At the very moment when the novel visitor to Saxford revolved those vexatious conclusions, clinging to his one consolation—the fire which Mrs. Morse had been so good as to light for him,—and standing with his back to the window, hanging over the heat, applying each well-made boot in turn to the bars of the grate, Joel Wray came down the village street, walking slowly and showing himself fully to all who cared to look for him, as a smart and happy bridegroom.

CHAPTER. XXVIII.—THE MARRIAGE, WITH ITS LAST GUEST.

WHEN Pleasance was dressed on her wedding morning, she went to Mrs. Balls to show herself.

It was all that Mrs. Balls could do to sit up in bed, stroke down Pleasance's dimity gown, and smell her flowers. Joel had kept to his point of getting her such flowers as Cheam could afford. They were not very fine flowers after all, a late rose or two grown in a sheltered corner, and a few carnations for sweetness, with sprigs of geranium and scarlet

verbena for brightness. But they made a fine show in the breast of Pleasance's white gown, and they had been shedding their fragrance since the previous day through the old rooms of the Manor-house.

"I thought you were to be none smart, Pleasance," said Mrs. Balls's quavering voice; "but you d' be main tasty with them flowern—on'y not a bit like your mother. It were your poor sister as favoured my owd Pleasance."

"Did you see my mother go away to be married?" asked Pleasance, humouring the old woman.

"No, I didn't, nor; your father, though he meant her fair, wern't likin' to come among her people as were so different from his'n. It is my mind he wanted to part her from her friens from the fust. You see they were ill convenient when she had gotten a gen'leman for her man. She had to pay the price, poor mawther. He found a respect'able place scores on miles from here, where nobry knowed her nor him. She lived there for a time, and were married from there."

"But Joel does not take me from my friends," said Pleasance, as she chose the sweetest, most perfect rose from her flowers, and put it aside for his button-hole, to be ready for him when he came, village fashion, to walk with her to church. "I have not many friends to spare," said Pleasance, with a quiver in her own voice. "I wish you could have come with me to-day, dear."

"An' I wish it mysen," said Mrs. Balls; "but where's the use on wishin'? If wishes were horsen, beggars 'ould ride. I'm nowt now but an owd, done body, as is fit for nowt but to be in folk's way, even on your weddin' day, Pleasance," said Mrs. Balls with a pathetic consciousness of the contrast between herself lying there, old and feeble, with her dim eyes, scanty white hair and fallen-in, shrivelled cheeks, and Pleasance standing beside her in her youth, and strength, and bloom, dressed as a bride waiting for her bridegroom. "It ain't that I be a cryin' out again' the A'mighty," said Mrs. Balls, wiping away the rare tears of old age; "it's what we mun all come to,—'common lot,' as passon he says. I 'a 'ad my day, though I were none on a bride. Yet I 'a besser'n a darter to wait upon me, and not to weary for me goin', and never to leave me, though she d' be a bride. She be to shut my owd eyes arter she d' be done readin' to me on the risin' again, and the Lord as is risen fust. I be bun' to be thankful sure-ly."

"And I am thankful to be with you," said

Pleasance, tenderly. "I love Joel best of all for not thinking of taking me away from you."

"Ah, Pleasance," said Mrs. Balls, "you 'a found your master—you may 'a pleased yourself in the findin' on him, but it will be please your man from this day forth. This is the last day, gal, that you d' be free to please yourself."

"Don't frighten me, Mrs. Balls," said Pleasance with a laugh, so little frightened that she verily believed she should have nothing to speak of to wish for from this day, that she should be like the wonderfully blessed Shunammite woman who had always stood out to Pleasance as one of the wisest and sweetest of the figures in the Bible, because she had told the great prophet that she dwelt among her own people, and had nothing to ask from his supernatural power.

The next moment Mrs. Balls was alluding to what was a great source of gratification to her in the arrangements for the marriage with which she could have so little active concern. "An' bailiff d' be to ack father and the man as gives away this 'oman. I do take it uncommon kind on bailiff, most as if it had been Lawyer Lockwood, no less; you'll mind to say so, and make my duty to en, Pleasance."

There had been a little difficulty as to who should be the substitute for the father and guardian at Pleasance's marriage. She had felt inclined, without meeting any opposition from Joel Wray, to ask old Miles Plum, who had been about the farm since she came to it, in preference to the parish clerk, or to some head of a house in the village, with whom she was not so well acquainted, and for whom she felt less regard. But the bailiff on the farm had stepped in and offered his services. He was far enough above the couple in rank to render his presence in the capacity a little of a condescension, and he was a man of just such a hearty character as to enjoy conferring the condescension.

He had known Pleasance almost as long as Miles Plum had known her. He had a great respect and regard for her as an excellent and, what was more, a handsome young woman, who had not let her head be turned either by her claim to superior birth, her good looks, or her fortune. She had proved a dutiful young kinswoman to his old ally Mrs. Balls, and a valuable auxiliary to himself—an example of industry to the whole field in many a wheat-hoeing and hay-making. He thought that such a good girl deserved honour done her, and he determined that he should be the man to do it.

XVII—32

Then the bailiff had a liking, as most people had who came in personal contact with him, for that winning vagabond and erratic Jack-of-all-trades, Joel Wray. The bailiff was somehow agreeably tickled by the notion of a marriage between these two, and was quite ready to excuse Madam for throwing herself away on a half-trained labourer, who yet, his master let himself to be persuaded, would do well.

The bailiff came to the Manor-house on purpose to walk with Pleasance and her party to the church. In order to grace the occasion he had put on his suit of best broadcloth—the only broadcloth represented at Pleasance's wedding—and assumed the very match to the sprigged waistcoat, bright blue neck tie, and glossy beaver hat, which Pleasance had deprecated on Joel Wray's account. They called to her mind with a strain of pensiveness Long Dick across the seas. And as if she had been fated to recall Long Dick on this day, Pleasance was to walk first with her champion, the bailiff.

Joel Wray—to the bailiff's surprise, and somewhat to his dismay and disgust—was in his clean working clothes and straw hat, wearing the rose that Pleasance had chosen for him, and carrying a face like the morning above it. He walked with Dorky Thwaite, a girl of thirteen years, sister of poor Sammy dying of consumption. Dorky, in her school-girl frock and tippet, was elected to the post she filled because Pleasance could not bear to have any of the village young women in the place which Lizzie Blennerhasset should have occupied, and because poor Dorky had few treats in the present circumstances of her family. She was giving abundant indication that the present treat was well bestowed by showing herself one proud gleeful giggle, certainly the happiest person in the company after the bride and bridegroom.

An irregular group of three wound up the procession. These were old Miles Plum, in his clean smock, which he was relieved to see was in the best of company with the bridegroom's working jacket, only Miles had not the satisfaction of twitting his wife Phillis with the fact, and with the absence of any necessity for her lamentations over his want of a coat, and her unpalatable suggestion that he should stay at home in consequence. Stay at home from Pleasance's marriage! when he had known her since she was a little lady, and whom he had helped to make at her own request a working woman, while to his certain know-

ledge she had never failed to fulfil the proverb that "gentle is as gentle does." But there was Phillis, as deaf as a post, walking "all serene," quite indifferent to what he could cast into his looks of triumphant reminder and mute upbraiding. What did Phillis care for his looks when she wore the new gown and cap which Pleasance had bought her for livery, as she had given him the orange cravat which was tied round his throat, with the ends hanging down above his smock, and the mufflers in his pocket for his hands when the cold weather should come?

Miles had to betake himself for social company—and, after all, no woman, neither his old woman, nor Pleasance, was company for a man—to the "soft young 'un," Ned, who was also off work for the day, leaving the new head man in charge of the farm. Ned was in another smock, but with bunches of old ribands of divers colours, with which some girl had supplied him, in his hat and on his breast—a decoration not unlike the paper trappings of children and amateur sweeps on May-day, and of which Ned, while he wore it, was mortally ashamed.

The little group was very much of a family party, that could take their festival quietly, as be seemed the circumstances. The old mistress of the Manor-house lay on what must be, sooner or later, her dying bed, while friends and watchers from the village were appointed to sit with her till Pleasance returned to her side.

The October sun was shining with unusual brightness on the bare, cold landscape in which the yellow gables and olive thatch of the Manor-house looked like a golden brown point as Pleasance left it behind her.

Ned and old Miles, with no want of volunteer assistants, had at spare hours, during the previous days, accomplished sundry tokens of rejoicing in green branches—scarce as boughs were in the treeless region—and in flags as rustic in the flag line as were Ned's ribands for favours. But these trophies were, partly out of regard for Mrs. Ball's state of health, partly from natural predilection, confined to the outbuildings and offices, where they waved and fluttered bravely, disturbing the equanimity of the horses and cattle that had been among Pleasance's chief friends.

The bailiff had no idea of leaving Pleasance to her own meditations, as something sacred that day, or of her being unable to attend and respond to his compliments on her appearance, his ponderous jokes on her change of condition, and his appropriate reminiscences of his own marriage.

And the bailiff was a great man in Pleasance's circle, with something in his power where Joel was concerned. He was also one who was bestowing a signal mark of his favour on the couple, of which Pleasance with her changed standard, as well as Mrs. Ball's, was innocently proud. Pleasance had to listen, smile, protest, and acquiesce, though it was all done in a dreamy fashion, and with many thoughts in the background, as the party traversed the familiar road until they entered the village. There every villager—man, woman, and child, within the precincts congregated about their doors and windows, not merely to look and admire, but to call out loud greetings and plain-spoken comments.

"Good day, and good luck to you both."

"Bailiff, you 'a a strappin' darter as you are soon to get off your hands."

"See t' bridegroom in his working-jacket, and Madam 'a 'ad to put up with it."

"Laws! her own gownd d' be but white cotton."

"There be Ned Sadler bringin' up t' rear, ready to hee-haw like a donkey."

"And Phillis Plum with gloves on her fingers, I d' confess."

The little church remained uninvaded. There was a village etiquette which forbade any save the real "weddiners" to enter during the ceremony. But the rabble of Saxford, in children and half-grown lads and girls, headed in this instance by Clem Blennerhasset, might congregate outside, and even be guilty of climbing up, by the aid of ivy and honeysuckle buttress, to look in through the windows at the scene.

The little flint-built, thatch-roofed church of Saxford was among the smallest, most primitive parish churches in the kingdom. The approach to it had neither gate nor pillar. It turned off from the main road which ran through the village street, and formed between two hedges a wide and open path to the little house of God, while the graveyard, enclosed by its loose stone wall, had a wicket. Pleasance had often thought that the free road had the look of a highway where a king was about to pass. As it was only trodden once a week, it was grown green. But it was not so much green in early summer as a mingled mass of pure white, blood red, purple, blue, and yellow, from the luxuriant growth of ox-eyed daisies, poppies, mallows, buglos, vetches, and crows-toes—weeds, as men call them—which grow in fresh country places of their own sweet will and without stint, neither asking special consideration, nor resenting

"WHAT SHE CAME THROUGH."

being occasionally trodden under foot. The homely worshippers at Saxford church entered it, walking in the prime of the year, unconcernedly, and, unless in rare and exceptional cases, without giving the slightest attention to what was to them the immaterial fact, that their path lay over a carpet of flowers with which no tessellated marble could be put into comparison. Pleasance was one of the few who noted the circumstance and recalled what she had read of flowers strewn before the passage of the host in Roman Catholic countries.

But there were no flowers beneath Pleasance's feet on her wedding morning. The honeysuckle on the porch presented shrivelled leaves and dull red berries instead of flowers.

Inside the small building, of which the only merit as a building belonged to a certain ancient simplicity and solidity, there were no galleries, nothing save whitewashed walls, and the plainest of deal pews, pulpits, and reading-desks, relieved by an old carved stone font.

The vicar had followed his own taste, and what he judged to be the requirements of the worshippers, by adorning the bald little church with Sabbath-school-like adornments of texts: "The earth is the Lord's, and the fulness thereof," "The Lord our God is one Lord," "The Word was made flesh, and dwelt among us," painted in scrolls with letters of blue and red, and hung on the white walls. The very commandments were printed in blue and red, and the effect of these patches of vivid colour produced by the homeliest means, was something like that of the wild flowers outside in summer, and as if the poppies and cornflowers had been brought within doors, and hung up in sheaves on the walls and at each side of the altar.

The vicar, who was coming in from the vestry in gown and cassock, bore, hardly less than Mrs. Balls, the marks of the years which had passed since he first saw Pleasance. He had grown stiff and unwieldy, as well as worn and battered. His memory was beginning to fail him, and, burdened as it was with many a weightier record, he entertained but a dim retrospect of Pleasance as the poor young girl of superior nurture who had been thrown with her dying sister on the good offices of worthy Mrs. Balls of the Manor-house, and who had obstinately declined his suggestion that she should go up to the vicarage and see what his wife could do for her. He thought chiefly of Pleasance as the fine-looking, steady young woman who lived with and was a comfort to Mrs. Balls, and who was creditably regular

in her attendance on church services. As for Joel Wray, he also had been punctual in coming to church, and although he had shown himself shy of being spoken to, and had not appeared at the vicar's week-day class for young men, still, when his pastor had succeeded in getting speech of Joel, he had struck the clergyman as a youth of intelligence.

It was, therefore, with perfect good-will and complacency that the vicar proceeded to read the service, uniting in holy matrimony his two "young friends," as he was fond of calling, in all sincerity, the better specimens of his humble parishioners.

All had played those parts, the solemnity and importance of which are liable to be lost sight of in their very simplicity and in the excitement of the moment. The bailiff had given away Pleasance Hatton. Joel had received her with an "I, Archibald, take thee, Pleasance," that vibrated in its earnestness. Pleasance had soberly and tenderly taken on her the obligation to honour and obey. Both of them had vowed to be true husband and wife till death did them part.

Ned Sadler and Dorky Thwaite had officiated—they could hardly tell how (since Joel had the ring ready in his pocket, and Pleasance had wanted no assistance with her gloveless hand) as best man and maid, but they felt clear that they must have been of some use, bearing the time-honoured names.

Phillis Plum, as the only responsible woman—Dorky was but a chit of a girl—had contributed what was called for from the sex in the matter of crying, though, like Ned and Dorky in their question of how, she could not well have told why.

Old Miles had stood bolt upright, with his hat between his hands, and felt that if he were good for nothing else, he stood for company in general, and was another witness in addition to the clerk and the verger.

The ceremony was ended. It was all over, as is apt to be said of many a long-wished-for event, but never said so emphatically as of the two most decisive and individual acts in the great human drama. Joel had kissed his wife, and suffered the bailiff, in the position which he had held towards Pleasance, to press his honest lips to her cheek.

The party were moving with one accord to the vestry to ratify the marriage which had just been solemnized when a hurried footstep was heard on the threshold. A more desperate intruder than the children—who only peered in, hoisted on each other's shoulders, through the windows—rushed frantically into the church.

A MORNING RIDE.

DURING our stay at Bahia, Captain Maclear and I went in one of the little coasting steamers to Caxoeira, a small town at a few hours distance up a river, to get some idea of the general appearance of the country. We were very fortunate in meeting on board the steamer Mr. Hugh Wilson, a countryman of our own and a leading engineer at Bahia, who was at the time carrying on some railway operations at Caxoeira. He had an establishment in the town, with clerks and draughtsmen at work, where he kindly put us up, and we rode out with him in the afternoon to see the railway works.

The town is on a river between two low mountain ridges, and the railway winds along the flank of one of these. The country is excessively rough, with no regular roads except the main road, and it was at first rather nervous work riding up and down places which no civilised horses would have dreamed of attempting. Mr. Wilson was accustomed to it, however, and led the way with the utmost confidence, and we soon learned to place complete trust in the intelligence of the handsome black, entire horses, which seemed to be strong enough for anything and to know perfectly what they were about, often absolutely refusing to take the path indicated to them, and choosing one which to our less-instructed eyes appeared ten times more difficult.

In our ride we crossed here and there steep tracks winding through ravines among the mountains, and at intervals an extraordinary amount of noise—men shouting and cracking their long bullock whips, cattle bellowing and struggling and scrambling among the loose boulders, and, above all, the shrill creaking of wheels—announced almost miles off the approach of one of the huge drays, dragged by ten or twelve pairs of bullocks, carrying supplies to, or produce from, the interior. The ponderous wagon comes creaking and groaning up to the bottom of what looks like, and I suppose is, the dry bed of a torrent, and one cannot at first imagine that they can mean to attempt to go up; after a spell of a few minutes however they go at it, the men lashing and shouting, and every now and then putting their shoulders to the great solid spokeless wheels, and to your surprise you find that they are making a little way. One leader of a team whom we spoke to, had a very confident expectation, in spite of

appearances, of getting to his destination, somewhere a good way up country, in rather less than a week.

Mr. Wilson was obliged to be next day at Sta. Amara, a little town thirty miles distant across one of the ridges, on another river, where he had a line of steamers plying, and he asked us to ride there with him; so we went back to his house and dined, and spent the evening at his window, inhaling the soft flower-perfumed air, and gazing at the stars in their dark-blue crystal dome, and their travesties in a galaxy of fire-flies dancing and glittering over the flowers in the garden beneath us.

It was late when we tossed ourselves down to take a short sleep, for two o'clock was the hour fixed to be in the saddle in the morning. We rode out of the town in the starlight, Mr. Wilson, Captain Maclear, and I, with a native guide on a fast mule. We were now obliged to trust entirely to the instinct of our horses, for if a path were visible in the daylight, of which I am by no means sure, there was certainly none in the dark, and we scrambled for a couple of hours straight up the side of the ridge. When we reached the top we came out upon flat, open ground, with a little cultivation, bounded in front of us by the dark line of dense forest. The night was almost absolutely silent, only now and then a peculiar shrill cry of some night-bird reached us from the woods.

As we got into the skirt of the forest the morning broke, but the *réveil* in a Brazilian forest is wonderfully different from the slow creeping on of the dawn of a summer morning at home, to the music of two thrushes answering one another's full rich notes from neighbouring thorn-trees. Suddenly a yellow light spreads upwards in the east, the stars quickly fade, and the dark fringes of the forest and the tall palms show out black against the yellow sky, and almost before one has time to observe the change, the sun has risen straight and fierce, and the whole landscape is bathed in the full light of day. But the morning is cool and fresh for yet another hour, and the scene is indescribably beautiful. The woods, so absolutely silent and still before, break at once into noise and movement. Flocks of toucans flutter and scream on the tops of the highest forest-trees, hopelessly out of shot; the ear is pierced by the shrill wild screeches of a little band of macaws, which fly flaring past like the rapped-

up ghosts of the birds on some gaudy old brocade. There is no warbling, no song, only harsh noises, abrupt calls, which those who haunt the forest soon learn to translate by two or three familiar words in Portuguese or English. Now and then a set of cries more varied and more dissonant than usual tells us that a troop of monkeys are passing across from tree to tree among the higher branches, and lower sounds to which one's attention is called by the guide, indicate to his practised ear the neighbourhood of a sloth, or some other of the few mammals which inhabit the forests of tropical South America. And the insects are now all awake and adding their various notes to swell the general din. A butterfly, of the gorgeous genus *Morpho*, comes fluttering along the path like a loosely-folded sheet of bright-blue tinsel, flashing brilliant reflections in the sunshine: great dark-blue shining bees fly past with a loud hum; tree-bugs in the most singular harlequin colouring of scarlet and blue and yellow, with a metallic sheen, cluster round a branch so thickly as to weigh it down, and make their presence perceptible yards off by their peculiar and sometimes not unpleasant odour; but how weak it is to say that that exquisite little *Colibri*, whirring and glittering in the air over that branch of *Bignonia* bells and sucking the nectar from them with its long curved bill, has a head of ruby and a breast of emerald and wings of sapphire, as if any triumph of the jeweller's art could ever vie in brilliancy with that sparkling epitome of life and light!

It was broad day when we passed into the dense forest, through which the greater part of our way now lay. The path, which had been cut through the vegetation, was just wide enough to allow us to ride in Indian file, and with some care to prevent our horses from bruising our legs against the tree-trunks; and we could not leave the path for a single foot on either side the scrub was so thick, what with fallen trees covered with epiphytes of all descriptions, and Cycads and Arums and great thorny spikes of *Bromelia*, and a close undergrowth, chiefly of Melastomads, many of them richly covered with blue or purple flowers. Above the scrub the tall forest-trees ran up straight and branchless for thirty or forty feet, and when they began to branch a second tier of vegetation spread over our heads, almost shutting out the sky. Great climbing *Monestras* and Arals, and parasitic Loranths, and epiphytic Bromeliads and ferns; and orchids, many of them distilling from their long

trusses of lovely flowers a fragrance which was almost overpowering; and mazes of *Tillandsia* hanging down like tangled hanks of grey twine. Every available space between the trees was occupied by lianas twining together or running up singly, in size varying from a whip-cord to a foot in diameter. These lianas were our chief danger, for they hung down in long loops from the trees and lay upon the ground, and were apt to entangle us and to catch the horses' feet as we rode on; it was little consolation that we could scarcely tear ourselves away from the charming wreaths of Ipomea flowers or Bignonia trusses into which they burst, whenever they had reached the required support.

As the forenoon wore on it became very close and hot on our bridle-path, and the forest relapsed into silence, most of the creatures retiring for their midday siesta. The false roof of epiphytes kept off the glare of the sun, and it was only at intervals that a sheaf of vertical beams struck through a rift in the green canopy and gave us a passing glimpse of the tops of the forest trees, blending in a delicate open tracery far above us.

For some hours our gallant horses struggled on, sometimes cantering a little way where the path was pretty clear, and more usually picking their way carefully, and sometimes with all their care, floundering into the mud-holes imperfectly bridged over with trunks of trees. As we had made our ascent at first, we had been riding the greater part of the time almost on a level on the plateau between the two river valleys; suddenly the wood opened, and we rode up to the verge of a long irregular cliff bounding the valley of Sta. Amara. The path ran right up to the edge and seemed to come to an end, but for a kind of irregular crack full of loose stones, which went zigzagging down to the bottom at an angle of something like 70°, and we could see the path far below winding away in the distance towards the main road to Sta. Amara. We looked over the cliff, and told Mr. Wilson firmly that we would *not* go down the side of that wall on horseback. He laughed, and said that the horses would take us down well enough, and that he had seen it done, but that it was perhaps a little too much; so we all dismounted, and put the horses' bridles round the backs of the saddles and led them to the top of the gully, and whipped them up as they do performing horses in a circus. They looked over with some apparent uneasiness, but I suspect they had often made

that precarious descent before; and they soon began to pick their way down cautiously one after the other, and in a few minutes we saw them waiting for us quietly at the bottom. We then scrambled down as best we might, and it was not until we had reached the level ground, having freely used all the natural advantages which the Primates have over the Solidunguli under such circumstances, that we appreciated the feat which our horses had performed. The next part of the road was a trial, the horses were often up nearly to the girths in stiff clay, but we got through it somehow, and reached Sta. Amara in time to catch the regular steamer to Bahia.

At Sta. Amara a line of trainways had lately been laid down, also under the auspices of our enterprising friend, and we went down to the steam-boat quay on one of the cars on a kind of trial trip. The waggon went smoothly and well, but when a new system is started there is always a risk of accidents. As the

truck ran quickly down the incline towards the river the swarthy young barbarians, attracted by the novelty, crowded round it, and suddenly the agonized cries of a child, followed by low moanings, rang out from under the wheels, and a jerk of the drag pulled the car up and nearly threw us out of our seats. We jumped out, and looked nervously under the truck; but there was no child there. The young barbarians looked at us vaguely and curiously, but not as if anything tragical had happened, and we were just getting into the car again, feeling a little bewildered, when a large green parrot in a cage close beside us went through, no doubt, another of his best performances in the shape of a loud mocking laugh. A wave of relief passed over the party; but we were rather late, and the drivers expressed to the parrot their sense of his conduct, I fear strongly, but in terms which being in Brazilian patois I did not understand.

C. WYVILLE THOMSON.

ART CLUBS.

ART in its various forms is to inquirers into the inner life of a nation of incalculable value, being the visible embodiment of the feelings, as distinguished from the thoughts and reasonings of the people, and no history is complete which does not take account of a nation's artistic progress, for therein much will be found to explain what would otherwise be obscure in its theology and politics. It is not, however, with art in this its historical connection that we now propose to deal, but rather with Art—the Teacher, the Educator, the Inculcator, more or less unconsciously, of great moral lessons. That the study of art has a distinctly refining and elevating effect, that the influence of the truly beautiful must in the end be good, or that the association of imperfect humanity with its perfect ideal tends to the improvement of the former, can hardly be denied; and the object of these lines is to bring into prominence one method by which these most desirable effects may be arrived at.

In all our large towns, excepting, perhaps, the metropolis, there is an ever-growing danger to healthy, moral, intellectual, and even physical life in the absorbing excitements of business; medical men know well how the strain of competition in these days of telegraphs, railways, steamers, and supposed necessities for luxurious living, is telling on the bodily health of our business men; keen

observers could speak of a general deterioration of brain and moral sense caused by the terrible pressure involved in this race for life; and the best palliative, though not to be taken as an absolute remedy, is a recreation and relief as complete as possible from the work of every-day life. Books afford this but in part; conversation and cheerful society are not always obtainable, and in commercial towns are too apt to fall into the shape of mere business talk; the Shakesperian or legitimate drama is a great resource; and here we welcome the advent of art, but it is not always available, and often more exciting than soothing. Music is an art affording to some the greatest possible relief from the turmoil and worry of the day; but all men are not musical, and hearing the finest sonata of Beethoven will not soothe a man who is through it all calculating his profits and losses of the day, and the prospects of the morrow.

There are left, then, the two sister arts—Sculpture and Painting, taken in their widest sense, the embodiments, that is, of our feelings for form and colour. All men are more or less susceptible to these influences, although many have no technical knowledge, and there is no greater rest in the outward world than is to be found, not in rushing round hot and crowded galleries, but in the quiet contemplation with a few friends of a small collection, and such unconscious study

will soon develop a knowledge of art, and with knowledge comes daily increasing pleasure. It is then with the view of giving rest to the wearied man, an innocent and useful pleasure to the young beginner of the struggle of life among the temptations of town, and a means of improvement, an opening of higher and better life to all, that I advocate the cause of Art Clubs; and, as an example, I propose to give an account of the Liverpool Art Club. There are several others, such as the Burlington in London, and also many art societies, but the Liverpool Club comes nearest of all to fulfilling the requirements indicated.

The Liverpool Art Club was founded in a very modest way in one room, in December, 1872, the opening exhibition being of Oriental art, and comprising Enamels, Lacquer, and Porcelain, the whole illustrated by a *Catalogue Raisonné*, which affords an historical and descriptive sketch of Oriental art most valuable to all collectors. The intentions of the founders are best given in their own words:—

"The amount of wealth expended in Liverpool upon different forms of art is out of all proportion to any influence exerted upon its progress, or upon the general diffusion of an intelligent love for it. This may not unfairly be ascribed to a great extent to the isolation to which art collectors and art lovers have found themselves condemned, through the want of one general centre of communication and re-union.

"A Representative Society, such as is already possessed by most branches of knowledge here, is even more required in the case of art, as many of the highest and most subtle lessons it has to teach cannot be learned from books, but only from a careful examination and comparison of specimens, and a personal interchange of views and ideas amongst its students.

"The Liverpool Art Club is intended to form such a centre. Among the methods by which it is proposed to attain the desired ends are—Social Evening Meetings, at which specimens of all forms of art may be exhibited and discussed. Moreover, it is intended to make the club a medium of bringing the art-loving public into closer and more direct connection, not only with local, but also with metropolitan and other artists, a step which cannot but be most serviceable to all parties, and to the interests of art generally.

"It will also aid in the promotion of Loan Collections, and the delivery of Lectures on Art, and will obtain for the use of its members valuable information as to the application of artistic taste to decorative purposes. It will most cordially aid by all means in its power, all efforts, public or private, to promote a general interest in art."

The club has recently procured other and larger premises at No. 1, Sugnall Street, and one exhibition follows another in rapid succession: mediæval manuscripts and early printed books, Wedgwood pottery, English porcelain, ivory carvings, and an examina-

tion of Turner's *Liber Studiorum* filled up the first year. Since then have been held exhibitions of water-colour drawings by artists born during the last century, illustrating the progress of the art in Great Britain; of goldsmiths' art, including both European and Eastern specimens of every age. Then Mr. James Anderson Rose lent to the club his unique collection of etchings, and enhanced the value of the loan by writing for the catalogue a preface descriptive of this too-much-neglected art. Specimens of embroidery, ancient and modern, followed, also with a descriptive preface from the pen of Rev. R. E. Guy, O.S.B. Then came illustration of Dutch, Flemish, and Belgian art, and then an exhibition of works in Japanese lacquer, the property of the club President, Mr. James L. Bowes, to whose untiring and self-denying energy very much of the success of the club is owing. He has not merely placed his own treasures at their disposal, but has induced others to do likewise. This exhibition was noticed in all the art papers, and consequently it is hardly necessary to dwell on it here, further than to say that it was a perfect exemplification of all styles and periods of Lac. One of the most recent exhibitions was that of the works of our great English landscape painter David Cox, comprising four hundred and forty-eight examples, of which fifty-seven were oil paintings. This was an exhibition which drew together connoisseurs and critics from all parts of England, and it is very improbable that so fine a collection of the works of Cox will ever again be brought together. At the present moment the club is exhibiting a collection of miscellaneous works of art, weapons, china, gold-work, cameos, *Cloisonné*, &c. I have been thus particular in enumerating the different exhibitions in order to show the opportunities given for the study of art; but it should also be mentioned that lectures and papers on different artistic subjects form a regular feature of the club life. These papers, contributed by members, and by men of note in the artistic and literary world, cannot fail to be of interest and of value, as tending to instruct and form the taste of the audience, which is by no means confined to members, as most of these introduce friends. It would be impossible to give an account of all the papers read since the formation of the club, but a few of the principal ones may be briefly indicated. In 1873 and 1874, the following were read: a very exhaustive treatise, by Mr. H. Clark, on "Ivories,"

exemplified by a most valuable collection of specimens; on "Early Forms of English and French Gothic Architecture," by Mr. Graham; on "The Paintings of the Old Masters," illustrated by about two hundred of their drawings, by Mr. Clark; and on "The Process of the Autotype," by Mr. G. A. Audsley; the account of this last being supplemented not only by a very valuable collection of specimens, but by the actual production in the club-room of a head after Greuze, copies of which were presented to all present. During the year 1875 an even wider field was opened, and papers were read on "Embroidery," by Rev. R. E. Guy; on "Michael Angelo," by Mr. P. H. Rathbone; on "Fresco and Mural Paintings," by Mr. G. A. Audsley; on "The Art of Sculpture," by Mr. Clark; and a most interesting and valuable contribution on "The Orchestra," by Mr. Rensburg. The paper, however, deserving perhaps the most attention here, was one by Mr. P. H. Rathbone, entitled "The Political Value of Art to the Municipal Life of a Nation," being the reproduction of an address delivered at the Free Library.

A paper by Mr. F. G. Prange, on "The Sixtine Madonna of Raphael," and one by Mr. G. H. Garraway the artist, ably contrasting the lives of artists and of commercial men, delivered this year, may with the foregoing be mentioned as showing the wide range of work taken by members of the club; but in addition to these, many highly distinguished guests have been entertained, and have added much to the instruction given. Among others may be mentioned Lord Houghton, Mr. Holman Hunt, Professor Colvin, Sir Henry Cole, K.C.B., Mr. Beavington Atkinson, secretary of the Burlington Fine Arts Club, Professor Archer, and Mr. Poynter, A.R.A. House dinners are held continually throughout the winter, while large club dinners were given to these various guests.

It is often objected to the idea of such meetings that artists are "Bohemians," and that the tendency of lovers of art is to degenerate into "Bohemianism." What is the exact meaning of this word I must confess myself unable to explain, but as I know that by many who use it (probably as ignorant as myself of its precise signification) it is regarded as something very wrong, or as showing an absence of delicacy and refinement, I hasten to explain that so far from the Liverpool Art Club being open

to this accusation, it is most eminently respectable (some people say "Philistine,") in its arrangements and tone, and that at the *conversazioni* and on lecture nights, it is no uncommon thing to see among the friends of the members from fifty to a hundred ladies belonging to the very best society in Liverpool, who not only enjoy and study art in this way themselves, but by their music and singing contribute largely to the pleasure of what are really most delightful social gatherings.

The club numbers about three hundred and sixty members, of whom about two hundred and fifty paid no entrance fee, the remainder £3 3s., or in the case of those admitted this year £5 5s., the annual subscription being £2 2s., which is more than ample to meet all ordinary expenses. The bulk of the furniture is paid for by debenture bonds raised among the members and being now steadily paid off, and these bonds in all only amounted to £1,000. The question of cost need not then be a deterrent to the good work; some of the Exhibitions have been practically thrown open free to the public, for others a charge of one shilling entrance has been made, and as the work of arranging, cataloguing, &c., is done by sub-committees of members chosen for their special knowledge of the various subjects, the cost of each exhibition is only from £20 to £60; always excepting the David Cox collection, which is estimated to have cost £150, a small sum for such an instructive and unexampled gathering. This was the occasion of formally opening the new Exhibition room, built at the small cost of £500.

Upon the value of such a club to the young men sent to Liverpool to learn business I have touched above, and on this point it is not necessary to enlarge. The temptations to a youth fresh from the country, and coming to a large town where he has no social ties to restrain him, are too well known to need recapitulation here; the dullness of lodgings, and the attractions of society worse than doubtful, but too often the first, if not the only sort of social intercourse easily attainable by a stranger, need but a moment's reflection to show the advantages of an institution offering at once cultivated society, and the benefits of artistic study; a drawing-class constitutes one of the attractions of the club, where members meet for practice once a week.

If these few lines lead any readers to imitate the promoters of the Liverpool Art Club they have not been written in vain.

LOUIS GREG.

HOPE DEFERRED.

HIS hand at last ! By his own fingers writ,
 I catch my name upon the way-worn sheet :
 His hand—O reach it to me quick—and yet
 Scarce can I hold, so fast my pulses beat !

Long prayed and waited for through months so drear,
 Each day methought my wasting heart must break :
 Why is it that our loved ones grow more dear,
 The more we suffer for their sweetest sake ?

O feast of soul ! O banquet richly spread !
 O passion-lettered scroll from o'er the sea !
 Like a fresh burst of life to one long dead,
 Joy, strength, and bright content come back with
 thee.

His hand at last ! each simple word aglow
 With truthful tenderness and promise sweet.
 Now to my daily tasks I'll singing go,
 Fed by the music of this way-worn sheet.

JANE C. SIMPSON.

THE CONTINUITY AND DISCONTINUITY OF THE CHURCH.

A Sermon preached by Arthur Penrhyn Stanley, Dean of Westminster, in Westminster Abbey,
On Ascension-day, May 25, 1876,
In behalf of the Restoration of St. Alban's Abbey.

"I saw in the night visions, and, behold, one like the Son of man came with the clouds of heaven, and came to the Ancient of days, and they brought him near before him. And there was given him dominion, and glory, and a kingdom, that all people, nations, and languages, should serve him: his dominion is an everlasting dominion, which shall not pass away, and his kingdom that which shall not be destroyed."—Dan. vii. 13, 14.

THIS text, from the Book of Daniel, which has been read in the services of Ascension Day, well describes the eternity of God's kingdom upon earth. Other kingdoms fade and vanish away. The monster forms which the Prophet saw in the shape of lion, and bear, and leopard, and goat, and ram, fought, struggled, bounded, sprang to and fro, as in some vast amphitheatre, and were then seen no more. But they were followed, as in the vision of Elijah on Mount Horeb, by a tranquil, reasonable, human, and therefore more Divine, appearance. The prophet beheld "in the night visions, and behold one like a son of man" (so the words should be translated*)—one clothed not with the wings of the eagle, or the strength of the lion, or the paws of the bear, nor armed with the horns and "great iron teeth" of the "dreadful and terrible" beast, which had passed before, but with the gentleness, the tenderness, the justice and the reason which exalt the human being, in spite of all his feebleness, above the fiercest and strongest of the brute creation. "The Lord is not in the earthquake," "the wind," or "the fire," but in the "still small" human "voice." The Lord is not with the lion, the leopard, and the bear, but He is with "the son of man," who reflects even in his weakness the image of everlasting goodness. And to this figure of "a son of man" there was given "an everlasting dominion which shall not pass away, and a kingdom which shall not be destroyed," because it is a dominion founded upon truth and right, and a kingdom which consists of "gentleness, goodness, faith, meekness, and temperance."

In considering the eternity of the Divine kingdom, as a whole or in any of its parts, as established on this earth of ours, there are two aspects of it which I desire to consider, and which are not unsuitable to the purpose for which your contributions are asked and to which I will return more specially at the close of this discourse. I propose to bring before you the continuity and also the dis-

continuity by which the heavenly kingdom is perpetuated.

I. First, let us take this double aspect of the kingdom as it is described in the text. The primary reference of the establishment of "the everlasting dominion," according to the Book of Daniel itself,* and according to some of the most approved commentators, is to the triumph of the chosen people in the Maccabæan age, "the people of the saints," who with their scanty forces, by the nobleness and chivalry of their better spirits, "turned to flight the armies" of the oppressors. From that time of which the Prophet more especially spoke, and even before that time going back to the first ages of the Ancient of Days, the kingdom, not of external power or ecclesiastical organization, but of spiritual force and moral energy, of truth, justice, and goodness, has never ceased to possess even an outward unity through all the various vicissitudes of its eventful history. There never was a time in which the true succession of generous and kindly and upright souls in the Jewish nation, and afterwards in the Christian Church, has not kept up a genuine affinity with all that is good in every age. And there never has been a breach in the close connection which has united this spiritual succession with the race from which it in so large a measure sprang. Gentile, Western, European, American, as the kingdom of God has become in its onward passage, yet it has never ceased to bear in its language, in its records, even in its institutions, the marks of its Jewish, its Semitic, its Asiatic origin. The Jewish prophets are still our teachers; the Jewish warriors are still our heroes; "of the seed of David according to the flesh" came even the Lord Himself; there is not a single Apostle who bore not in his heart and in his writings the peculiarities of his Israelite lineage. Of our chief ordinances, one is the direct continuation of the Paschal Feast; the other, of the purifying bath in the waters of

* Speaker's Commentary on Dan. vii. 13 (vol. vi. p. 328).

* Dan. vii. 18, 22, 27.

the chief river of Palestine. Most of the early forms of the constitution of the Christian Church are developments of the forms of the Jewish synagogue.

But with this continuity, inward and outward, there has been a discontinuity no less remarkable. The Maccabæan age so little resembled those which had gone before, that we can hardly even now bring ourselves to regard its history as a part of the same sacred dispensation. The Divine Master, in whom the form of "the Son of Man," with all its graces and with all its sufferings, was most distinctly manifested, although He came not to destroy but to fulfil the Law and the Prophets, yet founded a system so unlike to that of Jewish priest or king, so far beyond the range of Temple or Synagogue, that Christianity and Judaism have ever since been placed in almost necessary antagonism, and the revolution which His advent effected has divided, as with an impassable gulf, the ancient world from the new. It is by these chasms, and inequalities, and divergences, and not by one unbroken level, that the progress of the Divine kingdom has been conducted, and the "highway" of the Lord "prepared." One main characteristic of Christianity is that in it old things are ever passing away, and all things ever becoming new.

II. And now let us apply the same principle more nearly to ourselves and to our own national Christianity. We often hear it said, and said truly, that the Church of England as it now exists is the same as that which existed from the first establishment of Christianity in these islands. Most true is this, if we look at the advance of the Divine kingdom amongst us in its larger and moral sense. There has been one continuous purpose in the English Church, as in the English nation, from the time when Augustine encountered Ethelbert in the Isle of Thanet; nay, even from that legendary age when Lucius was believed to have founded the first Church of St. Peter in this Island of Thorns on the ruins of the Temple of Apollo, or when Alban suffered for the Christian faith outside the walls of Verulam. Hardly ever since that time has there been lacking a succession of sturdy, independent, courageous Christian spirits, who have regarded conscience as higher than power, and virtue as nobler than worldly advancement, and truth as more precious than pleasure or gain, and justice as demanding her due though Heaven itself should fall. Never has the continuous advance of domestic

purity, and honest trade, and disinterested policy, and world-wide charity, altogether ceased from amongst us, although at times their course has been sadly overclouded,—although it is only by gradual and uncertain steps that "the path of the just," in England as elsewhere, has "lightened more and more unto the perfect day."

And not only in this moral, and therefore most essential, aspect has the Church and the Religion of England remained one through all these ages, but even in external ordinances its days have been "bound each to each by a natural piety" such as few other nations or churches exhibit. The great institutions of its Monarchy, and Parliament, of its Episcopate, its Universities, its Cathedrals, its parishes, retain more of the ancient fashion of the centuries through which they have passed than could be said of the like forms of any other western nation.

But, on the other hand, not less instructive is the discontinuity which marks the successive changes which the Church, as well as the State, of the British Isles, has traversed, and which, equally with its continuity, have tended to the advancement of the eternal kingdom amongst us. There was first the change from the wild state of the early British Christians to the organized condition of the Anglo-Saxon Church. There was the almost entire superseding of the English-speaking hierarchy by the French prelates that came in the train of the Norman kings. There were the alternations of feeling engendered during the struggles between the Plantagenet kings and their ecclesiastical rivals; there was the substitution of new Liturgies for those of older times, new objects of veneration for those which moved the devotion of the Saxons. There were the fluctuations and contradictions of the maxims issued by authority respecting Christian doctrine and Christian practice as conspicuous here as in the other European countries. All these vicissitudes, even before the Reformation, had effectually broken the historical continuity of the English Church, and prevented it from lapsing at any one period into that sterile and immovable monotony which has characterized the institutions of China, and in some respects, eastern Christendom, but which, happily, has never taken complete possession of any western Church. And when there came the great convulsion, which at the time of the Reformation divided mediæval history from that which is more properly modern, when the revival of Greek learning kindled a new flame in the human soul, which

was as "life from the dead;" when the reform of the errors and superstitions which had overgrown the whole of Christendom was originated by the great German and Genevan theologians of the sixteenth century, England partook in the effects of that beneficent regeneration; and the English Church entered on an existence so unlike its previous condition that it may well be called from that time "a new creation;" and the spiritual affinities which it possesses with the various Churches on its own soil, or on the Continent, which have been yet more completely transformed by Luther or by Calvin, are stronger and more intimate than those which unite its outward framework to the Churches, which in Spain or Italy, or in the more distant East, have lagged behind in the progress of mankind, or received with less fulness the breath which "renewed the face of the earth" three hundred years ago. These rents and fissures, and disruptions and separations, in our long history no more prevent a substantial identity, ecclesiastical and spiritual, with our forefathers in the Christian faith, than the not less violent, if less extensive changes of the Conquest, or the Lancastrian usurpation, or the Civil Wars of the Commonwealth, or the Revolution, exclude the identity of the English people and the English Monarchy with the race of Hengist, the legislation of Alfred, or the glories of Cressy and Agincourt. But it is well in each case to note the unlikeness as well as the likeness, the contrasts as well as the similitudes, by which our national character and our spiritual existence have been formed, in order that we may not lean with an exaggerated insistence on any single bulwark, or on any single link of a complex whole which depends for its total effect on the working not of one part but of all.

III. And now let me apply these general remarks to the particular object for which your generous contributions are asked. Of all the outward tokens and memorials of the heavenly kingdom, few are more fitted to recall to the mind the eternity of spiritual things than the sacred buildings set apart for Christian worship. Other outward forms of Christianity convey to each particular section of the Church some different and peculiar idea; but, with perhaps the exception of the two Sacraments, there is no emblem or external sign which conveys such a sense of fixed, unchangeable, universally admitted truth as a Christian place of worship, whether it be called basilica, cathedral,

abbey, chapel, church, tabernacle, or temple. The stranger who asks the intention of any of these edifices meets with one answer, and one only, that they are calls to the inhabitants of this land to remember the things of eternity, and to forget for a moment the things of time. When, in a crowded city, or even a humble village, we see a vast religious edifice towering above the mass of ordinary buildings, what is this but a memento of the surpassing grandeur of the immortal spirit of "the son of man" above his material and animal wants—of the things of God above the things of earth? "They dreamed not of a perishable home who thus could build." In the City of Damascus a great Christian Church which was raised out of the remains of a Pagan Temple, and has since been turned into a Mussulman Mosque, has an inscription carved high on its stone cornice, which can be read to this day by climbing over the roofs of the adjacent houses, and which through all its changes indicates the original purpose of the building.—It is the words of the text—"His dominion is an everlasting dominion which shall not pass away, and His kingdom that which shall not be destroyed." That is a true likeness of what all buildings for Christian worship should represent to us,—the unchangeable value of Divine truth, the indestructible immortality of human goodness.

Such a building is the great abbey of St. Alban—in some respects the most venerable and the most characteristic of the churches of England, and thus claiming pre-eminently to be regarded as a national monument, as an emblem of our national Church. Look how truly it impresses upon us alike the continuity and the discontinuity of the Church of England. Look first at its continuity. It carries us back by its very situation to the day when the British soldier Albanus was led out to execution beyond the walls of the city of the Roman settlers, across the river, to the summit of the hill on which in after days this church was built to commemorate him. Alone of all the cathedrals and abbeys in England it is actually built of the bricks used in their buildings by those old conquerors of the world, which we see to this day in the ruins of the Imperial city beside the Tiber. Verulam itself, the capital of Cassivellaunus,—within whose more ancient circuit once stood Cæsar himself—has perished, but it lives again in St. Alban's Abbey, as the Roman Empire survived in the Christian civilisation which swallowed it up. It is further connected with the most continuous series of historical writers who in the

scanty and imperfect chronicles of the Middle Ages contrived from their monastic cells to keep alive a sense of the past, and the contemporary greatness of each succeeding generation. When Matthew Paris, chief of the students of St. Alban's, gave as his reason for devoting his time to history that he found it written in the Psalms, "The just shall be held in everlasting remembrance," he showed that he at least had some sense of what was meant by the eternity of God's kingdom, and the true continuity of the succession of His servants.

But along with this continuity, the story of St. Alban's Abbey exhibits, in a no less striking shape, the discontinuity which has marked, and we trust will always mark, the Church of England. The British form of Christianity represented by St. Alban, the first martyr, has totally disappeared from amongst us. The mystic bells, the holy stags, the wranglings about Easter, which then seemed indispensable signs of Christianity, are gone for ever. It is doubtful whether any English bishop can trace even his outward descent from those old Celtic missionaries. With the exception of those ordinances which we hold in common with all who "profess and call themselves Christians" throughout the whole world, perhaps no single religious observance would be practised in the same form by St. Alban and ourselves. Again, the origin of the structure has its root in the barbarous cruelties and wild delusions which characterized and stamped with an indelible brand the early Anglo-Saxon kings, not least the reign of Offa, king of the Mercians, the actual founder of the church of St. Alban. From that dark atmosphere we have, by the grace of God, long ago emerged; and great as are our present shortcomings, and far as we are from the perfected kingdom of God, yet we trust that the gulf which divides our princes and our people from the crimes of Offa is deeper still. Again, the fables which have gathered round the story of St. Alban and his companions, the superstitious veneration attached to their relics, the impostures which were thereby engendered, rose to such a height within the walls of that majestic building, and around its venerable precincts, that in the sixteenth century they were the chief popular associations with the name of St. Alban. When Shakspeare, in his play of *Henry the Sixth*, introduces Humphrey Duke of Gloucester, the good champion of truth and goodness, in the streets of St. Alban's, there is not a single allusion

to the grandeur of the building or the sanctity of its inmates, but only to the miserable frauds which it was the glory of that enlightened prince to scourge and banish away. In this respect the Church of England is not one with the Church of those days: it is divided from it, we trust, by a wall of adamant which shall never be broken down. The shrines of St. Alban and St. Amphibalus, once so widely venerated, were shattered with so stern a hand that it required all the skill and all the perseverance of one of the most ingenious of modern workmen to discover the broken pieces; and as they now stand again in their restored state, they remain monuments alike of a just retribution, in former days, and of the tender curiosity which in our own time rightly endeavours to gather up the fragments of the past that nothing be lost.

Again, the Abbey of St. Alban's ranked the first amongst the monastic institutions of England. Its abbot sat as a peer in parliament. Its monks were amongst the wealthiest and the most thriving of their time. In it the monastic system flourished and grew to the utmost. And with what results? In the close of the fifteenth century, before the Reformation, the crimes of its inmates, from the abbot downwards, had reached such a pitch, that a special commission was issued by the Pope * to the Primate to inquire into the moral state of the abbey. It was found that the whole place, with its dependencies, was filled with every sort of wickedness—that the property was wasted, the sacred vessels plundered, the jewels stolen from the stone—the abbot and the monks guilty of the grossest licentiousness, such as could hardly be practised now by the most dissolute of worldly men. Nor were those scandalous fruits of the conventual rule the first or the last that St. Alban's witnessed. Well may the righteous indignation of the English people have risen against such a system. Well may the walls of the church still bear the signs of the vengeance which tore the images and the rood from their places, and laid waste the monastic precincts. Far holier in the sight of God; far more venerable in the sight of man, was the shrunken edifice when reduced to a humble parish church, whose simple townsmen worshipped, than when towering in its pride of place, it was the seat of iniquities which poisoned the very fountains of morality and religion. In this

* Wilkin's Concilia, iii. 632. See Froude's Short Studies, 273, 274, 275.

respect, also, the discontinuity of the Church of England and of the church of St. Alban, with the Church of the past, is, let us hope, final and complete. However much, by outward links, by the framework of this or that institution, possibly by the succession of its prelates, certainly by identity with the national establishments of the realm, our Church may claim a unity with the mediæval Church of the fourteenth and fifteenth centuries; and however marvellous in some respects were the gifts and graces of that Church, yet we ought to claim no less firmly an absolute dis severance and divergence from the system whose profligacies caused the Abbey of St. Alban's to be a mockery and a reproach to Christendom, and which, if they were re-enacted in the present day on the same scale, would be a far greater danger to the Church of England and to the cause of religion amongst us than any attacks which intellectual inquiry or political animosity or social jealousy can set in motion.

And now in this our immediate time this union of continuity and discontinuity is yet once more to be exemplified. The Abbey of St. Alban, which, owing to the causes on which I have just touched, descended from a stately and wealthy corporation into the parish church of a small country town is about to become the seat of a bishopric—the first of its name in England. It is true, indeed, that not for the first time has the project of creating a see of St. Alban's entered into the mind of the statesmen and Churchmen of the time. Such a scheme existed in the mind of an unknown minister of the last century, but was never carried out. Now it has again been brought forward by the Legislature, with every chance of its accomplishment. On the question of any general multiplication of bishoprics, this is not the time to argue for or against. But in this particular instance it confessedly meets the crying needs of the enormous overgrowth of our metropolis and its neighbourhood. And the fulfilment of this project marks a spirit of what we may call wholesome innovation on the old ways of our forefathers—a strange break in the easy continuity of diocesan organization, which ran almost undisturbed from the twelfth century to the sixteenth, and again from the sixteenth to our own. He who is, to undertake the office of inaugurating this new bishopric, and who himself at this moment represents the oldest, with one exception, of all the sees of England, will curiously symbolize

by his entrance on this, the newest, the contrast of which I have spoken. He will find himself in a see without a single predecessor, with a field, in some respects, entirely new, with the opportunity of devoting his long-tried pastoral experience and the graces of his academic culture, to meet the new requirements of our age—guided, indeed, by the experience of the past, but free to choose and devise and execute whatever the elastic system of our Church will allow, on the right hand and on the left, for the carrying out of the eternal purposes of the kingdom of God.

If, as we have seen, St. Alban's in its high estate was haunted by evil spirits which have been long ago cast out, if at times its vast aisles have been but thinly occupied by its parochial congregation, yet this very breach and blank in its existence makes both more easy and more desirable to people it fully with the spiritual life of our own time, and so for ever prevent the evil spirits of impurity and profaneness and superstition from claiming as their own the vacant shrine. It is with this church, as with the Church of England itself. The true means of preserving it is by using it, by reforming it, by making it serve every good word and work, by filling it from end to end with the fruits of the Spirit of truth, righteousness, and charity. The true vengeance on the follies and vices of the past is not to destroy the good or the beautiful which have been intermingled therewith, but to bar their revival by transforming and purifying the ancient framework with a better spirit. And, in this wish not ourselves only, but almost every section of the English nation in its better moments must share. No doubt in a few clamorous circles notes are heard of another cry—of destroying for destruction's sake—of pulling down because in our poverty of religious or political ideas we have lost the noble passion for reforming and building up. But these, let us trust, are still the exceptional currents of the age. It was but last week that in an assembly of Nonconformists in the northern kingdom* a rude voice was heard to say that "the worse the national Church became, the better for the nation"—that "it never improved nor could improve"—that "it was evil, and only evil, and that continually." But hardly had the echoes of those dismal sounds subsided, when there rose another minister of the same persuasion who, in a

* The Synod of United Presbyterians in Scotland, on Friday, May 19th, 1876.

noble and generous spirit which won the applause even of that narrow synod, and in the name of liberty and charity, indignantly protested against this crusade of jealousy and partisanship. He declared "that, whilst differing widely from the Established Church, he rejoiced, yea, and would rejoice, in every effort for good by that Church"—that "the better the national Church was, the better for the church at large"—that "the more earnestly and successfully the Established Church did Christ's work amongst us, the better for our common country and our common faith." There spoke the genuine spirit of the better days of British Nonconformity; there spoke the truly patriotic Scotsman, the truly liberal reformer, the truly Christian pastor; and in that spirit the sounder intelligence of the nation, whether amongst Churchmen or Nonconformists, whether on the other side of the Tweed or on this, no doubt heartily concurs. In that spirit it is, that we invoke the aid of all our countrymen to assist in preserving this and all like national monuments, and in making their use and purpose worthy of our common Christianity.

And this leads me, in conclusion, to one final exemplification of the grand discontinuity which marks our national and Christian unity. Throughout Europe during the last two centuries the feeling for an edifice in the style of St. Alban's Abbey had totally disappeared, alike in Catholic and in Protestant Churches. In France, where these great monastic institutions had continued unabated down to the time of the eighteenth century, the exquisite traceries of their antique cloisters, the picturesque forms of their abbatial palaces, had one by one fallen before the axe and hammer, not of the iconoclast, not of the revolutionist, not of the Puritan, but of the lordly abbot, the devout prince, who saw nothing to admire, nothing to venerate, in these ancient monuments; but in the excess of the architectural zeal of that time swept them all away, and built in their place porticoes, and colonnades, and halls, in the style of Leo X. and Louis XIV. Had the terrible catastrophe which cut down the power of the Church of France been delayed for another fifty years, it is probable that not one Gothic edifice would have been left standing through the length and breadth of that Catholic country. The greatest of all abbatial churches, the church of the Benedictine Abbots of the Monastery of Clugny, which was equal to Cologne in the splendour of its mediæval architecture,

vaster than St. Peter's in space and majesty, which had survived the shock of the Huguenot wars, and even of the Revolution itself, and which remained standing from end to end even down to the memory of persons still living, was, in the first years of this century, under the auspices of the restored monarchy of France, and at the instigation of the parish priest of the town, gradually pulled to pieces; and of its vast nave, of its four transepts, of its innumerable chapels, of its seven towers, there remain only three scanty fragments to indicate what once had been the glory of mediæval France. Since that time the discontinuity between the Church of the nineteenth and of the two preceding centuries has been complete. Within the few years which have succeeded to the reign of Louis XVIII., and of George IV., has the new spirit been created which has transformed the outward face of the Church of England as of all the other Churches of Europe. This new spirit may perchance have run to excess. The classical architecture of the eighteenth century may now be as unduly disparaged as that of the thirteenth century was before. But in this particular instance it can hardly be doubted that if ever there was a case which demanded the stimulus which the new spirit can give, it is the need of St. Alban's Abbey. It is too vast to destroy—yet in a locality too poor, too small, to maintain at its own cost so gigantic a burden of inherited glory. Unlike the poor parish priest of Clugny, two successive pastors of St. Alban's have done their best with scanty means to keep together the mighty skeleton which it has fallen to their lot to animate, if so be, with Christian life. But it is beyond their means, or the means of any single man, or any one locality. It is for the nation to preserve and to adorn what belongs by its history, and by its significance, not to the county of Hertfordshire, not to the town of St. Alban's, but to the nation. And moreover, it is an opportunity for the performance of a duty too much neglected in all times, but perhaps especially in our own—the duty of giving to great public purposes, to objects which are really grand in themselves, regardless and irrespective of our own peculiar predilections for party or locality or personal interest. We would not for one moment disparage the munificence which will give thousands of pounds to glorify an honoured name in the chapel of a modern college. But we would point to a higher object and a wider horizon. To do

little things well is good, but it is not great, and it is not the best. What our age requires, what our country requires, is to do great things well, and grand things grandly.

No doubt the first claim is on those wealthy and historic families whose immediate neighbourhood derives its glory or its shame from the preservation or the neglect of this venerable church. No doubt, in carrying out the scheme, the prelates, who will be eased by such a lightening of their labour, are bound to be foremost in the good work. They must be able to say, like Abimelech to the people of Shechem, "What you have seen me do, make haste and do as I have done." But all the people must in their measure "do likewise."

Let it not be said that in this great metropolis, in this whole nation, there cannot be found any individual, or any number of individuals, eager to preserve a magnificent bequest, which (in the words of the greatest of the sons of Verulam) "has escaped the wreck of time," which it would be an honour to maintain and a disgrace to lose—and which, when maintained, would be a constant stimulus to all who were within its reach to fill it with a spirit worthy of the first British martyr, worthy of the freedom, and country, and charity, and truth, and devotion, which alone constitutes, amidst all their breaches and discontinuities, the true unity and identity of a national as of a universal Church.

SAINTS.

I SEE them with their heavenward eyes,
Men who in Christ abide;
The long train ceases not to rise
Through Time's unceasing tide,
And a grave across each pathway lies
But the path swerves not aside.

Like a chorus which no discords mar,
Sober and clear and grand,
Like a scroll upreaching to a star,
Caught by an angel's hand,
Like a wind beginning from afar,
And covering all the land,

They sound, they pass; each man beholds
The Master's risen face,
Each arm some near Beloved enfolds,
Yet keeps its forward place,
The weak one leans, the strong upholds,
But all are in the race.

Up, through the darkness and the pain,
Up, through the joy and light,
Earth's myriad hands are raised in vain
To baffle or invite,
Life shows them nothing to detain,
Death, nothing to affright.

By all things fair their course is graced,
By all things bitter, healed;
Gathering like servants sent in haste
Who, being challenged, yield,

And through the garden on the waste,
Guide to God's happy field.

To them each human loss is gain
Withdrawn or sacrificed,
Nothing but sin was all in vain,
And that, which long enticed,
Falls from each soul and leaves no stain
At the first smile of Christ.

The flock of God goes up and on,
And if, as sin departs,
Some faces from the throng are gone
Leaving some broken hearts,
God, full of pity for His own,
Dries every tear that starts.

The flock of God is strong and swift
And it devours the way,
Longing to see the curtain lift
From the everlasting day;
How slight the toil, how vast the gift,
How weary the delay!

Lord, gather us beneath their feet
As Thy good will shall be!
The service of Thy Saints is sweet
When they are serving Thee;
Souls for inheritance unmeet
May serve eternally.

M. B. SMEDLEY.

THE LAUREL BUSH.

An Old-fashioned Love Story.

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

PART II.

THE "every day" on which Mr. Roy had reckoned for seeing his friend, or whatsoever else he considered Miss Williams to be, proved a failure. Her youngest pupil fell ill, and she was kept beside him, and away from the school-room, until the doctor could decide whether the illness was infectious or not. It turned out to be very trifling—a most trivial thing altogether, yet weighted with a pain most difficult to bear, a sense of fatality that almost overwhelmed one person at least. What the other felt, she did not know. He came daily as usual; she watched him come and go, and sometimes he turned and they exchanged a greeting from the window. But beyond that she had to take all passively. What could she, only a woman, do or say or plan? Nothing. Women's business is to sit down and endure.

She had counted these days—Tuesday, Wednesday, Thursday, Friday, Saturday—as if they had been years. And now they were all gone; had fled like minutes—fled emptily away. A few fragmentary facts she had had to feed on, communicated by the boys in their rough talk.

"Mr. Roy was rather cross to-day."

"Not cross, Dick—only dull."

"Mr. Roy asked why David did not come in to lessons, and said he hoped he would be better by Saturday."

"Mr. Roy said good-bye to us all, and gave us each something to remember him by when he was out in India. Did Miss Williams know he was going out to India? Oh, how jolly!"

"Yes, and he sails next week, and the name of his ship is the *Queen of the South*, and he goes by Liverpool instead of Southampton, because it costs less; and he leaves St. Andrews on Monday morning."

"Are you sure he said Monday morning?"

For that was Saturday night.

"Certain, because he has to get his outfit still. Oh, what fun it must be!"

And the boys went on, greatly excited, repeating everything Mr. Roy had told them—for he had made them fond of him, even in those few months—expatiating with delight on his future career, as a merchant or something, they did not quite know what; but no doubt it would be far nicer and more

amusing than stopping at home and grinding for ever over horrid books. Didn't Miss Williams think so?

Miss Williams only smiled. She knew how all his life he had loved "those horrid books," preferring them to pleasure, recreation, almost to daily bread; how he had lived on the hope that one day he—born only a farmer's son—might do something, write something. "I also 'am of Arcadia.'" He might have done it or not—the genius may or may not have been there; but the ambition certainly was. Could he have thrown it all aside? And why?

Not for mere love of money; she knew him too well for that. He was a thorough book-worm, simple in all his tastes and habits—simple almost to penuriousness; but it was a penuriousness born of hard fortunes, and he never allowed it to affect anybody but himself. Still, there was no doubt he did not care for money, or luxury, or worldly position—any of the things that lesser men count large enough to work and struggle and die for. To give up the pursuits he loved; deliberately to choose others, to change his whole life thus, and expatriate himself, as it were, for years—perhaps for always—why did he do it, or for whom?

Was it for a woman? Was it for her? If ever, in those long, empty days and wakeful nights, this last thought entered Fortune's mind, she stifled it as something which, once to have fully believed, and then disbelieved, would have killed her.

That she should have done the like for him—that or anything else, involving any amount of heroism or self-sacrifice—well, it was natural, right; but that he should do it for her? That he should change his whole purpose of life that he might be able to marry quickly, to shelter in his bosom a poor girl who was not able to fight the world as a man could, the thing—not so very impossible, after all—seemed to her almost incredible! And yet (I am telling a mere love-story, remember—a foolish, innocent love-story, without apologizing for either the folly or the innocence) sometimes she was so far "left to herself" as the Scotch say, that she did believe it. In the still twilights, in the wakeful nights, in the one solitary half-hour

of intense relief, when, all her boys being safe in bed, she rushed out into the garden under the silent stars to sob, to moan, to speak out loud words which nobody could possibly hear.

"He is going away, and I shall never see him again. And I love him so—love him better than anything in all this world. I couldn't help it—he couldn't help it. But oh, it's hard—hard!"

And then, altogether breaking down, she would begin to cry like a child. She missed him so, even this week, after having, for weeks and months been with him every day; but it was less like a girl missing her lover—who was, after all, not her lover—than a child mourning helplessly for the familiar voice, the guiding, helpful hand. With all the rest of the world Fortune Williams was an independent, energetic woman—self-contained, brave, and strong, as a solitary governess had need to be; but beside Robert Roy she felt like a child, and she cried for him like a child—

"And with no language but a cry."

So the week ended and Sunday came, kept at Mrs. Dalziel's like the Scotch Sundays of twenty years ago. No visitor ever entered the house, wherein all the meals were cold and the blinds drawn down, as if for a funeral. The family went to church for the entire day, St. Andrews being too far off for any return home "between sermons." Usually one servant was left in charge, turn and turn about; but this Sunday Mrs. Dalziel, having put the governess in the nurse's place beside the ailing child, thought shrewdly she might as well put her in the servant's place too, and let her take charge of the kitchen fire, as well as of little David. Being English, Miss Williams was not so exact about "ordinances" as a Scotchwoman would have been; so Mrs. Dalziel had no hesitation in asking her to remain at home alone the whole day in charge of her pupil.

Thus faded, Fortune thought, her last hope of seeing Robert Roy again, either at church—where he usually sat in the Dalziel pew, by the old lady's request, to make the boys "behave"—or walking down the street, where he sometimes took the two eldest to eat their "piece" at his lodgings. All was now ended; yet on the hope—or dread—of this last Sunday, she had hung, she now felt with what intensity, till it was gone.

Fortune was the kind of woman who, were it given her to fight, could fight to the death, against fate or circumstances; but when her part was simply passive, she could also en-

dure. Not, as some do, with angry grief or futile resistance, but with a quiet patience so complete that only a very quick eye would have found out she was suffering at all.

Little David did not, certainly. When, hour after hour, she sat by his sofa, interesting him as best she could in the dull "good" books which alone were allowed of Sundays, and then passing into word-of-mouth stories—the beautiful Bible stories over which her own voice trembled while she told them—Ruth, with her piteous cry, "Whither thou goest, I will go; where thou diest, I will die, and there will I be buried—"; Jonathan, whose soul "clave to the soul of David, and Jonathan loved him as his own soul,"—all those histories of passionate fidelity and agonized parting—for every sort of love is essentially the same—how they went to her very heart!

Oh, the awful quietness of that Sunday, that Sabbath which was not rest, in which the hours crawled on in sunshiny stillness, neither voices nor steps nor sounds of any kind, breaking the death-like hush of everything. At length the boy fell asleep; and then Fortune seemed to wake up, for the first time, to the full consciousness of what was and what was about to be.

All of a sudden she heard steps on the gravel below, then the hall-bell rang through the silent house. She knew who it was, even before she opened the door, and saw him standing there.

"May I come in? They told me you were keeping house alone, and I said I should just walk over to bid you and Davie good-bye."

Roy's manner was grave and matter-of-fact—a little constrained, perhaps, but not much—and he looked so exceedingly pale and tired that without any hesitation she took him into the school-room where they were sitting, and gave him the arm-chair by Davie's sofa.

"Yes, I own to being rather overdone; I have had so much to arrange, for I must leave here to-morrow, as I think you know."

"The boys told me."

"I thought they would. I should have done it myself, but every day I hoped to see you. It was this little fellow's fault, I suppose" (patting David's head). "He seems quite well now, and as jolly as possible. You don't know what it is to say 'Good-bye,' David, my son."

Mr. Roy, who always got on well with children, had a trick of calling his younger pupils "My son."

"THE LAUREL BUSH."

"Why do you say 'Good-bye' at all then?" asked the child, a mischievous but winning young scamp of six or seven, who had as many tricks as a monkey or a magpie. In fact, in chattering and hiding things, he was nearly as bad as a magpie; the torment of his governess's life, and yet she was fond of him. "Why do you bid us good-bye, Mr. Roy? Why don't you stay always with Miss Williams and me?"

"I wish to God I could."

She heard that, heard it distinctly, though it was spoken beneath his breath; and she felt the look, turned for one moment upon her as she stood by the window. She never forgot either—never as long as she lived. Some words, some looks, can deceive, perhaps quite unconsciously, by being either more demonstrative than was meant, or the exaggeration of coldness to hide its opposite; but sometimes a glance, a tone, betrays, or rather reveals, the real truth in a manner that nothing afterwards can ever falsify. For that instant, that instant only, Fortune felt sure, quite sure, that in some way or other she was very dear to Robert Roy. If the next minute he had taken her into his arms, and said, or not said, the words which, to an earnest-minded, sincere man like him, constitute a pledge for life, never to be disannulled or denied, she could hardly have felt more completely his own.

But he did not say them; he said nothing at all; sat leaning his head on his hand, with an expression so weary, so sad, that all the coaxing ways of little Davie could hardly win from him more than a faint smile. He looked so old too, and he was but just thirty. Only thirty—only twenty-five; and yet these two were bearing, seemed to have borne for years, all the burden of life, all its hardships and none of its sweetnesses. Would things ever change? Would he have the courage (it was his part, not hers) to make them change, at least in one way, by bringing about that heart-union which to all pure and true natures is consolation for every human woe?

"I wonder," he said, sitting down and taking David on his knee, "I wonder if it is best to bear things oneself, or to let another share the burden?"

Easily, oh how easily! could Fortune have answered this—have told him that, whether he wished it or not, two did really bear his burdens, and perhaps the one who bore it secretly and silently had not the lightest share. But she did not speak: it was not possible.

"How shall I hear of you, Miss Williams?" he said again, after a long silence. "You are not likely to leave the Dalziel family?"

"No," she answered; "and if I did, I could always be heard of, the Dalziels are so well known hereabouts. Still, a poor wandering governess easily drops out of people's memory."

"And a poor wandering tutor too. But I am not a tutor any more, and I hope I shall not be poor long. Friends cannot lose one another; such friends as you and I have been. I will take care we shall not do it: that is, if— But no matter. You have been very good to me, and I have often bothered you very much, I fear. You will be almost glad to get rid of me."

She might have turned upon him eyes swimming with tears—woman's tears—that engine of power which they say no man can ever resist; but I think, if so, a woman like Fortune would have scorned to use it. Those poor weary eyes, which could weep oceans alone under the stars, were perfectly dry now—dry, and fastened on the ground, as she replied in a grave steady voice,—

"You do not really believe that, else you would never have said it."

Her composure must have surprised him, for he looked suddenly up, then begged her pardon. "I did not hurt you, surely? We must not part with the least shadow of unkindness between us."

"No." She offered her hand and he took it—gently, affectionately, but only affectionately. The one step beyond affection, which leads into another world, another life, he seemed determined not to pass.

For at least half an hour he sat there with David on his knee, or rising up restlessly to pace the room with David on his shoulder; but he appeared not in the least to desire the child's absence, rather to keep him as a sort of barrier. Against what? himself? And so minute after minute slipped by; and Miss Williams, sitting in her place by the window, already saw, dotting the Links, group after group of the afternoon church-goers wandering quietly home—so quietly, so happily, fathers and mothers and children, companions and friends—for whom was no parting and no pain.

Mr. Roy suddenly took out his watch. "I must go now; I see I have spent all but my last five minutes. Good-bye, David, my lad; you'll be a big man, may be, when I see you again. Miss Williams" (standing before her with an expression on his face such as she had never seen before), "before

I go there was a question I had determined to ask you—a purely ethical question which a friend of mine has been putting to me, and I could not answer; that is, I could, from the man's side, the worldly side. A woman might think differently."

"What is it?"

"Simply this. If a man has not a half-penny, ought he to ask a woman to share it? Rather an Irish way of putting the matter," with a laugh, not without bitterness, "but you understand. Ought he not to wait till he has at least something to offer besides himself? Is it not mean, selfish, cowardly, to bind a woman to all the chances or mischances of his lot, instead of fighting it out alone like a man? My friend thinks so, and I—I agree with him."

"Then why did you ask me?"

The words, though low and clear, were cold and sharp,—sharp with almost unbearable pain. Every atom of pride in her was roused. Whether he loved her, and would not tell her so, or loved some other woman and wished her to know it, it was all the same. He was evidently determined to go away free, and leave her free; and perhaps many sensible men or women would say he was right in so doing.

"I beg your pardon," he said almost numbly. "I ought not to have spoken of this at all. I ought just to have said 'Good-bye,' and nothing more." And he took her hand.

There was on it one ring, not very valuable, but she always liked to wear it, as it had belonged to her mother. Robert Roy drew it off, and put it deliberately into his pocket.

"Give me this; you shall have it back again when I am dead, or you are married, whichever happens first. Do you understand?"

Putting David aside (indeed he seemed for the first time to forget the boy's presence), he took her by the two hands and looked down into her face. Apparently he read something there, something which startled him, almost shocked him.

"God forgive me!" he muttered, and stood irresolute.

Irresolution, alas! too late; for just then all the three Dalziel boys rushed into the house and the schoolroom, followed by their grandmother. The old lady looked a good deal surprised, perhaps a little displeased, from one to the other.

Mr. Roy perceived it and recovered himself in an instant, letting go Fortune's hands

and placing himself in front of her, between her and Mrs. Dalziel. Long afterwards she remembered that trivial act—remembered it with the tender gratitude of the protected towards the protector, if nothing more.

"You see, I came, as I told you I should, if possible, to bid Miss Williams good-bye, and wee Davie. They both kindly admitted me, and we have had half-an-hour's merry chat, have we not, Davie? Now, my man, good-bye." He took up the little fellow and kissed him, then extended his hand. "Good-bye, Miss Williams. I hope your little pupils will value you as you deserve."

Then, with a courteous and formal farewell to the old lady, and a most uproarious one from the boys, he went to the door, but turned round, saying to the eldest boy, distinctly and clearly—though she was at the farther end of the room, she heard, and was sure he meant her to hear, every word,—

"By-the-bye, Archy, there is something I was about to explain to Miss Williams. Tell her I will write it. She is quite sure to have a letter from me to-morrow, no, on Tuesday morning."

And so he went away, bravely and cheerily, the boys accompanying him to the gate, and shouting and waving their hats to him as he crossed the Links, until their grandmother reprovingly suggested that it was Sunday.

"But Mr. Roy does not go off to India every Sunday. Hurrah! I wish we were all going too. Three cheers for Mr. Roy."

"Mr. Roy is a very fine fellow, and I hope he will do well," said Mrs. Dalziel, touched by their enthusiasm; also by some old memories, for, like many St. Andrews folk, she was strongly linked with India, and had sent off one half of her numerous family to live or die there. There was something like a tear in her old eyes, though not for the young tutor; but it effectually kept her from either looking at or thinking of the governess. And she forgot them both immediately. They were merely the tutor and the governess.

As for the boys, they chattered vehemently all tea-time about Mr. Roy, and their envy of the "jolly" life he was going to; then their minds turned to their own affairs, and there was silence.

The kind of silence, most of us know it, when any one belonging to a household, or very familiar there, goes away, on a long, indefinite absence. At first, there is little consciousness of absence at all; we are so constantly expecting the door to be

opened, for the customary presence, that we scarcely even miss the known voice, or face, or hand. By-and-by, however, we do miss it, and there comes a general, loud, shallow lamentation, which soon cures itself, and implies an easy and comfortable forgetfulness before long. Except with some, or possibly only one, who is, most likely, the one who has never been heard to utter a word of regret, or seen to shed a single tear.

Miss Williams, now left sole mistress in the school-room, gave her lessons as usual there, that Monday morning, and walked with all the four boys on the Links all afternoon. It was a very bright day, as beautiful as Sunday had been, and they communicated to her the interesting facts, learnt at golfing that morning, that Mr. Roy and his port-manteau had been seen at Leuchars, on the way to Burntisland, and that he would likely have a good crossing, as the sea was very calm. There had lately been some equinoctial gales, which had interested the boys amazingly, and they calculated with ingenious pertinacity, whether such gales were likely to occur again when Mr. Roy was in the Bay of Biscay, and if his ship were wrecked, what he would be supposed to do. They were quite sure he would conduct himself with great heroism, perhaps escape on a single plank, or a raft made by his own hands, and they consulted Miss Williams, who of course was a peripatetic cyclopædia of all scholastic information, as to which port in France or Spain he was likely to be drifted to, supposing this exciting event did happen.

She answered their questions with her usual ready kindness. She felt like a person in a dream, yet a not unhappy dream, for she still heard the voice—still felt the clasp of the strong, tender, sustaining hands. And to-morrow would be Tuesday.

Tuesday was a wet morning. The bright days were done. Soon after dawn, Fortune had woke up and watched the sunrise, till a chill fog crept over the sea and blotted it out; then gradually blotted out the land also, the Links, the town, everything. A regular St. Andrews "haar;" and St. Andrews people know what that is. Miss Williams had seen it once or twice before, but never so bad as this; blighting, penetrating and so dense that you could hardly see your hand before you.

But Fortune scarcely felt it. She said to herself, "To-day is Tuesday," which meant nothing to any one else, everything to her. For she knew the absolute faithfulness, the

careful accuracy, in great things and small, with which she had to do. If Robert Roy said "I will write on such a day," he was as sure to write as that the day would dawn. That is, so far as his own will went; and will, not circumstance, is the strongest agent in this world.

Therefore, she waited quietly for the postman's horn. It sounded at last.

"I'll go," cried Archy. "Just look at the haar! I shall have to grope my way to the gate."

He came back, after what seemed an almost endless time, rubbing his head, and declaring he had nearly blinded himself by running right into the laurel bush.

"I couldn't see for the fog. I only hope I've left none of the letters behind. No, no, all right. Such a lot! It's the Indian mail. There's for you, and you, boys." He dealt them out with a merry careless hand.

There was no letter for Miss Williams. A circumstance so usual that nobody noticed it, or her, as she sat silent in her corner, while the children read noisily and gaily the letters from their far-away parents.

Her letter—what had befallen it? Had he forgotten to write? But Robert Roy never forgot anything. Nor did he delay anything, that he could possibly do at the time he promised. He was one of the very few people in this world who in small things as in great are absolutely reliable. It seemed so impossible to believe he had not written, when he said he would, that as a last hope, she stole out with a plaid over her head and crept through the side walks of the garden, almost groping her way through the fog, and like Archy, stumbling over the low boughs of the laurel bush to the letter-box it held. Her trembling hands felt in every corner, but no letter was there.

She went wearily back; weary at heart, but patient still. A love like hers, self-existent and sufficient to itself, is very patient, quite unlike the other and more common form of the passion; not love, but a diseased craving to be loved, which creates a thousand imaginary miseries and wrongs. Sharp was her pain, poor girl; but she was not angry, and after her first stab of disappointment her courage rose. All was well with him, he had been seen cheerily starting for Edinburgh; and her own temporary suffering was a comparatively small thing. It could not last; the letter would come to-morrow.

But it did not, nor the next day, nor the next. On the fourth day, her heart felt like to break.

I think, of all pangs not mortal, few are worse than this small silent agony of waiting for the post; letting all the day's hope climax upon a single minute, which passes by, and the hope with it, and then comes another day of dumb endurance, if not despair. This, even with ordinary letters, upon which anything of moment depends. With others, such as this letter of Robert Roy's—let us not speak of it. Some may imagine, others may have known, a similar suspense. They will understand why, long years afterwards, Fortune Williams was heard to say, with a quiver of the lip that could have told its bitter tale, "No, when I have a letter to write, I never put off writing it for a single day."

As these days wore on, these cruel days, never remembered without a shiver of pain, and of wonder that she could have lived through them at all, the whole fabric of reasons, arguments, excuses, that she had built up, tried so eagerly to build up, for him and herself, gradually crumbled away. Had she altogether misapprehended the purport of his promised letter? Was it just some ordinary note, about her boys and their studies perhaps, which after all he had not thought it worth while to write? Yet surely it was worth while, if only to send a kindly and courteous farewell to a friend, after so close an intimacy and in face of so indefinite a separation.

A friend? Only a friend? Words may deceive, eyes seldom can. And there had been love in his eyes. Not mere liking, but actual love. She had seen it, felt it, with that almost unerring instinct that women have, whether they return the love or not. In the latter case, they seldom doubt it; in the former, they often do.

"Could I have been mistaken?" she thought, with a burning pang of shame. "Oh, why did he not speak, just one word? After that, I could have borne anything."

But he had not spoken, he had not written. He had let himself drop out of her life as completely as a falling star drops out of the sky, a ship sinks down in mid-ocean, or—any other poetical simile, used under such circumstances by romantic people.

Fortune Williams was not romantic; at least, what romance was in her lay deep down, and came out in act rather than word. She neither wept nor raved, nor cultivated any external signs of a breaking heart. A little paler she grew, a little quieter, but nobody observed this: indeed, it came to be one of her deepest causes of thankfulness,

that there was nobody to observe anything—that she had no living soul belonging to her, neither father, mother, brother, nor sister, to pity her or to blame him; since to think him either blameable, or blamed, would have been the sharpest torture she could have known.

She was saved that, and some few other things, by being only a governess—instead of one of Fate's cherished darlings, nestled in a family home. She had no time to grieve, except in the dead of night, when "the rain was on the roof." It so happened that, after the haár, there set in a season of continuous, sullen, depressing rain. But at night-time, and for the ten minutes between post-hour and lesson-hour—which she generally passed in her own room—if her mother, who died when she was ten years old, could have seen her, she would have said, "My poor child!"

Robert Roy had once involuntarily called her so, when by accident one of her rough boys hurt her hand, and he himself bound it up, with the indescribable tenderness which the strong only know how to show, or feel. Well she remembered this; indeed, almost everything he had said or done came back upon her now—vividly, as we recall the words and looks of the dead—mingled with such a hungering pain, such a cruel "miss" of him, daily and hourly, his companionship, help, counsel, everything she had lacked all her life, and never found but with him and from him. And he was gone, had broken his promise, had left her without a single farewell word.

That he had cared for her, in some sort of way, she was certain; for he was one of those who never say a word too large—nay, he usually said much less than he felt. Whatever he had felt for her—whether friendship, affection, love—must have been true. There was in his nature intense reserve, but no falsehood, no insincerity, not an atom of pretence of any kind.

If he did love her, why not tell her so? What was there to hinder him? Nothing, except that strange notion of the "dishonourableness" of asking a woman's love, when one has nothing but love to give her in return. This, even, he had seemed at the last to have set aside, as if he could not go away without speaking. And yet he did it.

Perhaps he thought she did not care for him? He had once said, a man ought to feel quite sure of a woman before he asked her. Also, that he should never ask twice; since, if she did not know her own mind then, she never would know it, and such a

woman was the worst possible bargain a man could make in marriage.

Not know her own mind! Alas, poor soul, Fortune knew it only too well. In that dreadful fortnight it was "borne in upon her," as pious people say, that though she felt kindly to all human beings, the one human being who was necessary to her—without whom her life might be busy indeed, and useful, but never perfect, an endurance instead of a joy—was this young man, as solitary as herself, as poor, as hard-working; good, gentle, brave Robert Roy.

Oh, why had they not come together, heart to heart—just they two, so alone in the world—and ever after belonged to one another, helping, comforting, and strengthening one another, even though it had been years and years before they were married?

"If only he had loved me, and told me so!" was her bitter cry. "I could have waited for him all my life long, earned my bread ever so hardly, and quite alone, if only I might have had a right to him, and been his comfort, as he was mine. But now, now—"

Yet still she waited, looking forward daily to that dreadful post-hour; and when it had gone by, nerving herself to endure until to-morrow. At last hope, slowly dying, was killed outright.

One day at tea-time the boys blurted out, with happy carelessness, their short-lived regrets for him being quite over, the news that Mr. Roy had sailed.

"Not for Calcutta, but Shanghai, a much longer voyage. He can't be heard of for a year at least, and it will be many years before he comes back. I wonder if he will come back rich. They say he will: quite a nabob perhaps, and take a place in the Highlands, and invite us all—you too, Miss Williams. I once asked him, and he said, 'Of course.' Stop, you are pouring my tea over into the saucer."

This was the only error she made, but went on filling the cups with a steady hand, smiling and speaking mechanically, as people can sometimes. When tea was quite over, she slipped away into her room, and was missing for a long time.

So, all was over. No more waiting for that vague "something to happen." Nothing could happen now. He was far away across the seas, and she must just go back to her old monotonous life, as if it had never been any different—as if she had never seen his face, nor heard his voice, never known the blessing of his companionship, friendship,

love, whatever it was, or whatever he had meant it to be. No, he could not have loved her; or to have gone away would have been—she did not realise whether right or wrong—but simply impossible.

Once, wearying herself with helpless conjectures, a thought, sudden and sharp as steel, went through her heart. He was nearly thirty; few lives are thus long without some sort of love in them. Perhaps he was already bound to some other woman, and finding himself drifting into too pleasant intimacy with herself, wished to draw back in time. Such things had happened, sometimes almost blamelessly, though most miserably to all parties. But with him it was not likely to happen. He was too clear-sighted, strong, and honest. He would never "drift" into anything. What he did would be done with a calm deliberate will, incapable of the slightest deception, either towards others or himself. Besides, he had at different times told her the whole story of his life, and there was no love in it; only work, hard work, poverty, courage, and endurance, like her own.

"No, he could never have deceived me, neither me nor any one else," she often said to herself, almost joyfully, though the tears were running down. "Whatever it was, it was not that. I am glad—glad. I had far rather believe he never loved me, than that he had been false to another woman for my sake. And I believe in him still; I shall always believe in him. He is perfectly good, perfectly true. And so, it does not much matter about me."

I am afraid those young ladies who like plenty of lovers, who expect to be adored, and are vexed when they are not adored, and most nobly indignant when forsaken, will think very meanly of my poor Fortune Williams. They may console themselves by thinking she was not a young lady at all—only a woman. Such women are not too common, but they exist occasionally. And they bear their cross and dree their weird; but their lot, at any rate, only concerns themselves, and has one advantage, that it in no way injures the happiness of other people.

Humble as she was, she had her pride. If she wept, it was out of sight. If she wished herself dead, and a happy ghost, that by any means she might get near him, know where he was, and what he was doing, these dreams came only when her work was done, her boys asleep. Day never betrayed the secrets of the night. She set to work every

morning at her daily business with a dogged persistence, never allowing herself a minute's idleness wherein to sit down and mourn. And when, despite her will, she could not quite conquer the fits of nervous irritability that came over her at times—when the children's innocent voices used to pierce her like needles, and their incessant questions and perpetual company were almost more than she could bear—still, even then, all she did was to run away and hide herself for a little, coming back with a pleasant face and a smooth temper. Why should she scold them, poor lambs? They were all she had to love, or that loved her.

One day, however—the day before they all left St. Andrews for England, the two elder to go to school, and the younger ones to return with her to their maternal grandmother to London—David said something which wounded her, vexed her, made her almost thankful to be going away.

She was standing by the laurel bush, which somehow had for her a strange fascination, and her hand was on the letter box which the boys and Mr. Roy had made. There was a childish pleasure in touching it, or anything he had touched.

"I hope grandmamma won't take away that box," said Archy. "She ought to keep it in memory of us and of Mr. Roy. How

cleverly he made it! Wasn't he clever, now, Miss Williams?"

"Yes," she answered, and no more.

"I've got a better letter-box than yours," said little Davie mysteriously. "Shall I show it to you, Miss Williams? And perhaps," with a knowing look—the mischievous lad! and yet he was more loving and lovable than all the rest, Mr. Roy's favourite, and hers—"perhaps you might even find a letter in it. Cook says she has seen you many a time watching for a letter from your sweetheart. Who is he?"

"I have none. Tell cook she should not talk such nonsense to little boys," said the governess gravely. But she felt hot from head to foot, and turning, walked slowly indoors. She did not go near the laurel bush again.

After that, she was almost glad to get away, among strange people and strange places, where Robert Roy's name had never been heard. The familiar places—hallowed as no other spot in this world could ever be—passed out of sight, and in another week her six months' happy life at St. Andrews had vanished, "like a dream when one awaketh."

Had she awaked? Or was her daily, outside life to be henceforward the dream, and this the reality?

IN ICELAND.

I.—GEYSIR.

1875, our steamer came in sight of Iceland. There was a peculiar effect of largeness in the view, the sky was so transparent, and the land

T had been blowing a gale from the south-east, heavier than any which had been experienced in the north since the new year, and the sea was still rough, though bright blue, when, early on a June morning of

on such a big scale, though its features were very simple. There was a wide shining expanse of rounded ice-mountains, with an occasional dark-green valley opening down to the sea, which generally foamed against high black cliffs; straight before us a huge square rock, called Ingolf's Head, stood conspicuously outside a narrow bay. We were a good deal to the eastward of the point usually first made, which was, however, very satisfactory; for, like most travellers to Iceland, I was drawn there by a special fancy; science brings some, and sport others, but the old Sagas had brought me. Now Ingolfshöfði, or head, was the first point of land sighted by Ingolf, the earliest settler in the island, and it was there also that the gallant Kari, the avenger of Burnt Nial, was wrecked, close by the home of Flosi the Burner. Kari went up to his house uncertain as to his reception, but although they had been for years occupied in killing each other's

relations, the claims of hospitality were paramount, and from that day they became the best of friends.

The weather was clear and bright, and we found it most enjoyable coasting along the shore, past the great wastes of the Vatna Jokull, and the arched rocks of Portland, and towards evening past the low lands where

the Markerfliot, or river, runs by several foaming channels into the sea, the scene of the fascinating Saga of Njal. On the other side, the Westmann Islands rose in high square black cliffs out of the sea, and beyond them whales were spouting; meanwhile, as evening drew on, the sky was again breaking into windy flaws, and then the south-easter tore

Reykjavik.

Tingvellir Vatn.

down upon us once more. Hitherto, though the voyage had been very rough, and most things breakable had been broken, all had been going well, and it had been pleasant and amusing. But now we began to realise the perils of the seas. The night grew dark, and the squalls of wind and rain effectually blotted out the coast, which all were anxious

to see, as there are no lights, and none of our ship's company had been there before, and there is only a narrow channel between Reykjanes Point and a dangerous reef which runs twenty miles out to sea. A fierce tidal current came running up against the ocean wave, which made a confused and savage sea; the water on our deck foamed

round masts and hatchways, and it seemed altogether like one of Cooper's sea-novels, more exciting than pleasant, till we were safe round the dangerous point, and thankful to tumble into even damp berths, till we woke to a sunny morning off Reykjavik, just a week out from Leith.

We were in a fine frith, the Faxa Fiord, bounded on the north by purple mountains, trending away westward, till fifty miles away the snows of the last of the range, Snæfell Jokull, glimmered like a daylight moon. Southwards, on rising ground, lay the little town, a far range of hills showing beyond it. Either Reykjavik has been somewhat slandered, or it is much improved; it consists mostly of trim little wooden houses, painted black and white, set in broad graveled alleys, and on the smallest provocation fluttering the red Danish flag from many roofs. There is no pier nor inner harbour, only some wooden jetties, but usually there is a fair amount of shipping in the fine roadstead. On one side are the turf hovels, the split fish spread over field and shore, and the vigorous consequent smell, noticed by several travellers. There is no regular inn, but the want of it is little felt by travellers with good introductions; the week that we spent there at this time was a series of hospitalities.

The first ride in Iceland was memorable to us. We rode in the evening to a lonely sea-inlet, where was a drove of two hundred and fifty ponies, destined for our steamer. A bevy of wild lads and girls, on bare-backed ponies, careered about, and all proceeded to drive them to Reykjavik. A splendid sunset lighted the Faxa Fiord and surrounding hills, and the brown stony waste over which we hurled, chasing and driving the ponies, who with their tumbling hog-manes and wild heads, neighing, kicking, and scouring here and there, were wonderfully picturesque. Then, by our watches rather than the sky, we realised for the first time in the north, that it was midnight, broad "daylight," but hushed and still; the little islands in the neighbouring sea were covered with ducks asleep on their nests; nothing stirred, though all was bright; red clouds lingered still in the north-west, and close by was the clear yellow light of dawn, where the sun would soon be up over the mountains.

After more than a week at hospitable Reykjavik, one lovely summer day we started for the Geysir. Every one goes to see Geysir, as it is only seventy miles from the town, so that the trip may be made during the nine days' stay of the post-ship; but as Geysir does not always

"receive," it may prove a disappointing expedition. We were fortunate in our guide, Mr. Oddur V. Gislason, a theological candidate, the experience of nearly three months' companionship being that the more we saw of him the better we liked him, and the success of our journey was greatly owing to his unfailing good humour, energy, and kindly care. He brought with him his comfortable little marquee tent, with divisions; we took—besides a tiny *batterie de cuisine*—some provisions, cork mattresses, plaids, and water-proofs, so that with the addition of a folding bath, we had good furnished apartments wherever we went. As we did not mean to hurry, we took only nine ponies this time, which gave us four to ride, three for baggage, and two relays; the fourth rider being Skuli, a youth who drove for us. And so on the 2nd of July we started gaily over the brown desert bordering Reykjavik. It has no beauty except the distant views over sea and mountains, this day exquisite in tint. The Salmon river, four miles off, was of the deepest blue, not less intense in hue were two lakes we passed further on; but for the extraordinary vividness of colour, the landscape reminded me of our Hebrides.

The glory of Iceland is its colouring; with considerable experience of the finest scenery in Europe, I could not but feel that even Switzerland, unless perhaps above the constant snow line, is not so clear and glittering; Italy, with a stronger light, has not its peculiar purity, and Scotland, after it seems toned down with a damp sponge. The forms of Icelandic scenery are, however, more curious than beautiful, though they had for me a weird fascination. There is often great width of contour, the hills are in long hummocked masses, with perhaps a volcanic cone suddenly breaking the outline; there is a sort of disconnected, uncombined effect about the landscape, easy to perceive but difficult to describe. Trees would not suit it, and its wistful melancholy grandeur is partly, no doubt, owing to the absence everywhere of enclosures, square fields, roads; all lines, indeed, save those curves which nature never draws amiss. The road, when there is one, is generally a mere product of the hoofs of a hundred generations of ponies, sometimes worn into a deep ditch or hollow way, sometimes branching into a dozen little tracks, just large enough for their small feet, and it needs some practice to choose the best line. It is merry riding in the pure light air, the loose ponies rattle on before, constantly one or another strays off after some fancy of its

own, and has to be chased back by the drivers, who, dashing up and down, cracking their whips and shouting, adjuring the ponies by name to keep the path or beware of the dogs, make the cavalcade lively; and the way must be bad indeed to reduce it to a walking-pace, which always causes the loose ponies to stray more. We usually rode at a steady trot, but with many little halts, now to adjust a box, now to mend a rope, or perhaps to bait our little steeds on some choice bit of grass.

The evening had grown cloudy when we suddenly came to a deep cleft and rough rocky steps leading downwards; this was the well-known Allmanna *gih*, or rift, a long split between two lava precipices. We came out by a side opening into the solitary grassy valley below, the celebrated Tingvellir, all unchanged since the days of the old commonwealth; it seemed still ready for the booths of the freemen who flocked here of old from all parts of the island for their annual parliament. The only buildings are the little timber church across the river, and the low turf-house of its parson close by. We hurried to the church, eager for coffee and supper, after our seven hours' ride. It may seem at first somewhat sacrilegious to sup in a pew and sleep in a church, but when my friend and I had shaken down our cork mattresses and plaids on each side of the altar-rails, we thought it looked fairly comfortable, and could not but approve of the custom of giving the best buildings in the land everywhere to the church, which in its turn lends them to strangers like ourselves.

The weather was unsettled, so we lingered all next day at Tingvellir; rain came on in the evening, and continued till noon the following day, when we started up the mountain track, and thence in three hours descended into the green valley of Laugardalr. We rode close under wild impending mountains, where black crags and red corries contrasted with tracks of most wonderfully green moss; on our other hand a lake lay in a wide plain, far-off rivers shining in the distance below a range of misty hills. We had been riding among the mountains again for an hour or two before we reached a wide river swelled by the recent rains, the Bruar-á, or Bridge River—bridges being very rare in Iceland. Midway across this stream its broken waters fall foaming into a deep cleft in its rocky bed, and over this a few wet planks were fixed, the ponies marching over them unhesitatingly midway in the deep ford. The turbulent river, with its clear flashing waters

rolling down among the dark lonely hills, delighted me; had it been a little later in the season we would have camped there, and tried the fishing; but as it was we rode on to the church of Utlið, which we reached in the clear twilight of eleven P.M. The church was as small as it could be, and half full of wool already; but we took the rest of it, and there some courteous damsels soon served us with coffee, good even for Iceland, and there we slept hardly less quietly than the dead folk just outside.

It rained in the morning, except when it was blowing very hard indeed; so, after breakfast, we went over to the neighbouring *bar*, or farm-house, and into a cavern called the Eldhus, or kitchen, where, with patience, a person who can stand steadily on one foot may dry the other over the few sticks that, crackling between two rough stones, count as the kitchen fire. Nice people were there, who made much of us, and gave us excellent cream. About one it cleared up, and we cantered off merrily, sometimes over sound turf, but sometimes plashing through bogs, which had drunk so much rain that I feared they would swallow us down as something solid. At length we came out from the hills on a sloping plain, which, except where one snowy peak showed beyond it, melted into misty distance. Near us it was dotted here and there with clouds of steam rising from the ground. We rode over the soil blasted by sulphurous vapours to the farthest and biggest of these clouds; and this was Geysir, and here we dismounted on a bit of greensward, and prepared to pitch our tent. This may not read as if the place were pretty, nor was it; it looked odd and perhaps a little mean; but then the lamps were not lighted. Soon we found much that was curious. Hunger impelled us to the accredited kitchen, Blezi, which is a pool like a wide, deep crevasse in a blue glacier; the boiling water is so exquisitely pure that the silica rocks below become bright blue through its medium. To Blezi we confided a joint of lamb, a tin of preserved fowl, and a fish, tying them in strings and lowering them. I regret to say he swallowed our fish; the string breaking, we beheld it deep blue in the depths, and no doubt it is now a petrification. Round the margin of this pool ran a charming fretwork of petrified leaves, chiefly silverweed; many we took away, but, like fairy-money, when we unpacked them they were dust.

The crater of Geysir is a mound of silicious rock, which has been aptly compared to an inverted oyster-shell. The pool is about sixty-

five by fifty-five feet in diameter, and there the transparent water simmered quietly, looking perfectly incapable of any such frisky proceeding as springing into the air. Strokr, another hot spring that boils and tosses angrily some way down a deep pit about eight feet across, looks far more violent and flighty, and some of the other smaller springs also boil furiously close to the surface. Others only make a perpetual, dull, thudding noise below, as if the dwarfs were forging metals at the subterranean fires: others, again, look quite quiet and limpid, and lie in little fairy arches or caves of greenish moss, where bright flowers and little delicate ferns nestle in a southern climate. Excellent hot-houses might be made here, and grapes grown to supply the island. As it is the farmer, who owns the land and charges a trifle for the tent-stance, finds it not worth while to put up a hut in the wilderness for the few travellers, who must, therefore, bring a tent, or wander about all night. Three such homeless beings rather disturbed our first night in the tent; they were Icelanders, two girls and a youth, who beguiled the time by singing and talking, and causing Strokr to explode at the dead of night, with thundering, hissing, and roaring. I was lazily glad to hear it was only Strokr, who would doubtless give us an eruption whenever we wished; so there was no need to turn out. Next day the weather was lovely, the lamps were lit, and all was transfigured. The distant snow-mountain gleamed with opal lights, the ferruginous soil and dark colouring of the near hills were glowing reds and rich purples, and the boiling water-jets seemed like handfuls of diamonds tossed into the sunny air. We now had the desert all to ourselves. We strolled about as far as the river would let us; we bathed, and dried all that was wet, and cooked an excellent dinner. Moreover, we cut a pile of turf and flung it into Strokr, and in about twenty minutes the fountain hurled up to a great height, I suppose eighty or ninety feet; again and again it leapt into the sky, flinging down mud and pebbles, and our turf thoroughly boiled. After nearly an hour, when we thought it was all over, we were startled by the most beautiful jet of all, because the purest, the water having partly cleansed itself from the mud.

About six o'clock P.M. a low subterranean thunder made the ground shudder, and Geysir rose a little in the centre in a pure white jet glittering in the sunshine, in size and form like a veiled white woman, remind-

ing one of Fouque's "Undine" rising from the fountain. It gently subsided, and the water brimmed over the basin and ran down the rocks. That evening, one of the loveliest sunsets I ever saw made the whole sky blaze with splendid hues, which were variously reflected in the strange water-springs. Even when we lay down in our plaids about midnight, we could not persuade ourselves to close up the tent, so warm was the daylight night, so brilliant the sky. Gislason stood on the edge of the crater, and invoked Geysir by all sorts of adjurations, ancient and modern, from Odin onwards, to appear. Finally, he threw in a silver coin as a bribe, and counselled us to be on the alert. So twice in the night when, the underground thundering round us, we all ran out only to see the wan white figure rise and fall again, but we remarked it had grown taller. It was morning when the warning cannon went off again, and this time, after the eight-foot rise, the fountain did not subside. With a booming roar, not a mere central jet, but the whole of the water to the very edge of the crater, rose majestically in a great massive dome higher and higher, till it was lost in steam in the sky. The height was said to be about a hundred feet, but what with the noise and the steaming, the wind swaying the column to leeward, and the torrents of hot water that were pouring down one did not know where next, I was thankful to be unscientific, and to confine myself to looking and running out of the way. The water sank and rose again five or six times, the later eruptions being lower, and the whole commotion subsiding by degrees, till at last all was calm, and there was not a drop of water left in the crater. When it was cool enough to walk on, we went to the brink of the well in the centre, and could only just see the boiling water tossing far below.

The weather had now become cold and rainy, so we lounged in the crater, enjoying the comfort that can be derived from sitting on a hot oven under a cold shower-bath. Moreover, Gislason found the blackened piece of silver, which, from its position, had evidently been erupted, and now it decorates my watch-chain as a memorial that, like some other Icelanders, Geysir refuses all payment from travellers. The water gradually filled up the crater, which by evening was brimming over, and the ground began to throb again; all the springs seemed in mad commotion; in fact, it was a general boil over. It rained heavily, but the time passed cheerily in our comfortable little tent, where the boxes

served as tables. We cooked, and drew, and sang, and read Icelandic till night, when it continued pouring, so it was fortunate the tent was a dry one. Twice Geysir called us in the night, but only the white figure rose, who seemed to me now a witch of the worst kind as I waded through lukewarm water to see her. But we could not miss the chance of seeing another grand eruption. Rain in the morning. Our tent was heavy with moisture, everything had got wet the evening before, and nothing could be dried; so all was damp but our spirits when we started to ride, under slashing rain, through wet morasses, back to Tingvellir. It cleared up after awhile, but the sun was still watery, and had no drying power. It was pleasant dashing along the green valley by Laugvatn, where we were joined by a rural dean on his visitation tour, mounted on a very clever pony. At the neighbouring farm, where we halted to rest, we were told that the road further on had become almost impassable from the rain. Nevertheless we pushed on, diverging from the usual track to visit a very curious extinct crater called Tintron. The black pit of unknown depth is arched over by reddish-coloured lava of the most grotesque forms, and it lies isolated in an ashen plain near a range of cinder crags. The road, when we reached it, was a mere ditch of yellow water rising to the stirrups, flooding lava boulders about the size and shape of bolsters; but the ponies felt through the thick water for the lava with their little feet, and seemed never at fault. Rain again before we reached Tingvellir at half-past ten; the people had gone to bed, and I thought the church key would never come as we stood at the door, battered by wind and wet like outcast spirits. But here it is at last, and coffee, never more welcome.

It shone brilliantly during the three days which we now passed at Tingvellir, with which we were charmed. Seldom indeed does a place visited for its historic interest so fulfil all expectation. For nothing here is changed. Names and places are all unaltered, and the old sagas are living realities, and our best guides about these solitudes, which seem waiting for the return of the ancient heroes. The grassy valley lies between two long cliffs of lava; the one to the west is split up again into a deep rift, forming a green fairy valley only a few yards across, but more than a mile long; and at one point the great Ox River flings itself over the western crag in one broad fall, and, after a short course in the rift, breaks

out into the broader valley, and flows gently down half a mile to the lake. This lake, about twelve miles long by ten broad, with a fine mountain barrier, is strangely lonely. No sail animates its surface, no houses dot its solitary shores; it is left to the swans and wild ducks, and at this time to ourselves, to enjoy alone. Parallel to the great rift, another long chasm has split up the opposite lava cliff, leaving a wall of rock running up the centre. This is the place whence the laws were promulgated of old, the Lögberg. Here, as you sit on the long grass, facing the lake with mountains all round, you have on either hand a straight cleft, down which you look thirty or forty feet into clear dark water twice that depth, reflecting the overhanging rocks with their lichened greys and greenery, and flowing, like Dante's Lethe,—

"With a brown, brown current,
Under the shade perpetual which never
Ray of the sun lets in, nor of the moon."

These chasms, into which the river flows by a subterranean inlet, quite isolate the Hill of Laws except at one narrow neck of land. To be sure, at one point the rocky walls approach within eighteen feet of each other, and here, according to ancient tradition, Flosi, the burner of Njál, and leader of his enemies, jumped over with his foes behind him, and Lord Dufferin wished to jump over also, not to be outdone by an Iclander. Looked at in cold blood, there is a most awkward, narrow rocky shelf to alight on; but Flosi perhaps had the advantage of being in a fright. Old lava lies for miles round Tingvellir, it is all split into fissures and chasms, but is full of pretty details from the luxuriant growth of bog-myrtle, crow-berries, blaе-berries, wild thyme, and flowers; here and there a cleft or pool of pure deep water opens in the rocks. The variety of the place is one of its many charms. It seemed wonderful that we should have it all to ourselves, wonderful that there should be no house for miles and miles round, but the tiny parsonage. There are many stone foundations left of the booths, that used formerly to be built by the people who flocked here for the annual *alting* or parliament; and in front of the church is an old stone marked with the standard measures, and supposed to date from the tenth century.

The sun was very hot during our stay, but there was always a pleasant crispness in the pure air, and each night a splendid sunset lit the sky, the lake, the cataract, and the snowy and purple hills, with a blaze of changing colouring.

It was with quite a wrench that we tore ourselves away from the valley on the 12th of July, bound for Reykjavik, by a longer and more interesting route than the one we had come by. The weather continued beautiful. The riding was good, and much of it over sound turf. We halted in a green pastoral valley near a pretty little rocky lake. In the evening we reached the parsonage of Rennyvellir, and found the bachelor-parson who received us, as we supposed so occupied with his outside farming, that he could not attend to the inside of the house, which suggested the hole of an untidy rabbit—much magnified. Yet he had a large household, and was draining his fine pasture-land scientifically into the pretty river which runs through the valley. We improved the guest-room by taking out the whole window, frame and all, as it was not made to open; and we longed further to improve it by turning in the stream. Here, however, was a good collection of books in Latin, Danish, English, German, and Spanish, all of which seemed familiar to our host.

Next day a strange little mounted funeral procession came up through the lonely grassy valley to the church, some seafaring men bringing two drowned sailors in coffins, balanced on the backs of ponies. First the people sang in the church, the clergyman in his ruff and gown standing by the altar; then they dug the graves, and then followed a service in the churchyard, much resembling the Anglican funeral service, especially I re-

cognised the burial ritual of "Earth to earth." All this lasted very long, and as it was not considered respectful to go till it was over, we did not start till four o'clock. Then we cantered up a wild valley between bare, scarped hills, and thence over a bright green bog, filling up another dark valley. I have always stood in awe of bogs, and there was a size, depth, and brilliancy about this one which seemed to me almost sublime; but I had not then ridden over Myra (or mire) Sysslu. Following our guide closely, we did pretty well, but a straying baggage pony stuck fast for some time, kept only by his boxes from sinking altogether. We halted for awhile, under a pass over a spur of the mountain Eysa; below rushed a great river, heavy with melted snow; the dark mountains on either side had a good deal of lingering snow in their black ravines, there was no touch of vegetation, except some vivid green moss, and all looked very savage and arctic. The pass, though short, was a steep zig-zag, and from the top a wide expanse of hill and sea was seen, with strangely-shaped rocks in the foreground. Down we rattled, careless of the steepness of the way; indeed for the last few hours we rode at a good canter or hand gallop, sweeping the loose ponies before us, nothing loath as they were going home, all the way to Reykjavik, where we arrived at 10.30 P.M., glad for a few days at least to return to the comforts of civilised life.

E. J. O.

SKETCH OF A JOURNEY ACROSS AFRICA.

By VERNEY LOVETT CAMERON, LIEUTENANT ROYAL NAVY.

PART II.

TAKING up my journey again from where I left off last number, we left Kawélé on the 13th of March, 1874. I could not get away till past one o'clock; as my people spent the beads, which had been given to them to buy food, in getting drunk, I had to wait until they were sober, and we only made a short distance, camping a short way south of Jumah Merikani's permanent settlement at Point Infomdo.

Jumah Merikani (properly Jumah ibn Salim) is one of the largest traders to the west of Lake Tanganyika, and was the second or third that ever went into Manyúma. I had a waggon-roof awning over the stern of the boat, and made my bed up under it,

so as to prevent the trouble of pitching and packing up the tent every day.

The next day we passed most lovely country, with red cliffs and the trees hanging over the edges, which were reflected in the beautiful clear water. Had to stop for two or three hours to patch a hole in the boat's stern, and had dreadful difficulty in getting the men to go on again.

In the evening after we camped I was knocked over by a very sharp attack of fever, and had to halt a couple of days until I got better. Soon after leaving the camp we passed the mouth of the Malagarazi, the current of which was perceptible a long way off the land, and after a short day's work

camped at Ras Kibwé. In the night there was a thunderstorm, accompanied by a little wind, and my men were all afraid to start next morning because of a very slight surf and swell, so that we did not get away till the middle of the day, and even then I had to give in to them after an hour's pulling, and camp at Machachézi, where we found three canoes belonging to Wajiji, who were going south to sell goats and corn for slaves. The country all round here is now depopulated, as for many years the Arabs and Wanyamwesi drew their principal supply of slaves from this district, and the population have either all been carried off into captivity, destroyed in the forays of the traders, have died of disease or starvation, or emigrated to some less disturbed locality.

On the 19th of March we passed Ras Kabogo, a sort of double cape supposed to be haunted by a devil and his wife, and my Wajiji guides refused to pass without making an offering, as they were afraid of being lost if they neglected it; but he must be a very poor devil if he was satisfied with what they gave him.

After Kabogo we went round a bay, where Livingstone and Stanley left the lake, between it and Ras Kungwé. The shores of the bay were mostly low and marshy, but high hills spring up close beyond. In this bay we saw a few natives, and a large village of slave and ivory traders from Usukuma, one of the districts of Unyamwesi. Several rivers flow into the lake, but most of their mouths are hidden by the Matété grass; however, the herds of hippopotami are always numerous near to them, and point them out. The reason, I believe, why hippopotami are usually more frequent near the rivers than elsewhere is, because the current brings down a quantity of mud which is deposited near their mouths and affords soil for the growth of the weeds on which the animals feed. No hippopotami are seen more than a mile from the shore or in very deep water.

On the 23rd of March we rounded Ras Kungwé, formed by a bold mass of mountains, down the sides of which torrents fall in lovely waterfalls, and occasionally we saw a few patches of Mtama belonging to some of the wretched remains of the inhabitants who have taken refuge in the more inaccessible parts of the mountains to be more out of the reach of the slave-traders.

In the evening we camped near a village called Kinagari, where the inhabitants were principally dependent on the slave trade for

support. The Wajiji, who rounded Kabogo at the same time as ourselves, sold their cargoes of corn and goats and oil for slaves here, the price of a slave varying from three to four goats, according to quality. We had to stop here a day for my men to pound corn, and I went up to see a dance in the village; they made pirouettes, turned summersaults, &c., to the accompaniment of a big drum, which was vigorously beaten by a man who wore a remarkably hideous mask of zebra-skin, and howled a sort of recitative describing the Wazungu and others.

During our nights here we were very wretched, owing to heavy rain and thunderstorms, which wetted us all through and put out the men's fires. About twelve o'clock on the second night the rain was so heavy as to nearly swamp the boats, and a flash of lightning came down so close that I thought we were actually struck. The glare was intense, and I was quite blinded for some minutes. The cause of this especially heavy rain here was the attraction of the mountains, which almost overhung us. In the morning there was enough sun to dry most of our kit, and we got on a short distance in the afternoon.

On the 26th we passed a small island, and directly afterwards camped, as a little wind and rain came on, and frightened my gallant men. They said at every squall, "Lake bad; canoes will be wrecked;" and get them on I couldn't. The Wajiji, who have lived all their lives either on or close to the lake, were just as timid; they used to bring me their hire, and say, "Let us go back; we don't want to die," and the trouble and bother they caused was almost indescribable.

The lake here seemed to turn to the south-eastward, and look as if it were coming to an end; the land on our side close to the shores became lower, the hills near the lake being low and rounded, and not running more than two hundred feet or so above the level of the water; the country was very fertile, and would, I fancy, form a splendid position for a mission-station.

On the 28th we came to the island of Kabogo, and pulled between it and the mainland through a broad deep channel, which had bars at each end. The island was thickly populated and well cultivated, and both on it and on the mainland were numerous fan-palms, of which the people eat the fruit, though they have not found out how to make palm-wine; they are quite contented with pombé. Gulls, darters, lily-trotters, and other waterfowl, were nume-

rous, and the natives sold us some fish in exchange for palm-oil, which we had brought from Ujiji with us.

The chief lived on the mainland in a large

fenced-in village. In order to land we had to force our way through a mass of weeds and canegrass; there were passages through which the small canoes of

Mountains near Ras Kungwe, Lake Tanganyika, named Victor Emanuel Mountains.

the natives could pass easily; but our large boats from Ujiji could only be got along by dint of much hauling, shoving, and tugging. The grass and canes were so thick, that as we beat them down on each side the men

could get out of the boats and stand on them.

At the chief's village I found a half-caste Arab trader, who had come here by land from Unyanyembé to buy ivory and slaves.

He bitterly lamented the high price of the latter, having to give forty yards of cloth for a man or woman, and twenty or thirty for a child. Ivory, however, was cheap—thirty-five pounds

for fifty yards of inferior cloth. He seemed to be afraid of going back the way he came, as the Warori were out, and had stolen some cows sent as a present by the chief Un-

Crossing Luama River.

Nyangwe.

yanyembé to his son-in-law, the chief here. He at first wanted me to take him with me; but in the long-run decided to remain, as his porters were more afraid of the lake than of the Warori.

XVII—34

We went on from here, passing some more rivers and high cliffs, on the face of one of which I saw an outcrop of coal and patches of marble and chalk, beside the usual granite and sandstone. Our camps

often now had to be formed in places beaten down by hippopotami in their nocturnal rambles; but our fires kept them from intruding on us. The frogs used often to keep me awake at night with their croaking: some make a noise like caulkers or riveters; some of the larger kinds resemble smiths at work, whilst a rarer one makes a noise like a ratchet-drill, so that with a little imagination one could shut one's eyes and fancy oneself in a busy dockyard.

On the 2nd of April we put in behind a spit on account of a sharp squall; there were a few huts on it, and across its junction with the mainland a heavy stockade, with a crow's nest over the entrance. There were a few fires burning when we landed; but the people had all cleared out as soon as they saw the large boats, fearing a visit from the slaves of the Arabs, for they, when away by themselves, are far worse than their masters, as they have no thought, as to what the effect of their indiscriminate plundering and looting may be hereafter.

On the 3rd of April we camped close to the mouth of the Musamwira, the drain of the Likwa lagoon. The lake here is washing away its shores rapidly, and where, a few years ago, were flourishing villages, are now only shoals, spits, and sandbanks, on a few of which some fishermen have their huts. Many very large cages were lying about, which are used for catching fish; but we could get none, although I offered a high price, as I had had no meat, fowl, or fish since leaving the island of Kabogo.

Many points and bays, and the scenery lovely. Sometimes we had a fair wind, and made sail; but whenever a squall came on there was almost a mutiny amongst my men if I did not lower it. Not only were these beauties afraid of squalls, they also funked going any distance from the land, always wishing to hug the shore as closely as possible, and thereby running great risks, as there are many half-sunken rocks in this portion of the lake.

On the 7th of April we passed Ras Mpimbwé, a promontory formed of enormous blocks of granite and conglomerate, scattered about anyhow, as if the Titans had been playing at building a jetty or breakwater. The cracks and crannies between the masses of stone had got filled with earth, in which large trees were growing, rendering the scene one of striking beauty.

The part of the lake we were now passing had many small islands, and the rocks in several places were of most extraordinary

shapes—one pair especially. They were from seventy to eighty feet high, with sheer smooth sides, except where the granite had scaled a little.

Very little trade comes beyond this part, where there is a ferry from the Makakomo Islands to the western shore, the southern part of the lake being an *agua incognita* to all the Arabs whom I met, though they have some routes which go a little to the southward of it altogether. Owing to there being no communication with the outward world, no European cloth finds its way here, the people being dressed in skins, bark-cloth, and cotton of native manufacture. This native cotton cloth is very coarse and heavy, like a superior sort of gunny-bag, and the commonest pattern is a sort of large shepherd's plaid, white divided into large squares by black lines. All, of course, have the fringe, which seems inevitable in African work. The country of Ufipa, which we were now passing through, used to be rich in cows, and even during Dr. Livingstone's journey from Unyanyembé sheep and goats were plentiful; but now the Watuta have destroyed every head of large cattle, and sheep and goats are very rare and dear.

After Ufipa we came to the country of Masombé, where villages were few and far between, and the people were afraid of all strangers, as the Watuta were about in numbers, and every new-comer was suspected of being in league with them. We here came upon a different formation in the cliffs; they were composed entirely of innumerable small strata, looking like courses of brickwork, and were worn and weathered into fantastic forms and shapes, reminding one very much of ruined buildings and ramparts.

On the 18th of April we arrived at Kasangalowa, a large village in Ulungu, the country which forms the southern boundary of the Tanganyika. Kasangalowa we found in the possession of the Watuta, and although they are regular robbers and blackguards, they were very friendly to us—as, indeed, I believe they are to all caravans. The Watuta require a passing remark, as they are a peculiar people in Africa. Originally they were a nomad tribe who lived by plunder of cattle; but now they are recruited from the off-scouring of all the tribes of the part of the continent they infest; not content with cattle-lifting, they also steal slaves, and everything else they can lay their hands on. They are the same as the Mazitu of Livingstone, and spread from the east coast to Sekéléu's

country, travelling about in quest of plunder, and universally dreaded by all other tribes. They enlarge their ears like the Wagogo, and wear peculiarly cut aprons of skin, which expose the upper part of their buttocks.

Leaving Kasangalowa, we crossed the lake about twelve or fourteen miles from its southern end, which is hemmed in by a high tableland, the edges of which overhanging the lake form some of the finest cliffs in the world. Elephants were very numerous about this part of the lake, and one night the trees round our camp were regularly polished by the creatures rubbing up against them after bathing in the blue waters of the lake. On the 22nd of April we arrived at Akalunga, the village of Miriro, the chief of Marungu. Here we found a good many Arab slaves and freedmen for trade; they have come from Unyanyembé without going near Kawélé, having crossed the Tanganyika at the islands of Makakoma.

Bananas, cassava, beans, &c., were plentiful here, but I could only get one wretched goat for about twelve yards of cloth, which made me very angry, as I had been hard up for meat for some time.

The chief Miriro was a very old man with a large white beard, and his moustache and whiskers shaved off: he is much fairer than most of his subjects. He was a very big chief, according to his people and those from the coast; although he got a very good cloth from me, he gave me nothing in return; and when he came to return my call began to beg for guns and powder, which I fancy he did on the instigation of the traders. However, though stingy and avaricious, he was civil, and said that the day on which the first white man had visited his place would always be remembered as a great era.

From Akalunga we went away north with slashing fair winds, mountainous hills rising straight out of the water with roughly-formed terraces on their sides, the people employed about their cultivation looking like flies on the side of the wall. One day, passing close in to the shore, I saw a couple of gorillas amongst the trees; but we passed them before I could get my gun ready, and when I put back to try for a shot I found that they had disappeared. They were great big fellows, and looked larger than men. The natives say they build a hut every night and make a regular bed-place to sleep on; but they laugh at them and call them fools, as, if caught in the rain, they do not go to their comfortable huts for shelter, but sit cowering out in the open with their hands clasped behind their necks. One or two Arab traders, at different

places along the coast, told me they could get thirty-five pounds of ivory for forty yards of cloth, and a good slave for twenty.

On the 28th of April I got into a deep sort of inlet perfectly landlocked, where I had to wait a day for the *Pickle* to come up, as the men in her had been frightened by a stiff breeze the day before, and had put in to a village early in the morning. Here I found a large Arab camp, and two very big boats hauled up under a shed; one pulled eighteen and the other twenty oars, and both were fitted with masts and sails. They were the property of Jamah ibn Salim, who was reported to be away in Itawa (Msama's country), trading for ivory. In the afternoon, just as I was going to send the *Betsy* back to look for her, the *Pickle* arrived, the men protesting that they had not been able to come on the day before. Next day the men all wanted to stop, and we did not get away till late, and could not find a camping place till eight P.M. As it was so late, I did not have my tent pitched, trusting to the look of the blue sky for the weather, but was bitterly disappointed, as about two A.M. it came on to rain in torrents, and in the morning we were all very much like drowned rats. After the things were dry I ordered a start, when all the men refused to go on, and Bombay was useless, saying he could, and that the men would, do nothing. I by force of driving, however, got them away, and a short time after we had got outside found out the reason of their reluctance; a shooting party belonging to Mohammed ibn Gharib was camped near, and my people had seen some of them and wanted to have a yarn; their canoe put out to have a talk, and I found they had been away from Ujiji for six months, but had only got a very little ivory, and that the next day they were going to cross over the lake on their way back, all their stores being exhausted.

On the 12th of May we reached the country of Uguhha, but only put in at the village of a chief called Luluki, to have a look at a reported hot spring. I had a hot and tiring walk, and my feet being very sore, it was rather nasty work getting to it. The temperature of the water when I got there was 96° Fah., but I heard afterwards that sometimes it was nearly boiling, and that people had been scalded by it. There was a small spring of gas under the surface of the water, which made it keep on bubbling up like soda water.

Two days after this I discovered the Lukuga, a largish stream going out of the Lake. I went down it about five miles, and

was then stopped by the floating vegetation; the river there, however, was from three to five fathoms deep, and a current of about a knot an hour set us strongly into the edge of the grass. This river Lukuga flows out in the only break in the line of mountains and hills by which the Tanganyika is encircled, and according to all descriptions joins the Luvwa (Livingstone's Lualaba) a short way below Moero.

Having found the outlet of the lake, my next idea was to follow it to its junction with the Lualaba; but I was obliged to go back to Ujiji to get the men and stores I had left there, before I could again start west. When I arrived at Ujiji I found that the greater portion of my stores had been wasted or stolen, and could get no account of how they had gone, and was therefore obliged to buy more to prevent future starvation. My donkeys were reduced to four, and they were not fit for the road, so I sold them for what they would fetch.

I found it utterly impracticable to follow the Lukuga, as none of my men would go anywhere without a guide, and as no one at Ujiji had ever been to the Lukuga. I could not get one, and had to avail myself of the services of a half-caste Arab, Syde Mezrui, to show me the road to Nyangwé. This fellow at first made professions of doing everything in his power for me, and promised to obtain canoes when I got to Nyangwé, in which I might follow the river to the sea-coast. Whilst at Ujiji I received letters from home, dated the 1st of July, 1873, which had passed through some curious vicissitudes on their journey from Unyanyembé. They were sent on by the Liwali there by an Arab caravan, which was attacked and dispersed by some of Mirambo's people, and those who escaped abandoned everything, including my letters. A short time after another caravan was attacked by the same men, but beat them off, shooting two or three, and on one of the dead bodies they found the packet of letters.

I now discharged such of my men as were afraid or unwilling to proceed, and after packing up a map of the Tanganyika and the journals, and a map of Dr. Livingstone's which I had found at Ujiji, in the possession of Mohammed ibn Salih, and some other small things, and despatching them to the coast in charge of my servant and two other men, set out for Kasengé on the west shore of the lake, in company with Syde.

Our journey to Kasengé was uneventful, except that the night during which we

crossed from the east to the west it came on to blow hard, and we had heavy work to reach the island of Kivisa, near the landing on the main, in the *Betsy*; and the *Pickle* got to leeward altogether, and had to put in at Kigoma and wait till the weather moderated before rejoining us. We left the shore of the lake on the 31st of May, and the same day reached Ruanda, the chief town of Uguhha, which was very populous. The people formed a regular lane all the way through the town; and, to add a ridiculous feature to the scene, an unfortunate sheep, not being able to find a way through the crowd, trotted along just in front of me, ba-aing the whole time. At Ruanda I got extra porters to carry some of my loads, as the men of the caravan were all out of condition on account of having been so long without marching; and I also bought some goats, as they were cheap and plentiful. The chief at Ruanda was supposed to be a great swell, and said he was independent, though I afterwards found that he was feudatory to Kasongo, the great chief of Urua.

The day after leaving Ruanda, which we had to do without any extra men, we crossed the Rugumba, a largish stream flowing fast and swift into the Tanganyika, and with many small particles of quartz glittering in the sunshine, brought down from the mountains of Ugoma, which ended abruptly on our right. On this march, one of my men, in crossing a small watercourse, fell down, and one of the sticks forming the cradle for his load ran into his eye, destroying it completely. Owing to this, and illness of other men, I had to engage more men for part of the road, as the lazy askari would do nothing to assist the pagazi in their work.

We then made a march of four or five days, along the watershed between the Rugumba and the Lukuga, passing many streams going towards both, and arrived at Mékéto, a fertile vale, and a scene of almost perfect rural beauty. On our journey here, from the top of a high hill I had my last view of the Tanganyika, its glorious blue showing out against the purple of the mountains of Kowendé. From these same hills we could see the trend of the valley of the Lukuga, which apparently was going to the west-south-west.

Whilst at Mékéto, to spoil one's appreciation of the scenery, a wretch of a slave dealer brought a small boy of seven or eight years old into camp for sale. The poor child was crying bitterly, and his master had him confined in a slave fork, one end of which he

held in his hand, and twisted and shoved the poor boy about cruelly. I felt very much inclined to thrash the master and set the slave free, but I knew that directly afterwards he would be worse treated, and therefore contented myself with turning the dealer in human chattels out of the camp.

Leaving Mékéto, we passed through a moderately hilly country, crossing a tangled quantity of streams which it was very hard to sort into their right basins, and just as we left Uguhha and came into Ubúdjwa we came upon the Rubumba, a stream which rising close to the Rugumba is often confounded with it, though the Rubumba falls into the Luama and the Rugumba into the Tanganyika.

The Wabúdjwa are also tributary to Kasongo, and the chiefs and upper classes are, I believe, originally of the same race as the Waguhha and Warua. The lower orders, however, are very different. One of the most striking peculiarities of the women of Ubúdjwa is the custom they have of piercing the upper lip, and in the hole inserting an oval stone, or piece of wood, or bone, which they keep on increasing in size till it sometimes, in the lesser and greater diameters, attains to 1.5 by 1.25 inches. This sticks out in front and gives the wearer the appearance of having a bill like a duck when seen in profile, and prevents her from speaking plainly. Another peculiar habit is that of wearing leather bolsters, made tapering from centre to end like buffaloes' horns, round the waist. Sometimes a dandy lady will wear two or three of these peculiar vestments, though it cannot be for decency, as the barest requisites of what is considered indispensable with most people are scarcely complied with.

Some wear, instead of these bustles, belts split in the rear into two or three parts, where they serve to keep up a small piece of leather about twelve inches by eight, which with the belt and a smaller patch in front constitutes the whole of a lady's dress, with the exception of a few indispensable articles such as anklets, bracelets, and necklaces.

The largest chief in Ubúdjwa was Pakwanywa, close to whose village we stopped a couple of days. He and his wife came to visit me, and although her clothing was scanty in quantity, she was very dressy in her get up, her apron being ornamented with beads and cowries. She also wore gaiters and bracelets from wrist to elbow, tassels just in front of her ears, and several necklaces, all of good beads. Her hair was done up in

a pretty fashion, and ornamented with bright steel and copper ornaments, and across her forehead, just below the roots of her hair, stripes of red and yellow were carefully painted. Altogether she had a very effective appearance, and seemed fully conscious of it, though at the same time she was a ladylike merry body.

Whilst here we heard that a large body of Wamerima and slaves of Syde ibn Habib were close in front of us, and that they were waiting for us to come up in order to make a formidable body to cross Manyéma. This I was very sorry to hear; I should much have preferred travelling alone, as the traders in these parts are apt to take advantage of the natives having no guns, and to allow their men to steal and pilfer from the huts, often causing rows which I had no desire of being mixed up with. I, however, had no choice, as it was intended as a civility, and if I had refused, the natives would have said that we had quarrelled, and, therefore, very likely have attacked one party in hopes of the other joining them; so that I was on the horns of a dilemma.

Two days after leaving Pakwanywa's we arrived at the camp of the other caravan, and were warmly welcomed by Muinyi Hassani, who was the principal trader in the party, although afterwards we did not get on over well together. The next country after Ubúdjwa was Uhiya, where the people wore on the back of their heads enormous leather chignons, with a piece like a tongue sticking out behind, and indulged in tattooing in irregular and diversified patterns. On leaving Uhiya we began to get into a hilly country, the commencement of the offshoots of the Mountains of Bamarré. Here we came into a second country of Uvinza, and different methods of personal decoration: the people pierced the centre cartilage of the nose and ran straws through, and worked their hair into ridges and tufts, with small plaits along the tops of them. Wood carving was here carried to greater perfection than I had yet seen, and clay idols were common outside the villages. Many of the villages had been lately deserted, and I believe that some large party of traders had had a row there, as they could not have been left for what is a very common reason, viz., the exhaustion of the soil near them, as the vegetation was luxuriant close to huts still in good repair.

A very hilly road took us to Rohombo, the first district in Manyéma according to the people, though geographically and ethnologically Manyéma proper can only be said

to commence on the northern side of the Bambarré Mountains. The population here was very dense, and the roads were lined by black crowds who had turned out to look at the strangers, and especially at the white man. Oil palms were very numerous at Rohombo, and the natives made palm wine from them, which, when fresh, is very good and refreshing, reminding one something of ginger-beer. They climb the trees with a belt made to go round the tree and themselves, something like the Tamils in Ceylon. Salt was in very great demand here, all that the people get being brought from Ujiji by the traders, as since the Arabs have come here the Warua, who used to do the trading in Manyúéma, have deserted it. A man would cut and bring into camp a large load of firewood for a pinch of salt as large as one usually puts on one's plate at one time.

From Rohombo we went over a rolling and fertile country intersected by many streams, all draining to the south-west, till we reached the ascent of the Bambarré Mountains. They gave us a steep climb, standing up like a narrow spine, with very declivitous sides, and we had to camp before reaching the top in a deserted village. The next morning we had another climb before surmounting the crest, and then, plunging into a mass of forest, suddenly commenced our descent amongst a number of ravines and gullies, all crowded with enormous trees. Some of the gorges were over a hundred and fifty feet deep, and trees growing in their bottoms towered to an equal height above the head of one standing on the brink. This was truly a primæval forest; the hand of man had never desecrated these giants of the sylvan world. No sun or breeze reached the dark, damp depths, and every tree seemed to try and force itself aloft into the blue heaven to get a sight of the life-giving sun.

Emerging from the forest at the foot of the mountains, we came upon villages and cultivated land. The villages were entirely different from any I had yet seen in Africa. Huts arranged in long broad streets, the walls and ends of bright red clay, with sloping roofs thatched with yellow grass. The people also presented a change as sudden as that of their houses. The women ("*toujours place aux dames*") dressed their hair into the shape of an old-fashioned bonnet in front, with long ringlets, daubed with mud and grease, hanging down their backs. The edge of the bonnet-like part in front was trimmed with beads, cowries, or seeds of the

wild banana. Round their waists they wore a string of the same materials, which served to support two small aprons, constituting all their clothing, and which, when going to work in the fields or fishing, they replaced by small bunches of leaves in order to save their go-to-meeting frocks.

The men, in their way, were equally peculiar, plastering their hair thickly with mud and forming it into cones, lumps, and flat plates, into which they inserted cowries and bits of copper as ornaments. Between the different patches the scalp was shaved perfectly bare. Some wore a cone on top of their heads, and the side and back hair formed into long flat flakes with mud, with round holes in them, to which iron and copper rings were hung. The remainder of their dress consisted of leather aprons about six or eight inches wide, reaching to their knees.

The second camp, after crossing the Bambarré Mountains, was at Moéné Bugga's village, son of Moéné Kussu. The latter, who is now dead, was chief when Livingstone stopped here for some months, and many of the people inquired after the "old white man," and seemed very sorry to hear of his death.

The chiefs indulged in more clothes than their subjects, wearing large kilts of fringed grass cloth. Each of them also wore the peculiar Manyúéma knife or sword slung over his shoulder by belt of otter skin. Every separate village is independent, and as at the time we were here there was no war going on, several of the chiefs came to see us and have a stare at a white man. They were attended by people carrying rattles, who proclaimed their names and titles; two, Moéné Gohé and Moéné Booté, had dwarfs for their rattlers, and Moéné Booté had also a man playing on an instrument made of different sized gourds fastened in a frame, and over them were keys of hard wood, which, when struck, gave a clear metallic sound, varying in pitch according to the size of the gourd under each key. This instrument is called the "*marimba*," and is known close to the west coast, from whence it reaches to Manyúéma, which was the first place I saw it. The name is the same everywhere.

After leaving Moéné Bugga's we passed through another strip of primeval forest of enormous trees, and came to the village of another Moéné Booté, with whom we had to make arrangements about the crossing of the Luama. Muinyi Hassani and I here

began to differ somewhat as to the necessity for numerous halts, as I wished to press forward as quickly as possible, and he took every opportunity to say we wanted to halt for something or another; but alternate dawdling and hurrying are what every European has to put up with when dealing with semi-civilised races. We had halted a day at the northern foot of the Bambarré Mountains, two or three at Moéné Bugga's, and now again was another delay about getting the canoes, which might have been obviated if men had been sent on in front. I asked about this whilst at Moéné Bugga's, and was told it had been done, but now found that it was a deliberate falsehood.

We got across the Luama safely after all: it is a fine stream two hundred yards wide, and varying from twelve to fourteen feet in depth with a moderate current. Its banks are mostly clothed with fine timber, and its winding course was often visible from some of the small hills over which our path led, forming an agreeable feature in the landscape.

After crossing the Luama we came to rather a flat country, but intersected by many streams and watercourses which had grooved out for themselves deep beds in the sand and shingle of which the strata are composed. Strips of green trees mark the position of these watercourses, and the rest of the country is covered with the Manyéma grass, interspersed with trees stunted by the grass fires. This grass is impassable until it has been burnt down, being often twelve and fourteen feet high, with stalks as thick as one's thumb, and growing in such a dense mass that one may throw oneself against it and make scarcely any impression. Even after it is burnt down, the thicker stalks remain and scratch one's hands and face, and tear one's clothes, besides which the ashes and blacks make one as dirty as a chimney-sweep, which, as soap is a rarity and a luxury in Manyéma, is the reverse of desirable. Soon after leaving the Luama we passed a few hills on our left, and many streams, some flowing to the Luama and some direct to the Luallaba.

Our road took us through many villages, in several of which the men belonging to the Wamerima traders, as they did not receive anything from their masters to buy food, had to steal from the unfortunate natives to supply their wants. I did not know the whole truth at this time, as the traders told me that they served out regular allowances to their men, and that they punished any

who stole from the natives. As we formed separate camps, I could not say that this was false, and my men assured me that it was true. However, long after, I heard from some of the more respectable of my people that I had been wilfully deceived.

At Karungu, a largish village, or rather a scatter of hamlets, matters came to a crisis, and a row between the traders and natives occurred. The true story was that some natives having been robbed, retaliated by stealing from Muinyi Hassani. I was only told at the time that the natives had stolen from him, but nothing of the reason why. The next morning Muinyi Hassani and his colleagues had a palaver with some of the chiefs on the subject, and wanted their property returned, besides a heavy indemnity; and on the chiefs replying that they would pay it with their spears, and brandishing them, they were shot down in the camp.

Instantly there was a regular tomasha, all the people of the caravans rushing for their guns, and the natives throwing their spears at the people nearest them, and then bolting into the jungle. One fellow's spear fell only a couple of feet from where I was sitting quietly writing. In a moment all the people belonging to the traders had got their arms, and rushed out to set fire to the houses near; and it was as much as I could do to keep my men in hand, and prevent their rushing out to join their friends.

For a couple of days we were in a state of semi-warfare, the coast people going out in bodies whenever they saw a chance, and the natives gathering together in the jungle with their spears and shields, shouting and yelling. The traders' people, in their numerous sorties, caught a lot of women, children, and goats, and the natives soon found that spears, their only offensive weapons, were no match for the guns of their opponents, and after several abortive attempts peace was at length made, and Muinyi Hassani and Syde Mezui "made brothers" with some of the chiefs. After peace was concluded I found that people from several of the places through which we had passed had joined with those of Karungu, and if there had been any equality in the way in which the two sides were armed, we should have been in a fix.

I afterwards exerted myself to get the slaves and goats returned, but was only successful about the former, as Muinyi Hassani and his people said that if nothing was taken from the natives they would think we were afraid of them, and attack us whilst passing through some of the strips of jungle

which lay across our road, and where numbers might have prevailed in spite of gunpowder.

Two days after leaving Karungu we arrived at Mangarah, a village, the chief of which was a friend with the Arabs. His son had come out to Karungu to welcome us, and on our arrival at his father's introduced me to him in the most gentlemanly manner possible. Mangarah is one of several villages in which there are many iron foundries, a beautiful black speculum ore being obtained close to the surface.

The day we arrived here a partner of Syde Mezrui came out from Kwakasongo, where several Arabs are settled, to welcome the party and learn the news from the coast. With him came several of the surrounding chiefs. Syde, who had already squandered nearly all the beads I had given him, and now found that I did not part so freely as he anticipated, began to show his bad points. He got hold of these chiefs and instigated them to tell me most unwarrantable tales of the road in front, and told me that everything they said he was certain was true, although he did not know it from personal knowledge. His partner, a youngster of about twenty, corroborated this, and I was in a greater puzzle than ever about the rivers and everything else in front.

The next day we started for Kwakasongo, and for some inscrutable reason went two long sides of a triangle instead of a short one, thus taking a couple of marches to get there instead of doing it in one short one.

Kwakasongo I found had fourteen or fifteen Arabs, Wasuahili and Wamerima, settled there, including Syde and his partner, and they had about two thousand Wanyamwesi and slaves all armed with guns, so that they had the sway over the whole surrounding country. One man alone had over six hundred armed Wanyamwesi, and in his storehouse he had fifteen hundred frasileh (each of thirty-five pounds) ready for transport, but was waiting to hear of Mirambo's war being finished, not from fear of Mirambo himself, but because he was afraid he and his men would be detained to fight Mirambo by the Arab Governor at Unyanyembé.

We were detained at Kwakasongo for a week, and after three days marching arrived at Kûmbwi on the Lualaba. The first view of the river far exceeded my previous expectations. Imagine a river varying from a thousand to three thousand yards in width, with swiftly flowing current, and many well-wooded and inhabited islands. At Kûmbwi I got canoes for myself and some of my men, and went down to Nyaugwe by water in one day, leaving the others to come by land. At Nyangwe I was warmly welcomed by Habib ibn Salim, an old Arab who had housed Livingstone during his stay there.

My men, who came by land, arrived two days after me, and then I set to work to try and get canoes to follow the great river down to the coast. My ill success in this, and the reasons for it, will be told next month.

DISTRICT VISITING.*

I HAVE assumed throughout this paper that most district visitors feel a certain dissatisfaction both with district visiting and with systems of relief as they exist, even where such systems are best organized. Some may think that there is too much relief given, some that there is too little, others that what is given is of the wrong kind. I believe, also, some visitors feel that their spiritual influence is interfered with in different ways by the unsatisfactory character of the temporal relief. To some of them it seems incongruous to carry tracts in one hand and coal-tickets in another; to others, that carrying either, still more carrying both, as a matter of course, shuts them off from true intercourse with the best kind of working

men and women; others, again, feel that carrying tracts without coal-tickets when the grate is empty seems a little like want of sympathy; and others that carrying coal-tickets without tracts is treating the poor as if they were only concerned with the outside things of life.

However earnestly our clergy have desired to solve this problem of how to deal wisely with the temporal condition of their flocks, it remains a problem still. However tenderly our visitors have mourned over it, as it affects hundreds of individuals, it remains mournful still. What prospect is there of its being vigorously studied with a view to solution, or even to radical improvement, by those who have power to effect improvement? Busy, overworked clergymen, with services and sermons, and churches and schools, and thousands of souls to see to, have inherited systems of relief in their parishes which they

* This paper has been slightly altered from one which was read on the 4th of May last to a meeting of District Visitors and Clergy at the Bishop of Gloucester and Bristol's house in London.

hardly have time to reform, and the gigantic pressure of daily duty perpetuates many unwise plans, though many, I am well aware, are being abolished. How far the best still falls below what they would like to see, let the clergy themselves say. I believe most of them, if asked, would reply, "I have tried honestly to make my system of relief as satisfactory as I could, but it is far from my ideal." And this is so from another cause. You can never make a *system* of relief good without perfect administration, far-sighted watchfulness in each individual case; and this is specially true in an age in which bad systems of relief have trained the people to improvidence. Given your entirely enlightened clergyman, he cannot in a large London parish do much more than see to his people when the crisis of distress has come. He cannot watch over them before it comes, yet it is then that distress is preventible. On whom does the continuous watchfulness devolve at best? Visitors, young, inexperienced, untaught, undertake districts; they find themselves part of a system, and follow in its lines; they meet individual cases of want, improvidence, disease, and though they know little themselves how to deal with such, they hesitate to make calls upon the time of a too busy clergyman, kind as he is in helping, gladly as he would reply to a practical question about the individual; they cannot talk out with him radical means of dealing with the root of such evils. What can they do? They give or withhold the soup ticket or the shilling. Has the clergyman usually time? Has the visitor often knowledge to do much more than deal with the individual question of relief or no relief at the moment in the special case?

And yet the problem has become appalling, gigantic: viewed in its entirety, it might make us almost tremble.

Statesmen, philanthropists, political economists, try their hands at it, or rather their heads. Do they succeed better than the clergy and the visitors? Do they not often succeed worse? For the clergy and the visitors at least bear witness to the poor of sympathy with them, and deal with the wants round them practically; while the theorists, let their theories be ever so excellent, somehow stand so far off that they bring little practically into operation. Who does not know of good laws passed which are nearly inoperative because not enforced by brave persons face to face with the evils which should be removed by them? Who does not know of sound principles of political

economy clearly enunciated to those unconcerned by them, which never reach the ears of those whose lives they deeply affect, still less are brought before them by those whom they would heed or trust?

Now these two classes, the studious, more leisurely, generalising thinkers, and the loving individualising doers, need to be brought into communication; and that is what in this paper I wish most emphatically to enforce. Each has knowledge the other requires; separated, they are powerless; combined, they may do much. For I have drawn miserable pictures of the weakness of both, but see on the other hand what each has of strength. The clergy have all that is pitiful, all that is generous in the hearts of their richer parishioners on their side—the power of calling out workers from among them, the power of directing a large part of their alms, the distribution of money, the leadership of the men. Besides these they have the enormous accumulated knowledge of the poor, gathered in long years of intimate observation of them in their homes—a mass of information over which they may not have much time to brood, and from which they may not be in the habit of generalising, yet what might not the theorists learn from it?

And the visitors. I have called them inexperienced, and I might have added that their work is less valuable in many ways, because it is intermittent; but pause to think what these visitors are and might be. Hundreds, perhaps thousands, of gentle, earnest, duty-doing souls, well born, well nurtured, well provided for, possibly well educated, turning aside out of the bright paths which they could pursue continuously, to bring a little joy, a little help, to those who are out of the way. A voluntary gift this, if a very solemn duty. I have heard persons who give their whole time to the poor speak a little disparagingly of these fleeting visits, and young girls themselves, fevered with desire to do more, talk rather enviously of those who can give their time wholly to such work; but have they ever thought how much is lost by such entire dedication?—or, rather, how much is gained by her who is not only a visitor of the poor, but a member of a family with other duties? It is the families, the homes of the poor, that need to be influenced. Is not she most sympathetic, most powerful, who nursed her own mother through the long illness, and knew how to go quietly about the darkened room; who entered so heartily into the sister's love and marriage; who obeyed

so perfectly the father's command when it was hardest? Better still if she be wife and mother herself, and can enter into the responsibilities of a head of a household, understand her joys and cares, know what heroic patience it needs to keep gentle when the nerves are unhinged and the children noisy. Depend upon it, if we thought of the poor primarily as husbands, wives, sons, and daughters, members of households, as we are ourselves, instead of contemplating them as a different class, we should recognise better how the house training and high ideal of home duty was our best preparation for work among them. Nay, to come down to much smaller matters than these family duties, to the gladness of party, ball, and flower show, I believe these, too, in innocent and happy amount, when they brighten the eyes and bring the ready smile to the face, and make the step free and joyous, prepare us to bring a gleam of sunlight into many a monotonous life among the poor. What, in comparison with these gains, is the regularity of work of the weary worker, whose life tends to make her deal with people *en masse*, who gains little fresh spring from other thoughts and scenes? For what is it that we look forward to as our people gradually improve? Not surely to dealing with them as a class at all, any more than we should tell ourselves off to labour for the middle class, or aristocratic class, or shop-keeping class. Our ideal must be to promote the happy natural intercourse of neighbours—mutual knowledge, mutual help, of a kind, certainly, but not this professed devotion of a life, and it will be better from the beginning to mould our system so that it shall bear witness of what it ought to become. If we establish a system of professed workers, amateur or paid, we shall quickly begin to hug our system, and perhaps to want to perpetuate it even to the extent of making work for it. Well, here we have then our wonderful company of visitors full of real care for the people, with time and intelligence to apply the wisest principles, did they but know them, with fullest thought to individual cases; capable of inspiring confidence, of winning allegiance; of getting those whom they visit to understand what is best for their future, and to make up their minds to do it. Is not this precisely what is needed—the individual thought which can apply the wise principles, the love which can influence the wills which should be brought into harmony with those principles? Then turn to consider how these principles are

now being thought out, with what painstaking devotion, what science, what accuracy some of our greatest men are studying them. What a mass of information they have accumulated! How day by day they are learning to explain better the meaning of it all! Think of the doctors, the legislators, the poor-law reformers, the advocates of co-operation, the members of the Charity Organization Society, how they examine, study, and expound. Once duty to the poor was supposed to consist in giving large alms; once, self-sacrifice and devotion were thought sufficient qualifications for a worker among the poor; now it is seen that to these must be added the furthest sight, the wisest thought, the most self-restraining resolution to make a useful worker.

These two classes, gentle doers and wise thinkers, stand far apart, yet, if they could be brought into close communication, both would gain much; the people for whom they are both labouring would gain much more. In what follows I have tried to show how such a communication might be made a practical reality. The scheme described is not based wholly on theory, but has substantially been in operation in a district of Marylebone for some years, and has been lately adopted by two other districts.

To effect a union, to establish communication with so numerous a body as the district visitors of London, would be in itself difficult. The difficulty is increased by the fact that they are not only a very numerous, but very changeable body; not only does death, marriage, or migration take them wholly away, but they are often interrupted by temporary absence from home, household duties, illness, and this far more than would be the case with paid workers, their district work being only a secondary, though a very real, duty. These incessant changes could never, without enormous labour and much likelihood of confusion, be registered at one centre; and this necessitates that the visitors must be dealt with by certain selected persons, who may be local leaders or centres. Large numbers of them are already gathered in district groups, round various churches and chapels. My first very natural thought was to ask the ministers of those churches and chapels to accept new duties towards their visitors, to bring before them whatever it might seem to the theorists ought to come under their notice, and to transmit to the theorists any individual problems quite too hard for solution in the locality, and to be ready to furnish other information to visitors on questions affecting the temporal condition

of their people. But it was obviously impossible to ask hard-worked London clergymen and ministers to undertake additional work, especially such a work as this. For its whole value would depend on the constant, living, detailed interchange of information. And, besides, though the district visitors attached to churches and chapels are by far the most numerous bodies to be enrolled, there are other groups which it is important to secure, and there are also individual visitors to be enlisted who might be ready to help with tangible work, and not prepared to take spiritual work. And this is another reason for not asking the clergy to take up the task. On the whole, then, it appears to me best to suggest leaving the question of all spiritual and moral work exactly where it is—where it almost must be, gathering round the clergy and ministers, everything affecting it being referred to them, and of course all funds and charities now in their hands being as hitherto managed and distributed wholly under their direction; but at the same time to ask them to consider whether they could single out some one from each ecclesiastical district, or from any given group of visitors, who should be a secretary to the others—a means of communication between them and the people dealing as officials or theorists with questions affecting large bodies of the poor.

I will describe what I think such a secretary should be and do.

She need at first have no special knowledge of laws affecting the poor, institutions established for them, or the principles of action which those who have thought most on the subject unite in thinking best; ladies furnished with such knowledge would not be found in many districts, and though such information would doubtless be of immense value, it would not be essential to secure it at first, as a great deal would be rapidly acquired by any one holding the post of which I speak. She ought to have a good deal of time for writing and seeing her fellow-workers. She need not have time for visiting the poor. In fact I should advise selecting some one who had experience in visiting them, but was content to resign that work, as I think her full available power should be devoted to her secretarial duties. She should be able, however, to attend regularly at least one meeting weekly of the Charity Organization Committee of her district. If she has a house of her own, or so much control over one as would enable her to see the visitors often there, it would be a great advantage; in fact, some way of seeing them frequently and

individually appears to me essential. She should be one who, for the greater part of the year, is resident in town; for though of course a temporary successor could be appointed, or her post left vacant, absences, especially if frequent, would be a drawback to her usefulness. She ought to have tact, gentleness, and firmness. She must be a careful, conscientious woman of business, with clear head, or very methodical ways; for next to ready sympathy, method will be of all things most necessary to her. Such a secretary should, in that capacity, busy herself only with matters relating to the temporary condition of the poor. She would have relations to her own group of visitors, to the locality in which she lived, and to the metropolis generally. Those to her own fellow-workers would be different probably in different cases; but I suppose she would help and advise new visitors, tell them of the local charities, consult with them about special cases, register their temporary absence, getting the clergy to fill in such gaps if possible, show them how to keep written records of families under their charge in given form, so as to be of use to succeeding visitors, whether temporary or permanent, and communicate to visitors, new and old, all facts within her knowledge which might be of value to them. With regard to the local organization, I will not stay to describe in detail the ways in which she might be valuable to the School Board officer, to the relieving officer, to the Inspector of Nuisances, who might learn to look to her for more radical means of help than are at their command, both material and moral, and for information as to details such as rarely reaches officials, and yet might enable them to bring beneficent laws more powerfully to bear on special cases. The secretary should not only avail herself of the investigating machinery of the Charity Organization Society, but she should, as I said, attend the committee meetings. There she will learn an immense deal about wise principles of relief, new and important facts of law affecting the people, and the working of various institutions; in short, she ought to get there nearly all the instruction she requires. She would also be invaluable to the committee. She would be well acquainted with the principles on which relief is given by those whom she represents, could tell whether they would be likely to make a grant in a certain case, and, approximately, how large such grant would be. She would know, too, how to enlist that individual gentle help which is so often needed

in cases coming before the Charity Organization Society after the preliminary investigation is made, and which the paid agent has neither time nor capacity to give. In fact, for applicants from every street, and court, and lane, in which a visitor was at work, she would know to whom to turn for the personal attention which the Charity Organization Committee feel they so urgently need. Nor would her services end there. Not only would she obtain the aid of the visitors she represented at such times of crisis in the history of a poor family as those in which they usually apply to the Charity Organization Society, not only would she be able to supply a detailed report of the past life of the applicant on points which might bear on the committee's decision, but afterwards, when the decision was made and relief granted or withheld, through succeeding years she would get the people watched over with that continuous care without which right decisions at any particular crisis of life lose half their efficacy; indeed, she might often avert such a crisis altogether. For instance, she might get the visitors to induce a man to join a provident dispensary or club; which would be more satisfactory, though not perhaps more necessary, than refusing him aid when he has not done so. Sometimes, when I think of those Charity Organization Committees so much misunderstood by many, because they have so resolutely determined to give no fresh unsatisfactory relief, some of them tenderly pitiful of the poor, some of them a little far off from them, but all trying to help them in thoughtfully considered ways, and of the great current of careless, inconsiderate relief going on unchecked and uncontrolled by them, I feel as if a union between you and them would do more than almost anything else to help the poor. There they are all ready for you in every district of London, asking you to co-operate, asking you to study with them what is best, and you leave them in too many cases to be mere repressors of the grossest forms of mendicity, and by no means organizers of charity. If the plan I suggest were adopted by only a few visiting societies, I delight to think what might be gained by furnishing the committees with a few gentle workers representing many more, and associated with the charities of the neighbourhood.

But I pass on to consider the relations of these secretaries to the metropolis. They ought to be supplied with information about the laws affecting the poor, sanitary laws,

poor laws, education acts; they ought to get notice of important meetings about medical charities, of new suggestions and arrangements as to the best methods of collecting and storing the earnings of the poor. And how is this to be done? Much of it might even now be done through the Charity Organization Society. All of it, I hope, will be done through the society in the future; but the Committees are too busy, too occupied with their daily labour, to deal with this new matter with the fulness of detail which at first it will require; and perhaps they do not everywhere nor always command the full sympathy and confidence of their district. Added to which, I have noticed that people, curiously enough, are more willing to invite information from private persons than from official bodies. Something must be done to meet the wants of a time of transition, and I trust I am not overbold in offering, while the plan is new, to do what I can to fill the gap; but in the future we ought to endeavour to secure that the visitors should be so organized that they can themselves compare notes, and each communicate to each how practical difficulties have been met in particular localities—so organized that facts bearing on their work should reach them swiftly and certainly, and that their experience should be accessible for legislators and reformers.

I have set before you nothing great, nothing grand, no new society, no fresh light even on the problems respecting wiser systems of relief, or their applications to individuals, which you are desiring so much to solve, each in your own parish or court. I do believe those problems to be capable of solution. I do believe that our almsgiving has been cruel in its kindness. It is for the sake of the people themselves that I would see it decreased, yes, even put down altogether; I believe they would be richer, as well as happier, for it. For the sake of the energy of the poor, the loss of which is so fatal to them, for the sake of that intercourse with them, happy, friendly, human intercourse, which dependence renders impossible, seek to your utmost for better ways of helping them. We can give you no general rules which will obviate necessity of thought, singly must your difficulties be met, singly conquered, but see that you throw upon them all available light from the experiences of others, the thoughts of the thoughtful. No new society, no great scheme, have I to urge, only if here or there any one or two of the groups of visitors

care to select one among them to be their secretary, and send me her name and address, I will tell her what I can which I think may be helpful to her or them. We might meet, too, we secretaries, now and again, to talk over important questions and strengthen one another; and though I could not possibly find time to deal with difficulties in detail, I might show, or get shown, what plans have been found useful in places which I know. I might help, too, a little about finding employment. I hear of a good many situations of an exceptional kind, and difficult to fill up suitably, and notices of such vacancies I might send on to secretaries, who could find among their visitors some one who would care to spend thought and time in fitting into an exceptional place the person best adapted for it. The large demands for labour are, I believe, best dealt with by advertisement or registry; but there is not any more valuable way of helping individuals than by fitting them in where they are wanted in ways that are not possible except to those who have personal knowledge of candidates. Mere routine notices might thus meet great human needs.

I have spoken throughout this paper of outward means and appliances; I have referred very little to improvement of the lives and spirits of men. This is not because I do not care for those lives and spirits. They are reached, we must remember, in many different ways. A great deal of life is necessarily spent in getting its surroundings into order, and in London here, this machinery of ours, all the tangible things round us need a great deal done to them; it is good for us to be dealing with them; it tests us better than any words can do. It is very difficult—impossible, I believe—to make the things of this world fair and orderly, to arrange them justly, to govern them rightly, without living very nobly. The right use of money, the laws affecting houses and lands, involve principles which test the sincerity of a man or a nation; they test it, I say, as words cannot test it. I think our poor see this very clearly, and that, strange as it may seem, the messages about God's nature, and about His relation to them, come in a strange way through our

acts. More perhaps than through our words. This is emphatically so just now. They have heard a great many words, and have been puzzled because our actions have often seemed to them at variance with those words. I know how hopelessly we must fail in any attempt to live up to the unspeakable majesty of His tenderness, and the boundless wisdom of His righteousness; but even our failure, after sincere trial, brings a message of what He is to His children. Our actions, are speaking to them. For this reason I have never felt the execution of the most minute duty with regard to tangible things beneath my notice, and I do not feel that in urging any of you to consider the right settlement of questions of temporal relief, I am asking you to devote yourselves to a task which is otherwise than holy. On the contrary, I have felt that it can only be rightly dealt with by those who are content to carry it on in silent allegiance to One who will judge with further sight than feeble men, who will know what deeper mercy there may be in the act which looks to men harsh at the moment. Indeed, I dare not trust the difficult things there may be to do in refusal of immediate help to any mere reasonable political economist. The generals who can direct the sad retracing of our foolish steps should be those who care for the people because their Father cares, and so desire to make them what He would have them to be; and the only ones who will have fortitude to bear the misunderstanding this may cause will be those who feel tenderest pity for the people.

Not a small thing, even in itself, is the dealing with the tangible and soulless things of earth. We may be very proud, justly proud, of the well-ordered spot of earth, the well-spent income, the self-restrained providence, whether they are our own, or whether we have helped another so to regulate the talents entrusted to him; but the glad pride breaks away, and a deep thankfulness overpowers one, if ever by word or deed one seems to have helped any one to catch even a little glimpse of that mighty Love which enwraps his spirit, uniting it in solemn harmony with all that *is* contained, as well as all that *cannot* be contained, in this wonderful visible world.

OCTAVIA HILL.

THE SECRET OF THE MERE.

I BUILT a hut beside the Mere,
 A lowly hut of turf and stone;
 Therein I thought from year to year
 To dwell in silence and alone,
 Watching the lights of heaven chase
 The phantoms on the water's face.

The world of men was far away;
 There was no sound, no speech, no cry;
 All desolate the dark Mere lay
 Under the mountains and the sky—
 A sullen Mere, where sadly brood
 Dark shadows of the solitude.

"It is an evil world," I said;
 "There is no hope, my doom is dark."
 And in despair of soul I fled
 Where not another eye might mark
 My silent pain, my heart's distress,
 And all my spirit's weariness.

And when I came unto the Mere,
 It lay and gleam'd through days of gloom.
 The livid mountains gather'd drear
 All round like stones upon a tomb;
 Around its margin rusted red
 The dark earth crumbled 'neath my tread.

I said, "It is a godless place—
 Dark, desolate, and curst, like me.
 Here, through all seasons, shall my face
 Behold its image silently."
 And from that hour I linger'd there
 In protestation and despair.

For mark, the hills were stone and sand,
 Not strewn with scented red or green—
 All empty as a dead man's hand,
 And empty lay the Mere between.
 No flocks led there, no shepherd's cry
 Awoke the echoes of the sky.

And through a sullen mist I came,
 And beast-like crept unto my lair;
 And many days I crouch'd in shame
 Out of the sunshine and sweet air.
 I heard the passing wind and rain,
 Like weary waves within the brain.

But when I rose and glimmer'd forth,
 Ghost-wise across my threshold cold,
 The clouds had lifted west and north,
 And all the peaks were touch'd with gold.
 I smiled in scorn; far down beneath
 The waters lay as dark as death.

I said, "Go by, O goddess bright!
 Thou canst not scatter darkness *here*.
 In two sad bosoms there is night,
 In mine and in the lonely Mere.
 Light thou thy lamps, and go thy way."
 It went, and all the heavens grew grey.

And when the lamps of heaven were lit,
 I did not raise mine eyes to see,
 But watch'd the ghostly glimmers flit
 On the black waters silently.
 I hid my face from heaven, and kept
 Dark vigil when the bright sun slept.

And ever when the daylight grew
 I saw with joy the hills were high;
 From dawn to dark, the live day through,
 Not lighting as the sun went by;
 Only at noon one finger-ray
 Touch'd us, and was withdrawn away.

I cried, "God cannot find me now;
 Done now am I with praise or pain."
 Beside the Mere, with darken'd brow,
 I walk'd as desolate as Cain.
 I cried, "Not even God could rear
 One seed of love or blessing here!"

'Twas spring that day; the air was chill;
 Above the heights white clouds were roll'd;
 The Mere below was blue as steel,
 And all the air was chill and cold,
 When suddenly from air and sky
 I heard a solitary cry.

Ah me! it was the same sweet sound
 That I had heard afar away;
 Sad echoes waken'd all around
 Out of the rocks and caverns grey,
 And looking upward, weary-eyed,
 I saw the gentle bird that cried.

Upon a rock sat that sweet bird,
 As he had sat on pale or tree,
 And while the hills and waters heard,
 He named his name to them and me.
 I thought, "God sends the spring again,
 But here at least it comes in vain!"

From rock to rock I saw him fly,
 Silent in flight, but loud at rest;
 And ever at his summer cry
 The mountains gladden'd and seem'd
 bless'd,
 And in the hollows of them all
 Faint flames of grass began to crawl!

Some secret hand I could not see
 Was busy where I dwelt alone ;
 It touch'd with tender tracery,
 Faint as a breath, the cliffs of stone ;
 Out of the earth it drew soft moss,
 And lichens shapen like the cross.

And lo ! at every step I took
 Some faint life lived, some sweetness
 stirr'd,
 While loosen'd torrents leapt and shook
 Their silvern hair to hear the bird,
 And white clouds ran across the blue,
 And sweet sights rose, and sweet sounds grew.

I hated every sight and sound ;
 I hated most that happy cry.
 I saw the mountains glory-crown'd,
 And the bright heavens drifting by ;
 I felt the earth beneath my tread,
 Now kindling quick, that late was dead !

Then down I stole unto the Mere,
 And black as ever was its sleep.
 Close to its margin all was drear ;
 I heard the weary waters creep.
 I laugh'd aloud, " Though all grow light,
 We twain keep dark, in God's despite !

" We will not smile nor utter praise ;
 He made us dark, and dark we brood.
 Sun-hating, desolate of days,
 We dwell apart in solitude.
 Let Him light lamps for all the land ;
 We darken and clude His hand."

Scarce had I spoken in such wise,
 When once again I heard the bird,
 And lo ! the Mere beneath mine eyes
 Was deeply, mystically stirr'd ;
 A sunbeam broke its gloom apart,
 And heaven trembled in its heart !

There, trembling in that under-gloom,
 Like rising stars that open dim,
 Innumerable, leaf and bloom,
 I saw the water-lilies swim,
 Still 'neath the surface dim to sight,
 But creeping upward to the light !

As countless as the stars above,
 Stirring and glimmering below,
 They gather'd, and I watch'd them move,
 Till on the surface, white as snow,
 One came, grew glad, and open'd up
 A pinch of gold in its white cup.

Then suddenly within my breast
 Some life of rapture open'd too,
 And I forgot my bitter quest,
 Watching that glory as it grew,
 For, leaf by leaf and flower by flower,
 The lilies open'd from that hour.

And soon the gloomy Mere was sown
 With oil'd leaves and stars of white ;
 The trumpet of the Spring was blown
 Far overhead, from height to height,
 And lo ! the Mere, from day to day,
 Grew starry as the Milky Way.

I could not bear to dwell apart
 With so divine and bright a thing ;
 I felt the dark depths of my heart
 Were stirring, trembling, wakening.
 I watch'd the Mere, and saw it shine,
 E'en as the eye of God on mine.

As one that riseth in his tomb,
 I rose and wept in soul's distress ;
 I had not fear'd His wrath and gloom,
 But now I fear'd His loveliness.
 I craved for peace from God, and then
 Crept back and made my peace with men !

ROBERT DUCHANAN.

SUNDAY EVENING READINGS.

I.—" I HAVE A MESSAGE FROM GOD UNTO THEE."

THUS did a servant of the Lord Jehovah once address an earthly monarch who had distressed and enslaved the chosen people of God. He found his way to the presence of the king, and after addressing him in these words, he smote the king with a concealed dagger, and put an end at once to his

tyranny and his life. He *had* a message from God—a very stern and terrible message, a message of death rather than life, of punishment rather than reward, of anger rather than love.

May not we, however, use and apply these words to ourselves in a somewhat different way? May we not give them a personal and a spiritual application? Surely God Almighty very often sends messages to us

all. Hardly any event in life ever takes place without its bringing with it a message, a real, distinct message from God. Our joys and our sorrows, our mercies and our cares, our work and our rest, they all come to us charged with messages from on high.

Let us take a few instances of the way in which these messages come to us. And first of all let us take a very common and ordinary event.

1. Does not every Sunday, as it comes round to us, bring with it a message from God? Does it not say to us, as we rise in the morning, feeling that it is a day of rest—a day unlike other days—does it not seem to say to us, “I have a message from God unto thee; I come to speak to thee about thy Father in heaven; I come to bid thee lift up thy heart to thy Saviour and thy Redeemer; this is the day for reaching forth unto things unseen, a day for high and holy and solemn thoughts, a day for sending, as it were, the spies—the spies of faith and hope—into the far-distant land where all is peace and joy and rest?”

Oh! is not this the message which every Sunday brings with it? the message of God’s love for our souls, the message which speaks of God’s tender care for us, in giving us these precious days of refreshment and rest, these holy days of spiritual joy and peace?

2. Or let us take another matter. Illness surely never comes to any one of us but it bears with it “a message from God.” We some of us know what it is to have passed through a very serious or painful illness; we some of us know what it is to have been brought very, very near the darkness and the silence of the grave, when the angel of death seemed to be hovering over us, and we almost felt his cold, icy breath upon our cheek, and when earth and the things of earth seemed gliding fast away from us—oh, then was the Almighty sending us a message! It was a message to us from the unseen world, reminding us that life is very frail, and very uncertain; reminding us that after life comes death, and after death the judgment; it was a message bidding us put our house in order, because we know not how sudden might be our call, how short the passage to eternity. Oh, let us who have received this solemn message ever bear it in mind; let us who have been called back, as it were, from the very jaws of death, consecrate our whole selves, body, soul, and spirit, to that great God who has given back to us our restored life and health and strength. That recovery,

that deliverance of ours, was “a message from God” to our soul!

3. Or, again, do not all anniversaries of great and important events in our lives bring with them “a message from God” to us? When our birthdays come round to us, and we thank God for having spared us hitherto, and we rejoice in the love and the congratulations of those who are nearest and dearest to us, oh, does not God send us a message at those times? Or when the anniversary of some great deliverance, or of some great domestic happiness, or of some great personal mercy—when this rolls round year after year, does it not also bring with it, year after year, a very earnest message from our God, reminding us that He gave us the mercy, that He sent us the deliverance, that from Him comes every blessing that we possess, and that to Him belong our thanks, to Him is our gratitude due. Let us try to make every one of those happy anniversaries a time for hearing the voice of God speaking to us personally and individually. Let us try to make every one of those events come home to us, and say to us, “I have a message from God unto thee: God asks for thy love; God expects thy gratitude.”

4. Once again: ought we not to look upon every sermon that is preached to us as a message from God to our souls? The great King often entrusts His messages to very unworthy messengers; He often makes use of very humble instruments; but it is our part to think more of the message than of the messenger; more of the Master than of His servant.

The messenger may sometimes be unattractive enough; his words may be commonplace, his manner rough, his eloquence small; but if he preaches God’s truth, if he founds his message on the Holy Book, if he unfolds to us the very same lessons of truth and love which that Book contains; then, whether he be eloquent or dull, attractive or unattractive, learned or unlearned, all this matters but little; he is the messenger of the great King; He is the ambassador of Heaven; He is the servant of Christ, and he comes to us in the name of the Most High God, and he says to each and every one of us, “I have a message from God unto thee.”

Thus, then, does God send His messages. The question for us all is this: Have I listened to those messages? Have I accepted those calls? Am I any the better for them? Have they brought me nearer to God, my Father, and nearer to Christ my Saviour? God give

us all grace to ponder on these questions, and to listen to those messages of His which His love sends, and which our faith should receive and cherish in our inmost hearts.

II.—SALT.

The well-known substance which we commonly call salt is very largely used in the economy of nature. It is difficult to point to any of the great works of nature in which this most valuable commodity does not appear. It floats in the air; it is present in water, both sea-water and fresh; it exists in every animal that walks on the surface of the globe; it is found in every plant and vegetable, in every tree and flower; it is contained in every species of soil; and large, enormously large, deposits of it are to be met with, here and there, in the bowels of the earth. In one district of Poland there is said to be a bed of salt five hundred miles in length, twenty miles in breadth, and twelve hundred feet in depth; while in England there are salt-beds which have supplied the inhabitants of this country for ages and ages with this most important material.

The fact is, that without this great purifying and antiseptic agent, both animal and vegetable life would be altogether an impossibility. The presence of salt is essential, to a certain extent, to the well-being of all material things. It is the secret of health, fertility, and life. It prevents corruption; it keeps the world pure; it promotes and stimulates life. The glorious sea, which, with its life-giving breezes, restores health and strength to thousands of our sick, languid, and over-worked fellow-creatures, would be, without the salt which it contains, a very fountain of death, a reservoir of corruption, a huge pestilential drain. But the salt of the ocean prevents all this; the salt of the ocean is that which brings the colour to the palid cheek of the weary sufferer, strength to the jaded constitution, and energy to the over-worked brain. Salt is good; it is one of God's best gifts; it purifies; it stimulates; it arrests corruption; it stays the course of decay.

In both Old and New Testament we find many references to this great purifying agent. Every sacrifice which was offered to the Lord Jehovah was to be mingled with salt. Thus we read in the second chapter of Leviticus, "And every oblation of thy meat offering shalt thou season with salt; neither shalt thou suffer the salt of the covenant of thy God to be lacking from thy meat-offerings; with all thine offerings thou shalt offer

salt." So in Ezekiel we read, "And thou shalt offer them before the Lord, and the priests shall cast salt upon them, and they shall offer them up for a burnt-offering unto the Lord." Turning to the pages of the New Testament, we find both our Lord and His apostles referring to salt. St. Paul speaks of the strengthening, purifying influence by which the ordinary, every-day conversation of Christians should be distinguished under this emblem of salt. "Let your speech be always with grace, *seasoned with salt*." And our Saviour three times over speaks of salt, first, as representing the principle or life and purity which should exist in the soul of every true Christian; and, secondly, to teach how each separate Christian should spread abroad and diffuse that principle, and thus become an agent of life and purity to all with whom he has to do. First He spoke thus: "Every sacrifice shall be salted with *salt*," that is to say, every soul which is really given up to God must be full of this life-giving principle—this salt of the heart. Secondly, He uttered these words: "Ye are the salt of the earth;" meaning that individual Christians are to go forth, and by their love to God, and their zeal for Christ, are to neutralise the sin and to break down the wickedness, and to keep in check the corruption of this evil world. Thirdly, He speaks thus: "Salt is good; but if the salt have lost its savour, wherewith shall it be seasoned,"—that is, if by neglect or sinful living this quickening principle loses its power, its freshness, and its virtue, how can it again be restored to its former vigour? This useless, worthless, powerless salt is fit neither for the land, nor yet for the dunghill, but men cast it out.

And now the question arises, what is really meant by this emblem of salt? What is that state of soul so indispensable to every follower of Christ, and without which he must be rejected as useless, profitless, and worthless? I would answer, it is the grace of God in the heart of man, whereby he is made holy and kept holy. What salt is to the body, that religion is to the soul. Salt purifies, renovates, invigorates; salt hinders corruption and arrests decay. So the love of God, which is religion, this, too, purifies, renovates, invigorates the soul; this hinders spiritual corruption, this arrests spiritual death. Religion is meant to make people *holy* as well as happy. Christianity, with all its blessings and privileges, comes to us and offers us not only pardon and peace, but life and purity. The true Christian is he who is

most like his Lord. The true Christian is he who day by day grows in grace, in unselfishness, in unworldliness, in courage, in truthfulness, in devotedness to God. A merely barren faith will be of little avail; a love of listening to what are sometimes called "gospel sermons," a love of listening to heart-stirring declarations of the tender love of Christ for sinners, followed by no

corresponding desire to follow Christ and to imitate Christ—this will not save the soul; every sacrifice must be salted with the salt of God's grace, every Christian must be led by God's Holy Spirit; faith must never be divorced from works; the knowledge of gospel truths must ever be accompanied by the "salt" of a holy and a religious life.

EDWARD V. HALL.

NATIONAL HEALTH.

CHAPTER II.—HEALTH AND CIVILISATION.

IN my last chapter I ventured to indicate that man in his past history has been ever struggling against natural obstacles, towards greater advantages of health, and towards the happiness which accrues from the possession of that acquirement. If this view be correct, it should follow that at the present day a notable improvement ought to be shown in the conditions of health that are manifested amongst our civilised communities, as compared with the conditions that have existed in preceding and less-favoured civilisations, or that exist in this day in uncivilised tribes. I do not think there is any reasonable doubt that the fact is as thus assumed.

It may be urged that no comparison can be instituted between the current civilised states and those practically lost civilisations which marked the Babylonian, the Egyptian, the ancient Greek, and the ancient Roman empires. I have heard it expressed by more than one admiring scholar of those civilisations, that if we knew all the details of them that are now concealed we should probably see in them a standard of excellence which this age, in its most refined aspects, does not approach: I bow to this opinion with the knowledge that it is unanswerable. All I know is, that nothing comes to my hand, no book, no word, that conveys to my mind the idea of the existence of any period when the human race, existing under any form of civilisation, was freer of great pestilences, was freer of slowly-killing diseases, was freer of loathsome diseases that do not necessarily kill, than it is at this hour.

I turn to the fathers of medical science to find them rich in their knowledge of diseases, knowledge which they could never have learned unless the diseases had been before them as subjects of study. I

turn to the historians to find the records of great devastations, from plague, pestilence, and famine. I read the poets telling of the same, and of the vengeance of offended deities. I find an ancient ruler, no less ancient and no less wise a ruler than Cambyzes himself, teaching his son Cyrus lessons in sanitary science as lessons then much needed. With regard to health Cyrus tells his father that "since he has heard and seen that those states which seek for good health educate physicians, and that commanders take with them physicians for the sake of the soldiers, he too, therefore, as soon as his present expedition was intrusted to him, gave his attention to this subject, and thought that he had with him very competent physicians." To which the father, Cambyzes, replies. "But these physicians, my son, of whom thou speakest, are like menders of torn garments, and thus they cure those who have fallen sick. Thy chief anxiety should be to provide for health; for thou oughtest to take care to prevent the army from falling into sickness at all." And then he describes, as a modern and learned Surgeon-General might describe, what is to be dreaded, what is to be avoided. He tells that the bodies and faces of men are the signs of good health and bad health; and he adds other advice and observation which shows to us that in Cambyzes' day, in the midst of a very high ancient civilisation, there was no special exemption from the thousand natural ills that flesh is heir to.

I need wait no longer on this interesting topic. Happily, proof nearer at hand is before me for comparison of the modern with past life, proof which tells that with true civilisation health ever appears in friendly communion. We must not, however, rush at once to the conclusion that health and lon-

gevity are developed with every phase of what is called modern civilisation. The modern civilised man conquers, and in conquering drives the modern savage out of existence, or leaves him part of a mere fragment of a wandering tribe. But civilisation, however refined it may be, however intellectual, inventive, learned, or knowing it may be, is foolish and helpless to check disease and death unless it be wise as well as knowing, unless it be self-sacrificing, and unless the passions of men, which civilised life so variously modifies, are influenced by it in such a manner as to be held from the influence of destructive causes. When civilisation leads to excess of luxury; when it leads to excess of strain, mental or physical, after wealth and the supposed advantages that can only be purchased by wealth; when it spreads too eagerly the sails of commerce; when it grasps too fiercely after conquest and dominion; when it brings about collisions between classes of men in the same population; then it is not an agency for the steady promotion of national health and national life.

We, who would do all we can to improve the health and life of the nation, must always bear these truths in mind. Steadiness of national life requires steady national repose. The political soundness and safety of a nation may be read in the annals of its mortality.

The best typical examples of communities living under conditions most favourable to vital integrity have been those which have been civilised in the midst of the extremest simplicity, in other words in the midst of freedom from the evils of intellectual civilisation. This point will well bear direct and practical illustration.

At the census of 1821 it was calculated that in the English county of Monmouth the death-rate was in the proportion of fourteen, and in 1831 twelve, in the thousand living. But from the years 1841 to 1870, the death-rate of the same county has presented a mean of twenty-three in the thousand living, or nearly double the rate that existed from 1821 to 1831.

The mortality tables of Edmonds show that for the eighteen years from 1813 to 1830 the mortality of England and Wales was at the rate of 21·20 in the thousand living. From 1841 to 1870, the death-rate has been twenty-two in the thousand living.

These examples could be multiplied, but they are sufficient to indicate that what is commonly called advancing civilisation is

not sufficient of itself, in detail, to insure a reduction of mortality in a limited series of years.

We cannot suppose that the county of Monmouth is less civilised now than it was forty-six years ago; yet its mortality has considerably increased. We cannot assume that England altogether is less civilised than she was forty-five years ago, yet her general mortality has slightly increased.

What shall we say then? Shall we rush to the conclusion that with our vaunted civilisation we are passing into a lower phase of national life? Is our vital force on the decline? Are learned authors who have written on the decrease of disease by civilisation—Marx and Willis, Berard, Francis D'Ivernois, Boudin—to be considered dreamers? Is it possible that we are blindly and imperceptibly drifting into danger, wearing out, as, philosophers say, the sun our master is? Or is there a mistake somewhere, and are we improving, as we hope we are? Optimist or pessimist, which is the authority?

Before these questions can be answered, let us look at another series of facts. Our balance will then be more fairly weighted.

In the year 1700 the mortality of London was computed as one in twenty-five; that is to say, as forty in the thousand. In the year 1801 it was computed as one in thirty-eight; that is to say, as twenty-six in the thousand. From 1841 to 1850 it was computed as one in forty; that is to say, twenty-five in the thousand. From 1861 to 1870 it was computed as one in forty-two; that is to say, twenty-four in the thousand. These facts show a steady and remarkable progression in favour of health, as far as such progression is indicated by reduction of vitality. Should the reduction continue, we may fairly assume that if even the improvement does not move faster than it has moved, twenty persons out of every thousand living will die in the year 1900, instead of the forty that died two hundred years ago. One in fifty, instead of one in twenty-five, will be the mortality in the metropolis.

If we apply the same test to England altogether, we find that a century since, within three years, the deaths were computed at one in forty, or at the rate of twenty-five in the thousand living. At this time the deaths are one in forty-five, or at the rate of twenty-two in the thousand. This, it is true, is but a small improvement; yet it indicates the position that with an advance of civilised life there runs an advance of actual life.

The position is strengthened by the further fact that whereas at the date of a hundred years back, the whole population of England was barely eight millions and a half, it was in 1870 twenty-two millions, seven hundred and twelve thousand, two hundred and sixty-six, with one cause of mortality, the overcrowding of populations, greatly increased.

Whither, then, are we led? There seems before us a statistical paradox, and some will say, as they read, that statistics can be made to prove anything. Really, there is no paradox, and the statistics, as is commonly the case, prove, when they are honestly read, the simple and consistent truth.

To read the facts correctly it is necessary to classify them as they lie within or in the circumference of the period of time in which they have been produced, and to remember that the greater circle includes the lesser. Taken in this way, we learn that in the wider circle of time the mortality of the nation has been reduced; while in the smaller circles there have been periods in which the reduction has ceased, or has even been replaced by a slight increase.

At the same time it must be confessed that improvement so far is extremely slow, and is, indeed, so finely balanced, it is hard to predict whether it will or will not be maintained. National health is national wealth, but the reverse is not equally true. National wealth is not, of necessity, national health. I fear the contrary is nearest the truth. If we could invent a social state in which health of life and wealth of life would co-exist, we should have a state where a noble intellectual civilisation was combined with a very frugal mode of subsistence, with moderation of pleasure, and with such restraint of passion, that violence of character would never be exhibited by those who wished to be accounted sane. With this state would be connected all the external sanitary requirements for the maintenance of health, and to these advantages would be added a due prudence in respect to marriage, so that marriages were not contracted until the married had the means necessary for maintaining the life of the offspring that result from their union. The last-named provision is possibly the primary and essential; for death is the shadow of birth.

I remember once reading a lesson on this subject, written by an anonymous writer, in relation to the life value of the inhabitants of the little town of Montreux, a parish in the canton of the Vaud, in Switzerland.

The facts and the argument based on them ran somewhat in the following order. The records of Montreux, which had been faithfully kept for several years by the good pastor, M. Bridel, showed that the population was limited to two thousand eight hundred and thirty-three souls, and told all that related to the life history of this self-contained community. The births were at the rate of one in forty-five, the deaths one in sixty-four annually, or 15·62 in the thousand living. The writer compared this mortality with that of a Russo-Greek population existing at the same period of time, in which population the births were one in seventeen, and the deaths one in twenty-five, *i.e.* at the rate of forty in the thousand. Mark! says he, the figures which announce the proportional mortality of these contrasted communities. In the Russian community one-twenty-fifth disappear annually; in Montreux one-sixty-fourth. The Russian generations passed away more than twice as rapidly as the population of Montreux. Who would purchase the advantage, equivocal at best, of a triple number of births, accompanied by this enormous multitude of premature deaths? In Montreux, four-fifths of those born reached the age of twenty, while in the Russian diocese of Nisni Novgorod, out of one thousand baptized, six hundred and sixty-one perished before their fifteenth year. The nuptial garments of the mothers were the destined shrouds of the first-born. In the Russo-Greek community the apparent annual increase was $\frac{1}{3}\frac{1}{2}$. In Montreux, the apparent annual increase was $\frac{1}{3}\frac{1}{4}$. In the former the march of life, so seemingly rapid, was the most murderous in Europe. In the latter the march, so seemingly slow, was, with health and abundance, the sure foundations of actual and steady increase of life over death.

When this writer came to inquire into the cause of these differences, he traced the rate of death to the rate of birth, under conditions favourable or unfavourable to persistence of life. He found that the advance of a population, and its condition with regard to subsistence, are universally correlative, and that a state of comfort stands in relation to the rate of increase, either as cause or effect. If the rate is rapid, the state of comfort is in the relation of cause. If the rate is slow, the state of comfort is its effect. Thus the conditions of ease, and the consequent health of the social body sustained at Montreux, were due to the comparative slowness and circumspection with which

its successive races were brought upon the scene of the world.

The secret of success for securing the low mortality, and a social state in which the happy circumstances of one generation were handed down unimpaired to the next, was assigned by this excellent writer to Swiss forethought and the virtue of continence. These civilised peasants of a Swiss village conserved their health, conserved their lives, maintained a condition of ease, and thereby a condition of social health, simply by the comparative slowness and circumspection with which their successive races were brought upon the scene of the world. In Montreux the nuptial garments of the mother were *not* destined to serve as the shrouds of the first-born.

It would be fair to urge that the comparison I have borrowed between a community of Switzers and a community of Russian Greeks is not strictly fair. Unfortunately the comparison admits of wider application. For the Russo-Greek population of a past day I may substitute an English community of the present, which cannot, in the ordinary sense of the term, be considered less civilised than Montreux was forty years ago. In Liverpool, from the year 1861 to 1870, the deaths were at the rate of thirty-nine in the thousand annually.

Whatever may be the favouring influences, then, of our modern civilisation,—and no one can fail to admit there are favouring influences,—they must be accepted as qualified by the knowledge that they can only prove their value when they are sustained by moral influences which lie apart from them in a sanitary point of view. The fact is obvious that some communities, by virtue of certain physical or moral laws, exist and exhibit in existing a high standard of health without being dependent for their health and longevity on what we sanitarians call strict, formal, sanitary rules. Nay, they exist oftentimes in the absence of, or it may be in opposition to, some of the sanitary rules on which, at present, an exaggerated or doubtful reliance is placed.

I have already given a simple proof of this truth in the comparison I have adduced between a Swiss village and two other communities. I have before me a still more striking evidence of the same truth in the history of the Jewish communities, and of their vitalities, in modern times.

The Jews, spread throughout the world in small clusters of population, have been unusually healthy and tenacious of life. That

they should exist at all is one of the marvels of history. That they should exist as they do, and present the vitality they do, adds even marvel to marvel. Of no other people can it be so truly said that the advancing civilisation of the nations in which they have been cast has been a ban and a curse. Yet concerning them the saying is too true. From the time of their great revolt under their last great leader, Barchochébas, in the reign of the Emperor Adrian, a revolt which ended in the complete destruction of their city as a home for them, their career has been one incessant struggle with fate for very life. From the time of Justinian and Justinian law, they have had to compete not only with the difficulties caused by nature, but with the legal difficulties raised by more cruel and more specifically directed powers against them than those of nature, viz., the powers of the men who gave them permission to live and be persecuted. They have been debarred political rights and social privileges. They have been born in circumstances most unfavourable to healthy development. They have been forced to live in special and overcrowded quarters of great cities. They have been pressed to supply the wants of their oppressors, when their own wants were far greater than were the wants of those who oppressed them. They have been often deprived of the highest services which the healing science gave to their more fortunate and favoured compeers. They have been cut off from advantages of education which to others were offered in the choicest forms.

In the midst of all these adversities and deprivations, the Jews have continued to live, and, what is more remarkable, have continued to live exhibiting a healthier life and a longer life than others amongst whom they have been cast. In every country to which the modern statist has turned his attention, and has found material on which to estimate the vitality of the Jews, and to compare that vitality with the vitality of the people immediately surrounding them, the result has been as favourable to them as to the Switzers of Montreux, or the natives of Monmouthshire in the beginning of this century. Some examples of these results are deserving of our attention.

M. Mayer, in the year 1864, made a series of observations on the relative values of life of the conscript population of the town of Fürth. The physical population of Fürth was, he states, at that time poor and mean, so that the number of conscripts ex-

empted from service on account of infirmities and defective height was greater by one-half in Fürth than it was in Munich. His calculations, therefore, were made on a population which, whether it were Jewish or Christian, was of an inferior physical character; and they are the more valuable on this account, since they present the facts derived from two populations, both of which were poor, with one, the Jewish, labouring under some disadvantages not felt by the other. Under these conditions there was observed during ten years a notable difference in favour of life among the Jews. This advantage was most distinctly evidenced during the first periods of life. Of children from one to five years of age the Jews lost ten per cent., the Christians, or, more correctly speaking, those who did not profess the Jewish faith, fourteen per cent. This tenacity of life was traced as belonging to the Jews during every other stage of life until the age of sixty. From sixty to seventy the mortality was at the rate of 12 amongst the Jews, and of 9.8 amongst the other part of the conscript class. From seventy to eighty it was 9 per cent. amongst the Jews, and 8.9 amongst the others. From eighty to ninety it was 8.1 per cent. amongst the Jews, and 2.4 amongst the Christians and others who did not profess Judaism.

The results of these calculations indicated that through every phase the vitality of the Jewish people was superior to that of the surrounding people with whom they were cast. At first sight it may seem that the Jews who had passed the age of sixty were less healthy and more disposed to die, either from premature old age or from disease, than the other conscripts. But the inference, as Mayer shows, would be wrong. The greater mortality of the Jews above sixty was due to the circumstance that a much greater number of them lived to die beyond that period of life. Even at the age of between eighty and ninety so many were left that their deaths could be counted in the proportions of 8 per cent. compared with 2.4 per cent. of their immediate neighbours.

From Fürth the inquiry was carried to Frankfort, a town in which some of the most remarkable chapters of Jewish life have been written. In this town the modern Jews have laid the beginning of that extraordinary wealth, the end and influence of which, for good or for evil, for themselves and for others, has yet to be seen; a wealth that will probably bring about the strangest revolutions that has yet been realised in their strange

history; a wealth that may make them the kings of the world or destroy them altogether. In Frankfort the Jews have lived until lately in their own quarters; they have had few social advantages, as such advantages appear to the mere politician, to the man of pleasure, or even to the masses of mankind. It is no insult to them, because they have not deserved what they have suffered, to say that they have as yet barely escaped the thralldom of a people living by permission and resting upon mercy sanctioned under legal prohibition.

It would be difficult to invent, for the purposes of our present inquiry, a series of conditions more critical than have been actually presented to us in the mortality statistics afforded in Frankfort by the two communities of Jews and Gentiles. Both were living, in the general meaning of the word, under the same kinds of civilisation, but socially the Jews were hampered while their fellow-citizens were entirely free. The Jews had closer quarters, they were reputed to be less cleanly than their neighbours, and though some of them were, confessedly, very rich, the mass of them were, or were supposed to be, poorer than the majority of the citizens. They had no direct hand in making the laws, and altogether were not, at first sight, to be envied. What under these states of relative existence were the relative values of their health and life?

The answer to this curious question is given by Mayer from evidence carefully collected by Dr. Neufville in Frankfort. The average duration of life of the whole population, Jewish and Christian, was thirty-seven years and seven months. But the mortality was unequally divided. The average duration of life amongst the Jews was forty-eight years and nine months; amongst the other classes of the community it was thirty-six years and eleven months. During the first five years of life the Jewish children died at the rate of 12.9 per cent.; the children of the other classes at the rate of 24.1 per cent. Of the Jews that passed into manhood or womanhood 54 per cent. reached their fiftieth year; of the other classes that passed into manhood or womanhood 38.1 per cent. reached their fiftieth year. Amongst the Jews 24.7 per cent. attained the age of fourscore and ten; amongst the other classes 13.4 attained that nearly ripe maturity. In the total, one-fourth of the Jews lived to be twenty-eight years and three months old, while one-fourth of the rest of the community only lived to reach six years and eleven months. One-half of the Jews lived to be fifty-three years old; one-half of

the other classes lived only to be thirty-six. One-fourth of the Jewish population attained the age of threescore and ten years; one-fourth of the other population barely attained the age of fifty-nine years and ten months. These general rates of mortality, common to the communities at large, in Frankfort, extended, according to Neufville, into special orders. Of one hundred commercial men amongst the Jews fifty died before reaching the age of sixty-one. Amongst a hundred of the same occupation, not Jews, fifty died before reaching the age of fifty-seven.

An eminent French statistician, who prepared, a few years ago, for his Government, an elaborate paper on the vitality of the Jews, —I refer to M. Legoyt,—has reported some equally important facts relating to the Jews in Prussia between the years 1859 and 1861. He corroborates what has been stated by Mayer and Neufville as to the greater value of Jewish life in the earlier years of existence. He indicates that the number of still-born children, that is, of children who die before, during, or soon after birth, was in 1849 one still-born child in 97·75 amongst Jews, to one in 44·86 amongst other peoples. He shows that from 1859 to 1861 in one hundred births in Prussia the proportion of mortality was 48·11 amongst the Jews to 66·33 amongst the other classes of the country.

From these experiences Legoyt assumes that the average life of the Israelites ought to exceed that of the general population. The fact, he adds, is so. The difference to their profit is about five years. The civil state extracts in Prussia only impute to them 1·61 deaths in a hundred, while for the whole kingdom the mortality assessment is 2·62 in the hundred. The population increases 1·36 in the hundred among the Christians, and 1·73 among the Jews annually. The effectives of the first require a period of 51 years to double themselves; those of the second a period of 41·50 years. In 1849 Prussia calculated one dead in 40·69 Jews, and in 32·26 of other classes. From a table of mortality which he constructed from data included between the years 1855-9, Legoyt drew as conclusions:—Firstly, that at birth the average life of the general population was higher than that of the Jewish; secondly, that at all other ages the Jews had the advantage; thirdly, that as regards the Jewish women their average duration of life did not attain that of the whole population up to the age of sixty years, but beyond that limit it became higher.

There lie before me some other details

bearing on this same subject and conveying the same truths. From them I cull one more series of evidences, because they are quite recent and original, and because they refer to our own country.

We have in England, as yet, no collected official documents bearing on the divisions of classes of people in respect to race or religion. We know from the admirable census returns how many persons of different trades and occupations there are amongst us. We know that in the 22,712,266 persons of both sexes who made up the population of England and Wales in 1871, there were 684,102 who were professional persons; 5,905,171 who were engaged in domestic or household affairs; 815,424 who were commercially occupied; 1,657,138 who were Adam's first journeymen, tillers of the soil, agricultural workers; 5,137,725 who were toiling and spinning in the busy hives of industry, industrials; and, 8,512,706 who,—being either boys and girls at school, or persons of rank and property, or persons doing nothing to gain a livelihood,—were all classed together under the head of indefinite and non-productive persons. We know how many of all these classes were males or females; how many were married or single; with various other pieces of important information. But up to this time the facts which relate to racial peculiarities, to families, to modes of life springing from habit, education, and thought, remain unrevealed in this kingdom. The reasons that are commonly urged against the collection of official data on these points have always seemed to me to be puerile, and indeed to be the foolish results of prejudice, I had almost said of superstition.

However this may be, the fact remains that we cannot ascertain on any determinate scale what the influence of the closest inner social life of the people is on the vitality of the people. In relation to the Jews, who stand out more distinctly than any other class, we cannot estimate their numbers accurately even in London, to say nothing of the country. From two good sources of information, each of which I should have considered to be reliable, I have heard, from one that there are twenty thousand, from the other that there are forty thousand Jews in the metropolis. The medium, viz., thirty thousand, is probably nearest to the actual truth. Owing to these circumstances, it is impossible for me to place before my readers any such series of facts as those they have gathered from the labours of Mayer, Neufville,

and Legoyt. I have nevertheless a short record to offer which bears on our subject, and which is, as far as it goes, of considerable interest.

Dr. Asher, the secretary to the Great Synagogue of Jews in London, has supplied me with the data of the number of burials of Jews in London, as they are officially known, for the three years 1873-4-5. In the tables thus supplied to me there are recorded the ages of all who were buried from the age of one month to that of ninety years. The total number of interments in the period named was two thousand five hundred and sixty-three. Of these, one thousand and eighty-four were not members of the Great Synagogue, and they are simply returned under this general head. One hundred and seventy-two were members of the families of seat-holders of the Great Synagogue. The rest were members of families belonging to the Hambro', the new, the Central, the Bayswater, the Borough, and the North London Synagogues. One thousand and twenty-six were males, one thousand one hundred and nine were females. In twenty-eight instances the deaths were premature.

Taken alone, the facts thus supplied are of little value. Fortunately, however, they admit of being compared with the tables of mortality at different ages of the whole population of London. What then, at the same ages, are the relative proportions of deaths in Jews to the deaths of the whole population?

The answer to this question is that the vitality of the Jews in London contrasts, as elsewhere, favourably with that of the members of other classes of the community. In the earlier periods of life, viz., under five years, the favourable comparison is not so peculiarly marked as in Frankfort, but it is indicated. The rate of mortality stands in the relation of forty-four of the Jewish to forty-five of the whole population. In the meridian of life, viz., from thirty-five to forty-five years, the contrast is better marked; for now the rate of mortality stands at the rate of five of the Jews to eight of the other classes. But it is at the more advanced ages of life that the contrast comes out with special force. At eighty-five years and upwards the number of Jews that died were 2 to 0.8 of the whole of the community; that is to say, the Jews who had passed fourscore years were nearly three to one, when compared with their neighbours of different faiths. It is worthy of notice, that in the Jewish, as in other classes, the longevity of

the women exceeds that of the men. Eleven Jewish women passed over ninety years of age, to five men; and fifty-three women died between eighty years of age, to twenty-two men of the same age. Between the ages of sixty and seventy years, the balance was a little in favour of the men; eighty-nine men died within that period of age, to eighty-three women.

It is further worthy of remark, that in the younger ages of life the Jewish male mortality was in advance of the female. Thus of males over ten and under twenty, the deaths in the three years were as thirty-six males to twenty-four females, and from five to ten years the deaths were as fifty males to thirty-five females.

Of the Jews themselves, from whose history the returns that are before us have been obtained, nothing can be urged to show that they, more than others, derived special advantages from what is popularly called civilised progress. Those of them who lived in foreign towns were mainly of the poor of those towns; and amongst the two thousand five hundred and sixty-three who died in London, and the facts of whose deaths are given in Dr. Asher's tables, no fewer than two thousand and forty-eight, or close upon sixty per cent. of the whole, were denizens of the east, north-east, and east central districts of the great city. It cannot be presumed that any of these were under special privilege that they should live so much longer than their fellows. Neither can their greater vitality be presumed to occur because they were Jews; for the inhabitants of Montreux were not Jews, and the people of Monmouthshire, to whom I have referred, were not Jews; yet both these presented a similar good vitality, a vitality which contrasted forcibly with that of other contemporary classes.

From all the facts above related two great inferences may be drawn. The first of these is, that civilisation, when it lifts man out of the savage state, adds to health of life and to length of days. The second is, that civilisation, when it gives to civilised man more privileges than he deserves or requires; when it ministers to his passions and perverts his freedom; when it forces him to extremes of labour; when it promotes premature marriage and excessive growth of population,—then civilisation itself lapses back into practical barbarism, and nature, maintaining her unswerving and wise course, pursues her way even with death on her wings.

BENJAMIN W. RICHARDSON.

WHAT SHE CAME THROUGH.

BY THE AUTHOR OF "LADY BELL," ETC.

CHAPTER XXIX.—"WHY HAVE YOU DECEIVED ME, ARCHIE?"

HE perturbed stranger at the Brown Cow, forced to rise and dress himself without a bath, and to breakfast on home-made bread which was unpalatable to

him, and on an infusion of sloe-leaves that his landlady had substituted for milk, was compelled at last to summon somebody of greater authority than the gawky chambermaid and bar-maid in one. He wished to settle how, after a few more inquiries, he could get away from this benighted and outlandish hamlet.

Host Morse having the stable entirely under his rule, and being less occupied with the great sight of the morning than his wife, was induced to brave the gentleman who spoke as if butter would not melt in his mouth. As a safe vent to his pent-up feelings in discussing the dog-cart and horse, with which the innkeeper was to furnish his guest, Host Morse had broken away from the subject in hand in order to refer to that which was uppermost in the mind of Saxford that day. "There d' be a wedding in the village this morning, your honour," he had said. "Bridegroom he be a stranger chap, fresh come into these parts, a day's-man, Joel Wray, leastways we called him as he called hisself, Joel Wray; but it d' seem, by now, his right name 't is Dooglas."

The gentleman had been listening blankly and indifferently; but at Joel Wray's new

name, he first fell back into his chair, and then started up. "What do you say?" he cried out loudly, and without the least hesitation. Seizing his hat and making for the door, he was down the stairs and up the street in the direction of the church, before Host Morse, standing open-mouthed, and feeling, as he described afterwards, "like one strook or took," could cry God save him! what was the matter?

It was the apparition of the tall, Tweed-suited stranger, darting into the church, which stopped the marriage party.

The gentleman stared distractedly about him till his eye was caught and fixed by Joel Wray in his working clothes, with the rose in his jacket. "Good Heavens, Archie, what are you doing here?" he gasped out.

The young man's eyes met those which had fastened on his, and he, too, stood arrested. "Selincourt! what on earth brings you here?" he said, with the oddest mixture of amazement, discomfiture, provocation, and something like a sense of comicality in his tone.

The familiar recognition between these apparently widely-severed members of society—the fine gentleman at the Brown Cow, and Joel Wray, the day's-man at the Manor farm—turned the rest of the party to stone for an instant. In the next followed a reaction.

"Is there anything wrong?" asked the vicar in an accent of aggrieved trepidation.

"I am here to stand up for this young 'oman," said the bailiff, preparing to show fight for Pleasance, "as is as vartuous a young faymale as breathes—passon, he knows—and as 'a come to church to be—as 'a been, married honest to this here young man."

Even the lad Ned, of all people, took it into his head to put in his awkward oar. Perhaps it was his part, as best man, to speak up for Joel, and Ned had something to do, after all. "Joel ain't in the wrong, as I can see. Banns and everything were right, or passon and clerk should 'a seed to it. I tow'd you last night, zur," turning valiantly upon Selincourt, "that he were bridegroom."

Dorky Thwaite, as best maid, did not follow suit and put the finishing touch to what was grotesque in the situation, notwithstanding that she was all in a tremor lest Madam's should not prove a marriage

after all, and there should be no dinner with plum-pudding at the Manor-house.

Phillis Plum was standing with the beseeching eyes of a deaf person, and Miles was signalling to his old woman to be quiet and submit to the restriction, since nobody was going to "holler" a secret into her stopped ears, and that in church, so that all the village might hear.

Pleasance did not scream, or sob, or faint, after the fashion of brides in the few marriages that have been challenged since marriages were instituted; but neither did she remain unmoved in her faith in the loyalty of her bridegroom.

It seemed to her as if by that unfathomed law of repetition which comes in force in men's lives, a certain miserable scene in her history was to be re-acted, only with a difference in all the actors save one. She could not tell wherein lay the analogy, she could not give any explanation; but with this sudden interruption there came back upon her, in a flash, Miss Cayley's drawing-room, when she and Anne had been unexpectedly brought before a stranger, while at a few words their whole surroundings had fallen away from them.

Joel Wray's voice broke the momentary silence—it had not lasted for more than a moment. "Don't you see what you are bringing upon me, Selincourt?" he said with passionate remonstrance. "These good folks, my friends, are ready to suspect me of bigamy at the very least. You had better explain, since you have thrust yourself where your presence was not wanted, and succeeded in making a mess of it."

Selincourt, thus assailed, made a gesture of helpless despair. "If there has been a marriage," he groaned, lifting his blinking eyes from the bridegroom, and casting round a hasty appalled glance which took in the clergyman and the little festive group of men and women, in which one woman's figure in white stood conspicuous, "I am not prepared to dispute it. This young gentleman is of age, and he has not been married before—to my knowledge."

The statement, thus wrung forth, produced an effect only less than the first address.

"Lor' a-mussy, Joel agen'leman!" "An' he 'a been cuttin', ploughin', sawin', and ordered about with the rest sin' 'arvest!" "An' he 'a been farin' plain, and he a' standin' there in them pewer clothes!" "What d' be the worl' comin' to?" were sentences murmured audibly by Ned, Miles, and the bailiff—the last magnate collapsing at this undreamt-of

turn of affairs, and the whole three men looking more staggered and perplexed than if Joel had been detected in an attempt to commit a felony.

The vicar took his view of the concession. "If the young man" (he could not bring himself to say gentleman to Joel—whom he had known as a farm labourer, and whom he had never suspected of being anything more than a smart mechanic tired of his trade) "has simply"—the vicar said "simply," but he paused and looked at Joel sternly,—“I say if he has simply deserted his position in life, though I regret his error and all that it involves, and feel pained to find that I have been made to assist in any deception that has been practised, I cannot think, sir,” looking commiseratingly, but still reproachfully at Selincourt, “that you were warranted in breaking in upon us in the—the unmannerly manner you have done.”

"I was—ah—commissioned to find a friend's son, and restore him, if possible, to his family," declared Selincourt, but yet with the air of a man resigned to be blamed, seeing that he has never looked for anything save blame in the whole transaction. "If my manner has been amiss, I must plead the shock of his discovery in such circumstances."

Pleasance heard every word, and she had a perception, visual or mental, of the aristocratic chin of which she had got a glimpse lifted in the air, and the eyes looking over her head. There rose up before her mind as if it had been but yesterday, her aunt, Mrs. Wyndham's, manner when she had told the girls that their father was dead, as if it had been no concern of theirs, since their mother had been a low woman.

"Selincourt," Joel interposed, "after I have taken my wife," he gave the title distinctly and defiantly, "back to our present home, I shall come to the inn and hear what you have to say, which is more than you have any right to expect of me."

Thus dismissed, with a high hand, Selincourt drew back, and the party, after standing as if irresolute for some seconds longer, pursued its course to the vestry.

But it was an altered party—not only were Joel's cheeks flushed scarlet, and Pleasance's blanched white, but uncertainty and disturbance pervaded every member.

Nothing more was said. The clear intimation that Joel was a gentleman, together with the tone which he had assumed to this stranger, Mr. Selincourt, who, with all his well-bred deprecation, had burst like a bomb-shell on the company, prevented any of the

vigorous appeals and rough remonstrances that would have been freely hurled at Joel the day's-man.

Even the vicar said no more.

The names "Archibald Douglas"—at which every one who could get near enough to see, stared intently, and "Pleasance Hatton" were scrawled in characters widely different from the writers' ordinary handwriting. The bailiff appended his signature, not certain whether, in spite of the parson's presence, he might not be called in question for the good-nature which had prompted this day's work. The clerk followed, as neither Miles nor Ned's powers of caligraphy were presentable.

At last the marriage company passed out into the road and the village street. Surcharged as it was with its secret, it could hardly contain itself. Doubtless, it emanated in this instance from Host Morse, who was not long left gaping in the parlour of the Brown Cow, and from Clem Blennerhasset, who cried out on the first faint sign of a stir and tumult, "I knowed it. He telled me hisself, ever so long ago."

A sense that something unusual had happened, was diffused with lightning speed throughout the village, and was taking shape in the wildest rumours. Joel Wray was a runaway convict, and Mr. Selincourt a head policeman in the genteelst of disguises, who was only giving Joel a little law through the influence of the parson and the bailiff, that he might walk back with Pleasance to the Manor House, in order to save appearances, and spare Madam and Mrs. Balls the first brunt of the blow.

Joel had half-a-dozen wives already—the shameful young Turk, and Pleasance did very wrong in so much as suffering him to accompany her to the Manor House, there to break with him for ever.

Joel, the day's-man, had turned out so grand a gentleman in disguise, that "Lawyer Lockwood were nor'n to him, and in course the marriage could not hold good, and yon dandified customer at the Brown Cow were his fater come to break it off, and had done it likewise, walking into the wery church and knocking the marriage to pieces, under nose of passon, the momint it were made."

The familiar, gazing crowd, with its free greetings, which had stood to see Pleasance going to be married, was nothing to the massed-together villagers, with strange looks and silent tongues, that feasted their eyes on her return.

Pleasance walked erect and firm, not as if the earth were crumbling away beneath her

feet, while Joel by her side saw not one of these people craning their necks to get a clear view of him. He was holding Pleasance's hand where he had put it within his arm, and where it seemed to rest without either her will or consciousness; and he was talking to her and her alone, with his head bent low to look into her face that was like a mask, the whole of their way back to the Manor House.

"I am afraid this has been a great shock to you, Pleasance," he was saying anxiously, "I never thought that it would come upon you like this. I meant to break it to you after you were prepared for it, when you would have come, surely, to welcome it. I would rather have cut off my right hand than had it come upon you like this to-day by my mother's ill-judged interference, and Selincourt's bungling."

And then he proceeded to enter on eager explanations, telling her fully, at last, all about himself, and taking care to dwell upon the fact that his father had been born in a station very little if any higher than that of the working people among whom his son had been sojourning by his own choice, for the last six months.

But the elder Archibald Douglas, having shown the turn for mechanics which his son had inherited from him, had gone to a great manufacturing town and become first a factory hand, next a manager, and at length, as the due reward of his talents and industry, a manufacturer in his own person. In that position he had acquired, comparatively early in life, a large fortune, had employed part of his capital in the purchase of estates, and had married one of the daughters of a poor county family. The man who was then speaking to Pleasance, her husband, was this rich and landed manufacturer's only son. The father had died, and the son reigned in his stead.

But he was not pleased to reign without preparation or probation. "It was not that there was nothing left for a fellow to do now," he asserted, "I mean no more worlds to conquer, no battles to speak of to fight, no discoveries of new lands to make, when even 'the great lone land' is ransacked for sables and beavers. Besides, there are things even better worth doing than fighting battles or discovering lands," he urged eagerly. "It was not that I had seen you, love, for you know I had never set eyes on you. But I did want to know the mass of my fellows, and above all the poorest men and women among them, by sharing with them their work and their fare, and living with them

like a brother for a time. If I found for myself what their real selves and real lives were, I might go on and help them more effectually than most masters and landlords are able to do.

"I thought of the stout old Russian Czar, Peter. I could but try, however much I should fall short. I knew, of course, that I should fail immeasurably, but I was bent on trying. I cherished the scheme through Eton and Oxford days. When it got wind so far, and reached my mother, though she had not opposed it in theory—the very reverse, indeed—she set her face against it in practice, and strove to get me to give it up. But I could not.

"I thought at first to go into a factory, because of that turn for mechanics which I have inherited from my father, and by which he made his fortune. But then at his death our interest in the old factory had been sold to his partners, and I was destined for a country gentleman, pure and simple.

"And I was fond of country life too, since the time, of which I spoke to you once, you remember? when my father used to tell me and my sister Jane of his young days, and of his father and mother's little farm away among the Cumberland dales. Besides, country knowledge would be most useful to me as squire of Shardleigh. You will love Shardleigh, Pleasance.

"So I left my mother, and Woodcock our agent, and all the college fellows in the lurch, and came off in a suit like this, to work for my living; and I met you, Pleasance, and I could not choose but seek to make you mine."

He spoke in the same strain without pausing for half an hour on end, till they came close to the Manor House. And all the rejoinder which she had made to him was to look once up in his face with troubled eyes and to ask with trembling lips and choked voice, "Archie, why have you deceived me?"

CHAPTER XXX.—"YOU MUST RETURN TO YOUR MOTHER, ARCHIE."

"AND now, Selincourt, may I ask by what title you have mixed yourself up in my affairs?"

Archie Douglas put the question in a voice of repressed wrath standing in Joel Wray's working clothes, and appealing to Mr. Selincourt in the parlour of the Brown Cow.

The appeal was a pertinent one, and without question it told. None knew better or felt more keenly than Mr. Selincourt the

established code of honour by which one gentleman is bound to shut his eyes to the flights, plunges, and hair-breadth escapes of another. It is no matter that the one may stand to the other in point of age as father to son, or that the two have known each other from youth upwards.

In the case in question there was but the remotest kinship. Mrs. Douglas—Archie's mother—and Ambrose Selincourt were cousins; and although there was certainly old acquaintanceship, the conditions for friendship did not exist between two minds utterly unlike, except that they were both capable of integrity.

Mr. Selincourt's sole title to interfere consisted in the obligation which had been imposed upon him by the young man's mother, and to which he, Mr. Selincourt, could not say no.

He could not tell why Mrs. Douglas should have selected him of all men in preference to the family agent, or any other confidential friend. Nay, he had no idea why he himself could not refuse quests and commissions for which he was perfectly aware that he was signally disqualified, merely because the solicitation came to him from a woman, a widowed mother, an old friend. He could not answer these questions, although he was a learned man, the fellow of a college, and one who rarely left the hoary walls which might be supposed saturated with knowledge.

But as a pendant to the disheartening sense of his want of claim to be heard, Mr. Selincourt had the comparative ease of a man who is not vitally interested in the matter.

However taken aback and scandalized he might be at a termination which to him threatened the ruin of his kinswoman's son, still in its lamentableness, the disaster did not concern Mr. Selincourt so nearly as to prevent him from discussing it temperately.

Of course he was very sorry, but after the first brunt of the discovery, perhaps he continued more put out than sorry in feeling himself so thoroughly a fish out of the water at the Brown Cow, and in holding in check his pressing inclination to get into his proper element again without delay.

"I acknowledge that I have no right," said Selincourt, abasing himself for his heinous offence against social requirements, "save what I have derived from your mother. Your conduct is distressing her very much, even while she is ignorant of this—ah! this last misfortune!" he concluded, with a deep sigh.

"No doubt," said Archie ironically, "my

conduct has been distressing her as much as if I had been breaking the whole Decalogue. But I don't admit that I have deliberately sinned against the fifth commandment," he added, with a sudden change of argument suggested by his own words. "I am ready to honour her with all due honour; but I am no longer a child that she should exact from me implicit obedience, to which, by the way, she never accustomed me. I have my own obligations, to fulfil, and my own standard to strive after. To my own master I must stand or fall. If I have gone away and left my mother with no trace of me, it is because she was doing her best to sow enmity between us by seeking to clog and fetter me in a fixed resolve, against which there was no law. If I have not consulted her in the most serious step of my life, it is because I knew that she would have opposed me, not the less inveterately that it might have been quietly. Certainly it would have been useless, for the step concerns me first and last. I wished to save everybody from pain, but, all the same, I am willing to answer for my deed to-day to God and man," he finished proudly.

"Apart from the respect which you owe to your mother," said Mr. Selincourt, with some firmness, "you are entirely your own master, both by your majority and by the terms of your late father's will. No one disputes that," added the speaker, desirous of propitiating his hot-headed antagonist. "I will allow farther, that, brought up as you have been, heir to a place like Shardleigh, you may claim additional respect for your opinions, which are of consequence to many of your fellow-creatures."

"I make no claim of the kind," said Archie, a little sulkily. "I ask nothing more than the lawful freedom which every grown man is warranted in seeking—to do what he judges to be right, and go on his own course, whatever that may be."

"I would not do you the injustice of supposing for a moment," continued Mr. Selincourt, "that you have not been actuated by good motives, however fallacious, in your singular line of conduct."

"I am not a communist, Selincourt," interrupted Archie, with a smile.

"God forbid. I should hope not," replied Selincourt, with a shudder. "I suppose this is a kind of modern knight errantry, which may be expected to lead you into strange quarters, and put your powers of endurance to the test. Yet, Archie," exclaimed the elder man, breaking off the thread of his

observations and yielding to an impulsive expression of his pent-up feelings, as he looked around him at the unsuitable decorations of begrimed majesty and shell flowers. "I wonder at your taste."

The person addressed was by nature a much harder individual than his mother's cousin, whether or not his plebeian blood from one side of the house had anything to do with it. He had been further braced by a tendency to innocent discursiveness out of his immediate sphere from his boyhood. He had not been a low-lived fellow in the ordinary sense of the word, not addicted to base vices or given to loose companions. But from the early days when he had listened with all his ears to his father's stories about his humble, hard-working dale progenitors, Archie Douglas had manifested a great sympathy with and interest in the working classes, together with an inclination to put himself in their place, and subject himself to their trials and temptations.

Actually, Archie Douglas failed to see Mr. Selincourt's allusion, and imagined that it referred to the subject which was nearest his own heart, and which, had his mind been at liberty, would have been filling it at this moment. He opened his lively dark eyes with amazed indignation.

"Do you mean that you have looked at Pleasance and not admired her?"

"Oh, no," said Mr. Selincourt, quickly waving aside the charge, "I have not ventured on such an assertion, for I confess that I was agitated—I did not see, so as to receive even the vaguest impression—the young woman—ah, the lady. Douglas, I have been scrupulously avoiding till now, any reference to what must form, alas, grievous evidence of the danger of your fantastic enthusiasm."

Mr. Selincourt found himself forced to come to the point, and speak out his thoughts, without regard to their effect on his companion.

"I glory in the consequence," said Archie, holding up his head. "I will always glory in it, and consider it by far the most fortunate circumstance in my lot. I have got the good wife that is God's best gift to a man. What should you or any other poor old fogie of a schoolman—forgive me, Selincourt, but I pity you—know about it?"

"Thank the Lord for our ignorance," muttered Selincourt, devoutly.

"And as for being a lady," insisted Archie, "I can tell you Pleasance is every inch a lady, a match for my mother any day."

"I won't contradict you. Don't let us argue on this question," said Mr. Selincourt. "Only you cannot expect this of me, my dear fellow, that I should congratulate you on having thrown away yourself and your possessions on a low marriage."

"I deny that it is low in any just sense," said Archie, keeping his temper wonderfully, "but I cannot expect you to understand it, and I do not ask you to congratulate me—yet—only not to pity me—rather to keep your congratulations to a later date—believe me you will live to give them."

The provocation of Archie's high-handed impetuosity was great, but Mr. Selincourt contented himself with shaking his head and proceeding with all speed to deliver himself of his commission. "This was what I had to say when everything was forgotten on account of this dreadful affair—ah! you count it delightful for the present moment—well, we shan't quarrel, there is no good in quarrelling; besides, I am arrogating no right to quarrel with you, and I call upon you in turn to respect my admitted powerlessness. What this grievous affair has nearly put out of my head, is, that your mother is not only longing and pining to see you again, but she is far from well in health."

"She was in her usual health when I left town," said Archie hastily, in a tone, half of vexation, half of incredulity.

"She is ailing now," reported her ambassador, unhesitatingly; "the old mischief in her chest has broken out again. Mind, I do not say that your conduct has brought it on, I believe that the changeable weather this summer and autumn has been against her. But it has really come to this, that the doctors have ordered her off, once more, to Pau or Cannes, before the frosts set in. There is no time to be lost, and she will not move before she sees you."

Archie Douglas, instead of answering, thrust his hands into his jacket pockets, and took two or three turns up and down the room, turning his back on Mr. Selincourt.

"I am convinced that you would not grieve your mother more than could be helped," urged the mediator; "as for what is done and cannot be undone, well, I suppose the best must be made of it. I do not envy you your task, but you are your own master, and your mother knows that, and is a reasonable woman. I do not need to remind you how valuable her life is, not only to you, but to your sister."

Mr. Selincourt was reflecting while he

spoke, that Archie Douglas having succeeded in stumbling into an extremely objectionable marriage down in this rough locality, had cut himself off from ever affording a home in the natural course of events to his sister; and that therefore the preservation to her of her mother as her guardian was specially to be prayed for.

Archie stopped short in his walk and turned sharply on the speaker.

"I shall go up to town and see and explain everything to my mother within the next four-and-twenty hours," he said, abruptly and gruffly, betraying the effort which the determination had cost him.

"Do so, my dear fellow," chimed in Mr. Selincourt eagerly; "I shall not presume to accompany you, since you have the courage and manliness to do what is right of your own accord, without seeking my poor support. Third parties are always in the way, and do more harm than good in these cases. I did not engage to return to your mother, and I think that she herself will prefer to have you with her alone. I have executed her commission to the best of my ability. I have been three weeks in coming up with you, even after I had got on your track," added Mr. Selincourt ruefully; "but I assure you that I was cautious in not compromising you." He sought consolation for being too late in taking this credit to himself.

"You could not compromise me," broke in Archie, loftily. "I wished to keep out of my mother's reach, and it was necessary that my name and position should be hidden; but otherwise I had nothing to conceal."

"True, no doubt," assented Mr. Selincourt suavely, but with a horrible suspicion that the position might not have remained so hidden as to have failed to glimmer through the imaginary veil. It might have been guessed at by some rustic and her relations as cunning as they were ignorant, leaving poor Archie Douglas, in his sublime self-conceit and disinterestedness, the victim of a wretched conspiracy, as well as of democratic fanaticism.

But there was no use in hinting the suspicion at this date. "I shall keep your secret," Mr. Selincourt told Archie in conclusion, "and let you disclose it to your mother, when she and you can take such measures as you judge best in the unhappy—ah!—the awkward circumstances. I shall run up to town and take the North Western and get back to college to-morrow afternoon. They may speak of the advantages of a holiday, but for a man like me there is no rest

like that which is to be found in his own quad and his own rooms."

Thus the antagonists parted on an amicable arrangement. Of course Mr. Selincourt had heard of and come across shameful villany in his day, but he would as soon have suspected himself as Archie Douglas, greatly though he disapproved of the young man's eccentricity. Mr. Selincourt knew Archie to be well-principled and high-minded—with his very faults leaning to virtue's side; why, even his present terrible scrape was only the unhappy result of an extravagant development of philanthropy.

CHAPTER XXXI.—"I WILL NOT GO WITH YOU."

PLEASANCE had no sooner crossed the threshold of the Manor House than she was called to still Mrs. Ball's aroused apprehensions. Bad news, travelling all the faster because of their intangibility, had flown before the bridal pair back to their home, and Pleasance found her old friend sitting up in bed white and ghastly, shaking in every limb, and crying, "Where d' you be, Pleasance? Be there owt come to you? They says summat be mortal wrong?"

Pleasance answered the most easily satisfied question—

"I am here, dear. Do you not see me?"

"And where be he as should be your good man by now?" was the demand that followed quickly.

"He came with me," said Pleasance, her heart aching sorely; "he will be here again presently."

Mrs. Ball's was pacified.

"Ay, he can go and come an it please he, but do 'ee mind I towl 'ee," she said, suffering herself to be laid back on her pillow, and with a faint attempt at resuming the joke of the morning, "that you 'ouldn't be free to go and come, not no more, arter your outin' this mornin'—that it 'ould be please your good man from this time forrard."

Pleasance received the sting of the words while she was too preoccupied to note how much remaining strength and intelligence Mrs. Ball's had lost in her panic, and what childish bewilderment was stealing over her face and voice.

Pleasance wanted to be alone and think. She had a few minutes of grace, for no one expected her to sit down to the feast which had been provided for the wedding guests. Since the bridegroom was compelled to stay away, the bride was permitted to follow his example. Strange and unheard-of as the

phenomenon of a marriage-feast, ungraced by the presence of the new-made husband and wife, was in the parish, the marvel proved a relief in this instance, allowing the full discussion of the singular circumstances along with the satisfaction of the guests' unabated appetite.

Pleasance tried to understand it all—tried to make allowance for him—the offender; but she was no longer the Pleasance of the morning, confiding and devoted. She was the Pleasance in whom, even as a child, Miss Cayley had seen powers and possibilities distinct from those of bright cleverness and friendly sympathy; and whose passionateness, where her stringent sense of right, and her warm, tender affections, were outraged, had been dreaded by her early guide.

This was the Pleasance who had not been crushed by her first downfall, who had asserted herself, and decided for both sisters. But that was because Pleasance's great trials could only be dealt by the hands of her dearest friends, could only reach her through her own fond exaltation of these friends, and her cleaving to them as more to her than silver and gold.

This was the same Pleasance who had so writhed under Anne's loss, that she had taken the desperate resolution, and abode by it, of renouncing the class which had renounced Anne, and left her to perish—of never again having to do with associations which could smite her by reminding her too keenly of the sister and friend who had been taken from her for ever.

Pleasance did not think of what Archie Douglas had said to her; though she had taken in the sound and sense. How could it, when it was swelling with the consciousness of the deceit which had been practised upon her, and the wrong which had been done to her truth. It seemed to her that insult was added to injury by his supposing that wealth and rank—the wealth and rank on which she had for ever turned her back—could bribe her into more than complacency, into vulgar elation, and could buy for him a ready and entire forgiveness for his double-dealing and treachery? He had been deceitful and treacherous under seeming candour and frankness, and he had persevered long, preserving his secret unbroken to the last moment.

Pleasance did not consider his plea that he had not put on a disguise in order to test and to win her in pretended poverty, in foolish emulation of the foolish egotism of

those heroes of romance who were no heroes to her. She had not taken to heart his eager confiding to her of his far more heroic and chivalrous motive—after her own heart, as that motive might otherwise have been. She did not once remember it, yearning with tenderness, even while she might have condemned him for falling so far short of what he had ventured to call his mission in abusing it for personal ends.

The time might come when Pleasance would take all these things into account, treasure every fragment of the argument on his side in her remembrance, and ponder over it in her heart; but that time had not come on her marriage morning when she had been betrayed into marrying a gentleman against her will. She only thought then of her wrongs.

Oh! how she had loved and believed in Archie Douglas, believing in him in the teeth of testimony which might well have shaken a less confiding woman's faith! She had hoped to be happy with him in the only station for which she was fit, and in which she could be happy. She had spoken to him freely of her hopes, to which he had listened, knowing that they were vain. She had been as glad as a child over the idea that she could furnish him with the small means on which they might begin housekeeping, and he had never told her—he might have been laughing at her all the time—that he was the possessor of many thousands, to which her few hundreds were as drops in the bucket.

Mrs. Balls—her honest, kindly, motherly cousin, whom she had promised never to forsake—was in her last weakness, and how was Pleasance to keep her pledge to one who had been as a mother to her? It would be worse—more dishonourable and heartless in Pleasance to give up Mrs. Balls, than if Pleasance had it in her power to fail, and failed to a real mother whom it was her natural duty to cherish. It would be a mockery to think of her staying with and waiting on Mrs. Balls, when she, Pleasance, was the wife of a gentleman, and when she was called upon to walk in his ways and suit herself to his tastes.

He had had many opportunities of explaining himself, many chances given him, from the time when he had taken to heart the loss of the foreign sailors, down to the Sunday afternoon when in the near prospect of their marriage he had stood with her by Anne's grave, and let himself be forsworn, as it seemed in Pleasance's severe young eyes. Even there, on that ground hallowed to Plea-

sance, he had not opened his mouth to warn and confide in her. Neither sorrow nor joy had melted him so as to constrain him to confess the deception he was practising. She knew he was kind, but what was kindness without truth?

So she had heard Mrs. Balls say that her father had been kind to her mother, and yet he had been so weak, so much the creature of social prejudices as to be ashamed of his own free choice. He had done her mother and these two, Anne and Pleasance, the cruel injustice of never publicly owning his marriage, and of leaving his children where he himself had placed them in a false debatable position, of which they were the innocent victims.

Could Pleasance expect another and a nobler ending from Archie Douglas's still more deceitful beginning? Was she who had not hesitated to condemn such a poor compromise, to perpetuate, open-eyed, her mother's half-seen imprudence, and leave a third unborn generation to reap the full harvest of misery? Would it not be consummating his error, and surely bringing down upon him his punishment?

Pleasance's anger was somewhat subdued before Archie Douglas came back to her, and joined her where she sat all alone with her hands in her lap in an upper room in the Manor House, where she had been wont to keep her books and pets. The place was now empty, except for a box, and a cage or two, and a fixed-in window-seat. The low October sunshine poured in and illuminated without warming the brown bareness and the solitary figure in the white dress so out of keeping with the surroundings. He came up to her without any guilty hesitation, although with subdued looks and tones.

"You have not gone down to the company in the kitchen without me," he said, in a voice half rallying, half pleading. "I suppose the good folks will do very well for once, cracking their special nut and digesting its kernel, as well as discussing their fare, without us. But neither have you changed your dress and gone back to your friend Mrs. Balls, as you proposed. Does she not need you?"

"I cannot tell," said Pleasance heavily. "I have only seen her for a minute."

He sat down in the window-seat beside her, and took her hand, which she did not withdraw. Where was the use, when it would soon be all over? But how strange it was to see him close to her there, in the working-clothes which looked as if they belonged to

him, but which he had only worn as some player on the stage might appropriate either the black velvet of Hamlet or the hodden-grey of the gravedigger, as it suited him.

"You know, Pleasance," he was saying, "I had intended to stay with you and work here for a time after our marriage, because it was the great wish of your heart, and till you had grown reconciled to the fact that

I had other duties and obligations which you must share and lighten. Whatever cause you have had to dislike them, on your own account, you will come to love them because they are mine, won't you, darling? But, besides, an end has been put to my appearing again upon the scene as a working man by poor old Selincourt's blundering. You will think it so, Pleasance, when you

Page 502.

are better acquainted with the man. I was furious with him, but the old sinner meant no harm, and to make a long story short, he has brought me tidings to which I cannot refuse to attend, and which I am sure you would be the last to ask me to neglect. My mother is ill, and ordered abroad, where she has frequently been sent for the winter, and will not stir till she has seen her impractic-

able son. But you must teach them better, that I have had the wit to win the dearest, sweetest, wisest woman in the world. I am very sorry to disappoint you, even more than to hurry you—the first thing too, only you see that I have too good an excuse, and cannot help myself. I must run up to town to-morrow, Pleasance, and take you with me, make my mother acquainted

with our marriage, and make you known to her."

He run over the obligations rapidly, rather slurring them as not being able to parry the suspicion that they involved what would be trying and distressing to all concerned.

"After that," he said, drawing a long breath of relief, "and after I have seen my mother and Jane off, you may depend upon me bringing you straight back to Mrs. Balls."

Would he have had the honesty and courage, supposing she had consented to go with him, to do what he proposed? Could she have depended on his fidelity and generosity in restoring her to her filial post?

It was idle speculating, since she would not try him.

"I will not go with you," said Pleasance steadily, but in a voice that she could not have recognised as her own, looking up at him with crimson cheeks contrasting with her white dress.

"You will not go with me!" he exclaimed, startled, but quite unable to take in her meaning. "Do you propose to follow me? But would not that be a great deal more disagreeable for you? No, I do not think I could consent to that."

"I will not go at all," she said, plainly; "I daresay you think that I must go with you," she continued, while he looked at her confounded, "because I married you this morning, and so am bound to obey you. But ours was not a right marriage in which both man and woman know what they are doing. I don't think that it should stand for a marriage; but I do not know and cannot help that. What I do know is that I will not go with you unless you force me, which you will not do."

"Pleasance," he cried, "what is this? You are not in earnest, you are not in your senses. Our marriage not a right marriage, which you do not think should stand, and you, my love, my wife!" He stopped, choked with emotion.

"Yes," she said, "Archie Douglas, or whatever they call you," she uttered the last words with harsh scorn that, even before it tingled through his veins, filled him with consternation, "you know that I did not mean to marry you as you are; you know and I know that I am no more fit to be a gentleman's wife, than I have wished to be the lady that I have forgotten to be."

"It is not true, I do not know it, Pleasance. How can I know it," he protested passionately, "when I have deliberately chosen you to be my wife? I know that you

have set yourself against a higher class, because of the adversity of your youth, so set yourself that I dreaded to tell you my real position lest it should part us while parting was yet possible. Don't you remember that every time I approached the subject you repelled me and closed my mouth by your hostility? I have erred, but it was for your sake. Look here, Pleasance, rank and wealth did not stop me for an instant, I felt that they could not come between us. Are you going to make them the bugbears that I never made them?" he urged. "Are you going to let the outward accidents of fortune divide us after all, when I have loved you so well, that, had it not been for my duty to others, I could have held my worldly station worthily lost, could have renounced and never resumed it for your sake?"

"Where was your duty to others?" she said, in the icy accents that contrasted so strangely with her flaming cheeks. "Where was your true manhood when you deceived me, a woman who loved and trusted you—deceived me, not for an hour or a day, but for a long course of days and weeks, and in face of all you knew of my sad story, my convictions, and my conscience? Do you mean that we are equal any longer, you and I? I, who did not hide a thought from you, and you, who misled me from first to last, and did not once speak the truth to me, but made a tool, if you did not make a mock, of me?"

"Pleasance, Pleasance," he cried, roused to wrath, and springing up. Then he stood still in despair, convicted before her, and yet rebelling against her undreamt-of cruelty. "Pleasance," he began again reproachfully, "I have already told you that it was not to gain you that I first assumed a character to which I was no further entitled than that all of us are working men and women, and that we are at liberty to change our sphere of work when and where we choose," (she shook her head at the specious fallacy of his reasoning). "But even if it had been otherwise," he urged, "I think I might have found more mercy from you—the cause of my deceit, if you will have it deceit, I am not the first man, or the man of highest station, else history lies, who has dropped the surroundings of his station, and descended into the ranks to struggle on the same level for the prize he coveted. I never heard that the man's descent was counted unworthiness in the man and degradation to the woman."

"WHAT SHE CAME THROUGH."

Page 515.

"But I count it unworthiness and degradation," said Pleasance bitterly; "I know what you allude to. I have read the stories of the Grizels and Enids and Lady Burleighs, and I always thought them written by men to shame women—to show how little honour was reckoned due to a woman. A man would never dare to beguile his friend and think to call him friend again, but he may play upon a woman's weakness, and having taken her in by false pretences and led her a long way under false colours, having tried her—as who was he to try her?—as no human being has the right to try another—he has but to throw off his mask to be forgiven because it is love, and not friendship, that he has profaned. And what is full compensation to the poor silly woman? She is torn from every tie of her youth, but she finds herself rich and great, like a woman among the Turks, with silk gowns, and cachemere shawls, and gold chains that she does not know how to wear and that do not suit her, with French cookery, that is not good for her and soon ruins her digestion, with servants that laugh at her before her face, and new relations that hate and despise her. It is very pitiful to be bought by such things," ended Pleasance with ominous quietness, sitting tearless and hopeless, with her hands crossed in her lap.

"Did I ever think to buy you? Did I ever seek to tempt you?" he appealed to her in vain.

"You once told me a story that you had seen played," she told him in return, "of a lad who was a gardener and who loved a proud beautiful girl of rank, whom he dared not approach, and how his love tempted him to lend himself to her enemies who could make him pass for a prince in order to win her and humble her. You said that there was the halting morality of the play, for the plot was not merely a heartless, but a base trick which no true man would have been induced to play. Now, I do not think that the gardener lad was substantially worse than his neighbours—the rich gentlemen who affect to be poor working men; I think they deserve the same reprobation."

"If you think so, Pleasance," said Archie Douglas slowly, "you are right in not going with me, and we are better to part here and now."

He was standing before her—no longer the gay, good-natured young workman whose good-nature had been the by-word of his chance comrades and one of his great charms.

Here was the man of whom Mr. Selincourt

had said that his opinions were of moment to many of his fellow-creatures, the young squire of broad acres and numerous retainers and dependents, who, when he was among his own people had been accustomed—whether he recognised it or not—to be listened to and deferred to. He had, indeed, among his equals, and among his college companions, learned to occupy common ground, to give and take, bear and forbear. He had even felt a great, generous impulse to waive every attribute of supremacy, and live with all men as brethren, till he could make friends of them and teach them to make a friend of him; but he could not, by any means, in thus doing annihilate the tendencies and destroy the influences which were superseded, but not suppressed.

The air of authority and command which Pleasance had learnt to condemn in man and woman, was clearly visible in Archie Douglas, under his working clothes, at this moment.

"You are right that I have been miserably wrong in my conclusions," he said again, sternly. "But the misery shall go no further so far as I can help it, you supporting me in my resolution. For bringing such distress upon you by a deception, which was as much self-deception as anything else, may God forgive me as I am already reaping my share of its fruits. I will not compel you to go with me; I can say farther that I do not desire it, in your present frame of mind. But you are my wife" (he said the word with sharp intonation this time), "unfortunately, nothing that we can do will break the bond, and which has become by one fault of mine so hateful in your eyes. You have the first claim to that protection, and to those worldly goods which you reject and heartily despise. When I go, I shall leave you my address both in town and country. I shall write to you after I leave," she put up her hand in deprecation, but he finished his sentence without heeding her, "whether you think fit to read and answer my letters or not."

He stopped; and total silence fell between them for a moment, in which his hard breathing was audible to both, and in which she heard the loud beating of her own heart as it stood at bay. He broke the silence where speech was concerned by words the very commonplaceness of which was full of irony in their anguish, "I suppose there is nothing left for us but to bid each other farewell."

"Farewell," she said stubbornly.

He moved half way to the door without her stirring, and then he came back quickly to

her with all the strange, cold calmness of his mobile face broken up. "Can this be real?" he whispered, stretching out his arms to her. "Only three hours ago we two were made one, and ere the words are well spoken, have we had a deadly quarrel, and are we about to part?"

"We should never have met," said Pleasance, "and so we do well to part."

"Be it so, then," he said, with a sort of fierce disclaim of himself and her, his empty arms falling by his side, while he drew back erect and haughtily, "you have chosen it; the evil rests with you, if there be evil. I have only submitted to your decision."

There was no one to see whether or not Pleasance relented when it was too late, and when the last sound of her bridegroom's foot had died away in the distance.

If Mr. Selincourt had come to Saxford a week earlier, the couple might have been parted, though that is doubtful, for as the wrong which Pleasance conceived that Archie Douglas had done her would then have been less complete and irremediable, so his confessions and persuasions might have had more power over her.

Or if Mr. Selincourt had come a week later, then the couple would not still have felt only lovers. They would have had time to realise that they were man and wife, joined together till death, to spend their years and share their good and ill thenceforth in closest union—homely yet sacred. And surely no words of a third person, no revelation of a hitherto unknown division between them, could have steeled Pleasance, to wreck her life at one stroke, and cast away her husband and her happiness.

In the meantime the marriage feast, stripped of bride and bridegroom, like the play of *Hamlet* enacted without the Prince of Denmark, having surmounted its hard deprivation, and being enlivened, instead, by the recollection of the late striking scene in the church, and the further excitement which it foreboded, was going on so briskly that Joel Wray left the house without observation.

Even after the lapse of another hour old Miles Plum was still struggling with the necessity of drinking the toast of the day, and the exceeding awkwardness and positive obstacle attendant on drinking that or any other toast when the good wishes of the company, which should have been addressed to the principals, must be spoken to blank air and resound on the head of the well-wishers.

Phillis was yet intent on supplying the exhausted wants of Ned and Dorky Thwaite,

and on sending messes to the attendants on Mrs. Balls, as she dozed on her bed. The bailiff had gone straight home, half in dudgeon, half in dismay.

Pleasance had time to rally and recover herself, to take off her white gown and put it away out of her sight, as one lays aside the relics of the dead. In her ordinary dress, with only the wanness of her face to indicate that within that day it had burned with shame and pain and passion, she prepared to resume her post in Mrs. Balls's room, and to account to her kinswoman, when she awoke, for whatever catastrophe had occurred and whatever changes were in store.

CHAPTER XXXII.—"NAY, NOW, PLEASANCE, YOU MUN PLEASE YOUR GOOD MAN."

THE workpeople at the Manor farm, and the villagers of Saxford, who saw with but partial comprehension the scenes of this drama enacted before them, when they found that Joel Wray, without taking leave of any one, had on the evening of his marriage day proceeded straight to the station, from which he had taken train for London, leapt unanimously to the last of their conclusions. The stranger was Joel Wray's great gentleman of a father; he had come to break off the marriage, and had succeeded.

The public indignation slept as yet on Pleasance's account. For one thing, her plight was indefinitely softened from what it might have been, if, after having rashly wedded a stranger, he had proved, say, a burglar, and been in danger of transportation. No doubt she received compensation for her loss of a husband, and the village had its sordid side, actuated by which it placed substantial value on such compensation.

Esprit de corps is a sentiment which is liable to many fluctuations and restrictions. Working men and women stand by each other, but they do not care, as a rule, to have one of their number promoted over the rest, they are even apt to be bitterly jealous of a working man or woman aspiring to such a promotion. "Serve 'em right," they growl or scream when pride is followed by a fall, and perhaps they are a little tempted to do what in them lies to conduce to that fall.

When Lily became a lady, the village might have been outwardly gay, but undoubtedly, unless Lily was a very exceptional person, it must also have felt inwardly provoked and aggrieved.

Then Lily happened to be successful,

and there is much popular homage which culminates in the lower ranks, paid to palpable success. If Lily had chanced to fail, and have the cup dashed from her lips, all the prophets of evil, all the severe censors and malicious detractors, would have been down upon her at once, and only a few of the kinder souls would have been mollified by her misfortune.

In Pleasance's case there were signal mortification and disaster following on the heels of the proclamation of an exaltation which she had just grazed and missed. In addition Pleasance did not belong properly and exclusively to the people, disposed as she was to identify herself with and cling to them. She suffered from the element of strangeness in her. She was like a solitary emigrant striving to be naturalised in a great nation, which is linked together by innumerable bonds, and which can only extend to the foreigner an inelastic tie. After all, she was but a volunteer adopted into the regular ranks; she was the alien fowl admitted into the barnyard which, nevertheless, the other fowls are everlastingly prone, on small grounds, to turn upon and peck.

The general feeling with regard to Pleasance, when it was fully settled in village conclave that she had been separated from her gentleman of a husband on the very day of her marriage, by the all-powerful intervention of his father, was that she ought not to have looked so high. Besides, she had been very sly in looking high, for she had always made believe that she was perfectly contented as a working girl. Yet see her! she had thrown over Long Dick and she had taken up with a stranger, and set her cap at Joel Wray, having guessed, no doubt, with her cleverness, that in the mean capacity of a day's-man, he was somebody clean out of the common. The end had been that she was fitly punished for her worldliness and slyness, and who was to cry pity on her?

The village girls particularly were dazzled, and preferred to marvel over the phoenix that had been among them. They giggled at having been his partners in field-work, as even Lizzie Blennerhasset had giggled over having rowed in a boat with "as good as a lord." They regretted that they had not made up to him more than they had done, and got from him gifts—ribands or neckerchiefs, or brass brooches and glass ear-rings, which he would have thought it an insult to bestow. All that he had ever given to them, and that was collectively, consisted of oranges and packets of sweetmeats (with

regard to which they had questioned him in a free and friendly fashion at the time, whether he could afford them?)

Joel Wray, in place of having sunk to zero in Saxford estimation by what, according to the village explanation, would have been his mean desertion of Madam, still enjoyed the high temperature of a privileged favourite. He was even, alas for public morals! a little admired by vicious judges for the imagined adroitness and freedom from injury with which he had done what his neighbours could not hope to do with impunity,—gone the length of marrying before the parson, and had his marriage come to nothing when it suited him, by giving Madam the slip so soon as she threatened to prove a trouble, because of his father's discovery of the performance. He had got rid of her and distanced the parish authorities at one stroke, and that on the very wedding day. "He were a clever rogue of a buttery chap, he were."

But Joel Wray had done a little to justify the extreme and undue indulgence with which his offence was at first treated at Saxford.

Clem Blennerhasset (who regarded the padlock that he had put on his mouth as removed) indulged in giving his feelings vent, and in becoming the centre of an envious crowd, coveting his earlier information and superior advantages, while he boasted loudly of what Joel Wray had said he would do for him. And sure enough before Bully Smith could lay hold of his degenerate son and "wallop him tightly" for this new development of his musical craze, a letter came from Joel Wray, or Archibald Douglas as he signed himself, which caused even the smith to hold his hand, and consider the good of his family.

For the first time in Clem's experience, his musical faculty ceased to be derided and put under a ban: on the contrary, it brought him such respect and consideration as filled the boy with wonder. Under the influence of this late regard on the part of his family, and of his own unmitigated amazement, which rendered him uncomfortably uncertain how to take his friends' complacent reaction, Clem was despatched to London, to new fields and new fortunes, leaving only one regret behind him, that poor Liz would not look up and wish him joy.

The villagers were more or less profoundly impressed by Clem Blennerhasset's luck, and the benefit conferred on him. Why might not his case be that of others? What was to hinder Joel Wray, who had dwelt famously among them, and beyond a few ea-

twits at the curious combination in him of coxcomb and day's-man, been well received by them, from becoming a general benefactor? Gorgeous visions of offices of head dairymaids and keepers of lodge gates, grooms and stablemen, began to float, with a giddy effect, before rustic eyes.

There was a remnant of what might be called the old republicans of Saxford, who stood firm as ever against all Joel Wray's attractions of romantic mystery, daring achievement, and limitless power. These were the same men who had remained faithful to Long Dick, and inveighed against new-fangled folks and new-fangled ways. They persisted in viewing the discovery that Joel Wray had been a gentleman abiding with them for a time, in the light of a dishonest imposition on their credulity. It was the taking of bread out of at least one poor man's mouth, that a gentleman might divert himself with playing at being a working man. It constituted an ill-considered jest in the middle of their serious earnest, an impertinent interference with their small privileges, and an utterly unwarranted intrusion into their secrets. They swore that had they known him as a spy they would have "trounced" him. But neither did these rugged old men—for the most part—waste their sympathy on Pleasance. She was not one of them, out and out; she had encouraged the fellow, who had dealt with her according to his kind; let her smart for it.

Little did Pleasance care for the want of sympathy. There had been a time when she had ardently craved for fellow-feeling, and when the sense of isolation, in spite of all her efforts to adapt herself to a humble standard, had chilled and weighed upon her. But now she was rather glad, if she could ever feel a spark of gladness again, to know herself alone. She was thankful for the moment that Mrs. Balls, apparently satisfied with her presence, asked her no further questions, and did not even inquire after him who was so to have been a son to her, as if she missed him and felt troubled by his singular and protracted absence.

But soon this dull sense of thankfulness was disturbed by a cold apprehension which penetrated even through Pleasance's sore occupation. Mrs. Balls had not been like other women; she failed self since Pleasance parted to them her on the wedding morning to go on air any happy errand. She lay there, with dim Philanderer eyes and shaking hands, plucking exhaustively at the bed-clothes, rousing herself fleetly for a moment, but only to speak

broken, anxious words of being from home, and bound to set out on the journey back. When soothed into composure, she returned invariably to one idea, and made a ghastly shift to smile again with a shadow of archness, and repeat to Pleasance her last pleasantry—"Nay, now, Pleasance, you must please your good man."—It was forced on Pleasance that there was another change coming to her old friend.

The doctor, when summoned, confirmed the fear. A little excitement—not the happy excitement of the morning probably, for which she had been prepared, but the hurried tale which had been imparted to her without warning, of an interruption and of some misfortune connected with Pleasance's wedding—had dealt the last blow to the worn-out system. "Another thing to thank him for." Pleasance made a mental note to herself, even while she stood with calmness and heard that there was nothing more to look for but the end—the end of one human life here, with all its earthly pleasures and pains, hopes and fears. Oh! how Pleasance could have wished, if she had been found fit, that the end were hers!

Once more, as when she had sat by Anne, buoyed up with the child's desperate hope, which was altogether absent from the woman, Pleasance took her post at the sick bed. She never moved save in its ministrations. She hardly took her eyes from the inert figure which seemed yet to be palpably receding from her gaze, and vanishing into the invisible and the unknown.

Her very last friend, not half enough valued while she had her, was going fast from her; and all Pleasance's need of her, greater than ever, could not retain the weak stay.

Though the end was certain, it was not speedy, like Anne's decline. Days and nights—during which October waned into November—passed and left Pleasance by the bed, or lying down on the mattress on the floor.

She had no lack of assistants besides Phillis Plum and the old friends of Mrs. Balls from the village. The doctor and the parson came regularly as ever, to do what they could to relieve the last incurable ill. Through their press of business they gazed still more curiously than they had done on a former occasion at the chief watcher and mourner—the young woman who was the talk of the parish for having contracted an unequal marriage, for having been left behind on her wedding day, and who would not speak voluntarily of her situation.

The vicar especially would fain have heard the end of the broken-in-upon wedding, with regard to which all he knew was the lying rumour that the reprehensible young fellow's relation or friend had been able to induce him to go off without his bride, who was submitting to stay on without him at the Manor farm. The clergyman's old half shy, wholly gentle overtures to win her confidence and to tender her advice were made to Pleasance, but if they had failed when she was a sorrowing child, they were not likely to succeed now.

The interruptions were few and slight, and came only from letters which arrived for Pleasance at this time. These were addressed in the name which she had not yet borne, by which she had hastily forbidden Phillis Plum to call her, and which no one else had given her—"Mrs. Archibald Douglas." They were written with what feelings Pleasance never suffered herself to ask. She did not know the handwriting; she had never happened to see it before; and, as if it had been the work of an intolerably presuming stranger—save, indeed, that for no mere stranger would her eyes have flamed at the sight of the characters composing the address—she turned aside her head on each occasion, and flung the successive letters unopened into the fire, refraining from looking round till they were floating red-hot films which a breath would dissolve.

Once Phillis Plum, who had brought a letter to Pleasance, interposed with a prudent remonstrance. "Bean't it a pity not to see what were in it?" she pled. "They did say at post-office this en 'a a furrin post-mark an' all."

But Pleasance only shook her head in sign of a fixed negative, and refused the further communication with Phillis, which her deaf ears rendered so troublesome.

So the days and nights passed till every vestige of autumn had left the bleak east country. Not a shade of royal purple remained on the sere brown and dank green of the heather in the hollow of the moor, where Pleasance had gone with Joel Wray to watch the beatific peace of a calm summer sunset, and where she had stayed to comfort him and to listen to his love tale. Not an orange or a tawny leaf lingered on the old chestnut and walnut trees at the foot of the Manor garden, which might in their day have afforded shade and shelter to other plighted lovers. Beneath those trees Pleasance and her promised husband had stood and arranged their future marriage, when

he had equivocated to her, and described his circumstances in terms which had a double meaning, and were as lying words.

It was all over now. The very country sights and sounds which had been around them had undergone, in the course of nature, an entire transformation.

And Pleasance was left sitting in the grey chill light thrown by rain-clouds which just shifted that wind-clouds might take their place, and sweep across the sky in a black frowning pageant, watching her aged cousin dying. Anne was gone long ago; and even before her, Miss Cayley and Pleasance's young school companions had disappeared below her horizon. Long Dick was gone—that was Pleasance's doing; and so perhaps it was her fault also that Lizzy Blennerhasset had, so far as Pleasance was concerned, departed with him. Did not Pleasance hear something, despite herself, in the echoes of the gossip which reached the sick room, sounding from the remote distance of the hale and hearty outer world? And before Pleasance's eyes, in the short winter day, homely, honest Mrs. Balls was drifting—unconscious of the fact, unconscious of the real life around her, though she always knew Pleasance, into another world. All that had been spared or renewed of Pleasance's landmarks were being removed simultaneously, like those which had vanished before them.

Pleasance could bear, with a little thrill of awe and a flood of tenderness, to hear that fitful recurring talk of Mrs. Balls, of her being from home and setting out upon a long journey. It sounded like a fragmentary revelation out of the dim darkness that compasses our coming and going in this world, like a wistful anticipation of the journey which lies before each of us, and which lay so close to those wayworn feet. But it was hard to hear that piteously stale jest of "Nay, now, Pleasance, ye mun please your good man," at which Pleasance had laughed gaily when she heard it first in very different circumstances—at last meeting, and taunting her at every turn. Mrs. Balls said it as long as she could speak, sometimes before Phillis Plum, who could not catch a syllable, but who would cock her well-nigh useless ears and ask at random, in reply, "What be she arter now? the pheasic? or be it her money she wants to tell you on, or a line on her prayers her's sayin'?" She would murmur it before the doctor and the parson, who took no notice, very likely did not listen to a dying old woman's evident wandering.

She would whisper it to Pleasance herself—morning, noon, and in the middle of the night, when she had drawn aside the curtain to let the late moon, wading through the clouds, add her white light to the yellow light of the candle—until Pleasance's unstrung nerves could stand the involuntary appeal no longer, and she fell weeping and sobbing before the dreaming speaker, imploring, "Bid me please you, dear—bid me please God; but do not bid me please another."

Mrs. Balls did not hear; she kept to her faltering injunction, and died with it on her lips. In a lower depth of loneliness—after having known the dearest companionship—than when she had followed Anne's coffin to its grave, Pleasance walked after Mrs. Balls's coffin, entering Saxford for the first time since her marriage morning. She had replaced her white wedding gown, with its bridegroom's roses and carnations, by a black mourning gown and cloak, and she held in her hand the sprig of rosemary which it was still the custom in Saxford to cast into graves.

CHAPTER XXXIII.—"LIZZIE BLENNERHASSET WILL GO NEXT." "STAY, LIZZIE, FOR WE ARE ALIKE BEREFT, BUT THERE IS ONE WHO WILL BE OUR REFUGE."

SAXFORD found its heart. There was a stout heart there, capable of both warmth and tenderness when it was reached, though it required strong appeals and broad contrasts to reach it. That was a strong appeal and a broad contrast when Pleasance walked alone, for she had shrunk from the renewed proffer of the bailiff's support, followed by the farm-servants of the Manor, at Mrs. Balls's funeral.

The vicar had caused the bell to be tolled for so old and worthy an inhabitant of the parish, and it was to the sound of the dismal tolling that Pleasance walked, while sullen raindrops plashed upon her hooded head and on the pall of the coffin. The village heart had already been softened by that primitive, half contrite, half generous recalling of the virtues of the dead by which the rudest, still more than the most civilised, circles, bear testimony that the things which have been are among the things that were.

"Her were a kind woman for a maid, and an honest. Her gave every man and wumman theys due, her did," said one.

"She was liberal with whatten skim milk and scalded whey, and flour and bacon, she had in her power," said another.

"Whatten store she set on that poor mawther as is forsaken this day! Lor'!

what hearts d' be in men, gentlefolks and all, when they 'a gathered on'y to cast aside!" moralised a third.

"Mor, Madam—she were good too, let alone her being airified," suggested the first speaker; "that came nat'ral sin' she were once on a day at boarding-school."

"Her kep a pleasant tongue in her head," corroborated the second; "Her minded a mander on wants, more'n her own, when she druv to Cheam—a big-printed Prayer-book for father, the twind for Laurie Larkins's cabbage-nets, matched muslins for Lizzie Blennerhasset, as was her frien' pe-llickler till they fell out along on Long Dick's goin', as if a wilful man 'ouldn't 'a his way, let a wumman do what she 'ould. As soon as she came into her fortune we was all to profit, but a polished villan 'a spiled all."

"I'm main vexed for the gal. I d' think she 'a been hard tret, along on Joel Wray's thinking fit to be a gen'leman. What's a gen'leman that he should come in a labourer's jacket, and with his fair false speeches turn a gal's head, and then turn 's back on her on their wedding day no less? For my part I've no stomach for grubs as comes out butterflies. Give me a pewer workin' man as owes his wife summat, and ain't in the way on affording' to throw her up; them's the sort on men for wummen."

(The last speaker was Mrs. Grayling.)

"What'll come to Madam now?" questioned Mrs. Morse, joining the group. "I ain't given to meddlin', but I 'ould like to know for owd friendship's sake—with Mrs. Balls I mean—what d' be up with her cousin? She can't bide not no longer by herself at the Manor, and Lawyer Lockwood ain't so soft as to put a gal like she in a 'sponsible woman's place, over the cheeses and the other gals as helps the dairy work. I ain't the one to objec', but he 'ont; and I suppose she 'a given up her claim on her fine gen'leman that were so fain to disown her."

"There be the compensation," said Sally Larkins vaguely. "Passon 'ould see that made sure to she, for he were allers a great en with Missus Balls; her were for Church and State, and never went with the Methodies; and one good turn deserves another, don't 'ee see? Then, Madam, she hev her fortin', or be it gone in the pouches of her gen'leman, Joel Wray? Any way she d' be a strong wholesome young 'oman athout cumbrance; she'll get another place welly easy; she's nonc so ill off," ended

Sally. She spoke not so much because she grudged the pity spent on another, as because she was always in chronic difficulties herself, with a husband as idle and careless as she was, and a troop of undisciplined, ill-clad, ill-fed children tearing at whatever came in their way—so that every other person's difficulties seemed to her light in comparison with her own.

"I tell 'ee what," said Mrs. Blennerhasset, taking a bold resolution on the spur of the moment, but giving it the air of having been cherished and matured from the beginning; "I ain't the one to leave Madam in the lurch; she were rare fond on my Liz oncet, till Liz, poor soul! bein' far gone for that sorer, Long Dick, took offence and flew up in t'other gal's face as no gal 'ould stand. I say it will be rank rotten-heartedness considerin' her as is gone, if none on us feels for the poor mawther, or seeks to see what is to become on her. I'll slip up to the Manor this afternoon, the same as I 'a gone a mander a times, sin' Missus Balls were took, and sat with her, and carried her a taste on my apple turnover and buttered ale, neibour and frien' like. I says 'this, Missus Balls, it'll do 'ee good,' says I, 'though thee were in the dead struggle,' I says. I paid never no heed to them dismals as is sure for to visit a body when they d' be much with the dyin'," announced Mrs. Blennerhasset with modest confidence in her fidelity to friendship's obligations. "Now I'll make no differ, I'll go as afore, and bid Madam cheer up, and help her to look over what's left, and ax her what she feels like, see an I 'ont."

Not only did an unmistakable murmur of assent and applause—showing how the tide of public opinion was turning—follow Mrs. Blennerhasset's speech, but it was seconded by no less a person than Mrs. Morse.

"I 'a made up my mind to go with you, Missus Blennerhasset," said her crony with mild condescension. "I 'a a feelin' heart, and I 'ould not answer to it, an I didn't do that much for Missus Balls and the gal's own sake."

When the two magnates among the village matrons espoused Pleasance's cause, the fact of her vindication in public opinion, and restoration to her meed of public favour, was triumphantly established. But the time had gone by when Pleasance cared whether her public stood aloof or closed in around her—she who had once so longed for the sympathy that she had given freely, was now as indifferent to it as to the censure which had gone before it.

XVII—37

When Mrs. Morse and Mrs. Blennerhasset in their state bonnets, with all the eyes of the village upon them, had arrived at their destination, Pleasance received them kindly because they had been Mrs. Balls's friends, but she was as little affected as she was impressed by their notice of herself. She listened with a little fleeting interest to their mention of Mrs. Balls and their elaborate and varied encomiums on her—"t' was a good day when she came t' Manor, she were a proper wumman and allowed no gallawantin, nor no collyshangin among the lads and gals. Her were prudent and thatten, laid by a penno in no time, yet never grudged her custom and her pay to the Brown Cow for such ale as was not home-brewed, or such stronger drink as a single wumman as tasted temperate, yet knew what was good for her, wanted—she made her frien's welcome and com'fable in her house—it do look em'py athout her—it do."

But after Pleasance had taken the hint and provided for the refreshment of her visitors, in the old style of which they had so highly approved, and when the conversation turned upon herself, Pleasance, though she did not resent neighbourly curiosity, was indifferent. It seemed as if the springs of feeling, where she herself was concerned, were dried up, and that her heart had grown hard as well as heavy.

Mrs. Balls's will, bequeathing her savings of eighty pounds to her cousin, had been attested, and the legacy duty paid by Lawyer Lockwood, who had also told Pleasance that as he would not put in a dairy-woman in Mrs. Balls's place till spring, there need be no haste in her removal, she was welcome to stay over the winter taking care of the old place if she chose. That was all she minded at present—she was not frightened to stay, with Phillis Plum bearing her company.

There seemed nothing further for Mrs. Blennerhasset and Mrs. Morse to do, than return home it might be a shade baffled and crusty, though they had accomplished their mission and were satisfied that they had done their duty, and cleared their tender consciences of all that could reasonably have been expected of them. Then a chance observation changed the aspect of affairs, and enabled the gossips to be of the importance that they dearly loved to be.

"It's which'll foller her fust," Mrs. Blennerhasset had made a moral speculation in which she had finished by rising to a figure, "for we d' be-like swallers as may take flight any minent."

It did require a flight of imagination to

change big blowsy Mrs. Blennerhasset, or even little demure Mrs. Morse, into swallows on the wing; but Mrs. Morse's imagination was able to do it, at least she made no objection to the simile, but went on to remark, addressing the observation to Pleasance—

"Lizzie Blennerhasset will go next."

It might seem odd that she should allow herself to make such a speech before her dear friend, the mother of the person indicated, but Saxford was accustomed to plain speaking on all subjects.

"Sure-ly," corroborated Mrs. Blennerhasset with perfect composure, and not appearing more melancholy than the general tenor of the conversation, without any special application, warranted, "Liz d' be in a fair waste, I b'lieve; and we munno stop her, mun we? Her were never much of a gal, poor Liz! sin' the burnin' on the smithy; and now she be in a poor way, what with her mis'able body, and her frettin' and pinin' arter Long Dick, though she were nowt but a cousin to him, and couldn't be thought to be ought else. Father and me, we was never so oonreasonable as to look that way; nobody can say it of we; besides, everybody knowed Long Dick were over head and ears in this welly quarter. But as for our Liz, she's that fallen off, the little as were on her, she's no bessern a chiney babby as can do no more good here. Her ain't put in a stich these three months by-gone; and though she d' be patient, I'll say that of her, poor sickly mawther! she d' need some waitin' on; and it stands to reason it 'ould be a deal nicer for her and all on us that she were at her rest, safe in kingdom come."

"Is Lizzie so ill as that?" said Pleasance half to herself. "I did not know it; I am very sorry; yet why should I be sorry?"

"Wool! you was friens!" exclaimed Mrs. Blennerhasset, a little puzzled herself, at the same time so conscious of offence on Lizzie's part that she could not be offended for her, even if Lizzie had been one of the children whom the complacent, careless woman was likely to be touchy about.

Pleasance said no more; but that very afternoon, in the sombre November twilight, she went over to the village. It seemed as if she could not keep her feet from carrying her there, though she had begun to hate to go out—she who had been so fond of the open air and of active exercise. She had begun, too, to dislike the daylight, and to seek to sit cowering and moping over the fire

during the day. If she went out at all it was to repair to the garden to pace it, or to wander in the adjoining meadows, at night-fall. But now she went straight to the smithy, unmindful either of the observation or the commiseration which she might attract, going, as she had been in the habit of doing, without knocking, in at the open door and past the family room, up to Lizzie's little garret—work-room and bedroom.

There Pleasance found the shadow of Lizzie stretched on the top of the patchwork quilt of her bed, lying all alone in the fading light, but starting up, as only flesh and blood could start, ready to cry out as at the sight of an apparition, when Pleasance Hatton entered, without any intimation of her approach. Pleasance, in a black gown, with a colourless cheek and a weary gesture, came and sat down by the bed, and put out a trembling hand to catch Lizzie's and said, out of her own wounded spirit with its single grain of faith, "Stay, Lizzie; we are alike bereft; but there is One will be our refuge."

Pleasance had been forsaken in her turn; Pleasance, whether she had deserved it or not, had been brought very low to speak as she did, when she said again, "Lizzie, both of our lives have failed; nobody wants either of us; can we not do something for each other? Don't go, Lizzie; my plight is the worse of the two, and I cannot die and get out of it."

This was the girl to whom Lizzie, in happier days, had looked up as to a superior being, whose regard she had craved, and when she had won that regard, it had been next to Long Dick's indulgent kindness, the great boon of Lizzie's crushed and shaded life. Lizzie had once been very fond of Pleasance.

More than that, this was the mistress Long Dick had worshipped, the woman for whom he would have gone through fire and water, and whom—though she had preferred another, and that a stranger—he had never been heard to blame. Poor Lizzie's heart swelled to bursting.

"Don't ee speak like that," she said, in an agitated whisper; "I ain't able to bear it. Poor dear, poor dear! Pleasance, as I thought, were so happy—fair blest. Ay, for sure I'll live if I can, and the Lor' will let me. Dick he would 'a me to do what little I could, in his place. You mind he sent me to you fust time; he were allers pleased that we tew were sich frien's. 'Twere no wish or word on hisn, on'y my own devilish spirit that made me break out on you yon dre'ful day. You know that, Pleasance? Poor

Pleasance! as he thought no end on, as were the light on's tew eyes, that you should come to grief yourself, arter all! It were nor'n for a poor lamter gal like me to fare ill; but that you should 'a missed a good lot, and that sich a whipper-snapper as Joel Wray—be he ten times a gen'leman—should think hisself above your price, it beats me."

"Don't speak of him," said Pleasance, wincing. "It was my own will; we were not fit for each other. That was the simple truth; and I would rather not hear his name mentioned. But never mind me, Lizzie; mind yourself—about trying to get well. Will you leave this dull close room and come up to the Manor? Do you think that you could bear to be moved, and that your father and mother, and the rest of them, would let you go? They have their own work, and are constantly about. I have nothing to do now, and don't care to stir; it would be something to live for. I daresay it is selfish to think of it, after I gave you up. But oh, Lizzie! I might do you good, please God, and it would be such a mercy to me—a far greater favour than any I was ever able to do you."

"Laws, Pleasance," said Lizzie, "it is you that are good. I am on'y in the way here, sin Long Dick and Clem, too, d' be gone. You 'a heard on Clem's luck? Wool, an' it d' be an ill wind that blows nobody good. But there ain't a soul here as I can say a word to, or listen

to a word from, as they 'ouldn't like better from another. I ain't angered or even wexed. Nancy and Kitty 'a their own road to travel, and their own ends to serve. It d' be their day; it ain't to be thought they 'ould spare time for the likes on me, as were never fit to go half way with them, and were allers holding them back; on'y rare kind ens like Long Dick and you 'ould do that. Father and mother, they 'a bore a deal with me, and I 'a been a real worret to en, what with my leg as healed short arter it were hurt in the fire, and my dwinin' ways and my bein' so love sick for Long Dick, as I 'ouldn't get no mor'n the Prince on Wales. They never nagged at me, or spoke rough to me, no more than they could help. They let me alone, and I dessay they thought it clever in me when I learned the dressmaking and perwided for myself. But I were so deadly sick with love and pinin', arter Dick left, that I couldn't hold up to make my bread not no more, and I didn't feel to need it long. But now that you 'a come and axed me your ownself, Pleasance, as if I could do summat yet, as Dick 'ould like, to serve you, I most fancy I feel as if there were more life in me than I thought for," said Lizzie, putting back her yellow hair from her face with her wasted hands, and looking up at Pleasance with the old inexpressible sweetness in her blue eyes. "If I could stand being lifted to t' Manor, I might get better yet, and cheat the hole in the churchyard."

THE CORNISH COAST.

FAR in the west, a windy music rings
The names of citadels of dim renown—
Of Lyonesse, the sunken beach of kings,
Tintagel's height and mystic Uther's crown.

It tells of fights a thousand years ago,
Of banners waving round the rocky wall,
The strifes of heroes and their overthrow,
When the same surges wailed for Arthur's fall.

Old monks are chaunting, in forgotten towers,
To kneeling knights, and, under shade, is seen
Launcelot stealing from the royal bowers
With guilty Guinevere, the glorious queen.

High on the guarded mount th' Archangel's sword
Wrathfully gleams on Marazion's spoil,
And ruined chieftains cross the craggy ford,
While grim Tregeagle plies his endless toil.

The wraiths of ages pass, of leagued crusades,
 Plantagenet and stately Tudor days;
 With fleeing foemen and with mourning maids,
 And rival Roses sung in vanished lays.

Fair, mid the changeful lights of stranded time,
 Are April spring-tides, mingling smiles and tears,
 Serener loves that sue for softer rhyme,
 Beauties that blush, like morning, through the years.

But the winds whistle to a sterner tune,
 The breakers boom along the barren shore,
 Recalling, in the notes of some wild rune,
 Th' invader's pride, the avenging battle's roar.

I see the galleons of insulting Spain
 The sport of northern gales and English skiffs;
 I hear the loud laugh of the Cornish main,
 And Freedom shouting from her iron cliffs.

Terrors to tyrants are Trelawneys found,
 As the stout bishop bold for truth to die,
 While thirty thousand chaunted underground
 The song that clamour'd for "the reason why."

Another valour reigns, th' adventurous heart
 Rifles far regions for the teeming shires;
 The fastness falls, appears the thronging mart,
 And o'er the labouring mine the furnace fires.

Still in dark nights the wrecking tempest raves
 That tossed the Norland pirates of fierce fame,
 While captains, loyal to their heaving graves,
 Bear through the storm an undiminished name.

Fresh fancies stir us, as the ages roll;
 Still, underneath the varying effort, lies,
 Ebbing and flowing, the same human soul,
 And the old priest returns in altered guise.

These rocks re-echo the resounding voice
 Of the great preacher with the narrow creed,
 Pressing our rich life to a single choice,
 Yet sowing hungry soil with fruitful seed.

A new day dawns and grants a grander grace
 Than thine, good shepherd of the Cornish fold.
 We read the mighty records of our race,
 And trust the eternal Forces as of old.

We have the faith that in the stars above—
 The sky, the hills, the message of the sea—
 Are signs of wonder, majesty, and love,
 The beacons of the nobler earth to be.

J. N.

ECCENTRICITY.

DO you flatter yourself that nobody thinks you eccentric? Do not. If there is not something about you which would seem to others eccentric, then you have no reasonable hope of immortality, for you have no centre of individuality, nothing to show that you are a being and not a mould.

We call people eccentric whose ways are not our ways. "She is so eccentric, poor thing!" says the woman of society, speaking of some old friend. "She never goes anywhere. She says she does not receive nor pay calls. There is no use in asking her to take a stall at a bazaar. She has buried herself alive with that husband of hers and those four rough boys." Yet probably the woman who speaks and the woman who is spoken about, both say alike that home should take precedence, and all the "eccentricity" lies in the fact that the one puts her precepts into practice.

The eccentricities of genius have long been a handy theme for the leisurely comments of people of safely limited talent. The genius is eccentric, because, having discovered the diet best suited to his constitution, he keeps to it, and will not eat pickled salmon, no, not even to please a Lord Mayor. The genius is eccentric, because he did not pay the least attention to the Countess of Dulborough, but spent the whole evening talking to that old maid, Miss Good, who is nobody at all.

The word "eccentric" is commonly applied to any deviation from custom, or from the habits and manners of others, but as they never profess to radiate from any centre, ought it not rather, in mere strictness of speech, to be applied to any deviation from the declared centre of our own existence?

Is not true eccentricity simply a wish to do an easy and plain thing in a hard and intricate way, or else to do something which had better not be done at all? To call a merely unusual or novel action eccentric is to confound eccentricity with originality and progress. The first man to build a house or to carry an umbrella was no eccentric. Any man who would persist in walking on his hands, or in going to bed in all his day-apparel, would have been always eccentric, and will be ever so.

On the other hand, what is generally called eccentricity is commonly the discovery of easier and swifter methods, or of novelties,

whether in duty or circumstance. Such a man is said to be so "peculiar"—he made all his friends in such queer ways,—one friendship began in a chance conversation on a steamer—another in a meeting at an inn. Now, everybody admits that the making of friends is perfectly legitimate and normal; only most prefer the manufacture to be carried on by an elaborate machinery of introductions, calls, cards, &c., through which all our carpets are worn out by the feet of casual comers and goers, before we hear the footfall of one who really brings good tidings of love and fellowship to our own soul. Or another is called eccentric, because, heartily believing something to be of vital good to his fellow-creatures, he invests all his money in furthering it, and spends himself in recommending it in season and out of season. His belief itself may be eccentric, or it may not; it may be in the golden rule, or in a particular pill, but his honest application of that belief is not eccentric, and never can be. At that point precisely he is at one with all the great men who have soiled and strained themselves to push the world towards God and good,—and one against the huge army of charlatans who impose burdens which they do not bear.

What a huge mass of small misery would vanish if people could dare to be eccentric in the sense of doing something which is right for themselves as individuals! How many a woman suffering under the close pinches of a narrow income, with a constant dispiriting sense of shabbiness, could be set free from her worst torture, if she gave up the use of gloves except when needed for warmth, and put their price into her general treasury! Is it best to have hands a little brown, or a face worried and anxious? The real beauty of a hand is not spoiled by exposure, or even by hard work, and nothing can be more hideous than the preserved whiteness and plumpness of a coarse hand. We cannot imagine angels in gloves. We cannot imagine the old healthy heathen goddesses in gloves. The hand-clasps which we shall never forget were given by ungloved fingers.

To hide hands or face from ordinary wear and tear lest they spoil them is as bad as to starve with money in the bank lest we spend it. Hands and faces were given us to be used and worn out, and wear out they will, whether or no. The true test of beauty

is its long resistance and its faculty for wearing well. Who would put brown holland over Russia leather chairs? While new, they might be taken for good imitation, but when old they are undoubted.

Everybody has to be eccentric somehow. It takes many a queer twist before the infinite variety of human character and circumstance can be reduced to a similarity almost as striking as that in a packet of pins. It was a humorous and suggestive illustration of this that a book, lately written to advise ladies of limited income how to look like their richer neighbours, hinted that in order to secure the conventional number of silk dresses and parasols, they might even wear coloured under-linen!

It is often said that when poverty approaches as "an armed man," the first retrenchment is made on the table, the last in the wardrobe. This ought not to be. Is not "the body more than raiment?" Put the boy into corduroys instead of broad-cloth, but spare him a good dinner, and so give him a chance of getting his own broad-cloth when his turn comes, instead of wearing out yours till it drops in rags about him in some casual ward. Any linen shirts and beaver hats you can buy will soon be translated to some other sphere of matter quite beyond his use, while muscle and nerve will remain. There is nothing sadder than the study of the children of shabby-genteel families. They retain the well-moulded features and lithe forms of "good blood," long after the departure of the hot energy or cool staying power which really constituted it. To borrow a phrase from the stable, "they are good ones to look at, but bad ones to go." They are our social slaves—the drug of our labour-market, and capital shrewdly knows that it can extort any terms from them, while it does not insist on fustian jackets or white caps and aprons.

There may be table-retrenchments for which nobody needs pity. If the children get porridge instead of tea, rosy apples instead of jellies, they may bless the poverty that suggested the change. It is the poorer tea and the thinner bread and butter which is to be deprecated. Even the moderate cost of the carefully-hoarded black silk dress, which deceives nobody, if put into the bread account, would relieve all tightness in that quarter for the whole period that it would wear.

Let a widowed mother make her Sabbath-best of serge, and boldly teach her lads the

virtues of holland and corduroy, that she may grudge no quantity of wholesome food, no cost of merry holiday, and she may live to display the rich gifts from her eldest, and to boast that her youngest, though he does not make money, has learned to live so simply that he can easily afford to give his life to the art or science of his ambition, and so to write the name she gave him on the best page of his country's history.

To wish to be like other people is as futile as it is fatal. We cannot be like anybody but ourselves. The more conventional we are, the more we resemble the jay which borrowed a feather from every other bird. We do not succeed in our attempted resemblance, we only spoil our own appearance and our own capacities. Nobody admires such. They are ridiculous even in the eyes of similarly bedecked jays. How the people in a theatre laugh at old Polonius' proses! There is wisdom in his words, but it is wisdom as a rose after a snail has slimed it. He knows right, wrongly. And yet we may be quite sure there are more of Poloniuses in box, pit, and gallery than there are of vacillating Hamlets, blunt Horatios, or guilty kings and queens. These belie the prince's words. These "galled jades" do not wince. Their criticism is—"This is a fool:" the moral they deduce appears to be, "Let us be so likewise."

Our use of the word "must" should be greatly in our minds when we confess that we do those things which we ought not to do, and leave undone those things which we should do. We neglect duties that should be done at any cost of will-power; we helplessly accept as duties actions which, done as such, lose all their value. How many "cannot" dismiss a servant, and open their own hall-door or dust their own shoes, even though their annual expenditure is regularly in excess of their annual income! Yet they "must" pay calls on people whom they do not like, and they "must" go to parties where two or three hours of black-hole atmosphere and ten minutes' gobble at unwholesome food leave them with a week's indigestion and bad temper. Or on higher levels it may be that we "cannot" keep a certain commandment, but we "must" believe a certain creed. We cannot serve some fellow-creature, but we must love him! It is simply a double lie, as transparent as if one should say he cannot cross a gutter, but can easily jump over the moon.

From some people's talk one might infer

that public opinion was a solid body of resistless force, or at least a policeman with a truncheon. "One cannot go to two parties in the same dress," said a lady. "What prevents you?" asked her companion. "Simply do it."

What is public opinion? The aggregate of many persons' opinions, mostly founded on their own ways. Do you acknowledge even to yourself that their ways and their opinions are better than yours? You think Mrs. S. a feather-brained creature, in fact a fool, and yet you feel it a terrible judgment if you can imagine that she is making derogatory remarks on the length of your skirt, or even the amount of beef you order from your butcher.

When you shrink from handing the dishes at your own table, or from the growing necessity that your daughters should do something for their own livelihood, whose image looms terribly before you? Is it that of the great man whose rare visits fill your house with spiritual light and warmth? Or that of the good woman whose life you know goes up as daily incense before God? Or that of the dear friend who knows all about you, even about the skeleton in your cupboard, and whose life has so penetrated your life, that you cannot realise how it was when you did not know him? No, it is that of the De Vescis opposite—about whom you delight to tell the naughty anecdote that they have a malicious cousin who subscribes his letters to Gentility Square, with the plain name of "Mr. Vesey." Or that of the Wildes, over whom there always hangs such a cloud of mystery, so that nobody has ever heard how he made his money, or what was her maiden name. Or lastly and chiefly, it is that of Lady Pompon, who twice a year kindly renews the card that you keep on the top of your card-basket, and who, could you only know it, goes to her next evening service with a happy consciousness of "acts of humility."

We should all have a "proper regard" for public opinion. Only what public opinion? Our most conventional acquaintance seeks the favourable verdict of Pluto Place, not of Black Shum. Let us think of the quality of the approval we gain rather than of its quantity. Let us dare to do what should be

done, and the best will either approve us at once, or presently thank us for teaching them a new lesson. People's moral tastes, like their artistic, want educating. The greater a man is, the fewer within earshot will praise him. Condemnation is the only title of honour that some people can bestow. Mazzini's greatness was truly recognised when he was judged as an assassin by those who would have been proud of a presentation to the besotted Bomba. They saw that white was the opposite of black: they only mistook the terms. Columbus was wise when he had his fetters buried with him: he had doubtless learned that in such a world the Iron Chain is a far more substantial order of merit than the most selectly distributed Golden Fleece. Higher yet. While the Jews made a hero of Barabbas the robber, their only possible tribute to Jesus was to crucify Him.

If there be anything which we secretly long to do, could we only muster courage, then we may be sure that there are many others like us—standing still as sheep, till the bell-wether moves onward. There are some slaves who achieve their own freedom long before the General Emancipation Act which they help to bring about. And let us remember the old proverb—it is "the hindmost" whom the devil takes. It would be a foolish cat who refused to go to the milk-pan till the other cats had licked off the cream. Yet there are people who can accept nothing till it begins to grow stale. The originality of some impulses are half their value. When they cease to be a protest against the untruthfulness and unthinkingness of habit, they are often far on the way to be untruthful or unthinking themselves. To-day, the most conventional of us are doing what was first done by some very "eccentric" forefather. Shall we drive the steeds of the car of time, or shall we toil ever behind in the dust which it raises? Shall we be slaves ourselves, or free liberators of others?

"Dare to be strong, the world is very weak,
And longs for burning words which strong souls speak,
Thirsts for the cup which ye have strength to grasp.
Toils on the road where ye are swift to run,
Does nought itself, but worships what is done.
Spare it one hand: thine other angels clasp."

ISABELLA FVIE MAYO.

TWO SEASONS.

CAN this be spring? These tearful lights that break
 Across wet uplands in the windy dawn
 Are paler than the primroses, that make
 Dim glories on the banks of field and lawn ;
 Wild blasts are sweeping o'er the garden beds,
 Wild clouds are drifting through the dull, grey skies,
 And early flowers, rain-beaten, hang their heads ;
 Can it be spring that wears this stormy guise ?

* * * * *

Can this be autumn? Freshly green and fair
 The meadows glisten in the morning rays,
 Touches of brown and crimson, here and there,
 Are all that tell us that the year decays.
 We would not have the old year young again ;
 If this be Death, we find him passing sweet ;
 Watching the soft hues change on hill and plain,
 We wait in peace the calm Destroyer's feet.

SARAH DOUDNEY.

ON SEEKING GOD.

BY THE LATE NORMAN MACLEOD, D.D.

ASSUMING that there is a God—an assumption we can never deny without doing wrong to our nature—we feel that there are wants in the soul of man which such an One alone can supply, a hunger and thirst which He alone can satisfy. We cannot do justice to our nature without giving room to the sense of the Infinite. We demand an existence without end. Nothing short of immortality can meet the longing of the soul. We might possibly prefer utter extinction to an immortality of evil or of misery; but when the hope of an endless life of good is presented, the spirit of man rises with joy at the thought, and grasps it as his inheritance. If imagination would fix any limit to our existence and to our progress, at which, when reached, there shall stretch before our memory a past embracing ages upon ages, during which we have advanced in knowledge, in the enlargement and enjoyment of a perfected social life, and during which our faculties also have become stronger and more capable of taking wider journeys through endless fields of knowledge, and our characters have become grander by increased means of action and love,—and let this point be at once as the summit of a mighty range of heavenly mountains, and the edge also of a precipice plunging into an infinite abyss of annihilation, the end, in short, of our existence—would we be satisfied in being thus limited and thus ending, because of the past we had enjoyed? Nay, we would not be satisfied were we permitted to live for ever, and to feed only on the memory of all we had seen and heard and known and loved. Would we not yearn for the infinite beyond, and seek to pierce the darkness and to brave the abyss, and descend to it even as a grave, a second death, if we thereby could win another resurrection? Yes! The soul is made for immortality, because it is made for God! His eternal life alone is the assurance and certainty of ours. His infinite love is the eternal fountain of love to fill our hearts, and the hearts of all who are, like us, made in His image. In Him as eternal wisdom and power, in Him as the everlasting source of all that is or can be of majesty or beauty, in Him, the Infinite God and Father, and in nothing lower, nothing less, can man, the greatest work of His hands, find the perfect satisfaction of his being.

Shall we not, then, seek after Him to know Him? Without Him, I am a creeping worm of the dust; finding Him, I am a humble child of God! Without Him and alone, I am a king in a dungeon, in darkness and in chains, poor and needy and naked; with Him, I am a king on a throne eternal in the heavens, rich and in need of nothing, and as seeing Him and all His works, clothed in royal robes, and crowned with glory evermore.

Again, I am constrained to seek God as the only way of solving many of the problems that press themselves upon me. I feel I am a *dependent* creature, and I crave for something firm and stable on which I can lean—not for dead matter or mechanical laws, but for a living person on whose will I can rely. Amidst the perplexities of the present, realising all the forces that are hedging up my path—amidst all the darkness of the unknown future—I cannot be satisfied with anything less than One on whom I can cast my burden, who will hear my cry in the waste howling wilderness, or in the stormy battle of life, and be my strength, my guide, my comforter.

Then, again, with a *soul made for moral good*, deeply wounded by conscious guilt and evil, a soul that feels there is an *ought* which is not realised, but which in sorrow or in hope it thinks may yet be attained, I seek to know the One, if such there be, who has put that soul within me and made me thus, and whether He can give me the righteousness, the peace of conscience, the joy, the sure hope of eternal progress in love and all that is pure and lovely, which I long for. Now all this I find in the conception of God! The very thought of such a Being *finds* me: it meets me at every point, it goes down to the depths of my being, it searches me, fills me, elevates me, restores me to myself, and to all things. I must seek Him, should there only be a *may be* that I shall find Him; for if not, the universe to me is an empty void. Let me find such an One, and it is as the eye finding light, or as an orphan in the wide world finding a Father, and that Father the Almighty. Nothing, I say, but God as He is, the living and true God, can satisfy me as I am.

This leads me to make a few remarks as to how we should seek God.

First, as to the eye with which we should

seek Him. The intellectual eye is not enough. The intellect sees much truth, but it does not see love, no more than the ear perceives colour. When the man of science speaks regarding a department in the field of knowledge which he has cultivated, I listen to him with the same respect which I would give to a great artist when he speaks of art; but in proportion as they have devoted themselves to any one subject, and as they have cultivated only one side of their being, I refuse to listen to them as necessarily speaking with authority on another side of truth which they have never perhaps seen, or the faculty to see which has been comparatively neglected by them. I would value more the spiritual judgment or insight of the poor but truly experienced Christian regarding God, than that of the most eminent man of science who had not cultivated his spiritual nature, nor educated those higher moral powers by which spiritual truth is discerned. "He who loveth not, knoweth not God," is a fact which debars any eye from seeing God but an eye that can discern holy and righteous love as the highest possible excellence. Without this eye, God, Who is love, cannot be seen or known. Hence one difficulty, but a normal and a necessary one, in finding God, and one that cannot possibly be got over except by the education of the spirit. If we could present God in a visible form, such as the senses could discern, either as a superb idol, embodying all that marble could express of beauty and strength, this could be understood, but not God; for God is a Spirit, and God is love, and no marble can express that to the eye. Such methods have no power to educate the eye of the spirit. Outward figures which seek by representations to the senses to aid man to apprehend an invisible God, only hinder him from the cultivation of those higher powers by which alone He can be truly perceived. They do not lift up man to God, but bring down *a man* for men, instead of God. Nor could the Son of God Himself as a mere man seen by the bodily eye, or judged of by the fleshly, carnal, or unspiritual mind, be a revelation of God. Herod saw Jesus, and so did Judas; but as they had not the right eye, the purity of heart, which is the purity of love, they could not and did not see Jesus as a Revelation of the unseen God. Unless we are "born of God," unless as children we have the spirit of sonship, or love, we cannot "see the kingdom of heaven," for we cannot recognise the King.

This being so, we can also understand

how no such revelation of God as is given through miracle appealing to the bodily eye can be sufficient. Miracles might be wrought before each man, majestic visions, angels, and manifestations of surpassing glory might be seen, and sounds of unearthly melody might be heard in the sky; cities, nations, might crowd to see wonders and signs in heaven and earth, and yet no progress be made in educating man to find God. If by the spirit only He can be seen and found, if there is no other instrument possible than that of a spiritual eye higher than that of reason, because dealing with higher truths and seeing further into eternal realities, then anything which instead of this substitutes sight or the teaching of the lower understanding, must retard the true education of the faculties which have to do now, and will have to do for ever, with the unseen and eternal. Slow this education may be, but it alone is sure, while any other is false from the beginning.

But to preserve the right eye, we must keep the right conduct. The purity of the spiritual vision is immensely affected by the character of the life. The right seeing is affected by the right living. Nothing, for instance, so blinds the eye in seeking after God as an immoral life. The fleshly lusts war against the soul; they are what dust or mud are to the bodily eye. He that doeth evil cometh not to the light, and without light the eye is useless. It is one of the most fearful punishments of sin, that he who loves it and clings to it, begins to hate God because He hates sin, and dislikes to seek after Him, as he would dislike seeking after an enemy. The will that is bound to the flesh *will not* aid the spirit. The feet turn the eye in the wrong direction from that in which God is to be found. As men of science sacrifice time, and deny themselves in what would injure their physical and mental faculties, dim the eye, or disturb the calm which is essential to study and discovery, so must the man who would see God mortify whatever would distract his vision. Unholy passions, as a thick cloud, conceal the vision of God.

Again: consider where we are to seek God—or, in other words, where we are to find the light we desire.

Now God has revealed Himself. To assume the impossibility of His doing so is not only to limit the power of God, and to make Him so arrange the world as to exclude Himself from it, but it is to limit His moral power, or to deny His love, the very essence of His

being, by making it impossible for Him to bring that love home to human hearts, as the reality of all realities to satisfy the beings He has made, and to bring them to be partakers of His own good and joy. But, without dwelling on this, and passing by all other possible revelations, let us contemplate the "light of the glory of God shining in the face of Jesus Christ." All He said and did, in showing us the Father, finds a response in conscience, and is seen to be not only in all respects in harmony with our highest ideas of God, but it educates us in the knowledge of God, enlarging at once the eye that can see the glory, and presenting that glory so as to fill the eye with its splendour. The God whom He reveals is One Who has made man for good—Who is the Father of all men, for we all are His offspring—Who has willed that all should seek Him and find Him—Who has never ceased to love the race He has made—Who so loved a world that knew Him not that He sent His Son not to condemn it, but to save it—a God who deals with every human being in accordance with His divine nature and character—Who in Christ Jesus has sympathy with every condition of humanity—Who reveals in the sorrows of Christ what man's sin is and ever has been and ever must be to Him—Who extends a full and free pardon to all, and has given a Redeemer to all, and who invites all to come to Him for rest—Who excludes none who do not exclude themselves, and does all that is morally possible to save—Who will never condemn any man, except on such grounds as every righteous and loving being in the universe would condemn him—a God whose mercy goes before His face, and endureth for ever, and who, if He will never clear the guilty, invites every man to come to Him that he may be guilty no more. No language can fully express, no imagination can conceive, the glory of this God in His good-will to man. This is the eternally true light in which alone we are to see God, if we are to find Him. This light is its own best evidence. We can conceive of nothing more divine, more worthy of God, than what Christ revealed. The more we study it, the more does it seem infinite.

And when I am thus taught in the light of Christ to see God as manifest in the flesh, I recognise Him as an ever-loving God, not

as yesterday only, but to-day. I begin to see that the God who spoke to the fathers and to the prophets, and in His Son, has been speaking to myself; that He has never left Himself without a witness in that He has done good—good to me; that His voice was never silent in my heart; that it was His loving fatherhood, and the brotherhood of Christ, which was dimly revealed in every blessed human relationship; His hand wiped away tears, and fed me, and raised me up in sickness; His grace restored my soul; His strength kept me from falling, and defended me, and led me safely up to man; His smile was in my mother's smile, His frown in my loving father's righteous anger; His wrath of righteous love in the misery of my self-willed and rebellious heart, making me arise in my rags and nakedness and go to Him. Never did He leave me; He never was far from me; He was closer to me than the light, than the air. In Him I have lived and had my being; and all He did was in order that I should seek after Him, and the moment I did so we met, for He was near and seeking me!

Finally, it is a glorious declaration that every man should "rejoice that *seeks* the Lord." This is in harmony with the blessing pronounced on all who hunger and thirst after righteousness. This call to joy is a most blessed revelation of the love of God. It meets the worst man, the most desponding and hopeless, at the very outset of his journey. It does not bargain for anything beyond the sincere *seeking*. It does not present a point to be reached in the search, any attainment in goodness, any experience as the result of a long and laborious journey before we can rejoice. There doubtless is a higher measure of joy corresponding to the labour bestowed and the advance attained in the journey, for a greater knowledge of God must ever produce a greater measure of joy as a necessary consequence. But this command meets the worst man at the greatest distance from God, in the lowest depths of his sin and misery; it meets the man who has hitherto despised all God's reproofs, refused His counsels, whose sins have been heinous through manifold provocations; and it says, "If you but in future seek the Lord, let thy heart rejoice—rejoice because thou wilt find Him, and to find Him is eternal joy!"

A DAY WITH THE GERMAN-AUSTRIAN ALPINE CLUB.

PART II.

IT was now getting late in the afternoon, and to our great relief, the various members of the party who were not going to pass the night in the hut, began to take their departure. To each party in turn the Herr Präsident, hat in hand, did the honour of the adieu, making courteous speeches to all, and distinguishing the more honoured with a prescribed round of Hochs! The band were treated with especial honour; and commenced their descent amid a perfect firework of cheers and compliments. Last of all, the superintendent of the cannonading department, who had been firing off deafening salutes from his maroons at every stage in the proceedings which afforded him the slightest opportunity, announced that his powder was exhausted, and that he could stay no more. The Herr Präsident ran forward, shook him warmly by the hand, and to our infinite amusement finished up a little speech of farewell with "Adieu! Sie haben uns allen die grösste Freude gegeben!"

The farewells were scarcely over, when we could see from a general state of expectancy which seized the company that a fresh arrival was expected. The words "das Fräulein" were heard more than once, and we soon made out that a young lady was making her way up to the scene of the festivities. It was reported she was to emerge at the top of the ridge below us in a few minutes, and the Herr Präsident taking his stand at the edge of our little plateau, summoned his followers around him to raise a cheer as soon as she should come in sight. The moment she came in view, the word of command was given; and at each successive point of her re-appearance round a fresh corner of the cliff the same order was given, and with the same military precision were the Hochs! and the hats simultaneously raised into air, while the flutter of a responsive handkerchief was waved from the advancing party below. At last up she stepped amongst us, amid a fresh burst of plaudits: a fine simple-looking girl, dressed in admirable mountaineering costume: hat, jacket, and short petticoat of grey Tyrolese cloth trimmed with green; below, trousers to match, gaiters, and a pair of first-class shooting boots. She walked forward without embarrassment, acknowledged simply the attentions of the party, and was ushered courteously into the hut.

And now, all excitement over, we could give ourselves up to enjoy the unrivalled glory of the scene. A fine afternoon was waning to a glorious sunset; from our high perch on the N.E. shoulder of the Ortler we had an absolutely uninterrupted view to the north and east, and fold after fold of peaks and ridges stood out bathed in warm light against the sky. Below, the exquisite green valleys of Trafoi and Suldén, with the upper lakes of the Adige valley beyond; around us, the cold and ever more grey-growing snows of the Ortler, while the peak itself, alone almost of all the summits in view, kept itself to the last jealously veiled in mist. To pass hours in such a scene as this, the eye at one moment sweeping from range to range, and from peak to peak, till the sense of their limitless extent gradually comes home to it, at another, plunging perpendicularly down to points beneath one's feet, which in the exquisitely transparent air it is hard to believe to be as many hundreds of feet below as one knows them to be thousands; amid objects and distances so vast, and in an air so keen, that one's whole sense of size and proportion has to be re-cast; to watch, in an evening of exquisite calm, the ceaseless changes which the failing light works in the shape, the distance, the colouring, and the size of every object on the horizon; to feel on so huge a scale the hand of night gradually and irresistibly laying its touch on everything till the whole earth seems in one act to lay itself down to rest; to feel all this, with that exquisite keenness of eye and sense which come of mountain air and mountain exercise, is as perfect a form of pleasure as this world of ours has to give. And that evening we enjoyed it to the full; we sat on, wrapped in our coats, gazing and gazing into the west, in a perfect luxury of enjoyment, till the coldness of the air and a cry that tea was ready recalled us from our reveries to a sense of our sublimity necessities. The warmth and brightness of the interior were most grateful; and we were all almost loth, a few minutes later, to troop out again into the night to witness the grand display of fireworks, which was to usher in the first darkness of the evening. Rockets, Roman candles, and Bengal lights were fired off in rapid succession; the party collected in a group against the outer wall, to be illuminated for the benefit of the valleys below; and the

responsive pop of a maroon in the distance announced that we had been seen.

Again the whole party poured into the hut, and in the semi-darkness, packed tight as herrings in a barrel, we entered into conversation with our neighbours. I was amused to find that the knowledge of our German mountaineers was confined entirely to the German mountains. Of Switzerland they seemed to know nothing except at second hand. One informed me confidently that an outstanding peak due north of us was the Piz Languard: a peak which, in fact, was south of west of us, and, with the whole Bernina group, quite invisible from where we were. Another asserted, with great confidence (and he was a man of science) that the Ortler Spitze stood third in height among the mountains of Europe, Mont Blanc and Monte Rosa alone surpassing it. In vain I remarked that about Zermatt alone there were a dozen or more peaks higher than the Ortler; he informed me I was mistaken. I then observed I had been up three peaks in the Bernina group the week before, all higher than the Ortler; but he confidently put me down by telling me that we English employed a different kind of foot, and that reckoning by Viennese feet, the Ortler was, beyond all doubt, the third mountain of the Alps. In point of fact, it is twelve thousand eight hundred and seven feet above the sea, and surpassed in height by all the first-class peaks of Switzerland.

My scientific friend next informed me that he read every English book of science worth reading—especially on electricity—and that Professor Tyndall was our only physicist of first-rate eminence. I mentioned timidly the name of Sir William Thomson; but he remarked, simply and conclusively, "How then had he not heard of him?" At the name of Professor Lister, however, a germ of harmony developed itself; he considered him one of the greatest benefactors of his age. We next turned to politics; but as in answer to my first query, "Was it absolutely necessary for Germany to keep a million of men under arms in a time of profound peace?" he replied that we English lived upon an island, and that in consequence neither our people nor our statesmen understood anything about foreign politics, we were not able to progress very far in our discussion of that subject.

We were now expecting to see the evening celebrated by some sort of joviality, or at least that the spirits of the party would rise high, and some form of fun or humour make

its appearance. We were well aware by experience of the horrors of a night spent in an Alpine hut, and were in no hurry to enter upon them before the time. Certainly there had been no trace of humour in any one of the speeches delivered in the afternoon. But with so many young fellows, after so successful a day, and under the combined influence of tea and spirits, we could not imagine but that fun and chaff of various kinds, would break out—we made sure of a good Tyrolese song or two—and we were looking forward with much interest to see what I had never seen before—fun and frolic among Germans. But we were doomed to be disappointed. For some time the whole company sat perfectly still, each man talking to his neighbour with as much solemn earnestness as if we were in a section of the Social Science Congress, or waiting for the commencement of a sermon. But soon, to our great dismay, the Herr Präsident got up, and formally announced that it was eight o'clock, and that as we should have to start early in the morning, it would be well to be early in bed. We should be off for the ascent of the Ortler not later than five A.M.; and as it took a long time to get so large and entangled a party under weigh, we were to be roused at three A.M. He would now proceed to allot the sleeping-places among the company, so far as they would go. Now, as there were only ten berths for the accommodation of some twenty or twenty-five persons, it was obvious that their equitable distribution would be a work of no small difficulty; and there was a general tremor of expectation as the Präsident set to work with the most nice discrimination to adjudicate upon the claims of the various aspirants to a night's rest. Couch No. 1 was without hesitation assigned to the *fräulein*, and No. 2 to an elderly gentleman who acted as her protector, and whom we thenceforth irreverently termed "the wad." The age, position, and personal merits of each candidate were rapidly passed in review, as one by one the ten places were authoritatively disposed of; and the excluded balance of fifteen began, in various degrees of depression, to put to themselves the question, What was to become of *them*? Amongst this excluded balance were my friend and myself, though we had been kindly offered, and had declined, places among the favoured ten. We had visions of passing the night sitting closely packed on the available benches; but our last hope died out as these began to be distributed at the rate of five feet four

per man among the party, and the remainder were to be lodged "up-stairs, on hay, among the guides." In fact, we were to begin, with shame, to take the highest room.

To a man who has known what it is to pass the night on hay among guides—with their unfailing companions—this prospect was the reverse of encouraging. We had noticed that there was a low room, like a dovecote, on the upper floor, taken out of the slope of the slates; and having a fair guess of the character of the accommodation and ventilation it was likely to afford, we clung with desperate tenacity to our seats below, till at last the *Präsident* authoritatively ordered us off, and prepared to extinguish the lights. Then out we sallied into the frosty night air, the sky ablaze with stars, and stumbled up to the door of the upper room. One glance within was enough to reveal the horrors that lay before us, and to show how dear our delay below had cost us. We were the last of the party to enter; by the light of an expiring candle we could see that while there was just head-room at the side where we entered, the roof sloped away to almost nothing at the other; there was no window, no hole or cranny of any kind capable of letting in one breath of air; the door was fastened tight behind us, and the whole floor, from end to end, was strewn as thick as it could be made to hold with a densely-packed mass of prostrate bodies. It seemed at first as if no amount of squeezing could work out room for two bodies more; but as we groped quietly along to the further end of the room, we lighted on what looked like a slight fissure, or "fault," in the human strata. Heavily and simultaneously we let ourselves drop into the mouth of the opening: it widened gradually beneath us, and as the shock communicated itself along the whole row of sleepers, we gradually worked out for ourselves the space requisite for our night's rest. How utterly vain, however, was any hope of rest under the circumstances, we soon discovered. We were said to be lying on hay; but the sagacious guides, who had been the first to establish themselves, had thickened their beds at the expense of the remainder, and left to us the apology of a few grassy hairs to keep us from the floor. The floor was about as hard as a good deal floor usually is. The noises never ceased, and were exaggerated by the darkness. Some snored; some chattered; almost all expectorated: some, finding sleep impossible, would every now and then find their way to a flask or wine-bottle, with much

smacking of the lips. Two of my neighbours indulged in coarse facetious conversation throughout the night, each giggle vibrating through their neighbours four deep on either side; others, overpowered with the heat, kept removing garments and depositing them as chance might direct, so that my friend, once half asleep, awoke to find a greasy boot stuffed half-way down his throat.

The night seemed absolutely interminable; and it can be imagined with what a sense of relief we discovered by the lighting of a candle, and a general commencement of munching among the guides, that the long-wished-for hour of three was approaching. With the first symptom of sound below, we rose from our lairs; and we only realised the full horrors of the atmosphere we had been breathing from the strange shock we experienced, producing a sudden faintness, as we emerged into the cold morning air. Twenty-two persons, more than half of them guides, all of them with that peculiar flavour of stale tobacco and other extraneous matter accumulated about their persons which distinguishes the Alpine guide, had been for seven hours in a room, some twenty feet by twelve, on an average not five feet high, without windows, and by its solid masonry completely satisfying the German standard of comfort by excluding every breath of air. Our companions seemed to have passed the night in perfect comfort. I had often before noticed, but never realised so strongly as on the present occasion, what an advantage in the "struggle for existence" the German possesses from his entire exemption from the necessity of having fresh air to breathe, and have been led to wonder whether the British craving for oxygen, so much encouraged by our doctors, be not a weakness of the same character as our national taste for ardent spirits, and fresh air itself a luxury which should be indulged in only in moderation. I shall not easily forget a visit I paid on a fine summer's morning to a distinguished German professor. He was still in the small bedroom in which he had slept with tight-barred windows all night; he still wore his night-dress, enveloped in a fusty dressing-gown; no signs of ablution were to be seen; he was smoking a cigar—by no means the first smoked in the room since the window had been last opened—and he was writing comfortably and composedly, in an atmosphere which gave him such a complete advantage over me that I was obliged to retreat with my object unattained. I was like a man who cannot dine without fish, or sleep

except on a feather bed, or is the victim of any other form of self-indulgence.

As we descended from our night quarters we felt that, had the light been stronger, we could have *seen* the column of foul air that rushed out of the door along with us. Below we found all astir. One or two of the gentlemen who had had only benches assigned to them, had crept into the vacated berths, and were sound asleep. The remainder were busy preparing tea and coffee, extracting stale viands from much squashed corners, packing their provisions for the day into other people's knapsacks in the impossibility of finding their own, lacing their boots, hunting for spectacles and veils, uncoiling themselves from layers of mufflers, smearing their faces with glycerine, settling disputes between guides as to the ownership of ropes and axes, and performing the thousand operations (washing always excepted) preparatory to a start for the day. As there was no room to turn in, these various operations had to be performed by a process of continual changing rotation and repulsion among the human units that packed the room, analogous to that which Professor Clifford describes as perpetually taking place among the atoms that compose air or water. As on all occasions when eating and drinking are going on promiscuously, the guides naturally found their presence indispensable for the assistance of their masters, and the two hours of preparation prescribed by the *Präsident* proved to be none too long for the "disentanglement" of the party. At length, shortly before five A.M., the first start for the summit was effected, and the various members of the party proceeded to tell themselves off in parties of two, three, or four under the leadership of their respective guides.

We were given to understand that a short interval should be allowed between the starting of each fresh party; and we soon learnt the reason. Having obtained the *Präsident's* leave to set off, we started along the rocky ridge of the *Tabaretta Wand* above us, then struck across a slope of snow, and found ourselves at the top of an awkward-looking *cheminée* or *coulair* of stones, down which we had to descend before commencing the attack of the main ridge. It was eminently a case to which the adage which warns one to be "last in a bog," was applicable: a sheer descent of some four hundred feet down a narrow gully between overhanging cliffs, filled entirely with shingle and loose stones ready to fly downwards on the slightest provocation, and too narrow to afford escape on either side.

We could hear the party in front of us letting loose thunders of stone avalanches, and charitably hoping that there might be no other party below them, we gave them time to reach the bottom before plunging into the slithery slope ourselves. And no easy work it was to keep our footing; everything was ready to give way beneath us; and picking our way with all proper mountaineering caution, we had scarcely got half-way down when we espied a blundering party above us just entering on the descent. Another moment, and we should have been exposed to the full fire of the enemy; so leaping into the centre of our gully, with legs stretched out stiff in front, and ice-axes dug deeply as drags into the ground behind, we let ourselves go on the crest of a glissade of stones, and rode triumphant to the bottom. Here we overtook and passed one or two of the parties which had started in front of us, among them a stout gentleman who had started very early with a single guide, and who now appeared to be involved in hopeless difficulties. Helpless of hand and foot, and near-sighted to boot, his guide was endeavouring with infinite labour to hoist him with the rope up a steep series of steps cut in the frozen slope; but as he could neither see the steps in the first instance, nor stand on them when seen, and as his breath was at least as short as his sight, his progress was naturally somewhat slow. To our great amusement, we recognised in him our enthusiastic Italian orator of the day before: the sublime heights reached so easily with his tongue were, alas! inaccessible to his person. On our descent from the summit, some four or five hours afterwards, we again overtook him, hardly a hundred yards from the same spot, painfully retracing his steps over the same ice slope, nor could we learn from any one that he had been seen at any higher level.

The remainder of the ascent was accomplished without difficulty, and calls for no further remark. It was a splendid morning; one of those dawns whose perfect beauty would alone be more than enough to recompense one for any amount of discomforts or fatigues. Not one speck of cloud in the sky the air sparkling with crisp freshness, the snow-world around passing gradually from the most dead grey to the most brilliant white; the horizon warming up with a uniform glow of saffron, till at last a few flashes of red struck upon the highest peaks and ushered in the full glory of a dazzling summer day. Steadily we toiled up one steep

snow slope after another, winding round crevasses and under huge blocks of overhanging *nevé*, till we reached the final slope up to the keel-shaped top; then along the narrow *arrêté* which forms the keel to the small plateau of the actual summit. It was a noble view; as fine as any I have ever seen in the Alps. A cloudless horizon, except as usual in the direction of Monte Rosa, which, with a few doubtful giants of the Oberland, stood out but half disclosed; at our feet all the lovely peaks of the Ortler group: the noble Königs Spitze, with its tremendous precipice straight before us, Monte Cevedale, Pallon della Mare, &c., and the whole range circling off to the two lovely peaks of San Matteo and Tresero on the right; further to the south the Brenta and Amadello groups, and standing above them all, the jagged outline of the Dolomites. To the east, all the peaks of the Tyrol, from the Gross Glockner to the Weisskugl; to the west, the Bernina group, every peak standing out firm and clear; to the north, the endless sea of peaks rising up from the valleys of the Inn and Rhine, with the Tödi and, as I believe, the less lofty but conspicuous peak of the Sents closing in the distance.

Fresh arrivals on the top kept constantly contracting our already narrow elbow-room; and when at last the gallant *Fräulein* appeared to complete the party, and stepped in amongst us amid a round of "Hochs!" we numbered no fewer than twenty-four persons, all told, upon a space about as large as an ordinary dining-table. The wind, which had been piercingly cold on our way up, had now subsided, and under the slight shelter of the northern cornice of snow we set to work heartily at our breakfast, basking in the sun, and with the sweet consciousness of successful enterprise. We had ascended from the hut in less than three hours; my German friends almost all assisted by the *Steig-eisen*, or *crampons*, which, despised as they are by the Swiss mountaineer, afford a great advantage to their wearer up a steep and slippery snow-slope, such as we had to ascend that day. The spirits of the party now rose fairly to the occasion; a hoarsely-shouted British chorus, though but little appreciated, extracted a German song in return; and something like enthusiasm was provoked when we called on all present to drink a bumper to the true mountaineer's toast of "Wein, Weib, und Gebirge!" A full hour and a half we sat on, revelling in the view, and naming every peak. Then once more getting into marching order, we separated into our respective parties, and

tumbled rapidly down the slopes of snow which it had cost us so much labour to ascend. Without further incident we again reached the hut at about mid-day. Each group was photographed in marching order upon its arrival; and after a welcome draught of wine and water, not unaccompanied by a further snack, and crowned with a glass of a delicious liqueur of which I have forgotten the name, my friend and I began to prepare for our descent to Trafoi. The remainder waited on, to produce a more satisfactory effect by arriving in a compact body at the inn; and after much mutual bowing and pretty speech-making, and the interchange of many cards, and amid general regret that we could not remain to take part in the "after-feast" which was to be held in Trafoi that night, we took our leave of the German-Austrian Alpine Club. The twenty members present raised for us a parting Hoch, which we flattered ourselves we more than answered by two vigorous British cheers.

As we neared the bottom of the valley there occurred the last mountaineering incident of our summer trip. We were descending a dry watercourse, extremely steep, and ending in a still steeper drop below. I was with difficulty keeping myself steady on the loose stones which barely hung upon the slope, when I heard a sudden cry of warning behind, and looking back saw that the guide, some sixty yards above me, had let loose a huge stone in my direction. Down it came, leaping with tremendous strides straight towards me. I was so placed that I had no chance of escaping to one side in time, and so, waiting till the stone was as near me as I dared allow it, I made one wild spring into the air, and, as I alighted, saw the whizzing mass thirty yards below me.

We were soon sighted by the ladies of our party, who awaited us with an account of the continuous roar of revelry, singing, dancing, "wine and skittles," which had been kept up uninterruptedly at the inn during the last twenty-four hours. Our approach had been signalled, and we marched up in triumph amid a roar of maroons discharged for our especial benefit, as being the first to descend of those who had climbed the Ortler.

Thus ended our day with the German-Austrian Alpine Club; and we have more than half a mind to accept the invitation they gave us to attend the next meeting of a similar character, to be held in Botzen, with a view to attacking the Dolomite country, in September of next year.

GEORGE G. RAMSAY.

THE LAUREL BUSH.

An Old-fashioned Tale Story.

By THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

PART III.

WHAT is a "wrecked" life? One which the waves of inexorable fate have beaten to pieces, or one that, like an unseaworthy ship, is ready to go down in any waters? What most destroy us? the things we might well blame ourselves for, only we seldom do, our follies, blunders, errors, not counting actual sins, or the things for which we can blame nobody but Providence—if we dared—such as our losses and griefs, our sicknesses of body and mind; all those afflictions which we call "the visitation of God?" Ay, and so they are, but not sent in wrath, or for ultimate evil. No amount of sorrow need make any human life harmful to man, or unholy before God; as a discontented, unhappy life must needs be unholy; in the sight of Him who in the mysterious economy of the universe seems to have one absolute law—He wastes nothing. He modifies, transmutes, substitutes, re-applies material to new uses; but apparently by Him nothing is ever really lost, nothing thrown away.

Therefore I incline to believe, when I hear people talking of a "wrecked" existence, that, whosoever is to blame, it is not Providence.

Nobody could have applied the term to Fortune Williams, looking at her as she sat in the drawing-room window of a house at Brighton, just where the grey of the Esplanade meets the green of the Downs—a ladies' boarding-school, where she had in her charge two pupils, left behind for the holidays, while the mistress took a few weeks' repose. She sat, watching the sea, which was very beautiful, as even the Brighton sea can be sometimes. Her eyes were soft and calm, her hands were folded on her black silk dress; her pretty little tender-looking hands; unringed, for she was still Miss Williams, still a governess.

But even at thirty-five—and she had now reached that age, nay, passed it—she was not what you would call "old-maidish." Perhaps, because the motherly instinct, naturally very strong in her, had developed more and more. She was one of those governesses—the only sort who ought ever to attempt to be governesses—who really love children, ay, despite their naughtinesses and mischievousnesses, and worrying ways; who

feel that, after all, these little ones are "of the kingdom of heaven," and that the task of educating them for that kingdom somehow often brings us nearer to it ourselves:

Her heart, always tender to children, had gone out to them more and more every year; especially after that fatal year, when a man took it, and broke it. No, not broke it, but threw it carelessly away, wounding it so sorely that it never could be quite itself again. But it was a true, and warm, and womanly heart still.

She had never heard of him—Robert Roy—never once, in any way, since that Sunday afternoon when he said, "I will write to-morrow," and did not write, but let her drop from him altogether like a worthless thing. Cruel, somewhat, even to a mere acquaintance;—but to her?

Well, all was past and gone, and the tide of years had flowed over it. Whatever it was—a mistake, a misfortune, or a wrong, nobody knew anything about it. And the wound was healed, in a sort of a way, and chiefly by the unconscious hands of these little "ministering angels," who were angels that never grieved her, except by blotting their copy-books or not learning their lessons. I know it may sound a ridiculous thing that a forlorn governess should be comforted for a lost love by the love of children; but it is true to nature. Women's lives have successive phases, each following the other in natural gradation—maidenhood, wifehood, motherhood: in not one of which, ordinarily, regret we the one before it, to which it is nevertheless impossible to go back. But Fortune's life had had none of these, excepting perhaps her one six-months' dream of love and spring. That being over, she fell back upon autumn days and autumn pleasures—which are very real pleasures, too.

As she sat with the two little girls leaning against her lap—they were Indian children, unaccustomed to tenderness, and had already grown very fond of her—there was a look in her face, not at all like an ancient maiden, or a governess, but almost motherly. You see the like in the faces of the Virgin Mary, as the old monks used to paint her, quaint, and not always lovely, but never common or coarse, and spiritualised by a look of

mingled tenderness and sorrow into something beyond all beauty.

This woman's face had it, so that people who had known Miss Williams as a girl were astonished to find her, as a middle-aged woman, grown "so good-looking." To which one of her pupils once answered, naively, "It is because she looks so good."

But this was after ten years. Of the first half of these years the less is said the better. She did not live; she merely endured life. Monotony without—a constant aching within; a restless gnawing want, a perpetual expectation, half hope, half fear; no human being could bear all this without being the worse for it, or the better. But the betterness came afterwards, not at first.

Sometimes her craving to hear the smallest tidings of him, only if he were alive or dead, grew into such an agony, that had it not been for her entire helplessness in the matter, she might have tried some means of gaining information. But, from his sudden change of plans, she was ignorant even of the name of the ship he had sailed by, the firm he had gone to. She could do absolutely nothing, and learn nothing. Hers was something like the "Affliction of Margaret," that poem of Wordsworth's which, when her little pupils recited it—as they often did—made her ready to sob out loud, from the pang of its piteous reality:—

"I look for ghosts, but none will force
Their way to me: 'tis falsely said
That there was ever intercourse
Betwixt the living and the dead:
For surely then I should have sight
Of him I wait for day and night
With love and longings infinite."

Still, in the depth of her heart she did not believe Robert Roy was dead; for her finger was still empty of that ring—her mother's ring—which he had drawn off, promising its return "when he was dead or she was married." This implied that he never meant to lose sight of her. Nor, indeed, had he wished it, would it have been very difficult to find her, these ten years having been spent entirely in one place, an obscure village in the south of England, where she had lived as governess—first in the squire's family, then the rector's.

From the Dalziel family, where, as she had said to Mr. Roy, she hoped to remain for years, she had drifted away almost immediately; within a few months. At Christmas old Mrs. Dalziel had suddenly died; her son had returned home, sent his four boys to school in Germany, and gone back again to India. There was now, for the first time

for half a century, not a single Dalziel left in St. Andrews.

Though all ties were broken connecting her with the dear old city, her boys still wrote to her now and then, and she to them, with a persistency for which her conscience smote her sometimes, knowing it was not wholly for their sakes. But they had never been near her, and she had little expectation of seeing any of them ever again, since by this time she had lived long enough to find out how easily people do drift asunder, and lose all clue to one another, unless some strong firm will, or unconquerable habit of fidelity, exists on one side or the other.

Since the Dalziels, she had only lived in the two families before named, and had been lately driven from the last one by a catastrophe, if it may be called so, which had been the bitterest drop in her cup since the time she left St. Andrews.

The rector—a widower, and a feeble, gentle invalid, to whom naturally she had been kind and tender, regarding him with much the same sort of motherly feeling as she had regarded his children—suddenly asked her to become their mother in reality.

It was a great shock and pang. Almost a temptation; for they all loved her, and wished to keep her. She would have been such a blessing, such a brightness, in that dreary home. And to a woman no longer young, who had seen her youth pass without any brightness in it, God knows what an allurement it is to feel she has still the power of brightening other lives. If Fortune had yielded—if she had said yes, and married the rector—it would have been hardly wonderful, scarcely blameable. Nor would it have been the first time by many times that a good, conscientious, tender-hearted woman has married a man for pure tenderness.

But she did not do it; not even when they clung around her—those forlorn, half-educated, but affectionate girls—entreating her to "marry papa, and make us all happy." She could not—how could she? She felt very kindly to him. He had her sincere respect, almost affection; but when she looked into her own heart, she found there was not in it one atom of love, never had been, for any man alive, except Robert Roy. While he was unmarried, for her to marry would be impossible.

And so she had the wisdom and courage to say to herself, and to them all, "This cannot be;" to put aside the cup of attainable

happiness, which might never have proved real happiness, because founded on an insincerity.

But the pain this cost was so great, the wrench of parting from her poor girls so cruel, that after it Miss Williams had a sharp illness, the first serious illness of her life. She struggled through it, quietly and alone, in one of those excellent "Governesses' Homes," where everybody was very kind to her—some more than kind, affectionate. It was strange, she often thought, what an endless amount of affection followed her wherever she went. She was by no means one of those women who go about the world, moaning that nobody loves them. Everybody loved her, and she knew it—everybody whose love was worth having—except Robert Roy.

Still, her mind never changed; not even when, in the weakness of illness, there would come vague dreams of that peaceful rectory, with its quiet rooms and green garden; of the gentle, kindly-hearted father, and the two loving girls, whom she could have made so happy, and perhaps won happiness herself in the doing of it.

"I am a great fool, some people would say," thought she, with a sad smile; "perhaps rather worse. Perhaps I am acting absolutely wrong in throwing away my chance of doing good. But I cannot help it—I cannot help it."

So she kept to her resolution, writing the occasional notes she had promised to write to her poor forsaken girls, without saying a word of her illness; and when she grew better, though not strong enough to undertake a new situation, finding her money slipping away—though, with her good salaries and small wants, she was not poor, and had already begun to lay up for a lonely old age—she accepted this temporary home at Miss Maclachlan's, at Brighton. Was it—so strange are the under-currents which guide one's outward life—was it because she had found a curious charm in the old lady's Scotch tongue, unheard for years? that the two little pupils were Indian children, and that the house was at the seaside?—and she had never seen the sea since she left St. Andrews.

It was like going back to the days of her youth to sit as now, watching the sunshine glitter on the far-away ocean. The very smell of the sea-weed, the lap-lap of the little waves, brought back old recollections so vividly—old thoughts, some bitter, some sweet, but the sweetness generally overcoming the bitterness.

"I have had all the joy that the world could bestow;
I have lived—I have loved—"

So sings the poet, and truly. Though to this woman love had brought not joy, but sorrow, still she had loved, and it had been the mainstay and stronghold of her life, even though to outsiders it might have appeared little better than a delusion, a dream. Once, and by one only, her whole nature had been drawn out, her ideal of moral right entirely satisfied. And nothing had ever shattered this ideal. She clung to it, as we cling to the memory of our dead children, who are children for ever.

With a passionate fidelity she remembered all Robert Roy's goodness, his rare and noble qualities, resolutely shutting her eyes to what she might have judged severely, had it happened to another person—his total, unexplained, and inexplicable desertion of herself. It was utterly irreconcilable with all she had ever known of him; and being powerless to unravel it, she left it, just as we have to leave many a mystery in heaven and earth, with the humble cry, "I cannot understand—I love."

She loved him, that was all; and sometimes even yet, across that desert of despair, stretching before and behind her, came a wild hope, almost a conviction, that she should meet him again, somewhere, somehow. This day, even, when, after an hour's delicious idleness, she roused herself to take her little girls down to the beach, and sat on the shingle while they played, the sound and sights of the sea brought old times so vividly back, that she could almost have fancied coming behind her the familiar step, the pleasant voice, as when Mr. Roy and his boys used to overtake her on the St. Andrews shore—Robert Roy, a young man, with his life all before him, as was hers. Now, she was middle-aged, and he—he must be over forty by this time. How strange!

Stranger still, that there had never occurred to her one possibility—that he "was not," that God had taken him. But this her heart absolutely refused to accept. So long as he was in it, the world would never be quite empty to her. Afterwards— But, as I said, there are some things which cannot be faced, and this was one of them.

All else she had faced, long ago. She did not grieve now. As she walked with her children, listening to their endless talk, with that patient sympathy which made all children love her, and which she often found was a better help to their education than dozens of lessons, there was on her face that peaceful

expression which is the greatest preservative of youth, the greatest antidote to change. And so it was no wonder that a tall lad, passing and repassing on the Esplanade with another youth, looked at her more than once with great curiosity, and at last advanced with hesitating politeness.

"I beg your pardon, ma'am, if I mistake; but you are so like a lady I once knew, and am now looking for—are you Miss Williams?"

"My name is Williams, certainly; and you"—something in the curly light hair, the mischievous twinkle of the eye, struck her—"you cannot be, it is scarcely possible, David Dalziel?"

"But I am though," cried the lad, shaking her hand as if he would shake it off. "And I call myself very clever to have remembered you, though I was such a little fellow when you left us, and I have only seen your photograph since. But you are not a bit altered, not one bit. And as I knew, by your last letter to Archy, that you were at Brighton, I thought I'd risk it, and speak. Hurra! how very jolly!"

He had grown a handsome lad, the pretty wee Davie, an honest-looking lad too apparently; and she was glad to see him. From the dignity of his eighteen years and five feet ten of height, he looked down upon the governess and patronised her quite tenderly; dismissing his friend, and walking home with her, telling her on the way all his affairs and that of his family, with the volubility of little David Dalziel at St. Andrews.

"No, I've not forgotten St. Andrews one bit, though I was so small. I remember poor old grannie, and her cottage, and the garden, and the Links, and the golfing, and Mr. Roy. By-the-bye, what has become of Mr. Roy?"

The suddenness of the question, nay, the very sound of a name totally silent for so many years, made Fortune's heart throb till its beating was actual pain. Then came a sudden desperate hope, as she answered,—

"I cannot tell. I have never heard anything of him. Have you?"

"No—yet, let me see. I think Archy once got a letter from him, a year or so after he went away; but we lost it somehow, and never answered it. We have never heard anything since."

Miss Williams sat down on one of the benches facing the sea, with a murmured excuse of being "tired." One of her little girls crept beside her, stealing a hand in hers. She held it fast, her own shook so, but gradually she grew quite herself again.

"I have been ill," she explained, "and cannot walk far. Let us sit down here a little. You were speaking about Mr. Roy, David?"

"Yes, what a good fellow he was! We called him Rob Roy, I remember, but only behind his back. He was strict, but he was a jolly old soul for all that. I believe I should know him again any day, as I did you. But perhaps he is dead; people die pretty fast abroad, and ten years is a long time, isn't it?"

"A long time. And you never got any more letters?"

"No, or if they did come, they were lost, being directed probably to the care of poor old grannie, as the first one was. We thought it so odd, after she was dead, you know."

Thus the boy chattered on—his tongue had not shortened with his increasing inches—and every idle word sank down deep in his old governess's heart.

Then it was only her whom Robert Roy had forsaken? He had written to his boys; probably would have gone on writing, had they answered his letter. He was neither faithless nor forgetful. With an ingenuity that might have brought to any listener a smile, or a tear, Miss Williams led the conversation round again, till she could easily ask more concerning that one letter; but David remembered little or nothing except that it was dated from Shanghai, for his brothers had had a discussion whether Shanghai was in China or Japan. Then, boy-like, they had forgotten the whole matter.

"Yes, by this time everybody has forgotten him," thought Fortune to herself, when having bidden David good-bye at her door and arranged to meet him again—he was on a visit at Brighton before matriculating at Oxford next term—she sat down in her own room, with a strangely bewildered feeling. "Mine, all mine," she said, and her heart closed itself over him, her old friend at least, if nothing more, with a tenacity of tenderness as silent as it was strong.

From that day, though she saw, and was determined henceforward to see, as much as she could of young David Dalziel, she never once spoke to him of Mr. Roy.

Still, to have the lad coming about her was a pleasure, a fond link with the past, and to talk to him about his future was a pleasure too. He was the one of all the four—Mr. Roy always said so—who had "brains" enough to become a real student; and instead of following the others to India, he was to go to Oxford and do his best there.

"THE LAUREL BUSH."

His German education had left him few English friends; he was an affectionate, simple-hearted lad, and now that his mischievous days were done, was taking to thorough hard work. He attached himself to his old governess with an enthusiasm that a lad in his teens often conceives for a woman still young enough to be sympathetic, and intelligent enough to guide, without ruling, the errant fancy of that age. She, too, soon grew very fond of him. It made her strangely happy, this sudden rift of sunshine out of the never-forgotten heaven of her youth, now almost as far off as heaven itself.

I have said she never spoke to David about Mr. Roy, nor did she; but sometimes he spoke, and then she listened. It seemed to cheer her for hours only to hear that name. She grew stronger, gayer, younger. Everybody said how much good the sea was doing her, and so it was; but not exactly in the way people thought. The spell of silence upon her life had been broken, and though she knew all sensible persons would esteem her in this, as in that other matter, a great "fool," still she could not stifle a vague hope that some time or other her blank life might change. Every little wave that swept in from the mysterious ocean, the ocean that lay between them two, seemed to carry a whispering message and lay it at her feet, "Wait and be patient, wait and be patient."

She did wait, and the message came at last.

One day, David Dalziel called, on one of his favourite daily rides, and threw a newspaper down at her door, where she was standing.

"An Indian paper my mother has just sent. There's something in it that will interest you, and——"

His horse galloped off with the unfinished sentence; and supposing it was something concerning his family, she put the paper in her pocket to read at leisure while she sat on the beach. She had almost forgotten it, as she watched the waves, full of that pleasant idleness and dreamy peace so new in her life, and which the sound of the sea so often brings to peaceful hearts, who have no dislike to its monotony, no dread of that solemn thought of infinitude, time and eternity, God and death, and love—which it unconsciously gives, and which I think is the secret why some people say they have "such a horror of the sea-side."

She had none; she loved it, for its sights and sounds were mixed up with all the

happiness of her young days. She could have sat all this sunshiny morning on the beach doing absolutely nothing, had she not remembered David's newspaper; which, just to please him, she must look through. She did so, and in the corner among the brief list of names in the obituary, she saw that of "Roy." Not himself as she soon found, as soon as she could see to read, in the sudden blindness that came over her. Not himself. Only his child.

"On Christmas day, at Shanghai, aged three and a half years, Isabella, the only and beloved daughter of Robert and Isabella Roy."

He was alive then. That was her first thought, almost a joyful one, showing how deep had been her secret dread of the contrary. And he was married. His "only and beloved daughter!" Oh! how beloved she could well understand. Married, and a father; and his child was dead.

Many may think it strange (it would be in most women, but it was not in this woman) that the torrent of tears which burst forth, after her first few minutes of dry-eyed anguish, was less for herself, because he was married and she had lost him, than for him, because he had had a child and lost it—he who was so tender of heart, so fond of children. The thought of his grief brought such a consecration with it, that her grief—the grief most women might be expected to feel, on reading suddenly in a newspaper that the man they loved was married to another—did not come. At least not at once. It did not burst upon her, as sorrow does sometimes, like a wild beast out of a jungle, slaying and devouring. She was not slain, not even stunned. After a few minutes it seemed to her as if it had happened long ago—as if she had always known it would happen, and was not astonished.

His "only and beloved daughter!" The words sung themselves in and out of her brain, to the murmur of the sea. How he must have loved the child! She could almost see him with the little one in his arms, or watching over her bed, or standing beside her small coffin. Three years and a half old! Then he must have been married a good while—long and long after she had gone on thinking of him—as no righteous woman ever can go on thinking of another woman's husband.

One burning blush—one shiver from head to foot of mingled agony and shame—one cry of piteous despair, which nobody heard but God—and she was not afraid of

His hearing—and the struggle was over. She saw Robert Roy; with his child in his arms, with his wife by his side, the same and yet a totally different man.

She, too, when she rose up and tried to walk, tried to feel that it was the same sea, the same shore, the same earth and sky—was a different woman. Something was lost, something never to be retrieved on this side the grave, but also something was found.

"He is alive," she said to herself with the same strange joy; for now she knew where he was, and what had happened to him. The silence of all these years was broken, the dead had come to life again, and the lost, in a sense, was found.

Fortune Williams rose up and walked, in more senses than one; went round to fetch her little girls, as she had promised, from that newly-opened delight of children, the Brighton Aquarium; stayed a little with them, admiring the fishes; and when she reached home and found David Dalziel in the drawing-room, met him and thanked him for bringing her the newspaper.

"I suppose it was on account of that obituary notice of Mr. Roy's child," said she, calmly naming the name now. "What a sad thing! But still I am glad to know he is alive and well. So will you be. Shall you write to him?"

"Well, I don't know," answered the lad, carelessly crumpling up the newspaper and throwing it on the fire. Miss Williams made a faint movement to snatch it out, then disguised the gesture in some way, and silently watched it burn. "I don't quite see the use of writing. He's a family man now,

and must have forgotten all about his old friends. Don't you think so?"

"Perhaps; only he was not the sort of person easily to forget."

She could defend him now; she could speak of him, and did speak, more than once afterwards, when David referred to the matter. Then the lad quitted Brighton for Oxford, and she was left in her old loneliness.

A loneliness, which I will not speak of.—She herself never referred to that time. After it, she roused herself to begin her life anew in a fresh home, to work hard, not only for daily bread, but for that humble independence which she was determined to win before the dark hour when the most helpful become helpless, and the most independent are driven to fall a piteous burden into the charitable hands of friends or strangers—a thing to her so terrible, that, to save herself from the possibility of it, she who had never leant upon anybody, never had anybody to lean on, became her one almost morbid desire.

She had no dread of a solitary old age, but an old age beholden to either public or private charity was to her intolerable; and she had now few years left her to work in—a governess's life wears women out very fast. She determined to begin to work again immediately, laying by as much as possible yearly, against the days when she could work no more; consulted Miss Mac-lachlan, who was most kind; and then sought, and was just about going to, another situation, with the highest salary she had yet earned, when an utterly unexpected change altered everything.

IRISH HUSH SONG.

I WOULD hush my lovely laddo*

In the green arbutus shadow,
O'er the fragrant, flowerin' meadow

In the smilin' spring-time.

Sho-heen, shoo lo!

Sho-heen, hoo lo!

I would rock him by the fountain,

By the soothin', silvery fountain,
On the pleasant, purple mountain

In the sultry summer.

Sho-heen, shoo lo!

Sho-heen, hoo lo!

I would smooth my darlint's pillow

By the blue Atlantic billow,
On the shores of Parknasilla,

In the goolden* autumn.

She-heen, shoo lo!

Sho-heen, hoo lo!

I would soothe my child to slumber

By the rosy rustlin' ember,

Through the days of dark December,

Through the stormy winter.

Sho-heen, shoo lo!

Sho-heen, hoo lo!

May no cruel fairy charm him,

May no dread Benshee alarm him!

Flood nor fire nor fever harm him—

Summer, autumn, winter,

Winter, spring, and summer!

Sho-heen, shoo lo!

Sho-heen, hoo lo!

* Little lad.

* Golden.

IN ICELAND.

II.—THE DALES.

THE HUS are named the many grassy valleys that open upon the Hval, Borgar, and Breida Fiords, on the western coast of Iceland, said to be the softest and most pleasantly attractive part of the island. The district is interesting to those who are familiar with the old Sagas of which it is the scene, as the names mentioned

in them still cling to many a homestead, hill, and river, scarcely changed since these ancient days.

After nearly a week at Reykjavik we started again on our travels, the same party, with eleven ponies this time, bound for Akureyri, in the north, meaning there to pick up the Scottish steamer. We could not clearly ascertain, however, if she were to be there, and it afterwards proved she was not there, somewhat to our disappointment, as in consequence we also never reached Akureyri, having to return to Reykjavik to take another boat. But we saw all the more of the charming dale country, and our journey back, by another route, left us nothing to regret.

On the 20th of July we took a conditional last farewell of Reykjavik, and started at eight P.M. instead of six, as we intended, and we considered ourselves punctual, so demoralised had we by this time become in time-keeping. But, what matters time when no one is kept waiting, and there are no trains to catch, and it is light all night? Besides, up the country, as at sea, the extra punctual may make it whatever time they like, and live by their own watches. It is much more important to keep temper than time in this land, as fussy tourists will soon discover; a genuine Iclander will not be hurried, and resents at once any incivility, probably saying nothing, but quietly letting things go all wrong. It was a still warm evening, the air was pleasant, the country was mysteriously half-veiled in

the light mist which waved across the edges of the mountains. Where the path skirts the sea-shore close to the break of the low wave, we passed some fishermen dividing their newly-caught grilse and herring into piles, after the old fashion called *kissa og deila* (choice and deal), one man dividing, and another, with his back turned, assigning the shares. In the Laxdala Saga a certain man named Hall is mentioned, who lived eight hundred years ago, who "thought so much of himself that he wished to have both *kissa* and *deila* at the fishing;" hence a quarrel, in which he was killed. We bought some herring, a rare change from the usual salmon, and rode on to Mossfell church, drawing rein at the mirk midnight among the churchyard mounds, like Lenore and her spectre lover. We woke to a lovely morning, and breakfasted under the shade of the fragrant haycocks, for all the hill-slope, on which church and parsonage are perched, was astir with haymaking. The bare hills with their light clay or red marl corries recalled, as did the colouring and temperature, the mountain lands of central Italy. The day was so hot, and the pastor and his family so pleasant, that we lingered till one P.M., and then rode off in the blaze of sunshine. We were glad to halt in a red rocky ravine of the mountain we were about to cross, where a clear river flowed in a series of little cascades, the very place for fishing, had it not been so bright, that sketching was the most profitable occupation. As fish and game were now in season, I had brought my trout rod, and Gislason his gun, and, though we did not go out of the way for sport, we often mended our fare *en route*. Rousing Skuli, who slept during our halt on the hillside in the midst of our grazing ponies, we crossed the mountain pass and bog we had passed before on our way from Rennyvellir, the bog a mere trifle in this dry weather, and crossing the last-named valley, we mounted the opposite ridge. Now we rode under lava crags, all wreathed masses of wrenched distorted stuff, which looked as if, when liquid and boiling high, it had suddenly been turned to stone. Down the other side we came upon a lovely quiet reach of the Hval Fiord, like a bit of the clear evening sky lying among the high purple crags which enclosed it. We descended to the shore, and halted for a while about ten at night by the edge of a stream; on one side the Fiord

lay lighted up in bars of red and gold by the sunset; on the other the river fell in an unbroken sheet of foam between two great black square basalt cliffs, a distant snow mountain rising above them. Thence we scrambled on by the edge of the most inland reach of the Fiord, riding towards its head. Before reaching it we turned into the sea itself, a short cut at low water, and rode through it in shallows blown into wide swirls by the rising wind, about two miles to the opposite mountain coast. The night was only a stiller, more mysterious day; hundreds of sea-birds slept on the dim water, but as we roused them it flashed into long lines of silvery light as they rose and broke it in their whirling flight. Then a clear yellow

light began to peer over a mountain, it looked like a fire at first, but there appeared instead the very brightest moon I ever saw—too bright by far, said our guide, as it foreboded wind, which was already making the riding less pleasant. On we cantered, over tracks of alternate sand, water, and stones, the morning brightening over the night sky that was never at all dark, and the wind growing furious, screaming in our ears, and raising foamy little waves on the sea. I had reached that dreamy state when the mind refuses all fresh ideas, and I seemed to have been for ever riding a cream-coloured pony with a high hog-mane after a clattering drove of loose horses, when about half-past one in the morning we stopped at apparently a series

Tingvellir, Hill of Laws.

of large mole hills, which were the bæ or farm buildings of Hrafnar Burg. After long knocking, a very tall man doubled himself up sufficiently to get out at a very low door, and helped to raise the tent; then we crept gladly in, had our coffee, and, in spite of straining ropes, and storm and cold, slept most comfortably till late in the morning.

This day's ride, which I have detailed as a specimen, was really beautiful in the sweet summer weather; but in this odd climate a change of wind to the north brings sudden winter. It froze in the night outside our tent, and the gale continuing in the morning made our journey over the hills impossible. Even washing was difficult in the foamy sea, and was best managed by tying a long string

to a big sponge, and sending it out beyond the froth to fetch water. Next day the weather had moderated, and as soon as our ponies could be collected we rode off, bound for Reykholt. On the low mountain pass, over which our way first led, the wind was furious; we could not have faced it had it been worse; and then we rode through more sheltered grassy valleys, past two or three bright blue lakes, but always among hills, coming in the evening to the pretty sunny valley of Reykholt. Cattle and horses grazed here, lively little bulls galloped up to inspect us, and several farms were visible on the slopes. The abundant river ran all in loops down the valley, while we rode quite straight and

forded it, I think, thirteen times. Here and there jets of steam rose from the earth, or leaping fountains of boiling water, it might be, bursting from a rock in the middle of the river, or from the grass, or from a wayside boulder. So copious were they, and so bright, one wished that invalids could come and have the benefit of them, and of the sweet air of the lonely valley. Lonely, though we did see haymakers at a distance, and on this day's journey we did meet one man; the previous day's journey we had seen only a boy and the postman, so we were not troubled by tourists, genial or uncongenial.

Reykholt is chiefly interesting as the home, in the thirteenth century, of the his-

torian Snorro Sturleson, whose history of the kings of Norway is generally allowed to be the best chronicle written in the Middle Ages. Indeed, for animation and interest, it would be hard to find its equal in the whole range of literature. The chief relic of his time is the circular bath it is on record that he built. The excellent masonry of the thirteenth century is still in repair. It is about sixteen feet in diameter, and water-burdoch and dock-leaves droop over the brimming hot water. Something was wrong with the cold-water conduit, however, and it was too hot to bathe in. Why is there but one good bath in Iceland, and that one six hundred years old? Yet it must have been otherwise in former days, as the chief bedroom in a

Daula Mountain. Edge of pass.

house is still called the *bath stofa* (or room). Once upon a time, many hundred years ago, there lived a Norse viking and hero called Ulf Usvo, which means, the Unwashed Wolf. He was killed in a sea-fight, but apparently left a numerous race, so numerous that to this day, up the country in Iceland, it is to be feared his soubriquet would be no great distinction. There are evident difficulties about keeping an earth house clean: washing it might reduce it to mud, and the deposit of peat-smoke within is warm and gives a fine bit of colour; but the other fact, in presence of plenty of fresh cold water, and often of hot water too, ready laid on, is inexplicable, and the worst drawback of Iceland. We were now travelling inland towards the

icy hills which loomed larger and larger before us; passing sometimes over stony wastes, sometimes over old lava, pleasantly covered with birch copse about six feet high. We forded the rapid Hvítá, whose white waters told of the neighbouring glaciers, and came pretty late to a grassy knoll encircled by a rivulet, where stood the farm of Kalmanstunga. There are depressing moments in all journeys, and this was one of them, as for the first time we had arranged to sleep in a farm. A good deal of roughing and fatigue are involved in Icelandic travel, but they are easily borne, owing to the pure wholesome air, which soon puts the traveller in first-rate condition. It was most pleasant to wake in the tent to its morning freshness, and the

scent of grass and thyme, and we found the churches also quite airy; but in an average farm, the little window of the timber guest-room is not made to open, and the air has to pass through the low winding earthen passage among ever-increasing odours before it reaches the door. Our window did sometimes get broken, but this place was too far inland, and glass therefore too precious, for an accident to happen. Earth houses are discouraged now by the Government. In Reykjavik, timber and stone only are employed: of the latter, of course, there is plenty, but there seems to be a want of lime.

The walls of these earth houses are about two feet thick; on the roof fine grass grows, duly mown for hay; there sit the dogs on the look-out, ready to jump down at any alarm. The passages are winding, to exclude the wind, and often too low to stand in upright; the rooms are mere arched caverns; in the kitchen only are any arrangements for fire, such as a few rough stones to hold the sticks together, and a hole in the roof to let out what smoke is not deposited as soot on the walls. There is little furniture, and often a good deal of dirt. Out of these dismal abodes, however, would come courteous women bearing trays of excellent coffee and delicious cream, which were often served to us on the grass outside. Here at Kalmanstunga the guest-room was not so bad as it looked: it was rather high, so all the oftener did we hit against a low beam which ran right across it. The depressing closeness of the night made the freshness of the morning air outside seem the more delicious.

The interior of Iceland, as is generally known, is a great uninhabited grassless desert, for the population (only about 70,000 for an area one-fourth larger than Ireland) is mostly confined to the sea-shores and neighbouring valleys. In going from coast to coast this desert must be crossed; it edges the inhabited land as the sea does on the other side, and gives it a wild charm,—for us, at least, who suffer from over-population. We were now on the borders of this region, crossing a great valley or plain of old lava, with a background of snow mountains. The lava was rather like a very rent and crevassed glacier, but all black, the sombre colouring being only relieved by the patches of grey and yellow lichen. Right in the middle rose the isolated conical hill, Erick's Jokúll, with dark crags below, and perpetual snow and ice above. Even on that sunny day, the scene conveyed the strongest impression of vast, weird, remote desolation.

We rode over the lava till we reached a great gaping pit, and then dismounting we clambered down over rough rocks into the cave of Surtsheller, which they say runs for two miles underground. The floor of the cavern was of transparent hard ice, covered near the entrance with some inches of water. The last sight of daylight, looking back, was therefore very pretty, as the ice gave a perfect blue reflection of the overarching rocks. Now lighting candles, we scrambled on over icy slopes. Down in the clear depths we could see the strange black shapes of the lava, as Dante saw the traitors like flies in amber in the ice of his frozen Inferno. All this cavern must have been once a huge bubble in the boiling lava, and these fantastic boulders flung from some furious volcano. Then came the frost-giants and made the place their summer palace; for where the cavern is at its highest, and the clear ice stands in tall columns, and fretted arches reaching to the roof, it is curious and pretty enough for any fairy tale. In the light of our torch, the whole place flashed back prismatic colours with a blaze that made our two little candles seem very dim when it was out. At the far end of the cave, in a hollow rock, we found seals and coins and carved names left by former travellers, some of them dating from early in the century. We added our names, as we were the first ladies who had been in the caverns—not that there is any special difficulty about going there, but that, speaking broadly, no ladies travel in Iceland.* We were glad to return to the warm daylight, feeling convinced that the outlaws who once inhabited these caves must soon have become the most rheumatic of men.

Our way hence grew most desolate—over stony plains, between shapeless hills, swept by the keen north wind. A brown desert strewn with stones often succeeds a plain of thick rich grass in Iceland, with as sharp a difference as a ploughed field borders a meadow, and we passed several such alternations this day. At last the country improved, fine-shaped conical mountains opened to the west, and we were glad, after ten hours of travel, to halt at the farm and chapel of Nordtunga, where Gislason left us to ride straight on to the port of Borderey, as we had ascertained the steamer was expected there next day. One advan-

* Madame Ida Pfeiffer, years ago, and three Miss Hopus, who ascended Hecla lately, were the only exceptions we heard of.

tage only accrued from the absence of our cheery guide; as he spoke English about as well as we did, our very broken Icelandic had not hitherto had the same reason to be exercised as now, when we were wholly dependent on it. We found even our slight knowledge of the language most useful, not only for the usual reasons, but because it made the people so friendly. Though it is rash to generalise about the character of a nation after a stay of hardly three months, I will venture to say this, that without some knowledge of their language it is impossible to judge of the character of the Icelanders. This would seem too obvious to be worth mentioning, but for the strange assertions frequently published by hasty tourists who scamper through the country for a few weeks, and talk of the people as if they knew all about them without understanding a word they say. Danish, English, and French are much understood at Reykjavik, but no language except their own is of great use up the country. I have often observed that people there, who at first sight appeared indifferent and reserved, when they heard our Icelandic, which no doubt was enough to make them laugh, at once became full of kindness and interest. They would compliment our lame efforts and try to teach us more, and we used to have plenty of lively talk. Some say Icelanders do not understand a joke; they probably mean an English one, for our experience was that the sarcastic playfulness of the old skalds is not uncommon to this day, and that they venture sometimes to amuse themselves even at the expense of that august being, the Great British Tourist.

We made some progress in talking before we left the island, but we found the grand old language very difficult. The verbs most in use are very strong, and hard to master; nouns are of any of the three genders without rule or reason apparent to foreigners, and have many declensions; everything is declined, even some numerals, and all proper names as in Latin. And the root-vowels frequently change with the cases. Moreover everybody speaks good grammar. The general tone of voice is soft and refined, the language at a distance sounds like well-spoken but rather slurred English, while many old words still used in Scotland which have dropped out of modern English, strike with homely familiarity on the ear. The language is very rich, possessing many words which require a paraphrase to translate them, and it has that conciseness, fire, and nobility of expres-

sion in which modern German is so markedly deficient, and which Matthew Arnold refers to the Celtic element in the English language. How he would account for it in this ancient Teutonic tongue I cannot tell.

We stayed three days at Nordtunga, and two of them were miserable, with a dull unchanging iron-grey sky above, and a strong never-ceasing blast blowing from the north, like the current of an icy river. My friend and I asked each other if this was July, and why we came to Iceland. The middle day, the 27th of July, the wind was west, and the weather warm and lovely. We rode over to Mr. Ritchie's salmon fishery at the mouth of the Hvítá on Borgar Fiord, some eighteen or twenty miles off, accompanied by the farmer and his wife; we went there partly to beg for bread, as we had only short-bread left, which does not go well with ham and game. We spent a charming day on the pretty rocks below the purple mountains that edge the Borgar Fiord. I do not detail our pleasant ride, it was the old story of bright rivers, deep bogs, green meadows, snow-hills above us, and lovely colouring. But when by eleven p.m. I had got back to my lonely quarters in the chapel, the north wind had returned, and was howling among the rafters, and making such a din that the circling band of grave-mounds which separated me from all living things might have been letting their worst inmates out to shriek in the blasts which shook the little building. However, in spite of too intimate an acquaintance with what are called "popular superstitions," by day-light, I did not envy my friend in the stuffy farm.

On our way north we stopped two nights at Hvammr, where the clergyman and his pretty young wife received us cordially. The house was certainly not good, the passages being like branching caverns where you knocked your head against the roof, and stumbled into puddles of water on the way to the good wooden guest-room. But there were books, and things were clean, and the mistress of the house showed us stores of old and handsome jewellery, and her beautiful Icelandic costume of green cloth and velvet, which we coaxed one of the girls to put on. She looked like the stately heroine of a Saga in it, and I recognised a resemblance to the costume of recumbent figures on old tombs of Normandy.

Then we rode over the desert Holtavordzheide to the northern shore. First mounting over wild rocks above a tumultuous river, we reached a little lonely house on the

edge of the desert land; there lived one woman, earth-red in colour, strange in manner, a sort of mountain gnome. She examined our hands and ears, in search, she said, of gold; in Italy one would have suspected bandit relatives lying in wait further on, but in Iceland it was mere feminine curiosity—the only womanly trait visible in the gnome. This day we met nobody, and there was hardly any track: we plodded as best we could across a high tableland, over bog, or rock, or stones. Snow had fallen there during the late northerly storm, which Gislason had encountered in full fury the night he had ridden from Nordtunga, and he had had some trouble in forcing the loose ponies against it. Most dreary must this heath be in bad weather, though this day it was not without its own wild charm, especially when from the upland ridge we sighted the northern sea—the Arctic ocean. From thence the ride by a river with many waterfalls was less dreary than above. We stopped at Melar, a big tidy farm in the valley at the head of Hruta Fiord, such a usual halting place for travellers that it is almost an inn. The charges, usually so moderate, were here high enough to make us criticize our accommodation, for there was no “gift horse” in the question, and the Bonder, a rich fellow who sauntered about with a perpetual pipe in his mouth, watching every one else hard at work at the hay, has not fairly grasped the traveller's side of the innkeeper's trade.

I rode next day the ten miles to Borderey in an hour, being unencumbered with baggage; the active ponies hardly slackening their pace over seaweed-covered rocks and bits of bad ground, which could scarcely have been crossed at all by an average English horse. The ancient port of Borderey, which looks large on the map, consists merely of a big store, a merchant's house, and a flag-staff. The merchant, who has lost a leg, and has a special regard for Scottish people, from grateful memories of the late Professor Syme, entertained us hospitably, as did the ladies of his family. It seemed strange to see fashionable wall-papers and white and gold shutters in this remote corner of the world.

The ride back to Melar that sunny evening was delightful. The path overhung the narrow sea, so lonely as regards humanity, but all alive with birds—eider-ducks, sea-gulls, and swans. The great northern diver laughed, the lesser diver wailed, and every discharge of the gun woke on all sides a startling

clamour. We splashed across the head of the Fiord to where a herd of three hundred ponies was grazing; of all colours and qualities, tossing their wild manes as they chased over the grass, or standing reflected in the river in the intense sunshine, they enlivened the grassy foreground of the snow-capped hills and rock-bound sea.

No steamer appeared, so after three days we continued our journey to the north up the Hruta Fiord. We were accompanied a good way by an eagle, the coolest of all birds, for Gislason shot him on the wing as he slowly sailed past, and we saw he was hit by the feathers which fell; but the gun was loaded with very small shot, and he seemed to despise us too much even to avoid us, constantly perching beside us a little out of range, and keeping us in sight for miles. Two more eagles came close to us this day, and on the heath we crossed the birds seemed to be wonderfully tame. Then we turned west over waste lands and quaking morasses, commanding fine views of the Hruta, and presently Breida Fiords. It was a grand though gloomy journey, for the day was cloudy, and the landscape, vast in scale, was utterly desolate. Towards evening the sky lighted up behind the mountain-chain to the west, showing range beyond range of the wild hills, which defy the great Atlantic waves in the north-west promontory of Iceland. Wistfully I looked at them with an unappeased craving to explore them. There were reasons against it; but it seemed dull, at such a point of interest, to “pause and make an end.” We pitched our comfortable little tent when we were tired, and pitied travellers who go from inn to inn.

Next day we turned regretfully south, and spent three days here and there in Laxdale, which, had it been less pretty, would have been to me full of interest owing to the Sagas. Morris's charming poem of the “Lovers of Gudrun” gives an episode of the quaint old Laxdala Saga, life-like in its simplicity, and bringing ancient days and customs freshly back, especially in this country, essentially unchanged. Dreaming of Kiartan, Bodli, and Gudrun, and all their sad intense story, so long past yet so living still, I rode down to the shores of the Hvammr Fiord. The evening was splendid, and most impressive was that great lonely sea rolling in heavy breakers on the lonely shore. A dark purple mountain rose on one side, and above it was wrapped in a cloud blazing with those celestial colours that one can remember but dimly, and never describe. Little islands showed in

dusky purple against the gold where the Fiord opened into the wider Breida Fiord, and the far mountain-peaks of the north-west peninsula rose beyond. To the south-west another fine mountain-range closed the prospect; here wheeled the sea-gulls, there many swans were sporting; otherwise, with all this extent and beauty, we saw no life.

The parson at Hjardarholt (Kiartan's Hjardarholt) received us kindly. The place is still girdled with the bog where his enemies hid his sword. Opposite, at Hauskuldstadr Farm, still the burn runs below the Tun, or in-field, where Hauskuld overheard his, as he thought, dumb slave telling her little boy how she was the King of Ireland's daughter; eight centuries ago, but the centuries make few changes here. Fortunately they have laid the vampires or walkers-again, as ghosts are called in Icelandic as in Scotch. A very bad one lived hereabouts,—Hrapp,—most unpleasant in life, when he died his family were weak enough to consent to his request that he should be buried head upwards at the kitchen door, that he might still be able to "take a look round;" and a pretty life he led them, for he became a dangerous vampire.

The Laxá, or Salmon River, is very pretty. I rode with our guide to a charming waterfall and dark pool among the grey rocks, where large salmon-trout rose freely to the fly, and showed fine sport in the swirls and rapids lower down. This was a regular fishing day, warm and showery, rare during our stay in Iceland, where the weather was generally, if cloudy, too cold, and if fine, too bright for good fly-fishing. Though so much salmon is taken in boxes, there seems but little sport. I never saw any one fishing with the rod. In very hot weather we have been amused by going down among rocky pools to see the men lower little hand-nets into the water, and then with stones and shouts scaring the salmon, who gene-

rally thereupon went into the net by twos and threes, we could not clearly understand on what principle. The salmon are excellent and very abundant. It was charming to watch them, in some rivers, working up stream, sometimes eight or ten in the air at once leaping at the falls. Last year at least they averaged smaller than our Scottish fish, whereas the trout and char, both river and loch, were very large and heavy. Far from all population, there seemed no reason against fishing freely; but some of the rivers, as the one near Reykjavik, are preserved.

We left the Dales by the fine pass of Kvænna-brekkka, mounting between walls of shadowy basalt to a table-land with a grand view of icy or purple hills, rendered magnificent that night by the extraordinary splendour of the sunset. Hence we scrambled down into a narrow desolate valley, overhung by the curious conical mountain, Baula, of which I have given a sketch, taken outside the pass. Till lately no one had ascended Baula, which was formerly considered one of the gates of fairy-land, and it is still whispered that those who go up the right way and in the right frame of mind, may meet the elf-folk. Anything seemed possible, as we picked our way after dark over wild rocks, guided chiefly by the glitter of the river; and indeed it is not surprising that the old beliefs should still linger in these solitudes, where man is so insignificant, and nature so powerful. Eastward still, by the long grassy valley of Lundr, where we camped for the last time by a farm called England, *i.e.* meadow-land. Thence, a beautiful mountain ride brought us to Tingvellir, and so back to Reykjavik, after a charming excursion of twenty-two days. It was the more successful because we only travelled on really fine days, never hurrying on in bad weather, which, in Iceland even more than elsewhere, spoils all the enjoyment of travel.

E. J. O.

Cottages in Iceland.

THE CHEVIOT HILLS.

By JAMES GEIKIE, F.R.S.

v.

I HAVE described the condition of the Cheviot district during the climax of the Ice Age as one of intense arctic cold, the whole ridge of hills being then completely smothered in snow and ice. This excessive climate, however, did not last continuously throughout the so-called glacial era, but was interrupted by more than one mild interglacial period. We have evidence in Scotland, as in other countries, to show that the great confluent ice-masses melted away so as to uncover all the low grounds and permit the re-appearance of plants and animals. Rivers again watered the land, and numerous lakes diversified the face of the country. Willows, hazels, and alders grew in the sheltered valleys, oak-trees flourished in the low grounds, and Scotch firs clustered upon the hill-slopes. A strong, grassy vegetation covered wide areas, and sedges and rushes luxuriated in marshy places and encroached upon the margins of the lakes. The mammoth, or woolly-coated elephant, roamed over the land, and among its congeners were the extinct ox, the horse, the Irish elk, and the reindeer. After such a temperate condition of things had continued for some time—probably for thousands of years—the land, during the last interglacial period, became gradually submerged to a depth of upwards of five hundred feet, and a cold, ungenial sea, in which flourished species of northern and arctic shells, covered all the low grounds of Scotland. The cold continuing to increase, our glaciers descended for the last time from the mountains and encroached upon the bed of the sea, until they became confluent, fairly usurping the floor of the German Ocean, and pushing back the western seas as far as, and even beyond, the islands of the Outer Hebrides. There is good reason to believe that such great changes of climate occurred several times during the glacial era, which thus seems to have consisted of an alternation of cold and genial periods. But as the last phase in this extraordinary series of changes was a cold one, during which the great glaciers scoured the face of the country, we now obtain only a few scattered traces of the genial conditions that characterized the preceding mild, interglacial periods. Vegetable accumulations, lake and river deposits, with

mammalian remains, marine beds and their shelly contents, were all ploughed up underneath the ice, and to a very large extent entirely demolished. Here and there, however, we find in the till or boulder-clay that marks the last cold period, wasted fragments of trees, tusks of mammoths, and broken sea-shells; while underneath the till we occasionally come upon old lake deposits with vegetable and mammalian remains, or, as the case may be, beds of marine origin well stocked with sea-shells of arctic species. And these freshwater and marine beds repose, in many cases, upon an older accumulation of till, which belongs to some of the earlier cold periods of the glacial era. In the Cheviot district proper, the traces of mild, interglacial conditions are very slight, but in the immediate neighbourhood we find them more strongly marked. Thus, in the valley of the Slitrig, near Hawick, we notice freshwater beds with peaty matter lying between a lower and an upper till or boulder-clay; and interglacial freshwater beds also appear in the neighbouring county of Peebles, particularly in the valley of the Leithan Water. Again, in the valley of the Tweed near Carham, there occur interglacial beds in which I detected numerous bones of water-rats and frogs. These interglacial remains acquire a peculiar interest when we come to view the "superficial deposits" of Scotland in connection with those of England and the continent; for, as I have endeavoured to show elsewhere,* it is most likely that the ancient gravels of England, which contain the earliest traces of man, belong for the most part to interglacial times; and the extraordinary changes of climate described above may therefore have been actually witnessed by human eyes. Indeed, I believe it was the advent of the last cold period of the Ice Age that drove out the old tribes who used the rude flint implements that are now found in the gravel deposits and caves of England, and who occupied the British area along with lions, hippopotami, rhinoceroses, elephants, hyænas, and other animals. The men who entered Britain after the final disappearance of arctic conditions, were more advanced in

* "Great Ice Age," chaps. xxix. *et seq.*

civilisation, and were accompanied by a very different assemblage of animals—by a group represented by oxen, sheep, dogs, and other creatures, most of which are still indigenous to Britain.

But to return to the Cheviots. When the final cold period had reached its climax, and the ice-sheet began to melt away for the last time, the tops of the hills then once more became uncovered, and large blocks, detached by the action of the frost, fell upon the surface of the glaciers, and were borne down the valleys, some of them to become stranded here and there on the hill-slopes, others to be carried far away from the Cheviot area and dropped at last over Northumberland and Durham, or even farther south. As the melting of the ice continued, and the glacier of the Tweed ceased to reach the sea, great accumulations of gravel and sand were formed. Underneath the ice, sub-glacial streams ploughed out the till, and paved their hidden courses with gravel and sand. In summer time, the heat was probably greater than is now the case in these latitudes, and this high temperature must have given rise to great floods consequent on the melting of the snow and ice, and the fall of excessive rains. The whole surface of the Tweed glacier was abundantly washed with water, which, pouring down by clefts and holes in the ice, swelled all the sub-glacial streams and rivers. At the same time, floods descending from the Lammermuirs and the Cheviots, pushed with them vast quantities of shingle, gravel, and sand, part of which was swept upon the surface of the Tweed glacier, while much seems to have gathered along its flanks, forming banks and ridges running parallel with the course of the valley.

At last the time came when the ice had fairly vanished from the lower reaches of the Tweed, and we now walk over its bed and mark the long ridges and banks of shingle and gravel that were formed by the sub-glacial streams and rivers, and the somewhat similar accumulations that gathered along the sides of the glacier at the foot of the Lammermuir Hills. Here and there, also, we note the heaps (*i.e.* moraines) of shingle, earth, clay, and *débris*, with large erratics which travelled on the surface of the ice, and were dropped upon the ground as that ice melted away. All the loose erratics that lie at the surface in the lower reaches of the Tweed valley have come from the west. Some of them rest upon hard rock, others upon till, and yet others crown the tops and

slopes of gravel and sand hillocks, or appear in low mounds of morainic origin.

In the valleys of the Cheviot Hills one traces the footsteps of the retiring glaciers in mounds and hummocks of rude, earthy *débris*, blocks, and rock-rubbish. These are terminal moraines, and they indicate certain pauses in the recession of the ice. The most remarkable examples occur in the valley of the Kale Water, at Blinkbonny, a mile or so above the village of Eckford. At that place a bank of moraine matter at one time blocked up the valley of the Kale, and thus formed a wide and extensive lake, that stretched up to and beyond Morebattle. Numerous curious hillocks of gravel and sand are banked against the moraine, and point to the action of the flood-waters that escaped from the melting glacier. Other gravelly moraine mounds occur higher up the same valley, as near Grubbit Mill. These last tell us of a time when the Kale glacier had retreated still further, so as to have its terminal front near where Morebattle now is. Wreaths and hummocks of gravel and sand, extending from Grubbit to the north-east, along the hollow in the hills that leads to Yetholm Loch, indicate the course taken by a portion of the torrents that escaped from the ice in summer-time. In other hill-valleys, similar indications of ancient local glaciers may be seen. Some of the most conspicuous of these appear upon the slopes and in the valleys that drain into the upper reaches of the Jed. They consist chiefly of mounds and hillocks, made up of coarse earthy *débris* and rock-rubbish; sometimes these are solitary and rest in the throat of a valley, at other times they are scattered all over the hill-slopes and valley-bottom. One can have no doubt as to what they mean—they indicate clearly the presence of insignificant glaciers which were soon to vanish away. The larger and better-defined mounds are true terminal moraines, while the scattered heaps of rubbish point out for us the beds in which the glaciers lay. Thus, from the sea-coast up to the highest ridge of this border country, we follow the spoor of the melting-ice; passing from massive and wide-spread deposits of till, gravel, and sand, and angular *débris* in the low grounds, up to insignificant heaps and scatterings of rock-rubbish and angular boulders at the higher levels of the country.

Several more or less extensive flats in the hill-valleys indicate the former presence of lakes which have since become obliterated by the action of the streams. But, by far

the most conspicuous example of such silted-up lakes is that of the Kale valley, to which reference has already been made. In the later stages of the Ice Age that river-valley must have existed as a lake from Marlfield up to and beyond Morebattle. Indeed, there is evidence to show that even within historical times a considerable lake overspread the flat grounds in this neighbourhood. The name *Morebattle* is supposed to mean the "village by the lake," and, up to a few years ago, there was a sheet of water called Linton Loch a little to the east of Morebattle. But this has been drained by the proprietor, and is now represented by only two insignificant pools. The present course of the Kale between Marlfield and Kalemouth is of post-glacial age—the old pre-glacial and interglacial course being filled up with drifted materials. As the appearances at this place are somewhat typical of many of the valleys of the Cheviot district, I may briefly summarise the history of the Morebattle lake.

Before the advent of the last great age of ice the Kale would seem to have flowed from Marlfield, close to the line now followed by the turnpike road as far as Easter Wooden, after which it passed near the present sites of Blinkbonny and Mosstower, and so on to the Teviot, which it joined some little distance above Kalemouth. During the Ice Age many of the old river courses were completely choked up with clay, stones, and gravel, so that when the ice melted away the rivers did not always or even often regain their old channels. Thus, in the case of the Kale, we find that the present course of the river below Marlfield is of recent or post-glacial age, having been excavated by the river since the close of the glacial epoch. The old or pre-glacial course lies completely choked up and concealed under the rubbish shot into it at a time when glacier ice filled all the valley of the Kale down to Marlfield. At this latter place the Kale glacier seems to have made a considerable pause—it ceased for some time to retreat—and thus a heavy bank of gravel, sand, shingle, earth, blocks, and angular rubbish gathered in front of it, and obliterated the old river course into which they were dropped. When the glacier at last disappeared, a lake was formed above the morainic dam that closed the valley below Marlfield, and the outflow of the lake took place at a point lying some little distance to the north of the old or pre-glacial course of the Kale. By slow degrees the river excavated a new channel for itself

in the Old Red Sandstone rocks, and in doing so gradually lowered the level of the waters. This and the silting action of the Kale and its feeders slowly converted the lake hollow into a broad alluvial flat through which the river now winds its way.

Another extensive lake seems to have occupied the vale of the Teviot between Jedfoot and Eckford, and similar old lake beds occur in several of the hill valleys. One good example is seen in the valley of the Oxnam Water, where the flat tract that extends from the old village of Oxnam up to the foot of the Row Hill indicates the former presence of a lake which has been drained by the stream cutting for itself a gorge in Silurian greywackés and shales. In many other valleys it is easy to see that the streams do not always occupy their pre-glacial courses, and some of the old forsaken courses are still patent enough. Thus a glance at the hollow that extends from Mossburnford on the Jed to Hardenpeel on the Oxnam, is enough to convince one that in pre-glacial and probably in early post-glacial times also a considerable stream has flowed from what is now the vale of the Jed into the valley of the Oxnam.

In all the valleys we meet with striking evidence to show that the streams and rivers must formerly have been larger than they are now. Certain banks and ridges of gravel fringe the valley-slopes at considerable heights, and indicate the action of deeper and broader currents than now make their way towards the sea. It is probable that these high-level gravel terraces date their existence back to the close of the Ice Age, when local glaciers still lingered in some of the mountain-valleys, and when in summer time great floods and torrents descended from the hills; for, as I have already stated, there are good grounds for believing that the summer season was hotter then than it is at present.

An extremely humid climate seems to have characterized Scotland even in post-glacial times, as may be gathered from the phenomena of her peat-mosses. Very little peat occurs on the Scotch side of the Cheviots, and it is conspicuous chiefly on the very crest of the hills, where it attains a thickness that varies from a foot or two up to five or six yards. Here and there we detect the remains of birch under the peat, but the peat itself is composed chiefly of bog-moss and heather. The evidence so abundantly supplied by the peat-mosses in other parts of Scotland shows that after the Ice Age had passed away the

Scottish area became clothed with luxuriant forests of oak, pine, and other trees. At this time the British Islands appear to have been joined to themselves and the continent across the upraised beds of the Irish Sea and the German Ocean. Races of men who used polished stone implements and sailed in canoes that were hollowed out of single oaks inhabited the country, together with certain species of oxen (now either extinct or domesticated), the elk, the beaver, the wolf, and other animals, such as the dog, the sheep, &c., which are still indigenous. The climate was more excessive then than it is now—the summers being warmer, and the winters colder. By-and-by, however, submergence ensued, the great wooded plain that seems once to have extended between Britain and the continent disappeared below the waves, and the climate of this country became more humid. The old forests began to decay and the peat-mosses to increase, until by-and-by large areas in the low grounds passed into the condition of dreary moor and morass, and even the brushwood and stunted trees of the hills died down and became enveloped in a mantle of bog-moss. A study of the present condition of the Scottish peat-mosses leads one to believe that the rate of increase is now much exceeded by the rate of decay, and that the eventual disappearance of the peat that clothes hill-tops and valley-bottoms is only a question of time. The progress of draining and other agricultural operations have no doubt influenced to some extent this somewhat general decay of the peat-mosses; but there is reason to suspect that the change of climate, to which the decay of the peat is due, may really be owing to some cosmical cause. Quite recently an accomplished Norwegian botanist has come to similar conclusions regarding the peat-mosses of the Scandinavian peninsula.

We have now traced the geological history of the Cheviot district down to the "Recent Period." From this point the story of the past must be continued by the archæologist, and, into his province I will not trespass further than to indicate some of the more remarkable traces which the early human occupants of the upland valleys have left behind them. Before doing so, however, I may briefly recapitulate the general results we have obtained from our rapid review of the glacial and post-glacial deposits. A study of these has taught us that the Cheviot Hills and the adjoining low grounds partook in those intense arctic conditions under whose influence all Scotland and a large

portion of England were buried beneath a wide-spread *mer de glace*. The Cheviots themselves were completely smothered under a mass of glacier ice which extended across the vale of the Tweed, and was continuous over the Lammermuirs with the vast sheet that filled all the great lowlands of central Scotland. But although the Cheviots were thus overwhelmed, they yet served to divide the ice-flow, for we find that the gelid masses moved outwards from the hills towards the valley of the Tweed, turning gradually away to east and south-east to creep over the north part of England. How far south the ice-sheet reached has not yet been determined, but its *moraine profonde* or till may be traced to the edge of the Thames valley; and I have picked up in Norfolk ice-worn fragments of igneous rock, which have been derived from the Cheviots themselves, showing that Scotch ice actually invaded the low grounds south of the Wash. Such severe glacial conditions, after continuing for a long time, were interrupted more than once by intervening periods characterized by a milder and more genial climate. The great *mer de glace* then melted out of the valleys, and for aught that we can say the snow and ice may even have vanished from the hills themselves. Vegetation now covered the country, and herds of the mammoth, the old extinct ox, the Irish elk, the reindeer, the horse, and probably other creatures, roamed over the now-deserted beds of the glaciers. It was probably at this time that Palæolithic man lived in Britain. He was contemporaneous with lions, elephants, rhinoceroses, hippopotami, and other animals of southern and northern habitats—the former living in England when the climate was genial—but being replaced by the northern species when the temperature began again to cool down, and the snow and glaciers were once more reappearing and creeping downwards and outwards from the hills. Towards the close of the last interglacial period the land became submerged to a considerable extent, and species of arctic shells lived over the sites of the drowned land where the mammoth and its congeners had formerly flourished. By-and-by the cold so far increased that another great ice-sheet filled up the shallow sea, and as it slowly ground over the face of the land and the sea-bottom, it scoured out and demolished to a large extent all loose river and lake and marine accumulations. When at last the ice melted away, it left the ground cumbered with stony clay, and with much gravel and sand and

morainic *débris*. It is underneath these deposits that we yet obtain now and again fragments of the life of the last interglacial period. But in all the regions visited by the final great incursion of the ice, such relics are comparatively rare; it is only when we get beyond the districts that were overwhelmed that the ancient interglacial remains are well-preserved. Beyond the southern extremity reached by the latest ice-sheet, that is to say, in the regions south of the Humber, we find the country often sprinkled with tumultuous heaps and wide-spread sheets of gravel and brick-earth, which seem to owe their origin to the floods and torrents that escaped from the melting ice. These waters, sweeping over the land, carried along with them whatever relics of man and beast lay at the surface, and swept out interglacial river deposits, scattering the materials far and wide over the undulating low grounds of central and eastern England. Mr. S. B. J. Skerthly, of the Geological Survey of England, has shown that such is the origin of the so-called "river-gravels" with ancient flint implements and mammalian remains in the districts watered by the Little Ouse, the Waveney, and other rivers in that part of England. These gravels could not possibly have been deposited by the present rivers, for they are found capping the hills at a height of more than eighty feet above the sources of the streams. The whole aspect of the gravels, indeed, betokens the action of rapid floods and torrents, such as must have been discharged abundantly in summer time from the melting ice-sheet that lay at no great distance to the north.

When the last ice-sheet vanished away, it left the ground covered thickly in many places with its various deposits. Rivers and streams were thus often debarred from their old channels, and were forced to cut out for themselves new courses, partly in drifted materials, and partly in solid rock. A number of lakes then also existed which have since been silted up. So long as glaciers lingered in the hill-valleys, the rivers seem to have flowed in greater volume than they now do. By-and-by the bare and treeless country became clothed with a luxuriant forest growth, and tenanted by animals, many of which are still indigenous to our country, while others are locally extinct, such as the wolf, the beaver, and the wild boar. In some of the old lake beds of the Cheviot district numerous remains of red deer and other animals have been turned out in the search for marl, and in drainage operations,

the red-deer antlers being often of very noble dimensions. It seems probable that in early post-glacial times our country was joined to the continent and shared in a continental climate, the summers being then warmer and the winters colder than now. The men who lived in Britain after the final disappearance of the great glaciers used stone implements, which were often polished and highly finished, and they sailed about in canoes, being probably a race of active hunters and fishers. They belong to the archæologist's "Neolithic" or new-stone period—the "Palæolithic" or old-stone period being of much older date, and separated, as I believe, from Neolithic times by the intervention of the last cold period of the Ice Age.

To the forest era succeeded a time when the climate became very humid, a result which may have been due in large part to the separation of Britain from the continent. It was then that the ancient forests began to decay, and peat mosses to increase. How long these humid conditions of climate characterized the country we can hardly say, but we know that nowadays the peat mosses do not grow so rapidly as they once did, and indeed almost everywhere the rate of decay is greater than the rate of increase. This points to a further change of climate, and brings us at once face to face with the present.

And now a few words, in conclusion, as to the old camps and other remains that occur so abundantly in the valleys of the Cheviot Hills. In many of the hill-valleys, especially towards their upper reaches, as in the valleys of the Kale and the Bowmont, almost every hill is marked by the presence of one or more circular or oval camps or forts. They are generally placed in the most defensible positions, on the very tops of the hills or on projecting points and ridges. Most of them are of inconsiderable dimensions, and could not have afforded protection to any large number of men, for many hardly exceed one hundred feet in diameter. Not a few consist of only a single circular or oval rampart with an external ditch—the rampart being composed of the rude *débris* which was dug out to form the ditch. Others, however, are not only much larger (five to six hundred feet in diameter), but surrounded, in whole or in part, with two or more ramparts separated by intervening ditches; and I noticed that as a rule the side which must have been most easily assailable was protected by several ramparts rising one above the other. From the extraordinary number of these

hill-forts one has the impression that the upper valleys of the Cheviots must at one time have been thickly peopled, probably in pre-Roman times. It is easy to see that the camps or forts overlooking a valley often bear a certain relation to each other, as if the one had been raised to support the other, and not unfrequently we can trace well-marked intrenchments extending across a hill-ridge, or along a hill-slope for a distance of not much short of a mile, and evidently having some strategic connection with the forts or camps in their vicinity. I found no trace of any "dwellings," either near the forts or in the vicinity of the terraces. The only indications of what may have been the walls of such appear within a fortified camp, called the Moat Hill, at Buchtrig. This is an isolated knoll of rock, which has been strongly fortified—large slabs and blocks of the porphyrite of which it is composed having been wedged out with infinite pains to form circular ramparts. The "walls" are of course nearly level with the ground and grassed over, but they indicate little square enclosures, which may very possibly have been huts closely huddled together. This fort is oval, and measures five hundred feet by two hundred and seventy.

In the same neighbourhood we also meet with plentiful marks of ancient cultivation and with places of sepulture—all of which may without much doubt be referred to the same period as the camps and forts. The slopes of the hills are often marked with broad horizontal terraces, that remind one strongly of the "lazy-beds" of the Hebrides. They are evidently the "cultivated grounds" of the hill-men, and doubtless the hill-slopes were selected for various reasons, chief among which would be their retired and somewhat inaccessible position. The ease with which they could be drained and irrigated would be another of their recommendations; and we must bear in mind that at this early date the low grounds were covered with forests and morasses, and therefore not so easily cultivated as the hill-slopes.

Here and there we notice also little conical hillocks or tumuli. They were much more numerous at one time than they now are, and by-and-by they may all disappear. Numbers have, even within recent years, been pulled down, partly to clear the ground, and partly for the sake of the stones of which they are composed. This is much to be regretted; for their destruction simply means the obliteration of historical records, the loss of which can never be made good.

I asked a farmer what had become of the tumuli which at one time, according to the Ordnance Survey map, were dotted over the hill behind his house. "If it's the wee knowes (knolls) you mean, I pu'd them down, for they were jist in the way. There was naething o' importance below the stanes, only a wheen worthless bits o' pottery ware!" And the worthy pointed to a heap of stones behind a neighbouring "dyke," where I afterwards found some fragments of the pottery which had been so ruthlessly demolished. These tumuli are no doubt old burial-places, and much information concerning the habits of our ancient predecessors might often be obtained by a careful examination of the mounds, when it is deemed essential to remove them. But, surely, after all, they might be spared, for they can seldom be so very much "in the way;" and, at all events, if they must be removed, might it not be well to communicate the fact of their approaching demolition to some local archaeological society, or to any member of the Berwickshire Naturalists' Club, who for the sake of science would, I feel certain, do what was possible to preserve an accurate account of their contents?

"Standing stones" are met with now and again, either singly or in groups, and sometimes they form circles. It is most likely that they were raised by the same people who made the forts and tilled the horizontal "laze-beds." One can only conjecture that they may have been designed as memorial stones, to mark the place where a chief or person of consequence was slain in battle. They may also mark burial-places, or indicate the site of some deed of prowess or other action or circumstance worthy of being remembered. Antiquarians at one time considered that all these stones were relics of druidical worship; but it is needless to say that this view has long been abandoned. That the ancient inhabitants of the Cheviots may have had some kind of religion is exceedingly probable, but it must have been of a very primitive kind, not more advanced than that of the North American Indians.

Such are some of the more notable relics of the people who lived in the valleys of the Cheviot Hills in pre-Roman times. These valleys, as I have said, seem to have supported a numerous population, who tilled the slopes and probably hunted in the forests of the adjoining low grounds. That they lived in fear of foes is sufficiently evident from the number of their intrenchments and fortified

camps, to which they would betake themselves whenever their enemies appeared.

What effect the Roman occupation had upon the dwellers among these hills we cannot tell. The great "Watling Street" passes right across the Cheviots, and there are some old circular forts and camps quite close to that wonderful road, along which many a battalion of Roman soldiers must have marched, and these forts, if of pre-Roman age, were not at all likely to have been held by the natives after Watling Street was made. In the remoter fastnesses of the hills, however, the old tribes may have continued to crop their "lazy-beds," to hunt, and tend their herds, during the Roman occupation, and the old forts may have been in requisition

long after the last Roman had disappeared over the borders.

But I have already, I fear, delayed too long over the old history of the Cheviot Hills, and must now draw my meagre sketches to a close. In my first paper I said that these hills were a *terra incognita* to the tourist. Those who visit the district must not therefore expect to meet with hotel accommodation. But "knowing" pedestrians will not be much disturbed with this information, and will probably find, after they have concluded their wanderings, that the hospitality and general heartiness for which our stalwart Borderers were famous in other days are still as noteworthy characteristics as they used to be.

SKETCH OF A JOURNEY ACROSS AFRICA.

BY VERNEY LOVETT CAMERON, LIEUTENANT ROYAL NAVY.

PART III.

HABIB IBN SALIM, the old trader mentioned in my last number, who housed Dr. Livingstone at Nyangwé, showed me great kindness during my stay there, but most of the other traders were very half-hearted in their welcome. Muinyi Dugumbi, who was supposed to be the head man amongst them, was full of promises of assistance, but he was so absorbed in the delights of his harem of over 300 female slaves, that he did nothing. Some of the other traders neither promised nor did anything, and Syde Merzrui contented himself with begging for beads, instead of trying to procure canoes for me according to his agreement. My whole attention was now concentrated on the means of obtaining canoes to convey us down the Congo to the Falls of Yellala. I was at first told that I could get them at the markets, which are held every fourth day at Nyangwé, but soon found that the Wagenya (a tribe inhabiting a narrow strip on the left bank of the river, to whom all the canoes belonged) would not sell any for such stores as I had to offer, although their repugnance might have been overcome if I had consented to buy slaves from the Arabs and to purchase the canoes with them. This, of course, I was unable to do.

All my efforts, however, were ineffectual; and I was next advised to send men through the strip of country belonging to the

Wagenya, to get boats from the people who built them (or rather hacked them out of logs), and who lived in the jungle, about ten miles from the river. I was unable to go myself, and therefore the opportunities which arose of buying shipping were not taken full advantage of, and at the end of three weeks I found myself with only one canoe (which was given to me by Habib ibn Salim), which might have held four or five men and their loads, and apparently with little or no chance of obtaining another.

A party of Arabs, etc., who had been away to the south of the river for some time, making war and fomenting disturbances amongst the natives, principally with the view of obtaining slaves, now returned and brought news that Tipo-tipo (alias Haméd ibn Haméd) was coming to Nyangwé to arrange peace between Russuna, chief of Maréra (a friend of his), and the traders settled at Nyangwé; who would have attacked him (Russuna) had it not been for the intervention of Tipo-tipo.

When Tipo-tipo arrived, he advised me to give up the idea of going down the river in canoes, or of attempting to march along its bank direct from Nyangwé. He told me that if I would go with him to his camp, about ten days' march south by west of Nyangwé, I should then be able to get guides to show me the way to a great lake about fifteen marches west of it, where men came in large

canoes holding from eighty to one hundred people, and the crews of which wore hats and trousers. I had already heard many reports of this lake at Nyangwé, and that the Lualaba fell into it; but now, in addition, two men, belonging to the district in which Tipo-tipo's camp was situated, assured me that they had been there, and gave the name, Sankorra; and also mentioned a small lake called Iki, situated on a river Luwembi, just to the west of the Lomâmi.

After a little consideration, I determined to go with Tipo-tipo to his camp, and thence march to Sankorra, and trust to getting boats from the trouser-wearing traders who, I hoped, would prove to be half-caste Portuguese from Cassanci or thereabouts.

I therefore cleared out of Nyangwé, the night before Tipo-tipo left there, and camped in a village of Wagenya, on the left bank of the Lualaba. I saw most of the men off myself, and as the day was very hot, left Bombay to bring the rest of the caravan and my boxes over after me; but, as usual, trusting to Bombay was like trusting to a broken reed, and he and the other men did not make their appearance till noon on the following day. In addition, several of the men, whom I had seen across myself, managed to slip back, and three deserted altogether, taking with them their guns and ammunition.

The left bank of the Lualaba is low and swampy, with many semi-stagnant backwaters, which render it a very hotbed of fever, whilst the right bank is raised and healthy. When I had got my men and stores together, and ready for the road, I was suffering from a heavy attack of fever, the effect of one night's exposure to the malaria. I managed, however, to struggle on for a long march, which, including an hour's halt, lasted from half-past twelve to between seven and eight p.m., although, for the greater part of the time, I was reeling about like a drunken man from fever and weakness. For the last hour or so, our path led us through tracts covered with gigantic pyramidal ant-hills, which I, in the partial delirium of fever, kept on mistaking for my tent; when at last I did arrive in camp, I was so done, that I was obliged to turn in at once, without being able to eat anything.

The next morning I was able to go on again, and each day saw me getting better. Half way to Tipo-tipo's camp, we halted for a couple of days at Russuna's; but just before reaching his village a row took place, between

some of the Wamerima from Nyangwé who accompanied us and the natives, who, thinking that these had come to plunder them again, began a fight, which resulted in the death of two natives; but Tipo-tipo had influence enough to restore peace as soon as he heard of the affair, and made the Nyangwé people pay something to the chief.

During the two days I was at Russuna's I was an object of intense interest to his wives, who would scarcely let me have one moment to myself, and kept on turning up the legs of my pyjamas, to see if I were really white all over: indeed, I had to use a certain amount of restraint, or I believe their curiosity would have led to their undressing me altogether. All these wives of Russuna, about forty or fifty in number, live together in a small village formed of two rows of huts, with one hut in the middle for himself and his mother, on whom devolves the task of keeping the harem. Many of the wives were really very good-looking, and, like many other ladies, seemed quite sensible of their charms.

Between Russuna's and Tipo-tipo's camp, nothing of importance occurred. The country was very pretty and fertile with groves of nutmeg-trees, and enormous quantities of oil palms. Tracks of elephants were very numerous, and we sometimes heard them trumpeting in the jungles.

When I arrived at Tipo-tipo's, though he had always told me only to expect a camp, I found a neatly-built and well-arranged town. There were four or five smaller traders besides. Tipo-tipo and the armed followers from Zanzibar and Unyanyembe amounted to nearly a thousand; in addition to these, slaves and native hangers on may have raised the sum total to upwards of two thousand five hundred. Directly I got to this place I sent some of my men with guides, supplied by Tipo-tipo, to ask permission from the chief of the country to the west of the Lomâmi to pass through his territory, as none of the Arabs had been allowed to pass that way, though native traders were constantly going to and returning from Lake Sankorra, which they reported as being fifteen marches distant. In support of this story, I was shown cloth and beads obtained from traders who came there from the west, and who were the trouser-wearing people I had heard of. The cloth and beads were quite of a different sort from any brought from Zanzibar. Cowries, too, which at Nyangwé were greatly in demand, were here a perfect drug in the market, owing to the large quantities that came from the West Coast.

A couple of days after my arrival I received a state visit from Kasongo, the chief of the district. The first to arrive were drummers and marinba players belonging to several petty chiefs, then a sort of master of the ceremonies with a huge carved stick, followed by the small chiefs, each of whom he announced in due form, and at last Kasongo himself and two of his daughters, with a retinue of men armed with spears, and bows and arrows.

A clear space was formed, in which Kasongo and his daughters went through a sort of dance, accompanied by the musicians, and some singers who chanted a monotonous recitative. When the dance was finished Kasongo came into an open hut, which was the general rendezvous of the traders, and where they usually passed the day. It was now spread with carpets and mats in honour of his arrival.

We had a longish palaver, and Kasongo at first said he would go himself to the chief on the opposite side of the Lomâmi, and try to make terms with him about my passing through to the westward; but afterwards he hauled off, saying that he was too old to travel, and that he would send some of his head men instead, to carry on the negotiations. I waited for a day or two, and then returned Kasongo's visit, accompanied by Tipo-tipo, and most of the principal people amongst the Arabs. I found Kasongo seated in a clear, open grassy plot in the middle of his village, looking clean and tidy, in a dress of grass cloth, and a great contrast in appearance to what he was the day he called on me, when he was tricked out in tawdry, dirty clothes made up for him by the Arabs, and certainly had not then left a very favourable impression on my mind.

Whilst I was at his village both his men and mine who had been to the west of the Lomâmi, returned the answer of the chief, that no people armed with guns had ever passed through his territory, and that if any came he would resist them, and if possible destroy them. I, however, at the same time saw many men who declared they had been both to Lake Sankorra and also to Lake Iki, and I had every reason to believe what they said.

On my return to the Arab settlement, I racked my brains to find what was best to be done, and when Tipo-tipo told me that he had heard of Portuguese traders, whom, from his description, I judged to be about two hundred or two hundred and fifty miles south-south-west from us, I made up my mind to go there and then to try to work

back to Sankorra, thus avoiding the chief who had refused us permission to pass.

As soon as Tipo-tipo heard of my determination he gave me three guides, natives of Urna, under charge of Mona Kasanga, son of the chief of Kowamba (a lake on the Lualaba), to show me the road.

My men threw every sort of obstacle in my way, as they were thoroughly afraid of going on through a country where no caravans had passed; some half-dozen deserted the day I started, and although I sent back from the place I halted at, I could get no news about them. They no doubt hid somewhere near Tipo-tipo-ville, and were supported by chums amongst the Zanzibar slaves until I was well away.

Besides giving me the native guides, Tipo-tipo also sent a free man of Zanzibar to accompany me for ten days on my road, but this, although intended as a great help, was rather a hindrance, as he every day said, after about two hours' marching, that the next place at which we could possibly halt was about six or seven hours further on, and therefore we had better camp where we were. In other matters he was very useful, and perhaps his always desiring to halt early arose from an idea which, until I had practically disproved it, seemed very common amongst the Arabs, viz. that a European was unable to march far or fast in Africa.

Our road led us close along the right bank of the Lomâmi, of which we caught glimpses from time to time. We crossed numerous affluents, all of which we had to ford. The country was still fairly level, with hollows grooved out through the sand and pebbles, which formed the upper strata. In these miniature valleys there were always trees, and many very beautiful ferns and mosses; some of these were club mosses over a foot in height. My guides were now getting very doubtful about the road, and as most of the villages through which we passed had been deserted by the inhabitants from an absurd rumour that we were in search of slaves, we were unable to get any directions from them. My guides themselves were all afraid, and kept on trying to work away to the eastward, towards the village of Mona Kasanga's father. At length one day, after having lost the track three times, I took the bull by the horns, and walked on by myself, leaving the guides and caravan to follow me or not as they liked; of course I was pretty sure that they would be much too cowardly to leave me altogether, but they straggled and wandered

all over the country. We camped that night in a village near a large branch of the Lomâmi, called the Lukanzi; the guides persisted that there were no means of crossing it. I asked where the natives of the village were gone to, and was told that they had crossed the river, so I knew that there must be some way to get over to the other side, and sent the guides along a path to find if it led to a bridge. After having been absent some time they returned, and reported that the path came to an end near the river, as it only led to a watering-place. I did not believe this, so I went down the path myself, and four or five hundred yards from the camp, found a large fishing-weir bridge.

Next morning I got the men across, after a very great deal of trouble; they were all in a great fright, as the guides had been cramming them with hobgoblin stories all the night about the natives beyond the river. As soon as we were across I took the lead again, and about a mile from the river, whilst I was passing through a strip of jungle, a native lurking near shot at me, and the arrow glanced off a leathern coat I wore without penetrating. I saw the fellow bolting, and as he was between me and the open, I was able to make him break cover, and, dropping my rifle, I ran him down, and gave him a regular good thrashing.

Soon after this a lot of natives appeared on the path in front of us and wanted to prevent our proceeding any farther, but after half-an-hour's palaver, which ended in my giving them a few beads, we became very good friends, and went on to the village of a chief four miles off, escorted by a mob of black fellows shouting, yelling, and playing on large wooden horns. Here I was told that Kwarumba, a chief whose village had been described to me as lying directly on our road, was only one march distant. I expected to get information from him about the Portuguese, and therefore I was anxious to go on at once, but Mona Kasanga began to give himself airs, saying he was a chief's son, and sorely against my will detained me for a day.

Next morning we went on our road, and after again crossing the Lukanzi by another fishing-weir bridge, arrived in the afternoon at Kwarumba's first village, which was very large and well populated. Here we halted, and I was regularly surrounded by crowds who came to look at me, and to whom the sight of a white man was perfectly novel. I believe many of the people had never even heard of one.

On the following day we marched a short distance, and camped close to the village in which Kwarumba lived. In the afternoon he came to see me, and told me that a short time before, strangers, who were not Arabs, and who wore hats and carried umbrellas, had been close by. This was good news for me, and I concluded that they were the Portuguese of whom I was in search.

After leaving Kwarumba's, the guides again began to give trouble, but I held on to my own course as well as I could until we arrived at Kamwawi, where at first we were well received. I engaged guides to take me down to the chief with whom the strange caravan was stopping, and paid them in advance, and during the whole afternoon women were in our camp selling flour, beans, &c. Next morning, however, I found that my pet goat "Dinah" was missing, and therefore went up to the village to inquire about her; so little did I suspect that anything was wrong, that I did not even take my pistol or gun with me.

I could get no answer about the goat, and the people began throwing spears and shooting arrows at us, so I had to send and get all my party together in the village, and show a bold front. For some time I would not allow my men to fire in return, as I did not know what the shindy was about, and I wanted to try every means to make all straight before I resorted to force. However, as I found the natives getting cheekier and cheekier every minute, I at last allowed some three or four of my men to return their fire, and a native was shot through the leg. Almost directly the row commenced a party of five hundred men or so came up from the road by which we had intended to go, where I believe they had been posted in ambush. When we began to defend ourselves they consented to a parley, notwithstanding their being at least ten to one.

After a few preliminaries, it was decided that the chief of the village and myself should exchange presents, and that one of my men should make brothers with him, after which we should go on our way in peace; but before this could be carried out, another chief with a large body of men came up, and said to the chief of Kamwawi, "Don't be such a fool, they are a small party, and we shall be able to kill or make slaves of them all, and divide their beads and cloth amongst us."

In consequence of his advice the negotiations were broken off; so I, remembering Troubridge at Teneriffe, set fire to a hut and

said that unless I was allowed to go in peace I would burn the whole village. On this we were told that we could go unmolested to a village where our guides said we should be

received as friends, and I therefore gave orders to march for it. Notwithstanding their promise, the natives hung about us all the march, which lasted from ten A.M. till

Crossing the River Lukanzi on fishing-weir bridge.

Kasongo's Mussumba.

nearly six P.M., and whenever we passed through a strip of jungle they closed in and began shooting at us, and the "whit, whit" of the long arrows sounded anything but pleasant.

Just before sunset we arrived close to the village (Mkatété), which we had been led to expect would prove a haven of rest, but we were destined to be disappointed. The only answer vouchsafed to the hails of my guides,

as to whether we should be received as friends or not, was a volley of arrows.

I sung out for my men to follow me, a call which was responded to by three or four, and

made a dash through a strip of jungle, and across a stream into the village. The natives as soon as they saw us taking the offensive bolted, and the remainder of my men coming

Crossing the Lukoji.

up, I burnt down all the village except four huts, which I utilised as the corners of a species of fortification. By dint of working all night, the morning saw us fairly protected. In this place, which I named "Fort Dinah,"

in memory of the goat, we remained five days, when the natives finding that we were too hard a nut for them to crack, volunteered to make peace.

On our leaving Fort Dinah we found the

people apparently very friendly, all the little children running after us and saluting us, but at the same time a large number of temporary huts in the villages through which we passed showed that men had come from far and wide to join in the attack on us. The chief of the district now offered to pay us an indemnity, but this I refused to receive, but exchanged presents with him to show that no ill-will was borne on either side.

We then pursued our way with varying fortunes, leaving the valley of the Lomâmi and crossing many streams flowing directly into Lualaba itself. At a place called Mangwa Sanza I heard that the village of Kasongo (the head chief of Urua) was only two or three days distant, and that two caravans were settled there. I wanted to find a guide and go there direct, but Mona Kasanga said that the man pointed out the wrong direction, and that if we took that road we should get into trouble, and he persisted that our right course lay to the E.S.E.

When we had followed this road for three days we came to a village called Mukalombo, and there we found out the reason why Mona Kasanga and the other guides had been deceiving us. Mona Kasanga had heard that having neglected to pay his tribute his father, together with some of his sons, had been killed, and his village destroyed by Kasongo. Mona Kasanga dreading the same fate, was therefore afraid to trust himself in the clutches of Kasongo. Mukalombo was also the home of the second guide, and on this account he had joined with Mona Kasanga in trying to lead me astray. Mona Kasanga now refused to go on any farther with me, and I had to wait till the second man, Kongwé, had done a big drink, and trust to him to show me the road.

Four days' marching west by south brought me to Munza, a large district, where a good deal of iron is worked, and where I found a party of men belonging to Jumah ibn Salim (commonly known as Jumah Merikani), and they promised to give me a man to show the way to Kasongo's. They also told me that the second caravan, of which I had been told, was commanded by a Portuguese from the West Coast. The two remaining guides given me by Tipo-tipo now bolted; but for this I did not much care.

After a day's halt at Munza I went on with Ngôori, a man detailed by Kasongo to act as a sort of dragoman to Jumah Merikani, and after three days arrived at Kilemba, where I was most warmly and hospitably welcomed by Jumah Merikani. I found

that Kasongo was away on an excursion to collect tribute and punish those who had neglected to pay it; in this he was assisted by many people, both from the Arab and Portuguese caravans, who were rewarded by being allowed to make slaves of all captives they could obtain.

The day after my arrival, Kendélé, as the Portuguese trader was called by the natives, came over from his camp about a mile distant to call on me. He said he was soon going west, but that he must first collect his various detached parties, which would occupy about a month, and that directly that was done he would make his adieus to Kasongo and start. I asked if he would require any payment, and he said that although he was black, he was all the same as a white man, and never told lies, and he would trust to my generosity. His proper name turned out to be José Antonio Alviz, and he was a native of Dondo on the Kwanza. He eventually proved to be trading from Bihé, though at first he said that he came from Cassanci,* owing to his having heard that I wanted to go there.

As Senhor Alviz said he was not going to start for a month, I determined to employ the time in visiting Lake Mohrya, on which I heard there were regular lake dwellings. I found it difficult to make up my party, as in consequence of my wanting to take only half-a-dozen men with me, all tried to shirk going. At last I made my start on the 30th of October, 1874, and, after marching through a pretty, though half-deserted country, arrived at the lake. This was a mere pond compared to the giant lakes of Africa, and its visible surface was much diminished by floating vegetation; but in the clear waters were the regular lake dwellings.

They were clustered together in villages; each house stood alone, though in many cases only separated a few yards from its neighbour; the intermediate space being filled up by ruined piles of former houses.

In vain did I try to obtain canoes to visit these curious dwellings, analogous to those so vividly revived by Sir Arthur Helps in "Realmah," a book which brought to the notice of modern civilised nations a fair idea of one of the phases through which their ancestors have passed. One of the chief causes of my failure was the presence of a guide furnished by Fumé a Kenna (the wife

* "Cassanci" and "Cassangé" are the Portuguese ways of spelling the name; it would be more correct to spell it Kasanji, but to avoid confusion I will use in this paper "Cassanci."

of Kasongo), who, exercising his prerogative as one of the royal household, used to rob all the country folks he came across. I often remonstrated with him on this practice, and tried to bribe him to refrain, but he said it was his right granted him by his king, and that nothing should prevent his exercising it.

The dwellers in the lake villages were afraid to let me approach them in his company, for fear of similar outrage; but at the same time I should not have been able to have seen the lake at all unless I had been accompanied by a court guide. I contented myself reluctantly with getting as near as I could to one of the villages by walking on the floating vegetation, and taking a good look at it and its inhabitants, and their proceedings through my opera glasses. In addition to this I made a rough sketch of the lake, and one on a larger scale of a single hut. The reason of these lake-dwellers thus defying the power of their suzerain, was that in their insular habitations they considered themselves perfectly free from the danger of the punishments inflicted by him on others of his recalcitrant subjects.

I returned to Kilemba in two days, the second march being over five hours through drenching rain without a check or halt of any kind, and I much astonished my kind friend Jumah Merikani by having got over the distance in so short a time.

Kasongo, I learned, was still absent, and his whereabouts, and time of returning, were very dubious. Kendélé still said he would remain a month, and I therefore endeavoured to get guides from Fumé a Kenna to show me the way to Lake Kassali or Ki Konja,* through which the Lualaba was said to flow. Fumé a Kenna kept on promising to give me men to take me to Kikonja, and two or three times sent one, only, however, to be re-called an hour or two after he had made his appearance. At last, being tired of dawdling, I set out for Kikonja with four or five of Jumah Merikani's men, who had been there to show the way. We arrived at Kowédi, a village about eight miles from the lake, but between us and it flowed the Lovoi, which the chief of Kowédi said he had orders from Kasongo to prevent my crossing. As I

heard Kasongo was only two marches off, I sent men to find him and ask permission to cross the Lovoi. Unfortunately, before they could reach his camp, he had set off on one of his erratic cruises, and they returned without having seen him. The reason for the orders to prevent my crossing the Lovoi was that Daiyi, a brother of Kasongo, who laid claim to the kingdom and had a considerable number of followers, was residing with the chief of the lake. I sent men back to Kilemba to ask Fumé a Kenna for guides, and also managed to send men across to Kikonja to try to get the chief there (whose name was also Kikonja) to use his influence with the chief of Kowédi to allow me to cross the Lovoi. This latter brought me back reliable reports about the lake, and also the news that Kikonja wanted to see me, but that the chief of Kowédi refused to allow me to go on till he had orders from Kasongo to that effect. One day, notwithstanding all these obstacles, I managed to get a distant view of the lake. After waiting for over three weeks for the guides from Fumé a Kenna to come, I determined to return to Kilemba, more especially as I had been very ill with dysentery, and thought that milk, with which I used to be liberally supplied by Jumah Merikani, who kept a large flock of goats, would do me more good than any medicine.

The same day that I arrived at Kilemba, I met guides coming from Fumé a Kenna, who evidently wished *apparently* to help me, whilst in *reality* she, in consequence of orders from Kasongo, was doing her best to thwart me.

On my arrival I found that during my absence Kasongo had returned and again started off, leaving orders that I was on no account to be allowed to depart without seeing him, and also desiring that notice of my arrival should be sent to him at once. Kendélé had all his ivory lashed and packed, and said that when Kasongo came back he would require a few days to say good-bye to him, and that after that there was nothing more to detain us, and that we should get to Benguella, which I now learnt was his destination, in about seventy days. Six weeks elapsed (a dreary time) before Kasongo turned up, though I sent many messengers to say I was waiting at Kilemba and wanted to get away. The only thing I had to help the time along, was the discovery that my people had stolen nearly all my beads in the vain hope of forcing me to retrace my steps. Jumah Merikani, how-

* In Livingstone's last journals, p. 335, vol. i., he mentions Eyelo ibn Habib, saying that Lufira and Lualaba fell into Lake Kikonza (evidently into my Kikonja, which I also heard received the Lufira). In one of his letters he also mentions the Lualaba flowing from a lake N.N.E. into Chowambe, which by many was supposed to be the Mwuta Nzige (Albert Nyanza), but which, I think, may safely be identified with Kowamba, a small lake lying N.N.E. from east end of Kikonja, and into which Lualaba falls.

ever, stood my friend and supplied me with stores which I expected would be sufficient to last to Benguela, or at all events to Bihé, where I should be able to get enough to reach the coast. Kasongo's advent was, however, by no means the signal for our immediate departure, for he had to swagger and talk big about his greatness, and hold meetings to impress me suitably. One day he held a very large levée, at which all the neighbouring chiefs were assembled to do him homage, and where he made a very long speech, in which he asserted that he was the greatest man in all the world, and that the only one that could at all compare with him was Mata Yafa, his friend and relation, who is chief of Ulûnda.

After this display I thought we were right for the road, but Kendélé first wanted an agreement made out as to what he was to receive for the work he was to do, and when this was arranged he began to give himself airs, and to find excuses for delaying our start. First, I heard that he was going to build a house for Kasongo, and when I remonstrated, he said that it was false, but a few days afterwards he owned that the report was true, but that it would not detain us more than a few days, as the house to be built was precisely similar to that in which he was living, and which he declared was finished in four days.

We left Kilemba for Totela, where the house was to be built, on the 25th of February, 1875, and made a very dawdling march of four days, besides halting two or three in order to give Kendélé an opportunity of stealing food, as he issued no rations whatever to any one. In fact, even he himself and his women lived on a portion of the plunder brought in by his people, and which he used to extort from them as leader of the caravan. Besides his own carriers, there were also independent bands of people of Bihé and Lovalé who ravaged the country in all directions, and were under no restraint whatever. Kasongo, instead of checking these ruffians, gave them free leave to do as they liked (he even encouraged them in their atrocities) if in return they would go with him when he went to punish any of his villages, either for not paying tribute at all or whose tribute he thought insufficient. On these occasions all the adult males who could not escape were shot down like dogs, and the women and children seized as slaves.

The house was built almost entirely by my men, and under my superintendence, or it would never have been finished at all, but

even when it was completed there were still more delays. A party of Kendélé's men had gone to Kanyoka, a place on the boundary between Kasongo's and Mata Yafa's kingdoms, some time before I arrived at Kilemba, and as nothing had been heard of them since, Kendélé refused to start without them, and we had to wait until men had gone and brought them back. They did not return until the 27th of May, and in the mean time Coimbra (Kendélé's second man) was off on a slave-hunting expedition, much to my disgust and annoyance.

On the 28th my camp was burnt down by the carelessness of one of my men, and I very nearly lost journals and all I possessed; but, owing to the coolness and pluck of my servant Jumah, everything important inside the tent was saved, though the tent itself was burnt.

A few days afterwards we started for Lunga Mandis, a sub-chief of Kasongo's, ten days (short marches) south by west of us. Here we were detained nearly three weeks waiting for the wretch Coimbra, and only got off at last by dint of constant growls and remonstrances. After the first march we were detained a day by slaves running away and their owners going to look for them. The next morning, just as we were packed up and ready for the road; news came that Coimbra would arrive in the course of the day, and Kendélé said we must wait for him.

Sure enough, in the course of the day Coimbra came in, driving a string of fifty or sixty wretched women tied together with knotted cords, and all heavily laden with plunder, and several with babies in their arms. These poor creatures represented twenty or thirty villages burnt down, and I am sure a population of two hundred and fifty to three hundred people utterly destroyed. About three or four hundred more may have escaped to other villages. There were now in the caravan upwards of fifteen hundred slaves, all of them obtained by plunder and murder from a country which has only lately been tapped to supply slaves for export.

The rest of my journey to the West Coast I will describe in the next number.

[The Editor has much pleasure in publishing the following explanation sent him by Lieutenant Cameron, in reference to some remarks made by him at the Colonial Institute. The Editor hopes that there are few Missionary Societies in this country so foolish as to employ agents whose qualifications have

not been thoroughly tested, or who, when actually engaged, are permitted to labour without supervision. He is glad not only to endorse what Lieutenant Cameron says respecting the Universities' mission, but to express his belief that similar confidence may be placed in the well-equipped Scotch mission recently sent to Livingstonia.—ED. G. W.]

It has been supposed, from what I said on the evening I had the honour to address the members of the Colonial Institute, that I intended to disparage the work of missionaries, or to endeavour to dissuade men from following that noblest of callings. I am sorry to have been so misunderstood. Nothing, according to my ideas, can be grander than the man who devotes his life, his talents, and his energies to missionary labours. But what I wanted to urge was, that proper care should be taken in the selection of missionaries.

In ordinary affairs of life every candidate for employment has his qualifications for the post he seeks carefully considered and weighed by able men, and has during his labours to submit to close and constant supervision.

Missionaries, on the contrary, are frequently taken on their own recommendation, and are often subject to no supervision whatever.

With regard to what I said about the necessity that missionaries should be gentlemen, I maintain I am in the right. Who could be better fitted for this glorious work than such men as Bishops Mackenzie, Patteson, Selwyn, Heber, and Crowther, and I would add Drs. Moffat and Livingstone, who were one and all Christian gentlemen in the truest sense of the word?

Real work is, I believe, being done by the Universities' mission, so ably conducted by the learned Bishop Steere.

BOOKING THROUGH.

IF the reader takes up a railway map of the United Kingdom, he will at once see that it is hardly possible to travel a long distance without passing over several lines of railway, the property of different companies. In going from London to Inverness, for example, the London and North-Western, the Caledonian, and Highland lines are traversed. Or, if the East-Coast route be taken, then the Great Northern, the North-Eastern, the North British, the Caledonian and Highland railways are used. In going from Darlington to Cardiff the North-Eastern, the Lancashire and Yorkshire, the London and North-Western, and the Rhymney Railways are passed over; while between Lynn and Inverness there lie no fewer than six different lines. Has it ever struck the reader to inquire how it comes that, in spite of these facts, he can book through from London to Inverness, or from Lynn to Stirling, or even to Dingwall, without the trouble of taking out fresh tickets at the junctions? Imagine the wholly different aspect things would wear for the railway-travelling public, if each company only booked over its own line; the constant worry of changing, the bustle of re-booking, the hunting up of luggage, and the conveying of it from station to station, it may be at considerable distance from each other; for unfriendly railway companies might not of

themselves court close proximity in their termini. It is evident on the face of it that a stop would at once be put to extended excursion tickets, to circular tours, and to all that elaborate system of easy holiday travelling which is, year by year, becoming more and more a necessity of our modern life at high-pressure. And bad as it would certainly be for passengers, it would be yet worse for goods traffic. Indeed, it is difficult to see how, under such conditions as we have supposed, with constant unloading from waggon to waggon and cart to cart, the millions of tons of goods of all kinds could ever get to their journeys' end. Certainly for the class of goods coming under the head of "perishable" there would not be much chance. Yet such would inevitably be the position, both for goods and passengers, were there not in existence an institution, supported by the railway companies, yet in a sense apart from them, which unites them as though into one body, notwithstanding divergent interests at many points, at once for their own ultimate benefit and for the unspeakable comfort of the community. Seeing that all are so largely indebted to a machinery which, on the whole, is so little known, we cannot but believe that our sketch of this system will be read with interest by not a few.

In Seymour Street, Euston Square, London,

there is a compact-looking, but somewhat dingy building, with another "fresh from the mason's hand" close to it, known as the Railway Clearing House. It is in this establishment that the magic work of booking through is really accomplished. Here are a staff of some fourteen hundred clerks, who, under a secretary and four chief clerks, may be said to supervise and adjust all the through railway traffic of the kingdom, there being but a few miles of straggling local railways which are not in connection with it. In addition to this staff at the head office, there are about four hundred agents or "number-takers" who are placed at the various junctions where the lines meet. The duty of these agents is to take note, by name and number, of every carriage, waggon, and cover-sheet that may pass on to a foreign company's line, and the date of such transfer. Accounts are regularly forwarded by them to the Railway Clearing House, and these reports, together with passenger tickets and returns regularly forwarded from the stations themselves, furnish the materials from which the staff of the Clearing House busily work out their results day by day. The first process to which this chaotic mass of documents is submitted is that of "sorting." For this a detachment of messengers is retained, who refer each paper to its proper chest, from which they are conveyed by boys to the various departments, of which there are four, with many divisions.

The first and by far the largest department is that of *Merchandise*, which may be said to comprise the half of the whole work of the House. This takes cognisance of all traffic distinct from that of passenger trains; and the main features of the process are easily indicated. Each station makes return of all its outward traffic wholly distinct from that of its inward traffic; and the first piece of work is to check the outward returns of the forwarding station with the inward returns of the receiving station. In the case of any discrepancy, of course, it is necessary that the stations should be corresponded with, and the returns rectified; and not seldom much trouble is involved in this. If, however, the returns are found to correspond exactly, the next step is to make due allocation to each company. But before this is finally done, it is necessary to settle the matter of "terminals," that is, the allotment of allowances for the Despatching and the Receiving Company, including collection, cartage, loading, unloading, delivery, &c. This having been deducted from the total, each of

the companies concerned is then credited in exact proportion to the mileage of their lines over which the goods have been conveyed. This would seem to be on the whole a very simple matter; but it is complicated by many special arrangements; and in not a few cases the routes over which the commodities may have travelled cannot be learned from the station returns. In this event their route must be traced out by reference to the numbers of the waggons in which they were sent. This is ascertained from the returns made by the number-takers at the various junctions. Besides, there are different working arrangements. In some cases the goods are hauled and in others not hauled by companies over whose lines other companies have running powers. Between Brighton and Aberdeen, for example, a waggon must pass over a portion of the London, Chatham, and Dover and Metropolitan lines, from Battersea to Ludgate, and from Ludgate to King's Cross; so that, while the Great Northern must be credited with the hauling over these lines, the companies themselves must be credited with the due amount for the wear and tear of their metals. As the last outcome of the work in this department, the accounts of the companies are so made up as to show at once how much money is due to or from them, both inwards and outwards, at the end of the month, and how much each company has to receive from each of its station agents. In the event of loss, say, by the failure of a trader, the same principle is applied. The Clearing House allocates to each of the companies concerned its proper proportion, which, as in the other case, is implicitly accepted by them. So, too, in any dispute that may arise. The Clearing House acts the part of a neutral, dividing the undisputed portion of the receipts, and holding the rest in trust till the parties agree.

Broadly taken, we have thus the result of the Clearing House work applied to merchandise, that any station on any railway can invoice and forward goods to any other station in the country to which through rates have been agreed, and the companies need not in the least trouble themselves over the proportions of the rates charged, assured as they are that this will be accomplished for them. We have in a very complete account published in the *Railway Flysheet* the following very good illustration of the exactitude of the process of tracing out details and balancing accounts:—

"When a city man returning to his suburban retreat passes a goods train composed of Great

Northern waggons (carrying goods from various towns in the north of England), hauled by a North Western Company's engine, on the North London Company's railway (if it ever strikes him to think of the matter at all), he must imagine that it is utterly impossible that each company concerned should ever get its correct proportion of the receipts from the carriage of the miscellaneous consignments of goods which it contains, and yet it is a fact, that the Clearing House accounts are made up with such minuteness of detail, and facility of reference, that any error, however small the amount, can be easily pointed out and duly remedied."

The next department takes the name of *Coaching*, and is concerned with everything carried by through passenger trains, animate and inanimate. It is divided into two sections—parcels and passengers. Of the work of each we shall give a general outline.

(1) *Parcels*.—It is clear that as the bulk of the parcels so carried are comparatively small, no trace can be kept of them by the numbers on the vehicles they were conveyed in, as in the case of goods. It is therefore necessary to have a regular system of way-bills, with an efficient check at each junction, and this has been found to a large extent in perforating stamps. If the parcels and the way-bills have kept together, all is easy; but if they should chance to get separated, as in busy times will not unfrequently occur through the haste or the ignorance of porters, a great deal of work is imposed on the Clearing House in tracing out and identifying them. Here, too, a certain amount is allowed for collection and delivery, and the remainder equally divided according to the mileage. We should mention, however, that for parcels the terminal allowances, for a reason easily guessed, are at a fixed rate per parcel; the receiving company getting double the allowance of the forwarding company. Accounts are made up in a manner somewhat similar to that of the merchandise department, and with the same exactitude, only that the actual division of receipts is here half-yearly instead of monthly. Notwithstanding their smaller scale, we can well believe that the compilation of these accounts is a yet more complex and tedious matter than that of the goods' accounts.

(2) *Passengers*.—Our readers will not have failed to observe that on "through tickets" there are not only a very plentiful amount of numberings, but that at each junction a process of perforating is carried on, which toward the end does not seem to improve the symmetry of the valued bit of card-board. These marks each mean something important to a Clearing-House clerk. The tickets run in regular order of numbers; so

that the first thing done in the Clearing House, after all the tickets have been arranged by some twenty-five boys constantly employed at this task, is to ascertain that the commencing and the closing numbers issued for the month by the ticket-clerk exactly agree. The perforated marks again show to the experienced eye at a glance whether or not the proper route, or what route has been taken. The ticket-clerk has forwarded to the Clearing House the halves of the children's tickets that were reserved by him at the time of issue, and these having been allowed for, as well as any omission of issue that may have been detected, the preparation of the companies' credits is begun. These show for each company interested full particulars of the progressive numbers, the non-issued and children's tickets, the number of tickets sold, and the proportions of the fares due to the company for whom the account is prepared; each return, as entered, has to be balanced so as to ensure the total of the credits in the various accounts agreeing with the total station debits. A similar course has to be adopted with other station returns, and it consequently results that a company is a debtor for the fares it has received on account of other companies, and creditor in respect of the fares other companies have collected on its behalf. A complete check, as will be seen, is thus not only kept up as between the various companies, but as between them and their various employés.

The next is the *Mileage* department. Though the amount of money cleared by it is small compared with that of the other departments, it is, in some respects, the most important of all. It really constitutes the foundation of a great part of the Clearing House system. It deals with the rolling-stocks of the various companies, carefully follows each item, and ensures speedy return. In the early days of railways, constant difficulties arose about carriages and waggons. Many of them were kept possession of for weeks and months, and were greatly injured; some, indeed, were never traced, and were entirely lost to their owners. It is here that the main purpose of the number-takers at the various junctions comes into full view. Every carriage, waggon, and sheet passes under their scrutiny, is made careful note of, and followed in its course from the beginning of its journey to the end; the one number-taker checking and supplementing the other. On their reports the railway Clear-

ing House credits the owning company of each carriage or waggon with an agreed rate per mile the moment it passes to another line. The London and North-Western, for example, send their through traffic over the Caledonian line, and the mileage charged for their "foreign carriages," as they are called, is settled at three farthings per mile. At the end of the month the bill for mileage against the North-Western will amount, say to £8,000; but, on the other hand, there is a *per contra* in the form of mileage against the Caledonian, which has also been sending carriages and passengers over the London and North-Western, and both accounts go to the Clearing House. Taken together, they may amount to about £20,000, yet the set-off of the one against the other may be no more than £10 or £20. Again, should the stipulated time have been exceeded before the vehicle is returned to the owners, a demurrage charge per day is made. The rates of mileage and demurrage are of course to compensate the owners for the wear and tear of their stock while in the hands of others. Thus, if a first-class carriage be sent from Euston to Edinburgh, the Scotch Railway is bound to return it to Euston at once, whether full or empty. If it is not sent back *ros.* a day is charged against the company retaining it, and so on down to second and third-class carriages and to waggons, which are only charged 3s. a day. The mileage charges are made quarterly. On one side of each balance sheet is shown the charges due from all companies, to the owners of one stock, on the other the earnings of all stocks on the line of one company. And, as we have said, the difference is then either received or paid by the Clearing House.

The number of miles charged through the Mileage Department per annum is about four hundred and thirty-nine millions; the number of days upon which demurrage is charged is upwards of one million, involving yearly, nearly twenty-nine millions of entries.

A most important department of the work of the Clearing House is that connected with *Lost Luggage*. Every station is required to report at once to the Clearing House, with exact details, the presence of any unclaimed luggage, and all inquiries made by passengers for missing luggage are at once forwarded to it from the various railway offices. The descriptions are carefully compared, and the finding station instructed how to dispose of the property; the Clearing House again being advised that it has been duly received at the station where it should

be delivered to its owner. The value of this department to the public can hardly be overrated. Officials are fallible, and mistakes are most likely when traffic is greatest; and the companies have shown wisdom in thus providing a central department where the matter can be thoroughly and expeditiously dealt with. Scarce anything is more distressing than the loss of personal luggage; but those who happen to be unfortunate in this regard may take heart, for few absolute losses are experienced—so thorough is the Clearing House system. Over one hundred and fifty thousand packages are annually restored to their owners—many of them doubtless containing valuable articles. Being, however, nearly all locked portmanteaus, dressing-bags, carpet-bags, and trunks, it is impossible to estimate their worth exactly, but half a million sterling annually would be quite within the mark.

This great establishment is managed by a committee appointed from the directorate of the different railways. The chairman is Lord Wolverton, whose father, Mr. Carr Glyn, was one of its first supporters, and did much to reconcile the railway companies to it, while as yet they were slow to see its merits and its great capacities of growth. The administration is in the hands of Mr. P. W. Dawson, who has been fortunate in seeing it rapidly "grow from more to more" under his hands in recent years. In 1842, when it was started by Mr. Kenneth Morison, in Drummond Street, it had only five clerks; in 1866 it had upwards of four hundred; to-day, as we have seen, it has over fourteen hundred. Three years after its institution, there were only sixteen companies on its books. Ten years later there were seventy-three. Now, as we have said, there are only one or two small unimportant lines not connected with it, while it embraces many lines of steam-boats. The total extent of lines under its jurisdiction in December, 1874, was 15,400 miles.

In addition to the fixed conferences of the delegates from the railway directorates, regular meetings take place of the managers of the various lines to arrange any differences that may arise with respect to particular points; and special meetings are called in the event of any question coming forward of immediate and pressing importance. For all these arrangements, by which a settlement is ensured without delay, and without such disturbance of friendly relations as might soon come to affect the public comfort, we are indebted to the Railway Clearing

House, which prepared the way for this amicable relationship, and has managed to maintain it.

"The plan of the Clearing House," says the *Times*, "is simple in the extreme. It may be said to represent the combined interest of the railway companies united in a voluntary association under the provisions of an Act of Parliament. No company is obliged to join it unless it chooses, and any company can withdraw from its association at a brief notice. Practically, however, this permission to withdraw is of small avail, for no company can really conduct its business without the assistance of the Clearing House. . . . What has always been desired by theorists—namely, one vast amalgamated, general railway system—has been virtually brought about by the labours of this Clearing House, with this difference, that as each line has its representative on the Clearing House committee, each member looks after the interests of the line from which he is accredited with a vigilance which no merely central board could ever do. In fact, a central board would be nothing but a gigantic monopoly full of prejudice and hostilities, and without much motive to either economy or efficiency. In such a case the division of labour became the only element of success. The lines being distributed among a number of proprietaries, the energy of different boards of directors, the watchfulness of the various bodies of shareholders, and the wholesome emulation between the companies are all brought to bear through the Clearing House on the successful working of the lines, and the public derive the benefit of a through system of booking as if there were only one railway company and one set of shareholders throughout the kingdom. . . . Our whole railway system would be as nothing without the Clearing House, which affords another illustration of the great truth that the British railway public is the best served railway public in the world, and on the whole, the least grateful."

The much abused railway director, however, is in this seen to be wiser in his generation than he generally gets credit for. For here he has his disputes settled by committees of delegates who are chosen for the purpose, and who determine which company is in fault for damage, claims for delays, &c., &c. Heavy law expenses are thus saved, and those concerned have the satisfaction of knowing that whoever loses, railway companies and not lawyers pocket the cash. This, we are inclined to think, is a great feature

in the usefulness of the Railway Clearing House.

In connection with the establishment there are various benevolent and other societies, which show the warm interest taken by the heads in the moral and intellectual condition of those under them, as many details in the arrangements of the rooms decisively show that health and physical comfort have likewise been well considered. The most prominent of these are the Contingent and the Superannuation Funds, both organized on an admirable basis. The latter, which is open to all railway companies, parties to the Clearing House, was established mainly through the exertions of Mr. Dawson, after similar schemes had repeatedly fallen aside. The subscription is two and a-half per cent. upon the salary of the subscriber, his company or committee subscribing the same amount. There are about two thousand members, and an accumulated fund of about £20,000, five railway companies having joined. We were much pleased also to see that, through the liberality of the directors, the staff of the Clearing House are in possession of an admirable library of some eight thousand volumes, to which a permanent librarian is attached, also of a reading-room, well supplied with newspapers and magazines, where lectures and entertainments of varied character are given during the winter months. They are also provided with handsome kitchen, luncheon bar, and dining-hall, in which cheap but substantial dinners, luncheons, teas, &c., are provided daily for upwards of a thousand clerks—an arrangement which doubtless does something to maintain the admirable sanitary condition of the House. There is also a co-operative store, which, like the dining-hall, is managed by a committee of the clerks. We were much indebted to Mr. Rider for his courtesy in showing us over the whole place, and clearly and exhaustively answering the many questions we were tempted to ask him.

H. A. PAGE.

NATIONAL HEALTH.

III.—HEALTH AND OCCUPATION.

THAT man was born to live by the sweat of his brow is a figure of speech, the truthfulness of which remains as perfect now as on the day when it was first spoken. Who tries to break that law wrestles with all the forces of nature, and is brought foolishly

XVII—40

prostrate. "I will lay up," says the foolish man, "so much wealth out of the present that my children and children's children shall never require to work. They, at all events, shall not be sons and daughters of toil." Under the influence of this sentiment some

men work in such disobedience to natural rule, that they themselves die in the middle stages of their life. They would wonder if they could see the folly of the sacrifice. To work for his own health and means of subsistence ; to work for this from the first working times until the close of life ; to work for those who are young and dependent upon him until they too can work as he has done for health and life ; to work a little in advance for those of his who may continue to demand from their own weakness more care and aid,—these are true duties belonging to every man. Pressed far beyond this bound, the effort becomes unjust, and injustice in natural things has its certain rectification. The law is absolute. Man shall live by the sweat of his brow.

To the children of the earth, the earth is presented as a garden, and the primitive ideal of the life that is, as a life planted in a garden, is the simplest and truest. "Here," nature tells her children, "here is the great sphere for your labour. It is your property to discover and to conquer to its utmost bounds of sea and land. Make it, if you will, a garden of richness, and pleasure, and delight, for it is yours also to enjoy. Some of you in this sphere must overlook and govern ; some must teach the ignorant ; some must tend the feeble and sick ; some must make and invent new instruments for the handicrafts, and find new modes of transit from place to place ; some must till ; some hew their way into the earth, and find new treasures ; some must recreate the created, and bring forth forms of natural beauty on stone or canvas that shall delight the eye and cheer the heart ; some must be the treasure-hunters and scientific re-distributors of the wealth which the toilers have extracted from the earth ; some must be scribes who watch and score the work that is done for other ages to read ; some must sing songs, or tell tales, or bring up to sight the life of the past, for the rest and delectation of the workers of every class ; some must survey the whole field of labour, and teach from the observation those lessons of morality, of health, of goodness which observation makes known as the best lessons for rules of life, of the life of all. But all must work : the whole generation of labourers, be it ever so great, cannot work so as to lessen the labour of its successor. New knowledge, new labour, new responsibility." Still, age on age, there is the garden that must be supervised, weeded, embellished. It dies with its children, it rises again with them. An age may be strained in work to the utmost,

and die at its work, and still the next age must strain and die. The garden itself never rests : in steady revolution, in time and space it knows no rest, and allows none. That cunning old knave of a gardener there, coming out of the dark grotto, who has pillaged the earth unjustly, or has pillaged the wallets of his fellows with such infinite skill that he cannot be punished, he has a store securely hidden, so he thinks, which none but those who are privileged to be directed by the insane scroll which he calls his last will and testament, can find and use. These happy born, will not, like him, have to work in the garden, but will walk about in it buying its pleasures, its health, its slaves. Impossible ! If they be ever so cautious, they cannot battle against the perpetual motion. If they do, they clash and are annihilated. The result is, that out of sense of self-preservation they will fall at last into a gang, and work with the rest. Nay, if the cunning old man uses his hand to perpetuate himself in what he considers immutable materials,—in marble, in stone,—he fails ; for they change also, or are changed. They too die, and are reformed for new work.

In the garden of life there must then be universal work from universal man. Here we start on firm ground. Without work universal there can be no health universal. Here, again, we start on firm ground, and this now is the basis of our argument. We say soundly enough occupation, or work, is necessary for health. The question to be studied is how near in the present stage of the cultivation of the garden of life have we approached to those measurements of labour, and to those natural and necessary industries which are in accord with a life that is healthy and therewith happy.

As in this spirit of inquiry we look at the work that is in progress in the garden, we cannot, I regret to say, be satisfied with the prospect. There are a great many idle clashers there in all ranks, who ought to be at work, but who are making collisions simply with those who are in train. There are a great many who are doomed to work who ought not to be in train, owing to their physical weakness. There are a great many who are in train at work that is too heavy, too long, too laborious. There are a great many who are in train at work which is positively injurious to themselves and others, planting poisonous seeds where only wholesome fruits or flowers should grow. In some sections of the garden of life there are many who stand ready to slay, who are trained to

fight to the death the owners of other sections if a mere quarrel should arise; and there are in certain sections, great hives of workers fabricating the instruments of death for the slayers. Truly, the primitive garden, the Paradise, is not yet regained.

When we come to the scientific consideration of the relation of work to health, we are led, in the first place, to study the relation of work to life. Health is a detail, life a principal. If we can determine, as a preliminary fact, how the years of life of men following different pursuits in some important sections of the garden, are modified by the labour, and if we find there are great variations in this respect, then we are enabled to judge by the relative mortality the leading truths, and by a comparison of value of life to judge also of the value of health in different grades of workers. Afterwards we can enter into detail on the classes, and inquire what in particular classes are the particular variations of health, and how far they depend on the labour of the class.

Up to the present time the information that has been obtained on this subject has been extremely limited. I mean by this accurate information, based on so many carefully recorded observations, that the inferences to be drawn from them may be safely accepted. At last, in this country, under the able designing hand of Dr. William Farr,—whose labours will be better known as time reveals them, and which, indeed, are so great, that time is necessary to unroll them,—at last, under his hand, we have obtained so much information respecting life and occupation in the part of the garden of the world called England, that a good solid basis is laid for the support of the most valuable records of general structure and of detail. We know now, in respect to seventy well-defined sets of workers in the garden, in England, what is the value of the life under each class. We can set class against class, and without any danger, in this instance, of exciting collision or ill-feeling, can compare one class with another.

I propose to take these facts as they have been drawn up for our study. They lie before me in an original table which for a course of lectures recently delivered at the Society of Arts on the subject before us, I was permitted to receive from the Registrar-General's office, and which will, I hope, be easily construed from the history of it I am about to write.

My authority sets forth by extracting from his returns of mortality, which now are

sufficiently perfect for the purpose, the annual death-rate in England and Wales of males aged fifteen years and upwards, who were engaged in seventy occupations during the three years 1861, 1862, and 1871. He shows (a) the years of life belonging to these different occupations in 1861, 1862, 1871. (b) The deaths in each class that were actually recorded in the said three years. (c) The deaths that would have occurred according to a standard rate of deaths derived from the mean rate of all the deaths. (d) The names of each of the seventy occupations. (e) The deaths of these males aged fifteen and upwards engaged in the seventy defined occupations in comparison per cent. with the deaths per cent. of males of all the occupations. (f) Lastly, the authority gives the annual death of the males of the seventy occupations per thousand, living at eight groups of ages, from the age of fifteen years to that of seventy-five and upwards.

It will be seen by this outline how comprehensively the information supplied is laid out. I admit that in course of time the information will be enlarged upon, and, in some details, perhaps, modified. Indeed, it is now put forward with these explanations on the face of it. But, approximately, it is so near to the truth, we need not cavil at details: it is the best knowledge yet acquired on the subject upon which it treats, it has been collected with infinite labour, and it calls for grateful acknowledgment.

As the facts which have accumulated in the manner above described are surveyed, the most striking of all is the disparity in value of life between the representatives of different occupations. Taking one hundred as the standard of deaths of all who are employed in all the occupations named, *i.e.* as the mean of the whole number of deaths equally divided, we discover that some of the classes of workers in the English garden die at the rate of sixty-three as compared with the standard, while others die at the rate of one hundred and forty-three. These are the extremes of the scale, the top and bottom, taking the class of life that presents the highest vitality at the top, and the class that presents the lowest vitality at the bottom. Between these come varied degrees of vitality amongst the different classes, from the highest to the lowest degree, in forty-five gradations.

The workers who stand at the head of vitality are the barristers. The deaths recorded in their class in the three years from which the observation is derived, were one hundred and thirty-five; the deaths

that would have occurred amongst them in the same period if they had been in the mean rule of deaths, that is to say if they shared the common rate of deaths with all the others, would have been two hundred and fifteen. The rate of their deaths was sixty-three compared by the standard.

The next in order on the list of those who present a high vitality is the class composed of the clergy of the Established Church of England. The deaths in this class were actually one thousand one hundred and five in the three years: the deaths that would have occurred amongst them according to the standard rate, would have been one thousand five hundred and forty-seven. The rate of their deaths compared with the total of all the deaths of all the classes was seventy-one to a hundred. The good health and longevity of the clergy has long been observed, both in England and in Switzerland, but that it was so superior in its totality had certainly not before been surmised.

Under the head of Protestant ministers are placed all the other ministers of England and Wales who, preaching Protestant principles, are not included under the title of ministers of the Established Church. These are a very slight degree lower in the vital scale: they rank as seventy-five by the standard.

Next in order to these ministers come the class of men in trade known as grocers. These yielded an actual mortality in the three years of three thousand one hundred and sixty. By the mean standard they would have yielded four thousand one hundred and seventy-three. The rate of their mortality compared with the standard of the hundred was seventy-six.

In another very large group of traders who combine grocers' business with other forms of shop-keeping the same favourable condition did not precisely obtain, but still it was not greatly altered. The deaths were at the rate of seventy-seven. After the grocers come a small class of a very different order, a class not destined probably to remain always on the books of the statistician. This class is made up of gamekeepers. The rate of their mortality was eighty.

The large class of superintendent tillers of the soil known as farmers and graziers are the next favoured. Their mortality is eighty-five as compared with the standard of a hundred. They are followed by the civil engineers eighty-six, booksellers and publishers eighty-seven, and wheelwrights eighty-

eight. Next to the wheelwrights are the silk manufacturers who rate at eighty-nine, and who are specially worthy of notice because they contrast, as we shall see in due time, most favourably by the side of some other workers in textile manufactures.

Labourers, including the whole class of agricultural workers, and carpenters and joiners succeed in order: they each present a mortality of ninety-one, and compare a degree favourably with the little class of men who are known as bankers, and whose rate of death is ninety-two. Next to them are the whole class of male domestic servants, who yield a rate of ninety-three deaths in proportion to the hundred.

Sawyers, a rather large class of working men, present a little higher mortality, ninety-five. Brass manufacturers and braziers present ninety-six as their rate, and paper manufacturers and musical instrument makers present the same, viz., ninety-six. Gunsmiths and blacksmiths rise to ninety-seven. Shoemakers, iron and steel manufacturers, and tanners and curriers rise to ninety-eight. Bakers complete the list of those who stand on the favourable side of the standard in the scale. They exhibit a mortality of ninety-nine compared with the standard of one hundred as the mean.

We have now descended step by step along the scale until we have arrived at the classes of men who out of the seventy occupations under our cognizance yield the average mortality. These are two in number. They are engine and machine makers, and wool and worsted manufacturers.

To place the computations in perfect simplicity of statement, we may rest here, and, in a line, run back the order from the standard to the lowest degree of mortality. It will run then in this way.—To the hundred that would have died by an equality of deaths throughout the whole of the seventy classes of workers, there died ninety-nine bakers; ninety-eight tanners and curriers, iron and steel manufacturers, and shoemakers; ninety-seven blacksmiths and gunsmiths; ninety-six musical instrument makers, paper manufacturers, brass manufacturers and braziers; ninety-five sawyers; ninety-three domestic servants; ninety-two bankers; ninety-one carpenters, joiners, and labourers; eighty-nine silk manufacturers; eighty-eight wheelwrights; eighty-seven booksellers and publishers; eighty-six civil engineers; eighty-five farmers and graziers; eighty gamekeepers; seventy-seven grocers and shopkeepers; seventy-six grocers; seventy-five Protestant

ministers; seventy-one clergymen of the Established Church; and, sixty-three gentlemen of the long robe—barristers.

As we resume our narrative and proceed on our way the picture becomes sadder. We leave the standard of a hundred in which engine and machine makers, and wool and worsted makers were enrolled, to see before us a long list of forty-three classes in whom the rate of vitality is lower and the rate of mortality higher than the standard. At the first the difference is very small, but it falls to a figure a little more important than the figure on the other or favourable side. The classes which depart first from the standard in the downward direction are iron, copper, tin, and lead manufacturers. They rank as a hundred and one, and in this respect stand side by side with bakers and confectioners. The schoolmasters and solicitors come next at one hundred and two. After these follow the millers, and, side by side with them in respect to rate of mortality, the Roman Catholic priests. These both have a mortality of one hundred and three compared by the standard. The comparison is very strange in regard to the priest of the Roman Catholic Church when it is made with that of the ministers of the Church of England or with Protestant ministers. Watchmakers come in order after the priest and miller, they rank as one hundred and four; and one step below them are the tobacco manufacturers, who rate at one hundred and five.

We reach at this point another representative class of the strictly professional order, in the men belonging to the science and art of physic. They, one would think, living only to learn the laws of health and of life, might surely be on a level with the other professions, and might rank above such hardly conducted lives as those of the baker, blacksmith, sawyer, domestic servant, or farm labourer. It is not so: these men who labour to save life stand six degrees down in the scale below the standard, thirty-five degrees below the most favoured class of all, the barristers, thirty-four below the clergy of the Established Church, and three below the priests of the Roman Catholic Church. They rate as one hundred and six, and by their side are the ship-builders, who yield the same figure.

Messengers and porters, coachmakers, and ropemakers are three classes which lie together and next in order: they rank as one hundred and seven.

The class of shopkeepers known as drapers

are immediately lower on the list; they rank as one hundred and eight. It is of importance, for reasons I shall ultimately have to offer, to compare these shopkeepers with the grocers, between whom and themselves there is so wide a difference in the matter of mortality. Next to the drapers come the tailors, who stand at one hundred and nine on the list, and with them the workers in cotton, flax, and silk manufacture, who also stand at one hundred and nine. Respecting this last-named group an error of classification has crept into the account, which it will be well to avoid in future tables. The wool and worsted manufacturers have already been estimated in previous and distinct classes, and have been found to be favourably placed. They are here mixed with the cotton and flax workers, probably because in the cotton and flax manufacturers, from which the returns are obtained, there are some wool and silk workers also; but these, by being blended with the others, vitiate the calculation, because they lighten the mortality. However, they are so grouped, and we must take them with this correction, in the order in which they are placed, viz., as rating at one hundred and nine.

The two groups which succeed are one degree lower in the scale, one hundred and ten. These are chemists and druggists, and commercial travellers, and following them a degree lower still, viz., one hundred and eleven, are the insurance service and commercial clerks, and butchers. Carvers and gilders rank at a hundred and twelve, farriers at a hundred and thirteen, and miners, cotton and flax manufacturers (taken together,) and printers, at a hundred and fifteen; bookbinders rate at a hundred and sixteen, glass manufacturers and fishmongers at a hundred and nineteen, and plumbers and painters at a hundred and twenty.

Fourteen occupations remain on the list, which are remarkable, in that they present the highest mortalities. They begin with railway engine-drivers, officers, and servants, tool, file, and saw makers, and harbour and dock labourers, all of which classes have a mortality of one hundred and twenty-one. Hatters, coppersmiths, and needle manufacturers are still more unfavourably placed, viz., at a hundred and twenty-three; manufacturing chemists, and dye and colour manufacturers run down a degree further, viz., to a hundred and twenty-four; hairdressers sink to a hundred and twenty-seven; bargemen to a hundred and twenty-nine, and carmen, carriers, and draymen, together with

horse-keepers and grooms, to a hundred and thirty-one.

The last three classes on the list are of all the most exceptional. They are (*a*) inn and hotel keepers, licensed victuallers, or publicans (*b*), earthenware manufacturers, and (*c*) coachmen (not domestic) and cabmen. In the first two of these classes, the rate of mortality computed by the standard of one hundred as the mean is one hundred and thirty-eight. In the last-named group the rate is one hundred and forty-three. In other words, for every hundred who die of the representatives of the seventy occupations collectively, there die one hundred and thirty-eight innkeepers and earthenware workers, and one hundred and forty-three cabmen and non-domestic coachmen. The last class die as two to one compared with the clergy of the Established Church.

The three groups of occupations thus signalised stand out in a peculiar light, and offer a strangely striking example of the influence of occupation on health and life. Of the groups themselves, the earthenware manufacturers are a very small group, the total of the deaths recorded against them in the three years being only one thousand, three hundred, and twenty. The coachmen and cabmen, though larger in number, the deaths recorded against them being in the three years two thousand, two hundred, and thirteen, constitute also a comparatively small group. The innkeepers, on the other hand, are a large class, the number of deaths recorded against them for the three years being seven thousand, one hundred, and twenty-seven. We are obliged, therefore, to place this class of workers in the lowest part of the scale of vitality of all the great classes of workers in England and Wales. I may add that if we were to depart from our table and make search among all the minor occupations not included in the seventy that have come under notice, none other could be found that is so disadvantageously placed in relation to value of life.

In the history given in the above passages I have recorded the leading facts bearing on life and occupation in this country in so far as they are officially authenticated. They may be accepted as fair representations of the facts of other countries similarly civilised. In respect to health they show at once that the conditions conducive to good health must indeed be little cared for in a community some classes of which die at the rate of two to one over other classes, and in which those who are now most favourably circumstanced

are actually not themselves up to the natural standard of health and longevity.

The fact of the mere loss of life incident to occupation conveys but a faint idea of the amount of disease that is induced and that leads to the fatal results. Diseases of the lungs, of the heart, of the liver and kidneys, of the brain and other parts of the nervous system, are the chief maladies which bring about the mortality.

As we glance with scientific appreciation over the facts revealed by the history that has been collected, and which is now in our possession, several points stand prominently forward. It will not be lost time to look at one or two of these.

In the first place, we are led to see that the degree of mortality, and therefore, as may be fairly inferred, the degree of ill-health incident to an occupation, is not of necessity connected with the occupation, but is due to some error, which may perhaps be very slight, but which, continuously persisted in, is extremely fatal. Let us glance, for example, at the facts relating to the two trades, the grocer's and the draper's trade. In the work carried out by the labourers in those businesses there cannot be any great difference in the amount of work done nor in the hours of work. Neither can there be any marked or sufficient difference in respect to social advantages. The draper lives as well, is sheltered as well, is or may be as well provided with recreative pleasures as the grocer. They both live in the same communities, exposed to common general influences and to similar anxieties in reference to business affairs. It is not probable, and indeed there is not the slightest reason to assume, that the grocer leads, as a rule, a more temperate or more perfect moral life than the draper. Yet there is this extraordinary difference between them, that by a mean of a hundred as a standard for men belonging to seventy occupations, only seventy-six grocers die to one hundred and eight drapers, and this in males varying in age from fifteen to seventy-five years. When we analyze the phenomena we find that this great difference is produced at definite periods of life; that from fifteen years up to fifty-five the mortality at every period is in excess amongst the drapers. From all these facts we are driven to infer that the evil which is at work is of an acute kind, influencing life in its earlier stages, and if we inquire one step further we discover that the evil lies in diseases affecting the organs of respiration, such as consumption and bronchial phthisis. The explanation is at hand without mystery.

The grocer lives in an open shop with doors rarely closed from morning to night. He deals in goods which give off little dust. He is rapid in his movements, and keeps himself warm by exercise, without the aid of hot stoves and thick raiment. The draper, on the other hand, works in a close atmosphere. His shop-door is on swing hinges, and is commonly blocked up with rolls of woollen or cotton material. His shop is literally stuffed with goods. He is engaged handling goods which fill the air with fluff and dust. He warms up his place with stoves, and from morning to night he keeps up his temperature by artificial means. Under these conditions he becomes first dyspeptic, thin, pale, and anæmic, then consumptive or bronchial, and so he succumbs. The source of evil here is easily traced, and is as easily removable. It belongs to the occupation as a matter of ignorance, not of necessity. It is a type of many similar errors connected with those occupations which yield the highest mortalities.

In other examples the degree of danger connected with the occupation is so closely connected with it that it is inseparable, although at first sight the connection may not seem necessary. One who casually compares the life of the members of the profession of the church with the life of the members of the profession of medicine might think that between the two professions there was little reason for difference of value of life. Yet by the standard we have obtained it follows that for every seventy-one clergymen who die, one hundred and six doctors die. When we come to the cause of this difference, we find that up to thirty-five years of age the deaths are in proportion of two of the doctors to one of the clergy, and that from this period of life through every decade the excess of mortality, in a lesser ratio, continues amongst the *Æsculapian* fraternity. Here the cause of difference lies in the difference of occupation purely. The extreme labour of learning, and the danger of the learning through which the man of physic has to pass before he attains his qualification, are the great causes of his mortality in early life: later, the struggle to live, coupled with the day and night watching; and later still, the increasing watchfulness and anxiety which come with success—these causes all add to the failure of physical health and to the loss of life which succeeds thereupon in this class of workers. In short, whoever enters the profession of medicine must enter it knowing that, compared with the clerical and other

professions, he must accept a shorter lease of life than theirs, in compensation for the longer leases of life it is his high privilege to confer on all his brethren.

There are classes of labourers who, engaged at very laborious work, die in very different proportions because their work is carried on under different conditions. The dock labourer's work is not actually harder than the farm labourer's. Yet the dock labourer dies at the rate of a hundred and twenty-one, the farm labourer at the rate of ninety-one. In this case the greater exposure of the dock worker to physical accident, and to extremes of cold and wet, are the determining causes of his greater mortality. The same may be said in respect to the differences between the bargemen and the blacksmiths.

There are classes of labour in which the great mortality that prevails amongst the workers is due to want of scientific care in carrying away products of the labour which are given off as volatile refuse. These products are dusts, or gases, or vapours which the worker breathes or receives into his lungs, and the presence of which in the air is sufficient to convert a light and easy occupation into a seriously fatal pursuit. The work of the hairdresser cannot possibly be esteemed a more laborious art than that of the wheelwright. But the hairdressers who are all day inhaling a close atmosphere charged with fine particles of hair-dust die at the rate of one hundred and twenty-seven, while the wheelwrights, who are toiling in all weathers in the open shed, die at the rate of eighty-eight. It is quite unnecessary that any such differences as these should exist. The fatality from impure air charged with dusts is so much ignorant destruction of life.

There are classes of workers who present high mortalities, from the circumstance that they are exposed directly to poisonous compounds which, absorbed by their body, produce fatal disease. The workers in lead, plumbers, painters, and potters, and the workers in some chemical factories, and at some chemical pursuits, such as photography, afford illustrations of this nature. The labour of plumbers and painters is not more severe than that of carpenters and joiners, but the death-rate of the former is as a hundred and twenty to ninety-one of the latter. The cause of the difference in this instance is the exposure to lead, chiefly, and some other similar cause is at work in the other examples of high mortality, referred to under this head.

In many of these examples all the danger is induced by deficient cleanliness on the part of the worker, and by the combined efforts of workmen and of science all the evils may in time be removed.

The most startling fact of all in reference to occupation and health is that which is told of the innkeepers and publicans. This class of the community is really at the lowest of the vital scale. The cause, unhappily, is not difficult to discover. There is nothing in the occupation of an innkeeper, as an occupation, which can account for its unhealthiness on ordinary grounds of labour. It is not an occupation which exposes those who fill it to physical danger, as the work of the miner or the engine-driver does. It is not an occupation which makes great demands on the physical organism, like that of the blacksmith or rope-maker. It is not an occupation which leads men into solemn charges and responsibilities, like those of the physician, solicitor, or clergyman. It is not an occupation which brings those who follow it to the miseries of want and starvation. Why, then, is it the occupation most nearly allied to death? The answer is simply told. The occupation is the one the most nearly allied to alcohol. This agent of death, which diffuses danger more or less amongst all classes of workers in our part of the garden of life, tempts most rapidly into destruction those who are the dispensers of it. The influence of this one agent vitiates to some extent every calculation on the vitality of classes of men; here it stands out on its own ground, telling its

effects on its chosen servants, and teaching a lesson by the fruits it yields in them, which, if the one lesson stood alone, were a sufficient recompense for all the labour through which the facts, that have now passed before us have been collected.

On the whole, we are brought to the conclusion, as we cast a final survey over the different groups of workers in the section of the garden represented in this nation, that the injuries inflicted in the name of work are most irregularly distributed, and the inference is fair that much of the labour from which injury occurs is carried to a degree far beyond the fulfilment of that natural law, with the statement of which this chapter was opened, viz., that man shall live by the sweat of his brow. Of the members of the seventy occupations we have specially studied, not one does too little work, many do a great deal too much, and probably so long as there is human competition, excess of labour will prevail, and will be a certain cause of an excess of mortality above the natural standard. But the real dangers, the series of causes, which lead to the great excesses of mortality, and which, I believe, add a sixth of the current excesses, are to be sought outside the occupations as mere departments of human industry and skill. They lie in the conditions under which the skill and the industry are developed and pursued; conditions nearly every one of which are removable without a breath of injury to the art or business itself, whatever it may be.

BENJAMIN W. RICHARDSON.

ONE OF THE SEVENS.

"We spend our years as a tale that is told"—Ps. xc. 9.

"Surely goodness and mercy shall follow me all the days of my life."—Ps. xxiii. 6.

SEVEN times ten—they came and fled,
Fled as fleeth a morning dream;—
My tale is told, my say is said,
I read the past by Memory's beam.

Seven times ten, with untold woe
For sin unseen by all save One,
For evil thoughts that come and go,
For evil deeds, for good undone.

I've mourned the loss of precious things,
I've wept beside the honoured dead,
Health has flown and riches had wings,
And thus the seventy years were sped.

With wayward steps my path I trod,
But oh! what mercies marked my way!
The love that led my soul to God
Has turned my darkness into day.

Seven times ten;—all fades not yet,—

Sweet flowers, and fields, and books are mine,

Dear friends are round my table set,
And daily gifts of corn and wine.

Safe hid beneath o'ershadowing wings,
Age need not fear the winter blast;
Sure watered by celestial springs,
The path has verdure to the last.

For countless gifts, for bounteous grace,
Break forth my soul in songs of praise,
To Him whose love redeems our race,
And crowns with blessing all our days.

By Him is every want supplied;
And not alone from youth to age,
In death we live, for He hath died
To win our glorious heritage.

WHAT SHE CAME THROUGH.

BY THE AUTHOR OF "LADY BELL," ETC.

CHAPTER XXXIV.—A LETTER FROM THE WILDERNESS, AND A LETTER FROM THE WORLD.

I Z Z I E
B L E N -
N E R -
H A S -
S E T
having been cheer-
fully resigned by her
relations to Pleas-
ance, and having
survived the re-
moval to the
Manor, began
with the

stimulus of change, and still more with an object in life which Dick's departure had withdrawn from her, to make a gradual recovery. By the time spring had come she was restored to nearly her usual state of health, and was able to resume her old occupation of dressmaking, which she practised for a season at the Manor.

Pleasance was earnest in working with her, not only to cheat time and thought, but with a faint expectation that if she could acquire a certain amount of skill in dressmaking, in addition to her other qualifications, she had a chance of being retained by the new mistress of the Manor, supposing she were the wife of the new head man and the mother of a family. Pleasance might become so valuable an auxiliary, that in such a case she might be solicited to remain and give her help in the household.

Pleasance clung to the old place. It is only after people go one after another, and leave a place vacant, that the place itself assumes the value it is capable of assuming, in such circumstances, in a man or a woman's eyes. To give up the animal world of the Manor, too, would be like giving up the last wrecks that were left out of a fortune.

XVII—41

Thus the winter, which Pleasance had once thought would fly on the wings of love, wore past until there was a spring feeling in the air; rooks were cawing, the few little birds of the east county were singing in the afternoons; and there were snowdrops and aconite and colt's-foot in the garden, and primroses budding under the hedge-rows.

The advent of the new mistress to the Manor was close at hand, causing Lizzie Blennerhasset to speak incessantly of going home to the smithy and Pleasance to reflect silently with a slight throb of her stunned and stricken heart, what farther changes might be involved to her in the movement.

But first there came one of those letters to the Manor which, unless during Mrs. Balls's last illness, had been like angels' visits, few and far between, and which had ceased altogether since last autumn.

This letter was not to Pleasance, but to Lizzie, and it came, of course, circuitously after having made a lengthened stay at the smithy. It was a letter from Long Dick. It had been written many weeks before, at a farm far up in the back woods of Canada, to which his feet hastening to leave the Manor and Saxford behind them, and to shake off their very dust, had reached. The writer had found heart of grace to convey an assurance of his welfare and of something more to the woman who had loved the very ground he had trodden upon.

"Dear Liz," Long Dick had contrived to indite in his laboured and still curiously defective calligraphy and orthography, "This comes to tell ee I d' be well, and hopes you be the same. Times ain't so bad with me as they 'a been, and Cain-a-day ain't a bad country by harf, an it weren't smo'ed with wood—leastways this bitten, and no meadows or beasteses as at home; but map-pen the less like home the bessern for some folks. There'd be grand sticks on trees, and sich a number on them that the housen—sich as there is—be built on wood and not on stone, which do seem a waste. But where they 'a room for corn it d' grow grand. I were a cruel brute to you last mornin, but I were hard druv, desperate like, you knows that and bears no malice. You 'a never bore me nowt but 'eavens goodness sin' I bore you out on the fire.

"There mun a been a marriage at Manor

long or now, and mappen he 'a gotten my berth—Wool! why not? he 'a gotten what I held a deal dearer; and I wunno be sich a grudgin beast as grudge him thatten to the bargain. He were 'nation smart and 'ould learn, he 'ould, and he were not a bad chap an he had not crossed my road and took—what he took; and he drew me out on Broad at risk's life, though I wish he 'ad left me there asoakin and adriftin with poor owd Punch. But there I d' be a smitin' your poor tender little heart again and turnin you sick and dizzy, as I can see, though I be knots and fadoms on sea water on the udder side of the world. I meant no sich ill deed. I just wished you to see and to say to them as may be axin—to her and to him, as I were doin well and gettin high wages at this farm, and were hearty a-seein on strange sights, and not wantin to spile sport. For she 'ould kinder go thinking on me, and grievin for me at times; and so 'ould he, dang him! for he were like a woman he were, in some things, though he were manful enough in udders. And so I d' be your cousin and frien till death, Dick Blennerhasset.

"I wuss all well at smithy. Tell uncle I 'a shod a power on horses sin I came, thanks to his learnin. I 'a thoughts on settin up a smithy of my ownet in back woods. Clem will be pleased for to hear there d' be fiddles out here. I heard en at Quebec, which is a town just bigger and finer than Cheam, the day I landed. Tell Missus Balls I ware astin for her."

There was nothing wonderful in this letter except its general ignorance and generosity. Pleasance made much of the last, telling herself sadly, that here was one poor stout foolish fellow in whom she had not been mistaken.

But though Pleasance had always been inclined to think well of Long Dick, and though she thought better of him now than ever, it remained a mystery to her what Lizzie Blennerhasset made of the letter, with its tardy brief acknowledgment of the obligation to her who had well-nigh died for the love of the writer. Without looking beyond the few brief references to Lizzie's self which were not its primary motive, and yet without arguing from them the wild conclusion of Dick's loving her at last—Lizzie was in the seventh heaven. "He 'a minded me and written to me afore all—he 'a minded my sufferin for him—he 'a minded my wery ways and looks."

Long Dick's letter had been something of a lively incident from the outer world in the

quiet domestic life of the Manor, heralding the great public event of the arrival of the new representative of Lawyrc Lockwood and the substitute for Mrs. Balls.

The letter had helped to diversify the last week, and distract attention and conversation from what was becoming its chief theme—namely, a close revision of all that had reached Saxford in rumour and gossip of the distinguishing peculiarities of the coming housekeeper and dairywoman.

On one of these last days Pleasance had missed a lamb which had lost its dam, and which had therefore fallen largely to the women to rear.

Pleasance had gone after what she had believed the traces of the lamb as far as the shoulder of the moor, and looking down into the hollow and seeing the vagrant as she had expected, lying chewing its juvenile cud in a sheltered nook, she had descended after it, and sat down to rest, ere she resumed her homeward way.

It was one of those sweet days in early spring, in which the sun does not seem so much to shine broadly, as to brood lovingly, with a thousand subtle influences, over the earth beneath him springing up to meet his smile. Yet, there was enough sunshine to cause what was one of the most characteristic features of the moor on a fine day, the endless procession of cloud shadows which pursued over its brown and green surface the cloud march in the sky. Pleasance sat watching them, and then turned to the one windmill which was in view, and regarded its swinging arms till she grew giddy.

On and on raced the clouds, round and round whirled the sails. Was it like the continuity of human history, never broken for individual disaster? Was it what men are sometimes tempted to count the pitiless will of fate always weaving—never in this life displaying the finished pattern that might seem to make the burden and the care, the pain and the tears of the process worth it?

Then a barge glided in sight like a signal stroke of destiny, bringing a token out of a far country; and contemporaneously with the barge appeared Lizzie coming to seek Pleasance, and holding in her hand—pausing momentarily as she limped along to rest, and to spell out a few words—the letter which she could say by heart.

"Oh, there she is with her letter again," sighed Pleasance, a little pettishly. "I think her head is turned with that letter, I wish she had spared it to me here."

It seemed mean to complain of being

asked to share Lizzie's small taste of happiness, which she relished so keenly, and for which she was so humbly grateful. Before she came up to Pleasance the latter had begun to reproach herself and to seek to bring herself into a better frame of mind. Yet it was hard to listen to Lizzie's ecstasies on a spot to which Pleasance did not care to come at all, and where she had always to put a supreme force upon herself to resist the current of recollection.

But it was not the old—it was another letter which by an odd coincidence had come again to Lizzie, a letter from Clem in London this time. "And it d' be all about music, practices, concer's, and sich like, as nobry but hisself 'ould care to hear about," said Lizzie, with a little contempt of her brother's epistolary powers—"not a word about the Queen, or the palaces and towers, and shops or nor'n. I ain't patience to read it through till night—there, Pleasance, you may 'a it, and see what you can make on it. Mor, I 'a seen the day Far'er 'ould 'a gev he a good hidin for such a letter, but now 'tis his bizness, and that d' make a differ. You can take your time, dinner will not be ready yet a while; and the lamb will foller when she sees you, ahtout trouble."

Pleasance let Lizzie drop the letter into her lap and go. Why should not Pleasance read Clem's letter and hear his account of a progress, the coming about of which was like a fairy tale? Why should not she read it all the more that the rough village genius, though he might have left behind him in his village many to envy what was to them his sudden unaccountable promotion, could find no real sympathizer even among his nearest relations?

Clem had come later from regular schooling than Long Dick, besides, since he had gone up to try whether he might not be admitted to an academy of music he had been put on a course of preparatory general education, which was doing its best to make a less utterly illiterate lad of him; while he was spurred on in the wider field that would otherwise have had no attraction for him by the fact that without being to a certain extent "a scholar," he would never be a musician worthy of the name. On the other hand, except with reference to music, Clem's parts were duller than Long Dick's, and many of his rustic turns of thought and habits of expression were the next thing to inveterate. It was therefore, through a strange, almost incomprehensible jumble of stiff gnarled pot-hooks—here and there soft-

ened by late efforts into more flowing and symmetrical penmanship.

He had played before "a first fiddle" of repute, and been not only heard to the end, but encouragingly told to work on; however, he was to work at nothing but exercises for a long time. He had been sent or taken to this hall and that society to hear—the music of the spheres to Clem—he was in another world, and was exalted and engrossed.

At last Clem diverged from his precious musical information. With a pant for breath and a great heart-throb Pleasance read, "Since the day I comed and were boarded here, I have seed little of Mister Douglas, him we was used to call Joel Wray; my eye! ain't he been a stunner, and he married to Madam and all! But he d' be reckoned a batchelor man here, as I 'ad plain positive proof. I was going to say I have seen little on Mister Douglas since I came up to town as they say here, for why I hear he 'ave been in France with his mother and sister. But first 'twere through him that I got to them concerts and oratorios I have been telling you of, and now that he is comed home—that is to town again, I expect that I shall get to mor'n and be at the Albert Hall, or at the Philharmonic or the Sacred, or the Monday Pops, or at the Crystal Palace every blessed day and night, so you see I have little time to write. But I was to tell you more about Joel, that's young Squire Douglas, being looked on as a batchelor man here. I was in the Park, that's not like no squire's park near Saxford, but all flower gardens here—and gen'lemen and ladies riding and driving there. I were leaning against the rail with some other fellers, when by comes Joel—I wish you saw him, young Lockwood were nothing to him—in a swell's coat and hat, and riding 'a chestnut mare, and two young ladies to right and left of him, and a groom as were like a gen'leman himself aridin behind them. That weren't like the wheat-hoeing in the Thirty-acre, 'or the harvestin, no, nor his weddin down at Saxford. Well, but he saw me, and while he reddened up, he nodded to me as frank as you like; and I touched my cap, not my hair, to my patron as they calls him here—main proud that he were that frien'ly. 'Who's that nob?' says a feller near me to a feller a-staring at me as if I were a bigger chap, along on my master's nod.

"Oh, that is young Douglas of Shardleigh," says his mate; 'he is a rich beggar, his father was the great manufacturer in the north, who left such a deal of tin.'

"I know all about him," sings out a third

man, 'I come from his part of the country ; he has just returned ; he has been abroad with his family for the mother's health ; but they have come back early, though the east winds ain't gone yet, because Miss Douglas, who has her share of the old manufacturer's tin, is to come out this season. She was the young lady next us ; the other young lady is a friend, a Miss Wyndham, on a visit in Grosvenor Square. They say she and Douglas are to make a marriage.' And the others went on to cry, what a great catch it were for a young lady, and were she a fortune herself, or a beauty, or connected high to get en ?"

Pleasance read and took in the sense, laid down the letter on the heather beside her, and looked around her with a dazed look. There was not a living creature within sight except the little strayed lamb beginning to find that it had strayed, to grow weary of and frightened at the freedom it had coveted, to get up and run here and there, without discovering its foster mother, to bleat piteously, and at last to start in a hurried trot in the opposite direction from the Manor.

Pleasance did not rise to prevent it ; she still looked about her with that blank bewildered look. Was this the Manor moor that she had known all her life, and where she had come and sat and sewed or read in peaceful content, during her spare moments, hundreds of times ? Was that the same grey stone she had avoided sedulously this morning, and on which Joel Wray had thrown himself, when he had brought her there, and placed her by his side, under the August sunset, the night he came back from Cheam ? He had told her in the very next breath to that in which he had spoken of the solemn mystery of death, and of the drowned men, whose distant hearths were made cold, and over whom he had mourned so tenderly, that he coveted her for his love and his wife, with whom to spend the rest of his days. Was she the same woman who had heard that tale ?

Pleasance covered her face with her hands, and thought. She was, after all, in spite of the early womanliness which circumstances had imparted to her character—in spite of her close, practical familiarity with such real life, in its unvarnished toil and care, joy and sorrow, as that with which she had come in contact—in spite of her habitual mental feeding on and thorough digesting of a few worthy books—very inexperienced. She was so inexperienced that, in so far as knowledge of the world—the conventional world, went, she might have credited the most violently

improbable circumstance, or combination of circumstances, almost as easily as the most ignorant of the village girls around her.

But Pleasance had one potent defence against such credulity. Any base and vile act was so far removed from herself that she could not, without great difficulty, conceive of it in another—far less in another whom she had believed to know well, and whom she had learned to love dearly.

Therefore Pleasance did not for a moment give way to the folly of holding that Archie Douglas could be about to marry another woman. But the idle report that had been brought in Clem's letter to Saxford, opened Pleasance's eyes, as her quiet, self-concentrated life recently had not been able to do, to the utter falseness of the position which both she and Archie Douglas occupied.

There could have been no such public acknowledgment of their marriage, as she had rendered doubly difficult by her rupture with him, and her refusal to accompany him to his friends, and of which, so far as it had concerned herself, she had never thought, since it did not seem to matter to her, dwelling near the village where the marriage had been publicly celebrated, and where it was well known. Whether Archie Douglas had suffered himself to be withheld from telling his family ; or whether he had told them, and it had been their policy to seek to hush up the affair, so that it was with their connivance that he was living in the world as a single man, Pleasance could not tell. All she knew and felt with strong conviction was, that the secret must be kept no longer in the interests of justice, that justice which lay so near Pleasance's heart. Archie Douglas and others must be thought of in the humiliation and misery of the situation. The truth must be told at any sacrifice of the pride of which he had so often accused her, and of the poor peace that was left her.

For Archie Douglas's own sake, to save him from a snare which would grow upon him year by year, and wind about and entangle him—holding him the while in fetters, becoming always the more hateful and maddening—until it should eat into and poison all that was manly and honourable in him. Pleasance would go through fire and water, would subject herself to desperate pains and penalties.

But there were others besides Archie Douglas to whom the permanent, even partial, concealment of his marriage might work grievous wrong and unhappiness. His mother and sister—whether deeply injured

by him, or whether guilty of abetting him, must be sufferers.

At that moment it recurred to Pleasance's mind that the name of the girl referred to was Wyndham. That had been her aunt's name, and the consideration made Pleasance pause even then with a curious sense of fatality and retribution. But Wyndham was not an uncommon name in England; and Pleasance's mind was too much occupied with thoughts which agitated her profoundly, to admit of her dwelling on vague possibilities, or on speculations which had to do with the remote tribulations of her girlhood.

When she reached the Manor she came without the lamb, and looking so strange to Lizzie's eyes that Lizzie at once forgot the missing animal, and assailed Pleasance—

"What 'a come to you? There be'n't snakes on the moor as in the meador; but be you bitten, Pleasance?"

"No, Lizzie; but I have been making up my mind to go right away to London, no less, before there is a change here. I may hear of something that would suit me," said Pleasance, with a slight tremulousness in her voice. "I should see a little of the world, and I can pay for my fancy, you know," she ended, with an attempt at a smile.

"She d' be seekin' if she can hear tidin's on that thief in the wood, her man, afore she tries summat new, poor mawther; though she 'ont let on about it," said Lizzie to herself, unconsciously shaking her head, while she answered aloud with determined cheerfulness, "Wool! it is no more than nat'ral, and you young and hearty, and with a bit on money to spen'. You'll get Clem to go about with you, and len' you a han' in need, if so be that he can be got from his scrapin' and fiddlin'. I'll go home a day or two sooner, that's all; but you'll come back, Pleasance?"

"I mean to," said Pleasance quickly; "where else can I go to?"

"And you 'a got Clem's letter with the places written down; keep it. I 'a seen enough on his crossets and quivers."

Poor Pleasance caught at the chance with its small compensation, though she had supposed that she had ceased to care what the world—her little village world—said; and though she was going for a time out of hearing of its gabble. She knew from the welcome relief afforded her by the hope of the news which Clem had given being confined to herself, with its farther circulation suppressed, that it would still have stung her keenly to have had the slander of Archie Douglas's speedy

infidelity, in addition to his desertion, go abroad. It would at once have been caught up and swallowed wholesale, and become the talk of Saxford in her absence, while her errand and its probable consequences would have been enlarged upon in every coarse and grotesque light.

CHAPTER XXXV.—PLEASANCE GOES.

PLEASANCE was so anxious to do what she was called on to do without loss of time, and to avoid all observation in doing it, that she set out the very next day, without going to the village and making preparations, and without speaking to a single soul save Lizzie, in whose charge Pleasance left her few worldly goods, consisting principally of Mrs. Balls's effects.

It was the same season of the year, too, only a little earlier, and in the morning, not in the evening of a fine spring day, such as that of yesterday, or of nine years ago when Anne and Pleasance had arrived in the east country. And as she walked with the rapidity of a fixed intent through the fields to the station, carrying in her hand all the luggage which she took with her in the very old carriage-bag that she had brought to the Manor, she could not help recalling that first day, and asking herself was she turning her back on another portion of her life? Yet she did mean, as she had said to Lizzie Blennerhasset, to come back. She could neither see nor desire any other course or refuge, except the path which custom had rendered easy to her, and the home among the homely people whom she knew, and who bore her some respect, and were not unfriendly towards her.

In other circumstances, Pleasance's sound and well-gifted nature might have eagerly responded to the novelty and exhilaration of such a journey, and risen with elasticity to the anticipation of fresh experience and a fresh world. But she had been only four months ago cruelly taken by surprise and driven desperate. Her rooted convictions and prejudices, her loyal adherence to a chosen standard, and her tender feelings had all been up in arms and in hard conflict, so that the wounds of that conflict must remain long unhealed, and the scars would prove ineffaceable. And she still bore a heavy, crushing burden of steadfast opposition to whatever culpable weakness of herself or another might beset her in her self-appointed task.

As it was, Pleasance saw everything with the sedateness and impassiveness, the half-tired, half-hopeless spirit that has only just

come up out of the deep waters, and can hardly so much as imagine that there is any safe footing, not to say pleasant path, left for the wayfarers in this troublous journey of life.

Pleasance took her seat in a third-class carriage scantily occupied at this hour with sober, serious, working people going to work a few miles down the line, or to market at the next town. She was herself the most serious of the party, so much so that one of them, a frank woman, asked her pointedly if she had lost a good place, or if she had been sent for home to wait on some deadly sick relation, or had she got her pocket picked?

When the neighbourhood of London presented itself, with its unmistakable increase of brick and lime, extending farther and farther in new and half-built houses into a waste which is neither town nor country, with ancient country tea-gardens left stranded in an advancing suburb, with cemeteries and breweries and a smoke-cloud—the more perceptible on this occasion that the spring day was sinking down in chill greyness after the fashion of spring days—beginning to be hung out like a grim pall over all, Pleasance did rouse herself from her private troubles.

However pressing these troubles might be, this was London, the great city of the modern world, the first look on which was an event in the life of any creature breathing thoughtful breath—any creature, great or small, young or old, care-laden or care-free.

Pleasance had had her dreams of seeing London for the first time, as most country-bred men and women have had theirs from childhood. Not so long ago she had made her plans to be taken there and shown its wonders by a duly qualified cicerone, who would have delighted in his office, and in whom she could have put boundless faith. The plans had broken down, and it was under such auspices as she never could have anticipated that she, like many another gazer, was catching her earliest glimpse of London—was looking at the ugly wilderness of mean houses which, from whatever side a traveller enters, soonest meets his view, and asking herself could this be great London, great in power, knowledge, and benevolence, the biggest, wealthiest, busiest city in the universe?

Pleasance thought, with a stolen sigh, that she had been right to prefer, when the choice seemed offered to her, a country life to a town life, and to judge that the fate of working people in all the essentials of air and sunshine, space and nature, was infinitely preferable to what life could be in a huge

city, to which necessity and higher wages drew them.

Lastly, a great ache and misery smote her with the vivid comprehension that she had come to that London in which he was dwelling at this very time, but in a region far apart from her, and with which she would have nothing to do.

Pleasance arrived at her station dauntlessly, with no protection save her humble independence, her modest dignity, and a little money in her pocket. She had no idea that she ran any personal risk, that her beautiful face could expose her to annoyance, or that the dozen sovereigns, which she had put into a purse, that was stitched into her pocket, might prove to her a snare rather than a safeguard. She did not know a house to go to in the millions of houses in London, since she had no intention of seeking Archie Douglas in his mother's house, or of applying to Clem Blennerhasset in his boarding-house. What she thought of was to ask some respectable man or woman—she had no fear of not meeting or not knowing such when she did meet him or her—to tell her where she could find a quiet inn for third-class travellers where she might “put up,” as she called it, in the mean time.

She was as ignorant of London ways as any foreign girl set down in its thronged and bewildering streets. But intrepid intelligent innocence is its own passport even in London.

Pleasance hit on her respectable man in one of the railway guards, a circumstance which was so far fortunate for her theory, since in addition to his credited incorruptibility, he was bound by his official duties to help and stand by travellers. “Can you direct me to a quiet inn for third-class travellers where I may get lodgings and will pay my way?” said Pleasance, with that most transparent simplicity of hers.

The man looked at her, thought for an instant, and then called a trusty old porter, who guided her through one or two of the city streets, the noise of which half deafened her, to a comparatively retired back street. There, at the sign of the Yorkshire Grey, was such an old-fashioned inn, as is still the head-quarters of some of the carriers' carts which remain on the metropolitan roads.

The place was quiet as Pleasance had wished. It “did” a limited regular business, and was kept by sedate elderly people, a widow and her daughter, punctilious in their line, who, though they laid themselves out for carriers, and were much better accustomed

to them than to wandering damsels of any degree, were still not unwilling to admit any respectable guest.

Pleasance had succeeded admirably, considering the chances, even to her instalment in a tidy little bed-room which looked out over an assemblage of roofs to the sky, and outside the window of which there was a box of thyme brought there from a country garden, by a carrier of floral tastes.

Pleasance had nothing more to do than order a cup of tea, and bread and butter, brought to her with an additional offering of water-cresses by the staid old landlady herself. When the day was done, she was at liberty to seek what sleep she could find in the excitement of her new surroundings, with the muffled roar of London, and the squalling of back-settlement cats, contending in her ears. She was bound to get rid of her fatigue, and to nerve herself for the arduous undertaking that lay before her.

Though the Yorkshire Grey kept early hours, Pleasance, with her country farmhouse habits, was earlier still, and having dressed and read the lessons which she had learnt to read with Anne at Miss Cayley's, and prayed out of her devout earnest heart, she was restless for breakfast that she might be stirring. It was not to visit the sights of London—Pleasance's heart was far too full for that. Indeed with reference to the old plans—old, yet not of a year or half a year's standing—which she had made about London, she felt rather inclined to grow heart-sick at the thought of the great gardens at Kew, the Crystal Palace, the museums, picture galleries, and theatres. If it were not to fortify herself against the outcries of such as Lizzie Blennerhasset, she would be tempted not to go near the sights. It was to take some definite step in the fulfilment of her mission, to do something towards freeing herself from being a party to a false concealment, and then to hurry away from London and bury herself once more down in the country, that Pleasance longed.

As soon as Pleasance had breakfasted, she started under the direction of the landlady to walk to the nearest thoroughfare and its first cabstand, when, calling a cab and entering it, she told the driver to take her to some of the fine streets and squares, and past a particular house of which she gave the address. He was then to bring her back to his stand.

Whether the man regarded the order as peculiar or not, he made no demur in obeying it. In the rawness of the morning,

while the sun was still fighting a piteous battle with a combination of smoke, fog, and mist, Pleasance was driven by Piccadilly and Park Lane in the first place. She sat and gazed about her with a rush of colour to her cheeks, though she was driving there all alone. She marked the entrance to Hyde Park and the Row, where two or three straggling horses were being aired, and where she easily guessed that Archie Douglas must have been riding with his sister and friend, when Clem Blennerhasset saw them. Would they ride there every day, according to the practice of the great folks in novels? But she tried to put away the overpowering vision, with the suggestion which it brought, and to gratify the impulse that had led her there. She could look around and make her observations undisturbed, in the comparative ease and retirement of the cab. It was not to her a shabby ramshackle vehicle given to doubtful freights, drawn by a scarecrow of a horse, and dear at its hire, but as fine and complete an equipage, horse excepted, as it appears to a country child, come to town for its holidays. It would be a privilege to have such a carriage at command for the payment, not of a shilling, but a crown.

Pleasance marvelled and admired, in spite of the asperity which caused her to contrast those hundreds of lordly mansions, not with the hideous dens in the squalid courts of which she had not dreamt, but even with the myriads of mean houses from which she had shrunk on her entrance into London. She was tempted to think the natural, foolish, short-sighted thought, how could the inhabitants of the one region bear to conceive of the existence of the other? Did they deliberately propose to themselves, like Dives, to take to themselves the good things here, while they left the next world and its chances to their poor brethren?

At last the cabman turned into Grosvenor Square, and Pleasance, sitting far back in the cab and holding her breath, saw an inclosure of large houses with grass and trees in the centre. The door of one mansion was open, and a portly porter, in red breeches and laced coat—the very finest-looking man in point of dress that Pleasance had ever seen—was revealed, already lolling in his oaken chair, with his huge morocco-bound book before him. On the steps of another house two exquisites of footmen were airing their perfection of livery.

The particular house in the square was reached. Pleasance's driver passed slowly,

while he looked back at her with a significant motion of his whip, and an idle wonder why the dickens this fine-looking, better sort of working-girl, nursery-maid, or shop-woman wanted to look at this house above all others?

Pleasance, now that she was there, hardly dared to glance out and see the spacious front of the house, the great flight of steps to the closed door, and the verandah with its azaleas and rose-bays. The windows airing the rooms within, were thrown wide, and disclosed glimpses of a rich confusion of satin and lace hangings, tall gilt chandeliers like gold trees with gold flowers, pots on pedestals with more growing flowers, and the gleam of a white statue.

Pleasance was not dazzled and abashed by unusual achievements of masonry and upholstery. But she was an imaginative woman, with the union of pride and humility often found in imaginative people. She could appreciate intensely, in a sense, the accompaniments of wealth and station from which she recoiled, and which she rejected absolutely for herself; while she was more convinced than she had ever been that she had neither part nor lot in such matters.

She was forced to come up to London and tell the truth, though it should bring dismay and disaster into this great house. The son of the house had wandered from his sphere; and in his wilful caprice and deceit, and in her ignorance, had compassed such a marriage as became neither of them, and Pleasance must publish the marriage, and go back to her elected portion, though he, as well as she, should thenceforth live lonely in his lot. She would never share it with him, to be an affront to his people, even though she should die at last of the honour—not the happiness, like the lady of Burleigh—and thus free him and all concerned from an incubus.

CHAPTER XXXVI.—THE ENCOUNTER IN THE PARK.

THE afternoon had turned out a dry, half-bright, half-cloudy, windy March afternoon. Pleasance made her way alone and on foot, guiding herself by the landmarks that she had noted from the cab, to the Park, on the chance of seeing Archie Douglas there. She was feverishly restless to accomplish her object, and she thought that if she could meet him in the Park, and he would turn aside and speak with her, she might tell him in as few words as she could command what her errand was—that it was right, for his

honour and for the good of all, that their marriage should be publicly known, however sharp the penalty to him. She could not help it; she would have spared him if she could; and it would be all that she would ever cause him to suffer. She meant that in the long regret which must be the portion of both their lives, since both were alike spoilt, she would ask nothing further of him, and make no other appeal to him.

She found no impediment to her entrance into the Park, though with other foot-passengers she had to run for her life in crossing the path of the high-bred horses pawing and prancing as they dashed into the drive. She walked along the footway, and gazed wistfully, and yet neither enviously nor covetously, but with a certain combined desire and fear in her eyes, as she had gazed at the houses in the western square in the morning, at the carriage-company and the riders. They seemed to Pleasance very numerous, though Easter was not come, and the Park was only half frequented.

Surely among so many she would find the one she sought, and in the solitude which a crowd afforded, she would be able to walk apart with him a few yards, and tell him what she had to tell without their association or anything unusual in their aspect towards each other, being remarked upon. She wandered up and down the broad path, keeping near the gate for a greater precaution—not able to divert her attention for a moment to the budding trees or the spring flower-beds of which Clem Blennerhasset had spoken, incapable of taking her eyes from every carriage-party, or even single horseman that entered, without seeing the face she longed, yet dreaded to see—till she grew weary.

The blustering March wind blew about and battered her, beating in her face, taking away her breath, ruffling her hair and disordering her dress. The fine white dust changed her black clothes to grey, got into her eyes and gritted between her teeth. She could not venture to go into a side walk lest she should miss her aim. It did not enter into her head to sit down, while she reflected that here was nothing of the freedom, freshness, and endless variety of a country walk, and thought that the town was a poor exchange for the country to any class. She began to feel pity for the ladies—many of them with pale, delicate-featured faces like what Anne's had been—half broiling, half shivering between the bursts of bright sunshine and the keen wind, as they sat in

their furs and silks, going the monotonous round in the carriages.

At last Pleasance's watching eyes lit up with a flash of attainment, while she trembled so that she was forced to stand still.

There was the same group in the very order that Clem Blennerhasset had described it, but Pleasance saw only one member—the one by whom she distinguished the whole.

Archie Douglas—whom she had last seen in his working-suit on their wedding-day, with his arms stretched out in a final passionate appeal to her—was there clad as a gentleman riding a spirited horse, and chatting smilingly with his companions on each hand.

Pleasance stood waiting among the little crowd of idlers and spectators of various ranks, but principally of men from clubs,

Page 589.

barracks, and offices, that gather about the Park railings on a favourable spring afternoon.

The riding-party was very near her, when she took two or three quick steps forward—so blindly that she was within a hair's breadth of striking against one of the lady's horses, causing it to shy and rear.

"Hie there!" "Hallo, you get out of the

way," "Hold on, young woman," was shouted in various keys by the bystanders, including a peremptory policeman. But Archie Douglas was yet quicker and more imperative. He leapt from his horse on the instant, and motioned to the groom a few paces behind him to take the animal off his hands. His face had changed from the good-natured, quickly-interested, and amused look which

belonged to it as its common expression, to an eager flush of excitement and disturbance.

His sister, whose horse had been the one startled, mistook his action. "Why have you got off, Archie?" she called to him as she continued to pat the neck of her restive horse. "There is no need; Lady Alice has come to herself; it was just a jib at that unlucky woman."

The policeman was reminding Pleasance, in a forcible manner, that she was invading forbidden territory, and must keep to her own ground, that of the pedestrians. "You ain't to walk under the 'osses' noses. What do you expeck? If you want to cross, there is room enough, if you look out for it."

"I don't want to cross," said Pleasance distinctly, in the hearing of all the curious by-standers, prepared to take a lively interest in the altercation and the scene generally. "I have business with that gentleman."

Archie Douglas was acknowledging the business by the energy with which he was getting rid of his horse, and bidding his sister and her friend ride on.

"But what can she seek, Archie?" the matter-of-fact young sister, not to be set aside, persisted in asking. "Is she from Shardleigh? Why does she stop us here?"

"Come away, Jane," said her more tractable companion; "leave Mr. Douglas to settle his business."

But Jane Douglas did not stir.

The ring forming an audience, among whom were some personal acquaintances of Archie Douglas, was rapidly taking in all the bearings of the case. The investigation passing from Pleasance's dusty common black woollen gown and jacket, and dowdy straw bonnet, to her youth and beauty—when one came to remark it, and to the manifest trouble in her face, was ending in one miserable conclusion.

"Do come away, Jane," urged Miss Wyndham in a low tone, "we are not wanted here;" while she said to herself, "The stupid, stubborn little goose, she will cause a greater *eslandre* where Archie is concerned than anything that has gone before."

The policeman, in the interests of society, was as pressing in his efforts to get Pleasance to move on or off, and leave the Row clear, for other riders were coming up, to whom the stoppage must prove an impediment. "Come, come, young 'oman, you hadn't ought to think of transacting bizziness here. You must seek the gent, if so be you have anything to say to him, some

other wheres, and you and he can speak private."

Pleasance lifted up her head. Instinctively she penetrated the shameful misconstruction put upon her relations with Archie Douglas. Some painful experience in the class in which she had lived might have taught even her modesty to fear it beforehand; but the apprehension had not occurred to her before. The blood rushed to her cheeks, adding tenfold to her beauty under all its disadvantages. She looked indignantly full in the faces—pitying, condemning, amused—all bent on her; she turned with swift piteous appeal to Archie Douglas.

If he faltered or failed her at that critical moment, she would despise him from the bottom of her heart then and for ever; she would know a depth of misery which she had not yet fathomed, insomuch as contempt is an infinitely lower abyss than wrath.

But Archie Douglas, however he might err, was far enough from a coward. He took the one brave step that was open to him, without a second's hesitation. He went up to the policeman and tapped him on the shoulder. "My man," he said, in a clear, audible voice, "you would not come between man and wife?" He looked round on his thunderstruck sister. "Jane," he said in an accent so decided that it sounded cool, "you must know that there are stronger claims upon me than even yours and Miss Wyndham's. But you need not ride home unattended; there is General Protheroe from his afternoon whist," and he indicated a grey-haired officer advancing to salute them with military precision, and in profound ignorance of the scene on which he was about to break in. He was hailed by Archie Douglas. With a steadiness and calmness that only well-read students of human nature could refer to the pitch of excitement, he said, "General, may I ask you to ride on with my sister and Miss Wyndham, and see them home (I think my mother has been expecting a visit from her old friend ever since we came to town). I have to look after Mrs. Douglas?"

"Mrs. Douglas! Who? Where?" cried the General, gazing about him in a bewildered manner, and neglecting his courteous assurances of pride and pleasure in the commission summarily entrusted to him. "I thought you meant that I was to take the young ladies to Grosvenor Place, and meet Mrs. Douglas there?"

"So you will, I hope, but there may be more than one Mrs. Douglas," replied

"WHAT SHE CAME THROUGH."

Page 566.

Archie Douglas, with a somewhat spasmodic smile, as he drew Pleasance's arm within his, before she knew what he was about, and walked away with her, leaving the liveliest sensation and dismay behind them.

Rica Wyndham broke the spell. "General Protheroe," she said, "don't you think this is not a day for sitting still in the open air for five minutes? I am dying with cold, and even my poor horse is beginning to shiver. Let me have a canter."

The gallant General took the cue with the alacrity and intrepidity of a soldier, and complied at once with the young lady's request—Jane Douglas being under the necessity of riding on with the others, as if they fled from the thrills and shrugs and amazed tumult which the electric shock of her brother's wild words had occasioned.

Almost before the girl could think, the spectators of the scene, with their tell-tale faces, were left far behind. Amidst the familiar features of the Park, with their special conventionality, Jane would have been tempted to accuse her eyes and ears of grossly deceiving her, and her imagination of having conjured up an outrageously improbable incident, if she had not retained evidence to the contrary in the continued absence of her brother, and in the sight, when she chose to look over her shoulder, of Evans, the groom, still encumbered with the led horse.

The rapid riding hindered speaking. When the party at last slackened their pace, Rica Wyndham and General Protheroe, though one of them had experienced a sharp disappointment, fell immediately into the polite hypocrisy of speaking on entirely neutral and uninteresting topics.

But Jane Douglas was very young, and, as far as a girl of her position and prospects could be, very new to the world; and she seized the first opportunity, when General Protheroe rode aside for a moment to put his hand on his daughter-in-law's carriage door and exchange a few words with her, to adjure her friend, "What on earth can it mean, Rica? Archie could not be joking in such horribly bad taste—it would not be a bit like him—and he looked quite in earnest."

"I should leave the matter to him, dear, if I were you," replied Rica Wyndham in a lightly soothing, indifferent tone, admirably assumed. "Let him explain it as he pleases and when he pleases, or let him leave it unexplained. There are circumstances in which curiosity is dangerous and a tremendous

blunder, especially on the part of us girls. You are a dear little girl, Jane, and are not supposed to know anything of the world—no more am I, though I am older, and have been out for two seasons. All I know is, that we must be careful to preserve unimpaired the charming bloom of our ignorance."

Jane Douglas was not a fool. She understood that Rica implied that Jane's brother Archie had some secret which it would be no credit any more than it would be a satisfaction for him to divulge.

Jane's heart burnt hotly within her. She was sufficiently trained and tutored not to say straight out to Rica Wyndham that she, Jane, hated Rica for her speech; but Jane did hate Rica at the moment, when, with grave youthful dignity, not unbecoming, she attempted to rebuke her companion.

"You are quite mistaken, Rica, so far as my brother Archie is concerned. He has no secrets from mamma and me—at least,"—(for there smote upon Jane the recollection that Archie had certainly had a secret from his family within the last few months, but she managed to finish with unabated confidence and sisterly pride), "I am sure there is no act of Archie's which he might not proclaim before the whole world."

"I am glad to hear it," said Rica Wyndham, with a little additional curl of the fine lips that curled so naturally; "but I think you might be satisfied with having such a paragon of a brother, and not seek to quarrel with me on his behalf. Poor me! I confess I have not very much faith in paragons, perhaps less than in ordinary mortals like my brother Tom, who is good enough as brothers go, but who is certainly not calculated to diminish my unbelief."

CHAPTER XXXVII.—AN UNWIFELY WIFE.

ARCHIE DOUGLAS did not speak till he had taken Pleasance out of the Park gate close to them. Then he asked her, in a voice the agitation of which he could no longer restrain, to what place he should direct the cab which he was about to call, as they could not speak together in the public streets.

Pleasance, in addition to her other sources of distress, had become painfully conscious that she had been wrong in approaching him in the Park, and that he might have cause to reproach her for acting as she had done. She told him her address without resistance or reservation, and suffered him to put her into a cab and to enter it after her.

When they had driven off he leant forward and said, "Pleasance, is Mrs. Balls dead?"

Have you come to me?" and his voice was tremulous with feeling.

If Pleasance had cared to read his meaning, it might have been plain to her that her empire—widely removed from each other as she, as well as others, saw the two—could be restored by a single word. He was ready to forgive all the wounds inflicted on his pride and his love by her former obstinate rejection of him, and of his penitence for having deceived her, and by her spurning the advantages which other women would have prized.

But Pleasance did not speak the word. She said, sadly yet firmly, looking down because of the anguish that tugged at her heart-strings when her eyes met his, while she remained resolute not to put upon him a burden that he could not bear, or subject herself to a trial which she should not know how to suffer. "I have not come because I wanted you, Archie, I have not come to stay."

He was repelled and thrown back upon himself. It seemed to him from her words that she was there in sheer perversity to expose their unhappy position, and to thwart and torture him.

"Then what is your business with me?" he asked, leaning back and folding his arms to endure, while his whole tone and manner changed in her estimation to those of the grand seigneur—a change which appeared to put a world of different experiences, different motives, different passions and prejudices, between him and Pleasance.

"Is our marriage known to your people?" she asked him, with the simple, courageous directness which nothing could daunt or turn aside, though her heart might be broken. "I can understand that it was a great mistake for you as well as for me; but, unfortunately, that does not help us to put an end to it, and since that is true, the whole truth should be told. Don't you think so?"

She spoke quietly, so dispassionately as at once to chill and exasperate him.

"To stoop to concealment would not only be a great error which would increase every evil a thousand fold," she was remonstrating strongly, yet in a manner not entirely removed from that elder sister's or mother's fashion in which she had often spoken to him in happier circumstances—"it would be terribly unjust to others."

"To whom we are to serve as a warning, I suppose," he spoke with sharp irony. "Did you never think," he demanded, while a flush came over his face, "how you wrought to shame me, as you are doing this day?"

"No, no," she cried, in an agony of denial.

"Yes," he affirmed, with stern indignation. "Did you never consider how cruelly hard, well-nigh impossible, you made it for me to tell of the marriage to the friends to whom you would not accompany me, when we had quarrelled and parted on our very wedding day?"

"Still, if it had to be told," she said.

"You may rest satisfied," he exclaimed, with the passionate scorn of himself and her into which he had worked himself. "Tonight the foolish story will be over all London—all London that knows anything of me, and nothing of you."

He was thinking, while he spoke, of what had been to him the unapproachable attractions which had won him—ay, and which he was angrily conscious at this moment were as powerful as ever to subdue him.

"The concealment is at an end," he assured her; "but whether the end has been brought about with any regard to me and my share in the misfortune—whether I might not have been consulted, or even warned, as to the mode of the announcement—whether there might not have been some respect paid to my duty to my people, which would have led me to prepare them for the blow that must come unexpectedly upon them—I leave you to judge."

She listened half wistfully, half shrinkingly, to his hot taunts, and then she half rose. "Let me go," she implored him. "We are only making ourselves more miserable. Contentment between us can do no good, and is horrible. I thought we might have both seen what was for our mutual good—the best that can be for either of us—and consented to part, in a sort, friends. Since that is not to be—and perhaps we had better never have met again—let us part now."

"So be it," he said moodily, motioning her back to her seat. "I shall rid you of my company, if this is all that you have come up from the country to say to me, after a whole quarter of a year has passed. Can it be," he cried, a new and more heinous offence suggesting itself to his excited imagination, "that you could suspect because I kept silence, driven to it by your own conduct—that I should be false to such vows, however fruitless? Have you grossly insulted me by believing that of me? Base enough to be even criminal—was that what you thought me?"

"No, so help me," she pledged herself solemnly and despairingly. "It is idle speaking, if you doubt my word," for he had

made a gesture of incredulity; "but I did not believe it for an instant—I could not believe it, and I knew that, if the time ever came that you could be so miserable as to commit a great sin, it must have been your having had to do with me—your having suffered yourself to be beguiled into an acted lie, that could have tempted and driven you to the awful fall."

So far from being propitiated, the bare idea sent him nearly beside himself. "Pleasance," he said, uttering her name with fierce emphasis, "you have paid me back well for my error in imagining that you would be, after all, pleased to find that I had many advantages to lay at your feet, while I gloried, poor fool! in laying them there. In return, you have conceived me capable of such villainous treachery as it might drive mad the most miserable wretch bearing the name of man, only to be accused of."

"Oh! don't you see that we must part?" was all that she said in answer to his violence, writhing, and ringing her hands.

"As you will," he said, in sullen resentment, giving the driver a signal to stop, and then, as he opened the door, and was about to step out, half-blinded, into the tumult of the City, he realised that he was leaving her there unprotected, and far from her country village, with its familiar scenes and faces.

He turned round with his white, contracted face, from which the pleasant youthfulness had vanished, and said stiffly, "I am bound to see after your safety. You may think little of such an obligation, but as I am a man and a gentleman, it weighs upon me."

She hastened to give him what relief she could. "I am quite safe in a respectable inn close to the North-eastern Railway, which will take me home," she assured him eagerly, with a mixture of *naïveté* and sense. "You may inquire, if it will be a satisfaction to you," she added quickly.

It was as if she had said, "You are aware of the terms on which we stand. Our mutual inclination now, as well as your assurance when we parted, that you would not force me to fulfil obligations that I had entered upon without my knowledge, and to which I had no mind, will prevent you from attempting to alter these terms."

He bent his head, and leapt out on the pavement, disappearing the next moment among the passers-by, while the cab took Pleasance within sight of the Yorkshire Grey.

There entered into the old carriers' inn the most utterly jaded guest that Mrs.

Tovey, the old landlady, had ever beheld return from sight-seeing. She refused all refreshments too, and shut herself into her little room, causing Mrs. Tovey and her daughter, who were knowing in their respectability, sundry qualms lest they should have been mistaken, after all, in their conclusions. They feared that this fine, open-faced, quiet-spoken country girl, who called herself simply Pleasance Douglas, though she wore something like a marriage-ring on her finger, might prove to be one of those reckless outcasts, who carry bottles of laudanum in their travelling-bags, manage to kindle charcoal in strange bedrooms, or slip out and contrive to throw themselves over one of the city bridges, and are brought back hideous, dripping heaps to await inquests.

But Pleasance merely sat down on a chair, and took off her bonnet to lighten her aching head, which she hung, as she clasped her hands on her knees, and moaned to herself.

CHAPTER XXXVIII.—THE REPORT TO MRS. DOUGLAS.

"Oh, mamma, something dreadful has happened!" cried Jane Douglas impetuously, and without any preparation, entering her mother's private sitting-room in the house in Grosvenor Square.

Mrs. Douglas's room was marked by studied simplicity, and some elegance in the white muslin of its draperies, the number of fine water-colour paintings by good artists in water colours, Frederick Walker, Fripp, and Thomas, which adorned it, and the perfume of lily of the valley and violets which pervaded it. To the daughter of the house it was the dearest, prettiest room in it, just like mamma herself, who was so true and kind, while yet thoroughly refined and very clever, far, far cleverer than Jane, and almost—Jane thought—than Archie. Yet Archie had taken his degree with fair credit, and had even been a prizeman one proud year, down at dear old King's, while he was considered a reading-man, if only in a desultory, and not in a strictly classical fashion.

Jane herself, as she stood there in her riding-habit, was not at all like Archie, and was not so pretty for a woman as he was handsome for a man. Jane was like her father, the son of the Cumberland dalesman, the great manufacturer. Her complexion, instead of being dark, was very fair, with somewhat dead-coloured flaxen hair of that shade called *gris cendré*, to which the French are partial. Her face had a certain square-

ness, her very teeth were square in their slight projection over the nether lip. It was a face that showed honesty and affectionateness with some character and will—yet to be developed, but had little that was spirituelle or imaginative. Any claims to beauty which Jane Douglas possessed, depended on the high-bred look of her perfect training, and on the attraction which *gris cendré* in hair has in itself to a considerable section of the community, in addition to the delicately fair complexion which usually accompanies it.

Mrs. Douglas, as she came into the room before Jane had time to speak to her again, was like her son, except that she was little for a woman, while he was at least middle-sized for a man. She had been a very pretty woman, with a dark, fine little face, bearing unmistakable marks of an impressionable and intellectually fanciful nature—and this not merely in the quick dark eyes, but in the sensitive mouth, with its short upper lip, the small peaked chin, the clearly cut but slightly up-tilted nose with its flexible nostrils, the delicately pencilled flexible eyebrows, and the waviness and silkiness of the dark hair.

Mrs. Douglas, though she had a grown-up son and a daughter ready to come out, and though she had suffered from bad health—indeed perhaps because of that bad health—was still young-looking. For that matter she was one of those women who, never having owed anything to fresh and brilliant tints, and who retaining slenderness of figure, delicacy of outline, and above all susceptibility of temperament, never do look old, and preserve far on in life dainty, fascinating, personal charms. Doubtless this abiding youthfulness and mature loveliness were enhanced in Mrs. Douglas's case, by the fact that she was scrupulous in remembering the strict tale of her years, and the dignity of that advanced stage of matronhood which reckons a grown-up son and daughter as its chief treasures. She dressed in an exquisitely quiet sober fashion, with lace hanging about her head, softly matching the few streaks of grey in her hair, and shading her throat, and in gowns of rich, soft stuff—silk, or cashmere, black or grey or lilac, smoke-coloured or heather-coloured. Her ornaments, which supplied all the brilliance that the still sparkling eyes and speaking features lacked, to relieve the low tone of the picture, were rarely any other than a diamond-set locket containing her husband's hair, a bracelet with her children's portraits, and sapphire and opal rings, each, as she would tell, a cherished souvenir.

"You look heated, child, sit down and rest while you can," said Mrs. Douglas, in her sympathetic, slightly plaintive tones.

"Mamma," burst out Jane once more in her distinct, abrupt, rather highly-pitched, though well-modulated voice, "something terrible has happened."

"Good heavens, child, what? Nothing to your brother?" cried Mrs. Douglas, with a gasp, sitting down on the nearest seat, her hand on her heart, and growing very pale.

"I have frightened you, mamma," said Jane, remorsefully; "there is nothing wrong with Archie—with his health at least."

"What is it, then?" asked Mrs. Douglas, beginning to recover voice, breath, and colour. "My dear, I thought you had more sense," she could not help adding, expecting to hear some cock-and-bull story of a girlish misadventure.

"Well, but, mamma, it is dreadful," persisted Jane, very seriously; "wait till you hear. Just as Archie and Rica and I had turned into the Park on our ride, a woman came up so suddenly that she startled Lady Alice. Archie got down in an instant, I thought because he imagined that I was not able to manage for myself, but it seems the woman had business with him. A policeman wished to send her out of the middle of the Row, when, oh! mamma, Archie flew forward and prevented it, and called her his 'wife,' and 'Mrs. Douglas,' and went away with her, sending us on with General Protheroe, who came home with us. Rica asked him to come in, but I could not, and I was so thankful when he refused."

Mrs. Douglas had sat astounded, confounded, till Jane's last words, when she exclaimed with energy,—

"Impossible, Jane, you are speaking nonsense. Archie may have said something frank and familiar, he is—well, peculiar in his ideas, dear fellow, and apt to be too confiding, and to think all the world as single-hearted and enthusiastic as he is himself. He may even have said something which sounded to you very friendly, for I am afraid he is rash and imprudent, and has encouraged absolute intimacy in unsuitable quarters; but, 'wife,' or 'Mrs. Douglas,' never, Jane, never."

"Indeed, indeed, mamma, I am not mistaken," Jane was not to be shaken in her testimony; "of course I thought my ears were deceiving me, or that I must be going mad, but I looked round and saw everybody with the same expression. And Rica heard it, too, you can speak to her, mamma."

"You must be wrong—you cannot fail to be wrong," said Mrs. Douglas, with gathering agitation, clasping her hands tightly together. "Did you know the woman? Was she young or old? What did she look like?"

"I hardly saw her, but I am sure she must have been a young woman, else she could not have stepped out so quickly, or ventured so near the horses' feet. I have an impression she would have been nice-looking, only she was very shabbily dressed, much more shabbily than Cobbes" (naming her mother's maid) "would have walked out."

Mrs. Douglas, in spite of her declared unbelief, could not restrain a groan. And where was the use of restraint, if Jane had heard what she believed she had heard? and more than that, she would never be put past believing that she had heard it?

"My poor unhappy boy, if he has got into any miserable entanglement, such as I dreaded for him, so soon as I heard of his mad adventure, what can be done?" lamented his mother openly. "He has not been like himself since he came back and we went abroad. I have noticed his restlessness and his uncertain temper, very different from his old elastic spirits and cheery good-humour."

"But, mamma, it cannot be anything really bad," remonstrated Jane, "not in Archie. He has always been so good and kind. You remember that his tutor said there was not a steadier, more blameless young fellow in his college, and we were so proud because we knew that it was true. And when he is the head of the house down at Shardleigh, with so many people looking up to him and flattering him—I know they do, because they flatter me sometimes, so that they must flatter Archie ten times more; he is not a bit spoilt. Mamma, when I asked Rica what it could possibly mean"—Jane paused, and her fair complexion flashed scarlet with the culminating injury of the day—"she made me furious. I understood what she meant, though I have not even had Rica Wyndham's two seasons out—that Archie had done something wicked and shameful, which it was not for his sister and for other girls to hear." Mamma, how dared she say such a thing of Archie?" cried Jane passionately.

"My dear, you are worth a thousand Ricas," said her mother, taking her daughter's hands, drawing her face down and kissing it with a tender sigh. "Rica Wyndham is, for her age, the incarnation of worldliness. I could not understand what attraction, ex-

cept that of reverses, drew Archie to her!" exclaimed Mrs. Douglas with a momentary shade of satisfaction rising to the surface of her speech, speedily to sink down again in her trouble. "But to learn a lesson from these worldly people, we must speak no more of this incredible, wretched story till I have talked it over with Archie. I must speak to him face to face on the subject; it is far too terribly serious a matter to be passed over." She admitted, in a degree, the depth of her fear, even while she clung to her profession of incredulity. "There is no help for it." Mrs. Douglas sighed and twisted the rings nervously on her taper fingers, while she looked round almost with timidity for the help that was not to be found.

"Why should you not speak to him face to face?" inquired the much bolder, unsophisticated girl; "it must be much the best plan, and what Archie would like best. If you had any fault to find with me, anything to call me to account for, I should greatly prefer you to speak to me myself, and at once."

"There is a difference," alleged Mrs. Douglas, half impatiently, half with a faint smile on her tremulous lips. "Archie is a young man, and the master of Shardleigh, as you say. He is his own master, though he is also my son, and he has already asserted his right to take his own way in what he was so possessed as to regard his duty, poor fatherless, romantic, imprudent lad," observed his mother in a low parenthesis, in which there was a singular mixture of admiration and pity. "A young man will not brook to be taken to task like a girl; and the master of Shardleigh, though Archie is hardly conscious himself of the effect of his position upon him, is still less likely to bear being called in question and censured."

"But, mamma," urged Jane, returning to the charge, "even if Archie has been dreadfully foolish and wrong—since he ought to have consulted you—in marrying far beneath him, and in taking his wife from a humble station, to which, to be sure, papa once belonged—although it will be a great trial to us, and perhaps very disagreeable for a time, still it is not so very, very wrong, and beyond remedy. It is not as if he had done anything really bad, after which we should never have held up our heads again."

It will be seen from this speech that Jane Douglas was still, and that more from character than age, not beyond the stage of an *enfant terrible*. In fact her honest, matter-

of-fact brains, were undisturbed by imaginative anticipations and comparisons. She had already cudgelled out the conclusion that, as mamma herself must have made in her day a decided misalliance, except, indeed, in the matter of the fortune which papa had acquired—still, if money made the chief difference between Archie's case and that of his parents, then Jane, who had all her life been reaping the benefit of that money, as well as of her mother's gentle descent, could not see that Archie had been so much more guilty than his elders.

"My dear Jane, you know nothing about it," said her mother hastily, with her vexation beginning to get the better of her indulgence. "How should you, when you are a mere girl? I wish you would not say anything more to me about this matter. I know that you cannot help feeling keenly interested, and I appreciate your fidelity to your brother, my love; but you must leave me to meet him now. That is a trial enough in itself, and until I have got it over I cannot bear to discuss the subject even with you."

Thus dismissed, Jane went to her own room, greatly perplexed, and a little aggrieved and hurt; for she, as well as Archie, had been spoilt. It was hard for her to realise that there were at last to be secrets even more momentous than Archie's strange adventure among working men, between the three who had once formed a united household; and also that her mother could dispense with her daughter's sympathy and support in a question that concerned both of them so nearly.

CHAPTER XXXIX.—TALKING TO ARCHIE.

It would have been a trial for any mother to meet her son and require from him the explanation that Mrs. Douglas had to require from Archie. It was a special trial for Mrs. Douglas, because she was, with many good qualities, always impelled to a cautious, vacillating policy. She had managed in this manner to lose her authority over her son, and even to shake his respect for her, while she had retained his affection. Yet she was like him in many respects, particularly in her love of giving pleasure, and her shrinking from giving pain.

Mrs. Douglas was not intentionally double-minded or hypocritical, but she had the misfortune to have stronger sympathies than principles. She was carried away by her impulses a great deal farther than she had fixed convictions to confirm her progress, and thus she was continually falling a victim to

reaction, secretly retracing her steps, and seeking to balance her advances.

When she, the youngest daughter of a poor county family, had consented to marry a *nouveau riche* in the person of the great manufacturer, already the squire of Shardleigh, she had said with some amount of truth that she was not making a mere *mariage de convenance*. Her heart was in it. She was proud of the independence and energy which had enabled her husband to make his own fortune and found a family. She delighted in his plain, unaffected manliness.

Mrs. Douglas had enjoyed so much of a heart as to feel all this. But still it remained a fact that no woman had a livelier sense of the advantages of long descent and of generations of culture. She would never have renounced them for the sake of her husband, or become the wife of Archibald Douglas, the manufacturer, had he not also been the squire of Shardleigh.

And after Mrs. Douglas was the mistress of Shardleigh, though she avoided the bad taste of trying to sever her husband abruptly from his old business connections, and to set him at variance with his old friends, she made her delicate health, with the frequent necessity for her wintering abroad, the excuse for withdrawing him more and more from trade and manufactures. She contrived that he should see less and less of the Lancashire comrades and their wives, to whom she had always been, when she did meet them, perfectly gracious. She had by no means relished, though her husband had lived in blissful ignorance of the dislike—which its entertainer had been too much of a woman even to venture to own in so many words to herself—the stories that Mr. Douglas had been in the habit of refreshing himself and regaling his children, by telling them. He had loved to dwell on his primitive early home, his mother riding to market with her farm produce, and his own boyish ventures in trading.

In accordance with her inconsistent character, Mrs. Douglas had at first admired and encouraged in her son the gracious sentiment of common brotherliness, the large development of charity, and that strain of a romantic, chivalrous temperament, which had led him to indulge in dreams of enterprise, and especially of reform for the old sinning and erring, but always hopeful and always to be rescued world.

She had drawn back when she saw, too late, the extreme direction in which Archie's

tendencies were leading him—not to disquisition in Parliament, not to the trial of an allotment system, not to the furtherance of co-operation in trade, not even to the foundation of a Utopia; but to the absurd radicalism of establishing a practical acquaintance with men's needs and penalties, so as to enlighten himself by personal experience, and to establish a claim on his neighbour's confidence. And it was precisely where his mother stopped short that Archie Douglas went far beyond her.

To a woman like Mrs. Douglas the apprehension that Archie had clenched his alliance with the people by a low marriage; so utterly rash and ill-advised that even he recoiled from making it known, foreboded a terrible misfortune.

Yet she was sufficiently a good woman to have one comfort, though she had not acknowledged it to Jane—poor Janey! who was so presumptuous and silly in counting the cost. In her inmost heart she was proudly, almost tearfully, grateful for the knowledge that her boy, however fanatical and unfortunate, was out of the category and beyond the comprehension of a woman of Rica Wyndham's type. He was what his tutor had indicated as pure-minded as his sister; he could look his own mother in the face where every other woman in the world was concerned. This consciousness was a thing to be devoutly thankful for, while it was also a thing to be taken for granted in relation to Archie. But it existed somehow so deep down in her nature, and so far apart from ordinary worldly considerations, that she could not bring it up and dwell upon it so as to be reassured by it.

That reference which Jane had thrown out in the innocence of her heart to her father's origin had done no good. Mrs. Douglas knew, none better, that with all her husband's attainments, with all the man's large liberality of heart, which nobody had been more ready to grant than she, and in spite of the extraordinary business talents which had given him a special kind of distinction and power, she had always had to contend with the results of his early disadvantages.

If Archie had been so left to himself, so possessed as to take, in the madness of the moment, a low-born, low-bred wife, who would compromise him for the rest of his days, that wife could not be compared to his father. There was little chance of redeeming qualities being found in her. And Mrs. Douglas was not singular in this condemnation of Pleasance unseen and unheard.

What could Mrs. Douglas conjecture with regard to her son's choice, of which he was already ashamed, but that she had been, at the best, some barn-door beauty—coarse, rude, and hopelessly ignorant and narrow-minded?

In addition to every other source of trouble, Mrs. Douglas was hampered and stultified by the peculiar relations existing between her and her son. She had always been on terms of familiar affection with him, yet at the same time she had long accustomed herself to deal with him in all grave concerns by deputy. She would employ such friends as Mr. Selincourt—and her winning ways enabled her to command many allies in the most unlikely quarters; or she would appoint Mr. Woodcock, the confidential family lawyer, to remonstrate with Archie on his eccentric theories and practices. She had very seldom, from his boyhood, taken it upon her to tax him with an offence, and bring him to confess and make the best of it, as she now proposed to do. Her usual line of conduct had been induced partly by an uneasy semi-consciousness that Archie penetrated what was false and hollow in herself, partly by the exaggerated impression which she, a squire's daughter, held of the importance of her son's position as the young squire of Shardleigh, so that she could only treat him as a queen-mother would treat a reigning prince. But it had now become impossible to call in even the most honourable and trustworthy of councillors.

After Mrs. Douglas had given directions that her son should come to her immediately on his return to the house, her sensations, bodily and mental, were not to be envied. She sat growing chiller and chiller under her apprehensions, in her pretty, pleasant room which the sun had ceased to visit for the day, and where she had prevented a servant's coming to put fresh coals on the fire when she was about to hear Jane's story, so that the fire had been suffered to go out, and Mrs. Douglas could not have it rekindled lest Archie should enter in the middle of the process. Cold, watching, and trepidation were severe trials upon Mrs. Douglas's delicate organization, which had been cared for and petted in turn by parents, husband, and children.

Archie came straight home from his short interview with Pleasance, and went directly to his mother's room, when he was told that she wished to see him, as if he had been the most tractable son in England.

He knew, without the request which had

been made to him, that she must have heard something, and she knew that he must be so far prepared. That was some relief. There was no room left for finessing and going about the bush, to bring him of his own accord to the point. She might have been prompted to that, but it would have required an exercise of self-control and tact to which she felt she was at this moment unequal.

It was sufficient for mother and son to look into each other's pale, agitated faces. Mrs. Douglas gave up the elaborate programme which she had been striving to arrange, and addressed the culprit with a tender reproach in place of a guarded accusation.

"Can it be, Archie, that you have been in trouble, and your mother has not known it?"

He was sensibly touched—all the more so that he had just been wounded and stung to the quick by what he regarded as the obduracy rather than the infatuation of Pleasance.

"It is true, mother, that your kindness, however much I may have tried it, has never yet failed me," he said, speaking as much to himself as to her, sitting down on the couch beside her, even leaning his aching head for an instant caressingly against her shoulder.

"And it never shall fail you, Archie," said Mrs. Douglas, in one of her fervent asseverations. "But to enable me to help you, you must tell me what has happened."

"I mean to tell you all that there is to tell, and no thanks to me when I cannot withhold it any longer," said Archie, directing a passing sarcasm against himself, "but don't press me too much, particularly as neither you nor anybody else can help me."

"Don't say so, my dear boy, only let me hear the truth. I am sure of the truth from you," she hastened to add, when she observed him wince, "and we shall see what can be done."

"Nothing can be done," he said again, gloomily. "When I went off to see for myself what working-folks were like," he began his story in haste, and with undisguised bitterness, "I went so far as to marry a working girl without your knowledge. We were married in Saxford church, down in Suffolk. Selincourt saw it. He walked in by chance just after the ceremony, which he left me to publish. But don't break your heart, mother," he interrupted his statement sardonically, and as if he were affording grim compensation for the ejaculation of distress which Mrs. Douglas could not restrain at this confirmation of Jane's account, and of her own worst fears, "she will not trouble

you; she will have nothing to do with you and me—I have seen the last of her."

Mrs. Douglas drew back for the second time this day shocked and appalled. She had thought that the utmost which she had dreaded from Archie's extraordinary notions had come upon her, but she found that there might be more terrible evils to follow.

The solution of the difficulty which occurred to her, though it might eventually restore Archie's freedom, would be dearly bought, and was what Mrs. Douglas had not bargained for.

"Has it come to that?" she asked, scarcely knowing what she said in her dismay and grief, "that you have married a woman whom I cannot speak to, and whom you can never own? Oh! Archie, my poor lost boy, you who were so good, how could you be so left to yourself?"

He started up in a passion of denial.

"Mother, are you out of your senses? or do you want to drive me out of mine? She was the nearest to perfection of any woman I ever knew. It was because she was too good for me that she gave me up. Mother, why are such good women pitiless in their intolerance?" he asked half wistfully, half wrathfully.

"His foolish infatuation is not extinguished, after all," thought his mother pityingly, and with a shade of scorn for which she might forgive herself, since it was very painful to her. Still she owned the sense of a hideous burden removed from her. His good name, the name of his father and Jane, which she, too, bore, would not be dragged through the mire. Nevertheless the strait remained a grievous and disastrous strait.

"I cannot understand you, Archie," she preferred to say in a safely ambiguous and—though she did not intend it—in a colder protest.

"I mean," said Archie impatiently, almost savagely, "that she, a working woman, has no wish to be a lady—the less so that her father was a gentleman, since she had an awful experience in her youth of what a lady can do. She does not covet, she absolutely rejects, the distinction which such as you would grudge her. She married me as a working man. It was without her knowledge and against her will that I sought to raise her to my position. She will not consent to be raised. She cannot pardon my presumption, and the deception of which I was guilty."

It was an extraordinary story, and Mrs. Douglas, who might have listened to it, and

had a word to say for it, had it concerned any other than Archie, at once set on it the seal of disbelief which it was likely to receive from men and women of the world. Poor Archie! he was doubly taken in; he was just the fellow to have his confidence thoroughly abused. Of course the girl had known what she was about, and had seen through any flimsy disguise which the young squire of Shardleigh could think to assume.

Mrs. Douglas caught at the chance—something to break the blow, something to give time, a reprieve which might, she could not tell how, in the chapter of accidents, end by proving a deliverance.

She had already, while she was awaiting her son, taken the resolution, that if the suggestion of Archie's having made a secret low marriage should prove true, Mrs. Douglas knew only too well how fast such a disparaging rumour with regard to a young man in Archie Douglas's position spreads and establishes itself in London—then she would employ once more the excuse of her delicate health, to give up for the present season the idea of bringing out the only daughter, for which she had been detaining Archie, against his inclinations, in town. He had been wishing to break loose and go down on his own account to Shardleigh, or to start off again to the ends of the earth, for anything that she had been able to discover. She had learnt the secret of his discontent. As it was, she would go down to Shardleigh herself. Jane was young, her coming out might very well be delayed, she would not mind it; anything would be better than for her to make her entrance into society with a cloud hanging over her brother.

In the meantime the cloud might pass, at least the story would grow stale. It was all very sad and painful, and doubly distressing when one considered how brilliant Archie's prospects had been!

Here was the opportunity for diplomatic temporising which came so naturally and was so dear to Mrs. Douglas, not so much from inherent falseness as because she was radically weak in her cleverness.

Therefore Mrs. Douglas did not urge on Archie what, even according to her conception of the case, would have been the manliest and wisest course, reconciliation with his wife. She did not offer to become a mediator between them, with the end in view, of supporting him by countenancing his wife, and making the best that was left to be made of a bad business. She acquiesced—all the more unjustifiably because in her ignorance and

prejudice she had taken up an entire misconception of the facts—as if it were incontestable, that his wife would not assume her place, and that he was parted from her.

Mrs. Douglas's solitary suggestion was, "If there is such incompatibility between you and the girl you have made your wife, as to require your separation, something must be done for her. You have given her your name, she cannot be allowed to go on working for her support, it would not be consistent with your honour, Archie."

"She is welcome to all I have, for that matter, but I do not see how she is to be got to take a fraction of it. You do not know her, mother," he said, brusquely. He was secretly in a rage with his mother for not contradicting him, for not reminding him that marriage was binding and sacred, for not enjoining on him at least to try to be reconciled to Pleasance by all patient efforts to remove or lessen the obstacles between them, although he could not conceive that Mrs. Douglas's doing so would have been of any avail. In the middle of his indignation also, there was a strange tormenting sense of absurdity in the idea, that his mother should be solemnly begging him to make a provision for Pleasance, because she bore his name, and because it would not befit his duty and dignity to leave her to her own resources, and to let her want. And all the time he would have laid his whole possessions at her feet, and she would not listen.

"Archie, don't you think that you had better send for Mr. Woodcock, confide all to him, hear what he will say, and get him to make some arrangement?" Mrs. Douglas said farther, anxiously and earnestly.

Archie was disappointed in his mother, but he had known what he had to expect, and the disappointment was not very deep. Besides, it was swallowed up in a greater disappointment. He was a little contemptuous as well as disappointed. "You may send for whom you please," he said, ungraciously turning on his heel like the spoiled lad he had been, and putting a hasty end to the discussion which was gall and wormwood to him, "you may make what arrangements you think fit, I shall not interfere. There is her present address," and he put down a card on which he had written it, "only remember that she is not to be molested, or forced into any course that she does not choose, for any consideration with which I have to do."

There was nothing that his mother could have liked better, after the catastrophe which

had befallen Archie, than this arrangement. "My dear," she said, with affectionate emphasis, "I shall do the very best I can for you since you trust me, in this sad affair. I shall not only seek to do what is becoming on your part" (forgetting that he had just forbidden her to consider him), "I shall strive to judge what is best for the poor young woman's welfare. You hear that I am not blaming her, Archie."

"Better not, mother," he turned when he was at the door to say sternly, "for this is not merely the ordinary story where both parties are to blame—only the man is the more to blame; all the blame is mine."

CHAPTER XL.—MR. WOODCOCK'S ROVING COMMISSION.

MR. WOODCOCK was not an old family servant of the Douglasses, seeing that the great manufacturer had raised himself, and hereditary family servants were inadmissible in what was only the second generation. In a sense Mr. Woodcock was a servant to no man; he was a well-born, well-bred old lawyer, who was on perfect equality with all save the very highest of his clients. His father and grandfather before him had been law agents to the former owners of Shardleigh; and their valuable familiarity with its resources, had rendered the agency an heirloom of the firm which every new proprietor was likely for his own sake to acknowledge.

Archie Douglas's father had gladly availed himself of Mr. Woodcock's assistance, and had been on cordial terms with him. Thus the agent had a double interest in Archie—who had grown up under his own eye, and to some extent under his guidance, both as the son of his friend and as the young squire of Shardleigh.

Mr. Woodcock had a sort of fatherly regard for both of the young Douglasses, but upon the whole he was fondest of Archie, though he put most dependence on Jane. He had also a considerable liking for Mrs. Douglas while enduring some amount of provocation from her, and while retaliating by laughing at her civilly and in his sleeve—processes of which the lady was naturally unaware.

Mr. Woodcock, in appearance hale, handsome, white-haired, and ruddy—more like a country squire himself than a city man—was an acute, practical elderly gentleman, just turned sixty. He was not without a recollection of youthful aspirations of his own, which had not been strictly confined to the law courts; and he had a humorous side to his

nature, equivalent to an assurance of some amount of large-heartedness, however well kept in hand. He had heard many queer stories from clients in his day, and was prepared to receive any addition to his store without experiencing or expressing much surprise or emotion of any kind. It did cut him up a little that young Archie Douglas was the black sheep in this case; but Mr. Woodcock had already been in possession of premises which, according to his judgment, ought to have prepared him for the catastrophe.

Mr. Woodcock sat in Mrs. Douglas's room in the house in Grosvenor Place. He had been brought there for a very special private interview, and had heard her version of the story without interruption.

"So my friend Archie has gone and done it?" he asked, rather in a tone of regretful assent than as raising an objection, sitting nodding his head in distinct, emphatic nods.

It was a significant circumstance of the generation and of the people that neither Mrs. Douglas nor Mr. Woodcock entertained for a moment the slightest suspicion of Archie's perfect sincerity in his marriage, however little satisfaction he might have derived from it, and however reluctant he might have shown himself to make it known. All the reference which Mr. Woodcock made to this point, was, that he should communicate with Selincourt, and take a run down to the parish of Saxford, in order to see that the marriage was duly attested, for where a man like Douglas of Shardleigh was concerned, his lawyer must be particular.

"Well, madam," Mr. Woodcock was saying (he had an old-fashioned habit of addressing a lady as "madam"), "we might have expected it since those days when he would come off his pony in crossing Shard Common, to let the young village beggars have a ride; and above all since that outbreak a few months ago, when he would play Christopher Sly in a reverse fashion all his own. He has been badly bitten with philanthropy, and has had a pretty strong tinge of Christian socialism from his birth."

"But what is to be done?" asked Mrs. Douglas, concealing her impatience and annoyance at the old lawyer's coolness and apparent disposition to philosophize over the disaster under the languor which her delicacy of health and the effects of the blow she had received warranted.

"I should say this plunge would cure him," answered Mr. Woodcock promptly,

not without a sardonic twinkle in his eye. "There will be no more of even political see-sawing. He will be henceforth as stout a Tory, if there be such an animal left, as you, madam, can desire."

"Oh, what do his political opinions signify now?" Mrs. Douglas was driven to protest, in plaintive vexation. "It is the *fiasco* which the poor boy has made of his personal affairs that is the misery. Is it not hard when our boy's prospects were so brilliant, were they not? that he should contrive to mar them frightfully, and he barely five-and-twenty?"

"He has not done his prospects any good, certainly," admitted the adviser, still with professional wariness. "I am not at all sure that he has not earned his experience not to meddle in other people's affairs or to mix separate interests, at much too high a price."

"You may say so," said poor Mrs. Douglas, with a groan. "He might have married into any of the best families in the country; he had everything in his favour, everything to recommend him; or he might have remained single, at least while he had us to make a home for him at Shardleigh. It is grievous to think that his very singleness of heart and generosity—what made him so much better and dearer than other young men—have led him so far astray, and left him so easy a prey."

"The result is not a contradiction, but rather in natural sequence. My dear Mrs. Douglas, you are no worse off than your neighbours—I mean, of course, your neighbours who have highflying sons; only in Archie's case I should have expected the punishment—the rue, if you will have it so—to have taken a different form. I did think that he had sufficient brains and heart to cause him to make such a bargain as he could and would stick to, for better, for worse—and that, being what he is, his bargain would have stuck to him. My humble opinion agrees with yours so far, that what you call his goodness—and I have no reason to suppose that he is not the honest, hare-brained enthusiast we took him to be—should have been to this extent his safeguard. I cannot understand, and I confess I like least of all, this rapid mutual revulsion between the pair. I should not mind, as a lawyer, hearing the young woman's version of the story."

"That is just what we wish you to do," said Mrs. Douglas eagerly; "that is, we shall be thankful if you will have the goodness to go to her, and see if she will come to

terms—if she will consent to any arrangement that will be for Archie's credit and comfort—all the credit and comfort that are left to him, poor fellow. I am sure you will do me the justice to believe that I am very sorry for the young woman who has taken so mistaken a step."

"You will excuse me, madam, for doubting whether, when the Rubicon is passed, there can be any arrangement save one, that is for Archie's abiding credit," said Mr. Woodcock plainly. "I am sensible that it is my office to be a go-between, a 'redder,' as they call it in Scotland," allowed Mr. Woodcock, with a shrug of his shoulders, "but if the redder is to come between man and wife, I should prefer to speak to the man first. You will forgive me again, Mrs. Douglas, but I must trouble Archie with regard to my credentials."

"By all means," said Mrs. Douglas, with a courteous deference to the lawyer's scruples that would have concealed from most people a shade of stiffness in her consent. "Come back to dinner, and talk to Archie afterwards. You are privileged, and you have my authority to speak to him on the subject; but I am afraid that even you will find it a difficult and disagreeable task."

"Where is the task worthy of the name that is not both difficult and disagreeable?" demanded the old lawyer, rising gallantly to the encounter.

"She is utterly incapable of any stage-mother's villainy," reflected Mr. Woodcock, when the interview was at an end. "I have always thought her a good sort of woman and mother, so far as warring instincts and influences would let her. She is a production of high civilisation and of a certain amount of liberal, even kindly sentiment, grafted on class exclusiveness and self-indulgence. The best thing about her is that she makes no pretence of cynicism. But just because she is what she is, with a shaky moral backbone, and beset by a tendency to subtlety and finesse, she is not to be trusted in so delicate a matter. But there is more than Archie's credit to be considered—ah! she spoke the truth, the lad had fine prospects, which, if he could but have been sufficiently immoral to think chiefly of himself, he might have escaped making ducks and drakes of. There is the future of the property to think of. Even his sister's welfare is implicated; but no. I doubt that poor Archie, having contrived to make a low marriage—he should know best, and he is doing what he can to prove that he has found it dis-

There was a pause, and when the family friend spoke again, it was much more formally and briefly. "Am I to understand that your separation from your wife does not admit of a reconciliation?"

"It does not," said Archie, "since it lies with her, and not with me."

The admission confirmed Mr. Woodcock in his suspicion. "At the same time you propose to admit the marriage, and do not seek to have it annulled, if that were possible?" he asked again stiffly.

"It is not possible," declared Archie, sternly—"it is not possible from your own showing, however sorely the man or the woman may repent of it."

"Then I conclude that you are prepared to make a provision for the woman to whom you have given your name, and from whom you do not desire to take it. She cannot be left to herself or to other people for her support in the future. Her maintenance is not

only your obligation, it will be your wisest course to give her an interest in living peaceably and decorously apart from you."

"You may give her Shardleigh if you like, and if she will have it," broke in Archie.

This speech, with its impulsiveness and lavish generosity, was much more like the Archie of old, and it softened Mr. Woodcock, who was beginning to harden against the culprit sitting in youthful haggardness and wretchedness opposite him.

"Softly, my dear boy, that is out of the question. But there is the old dowager house down at Stone Cross, that is far enough away from Shardleigh and the rest of you, and is a quiet place. She might occupy that with a suitable allowance."

Mr. Woodcock could get nothing farther out of Archie than to let his wife have what Mr. Woodcock would, or rather what she would take. Archie would enter into no particulars, and vouchsafe no explanation.

THE COMMUNION-TABLE IN CHESTER CATHEDRAL.

"In the place where He was crucified there was a garden."—ST. JOHN xix. 41.

I.—INTRODUCTION.

LET no one suppose, because I avoid the word "Altar" in this paper, that I am about to enter into any of the questions of the day, which cause excitement in connection with Rubrics and Ritual. Whether in their triviality or in their seriousness such questions are quite out of harmony with the spirit of what I am writing here. It is indeed quite true that the word "Altar" was, under the combined action of Convocation and Parliament, carefully removed from our English Book of Common Prayer, and never reinstated; and that this change is significant. This fact, like other facts of the Prayer Book, has its claim on the loyalty of those who have solemnly given to it their adhesion; such a change too, deliberately made and deliberately retained, has of course, its connection with Doctrine; but such questions do not concern us here.*

In the eighty-second Canon of the Church of England it is directed that there is to be "a decent Communion-Table" in every

church. It was of course requisite that this condition should be fulfilled in the Choir of Chester Cathedral, as it now appears after prolonged and careful restoration. It is equally clear that this part of the furniture of the choir ought to be beautiful. In any case I think the word "decent" denotes something more than the mere absence of squalor and untidiness; and in a cathedral, which has marked features of elegance and dignity, I presume that it means something more than that which it would mean in an ordinary parish church. Rich wood-work, too, is a characteristic of this cathedral. Moreover, I have been very anxious that its decorative parts should, while consistent with one another and with the whole, be made subservient to purposes of instruction—and instruction harmonious with the Bible. And once more, I was desirous to escape, more or less, from those ecclesiastical and artistic ruts, which, as it seems to me, confine us too narrowly. Thus it occurred to me that a very useful suggestion might be furnished by the thought of a Garden in connection with the fact of the Crucifixion, and that the Holy Table in this cathedral might suitably receive its decoration from the forms

* I may be allowed to refer here to a paper in *GOOD WORDS* for 1873, by Dean Stanley, on "The Altar in Westminster Abbey." See also some remarks by the late Canon Kingsley at p. 330 of a paper on "Grottoes and Groves" in *GOOD WORDS* for 1871.

of the plants connected with our Saviour's Passion.

While these thoughts were in my mind, I unexpectedly obtained the help of a worker in art, who entered warmly into my feelings,* and, still more unexpectedly, obtained a gift of wood from Palestine, which adds extremely to the value of this part of our cathedral-choir, and, indeed, gives to it an interest, which, so far as I know, is not possessed by any other church in Christendom.† The top of the table is a very grand slab of oak from Bashan, the panels which present the surface-decorations are olive ‡ from the Holy Land, and the shafts at the angles are of cedar from

Lebanon. The different plants which form the subjects of ornamentation will be mentioned presently in order, and with such remarks as, I trust, may lead to serious, reverent, and thankful feelings. What has been found to one mind suggestive of religious thought may be similarly suggestive to other minds. These introductory paragraphs may conclude with a further reference to the general subject.

This general subject is found in those words of St. John that are prefixed to this article. "In the place where the Lord was crucified there was a Garden." Let me ask that particular attention may be given to the word *crucified*. We all associate the *entomb-*

The Communion Table in Chester Cathedral.

ment of our Lord with "a garden." And we cannot avoid this. The very "gardener" is mentioned by St. John in the account of what took place in the dim morning of the Resurrection.§ And to this point we shall come in due order before we close. But St. John is here speaking, not of the entombment, but of the crucifixion. It is not the

grave of Christ, but the cross of Christ, which is here connected with the "garden."

I very much doubt whether we are altogether correct in our popular conception of the place of the crucifixion, as made familiar to us in pictures,—which we are apt to imagine as a dreary, squalid, and cursed place, made dismal with bones and skulls. No doubt Golgotha denotes in some sense "a place of a skull," for this we are expressly told,* but probably this has reference to the form and appearance of the ground. At all events, it was the law and custom of the Jews, that the remains of the dead should be *buried*; and, on the other theory, we should

* Mr. G. F. Armitage, of Townfield House, Altrincham, has carved all the panels except one. The general structure of the Table, as well as of the Re-Table (designed by Sir Gilbert Scott) which surmounts it, is the work of Messrs. Farmer and Brindley.

† Mr. Henry Lee, of Sedgeley Park, near Manchester, generously gave me these woods, which he himself brought from Palestine.

‡ Some small portions of the wood of the Mount of Olives itself are also added in one part of the work.

§ John xx. 15.

* Matt. xxvii. 33.

no need why we should follow the exact order of those events. We are dealing with Poetry rather than Chronology: and Poetry, in its way, is quite as true as Chronology. The panels are so arranged as to exhibit on the front of the Communion Table, in combination with the Thorn, the Vine and the Wheat which indicate the Eucharist, while the northern end is representative of the Crucifixion, and the southern of the Entombment. Still it is desirable in the description to follow, on the whole, the correct sequence of events. It was after the Lord had instituted the Eucharist that He went with His disciples to Mount Olivet; and it was after the agony, under the olive-trees of that mount, that He was crowned with thorns. To these subjects we shall pass in due order. At this point we turn to the Vine and the Wheat.

There are many aspects of the Lord's Supper. Here we touch only one. But it is an advantage, that in contemplating it in this one aspect we are taken quite away from painful discussions, and led to dwell on the simplicity of this ordinance, as originally instituted. How the Church has suffered, and how individual souls have suffered, from the speculations and debates which have entangled and complicated the simplicity of Christ's institution!

"Bread and wine, which the Lord hath commanded to be received"—such are the words of the English Church Catechism—adapted to children, and adapted, no less, to those who are older. What a loving instruction there is for us in this simple institution! How evidently it is the same voice which speaks to us in the parables! The familiar products of the earth, the familiar results of human industry, the fair forms of vegetable growth, God's good gifts in nature for practical use—these are made the vehicles of the highest and most solemn teaching. The corn-field and the vineyard are thus ordained, by the most sacred appointment, to become to us a perpetual parable. To use the words which have been taken as a motto to this course of illustrative description, we have here again the Cross in the midst of a Garden: for we must remember that a garden, in the Jewish sense of the word, was not so much a place of flowers, for fragrance and beauty, as a place of cultivation, for utility and for the supply of the wants of life. The Cross, viewed in this connection, seems to associate the thought of Redemption with all our common industry, and with the daily domestic experience of every family in the world.

And here, too, we must pause for a moment to think of the great beauty of these outward forms of the vine and the corn-plant. Nature and Grace are in harmony together, and together they give suggestions to Art. There are at this time much doubt and debate concerning the decoration of our churches. We cannot make a mistake, as regards either taste or theology, if, while thinking of the cross of Christ, we make even a lavish use of these fair and familiar growths of our cultivated gardens, the vineyard and the corn-field, to which so Divine a consecration has been given.

"Corn and wine," in the language of Holy Scripture, is the expression used to denote all that is needed for support, for strength, and for prosperity. When Isaac blessed Jacob, supposing him to be Esau, he said, "God give thee of the dew of heaven, and the fulness of the earth, and plenty of corn and wine;" and when the agonized cry of intreaty came from Esau, the answer was, "Behold! with corn and wine have I sustained him."* In the Book of Deuteronomy, the general blessing of Moses on the Promised Land is this: "Israel shall dwell in safety alone: the fountain of Jacob shall be upon a land of corn and wine."† When spiritual blessing is contrasted in the Psalms with general worldly prosperity, the expression is: "Thou hast put gladness in my heart since the time when their corn and wine increased:"‡ and in one of the chapters of Jeremiah, which are now appointed to be read in our churches during Passion Week, the utter desolation of famine and weakness in Jerusalem is described by saying: "The children swoon in the streets of the city: they say to their mothers, Where is corn and wine?"§

All this sacred analogy of Scriptural language was surely in the mind of Christ when He said, "I am the true vine: without Me ye can do nothing:"|| and again (still referring to Himself): "Except a corn of wheat fall into the ground and die, it abideth alone; but if it die, it bringeth forth much fruit."¶ And, surely there is this (though also there is more than this) in the Eucharist. We see the Cross in the Garden, when we read the word of the institution: "As they did eat, Jesus took bread and blessed, and brake it and gave to them and said, This is my body. And He took the cup, and when He had given thanks, He said unto them, This is my

* Gen. xxvii. 28, 37.

† Ps. iv. 7.

‡ John xiv. 1, 5.

† Deut. xxxiii. 28.

|| Lam. ii. 11, 12.

¶ John xii. 24.

blood of the New Testament, which is shed for many. Verily I say unto you, I will drink no more of the fruit of the vine till I drink it new in the kingdom of God.—And when they had sung a hymn, they went out to the Mount of Olives.”*

Bread and Wine—That we may the better appreciate the large Biblical range of this expression, let us combine these notices of the Eucharist with a reference to that passage in the Book of Genesis, which is the first where that rich and comprehensive phrase occurs in the Scripture. It is the earliest mention, indeed, even of “bread,” though it must be added, with a melancholy remembrance of man’s infirmity and sin, that it is not the earliest mention of “wine.”† We are told that after Abram’s victory over the kings who had invaded his kinsman’s territory, “Melchizedek, king of Salem, brought forth bread and wine: and he was the priest of the most high God—and he blessed him and said, Blessed be Abram of the most high God, possessor of Heaven and Earth, and blessed be the most high God, which hath delivered thine enemies into thine hand; and Abram gave him tithes of all.”‡ It is a mysterious passage; but we have an echo of it in the Book of Psalms, where it is said that “Christ is a Priest for ever after the order of Melchizedek:”§ and this is again caught up and repeated in louder and more distinct tones in the Epistle to the Hebrews: || so that we see, without any doubt, in Melchizedek a type of Christ, and in this passage of the Book of Genesis a dim foreshadowing of what He is in relation to ourselves.

“He brought forth bread and wine.” Can we fail to see in this an anticipation of the Eucharist? And is not the rich meaning of this ordinance (or at least one part of this rich meaning) given to us in the very choice of those things in the outward world, which express to us prosperity, support, and strength? Nature itself interprets to us the grace of the sacrament.

“And Melchizedek blessed Abram.” And surely Christ blesses us with all spiritual blessing in every part of our lives, and especially in this sacred ordinance. “And Melchizedek blessed God,” who had given Abram the victory. And Christ, our Great High Priest, leads our praises for the victory which has been given to us. Let us not forget the conclusion. It is a conclusion

strictly in harmony with one of the closing prayers of our Communion Service. “Abram gave to Melchizedek tithes of all.” Let an offering go up to Him from everything that we have of wealth, of time, of opportunity, of talent, of the affection of the heart! “By Him let us offer the sacrifice of praise to God continually, that is, the fruit of our lips giving thanks to His name. To do good and to communicate forget not: for with such sacrifices God is well pleased.”**

IV.—THE MOUNT OF OLIVES.

It was remarked in an earlier part of these meditations that in the time of the Gospel History the palm-tree was cultivated in the gardens on the Mount of Olives. This must have caused a great difference in the aspect of certain parts of that high ridge of rounded hill on the east side of Jerusalem, as compared with the aspect which they wear now. The olives, indeed, from which it receives its name, are abundant there in our own day as they were always, and still remain a living link between the past and the present. But then there was a *combination* of cultivated trees which is now no longer to be seen; and when a breeze came over the hill, there was not only the grey rippling foliage of the olive, but the waving and rustling of the palm-leaves high over head.

And the same varied and beautiful combination of leaf and stem must have been common in other parts of Palestine. We saw that the palm-tree used to be abundant in that land of old; and the olive now grows freely in it everywhere. Almost every village has its grove of olives. But there is another combination which brought these two trees together, and which it is more to our purpose to adduce here. I mean *the combination of art*. I referred above to the sculpturing or palm-trees in the decoration of Solomon’s Temple. Now the wood that was used for this carving was, in one case at least, olive wood. This was in the doors at the entering in of the holiest place. “For the entering of the oracle he made doors of olive-tree . . . and he carved upon them carvings of cherubims and palm trees and open flowers, and overlaid them with gold, and spread gold upon the cherubims and the palm-trees.”† Thus the associations of sacred art bring together for us these two characteristic trees of Palestine. Moreover, the cherubims within the oracle were made of olive wood.‡ We are familiar now with the qualities of

* Mark xiv. 22—24.

† See Gen. ix. 20—25.

‡ 1 Kings vi. 23.

such wood for work of this kind—its fine hard grain, its charming colour: and artists dealt with it then as they deal with it now; so that here again, in this continued exertion of human industry and skill on the same material, we have a living link between the past and the present.

As to the use of olive wood in the case before our notice, it is enough to repeat what was said before, that all those panels on which are carved the representations of plants connected with our Saviour's Passion are of this material, and brought from Palestine. It should indeed be added that there are in the structure of this Communion Table some small fragments of olive wood from the Mount of Olives itself: nor must I forget that the beautiful cloth which rests on the Table is edged by a border of olive-leaves.

No tree is more closely associated than the olive with the history and civilisation of man. Our concern, however, with it here is in its *sacred* relations—and not simply in its general connection with Judæa and the Jewish people, though that too is a subject of deep religious interest—but with the most sacred relation of all, so that the Olive may be seen to have a place in that *Garden* which surrounds the *Cross*.

"In the place where the Lord was crucified, there was a garden:" and of this literal fact we have, so to speak, an anticipation in Gethsemane, which was on the slope of the Mount of Olives. It is from St. John that we learn that Gethsemane was a garden. With St. Matthew it is simply "a place called Gethsemane." St. Mark says, that "when they had sung a hymn they went out to the Mount of Olives." St. Luke adds something more, when he says that "He came out, and went, as He was wont, to the Mount of Olives:" but he does not name Gethsemane. Neither indeed does St. John; but he says, "When Jesus had spoken these words, He went forth with His disciples over the brook Kedron, *where was a garden*, into which He entered, and His disciples;" and he adds, "Judas also, which betrayed Him, knew the place, for Jesus oftentimes resorted thither with His disciples."*

It strikes us as remarkable that St. John only should tell us that the place of the agony was a garden, when we remember that he only says that "in the place where the Lord was crucified was a garden," and he only names "the gardener" in the account

of the Resurrection, and he only specifies the "branches of palm-trees" in describing the triumphal approach to Jerusalem down the descent of the Mount of Olives. There seems in St. John's reminiscences of these events, and in his feeling about them, a consistency in minute particulars which is worthy of note. It is not too much to say that the thought of a garden in connection with our Lord's sufferings was strongly impressed on this apostle's mind. We must remember also, that he was one of the three who were intimately associated with Christ in His agony under the shadow of these olive-trees of Gethsemane, and that none of the other Evangelists had this experience.* He seems, as it were, especially appointed to associate us with what he himself felt regarding the Saviour's sufferings, and the scenes by which these sufferings were surrounded.

We have at this moment before us just one point of all this solemn recollection in the mind and heart of St. John. Round Jerusalem, as round any city of considerable size, there must have been many gardens—many enclosed spots of ground, where flowers and fruits were tended, where palm-branches could be gathered, and where olive-trees were cultivated. One such place was Gethsemane. Here the agony took place. The shadow of the crucifixion came over our Saviour's soul, when He was in this place of calm repose and solemn beauty. The Passover moon was then at its full, and the flowers and foliage were pale and fair in the moonlight. What the agony of the soul of Christ was we cannot fully understand: but it must partly have been the anticipation of His death; and yet the scene around Him spoke of nothing but peace. The Cross was in a Garden. This juxtaposition of the utmost anguish of spirit with the delicate charm of nature and the solemnity of outward objects is not without its instruction for us; and it is consistent with the analogy, which, in connection with this work of art, we are endeavouring to trace.

The deeper thoughts connected with our Saviour's anguish must be left here untouched. For such impressions on the heart silent and solitary thought are the best opportunity. All that I have dared to give here is a frame of olive-leaves for the earnest prayer, "By Thine agony and bloody sweat: Good Lord, deliver us!"

SUNDAY EVENING READINGS.

III.—THE BIBLE.

THE possession of one single copy of God's Word, in any one room in our house, brings with it a very solemn responsibility. Every one of God's gifts carries with it a corresponding responsibility. To be possessed of power or influence; to be blessed with intellectual vigour and strength; to be possessed of leisure, or of comfortable means, or of opportunities of doing good to our fellow-creatures—to be possessed of any one of these things brings with it a very real and serious danger. The gift must be used, or it will become a curse; the talent must be employed, or it will condemn us at last!

And so to possess just one Bible, a little volume which cost us perhaps a few shillings, or only a few pence, is really a matter which ought not to be lightly esteemed by any. To have just one Bible, lying on our table at home, to see it, then, day after day, to be able to read it day after day, to be able to store up in our minds the words of truth, of wisdom, and of affection which it contains—this, I say, is a gift, a privilege of unspeakable importance, and it brings with it a serious responsibility.

For what is the Bible? It is a book, or rather it is a collection of books, which reveals to us, as no other book has ever done, something of the nature, the ways, the will—something of the mighty purposes of that Almighty Being to whom we have given the name of God. The Bible is the solemn message of the Eternal Father, to us His ignorant, wayward children. It is the inspired record of God's dealings with man, and of man's dealings with God in the wonderful past. The Bible contains God's thoughts, God's messages, God's warnings, God's promises, dictated by His love and power, but written down by human instrumentality, and clothed in human language. The kernel is divine, though the shell be human. The spirit is heavenly, though the letter be earthly.

Or take another view of the matter. This life of ours is a pilgrimage. We are slowly and laboriously groping our way through the toils and troubles of life, looking for and hastening unto a better, a nobler, a purer life than any which we can live here. We want a light to guide our steps. We need something to show us the right and the true path, amidst the confusing labyrinth of earthly tracks, and the discordant noise of earthly cries. The Bible is the guide-book which

God has given to us to show us the way to heaven. The Psalmist realised this more than three thousand years ago, when he wrote those words, "Thy word is a lamp unto my feet." Happy are they who feel and understand this; blessed are they who value and use this lamp!

And, then, let us consider what the Bible contains. It contains, as I have already said, an account of God's dealings with man, and of man's dealings with God. First, we have a record of God's personal dealings with the patriarchs of the human race. We are told how that He gave personal instructions and promises to Adam, to Noah, to Abraham, to Moses, to Joshua. Then, next, we have an account of His dealings with His own chosen people; their going down into Egypt, their deliverance from the tyrant's power, their wanderings in the wilderness, their ultimate possession of the Promised Land. Then, also, we have the giving of that magnificent code of moral laws, which is even now binding on us Christians; that moral law which is the eternal proof and sign of God's great love to us, that moral law, which is no set of arbitrary rules, and meaningless regulations, but which marks out for us the path of holiness and obedience, the path of purity and love, the only path which will take us at last to the very presence of the all holy God. Then, passing on, we read how God punished His people for their rebellion and their sin, how at last He sent them into slavery and almost destroyed them as a nation. Then we come to the poetical books of the Old Testament, the grand imagery and the majestic language of the Book of Job, the tender, heart-stirring words of the Psalms—words which find an echo in every spiritual heart, words which fit in so well with our ever-varying moods and circumstances, whether of sadness or joy, whether of prosperity or adversity. Then, lastly, we have the noble words of the Prophets, their passionate denunciations of wickedness, their glorious declarations of coming joy, their earnest advocacy of spiritual, heart-felt religion, their fiery attacks upon merely formal religion, the mechanical recitation of prayers, the mechanical offering of sacrifices and keeping of feasts.

Then we turn to the New Testament; and here we find four separate biographies of the grandest and the noblest man who has ever walked this earth; four separate biographies

of Him who was perfect God, as well as perfect man, and who lived and who died, both to be to us a sacrifice for sin, and also an example of a perfect, a holy, an absolutely spotless life.

Then, again, we have, first, the doings, and, secondly, the writings of some of the Saviour's noblest followers and most intimate friends. We have the passionate appeals and the elaborate arguments of St. Paul, the earnest, practical words of St. Peter, the strong common-sense of St. James, and the loving, affectionate exhortations of St. John. The whole book is worthily concluded by a magnificent series of visions, a magnificent array of prophecies, which speak to us of the final triumph of good over evil, of God over Satan; the final triumph of all God's redeemed people, their endless rest, their endless blessedness, in the new heavens and the new earth, which His love and His power is preparing for them as their everlasting home.

Let us observe, then, lastly, the wonderful variety of this book. In one place we have glorious descriptions of the power, the greatness, the goodness of God; in another place we have noble portraits of some of the grandest of His servants, some of the greatest heroes of the human race. In one passage

we have strains of the tenderest poetry, in another the sternest denunciations of hypocrisy, the most crushing onslaught upon vice and sin. If we are sad and disheartened, here we can find promises of endless love and guidance; if we are languid and weary, we can solace ourselves with prophecies of coming glory, and of endless rest; if our sins are a burden to us, here is the *one* way pointed out by which to obtain pardon, the *one* fountain opened for sin and uncleanness; if we are mourning the departure of dear friends who have finished their course here on earth, we are told how they rest from their labours, how that they are safe under God's care, and in God's hands. If we are thinking with dread and alarm about our own departure, fearing the advent of the silent messenger, are there not promises of God's presence and of God's love in that most trying and solemn hour? "When thou passest through the waters, I will be with thee, and through the floods, they shall not overflow thee."

This is a book for all seasons, for all ranks, for all ages, for all circumstances. It is God's gift to us, to show us the way to everlasting life.

E. V. HALL.

SONNET.

ON A FOREIGN WAR-SHIP'S SALUTE TO THE QUEEN'S STANDARD AT
OSBORNE, 1875.

BY THE MARQUIS OF LORNE.

WITH their deep tones, monotonous and slow,
The cannons' voices roll along the sea;
But 'tis in reverence, and to work no woe,
Those sounds here strike the shore, and onward flee
Past the oak woods, that climb the grassy lea,
To strike thy terraces, and palace fair,
With stately salutation; offered thee
Who of these potent realms the crown dost wear.
So to the fabric of our future fame,
Set in the green oak of our nation's might,
Shall History's voice, with measured praise, proclaim
Thy life-long love of justice and of right;
And the good era that thy reign hath been;
To hail thee, reverently, Victoria, Queen.

THE LAUREL BUSH.

An Old-fashioned Love Story.

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

PART IV.

THE fly was already at the door, and Miss Williams, with her small luggage, would in five minutes have departed, followed by the good wishes of all the household, from Miss Maclachlan's school to her new situation, when the postman passed and left a letter for her.

"I will put it in my pocket and read it in the train," she said, with a slight change of colour. For she recognised the handwriting of that good man who had loved her, and whom she could not love.

"Better read it now. No time like the present," observed Miss Maclachlan.

Miss Williams did so. As soon as she was fairly started, and alone in the fly, she opened it; with hands slightly trembling, for she was touched by the persistence of the good rector, and his faithfulness to her, a poor governess, when he might have married, as they said in his neighbourhood, "anybody." He would never marry anybody now—he was dying.

"I have come to feel how wrong I was," he wrote, "in ever trying to change our happy relations together. I have suffered for this—so have we all. But it is too late for regret now. My time has come. Do not grieve yourself by imagining it has come the faster through any decision of yours, but by slow inevitable disease, which the doctors have only lately discovered. Nothing could have saved me. Be satisfied that there is no cause for you to give yourself one minute's pain." (How she sobbed over those shaky lines, more even than over the newspaper lines which she had read that sunshiny morning on the shore!) "Remember only, that you made me very happy—me and all mine—for years; that I loved you, as even at my age a man can love; as I shall love you to the end, which cannot be very far off now. Would you dislike coming to see me just once again? My girls will be so very glad, and nobody will remark it, for nobody knows anything. Besides, what matter? I am dying. Come if you can, within a week or so; they tell me I may last thus long. And I want to consult with you about my children. Therefore I will not say good-bye now, only good night, and God bless you."

But it was good-bye, after all. Though

XVII—43

she did not wait the week; indeed, she waited for nothing, considered nothing, except her gratitude to this good man—the only man who had loved her, and her affection for the two girls, who would soon be fatherless; though she sent a telegram from Brighton to say she was coming, and arrived within twenty-four hours, still—she came too late.

When she reached the village she heard that his sufferings were all over; and a few yards from his garden wall, in the shadow of the churchyard lime-tree, the old sexton was busy re-opening, after fourteen years, the family grave, where he was to be laid beside his wife the day after to-morrow. His two daughters, sitting alone together in the melancholy house, heard Miss Williams enter, and ran to meet her. With a feeling of nearness and tenderness such as she had scarcely ever felt for any human being, she clasped them close, and let them weep their hearts out in her motherly arms.

Thus the current of her whole life was changed; for, when Mr. Moseley's will was opened, it was found that, besides leaving Miss Williams a handsome legacy, carefully explained as being given "in gratitude for her care of his children," he had chosen her as their guardian, until they came of age, or married, entreating her to reside with them and desiring them to pay her all the respect due to "a near and dear relative." The tenderness with which he had arranged everything, down to the minutest points, for them and herself, even amidst all his bodily sufferings, and in face of the supreme hour—which he had met, his daughters said, with a marvellous calmness, even joy—touched Fortune as perhaps nothing had ever touched her in all her life before. When she stood with her two poor orphans beside their father's grave, and returned with them to the desolate house, vowing within herself to be to them, all but in name, the mother he had wished her to be, this sense of duty—the strange new duty which had suddenly come to fill her empty life—was so strong, that she forgot everything else—even Robert Roy.

And for months afterwards—months of anxious business, involving the leaving of the Rectory, and the taking of a temporary house in the village, until they could decide

where finally to settle—Miss Williams had scarcely a moment or a thought to spare for any beyond the vivid present. Past and future faded away together, except so far as concerned her girls.

"Whatsoever thy hand findeth to do, do it with thy might," were words which had helped her through many a dark time. Now, with all her might, she did her motherly duty to the orphan girls, and as she did so, by-and-by she began strangely to enjoy it, and to find also not a little of motherly pride and pleasure in them. She had no time to think of herself at all, or of the great blow which had fallen, the great change which had come, rendering it impossible for her to let herself feel as she had used to feel, dream as she used to dream, for years and years past. That one pathetic line,—

"I darena think o' Jamie, for that wad be a sin,"

burnt itself into her heart, and needed nothing more.

"My children! I must only love my children now," was her continual thought, and she believed she did so.

It was not until spring came, healing the girls' grief as naturally as it covered their father's grave with violets and primroses, and making them cling a little less to home and her, a little more to the returning pleasures of their youth, for they were two pretty girls, well-born, with tolerable fortunes, and likely to be much sought after;—not until the spring days left her much alone, did Fortune's mind recur to an idea which had struck her once, and then been set aside, to write to Robert Roy. Why should she not? Just a few friendly lines, telling him how, after long years, she had seen his name in the papers; how sorry she was, and yet glad—glad to think he was alive and well, and married; how she sent all kindly wishes to his wife and himself, and so on. In short, the sort of letter that anybody might write or receive, whatever had been the previous link between them.

And she wrote it, on an April day, one of those first days of spring which make young hearts throb with a vague delight, a nameless hope; and older ones—but is there any age when hope is quite dead? I think not, even to those who know that the only spring that will ever come to them will dawn in the world everlasting.

When her girls, entering, offered to post her letter, and Miss Williams answered gently that she would rather post it herself, as it required a foreign stamp, how little they

guessed all that lay underneath, and how, over the first few lines, her hand had shaken so that she had to copy it three times. But the address, "Robert Roy, Esquire, Shanghai"—all she could put, but she had little doubt it would find him—was written with that firm clear hand which he had so often admired, saying he wished she could teach his boys to write as well. Would he recognise it? Would he be glad or sorry, or only indifferent? Had the world changed him? or, if she could look at him now, would he be the same Robert Roy—simple, true, sincere, and brave—every inch a man and a gentleman?

For the instant the old misery came back; the sharp, sharp pain; but she smothered it down. His dead child—his living, unknown wife—came between, with their soft ghostly hands. He was still himself; she hoped, absolutely unchanged; but he was hers no more. Yet, that strange yearning, the same which had impelled Mr. Moseley to write and say, "Come and see me before I die," seemed impelling her to stretch a hand out across the seas—"Have you forgotten me? I have never forgotten you." As she passed through the churchyard on her way to the village, and saw the rector's grave lie smiling in the evening sunshine, Fortune thought what a strange lot hers had been. The man who had loved her, the man whom she had loved, were equally lost to her; equally dead and buried. And yet she lived still—her busy, active, and not unhappy life. It was God's will, all; and it was best.

Another six months went by, and she still remained in the same place, though talking daily of leaving. They began to go into society again, she and her girls, and to receive visitors now and then: among the rest, David Dalziel, who had preserved his affectionate fidelity even when he went back to college, and had begun to discover somehow that the direct road from Oxford to everywhere, was through this secluded village. I am afraid Miss Williams was not as alive as she ought to have been to this fact, and to the other fact that Helen and Janetta were not quite children now; but she let the young people be happy, and was happy with them, after her fashion. Still, hers was less happiness than peace; the deep peace which a storm-tossed vessel finds when kindly fate has towed it into harbour; with torn sails and broken masts, maybe, but still safe, never needing to go to sea any more.

She had come to that point in life when

"THE LAUREL BUSH."

we cease to be "afraid of evil tidings," since nothing is likely to happen to us beyond what has happened. She told herself that she did not look forward to the answer from Shanghai, if indeed any came; nevertheless, she had ascertained what time the return mail would be likely to bring it. And, almost punctual to the day, a letter arrived with the postmark, "Shanghai." Not his letter, nor his handwriting at all. And besides, it was addressed to "*Mrs. Williams.*"

A shudder of fear, the only fear which could strike her now—that he might be dead—made Fortune stand irresolute a moment: then go up to her own room before she opened it.

"MADAM,—I beg to apologize for having read nearly through your letter before comprehending that it was not meant for me, but probably for another Mr. Robert Roy, who left this place not long after I came here, and between whom and myself some confusion arose, till we became intimate, and discovered that we were most likely distant, very distant cousins. He came from St. Andrews, and was head clerk in a firm here, doing a very good business in tea and silk, until they mixed themselves up in the opium trade, which Mr. Roy, with one or two more of our community here, thought so objectionable that at last he threw up his situation and determined to seek his fortunes in Australia. It was a pity, for he was in a good way to get on rapidly; but everybody who knew him agreed it was just the sort of thing he was sure to do, and some respected him highly for doing it. He was indeed what we Scotch call 'weel respectit' wherever he went. But he was a reserved man: made few intimate friends, though those he did make were warmly attached to him. My family were; and though it is now five years since we have heard anything of or from him, we remember him still."

Five years! The letter dropped from her hands. Lost and found, yet found and lost. What might not have happened to him in five years? But she read on, dry-eyed; women do not weep very much or very easily at her age.

"I will do my utmost, madam, that your letter shall reach the hands for which I am sure it was intended; but that may take some time, my only clue to Mr. Roy's whereabouts being the chance that he has left his address with our branch house at Melbourne. I cannot think he is dead, because such tidings pass rapidly from one to another

in our colonial communities, and he was too much beloved for his death to excite no concern.

"I make this long explanation because it strikes me you may be a lady, a friend or relative of Mr. Roy's, concerning whom he employed me to make some inquiries, only you say so very little—absolutely nothing—of yourself in your letter, that I cannot be at all certain if you are the same person. She was a governess in a family named Dalziel, living at St. Andrews. He said he had written to that family repeatedly, but got no answer, and then asked me, if anything resulted from my inquiries, to write to him to the care of our Melbourne house. But no news ever came, and I never wrote to him, for which my wife still blames me exceedingly. She thanks you, dear madam, for the kind things you say about our poor child, though meant for another person. We have seven boys, but little Bell was our youngest, and our hearts' delight. She died after six hours' illness.

"Again begging you to pardon my unconscious offence in reading a stranger's letter, and the length of this one,

"I remain your very obedient servant,

"R. ROY.

"P.S.—I ought to say that this Mr. Robert Roy seemed between thirty-five and forty, tall, dark-haired, walked with a slight stoop. He had, I believe, no near relatives whatever, and I never heard of his having been married."

Unquestionably Miss Williams did well in retiring to her chamber and locking the door before she opened the letter. It is a mistake to suppose that at thirty-five or forty—or what age?—women cease to feel. I once was walking with an old maiden lady, talking of a character in a book. "He reminded me," she said, "of the very best man I ever knew, whom I saw a good deal of when I was a girl;" and to the natural question, was he alive, she answered, "No; he died while he was still young." Her voice kept its ordinary tone, but there came a slight flush on the cheek, a sudden quiver over the whole withered face—she was some years past seventy—and I felt I could not say another word.

Nor shall I say a word now of Fortune Williams, when she had read through and wholly taken in the contents of this letter.

Life began for her again—life on a new and yet on the old basis; for it was still

waiting, waiting—she seemed to be among those whose lot it is to “stand and wait” all their days. But it was not now in that absolute darkness and silence which it used to be. She knew that in all human probability Robert Roy was alive still somewhere, and hope never could wholly die out of the world so long as he was in it. His career too, if not prosperous in worldly things, had been one to make any heart that loved him content—content and proud. For if he had failed in his fortunes, was it not from doing what she would most have wished him to do—the right, at all costs? Nor had he quite forgotten her, since even so late as five years back he had been making inquiries about her. Also, he was then unmarried.

But human nature is weak, and human hearts are so hungry sometimes.

“Oh, if he had only loved me, and told me so!” she said sometimes, as piteously as fifteen years ago. But the tears which followed were not, as then, a storm of passionate despair—only a quiet, sorrowful rain.

For what could she do? Nothing. Now, as ever, her part seemed just to fold her hands and endure. If alive, he might be found some day; but now she could not find him—Oh, if she could! Had she been the man and he the woman—nay, had she been still herself, a poor lonely governess, having to earn every crumb of her own bitter bread, yet knowing that he loved her, might not things have been different? Had she belonged to him, they would never have lost one another. She would have sought him, as Evangeline sought Gabriel, half the world over.

And little did her two girls imagine as they called her downstairs that night, secretly wondering what important business could make “Auntie” keep tea waiting fully five minutes, and set her after tea to read some of the “pretty poetry,” especially Longfellow’s, which they had a fancy for,—little did they think, those two happy creatures, listening to their middle-aged governess, who read so well that sometimes her voice actually faltered over the lines, how there was being transacted under their very eyes a story which in its “constant anguish of patience” was scarcely less pathetic than that of Acadia.

For nearly a year after that letter came, the little family of which Miss Williams was the head, went on in its innocent quiet way, always planning, yet never making a change, until at last fate drove them to t.

Neither Helen nor Janetta were very healthy girls, and at last a London doctor gave as his absolute fiat that they must cease to live in their warm inland village, and migrate, for some years at any rate, to a bracing seaside place.

Whereupon David Dalziel, who had somehow established himself as the one masculine adviser of the family, suggested St. Andrews. Bracing enough it was, at any rate: he remembered the winds used almost to cut his nose off. And it was such a nice place too—so pretty, with such excellent society. He was sure the young ladies would find it charming. Did Miss Williams remember the walk by the shore, and the golfing across the Links?

“Quite as well as you could have done, at the early age of seven,” she suggested, smiling. “Why are you so very anxious we should go to live at St. Andrews?”

The young fellow blushed all over his kindly eager face, and then frankly owned he had a motive. His grandmother’s cottage, which she had left to him, the youngest and her pet always, was now unlet. He meant perhaps to go and live at it himself, when—when he was of age and could afford it; but in the meantime he was a poor solitary bachelor; and—and—

“And you would like us to keep your nest warm for you till you can claim it? You want us for your tenants, eh, David?”

“Just that. You’ve hit it. Couldn’t wish better. In fact, I have already written to my trustees to drive the hardest bargain possible.”

Which was an ingenious modification of the truth, as she afterwards found; but evidently the lad had set his heart upon the thing. And she?

At first she had shrunk back from the plan with a shiver almost of fear. It was like having to meet face to face something—some one—long dead. To walk among the old familiar places, to see the old familiar sea and shore, nay, to live in the very same house, haunted, as houses are sometimes, every room and every nook, with ghosts—yet with such innocent ghosts—Could she bear it?

There are some people who have an actual terror of the past—who the moment a thing ceases to be pleasurable, fly from it, would willingly bury it out of sight for ever. But others have no fear of their harmless dead—dead hopes, memories, loves—can sit by a grave-side, or look behind them at a dim spectral shape, without grief, without

dread, only with tenderness. This woman could.

After a long wakeful night, spent in very serious thought for every one's good, not excluding her own—since there is a certain point beyond which one has no right to forget oneself, and perpetual martyrs rarely make very pleasant heads of families—she said to her girls next morning, that she thought David Dalziel's brilliant idea had a great deal of sense in it; St. Andrews was a very nice place, and the cottage there would exactly suit their finances, while the tenure upon which he proposed they should hold it (from term to term) would also fit in with their undecided future; because, as all knew, whenever Helen or Janetta married, each would just take her fortune and go, leaving Miss Williams with her little legacy, above want certainly, but not exactly a millionaire.

These and other points she set before them in her practical fashion, just as if her heart did not leap—sometimes with pleasure, sometimes with pain—at the very thought of St. Andrews, and as if to see herself sit daily and hourly face to face with her old self, the ghost of her own youth, would be a quite easy thing.

The girls were delighted. They left all to Auntie, as was their habit to do. Burdens naturally fall upon the shoulders fitted for them, and which seem even to have a faculty for drawing them down there. Miss Williams's new duties had developed in her a whole range of new qualities, dormant during her governess life. Nobody knew better than she how to manage a house and guide a family. The girls soon felt that Auntie might have been a mother all her days, she was so thoroughly motherly; and they gave up everything into her hands.

So the whole matter was settled, David rejoicing exceedingly, and considering it "jolly fun," and quite like a bit out of a play, that his former governess should come back as his tenant, and inhabit the old familiar cottage.

"And I'll take a run over to see you as soon as the long vacation begins, just to teach the young ladies golfing. Mr. Roy taught all us boys, you know; and we'll take that very walk he used to take us, across the Links and along the sands to the Eden. Wasn't it the river Eden, Miss Williams? I am sure I remember it. I think I am very good at remembering."

"Very."

Other people were also "good at remem-

bering." During the first few weeks after they settled down at St. Andrews, the girls noticed that Auntie became excessively pale, and was sometimes quite "distract" and bewildered-looking, which was little wonder, considering all she had to do and to arrange. But she got better in time. The cottage was so sweet, the sea so fresh, the whole place so charming. Slowly Miss Williams's ordinary looks returned—the "good" looks which her girls so energetically protested she had now, if never before. They never allowed her to confess herself old by caps or shawls, or any of those pretty temporary hindrances to the march of Time. She resisted not; she let them dress her as they pleased, in a reasonable way, for she felt they loved her; and as to her age, why, *she* knew it, and knew that nothing could alter it, so what did it matter? She smiled, and tried to look as nice and as young as she could, for her girls' sake.

I suppose there are such things as broken or breaking hearts, even at St. Andrews, but it is certainly not a likely place for them. They have little chance against the fresh exhilarating air, strong as new wine; the wild sea-waves, the soothing sands, giving with health of body wholesomeness of mind. By-and-by the busy world recovered its old face to Fortune Williams—not the world as she once dreamed of it, but the real world, as she had fought through it all these years.

"I was ever a fighter, so one fight more!" as she read sometimes in the "pretty" poetry her girls were always asking for—read steadily, even when she came to the last verse in that passionate "Prospect":—

"Till; sudden, the worst turns the best to the brave,
The black minute's at end:
And the elements rage, the fiend voices that rave
Shall dwindle, shall blend,
Shall change, shall become first a peace, then a joy,
Then a light—then thy breast,
O thou soul of my soul! I shall clasp thee again,
And with God be the rest!"

To that life to come—during all the burden and heat of the day (no, the afternoon, a time, faded, yet hot and busy still, which is often a very trying bit of woman's life) she now often begun yearningly to look. To meet him again, even in old age, or with death between, was her only desire. Yet she did her duty still, and enjoyed all she could, knowing that one by one the years were hurrying onwards, and the night coming, "in which no man can work."

Faithful to his promise, about the middle of July David Dalziel appeared, in overflowing

spirits, having done very well at college. He was such a boy still, in character and behaviour; though—as he carefully informed the family—now twenty-one and a man, expecting to be treated as such. He was their landlord too, and drew up the agreement in his own name, meaning to be a lawyer, and having enough to live on—something better than bread and salt, “till I can earn a fortune, as I certainly mean to do, some day.”

And he looked at Janetta, who looked down on the parlour carpet—as young people will. Alas! I fear that the eyes of her anxious friend and governess were not half wide enough open to the fact that these young folk were no longer boys and girls, and that things might happen—in fact, were almost certain to happen—which had happened to herself in her youth—making life not quite easy to her, as it seemed to be to these two bright girls.

Yet they were so bright, and their relations with David Dalziel were so frank and free—in fact, the young fellow himself was such a thoroughly good fellow, so very difficult to shut her door against, even if she had thought of so doing. But she did not. She let him come and go, “miserable bachelor” as he proclaimed himself, with all his kith and kin across the seas, and cast not a thought to the future, or to the sad necessity which sometimes occurs to parents and guardians—of shutting the stable door *after* the steed is stolen.

Especially as, not long after David appeared, there happened a certain thing—a very small thing to all but her, and yet to her it was, for the time being, utterly overwhelming. It absorbed all her thoughts into one maddened channel, where they writhed and raved and dashed themselves blindly against inevitable fate. For the first time in her life this patient woman felt as if endurance were *not* the right thing; as if wild shrieks of pain, bitter outcries against Providence, would be somehow easier, better: might reach His throne, so that even now He might listen and hear.

The thing was this. One day, waiting for some one beside the laurel-bush at her gate—the old familiar bush, though it had grown and grown till its branches, which used to drag on the gravel, now covered the path entirely—she overheard David explaining to Janetta how he and his brothers and Mr. Roy had made the wooden letter-box, which actually existed still, though in very ruinous condition.

“And no wonder, after fifteen years and more. It is fully that old, isn’t it, Miss Williams? You will have to superannuate it shortly, and return to the old original letter-box—my letter-box, which I remember so well. I do believe I could find it still.”

Kneeling down, he thrust his hand through the thick barricade of leaves, into the very heart of the tree.

“I’ve found it. I declare I’ve found it; the identical hole in the trunk where I used to put all my treasures—my “magpie’s nest,” as they called it, where I hid everything I could find. What a mischievous young scamp I was!”

“Very,” said Miss Williams affectionately, laying a gentle hand on his curls—“pretty” still, though cropped down to the frightful modern fashion. Secretly she was rather proud of him, this tall young fellow, whom she had had on her lap many a time.

“Curious! it all comes back to me—even to the very last thing I hid here, the day before we left—which was a letter.”

“A letter!”—Miss Williams slightly started—“what letter?”

“One I found lying under the laurel-bush, quite hidden by its leaves. It was all soaked with rain; I dried it in the sun, and then put it in my letter-box, telling nobody, for I meant to deliver it myself at the hall-door, with a loud ring—an English postman’s ring. Our Scotch one used to blow his horn, you remember?”

“Yes,” said Miss Williams. She was leaning against the fatal bush, pale to the very lips, but her veil was down; nobody saw. “What sort of a letter was it, David? Who was it to? Did you notice the handwriting?”

“Why, I was such a little fellow,” and he looked up in wonder and slight concern. “How could I remember? Some letter that somebody had dropped, perhaps, in taking the rest out of the box. It could not matter—certainly not now. You would not bring my youthful misdeeds up against me, would you?” And he turned up a half comical, half pitiful face.

Fortune’s first impulse—what was it? She hardly knew. But her second was that safest, easiest thing—now grown into the habit and refuge of her whole life—silence.

“No, it certainly does not matter now.”

A deadly sickness came over her. What if this letter were Robert Roy’s, asking her that question which, he said, no man ought ever to ask a woman twice? And she had never seen it—never answered it. So, of

course, he went away. Her whole life—nay, two whole lives—had been destroyed, and by a mere accident—the aimless mischief of a child's innocent hand. She could never prove it, but it might have been so. And alas, alas, God, the merciful God, had allowed it to be so!

Which is the worst, to wake up suddenly and find that our life has been wrecked by our own folly, mistake, or sin, or that it has been done for us, either directly by the hand of Providence, or indirectly through some innocent—nay, possibly not innocent, but intentional hand? In both cases, the agony is equally sharp—the sharper because irremediable.

All these thoughts, vivid as lightning, and as rapid, darted through poor Fortune's brain during the few moments that she stood with her hand on David's shoulder, while he drew from his magpie's nest a heterogeneous mass of rubbish—pebbles, snail-shells, bits of glass and china, fragments, even, of broken toys.

"Just look there! What ghosts of my childhood, as people would say! Dead and buried, though." And he laughed merrily—he in the full tide and glory of his youth.

Fortune Williams looked down on his happy face—this lad that really loved her, would not have hurt her for the world; and her determination was made. He should never know anything. Nothing should ever know anything. The "dead and buried" of fifteen years ago must be dead and buried for ever.

"David," she said, "just out of curiosity, put your hand down to the very bottom of that hole, and see if you can fish up the mysterious letter."

Then she waited, just as one would wait at the edge of some long-closed grave, to see if the dead could possibly be claimed as our dead, even if but a handful of unhonored bones.

No, it was not possible. Nobody could expect it, after such a lapse of time. Something David pulled out—it might be paper, it might be rags. It was too dry to be moss or earth, but no one could have recognised it as a letter.

"Give it me," said Miss Williams, holding out her hand.

David put the little heap of "rubbish" therein. She regarded it a moment, and then scattered it on the gravel—"dust to dust," as we say in our funeral service. But she said nothing.

At that moment the young people they were waiting for came to the other side of the gate, clubs in hand. David and the two Miss Moseleys had by this time now become perfectly mad for golf, as is the fashion of the place. They proceeded across the Links, Miss Williams accompanying them, as in duty bound. But she said she was "rather tired," and, leaving them in charge of another chaperone—if chaperones are ever wanted, or needed, in those merry Links of St. Andrews—came home alone.

THE SERVICE OF STEAM.

II.—THE ROMANCE OF RAILWAYS.

By F. SCOTT RUSSELL, F.R.S.

NEAR half a century of experience of Railways has established them as an important element of civilised human life; not merely in England, where they were earliest tried and developed, but around the world, wherever civilisation has spread and settled. To one who, like myself, saw and assisted in the early trials of iron ways and of steam-horse power, it now reads like romance to be told that the laying a couple of iron bars side by side along a stone road or a wooden way, and letting the wheels of a waggon go along them, was a grand invention; and that another grand invention, viz., to turn round the wheels of the waggon by putting a small steam-engine and its boiler on springs above them, was in those days a

difficult and distinguished achievement. But it was so. I say this memory of the past may seem to the youth of nowadays nearly incredible. But to one who, like myself, knew and felt and endured such difficulties at a time when they were, socially, intellectually, and materially insuperable—that past is a strange weird but instructive memory.

From that simple beginning to lay two bars of iron side by side and settle them fast and firm in place, and that next step to place waggons on them, with one in front carrying a steam engine and boiler, and turning round its own wheels, and dragging the others along with it, over the iron bars, let us now pass on to the modern railway system of half a century of growth, and see what we

have got. Railways permeate the crowded ways of London, and carry its four millions of hard-working citizens, daily, from rest to work and from work to rest; and take them out into their suburban or country homes; and on their high-days and holidays take their wives and families to their sports, pastimes, and recreations. What would a London holiday of four millions now be if London were left without railways? And what is a comparatively new London luxury for distances near our homes, is a wide-spread convenience which makes all England and Scotland one great community. Railways make all their cities one with London. Men go to sleep in one city, and wake up in another. Men do to-day's work in England, and to-morrow's in Scotland. Edinburgh and Glasgow, which I remember as three days and three nights from London, or seventy-two hours' travel, are now within twelve hours.

Thus in half a century all England is covered by railways; scarcely a small town or large village is without its railway; some enjoy the luxury of two or three ways to the same place. Belgium, France, Germany, Austria, Russia, speedily followed our example, and gave their inhabitants the benefit of our experience. In Europe only Spain and Turkey lag behind, and allow their golden sunshine, and fertile soil, and manly and sober working races of men, to lie waste uncultured and uncivilised. But they, too, are waking up; a few lines exist in Spain, and Turkey has begun and means to continue that junction of European with Asiatic railways which can be so admirably effected across the narrow straits of the Bosphorus. India already enjoys the benefits of railways, which have given great value to the products of her soil, and have saved her nations from the calamities of pestilence and famine; and the Indian system of railways, having had all the benefits of our past experience, is much more economically constructed and wisely administered than our own, and so pays us back by better example the lessons it has learned from ourselves.

When once Turkey carries European railways across the Bosphorus, through Asia Minor, by ancient Nineveh and Bagdad, into Persia, we shall get so near to India by railway, that the Indian railway system will only have to extend itself westward a few hundred miles to meet the Turkish railways through Persia, and then our English railway system and our Indian railway system will form, with European railways, one continuous united group. A very moderate number of

miles, and a very modest number of millions, and a very few years' work, will accomplish this most desirable union of English with Indian railways. At modern English express speed, the Overland Indian Mail Train, furnished with the luxury of American palace trains, will then leave London on Friday night, pass Vienna on Saturday night, cross the Bosphorus on Sunday night, pass by Nineveh towards Bagdad on Monday night, and by Topahan cross Persia on Tuesday, joining the India Railway system for Bombay and Calcutta on Wednesday. When the happy moment arrives that our rulers find the will, we will find the ways, and the means are at hand. Our English empire and our Indian empire will then be "one and indivisible."

This, of course, is in the Romance of Railways, for it is still in the future. But it is this way that events point; and this lies in the near future for which we have to exercise invention and forethought. But it is perhaps in America that the romance of railway construction has been most speedily and successfully turned into reality. America owes more of its material wealth and prosperity to railways than perhaps any other country. The Atlantic and Pacific Oceans are united across the continent of North America by a single line of railway, joining the great cities of New York and San Francisco by six days and six nights of continuous travel, which enables the enterprising traveller to complete his journey right round the world in all the luxuries of "palatial steamships" and a "palace train." Here, then, the Americans have shown us another episode of the romance of railways, in which the younger English have first "followed the old country," and next, "bettered the example!"

Standing, therefore, where we now stand, what may we look forward to in the future as the coming romance of railways? Let us study the matter, and see where the lines of the past, prolonged forwards from our present standpoint, are conducting us to in the coming times. We are surely going ahead! but whither, and how far?

To guess at the railways of the future, we must take a rather wide view of the facts of the present, and see what they do for us. The circumference of the earth has of late years grown very small, according to our new notions of time and distance. An express train can go sixty miles an hour, or a mile a minute. Our globe is at most only twenty-four thousand miles round, taken round in the latitude of John o' Groat's House, it is only twelve thousand miles about. A thousand

miles in twenty-four hours is a moderate speed of an English express train; therefore, if there were a great circle on *terra firma* right round the globe, and a railway twenty-four thousand miles long, and an American palace train going at English express speed, an enterprising pleasure party could "do the round tour" in twenty-four days, or, including stoppages, say one month.

That, however, is a part of the romance of railways, not likely to become matter of fact, for the continents of Europe do not join nicely on to one another so as to form complete great circles; and the narrow straits and channels of the seas do not fit in conveniently, as at the Straits of Dover, or as at the sweet waters of the Bosphorus, so as to be bridged over by channel ferries transporting entire trains, or to be vaulted over by iron vaults in single spans, or to be dived under by subterranean tunnels. It seems as if it was not in the romance of the future that any single railway will girdle round the earth; for the oceans and their steam palaces will still strive to keep their share in the marvellous services which the speedy, safe, and luxurious transport of land and ocean render to the modern travel of civilised nations.

Let us now take a more limited and useful, if less romantic, view of what we may consider the near-at-hand future of the railway transport of our own generation. That trains in our own country will become safer and more punctual, is a hope we may reasonably entertain. That railway trains in England should possess all the conveniences and comforts of railway trains in America, we may reasonably expect. That express trains should go faster, we can hardly desire. That railway travel should cost less, we can scarcely hope, so long as our railways are "merchant ventures," instead of national works. That railways will speedily come to be regarded as great departments of public service in all well-ordered states, and will be organized for the common good, there can be no doubt. Belgium, Switzerland, and Germany have proved the enormous benefit of wise national organizations of railway traffic for the public good.

But England is perhaps the country in which the railway system is most completely developed and most widely employed. The little islands of Great Britain have over sixteen thousand miles of railways; while Germany has twelve thousand, and France ten thousand miles. The wide-spreading territories of Russia have already ten thousand miles, and Austria has nine thousand.

Italy has already four thousand, and wide-spreading, fertile Spain has only three thousand. Turkey and Egypt, together, have only twelve hundred, while Sweden and Norway have two thousand.

India has over five thousand miles, and America over fifty thousand! If less than half a century have thus covered England with railways, and spread them thus rapidly over the civilised lands of Europe; if younger England has sown the inventions of Old England thus broadcast over the New World; if even the less civilised nations of the world have already begun to make experiments at least of railway transport;—what may we expect of the coming half-century of growing enterprise and widening civilisation?

It seems to me that the railway will be in the coming time, in the hands of civilising, colonising, peace-loving nations, the pioneer of civilisation. In our own India, railways have brought immeasurable benefit to every district through which they pass. Every railway station becomes a market, to which the wealth of the soil is brought by the natives, and where it is sold to high profit, and where, in exchange, they can obtain all the newest products of modern civilisation. A railway in an uncultured country is a social revolution, and, wisely conducted, is a measureless blessing to the people of the soil. The people travel and get knowledge; they labour and grow rich; their prejudices of caste and class and village disappear; they become, in short, cultured, educated, and civilised.

Benefiting, then, by the experience of the past, and believing in the great benefits we may anticipate in the future, of wide-spreading railways; let us consider what it is well for us to do about railways so as to make them for those who come after us matters of the greatest good. Now, in this, as in all matters of the common good, there is but one way to make sure and safe progress—I mean the way of cultivating and enlightening public opinion. In our free land, all classes have opinion and exercise influence. When all classes are well informed and enlightened in railway matters, railways will be well conducted, and will work for the good of all. When knowledge is in the hands of few, and the public are ignorant, the benefit of better knowledge will be confined to the few who have it. Men who are no judges will be content with ill-managed railways; men who know what a railway should be, will expect to find it "up to the mark."

If, therefore, we care to see the benefits of the modern railway system rapidly extended to the promotion of the well-being of all the members of our Christian community, and of the human family, let us take a serious interest in understanding what a railway is; how it is well or ill managed; what it should cost; and what it might become with wise foresight and able direction and good purpose. In short, let us first make an ideal railway, and then try if we cannot realise it, and so complete the romance of railways.

The way to understand the practical nature of a railway, and to judge of the difference between a good and a bad line of railway—to decide whether railway traffic is ill or well managed—is first of all to master the general principles on which a railway is designed and constructed, and then to study the practical details requisite for its good working.

Now it so happens that the construction of the locomotive engine is the key to all the other elements of the modern railway system. You may have the best railway in the world, and yet, unless your locomotive engines have been wisely designed so as to suit the particular nature of that railway, its traffic will be unsuccessful. The engines good for one line of railway and one sort of traffic are altogether ineffectual and wasteful on a railway of a different character, or a traffic of another class. Locomotives are as different in use and character as a race-horse is from the team of a brewer's waggon, or a plough-horse from a hunter. We shall therefore commence our studies of the romance of modern railways with the study of the moving power which gives life and value to the modern railway, and which has made the steam horse one of the most marvellous of human creations. We shall first study how the steam horse is planned out and designed to suit its purpose. Second, how the iron road is made fit to receive and carry the steam horse and its load. Third, how the locomotive is made. Fourthly, how it is driven. Fifthly, how it can be made to go up-hill and down-hill. Lastly, how railways can be made and managed with speed, safety, punctuality, profit, and public good.

I.—THE STEAM HORSE OR LOCOMOTIVE.

Building steam-engines, locomotives, and steam-ships, seems scarcely, at first sight, fit matter for "Good Words." It is matter of "Good Works" rather than Words. Nevertheless good thoughts are the germs of good deeds; and after these good thoughts have borne good fruit in worthy deeds, there can

be no harm, but good, in spreading them wide-cast in "Good Words," as they may afterwards spring up into workful life in other young minds, and so blossom and bring forth still better fruit in future life many days hence.

Good works in the engineer's life are both a means and a result of high moral feeling, of noble character. The man who has to bring new beings into our matter world, has to become "a creator." He who out of his own head brings into useful, helpful existence in this world that which has never before been seen there, has done good service both in the sight of God and man.

The first locomotive engine running along the ground on its own wheels must have been a marvellous sight. The first little steam boat propelled by paddle-wheels, and running round a little lake, must have been a weird vision. When I was young I made a pilgrimage to that lake—I found an old woman there who had not, until this time, even seen a steam-ship. When I asked her if she had ever seen a steam-boat on her own lake, she said, "Oh na, sir!" When I showed her a wooden rib of the ship, which I found on the bank, she said, "Ou ay, sir! that was a boat that gaed by reek!" and she then added, that her young man ran round after the boat, as hard as he could go, and that it beat him. Fancy the delight of that Miller of Dalswinton when he saw this boat built out of his own head running round his own little lake. The imagination which built that doubtless forecast the time when many such "should go to and fro, and knowledge be increased."

The romantic story has been told of a young American who, in the early days before steam navigation existed, is said to have thought and executed the following fascinating fancy:—Living on a lone farm in the far-out country, he first made a steam-engine, which he fed with the wood he hewed in the forest. He made this engine first of all to turn round his mill-wheel, and grind his corn. When it had ground the corn, he filled a waggon with the sacks, and set the same steam-engine and its little boiler on the back of the waggon to turn round the wheels and push the waggon from behind, he himself guiding it in front. After a long land travel he came to a wide river, with the market-town opposite. Here he set both corn and engine in the ferry-boat, and made the engine turn round a wheel which paddled the boat across the ferry, and delivered the corn safe in the market! This story is so good that it should be true.

And though in 1775 it reads like romance, in 1875 it is merely fact. At present, a steam-engine ploughs the furrows, a steam-engine sows the seed, a steam-engine reaps the crop, a steam-engine thrashes the straw, a steam-engine grinds the corn, a steam train transports the sacks to the seaside, a steamship takes them across the sea, a steam hoist empties the hold and fills the market-waggon, a steam mill bakes the bread—in short, the steam-engine earns and delivers our means of life. The romance of last century has become the daily life of our own.

It may therefore be well worth our while to give some of our thought to the marvellous means by which we live now, and to consider how far the mechanical creations of man's genius have in them the elements of coming good or coming ill. Steam-engines increase our wealth—do they increase our well-being? Steam-engines make us strong—do they help us to grow good?

Human power in steam-engines, as in all else, is power for good or evil. When man's moving thought is the good of all about him, steam will strongly aid him to do good. When man's moving thought is to carry out in the world that which he thinks this world was made for, and so help on the plans of the Great World Maker, then truly the creation of the steam-engine may become one of the worthiest works of working man.

Of all the mechanical creations of man's fancy, the locomotive steam-engine is perhaps the nearest to the creation of an animal. The old traditions of the alchemists and the necromancers represent them as looking forward to the creation of a human being as the ultimate achievement or their science and skill. What would they have thought had they seen a locomotive engine? It feeds on mineral carbon and water, just as an ox feeds on vegetable carbon and water. It carries its own food and water just as the camel of the desert carries its spare supply for the long journeys over the sands. It has also the faculty of picking up its own supply of water from the roadside, as it races along at sixty miles an hour, or a mile a minute, or a hundred feet a second. It can carry a greater weight than an elephant, can drag a heavier load than a team of oxen, make a longer journey than a string of camels, and go with its load more rapidly than the fleetest race-horse!

Surely this is a triumph of human thought, insight, and skill! Surely the man who has done this may be proud of his work! But

when he has done all this, he becomes the humblest of worshippers of that far greater Mind, who made the whole world in one, to travel along a fixed line of spring, summer, autumn, and winter through the heavens, with all the precision of a mathematical line of rails, forming an exquisite oval route right round the sun, and going ever on year by year at a pace of thousands of miles an hour!

Although to the uninitiated there may not seem to be much difference between the locomotive engines of one line and another, yet essentially they are most various. Many lines of railway are covered with most foolish engines, quite unsuited for the work of that line, and simply taken from any merchant who has offered to sell them *cheap* to the directors of the company. The fact that on some lines ignorant men are made directors, is one of the great evils of our English railways. On their lines you will see the most mongrel collections of engines of all patterns, few alike; and there you see that the cost is great, the profit of the company small, and the public service bad.

A railway directed by intelligent and experienced directors, who have chosen a wise and trustworthy engineer, will be found to have only a few patterns of engine, adapted carefully each to its special kind of duty, and being all made after the same model, are much cheaper, more durable, and kept in more perfect working order than a mixed variety. In practice it is found that each line of railway has its own special character of traffic, its own special requisites in the character of the line, and its own special conveniences or difficulties of maintenance and repair, and that therefore the engine good for one line is bad for the other.

II.—THE DESIGNER OF THE LOCOMOTIVE.

The engineers who have the merit of the good work done by locomotive engines are three—the engineer who plans out the engine; the engineer who builds the engine according to plan; the engineer who makes the engine do her work.

These are perhaps rather degrees of engineering than essentially different kinds of skill and work. Practically, however, they are different sorts of men. One may be called the civil engineer, or engine planner; one, the mechanical engineer, or engine builder; one, the working engineer, or engine driver.

We cannot do better in our attempt to put the good works of these engineers into

words, than consider, first, what the special duties are of each of these men who has to do with creating a locomotive engine.

The Civil Engineer.

The civil engineer is the man who has possibly both to make the railway itself, and to settle the plan of engine to be used for drawing the loads of goods and of passengers along that line.

In order, therefore, to appreciate the character of an engine, and the capacity of its designing engineer, you must enter a little into the nature and difficulties of the task he undertakes.

The chief requisites of a locomotive engine fit for its work, are two—*Grip* and *Go*.

Grip is probably still, as it was from the beginning, one of the least understood qualities of an engine. A good grip is a much rarer quality than good go. An engine to go fast is easy, and along a level line is common enough. An engine to carry heavy trains up steep lines, with steady speed, in regular time—that is the difficulty, that is the rare engine, that has grip as well as go!

What, then, is grip, and how is it to be got? Grip is the holding on by something in order to pull another out of its place, or move it. If you are on the ice, and try to draw something after you, you slip, and fall, and fail to pull; but if you get hold of a rope tied to a tree, or if you have nails in your boots which take hold of the ice, you can both draw and push with effect. The rails of a railway are smooth as ice. If you attempt to pull a load up an incline by walking on the rails, you merely slip—you can't pull anything after you. Your feet take no hold on the rails—you want grip.

This was one of the great difficulties of early engineering—How can an engine get grip on a smooth iron rail? Its wheels must merely slip, and spin round, and drawing heavy loads must be impossible. So the early engineers thought hauling trains by long ropes the only wise way to make heavy loads move along smooth rails. Later on, they gave the rails teeth, so as to bite the wheels of an engine, and so by turning the wheels of the engine round, and making the teeth along a rail hold the teeth around the wheel. These teeth gave the grip.

But the teeth soon came to an end. They wore out, they broke down, and the grip they gave was gone. In later days the secret of grip came out. Meanwhile strange blunders in railway engineering devoured millions of English capital. Few men knew

that by the wise use of grip, heavy trains could be drawn up steep lines of railway. These millions of money were wasted in taking lines of rail a long way round, or in boring through heights costly tunnels, costing from a guinea to two guineas for each inch forward, and level lines of broad gauges made where they cost double the usual capital, merely because some able engineers of the day were ignorant of the principles of grip.

The principles of grip as now known are these:—If a smooth, flat sheet of iron lie on another smooth, flat sheet of iron, and you try to pull it, or make it slide along, it will not slide, or slip, or drag along, until you push or pull it with some force. If the upper plate of iron weigh seven pounds, you must pull it or push it along with a force of one pound, or it will not budge. If it weigh seven cwt., you must push or pull it with a force of one cwt., or it will not budge. If it weigh seven tons, you must push it along with a power of one ton, or it will stay still.

What is this hold which one smooth plate has on another to keep it fast, and not allow it to slip or slide? Answer—No one knows. Some people call it friction. But "friction" is only a Latin word for keeping fast or holding back, and means nothing. What friction is, the Americans may call stick-tion. But that tells us nothing. What we do know is this—That two smooth faces of metal brought close together, embrace each other, cling together, and will not part; nor will either give the other the slip, and let the other go, but under a compulsion—the measure of one-seventh of the whole weight, with which one presses on the other.

This measure of grip—one-seventh of the pressing weight—is a fundamental principle which underlies the whole construction, design, and performance of the modern locomotive engine. It is the measure of all a locomotive can do; and a great art of engine building and design is to do the most with this one-seventh of the weight, moving or moved.

The enemy of "grip" is "slip." The metal of the driving-wheel of the engine grips the metal of the rail, with the regular force of one-seventh of the weight pressing them together, only when both are dry. When they are damp, the strength of grip is lowered. Instead of a grip of one ton being caused by a weight of seven tons, as is true on dry rails, on damp rails it requires ten tons of weight pressing wheel and rail together, to give a grip of one ton. This

must always be kept in mind, both in planning engines and in settling the measure of the work they can do in any given day or climate. On a railway in Asia Minor I have known the traction done all the year round with an effective grip of one ton in seven, while in the damp of England it was in general only one ton in ten.

How it comes that "damp" makes slip, when "dry" gives grip, is an interesting speculation. We all know the love water has for solids, how it clings to them, and how hard it is to drive off. We call this "capillary attraction," but of the nature and cause these big words tell us nothing.

What we do know is, that in the absence of damp, iron clings to iron with one-seventh of the pressing force. What we know is, that damp clings to iron and takes away so much of the clinging force as to require more pressure in the degree of ten to seven—a difference, let us say, of thirty per cent.

The practical sum and substance of all this study about grip and slip in a locomotive engine is as follows.

A pair of engine wheels pressed down by a load of seven tons have a grip of one ton, and can therefore push a train forward with a driving force of two thousand two hundred and forty pounds, in dry weather. A pair of engine wheels pressed down by a load of seven tons, have a grip of six hundred and seventy-two pounds less in damp weather, than in dry, and can therefore push a train forward with only fifteen hundred and sixty-eight pounds or seven-tenths of a ton of driving force. It follows, therefore, that for our climate in damp weather the driving wheels of an engine should be loaded with a weight of ten tons for each ton of driving force they are meant to give.

In all we have now said about "grip," or adhesion of wheels to rails, or the measure of pushing force got by the grip of engine wheels on rails, we have been going straight to the root of the whole matter of railway construction and engine construction. Unluckily, engineers in history began at the other end of the matter, and so made multitudes of gigantic failures, the traditions of which still infest our profession, deteriorate their work, and injure the efficiency and economy of railways.

"Grip" being the first condition of railway propulsion, we can proceed after duly appreciating and accurately measuring that to its result, viz., "go."

In practice we want three classes of trains, and three corresponding classes of engines.

One we call express engines.

One we call ordinary engines.

One we call goods engines.

One we want to go sixty miles an hour.

One we want to go forty miles an hour.

One we want to go twenty miles an hour.

These are the speeds wanted on common English railways. Foreign lines and exceptional lines may have quite other aims. With steeper lines and other circumstances of trade and commerce and local wants come exceptional engines.

1. *The Express Engine.*

How to go sixty miles an hour, is therefore the first chief condition of the engineer's plan for a locomotive engine.

This problem, to go sixty miles an hour, is in some ways the easiest, and in others the hardest. Through a tolerably level country, it is easy; over very steep roads it is not attempted.

Early engineers, men of eminence, had a notion about speeds of sixty or one hundred miles an hour, which was curious, not unnatural, but disastrous, costly, and wrong. But as wrong is often merely the way to right, we shall do well to follow out the way they went and see where they landed. Speed! speed at all cost! was the cry of a time. How to get it seemed to some easy. Let us examine this question of great go or high speed as it was then treated.

The grand solution of the question was this—

Great go means great wheels.

Little go means little wheels.

There was the mystery solved! I remember in these earlier days to have seen an engine, built for a great railway, with wheels some twelve feet high or more. It was a strange sight. Of course, to carry such wheels, a broad base was necessary. Our common railways give five feet for the breadth or tread of the wheels, seven feet was the width of rails for these tall wheels. These notions about big wheels giving great speed to a railway train, were one-sided exaggeration of some plain and simple truths which we may now examine.

To go sixty miles an hour by turning round a pair of wheels, in a locomotive engine, is a problem done now in England every day. It is more really wonderful than it now seems, it is also more simple than its really marvellous nature might suggest.

To go sixty miles an hour, it is convenient to take a pair of seven-foot wheels. A wheel seven feet diameter measures twenty-two feet round the rim; that is, if we roll it along

a road, it will roll forward twenty-two feet in turning once round. In giving it two turns forward it will travel forty-four feet forward. In three turns it will travel sixty-six feet; and in four turns round it will go forward eighty-eight feet. These numbers deserve to be remembered.

The value of these numbers consists in the fact that each of them represents a railway speed. If a train travel forward twenty-two feet in a second of time, it will go fifteen miles an hour. If a train travel forward forty-four feet in a second of time, it goes thirty miles an hour. If it travel sixty-six feet a second, that gives forty-five miles an hour. If a train travel forward eighty-eight feet a second, that is our sought speed of sixty miles an hour.

This brings us to the important practical result, that if we wish a locomotive engine with seven-feet wheels to drive a train forward sixty miles an hour, we must so use our power as to compel these seven-feet wheels to go round four times in every second of time, and to take the train forward four times twenty-two feet a second, and so give a speed of eighty-eight feet per second to the wheels and the train.

It is difficult to realise this speed to one's self. In walking four miles an hour, I move my feet two paces forward in every second of time, or say six feet per second. My legs are about the same length as the spokes of the seven-feet wheel. To go sixty miles an hour my legs would require to take twenty-two steps in every second of time instead of two. It is almost impossible to fancy such a thing. But if we take a race-horse we can easier understand it. Imagine a race-horse able to cover twenty-two feet at a bound, and able to make four bounds in a second, that would give the eighty-eight feet. This our racing engine does by four turns a second of its wheels, twenty-two feet in girth.

The difficulty of driving our train sixty miles an hour has now resolved itself into giving our engine power to make its wheels turn round four times each second, and with sufficient grip on the rails to drag the train with it at that speed. These facts suffice to show why an express engine has a pair of driving wheels something near seven feet diameter; why those wheels have to spin round four times in every second of time; why if you stand by the railway as it passes, you feel a whirlwind or storm rush past you at the well-known speed of a hurricane, or eighty-eight feet a second, one mile a minute, and sixty miles an hour.

At sixty miles an hour, what load of train can the express engine draw? How many passengers and how much luggage can it convey?

At sixty miles an hour, the race-horse is overburdened if it carry one heavy rider; seven pounds wins the race or loses it. How many tons will overweight one racing engine?

At sixty miles an hour, our express engine can drive a train of ten passenger carriages and two luggage vans. That we may call a weight of sixty-six tons to seventy-seven tons, along a good level line.

As our engine has only one pair of driving-wheels (the middle pair), and the two other pairs merely help to carry its own weight, this middle pair has to do all the work. If the load of the whole engine itself be thirty-three tons, and if each pair of wheels carry its equal share of the engine load, then the driving-wheels are pressed down with eleven tons weight on the rails. This is enough pressure on the rails to give the one ton of grip wanted to pull the train.

But the engine has not only to draw the train of sixty-six or seventy-seven tons: it has to draw itself along and to carry with it its own supply of fuel and water. This is a further demand, both for additional grip on the rails and for further driving power in the engine itself. That, however, is a matter we shall have to consider later on. That we may consider as part of the engine's own affairs, to be considered afterwards by the engine-builder and engine-driver. At present we are merely considering the useful work the engine has got to do for the railway and the public service, in drawing trains of passengers and goods along the line of railway at the speed of the hurricane; and we have seen that seven-feet wheels, running round four turns a second, and forward eighty-eight feet a second, loaded with ten to eleven tons on the pair of driving-wheels, and having a grip on the rails of one ton, are equal to the duty of dragging say seventy tons weight of express train sixty miles an hour.

2. *The Slower Coupled Engine.*

If we now see clearly what a locomotive engine has to do, in order to gain a speed of sixty miles an hour, and to draw after it a train of sixty-six to seventy-seven tons of railway passengers, carriages, and luggage, we may next pass to the question, what is the difficulty of drawing a train, to carry much more weight, at a slower speed? Is it a greater difficulty or a less difficulty to draw a heavy train slow or a light train quick?

I give my own opinion when I say I think it harder to design an engine to draw heavy loads slow than light loads quick. I will now show why.

Suppose I take an excellent express engine, such as I have already noticed, with its pair of driving-wheels seven feet high; let us see what I could do with it if I wanted to take a heavy load slow. Suppose I attach it to a heavy goods train, and I should be content to take double the weight at half the speed. Would it go? No! The wheels would slip, spin round, but not go. The reason of this failure is not want of go; it is want of grip.

To make an engine fit for a heavier load and a smaller speed, what must we do? Simply increase the grip.

But we have now got all the grip our wheels can exert on rails in our common damp air, and we cannot get more.

Answer.—There are two ways to get more grip:—

First. Double the load on the engine driving-wheels.

Second. Double the number of driving-wheels.

Both these ways have been tried.

If an engine weigh thirty-three tons, then, instead of spreading the load of thirty-three tons equally among the wheels, why not concentrate double the load on one pair of wheels, that pair being the driving-wheels, and so give them double weight and double grip on the rails?

That has been tried and been quite successful, but it destroys the railway! Too much weight on one pair of wheels weakens, wears out, and breaks down the rails and the road, causes accidents, and ruins the railway.

The wiser way is the other way. Do not overload a single pair of wheels, load two pair of wheels instead of one pair, make two pairs both pull the load equally, make both do equal work; and thus each with a light load will together drag the double load. This way is simple and good, and yet it was neither soon nor generally adopted. It seemed so much simpler and easier to put a double load on one pair of driving-wheels than to make two do effectual work by halving it between them, that it was introduced slowly and unwillingly.

Coupled engines, as they are now called, are the one legitimate engine for the driving of heavier loads, whether at higher speed or at lower, for the one effectual reason that they give double grip without doubling the

strain on the rails and the road. This, then, is the second class of engines which requires to be provided for the general traffic of an ordinary railway. They are the class of engines in general use for passenger trains of ordinary speed. That they are somewhat more complex than engines with a single pair of driving-wheels is true, but their chief merit far outweighs slight difficulties or defects, which able engine-builders overcome by wise ingenuity, and knowing engine-drivers foresee and take precautions against.

With wise railway directors, these coupled engines should be a favoured class, and with able engineers they will be wisely proportioned to the nature of work to be done on each line. The diameter of the coupled pairs need not be so large as the diameter of a single express pair of wheels. A coupled pair of wheels, just over six feet diameter, making three turns round in each second, will go forward twenty feet a turn, or sixty feet a second, or just over forty miles an hour, being the speed wanted for ordinary railway trains.

This second class of engine, with four wheels in couples, driving the train, will draw a train of the usual mixed class employed in ordinary passenger, luggage, and mixed traffic, at forty miles an hour, and of double the weight of an express train, by means of the double grip of the rails got by the two pairs of driving-wheels. Whereas the single pair could take sixty-six to seventy-seven tons load at sixty miles an hour, this coupled engine will take a hundred and fifty tons forty miles an hour; and this is a great convenience and a great gain.

3. *The Heavy Goods Engine.*

But a third class of engine is wanted, possessing still greater dragging power; and that is merely done by following out what was done before to get the coupled engine. The principle of the coupled engine is this: that whereas out of six wheels which are used to carry the engine itself, only two are used to draw the train, we get our second engine by coupling a second pair to the first pair, and making both drag equally; and thus we double our grip and our dragging power.

Let us, then, take another step the same way. As there are six wheels to carry the engine, why not make all six do the dragging as well as the carrying?

This was the happy thought which gave us the power to drag the enormous long trains of heavy laden goods waggons which we see

passing along—so long that their waggons seem countless.

Couple all the six wheels of an engine to the machinery, in such a way that every wheel grips the rails and drags the train, and all with equal power, and the great problem is done.

This is practically achieved, with considerable difficulties which the engine-builder has to conquer, and with a good deal of care on the part of the engine-driver to prevent the engine from hurting itself and hurting the trains and the rails. For as in other matters, so in engines, increased power gives power to do good or to do harm, according as its use is wise or unwise.

Engines with three pairs of driving-wheels are engines of triple dragging power. Effectually they are even more than this, for the following reason—that, while their grip on the rails is tripled, the power required to take their own weight forward is very little greater with three couples of driving-wheels than with one couple.

This comes from the fact, that the express engine, with a single pair of driving-wheels, weighed nearly as much as this goods engine weighs with three pairs. If we take the express engine as being some thirty or thirty-three tons, then the goods engine may weigh thirty-three to thirty-six tons, and there will then be a weight on each pair of wheels of eleven or twelve tons, with merely this odds, that in the latter case all three drive equally.

In like manner, the second class of engine has three pairs of carrying wheels; and of these, two pairs only are drivers; and the weight of this engine need not be much greater than the engine with a single pair.

These facts make it plain to us, what an enormous gain railway traffic can obtain by this very simple invention of coupled wheels. It has long been known and used; but it is not so well understood, nor so wisely employed, as to be as universally and appropriately applied as it might be. It is at once a grand resource for economy, punctuality, efficiency, and even speed under difficulty.

Taking now a goods engine, weighing thirty-three to thirty-six tons; giving it six wheels, of fifteen feet round the rim, or a little less than five feet diameter—making only two turns of the wheel per second, this engine would drag a train twenty miles an

hour; and making three turns of the wheel per second, would drag the train thirty miles an hour; and the weight of such a train along the level might be over three hundred tons, or ten times the weight of itself.

4. *Conclusion of the Design.*

If the civil engineer who has to settle the design of the locomotive engines for his own railway is wise, he will stop at the point where we have arrived; and having settled the weights of the engines, the sizes and numbers of their carrying wheels and driving-wheels, the speeds they are to go at, and the weights of trains they have to draw, he will leave the rest of the design to the engine builder. Wise engineers know that they make a great blunder when they meddle in engine building an inch further than their own specialty requires; and most of the blunders in locomotive engines—and they are numerous—come from civil engineers who don't know enough, meddling with engine building, and trying to show off in knowledge and skill which they have not got.

The wisest railway engineers I have known followed this course. They laid down imperatively the characteristics of the engines wanted for the special character of their railway, and the peculiar nature of its traffic; they selected the most able and trustworthy men as engine builders, to construct their engines; and they left them to choose all the details on their own responsibility, and to construct their engines their own way. I have always seen this mode of action more successful than the method of meddling with other men's work.

Whether this method has been followed or not, you can always find out by looking at the assemblage of locomotives to be seen around any great railway station. If the line has been built and equipped by an able and responsible engineer, you will be struck by the fact that there are only three varieties of engines; that they are all identical in those three groups; and that there are no varieties, or diversities, or deviations from the standard. When you look further into the matter, you will find that these engines look in better condition than other engines. Being identical, they are better made, better understood, and better cared for, than if they were a various multitude, dissimilar, worse understood, and worse provided for.

ACROSS THE DOWNS.

RIGHT across the downs,
 Up hill and down hill,
 Where the shadowy upland frowns
 Underneath the mill,
 And the sails whirr round and round
 With a lithsome spring and bound.

All along the path,
 Curving here and there,
 Where the fragrant aftermath
 Fondly scents the air,
 And the flocks of South-Down sheep
 Browse along the shelving steep.

In the valley grows
 Blooming heath and thyme,
 And a little rillet flows,
 Rippling rustic rhyme,—
 Which a listening linnet learns,
 And to melting music turns.

Here's an ancient oak,
 Ivy overgrown,
 Has escaped the woodman's stroke,
 And still it holds its own,—
 Watered by the tiny rill,
 Green, and bearing acorns still.

Climbing up the slope,
 Hear the sky-bound lark
 Sing his song of joy and hope,
 Clear and piercing. Hark!
 Nearing heaven he soars and sings,
 Rippling on the breeze's wings.

Right across the downs,
 Where the sea's in sight,
 And the glowing sun embrowns
 Golden cornfields bright,
 Hamlets, villages, and towns,
 Shimmer right across the downs.

B.

SKETCH OF A JOURNEY ACROSS AFRICA.

By VERNEY LOVETT CAMERON, LIEUTENANT ROYAL NAVY.

PART IV.

WE got under way the day after Coimbra's arrival, and crossing the Lovoi on a fishing-weir bridge, we entered the country of Ussambi.

Ussambi is a sort of debateable ground (like the Scottish marshes of old) between Urua and Ulûnda. The people say that they are properly under the rule of Kasongo, but that they are forced to pay tribute to Mata Yafa also, as his territory is so close, especially on the north-west, that he can easily harry them in case of their opposing his claims. Besides the extortions they are subjected to by these two chiefs, they also suffer from the raids of Msiri (a Mnyamwësi), who has established himself at Katanga by force of arms, and now sends armed parties in all directions in search of slaves and other plunder. The slaves thus obtained, he sends to Unyanyembe and the West Coast, receiving in exchange cloth, guns, and powder. The guns and powder enable him to retain his position, and he is also greatly assisted by large armed caravans from Bihé, commanded by confidential slaves of Portuguese who use his territory as a safe basis from whence to start their numerous slaving expeditions. These Portuguese are generally accompanied by a few of Msiri's own people, in order that these blackguards may be considered as acting under his orders, and thereby spreading the terror of his name far and wide; besides this advantage, he receives a large proportion of the slaves captured in these raids.

The people of Ussambi, growing wise by experience, are now congregating in large villages, well protected by wide and deep ditches and embankments, and are rapidly sub-dividing into a number of small and independent tribes only bound together by the necessity of defence against the common enemy "the slave trader." The country of Ussambi is one pleasant to the eye and well watered; woods, meadows, streams, and cultivated grounds succeeding each other in agreeable diversity.

Whilst passing through Ussambi I heard that Mata Yafa was only a few miles distant from my camp, being then on his way to Kasongo in order to seek his protection and assistance. In consequence of

some unheard-of cruelties he had committed on women, an elder sister, whose rank was nearly equal to his own, had formed a conspiracy, saying, "I also am a woman," and driven him out of the country. He only just managed to escape with his life, accompanied by a few followers who still remained faithful to him, and when I heard of him he was skulking along through the jungle, afraid to enter any village. What his reception by Kasongo may have been is a momentous question for the peace of Central Africa.

After Ussambi we came into Ulûnda, part of the dominions proper of Mata Yafa, whose own immediate relations and their followers are Warua. Mr. Cooley, in his learned works on Africa, says that Alunda, from Mulûnda, means "wilds," but seems to think that the Pombeiros who crossed from Cassanci to Tété in the early part of the century were mistaken in talking of Arundas (Walûnda, according to correct etymology) as a separate race. I believe that Ulûnda, being, in fact, almost entirely covered with forests, and the people being very wild and savage, the country is called Ulûnda, or "the wild country," and the people Walunda, or "the wild people."

The chiefs of all the important districts belong to the dominant race of the Warua.

The huts of the Walûnda are smaller than any other permanent habitations I have seen in Africa, and are as a rule scattered about the country in clusters of three or four situated in the middle of small clearings, each of which just suffices to support the one family who inhabits it.

Whilst passing through Ulûnda we crossed many important affluents of the Lualaba or Congo, and in its western one of our camps was close to Lulua (well-known to geographers), whilst the source of the Liambaiyé, or Zambézi, was only ten or twelve miles to the south of us. I was fortunately able to fix the exact position of this camp by a very extensive set of lunars, and it may in future be considered as a crucial position for other travellers to take their departure from.

After Ulûnda we first passed through a country at present considered as neutral ground, but which is rapidly being colonised

by the people of Lovalé. Lovalé is a country of considerable extent; the eastern portions are very similar to Ulúnda, but as we proceeded westward we came upon large plains, which, in the rainy season, are nearly covered with water, and are then well-nigh impassable.

It is from these inundations that the inhabitants derive the greater portion of their wealth. When the waters are out, innumerable fishes, principally siluri (or mud fish), swarm forth from the rivers and spread themselves all over the country. The inhabitants take advantage of the slight inequalities of level to form small dams by which, when the floods subside, the fishes are confined, and are then easily captured by the natives, who dry them, and barter them with passing caravans and with their neighbours. So eager are the tribes on either side for these fish, that they refuse all other articles of barter from caravans who have passed through these piscatorial districts. I cannot admire their taste, and I fancy that if a Fishmongers' Company existed in Africa, not only a portion, but the whole amount brought for sale would be condemned. In order to gratify this peculiar taste of the people we were to meet on our road, we were obliged to lay in a large stock of this half-rotten fish, and the effluvia arising from it made our camp nearly pestilential.

The place where we halted to buy in our cargo was very near the point at which Dr. Livingstone's original route from Sekeletu's to Loanda crossed mine. The chief he met there was the same I saw, and he remembered Livingstone well, owing to the fact of his riding an ox, but I was unable to fix the exact position of the meeting, as since then the chief has shifted the location of his village four or five times.

In Lovalé we had a good many very annoying, though not serious, troubles with the natives. They had innumerable fetishes, and every time any fetish was offended a fine was levied, and as a stranger had no means of finding out what was "fetish" and what was not, these fines were very numerous and vexatious. Certain trees might not be cut down to build a camp, against others no gun might be leant, some paths might not be traversed by a stranger, and so on *ad infinitum*. As nearly every man in Lovalé was armed with a gun, they considered themselves powerful enough to insist on all these bothering regulations. The cowardly bullies from Bihé now showed themselves in their true light, very different from what they appeared to be in Urua. There, strong in the posses-

sion of firearms (of which the natives knew nothing), they robbed and maltreated every one; here they cringed and sneaked, and were often robbed in their turn.

After Lovalé we came to Kibokwé, where the country began to get more broken and hilly than any we had seen for a long time. We now began to ascend towards the western edge of the Basins of the Congo and the Zambézi. Here the fish which we had bought in Lovalé were in demand, but I soon exhausted all my stock, and if I had not been able to purchase a little cloth at a most exorbitant price from some people of Bihé, who were out collecting beeswax, we should have starved. The only product of Kibokwé which is exported is beeswax. From the honey the natives make a sort of mead, which was in taste very like the strong Scotch ales. At one village at which we halted the chief offered me some in a china pint mug, which, as I was very thirsty, I emptied at a pull. He held me in great admiration as this potent draught took no effect on my head, and followed me to our two next camps to give me drink before starting in the mornings. He brought a little pot with him, in which he warmed the mead, and as the mornings were then raw and cold this "Doch an dorroch" did not prove at all unacceptable. After Kibokwé we passed out of the basins of the Congo and the Zambézi (the affluents of which are so interlaced with each other that it was almost impossible to determine the actual watershed), and came into that of the Kwanza. After crossing the Kwanza (which here some distance above the falls was a fine navigable stream) we arrived at Komananté, in Bihé, where Kendélé (or Alviz) had his settlement. Although he said he was a civilised man, his establishment was little better than that of the natives, and the pigs shared the houses with him and his friends as freely as if they paid the "rint."

At Komananté I was delayed a week before I could procure a guide from Kendélé, to show me the road to the coast. Kendélé himself remained up in Bihé, in order to dispose of some of his slaves for beeswax and ivory; the others he retained to sell at the coast.

When I left Komananté, I had first to go to the town of Kagnombé, the chief of Bihé, as my guide would have been afraid to return if it had been known he had guided a white man through Bihé without taking him to see Kagnombé. Kagnombé's town proved to be the largest I had ever seen in Africa, but Kagnombé (or, as he called himself, King Antonio Kagnombé) was a most

despicable specimen of a negro. He said he had been to Loanda, but the only result of his travels seemed to be a grafting of the worst European vices on those already engrained in his nature.

The day I left Kagnombé's, I arrived at the settlement of Senhor Guilhermé Gonçalves, where I was most kindly and hospitably received, and felt as if I were once more getting into civilisation. Senhor Gonçalves has been settled at Bihé for about thirty-three years, and all his establishment (for a place in the wild) was wonderfully well *monté*. He has planted orange-trees, vines, roses, &c., which all grow to perfection. Great hedges of roses, thirty feet high, covered with blossom! Senhor Gonçalves was an old officer of the Portuguese navy, and a very gentlemanlike man, but had become so completely habituated to African life, that, after a short stay in Lisbon, he had felt obliged to return to Bihé, where he had arrived only a few days before I did. The day after, I came to Senhor João Baptista Ferreira's settlement, where I was also most kindly received; but I am sorry to say that he is a man calculated to do an immense deal of harm in Africa. He has travelled far (nearly up to Kasongo's country on one occasion), but being utterly uneducated, and almost solely dependent on the slave-trade for his profits, cannot fail to lower the prestige of the "white man" amongst the natives.

Close to the village of João Baptista is that of Silva Porto, famous for his journey with Syde ibn Habib half across Africa. His place is now in the charge of slaves, who make frequent trips to Katanga for copper, slaves, and ivory, whilst he himself lives in comfort at Benguélla.

After one day's halt at João Baptista's, we started for Benguélla, but after only four days' marching, we were delayed by the illness of the wife of our chief native guide, and, after all, had to leave him with her, and to go on with one of his brothers. Besides the natives, I had also a black Portuguese called Manoel, from Dondo, supplied to me by Alviz, who formed a very favourable contrast to that individual, as he endeavoured to assist me in every way in his power.

When we were on our road again, we came into the lovely and fertile country of Bailunda, the chief of which I visited in his village, situated on a rocky hill, standing by itself in the middle of a plain. To reach his hut, which was perched on the very summit, I had to pass through no fewer than seven

stockades; besides this, the path was so steep in places, that we had a regular scramble to get up.

Two or three days after leaving him we got into a very mountainous country, and the rainy season being in full swing, the men began to break down: four or five of them had to be carried, and one poor fellow died. The day after his death, I found that, in bringing up the rear of the caravan, I was about nine hours doing what might easily be done in three under ordinary circumstances, owing to the number of men who were unable to march, and who kept on halting. On my arrival in camp, I therefore made up my mind to throw away everything I could possibly spare, and pressing on to the coast, now one hundred and twenty-six miles distant, with a few of the best men to send back assistance to the others. I accordingly threw away boat, remains of tent bed, everything but a blanket and a shift of clothes.

The next morning I went on with Manoel and six other men, and after five days' stiff marching across a very rough and mountainous country, arrived at Katombéla, a suburb of Benguélla.

Here I was most warmly welcomed by Monsieur Charles Cauchoix, an ex-lieutenant of the French navy, who rendered me every assistance in his power. The day I got in, scurvy broke out with great violence on me, and by the evening I found I could neither speak nor swallow. Cauchoix started off with me in a hammock for Benguélla at two A.M., to place me at once under the care of Dr. Cavacho, in charge of the military hospital there, to whose kind and scientific treatment I in a great measure owe my life. The Portuguese Governor, Major Brito, was most kind, giving lodging and rations to my men, and from him and all the inhabitants of Benguélla I received every sort of hospitality.

After about a fortnight at Benguélla, I was given a passage for myself and followers to Loanda on board the Portuguese mail steamer *Bengo*. When we arrived at Loanda, I landed as quickly as possible, and got up to the consul's before he knew of my arrival. I was not a very prepossessing-looking individual at the time, but when, on his coming out, I said, "Come to report myself from Zanzibar—overland," he caught hold of me by both shoulders, and said, "Cameron, by God!"

Captain Hopkins (the consul) did everything he possibly could for me, and I shall

never be able to repay all his kindness to me. The other English at Loanda, Messrs. Newton, Carnegie, and others, received and welcomed me most warmly, and the time I was obliged to stay there till I could get my men started for Zanzibar, passed away far more pleasantly than sojourns on the West Coast usually do.

My most cordial thanks are also due to the Governor-General, Admiral Andradé, and his aide-de-camp, Lieutenant Mello, of the Portuguese navy. The latter, having served in

our own navy for some years, was quite an Englishman in his ideas, and always was considered as one of the English society at Loanda. As soon as my men were despatched, I started for England by the next homeward-bound English steamer, and, after a tedious and uneventful voyage of fifty-four days, arrived at Liverpool on the 2nd of April. I think I may now say good-bye to my readers, and hope that they will get through their "Journey across Africa" with less difficulty than I did.

KNOWLEDGE WORKETH FAITH.

"They that know Thy name will put their trust in Thee."—PSALM IX. 10.

THE Name, according to Eastern usage, stands for the attributes, the character, of the person, for that by which we are able to know Him, and understand what He is. So that we may take this sentence to mean—they that know Thy character, who know what Thou art, will put their trust in Thee, because of what they know. The knowledge will lead to the trust, which is trust in a person—"in Thee." This is a testimony to the personality of God. It throws the light of David's pious thought and feeling (assuming the psalm to be his) on that question of a personal God and of the possibility of knowing Him, with which, in these days, many minds are exercised. To him, as to every man of a thoughtful spirit, life must have been full of mystery—nature full of wonder. The man who wrote the words, "Thou hast beset me behind and before, and laid Thine hand upon me. Such knowledge is too wonderful for me: it is high, I cannot attain unto it,"—had doubtless felt his spirit overwhelmed within him at the awful thought of the all-encompassing power to which all the powers of his own life were as nothing. He who wrote, "When I consider Thy heavens, the work of Thy fingers, the moon and the stars which Thou hast ordained, what is man that Thou art mindful of him, and the son of man that Thou visitest him?"—must have realised, as keenly as any of us can, the difficulty of understanding how any power, so vast as to be able to rule those heavenly hosts and to manifest its control throughout the universe, can yet stand in an intimate relation to man, "whose breath is in his nostrils," and who is "crushed before the moth," and can in any way be known by him. And yet David got out of these diffi-

culties, and into a region where they did not trouble him, not by the road of scepticism, but by that of faith. I do not mean that he shut his eyes to every difficulty, and closed his mind against every doubt, resolving that in spite of all he would stick to his childhood's belief in the God of whom Moses had written, of whom Samuel had spoken, in whom Israel had been taught to believe. That is not the way of faith, but of credulity; not of the mind that is ready to learn, but of the mind that is ready to be imposed upon, and subdued to serve the ends of those who impose upon it. But David's was the mind and spirit to which all highest truth reveals itself, the earnest mind, the reverent spirit, preserved, by its own delicate instinct, from hard self-confidence, from impatient discontent, from hasty judgments upon the mysteries of life,—that is content to say, "With Thee is the fountain of life: in Thy light shall I see light." To a man in whom was such a spirit, the world with all its varied scenes, and life with its manifold changes, and nature with its stately order, brought revelations of that which was greater than themselves. In these he recognised the ways of One, who, though Himself "past finding out," was yet made manifest in these. Where the man of a hard and doubting mind, and unresponsive spirit, saw and heard only the common sights and sounds of nature, which disclosed nothing that had a spiritual meaning, he could see an invisible hand stretching forth the heavens like a curtain, and scooping out the channels of the great deep; clothing the sunny slopes with the vine and olive; sending the springs into the valleys that run among the hills. In the earthquake and volcano he discerned the act of one who looked on the

earth and it trembled, who touched the hills and they smoked. In the thunder he heard the voice of the Eternal dividing the flames of fire, and making the wilderness to shake. In the unbroken order of nature, which marches on from day to day, and from year to year, "unhasting, unresting," he saw, not a dull and soul-less force doing its work with the harsh precision of a machine, but the constant expression of the will of a Ruler, of whose infinite kingdom order must ever be the law: he perceived day unto day uttering speech, and night unto night teaching knowledge, and a kindly power crowning the year with goodness, so that the earth was satisfied with the fruit of His works. In the course of his own life, and of the lives of those around him, he beheld like evidences of a gracious influence guiding and controlling. That power, which he acknowledged to be too great and wonderful for him to understand, he yet knew to be one from whose oversight and care he could not, even if he would, escape. The wings of the morning would not carry him beyond its reach. The darkness of midnight would not hide him from the Presence, before which the night shone even as the day. And all this, not because he was a man of poetic imagination, whose spirit naturally rose from the earth to those "high regions where the pure forms dwell;" but because he was of that reverent and humble heart which is fitted to receive divine revelation, and able to lay hold of those things which, while hidden from "the wise and prudent," are "revealed to babes." He came, through the discipline of life, through his observation of nature, through his acquaintance with men and things, to know the name of the Lord; that is, to detect in all these the revelation of a divine character and will and government, and to master the great fact, true for all ages and generations of men under all creeds and dispensations, that life is an Education, in which there is a divine power on the side of what is good and true. But David did not stop at this. The discovery of a power that "makes for righteousness" was not enough for his spirit to rest on. A power, after all, is abstract and impersonal. Faith requires a person. And David rose to the idea of a Divine Person. He felt that the manifestations of order, of control, of intelligence, of righteousness, which he discerned in nature and in life, bore witness to a living source of all that was fair and true and right. He felt that these were not mere phases or properties of nature, but were the characteristics of a

living Being. They who came to know these, read in them the letters of a "name," the name of the All-wise, Almighty, Everlasting, and saw in them the parts of a Divine character.

What we learn of the world, of nature, and of human life, teaches us that encircling these are certain laws that rule not only the visible universe, but the heart and conscience of mankind,—that there is over all a certain controlling order, and an unseen but awful power everywhere making itself to be felt. And if we consider these heedfully, as those who wish to master their meaning must, we perceive that the law, the order, the power are pervaded by one purpose and marked by one character, are parts of a great whole; and this conducts us to the belief in one mind and will in which they must have originated, and of which they are the manifestations. It is much the same lesson that St. Paul teaches when he says, "Experience worketh hope." He does not mean that our experience of ourselves or our experience of others leads us to be hopeful for ourselves, or for them, or to think better of ourselves or of them, for such experience too often creates only disappointment and distrust; but experience of life, of its trials, crosses, lessons, and of the ways of God which we learn to trace through all these, "worketh hope," leads us to hope in His unfailing goodness, to believe that behind all darkness there is light, to trust

"That somehow good
Will be final goal of ill—
To pangs of nature, sins of will,
Defects of doubt, and taints of blood."

And so, too, we may say knowledge worketh faith. Experience of the ways by which we are led through life, if we be thoughtful and earnest, leads us to understand the character of God who leads us; and to understand His character is to have faith in Him. "They that know Thy name will put their trust in Thee." This, which was the experience of the writer of this ninth psalm, should be ours also. If it is not, I suspect the fault is our own: it certainly is not His who tries to guide our life to a good and noble issue. We sometimes hear people complaining of the way by which they are led, and of their lot in life. We hear it said of this man or the other, "Oh! the world has gone against him. He has got soured, or hardened, or has fallen into unbelief; and little wonder, for his burden was too heavy. Poor man! he never had a fair chance." Men speak about heresy and atheism, but there is no kind of talk fuller of

heresy and atheism than this ; for this would imply that God cared so little about the life of His creatures that He laid down no plan of it for them ; that He either took no care as to what should befall them, or deliberately sent them temptations which they could not resist, and burdens which they could not carry ; and, though Himself the fountain of light, allowed them to sink down into the blackness of darkness for ever, without stretching out a hand to help. What kind of God would this be ? Is it possible to imagine that God, if He be indeed possessed of divine goodness and power, could ever send His children anything that is not intended to bring them nearer to Himself—that is not, if they will use it rightly, a road by which they may come to Him—or that anything could proceed from Him which should tend to shake confidence or extinguish faith ? If the result of aught that befalls us in life is to do this, we may be sure we are using the disciplines of life wrongly, that we are turning away from them because of their painfulness, and refusing to receive them as the messages, nay, as the very gifts, of God ; that we are looking on them as if they were accidental mischances and troubles, and not as though they were parts of a divine plan laid down for us by a Father. For each man's life is a plan of God. We may thwart the plan, and by so doing bring evils and pains upon ourselves ; but these, too, come not at random. They proceed from God as the inevitable results, or, in other phrase, the natural recompenses, of having gone against His law and will. There is nothing arbitrary in these recompenses. They are the effect of which our transgression is the cause. They come to us along the road of absolute law. If we would keep out of their reach, we must do the will of God—do what is right : not doing right because it is His will, but doing His will because it is right.

The faith to which God would lead us—that trust in Him which knowledge of His character, as revealed in His laws and dealings, should work in us—is not the mere confidence with which the mind assents to a proposition which it sees to be true, or accepts a fact of which it has sufficient proof. It is the spirit of trustfulness, and act of trust, in which one being commits itself to another, in the assurance

that the other is worthy of the trust. If you are travelling through a strange land, and have to find your own way, you seek a guide who can lead you whither you wish to go. If you are wise, you will not take any one of whose ability you cannot get some evidence, of whose past services you do not receive a good account, whom others who have travelled with him do not recommend. But if you do find such an one, you will wholly trust yourself to his guidance, and act on no advice but his. Having come to know his name, you will trust in him. And just so on the great life journey. If we are careful to inquire, as those who really wish to make their way safely, we shall discover that there is one Guide who has never been known to mislead ; and, once convinced of that, we will entrust ourselves to Him, to be by Him guided, governed, and kept for ever. We will say to Him, "We commit ourselves to Thee. If the road be rough, we shall not complain, for Thou art leading us thereby. If the night be dark, we shall not be afraid, for Thou art with us. We will obey Thy voice in all perplexity and temptation—Thy voice as it speaks to us in our conscience, or in Thy word. We will look at all times to Him who has passed by this way before us, who came from Thee and returned to Thee, and so we shall be safe." It is only as we thus trust ourselves to God that the true spiritual life can grow within us. "Be it unto you according to your faith" is the principle laid down by Christ, and always true of all spiritual life. There is no law of the spiritual kingdom more true and more universal. The life of science grows according to the proportion of discovery, the life of knowledge according to the proportion of learning, the life of the Spirit according to the proportion of faith. For the life of the Spirit is the Divine life, the life of Christ reproduced in us ; and it is only as we trust ourselves to God the Father, through Him the Son, that the Divine can enter into us and find a home wherein it may abide and grow—grow to that perfect righteousness which no law can create, but which is the fruit of faith, and to that perfect fellowship with the Father which those only can attain in whom is the Spirit of the Son, the Spirit which quickens the eternal life which is "hid with Christ in God," but made manifest in those who are united to God through Him.

R. HERBERT STORY, D.D.

IN ICELAND.

III.—THE SULPHUR MOUNTAINS.

REYKJAVIK, where we spent at different intervals as much as a month, was unusually lively last year, owing to the sitting of the first Alting or parliament of Iceland, since the recent grant of a constitution. Till the other day the Danes, though their own government is constitutional, were despotic in Iceland, not from right of conquest, or any other right, for when they acquired the island by treaty they were pledged to uphold its old laws, but simply because they were the strongest. Indeed, the history of the connection between Iceland and Denmark

was, till quite lately, a mere history of wrongs. A country dependent on trade for all its corn, for the very necessities of life, especially requires free trade, but in the seventeenth century the Danes imposed on Iceland a commercial bondage almost incredible in its injustice. The government sold to certain Danish merchants, at a high price, the absolute monopoly of the Icelandic trade; no Icelander was allowed to trade with any but a Dane, not even with a countryman. He could not legally sell a fish at sea to another ship. The Danes imposed their

Eldbus, or kitchen.

own prices on exports and imports; what these were we may judge from an instance. The skippund (a certain weight of fish) was in 1782 worth from thirty to forty dollars in the outer markets, but in Iceland it had to be sold to the Danes at seven dollars. No wonder that the population diminished, that lands were deserted, enterprise languished, and the deep-sea fishing fell entirely into the hands of foreigners, where it remains to this day. The wonder seems, not that the country retrograded, but that it existed, that the love of it was strong enough to enable the people to fight the battle at all against such a severe climate and such disastrous laws. The year after this monopoly was first imposed, it is on record that three hundred people died of famine. But when more than a century later the

misfortunes of the great volcanic eruptions of 1783 were added to the other burdens, and nine thousand people had perished from want, at last the Danes consented to relax their code so far as to make trade legal with all Danish subjects, which had an immediate good effect. Since that time the restrictions have been, though very gradually, removed, and since 1854 trade has been free. The population, in spite of a good deal of emigration, is now steadily on the increase, and the country thrives, but it may be observed that till quite lately it has not had any fair chance. Now that it forms so large a part of the territory of the reduced Danish monarchy, it is to be hoped that that government will in all ways foster and develop the island, instead of actually preying upon its resources. I cannot here enter

upon the dry subject of the new constitution, but though it seems not yet, to British ideas, sufficiently free from government trammels, no doubt it is a step in the right direction, as was the visit of the King of Denmark at the Millenary of 1874.

The Alting worked and talked in rooms at the college all through the hot weather of July and August—it is to be hoped to good purpose; and on the last day of August there was a great departure of country members, who rode off in the holiday mood of people who had got through a hard task, attended by a cavalcade of friends, who some miles off shared with them a lively picnic and parting stirrup-cup. A picnic, ending perhaps in a dance, is a favourite amusement at Reykjavik, and seems a merry one,

especially the gallop home in the evening, as every one, even foreign sailors, must ride.

Reykjavik became to us quite a home. We were given pleasant rooms in the hospitable house of our guide and his wife; the view of the Fiord from our windows, of which I gave a sketch in a former number, was charming; but after all it was a town, indeed the focus of our ideas was adjusted into feeling that it was a capital city, and we longed for the wilds again. So, it was with no small satisfaction that one lovely summer day, we journeyed with ten ponies along a good road to the merchant station of Hafnar Fiord, bound for the conical range of Sulphur Mountains to the south at Krisuvik. Beyond this pretty sea inlet, with its bustle, shipping, and neat wooden

Waterfall near Hvalfjord.

houses, we came out on the great lava stream which spreads over most of the south-west promontory of Reykjanes. Far and wide we could only see a great blackened plain, broken up by the shattered shapes that surged out of it, in which imagination could trace towers and pinnacles, or a bear, or a dragon, winged and barbed, anything but respectable rocks and stones. The lava over which we rode was often marked with swirling ripples, as if suddenly congealed in the act of boiling, often tilted up steeply, by a newer stream that had forced a way beneath it, constantly traversed by cracks made in cooling, which widened in places into cavernous pits whose sides were decked with delicate ferns, rock flowers, and cistus; but above grew nothing but a grey and yellow lichen, giving the impression that

a long stillness had succeeded the commotion of ancient times. The hills near which we rode were like a range of gigantic cinders, and still smoking in places: we crossed them where a peak had evidently collapsed, and formed a caldron-shaped valley or enormous crater called the Kettle. On the other side, steaming yellow streams ran down the black gullies, and great disconnected rocks, too big to be called boulders, strewed the gloomy valley beneath. I had years ago seen Vesuvius in eruption, and been on the edge of red-hot lava streams, but for stern impressiveness it was not to compare with this burnt-out landscape; there was about it a forlorn horror and a far-spread desolation that are indescribable; it looked as if no one had ever been there before—like a lunar landscape in a tel-

scope ; and the very bad language * we had heard applied to Icelandic scenery, which had seemed such a libel in the soft valleys of the west, or among the grand hills of the north, we now felt was quite accounted for. We lodged for two nights in the tiny chapel at Krisuvik, apparently calculated for one hermit only, and more like an old clothes shop than a church, owing to the garments hanging from the beams. But very refreshing was the verdure and the view over the sea at Krisuvik ; even the bog was refreshing after the journey over these hideous hills.

We visited next day the neighbouring sulphur-mine, at present unworked ; and a curious place it was. A valley and hillside of hot white clay traversed by a yellowish burn, with a back-ground of black rocks and red corries. Bright-coloured varieties of stones and mud were strewn about, formed no doubt by the play of sulphur and ferric compounds, and the whole place was dotted with puffs of vapour, in which some of the sulphur was escaping into the air, in combination, to judge by the smell, with hydrogen ; but a good deal was deposited in powder or crystals round each little crater, and more might no doubt be condensed. In the wide valley below lay a little lake of as intense a blue-green as any in Switzerland ; great boulders strewed its desolate shores, and more cinder-shaped hills trended away northward, glowing red and purple in the brilliant atmosphere. We went cautiously over the hot white mud to the top of the hill where the red rocks edged the white clay, gathering various specimens of the mineral called here Krisuvik, copper carbonates, and pretty crystals of sulphur, these last not proving afterwards stable. It seems a pity that all this mineral wealth should lie here neglected, but the difficulty of transport must be against the profitable working of this mine.

We returned to Reykjavik by the shores of a clear green lake, which has lately sunk so much in its bed as to make it possible to ride beneath the precipices that descend, however, in places so sheer into the water as to make deep fording necessary ; it was a pretty ride on that lovely day, though nothing could be gloomier than the scarred aspect of the mountains all round where no grass grew. This is a much easier way to Krisuvik than the one over the lava, which was formerly the only one, and before long we had reached a pleasant grassy region,

fragrant with juniper and bog myrtle, where quick riding was possible again. We made a last halt by the banks of a mysterious little river, called the Kallir à, which here, after a bright and brawling course, disappears suddenly into a cleft in the lava crust, and must find some cavernous way to the distant sea.

Our appetite for what might be called sub-volcanic wonders being rather whetted than appeased, we started again on the 1st of September to explore the promontory of Reykjanes, the scene of recent as well as ancient volcanic agitation, there having been a great disturbance here in the year 1831, at which time one of the Gaifowl Skerries tumbled into the sea. From Hafner Fiord we followed the line of coast over dull unpicturesque lava, disintegrated into a stony flat, and bearing the same relation in interest to that near Krisuvik that a moraine does to a glacier. The rough track was chiefly marked by deep yellow mud. In bad weather it would have been most dreary, but what place would not be transfigured by so pure an atmosphere that the smallest details of the distant mountain range were quite interesting from their clearness ; and so bright a sunshine that the browns and greys of the rocky waste shone with jewel-like lustre against the blue sea ?

On the second afternoon we came to a sort of grass oasis on the lava field, and it was pleasant to have turf once more under the ponies' feet.

We soon reached Kirkjuvogr, which consists of three large timber farm-houses, each with its own numerous out-buildings, and a good-sized, well-kept black and white church. Everything here was neat and thriving ; the turf walls were trimmed to the utmost straightness, the houses were clean, the wind, even after it had blown over the farms, was deliciously fresh and sweet and laden doubtless with ozone, for close by the great Atlantic rollers were riding in from the west, and dissolving on the low red rocks in clouds of foam which sprinkled the window-panes, while the air was filled with the concussion of the sea. Three brothers had occupied these farms, one had lately died, but his widow still lived in his house, and received us most kindly, while the two gentlemen who shared this excursion with us found quarters in the other houses. One of these gentlemen was Mr. W. L. Watts, who had just explored the unknown wastes of the Vatna Joküll, thus drawing a line across the great blank space of a hundred miles and more,

* The Danish proverb runs thus :—"God made the world, but the devil made Iceland."

that occupies the south-east of the map of Iceland. For two seasons he had tried in vain to make the passage, and his success this third time had delighted every one the more, as only Icelanders had accompanied him. He certainly had the valuable quality in an explorer of inspiring his guides, or rather followers, with a personal enthusiasm which would have made them dare anything for him. We were all entertained here for two days, just as if we had been friends in an English country house; a party of strangers except Mr. Gislason, whose wife was a daughter of the house, and who therefore did the honours as host. There was a great charm about this family settlement, the Bonders were fine-looking athletic men, well known for their energy and hardihood; they owned some large fishing boats, and had done good service in cases of wreck which had occurred in the stormy seas which bordered their pasture lands.

A word here as to paying for quarters in Iceland. The traditional habit of the people is to entertain strangers freely, but except in places like Kirkjubog, where the means are evidently ample, I do not think it fair in tourists to avail themselves of a custom which is a good one among countrymen who are likely to require sometimes the hospitality they give at other times. We met with much real hospitality, and with kindness that could not be paid for, even when we gave money; occasionally in good houses they took nothing, but generally we gave a fair equivalent for food and trouble. And twice or thrice there was an attempted overcharge. Travellers would do well to ascertain the fair prices, so as not to be either mean or lavish when no definite charge is made, and yet something is expected, by people too poor to give away the provisions which through long transport become pretty expensive.

Morning dawned grey and cloudy, an exception to our usual good luck in weather. Nevertheless, we started to ride to the desolate point of Reykjanes. We went over a great waste of gunpowder-coloured sand, which made an effective back-ground for the one break in its unity, a long pale green grass growing so sparsely that the single blades knotted themselves in graceful curves loosely over the dark sand. In the distance were rocky piles, so architectural in shape that they seemed hardly natural. One was like Winchester Cathedral greatly magnified. Near it rose a pyramid so geometrical that it was hard to believe that it was no hand of

man, but the wild volcanic forces, that had piled it up. Deeper among the overhanging lava crags we rode; far and wide all was a mountainous desolation; till at last the air grew warm, the ground smoking and treacherous, and the ravine opened on a green hillside, sloping towards the cone of a recent volcano, where abundant clouds of steam rolled up from various places. Here we dismounted, in about the strangest spot I had yet seen. There was a caldron or crater some fifty or sixty feet in diameter of bluish mud, all in a boil, bubbling and wreathing up in circular ripples. The overhanging sides were jagged, and the ground above was rotten—a regular boiling bog, in which you sank through cohesive hot mud, into thinner,

Icelandic lady, full-dress.

more scalding stuff, and might easily sink far too deeply to be pleasant. Gislason being tenant of the place, and having at one time worked a quarry here, knew his ground as far as so shifting an affair could be known, and we followed him carefully; but we were all more or less in the hot mud. Little hot craters opened here and there, and in another great caldron red mud boiled instead of blue. This bewitched-looking place had of course its corresponding dreary legend attached to it—of a murderess who was executed in the neighbourhood, but would not lie quiet, but scoured these hills as a vampire, frightening folk out of their wits, which proves that the population has decreased, for there is absolutely no one now far and wide

to frighten. At last a holy man of developed spiritual powers confronted the vampire and forced it to enter the blue mud crater, where it was compelled to go round and round the converging circles till it reached the centre, where the gluey mud dragged it down, destroying the ghastly half-life of the body, though the unquiet spirit may still be seen flitting over the livid boiling grave it can never leave! We examined the quarry, where a pure white clay lay on a rock of hydrated silica, which was friable at the top, but grew harder as you dug deeper. Perhaps a fine porcelain clay may be found here, and Iceland may some day produce her own choice china. Of that I am no judge, nor of the rarity of the certainly very pretty bit of chemical action we saw going on here at a point where the steam was issuing strongly from some mud which impinged on the lava rock. The men broke the earth off the rock with their pickaxes, pulling a little rapidly down with their hands, though it was almost too hot to touch even for a moment. Then, as the vapour rose and grew rapidly condensed in the cold air, we saw the lava rock glance all over, apparently in the very process of being silver-plated. This was owing to the aluminum sublimised in the vapour being, through contact with the air, precipitated and deposited on the rock, silvering it over, while we watched, in the prettiest fashion.

On remounting, we rode towards the point of Reykjanes, so well remembered as a peril of the sea in our late stormy voyage, and those weird rocks like giant buildings, which had been in sight all this time. But the grey weather was changing for the worse, a sea-fog rolled up, thick rain set in, and it was of no use to go any further; we could have seen nothing, and the wilderness we had crossed would have been bad riding after dark; so we turned reluctantly homewards. We rode fast over rock and sand, my pony springing over the obstacles I did not see, till not too soon in the gathering darkness we hit on a real tract, and cantered over the grass full tilt for the lights of Kirkjuvogr. By 9.30 we were all doing justice to an excellent dinner in a comfortable, dark-wainscoted room at one of the farms, the dash of the sea outside, and the rattle of the wind and rain at the casements only adding zest to the mirth within, though it made us a little anxious about our plan for returning to Reykjavik by sea the following day. By morning, however, the storm had abated, and the sun shone brightly on the

wet fields and subsiding sea. We had a farewell repast at each farm, and after many cordial good-byes and a stirrup cup or two, we rode off about noon, in two hours, to Njardavik, a creek where our boat awaited us. First, of course, came coffee in the farm, where we were all questioned and patronised by a composed boy, who seemed to be the master of the house. He said he was twelve years old, but evidently considered years could add nothing to his importance. The most impassive of an impassive race, he gazed at us so fixedly that we tried all together to look him out of countenance, but failed utterly. Our large-sized open boat was waiting for us, with two masts, and six men in her; such a boat as those smaller craft mentioned in the Sagas, which, after crossing the ocean more or less successfully, swarmed up the rivers of England and France, with their crews of bold Vikings. Gislason took the helm, we cleared the land with our oars, and soon had the sails up, and were making fair way over the tumbling blue waves. It took us only about five hours to reach the jetty at Reykjavik, so we had made a very short cut home.

We certainly felt after this expedition that, unless its mineral wealth can be made available, Guldbringe, or Goldbringing Sissel, was rather a misnomer, for the wild desert we had been crossing. Much of the interior of Iceland is in the same plight, useless land, except for the pleasure of travelling, unless the mines can be worked. The real wealth of the country is in live stock, the grass in the inhabited parts is beautiful, and in many places would support far more cattle than it does in summer; but their winter keep, depending now entirely on hay, is the difficulty. Round each farm is a well-manured Tun, or infield, yielding a heavy crop of hay. Beyond are the unmanured fields, where inferior wild hay, called út-hey, is gathered, and there is generally besides a great range of summer mountain pasture. In this farming, the hay crop, always so dependent on weather for being well got in, is too important, there should be two strings to every bow; and that second string might surely be found in the turnip. It grows well in patches about Reykjavik, and would only need ploughs, which are very rare, and sustained labour, which is also not common, to succeed elsewhere. The summer, though warm, is too short, and the frost too long in the ground, for any sort of corn to be a safe crop; but a store of turnips to help the cattle through the winter would be invaluable.

It is always well that the door of emigration should be open to restless spirits, especially in a country without corn; but there is a want of hands rather than of labour in Iceland in summer. We came upon none of those signs of over-population, too common here in our own country, wages are good, and steady work would probably be as well rewarded there as in the locust-haunted plains of the far west of America. Only within the last few years has Iceland had a chance of retrieving itself from the distress produced by the burdens on trade. Farms which were known—before these burdens were imposed—to keep forty cows, now keep six or seven, but they might keep forty again, it is said, if people worked hard in summer to provide their winter food. The fisheries, also, are not half-worked, there is a great deal of inshore fishing, and a good trade in salt fish, with France and Spain especially, bringing, among other things, good cheap wine to Reykjavik; but the very profitable deep-sea fishing is virtually in the hands of the French. This is chiefly for want of large fishing vessels, and in these the Icelanders dare not invest, till some safe means of insurance are provided. There is no bank on the island, and the Bonders are said to be rather attached to the unprofitable form of stocking-heel and tea-pot investments. A better style of house-building in the country is the most needed improvement, but of course the scarcity of fuel and timber makes that difficult to attain; though the coasting steamer which has begun to ply this year regularly, and can bring materials more within reach of the farmers, will be a great convenience.

Improvements—all we who write of Iceland seem ready with our suggestions of improvements, but are we sure after all on which side the balance really weighs? It would be a dull world indeed if we were all improved to the same point. On landing in Scotland after our tour, it certainly struck us that the people looked clean—and unhappy. As refreshing as the uncontaminated air, is the absence of that money-winning, money-loving care which weighs upon our people. An Icelander may be a sharp hand at a bargain, but he is soon content with his position; if he have enough to put him beyond the fear of want, he neither covets, nor esteems, nor requires wealth.

The Bonder, however poor in money, is generally well off in the essentials of life; his farm gives him good meat and dairy produce, good clothing and wool for trade. He is owner of wide lands, and has the independent dignity of the lord of the soil. He has his fishing and shooting, and his long pleasant rides, not over dull highways, but across the free country "beloved of horses." His servants, if independent in their ways, are educated and well-bred companions; their indolence may hamper him, but on their honesty and kindness he may rely; crime, stealing, and violence are almost unknown; gay and easy tempers are the rule.

There is a good deal of drunkenness here and there; but statistically, the Icelanders are behind the Scotch in their consumption of alcohol, drinking something less than two gallons per head, and they are not helped by the women. But with the exception of a few veteran and known toppers, it is rarely that a man is drunk on duty; it is at supper that the drinking begins, as in the old times, or when friends start on a journey, or at a wedding or funeral feast. Reykjavik is a well-behaved little town, and for such scenes as our streets present on a holiday evening, or our country places, on the descent of an excursion train, there is no sort of parallel. We saw no abject poverty, no one even insufficiently clad; those who are not well off themselves, seem at least to have well-to-do and helpful cousins, for the people are within reach of each other and know each other. The country can never be rich or support a large population; all the more refreshing is it to be able here to realise the advantages of the earlier simpler forms of life, the real pastoral age when wealth meant sheep and cattle, and people felt towards each other as friendly neighbours, not as competing crowds. So long may it be before our feverish civilisation succeeds in improving away the charm of this rough and simple land.

I have mentioned our last expedition, for September was advancing, long dark nights and frosty days made us aware that the pleasant summer was over, and that it was high time to cross again the stormy autumnal sea; and most appropriately, we saw the last of the Iceland coast under the arch of a brilliant aurora, which presaged a rough passage home.

E. J. O.

WORK AMONG THE BOSNIAN FUGITIVES.

MORE than one-sixth of the Christian inhabitants of Bosnia and the Herzegovina have fled over since August last into the neighbouring territories of Austria, Serbia, and Montenegro.

We are now returning to England for a short time, after five months spent among the fugitive Bosnians in Slavonia and Croatia. Our work there is the application of funds collected for the relief of their distress, and for the rescue of some of their children from ignorance and want. A sad sight indeed it is to behold the ragged and miserable population of the unwholesome border-lands of Turkey, in many places even more than doubled by the yet more ragged and miserable strangers, whose bare lives, scarce saved in their flight, have been just kept from starvation by the allowance granted them by the Austrian Government. Their number is constantly increasing by fresh arrivals. It is hopeless to expect it to diminish; to expect unarmed Christians to return, seeking waste places where once stood their now destroyed homes, amid an armed and exasperated Mussulman population; when even foreign consuls in a civilised Turkish city, Salonica, where the Moslems number but one-fourth of the inhabitants, are brutally murdered by an infuriated Mahommedan mob; when in Brod, the first Turkish village on the high-road from Austria to Serajevo, the accession of the new sultan was celebrated by tossing the heads of three Christian insurgents about the market-place.

But what led to the revolt in which these Christian homes have been destroyed and this savage fury of revenge mutually excited?

Few English people having visited Bosnia, and these few for the most part only for some days or weeks, the normal condition of the Christians in that Turk-ruled European land has been up to the present time unnoticed and unknown. In Serajevo, the capital of the province, where the presence of the European consuls has hitherto kept the Turks on their best behaviour, I used to find it very difficult to obtain reliable accounts of Turkish cruelties perpetrated in the distant parts of the country which I had not visited. The wretched Christians were too terrified to speak. Turkish vengeance would have too surely pursued the reporters. When I complained to one of the more intelligent among the fugitives of the diffi-

culty which I had found in Bosnia in getting the Christians to speak openly to me, he answered, "Why, we dared not complain to one another; how, then, should we tell strangers what happened? I did not dare to tell my friend, lest he should quarrel with me and betray me, or get drunk and repeat what I had said. The Turks would have marked me as a dangerous man, and I should have been imprisoned on some excuse or other, or have been put out of the way." I said to him, "Well, at least you may tell me now you are on Austrian ground, and the Turks cannot hear you." In the course of our conversation he spoke as follows:—"The extortions of the tax-gatherers and the beys (landowners), and the irregular exactions of the zaptiehs (police officers), have reached a point never known before. What with the eighth paid to the government, the third or half to the bey, the tax in exemption of military service, the taxes for pigs, cattle, and everything we have and have not, there remains nothing for us villagers to live upon. I have seen men driven into pigsties and shut up there in cold and hunger until they paid, hung up from the rafters of their houses with their heads downwards in the smoke, until they disclose where their little stores are hidden. I have known them hung up from trees, and water poured down them in the freezing cold; I have known them fastened barefoot to run behind the bey's cart; I have known women and maidens at work in the fields suffer the extreme of brutal violence or be forcibly carried off to Turkish houses. If we complained or reported, we were imprisoned or put to death."

Now the same true and horrid tale I have heard repeated again and again throughout the length and breadth of the land. These were causes enough, indeed, to account for the rising. Encouraged no doubt it was by promises of help from without, and from so-called Serbian emissaries and agitators, who, however, to my certain knowledge, were, with some few exceptions, native Bosnians and Herzegovinians living in exile in Serbia and Austria. The inhabitants of the Serbian principality are of the same race and speech as the Bosnians, and the Serbs dwelling in Austria are all exiles, of a more or less recent date, from the countries conquered by the Turks. In the neighbourhood of Pakratz, in Slavonia, we found the whole Serb or Pravoslav population mindful of their Bosnian

origin, and for the most part looking forward to the time when they shall return to their own beautiful land, to the "Bosna ponosna" of their songs, the "lofty Bosnia" whose hills command the lower and less fertile lands of the Save. Some of them are already there, fighting among the insurgents. Many fugitives settled in Slavonia after the unsuccessful risings of 1858 and 1861; and to this part of the country inhabited by their own people and kin have thronged the fugitives of 1875. Some of these old refugees have become owners of small well-won property, and have received the new-comers with a beautiful and generous hospitality. I give the following instances of these families:—

1. A small miserable-looking hut of two partitions, one of which, open to the weather, served as kitchen and pigstye, the other as dwelling and sleeping place for two families. One family consisted of father, mother, and grandfather, with five children; the other family, father, mother, and three children. The family who owned the hut were Bosnians who fled from Turkey in 1858, and had earned enough to buy this hut and a little piece of land. They had taken in the other Bosnian family who fled here last September. The room was stifling; there was not one single article of furniture in the hut except a kind of open box. A naked babe, born on the flight, lay asleep on the earth floor in a man's tattered jacket.
2. A driver whom we sometimes employed we discovered to be a Bosnian who came over seventeen years ago with his father, mother, and brother. They had been so industrious as to be able to buy a small house and a piece of land for one thousand guildens from the landlady of our inn, who told us the story, remarking that the two young men were so good to their old mother that no wonder they had a blessing. One of them had gone over to Bosnia to fight, the other remained to labour and to mind the home.
3. A family of five brothers, all married, living in a *zadruga* or house-communion, still common in Slavonia, and in which each family, and each member of a family, has a share in the common property. One of these brothers took it in turn to remain at home and superintend the little community; the others were among the insurgents.

After having visited several places in the Croatian and Slavonian military frontier, we took up our temporary abode at Pakratz, thence establishing and organizing schools for the children of the fugitives. These schools have been our chief aim from the

commencement, but it was some weeks before we could find a teacher. The beginning was at length made in the following manner. We were conversing with a Bosnian insurgent, one of those who had been living for some years in exile in Serbia, and had crossed the frontier into his own country at the beginning of the rising last August. He had now come over into Austria, most probably in order to recruit his band among his friends and relations. He was a fine tall man with a very striking countenance, and what the old Serbian song describes as the "glad, bright eye of heroes." While we were talking, an old man came up and joined us. He was dressed like a Grenzer or Austrian borderer, in sheepskin jacket, military great-coat, and blue trousers. "He is one of us," said the Bosnian, "and the very best among us all." After the unsuccessful rising in 1858, he settled in Slavonia, acquired land, built a hut, and was living with his children and grandchildren on the produce of his few cattle and crops. In reply to our inquiry about the Bosnian fugitives in his village, he told us that he had living in his hut a poor crippled young man who was absolutely destitute, and who did not receive the Austrian Government allowance because he had been assigned to a distant Catholic village where he could not bear to go. The Austrian Government, with good reason, objected to the immense crowding of the Bosnian fugitives in the district of Pakratz, and was anxious to equalise their distribution along the frontier. This poor cripple, said the old man, was very clever, and had been a schoolmaster in Bosnia. Hoping that he would prove to be the very person we were seeking, we sent for him to come to us the next day. A more desponding, haggard-looking object I scarcely ever saw. We made him write before us, and read a Serbian psalm. He read with a feeling and expression rare in Bosnia, and we were struck with his singularly intellectual development of forehead. The next day we drove to the village of Kukunjevac, where we heard it would be possible to obtain the old deserted school-house. By the courtesy of the knez, or elder of the village, the arrangement was immediately made, the knez offering to take the young schoolmaster into his house until a sleeping-place in the dilapidated building could be repaired. In two or three days the school was opened (March 6th). The poor young man has displayed unusual skill and energy; the change in his appearance, now that he is earning his own bread in his own vocation, is very remarkable. He has already

taught some of the elder boys to read, and they have received Serbian Testaments as a reward. The accompanying sketch is from a photograph taken on the spot. It shows the old village school-house, now occupied by our Bosnians, and the new building where the little native Slavonians are taught. Our crippled schoolmaster is seen in the group

among his scholars, with his little hump-backed cousin, who is come to live with him, that he may learn to read and write. On the other side is a group of Bosnian men and women.

After this first discovery, by dint of sending messages and letters along the frontier among the fugitives, we at length found seven other

Bosnian fugitives' school.

Our Bosnian orphans at Pakratz, dancing the "Kolo."

teachers, and have now eight Bosnian schools, attended by upwards of four hundred children. We leave them, during our temporary absence, under the superintendence of the excellent professor of the Serb training-school at Pakratz, who is bestowing much time and trouble on these schools, and showing the ill-trained Bosnian schoolmaster how to teach.

Whole communities having come over *en masse* from Bosnian villages, we may expect that these schoolmasters, in event of the fugitives' return, will accompany the communities in which they are now established, and continue at home the schools started in exile. One or two of the more gifted among them will receive a year's training at Pakratz, before

returning to Bosnia. Most of these schoolmasters had served in the insurgent bands, but are glad to return to their own calling. One of them, however, a fine strong young man, and very clever, came in the deepest dejection to offer himself as schoolmaster. "To my shame," said he, "I am come. I was sent away from the troop in Bosnia by my elder brothers, because all the men of our family, sixteen in all, brothers and cousins, are fighting. I am sent away that there may be the chance of one of our name remaining alive." This young man is well known, and his story is perfectly true. He was named to us by his old uncle, the Nestor of his district, who is now himself in Bosnia to do or die.

Having spoken so much of the insurgents, I should mention that Miss Johnston and I found it impossible to help Bosnian women and children without coming in contact with these "crusaders," for the simple reason that every Bosnian child's father, brother, or uncle is an insurgent, or would be if he could but obtain arms. One of our hardest tasks was the absolute necessity we were under to refuse helping them in any way to buy arms and ammunition; to have done so, would have been to compromise our whole special work. But, at the express desire of some of our subscribers, a few sick wounded men have been cared for.

The group of little children dancing the Kolo is composed of the little orphan girls who have been provided with comfortable homes in families in Pakratz, to attend school. These little girls wear the national dress of Turkish Croatia, a loose shirt of strong coarse calico, with a girdle of warm stuff, and a large red cotton cross on the sleeve. A long black jacket without sleeves, and a woollen petticoat, were added in the cold weather. The red fez, which should complete the costume, was not easily attainable.

Small-pox and typhus in some districts are still carrying off many victims, and the mortality among young children has been very great. The Austrian authorities have in many places ordered vaccination among the refugees, but as the decree had not yet reached the neighbourhood of Pakratz, we ordered direct from the cow-pock establishment at Steinamanger vaccine with which two children from six schools have been vaccinated, and from these the others. I may mention here a curious custom: people are to be seen in Slavonia who have been vaccinated in the form of a cross on their

faces, one mark on the forehead and chin, and one on each cheek.

We have expended upwards of £700 in clothing and blankets. One of our last visits was to a village in the hills at some distance from Parkatz, where no linen had been distributed. Little children scarcely covered in ragged filthy shirts; among the women one over one hundred years old, who had known better days in her own land, but who now received with thankfulness some bread which we had with us. Tall, hungry-looking men standing about idle, unable to obtain work, prevented only by lack of ammunition from going across to join their brethren in combat for the freedom of their native land. "We cannot fight the Turks with our pipes," they say, "and we have nothing else." They know too well the fate that would await them if they were to return without arms on the faith of Turkish promises.

In another village we found an old widow woman spinning the coloured worsted with which the Serbian shirts are embroidered. She told us a sad tale of misery, confirmed by the kind Slavonian woman in whose house she lived. We gave her a small sum of money, and as we turned away we heard her saying, "The Lord God has sent this to me." There are beams of light in the darkness of the picture. Here is an instance among many others:—One day when some thousand fugitives were assembled to be newly numbered in the principal place of the district, we saw a Slavonian peasant leading a little Bosnian boy. The man had brought this little orphan two hours' distance that he might be written down to receive his five farthings a day, the Austrian allowance for children. We inquired what he meant to do with him. He answered, "I will never give him up to anybody; he shall be brought up with my own children." We offered him linen for a little shirt, which he accepted with an air of dignity.

A fortnight before we came away, four orphans were brought to us by a young Bosnian from a village six hours distant. We could not but accept the care of the two girls of fourteen or fifteen, who gave themselves to us to do what we would with them, as they said, that they might belong to some one; but finding it impossible to put them to service in Pakratz, we determined to send them with our maidservant, who was returning to Prague, to our branch Home for elder girls training in that place. It so happened that we were sitting under the cool shade of

the acacia trees in the inn garden when this group presented themselves, and the neighbour, hearing the conversation, called to us from the adjoining enclosure, that her husband, a cart-maker, wanted an apprentice, and would take one of the boys. We promised to find clothing, and the agreement was then and there concluded over the hedge. The boy immediately entered upon his new employment, and promises well. The other boy is placed with a tailor, thus making six orphan apprentices for whom we have agreed to find clothes.

All these arrangements, on the pitifully small scale within our power, have been made with the view of turning the time of exile to account as a season of education and preparation for the future which awaits this brave and gifted race on their deliverance from the fierce and foul tyranny of the Turk.*

A. P. IRBY.

NATIONAL HEALTH.

IV.—HEALTH AND HABITATION.

IN the last forty years of the present century, the subject of habitations in relation to the health of inhabitants, has come prominently forward for discussion amongst architects, men of science, and social reformers. At present the subject is one of the most prominent. Societies, voluntary and philanthropic, commercial and philanthropic, or commercial purely, are cropping up in all directions to give it consideration. Scarcely a week passes that does not bring forth some outline of a new plan or suggestion for improvements in human habitations individually or collectively. Nor is the wave of active thought on this matter confined to this kingdom: it is extending throughout all parts of the civilised world, in remote wilds, where the builders can begin *de novo*, as well as in crowded cities, ancient squalid towns, and villages. If the condition of mind thus striving after improvement be continued for another forty years, we may expect to see England so transformed, in respect to her private buildings, that our grandfathers, if they could revisit their old haunts, could hardly recognise them as their homes on the earth.

It was high time that these changes should be commenced, for surely nothing could be worse than the conditions of the homes of the masses of the people. At no period in the history of England has sanitary architecture had a chance of trial, sanitary science being a new implantation on the English mind, and, indeed, on the mind of the world. It was only the other day in the history of science, less than a century and a half ago, that the composition and vital part

of the atmospheric air were discovered; and it is within the last fifty years of the present century that the great discovery of the diffusion of gases, and of the distribution of hurtful gases and vapours in the atmospheric sea, was fully made known.

Previous to these revelations, all idea of purification of the air by what we now call ventilation, was necessarily of the crudest kind, and, indeed, until their announcement, the builders of houses in later stages of civilisation were worse providers of pure air in dwelling places than the more primitive. Dr. Stephen Hales, who in 1733 was the first to discover the physical and physiological importance of the air and the means of good ventilation, very correctly showed that the substitution of the closed stove in dwelling-rooms for the old-fashioned open chimney, which up to his time had prevailed, was an innovation attended with danger. "What," says he, "we call a close warm air, such as has been long confined in a room, without having the vapours in it carried off by communicating with the open air, is apt to give us more or less uneasiness in proportion to the quantities of vapours which are floating in it. For which reason the German stoves, which heat the air in a room without the free admittance of fresh air to carry off the vapours that are raised, as also the modern invention (A.D. 1733) to convey heated air into rooms through hot flues, seem not so well contrived to favour a free respiration as our common method of *fires in open chimneys*, which fires are continually conveying a large stream of heated air out of the room up the chimney, which stream must necessarily be supplied with equal

quantities of fresh air through the doors and windows and crannies of them."

The good genius of Hales in supplying the idea of ventilation of houses, gave a new and truly great direction to the principles of house construction. Like many good suggestions and discoveries, his idea has been obliged to tarry for a very long time. At this day it is but imperfectly realised.

The errors that have prevailed in past time in the construction of human habitations have not been confined to errors connected with ventilation. The political aspects of nations in their developments have tended largely to the developments of faulty and unwholesome constructions. When the great king or earlder-man built his castle he built for protection from enemies of human kind, rather than for protection against those hidden enemies, mysterious pestilences and hereditary diseases. He had to herd up his armed retainers within his thick walls in large numbers, he had to let his slaves live out in such surrounding huts as they by rude instinct could rudely build. The sons of the church who erected the magnificent churches and cathedrals and abbeys, built in perfection of taste of construction, but with little view to health. The spots selected for their residences were spots well selected for protection from bleak winds, for shelter of woods, for choice of springs of water, for running streams, for forest glades, and for easy foundations of highway and road; but here the conditions for health ceased. There was no provision against dampness of air, closeness of air, impurity of air, impurity of water. Half the conditions of health were reached, the rest were left untouched.

It would be unfair in reviewing the work of the first builders of human habitations, to criticise them too keenly by the light of modern science. They built from necessity, and it were hard to scold them if they did not discover what we have but just learned, viz., that in a house there are certain internal necessities for health which are as important as external situation, and which cannot be neglected without incurring the certain penalty of disease and excess of mortality. The first builders raised their various shelters and houses to meet the variations of seasons, to keep out wind and rain, to give protection from the heat of the sun or to fulfil some such other general service. To learn how to ventilate, how to warm, how to light, how to drain, how to secure a pure water supply, was a process or series of processes which could not be made matter of practice in

scientific form until science had shown the object and value and plan of those arts.

With all their necessary shortcomings in respect to sanitary requirements the ancient architects were far less culpable than their masters, the politicians, who determined to a large extent both principles and practice. The original necessity for erecting fortified cities, with their high walls, surrounding moats, narrow streets, closed gates, and central castle, created a stern defiance to all the natural or domiciliary requirements for health. The necessity, however, created a method which became an example, so that when more peaceful times were reached the plans of the city were laid out after the old system and included many of its vices. These bad plans remain to the present hour in many instances, and much of the labour of the sanitarian has to be expended in correcting them.

It is impossible to overestimate the dangers and miseries which have followed, and have been dependent on the fundamental errors of the walled town and city. In such centres the great plagues of the world have found their great resting places. In the streets of these places the poor miserable rickety, scrofulous, consumptive, pale children of the earth have been reared; in the streets of these places the crimes of the massed communities have been engendered together with the diseases, and the crimes and diseases have nourished each other.

The imitative process in building has had yet further evils in details. In imitation of the castle great public buildings such as gaols have taken the character of the castle, with the result that when great plagues affected and infected central communities they found in these places their foci. Thus, out of the gaol stepped the black assize. The prisoners poisoned in their cells poisoned in turn the officers of the courts of justice, and innocent and guilty alike were swept away. To what extent ignorance on these subjects prevailed a few centuries ago is shown by a practice which is hardly yet extinguished. It was believed during those darker times that the odour which rises from the plant known as rue is a preventive of contagion, and so before my Lord Judge there was laid a bunch of this innocent plant, on which his lordship might regale through his sense of smell whenever he desired. The rue, it was assumed, stood between the fever-stricken wretch in the dock and his lordship on the bench. Within present memory the custom has remained of placing the rue on the bench for his lordship, but the charm is dispelled.

The castle, as we have seen, was not the only building from which the habitations of mankind took their origin by the process of imitation. The cloister was to some extent also in fault. The cloister became the model of the asylum for the insane, and the asylum for the insane became in turn the model of the hospital for the infirm; of many of the almshouses for the poor left by the benevolence of the rich; of many of the workhouses built, after the passing of the Act of Elizabeth, for the maintenance of the poor; of many public buildings used as manufactories; and in most cases of hospitals for sickness and pest-houses. The faults of sanitary construction in the cloister system were fewer than were those of the castle and its miniature successor the gaol; but they were nevertheless manifold. They led to the introduction of small windows, of close corridors, of damp underground passages, of one-sided window ventilation, of narrow fire-places, of low ceilings with heavy beams in the crevices of which the dust of ages could accumulate, of thick walls and of bad roofings. With these forms of construction there was, it must be admitted, a certain picturesqueness of effect, and a quaint homeliness that is not without its charm. I am candid enough to say, indeed, that to me the picturesqueness and the homeliness have a very distinct charm, and I know that the same feeling, from association of an historical kind, due probably to some distant hereditary liking, extends to many others if not to all English people. It is unfortunate that feeling and health did not go hand in hand in this matter, and that the cloister system was not a sanitary system. It did not provide for sufficient air, for proper admission of air, for circulation of air: it did not provide for proper warming, nor for the exclusion of damp: it did not provide for the due admission of light. The deficiencies in these respects alone were fatal to healthy construction. These were deficiencies of internal construction. To them were added others which were external. The cesspool for the reception of the sewage was placed too near the source of the running stream, or well, or lake from which the institution received its water supply; the walls of the cesspool were made of porous material, or in some cases were made merely of the earth in which the pool had been sunk. The water supply was little cared for; if the water were sparkling and cold it was considered perfect, and the idea of organic impurity was never dreamed of. That source of disease, organic impurity of

water, remained to be discovered by a philosopher of our own age, a Yorkshireman, who practised in London, whose name was John Snow, who was once my own familiar friend, and whose life I have written, but whose great and useful work will probably not be duly recognised for many a long day.

Wherever we travel in England even in this day, we read, if we look at the public and private buildings, the history of the pre-scientific age, or I had better say of the pre-sanitary age. The time has come when with the breaking up of much that has been cherished in other departments of social life, we must break up also the old and long-cherished plans which the ancient masons, noble representatives of a noble craft as they were, planned and established to last a long time, but not as they thought for ever.

In the present day the grand problem before the nation is the reconstruction of the habitations of the people in cities, towns, and villages. There is at present a fair knowledge that construction as it progresses is imperfect, and that the results of new construction are, as a rule, bad. No man is quite satisfied with his domicile. This house is too dark; that is sufficiently lighted in so far as windows go, but is badly arranged in regard to its windows; this is too close, that is too draughty; this is damp, that is dry but intensely cold; this has an abundant water supply but no bathroom; that has a bathroom but a deficient supply of water; this has good drainage but no effective traps; that has bad drainage, trap it as you will; this has no soft-water cistern, that has one but the water in it soon decomposes, is always of greenish colour and is really of little use; this has no hot-water supply, that has, but the supply is constantly out of order. These are the complaints which the physician daily hears of, and for which up to the present time he has been able, in the general confusion which prevails, to provide few remedies. It is as though all people were becoming alive to the necessities and the requirements of a healthy habitation, but that the knowledge was creeping in by instalments and at irregular intervals, so that no perfect system of a uniform kind can be obtained.

For my part I have never yet seen a single model private habitation, nor an approach to a series of such habitations. Real advancements lie entirely in the future. First we shall have model houses and a small

model town; then, as the general intelligence advances, there will be radical imitative reforms, which will progress with unusual rapidity. With the full impulse that will come from a more perfect appreciation of sanitary requirements most of our English villages will have to be reconstructed altogether; pulled down, stick and stone; except the church and such antiquities as deserve to be specially retained; replanned into streets and gardens; redrained and rebuilt in accordance with a perfect system of construction. By these means much ground, now useless, will be saved; much money foolishly expended in maintaining badly planned highways will be saved; many plans for giving happiness and recreation to the people will be secured; and health will be improved up to its natural standard. These advantages will show such a singular economy, resulting from the wholesale system of improvement, that the economical argument alone, on behalf of that system, will carry the day. Even that persistent village nuisance and source of fever, the farm yard, will undergo the necessary radical changes, to the pecuniary advantage of the farmer, as well as to the advantage of the health of his neighbours.

In my address, made last autumn, to the Social Science Association, on Hygeia,—a City of Health, I laid out a theoretical plan on which a city could be built which should present the lowest possible mortality. The design was confessedly ideal in relation to our present actual position in knowledge of science and art, I mean in relation to the actual present possibility of carrying out the idea practically. At the same time I studiously avoided all that was, even at present, impossible. I asked, as each step of the city was figuratively laid out, could an architect do this for me to-day if I gave him the order? Could a builder find the materials if I gave him the order? Could workmen be found to carry out the details in every particular? Moreover I fixed my mind on the ordinary class of architects, builders, and workmen, and if the answer to the questions I have named above were negative I threw that part of my ideal design aside as something to be waited for. Thus I extracted at last an ideal city which in every detail was strictly practical. The result is that experienced builders say there is no difficulty whatever, save the novelty and the fear of expense, in turning the ideal into the practical, and in producing truly a model city of health; a city in which the mortality will

be reduced to the lowest possible standard which can be secured by the improvement of human habitations.

I do not urge, as some have supposed, that the perfection of sanitary science in construction of dwelling-houses will bring forth all the ends to be accomplished by sanitary science. This would indeed be Utopian in the wildest sense of that term. If, by the perfection of building, we could exclude the poisons which cause the contagious diseases; exclude damp, one of the most frequent exciting causes of consumption of the lungs; exclude darkness and confined air from which spring scrofula and allied forms of disease; exclude the fine particles of dust in the air which enter the lungs to keep up constant irritation; exclude water that contains injurious products; if we could carry out these exclusions, and at the same time could introduce all the best methods for insuring cleanliness of person and raiment; could give the best opportunities for out-door and indoor recreative activity; could establish the best places for preparing healthy and nutritious foods and drinks; then the duty of the builder might be considered as completed, and the duties of the physician and legislator might be considered as about to commence on a sound foundation.

Were, however, these reforms each and all carried out there would still remain those causes of disease and mortality which spring from social influences, from worry, grief, anxiety, irritation, and the reel of the passions: there would still remain those great external atmospheric variations which from the first of man's existence on the planet, and all through his career, have influenced him in his course: there would still remain the last grand cause of death, the wearing out of that physical organism by which, through a limited series of years, he has been identified on the earth as an independent living responsible being.

The builder of model habitations, knowing and skilful though he may be, can never by his subtlety and skill meet these causes of disease and death. His work, notwithstanding, will be of greatest value if it but fulfil its legitimate object, that, viz., of removing those causes which admit of being mechanically separated from the whole existing series of causes. He will in this way, with comparative ease, reduce mortality to a certain rate lower than exists now, although he has to meet at every moment not only the uncontrollable forces of nature but that still more difficult obstacle, human free will, which, when it is opposed to progress and even to the wel-

fare of him who wills, is an opposing force as uncontrollable as any one of those which nature directly imposes, in voice of storm, or wind, or drought, or deluge. Of the four hundred and twenty thousand persons who die in England and Wales in a year, two hundred and ten thousand die from causes humanly preventible, and preventible in greater part by the mechanical means of prevention which are now under our contemplation.

What can be effected by vigorous sanitary measures carried out in all their entirety, is best indicated in the results of modern prison life. I have already shown that in past days the gaol or prison was the focus of disease. I have seen a history of gaols the pages of which hardly admit of being read, so terrible are the records of fostered disease. Diseases were generated in these foci as if by experiment, and were propagated from them as if for the same purpose. Now all the conditions are changed. The gaol is a place of spotless purity, in a sanitary point of view. The large corridors are charged with the purest air; the temperature of the air is rendered equable beyond anything that is found in the private dwelling; the atmosphere is not only pure and equal but free of damp; the water supply is plentiful and wholesome; the walls of the building are kept cleared of dust, and the floors so pure that literally one might eat from them as from a clean dish. The drainage is, in most instances, so good that all excreted and refuse matter is carried off in detail, and accumulation of it in part or in whole is impossible. Thus, we may say, the sanitary work of the architect is complete. In the sick hospital such work is simply abominable; in the workhouse it is very imperfect; in the prison it is perfect. The sanitary metamorphosis of the gaol is decisive. Into common habitations there could be easily extended, with every additional artistic refinement, the architectural sanitary reforms that now exist in prisons, but the process of sanitary reform would be liable to interruption from the disturbing influence of free-will, and the strict analogy from results would not be manifested.

In the prison we see what is the effect of enforced individual discipline combined with the external sanitary safeguards. The prisoner is obliged to make the sun his fellow workman; he is compelled to take long hours of rest if not of sleep, and very soon he finds all of them pass fairly in sleep; he is deprived of those so-called luxuries, alcohol and tobacco; he is made to take regular

muscular exercise; he is fed on the simplest yet on sufficient fare; he is protected from inclemency of season; and, finally, he is under constant medical supervision, so that if he be seized with any serious illness, he is treated immediately with the proper remedies.

Taking him all in all, the modern prisoner in one of our model prisons is a wonderful subject of experiment for physiological and sanitary purposes. So uniform is his physical wear and repair, that in an immense establishment like that at Wakefield he and all his colleagues obey the vicissitudes of season with such exactitude that they begin to lose flesh in September, and begin to gain flesh in April, with a precision of movement as regular as the movements of the seasons themselves.

The results on the disease and mortality of the gaol population are as remarkable as the results of a chemical demonstration. The great epidemics of gaol fever are exorcised; the presence of an epidemic disease is so rare that it ranks after the style of an accident, such as a fire or the bursting of a cistern; and the mortality is so reduced that in our military prisons it has positively fallen, as Mr. Chadwick has shown, to below five in the thousand annually. In a word, in respect to health of habitations, the models of them are now found in the homes of the imprisoned criminal classes. The criminal taken from his home in one of the crowded passages of Liverpool or Glasgow is placed, after he is cast into prison to work out his sentence, in a position where the chances of living are as seven to one better than they were in his old and fatal haunt.

We cannot expect to secure out of the prison all the advantages for health that exist in the prison; we must not expect them for many a long day. When free-will is educated to be guided by knowledge and reason, and when it becomes resolute in the masses to do of itself what is found to be best, the rule of self-obedience to the right will bring all things into order, and will discover the ease with which liberty wears the yoke of discipline. Then as every person will systematically take part in suppressing the conditions which favour disease, the suppression will be a light task. Now the conditions leading to disease are like those which lead to a fire in cities built of wood, in which people live who, ignorant of combustible substances, distribute them carelessly, and wonder at the conflagrations they chance to excite.

The great sanitary work of the day in this

country, and in all civilised countries, is to find the best mode of placing the people of large communities in habitations which shall be as healthy as the prisons, and which shall at the same time supply what the prisons necessarily fail to supply, those objects of beauty in nature and art, which tend to make the home a garden of delight, and the town a centre of intelligence, social happiness, and educational progress. It is a gigantic task to contemplate. Whoever rides over the railway highways of London and other large towns and sees in the houses beneath how the denizens of the place are packed in their close rooms, so that the caged birds in their cages hanging at the windows seem happier and freer than their masters; whoever rides through the rural districts and sees the thatched hovels and huts in which the agricultural populations are housed, the thatch a nest of the seeds of pestilences as it is of the eggs of the sparrows, must needs appreciate the greatness of the required labour that shall reform such a system as exists, and by the process physically regenerate those who are at present born to suffer and prematurely die.

There are three directions in which to begin to move in the work of reformation in the habitations of the people. The first of these consists in the erecting model houses and towns *de novo*. The second consists in adopting a thorough system of remodelling what now exists and, for various reasons, must exist. The third consists in adding to the houses of the working classes accessory buildings in which the labour of the day may be carried on away from the rooms where the meals of the labourer are taken and his hours of sleep are passed.

In the ideal of a model City of Health—Hygeia—I pointed out the details that are necessary for every model building or series of buildings in which human beings are to live in due enjoyment of health. In that imaginary city I sketched forth the improvements which have to be carried out *de novo*. These consisted chiefly of the following details:—

The living space is assumed to be so arranged that not more than twenty-five persons are lodged on an acre of ground. That is calculated as the densest population that could be safely housed. The houses in which the population reside are so planned that each acre of land can receive five houses, and each house can receive a family of five persons. The houses are built three, or at most, four stories high, and each story is confined to fifteen feet in height,

by which means the great evil of tall overshadowing, densely packed human warehouses is prevented. The houses are built on solid arches of brickwork, so that where in other towns there are areas and kitchens, there are here subways through which the air flows freely, and down the inclines of which all currents of water are carried away. The streets of the city, wide and, owing to the lowness of the houses, well lighted and thoroughly ventilated, are laid also on archways, and beneath each of the main streets is a railway by which all the heavy traffic of the place is carried on. The streets are planted on each side with trees, and in many places with shrubs and evergreens. They are paved with wood, set in asphalt, and the side pavements, which are everywhere ten feet wide, are of light grey stone. These pavements have a slight incline towards the streets, and the streets have an incline from their centres towards the margins of the pavements. The streets are washed every day, through side openings, into the subways, the washings being conveyed with the sewage to a destination apart from the city. Thus the streets everywhere are dry and clean, free alike of pools and open drains.

The spaces at the backs of the houses are gardens, which gardens are common to all the houses, so that children have good playgrounds at home. The gardens are planted with trees and evergreens, but nothing is wanting to give facilities to the children for healthful exercise and play. Practically the houses stand in gardens, for the streets with their evergreen foliage and cleanly kept dry walks are also like a garden, with walking paths and a central thoroughfare.

The introduction of subways beneath the houses does away altogether with those underground caves called areas, kitchens, and cellars, in which, in bad imitation of the primitive cave-dwelling savage men, so many thousands of our industrious people now vegetate. The subways, at the same time, perform an important service. All pipes are conveyed along the subways and enter each house from beneath. The mains of the water-pipe are carried along the subway. The gas main is carried along the subway. The supplies of gas and water enter from the basement of each house, and are at every moment within the immediate control of the householder. The supplies of water and of gas are constant, and if there be an escape of either within the house the owner can separate them at the main from the floor of the entrance hall or from a side opening of the wall in that part of the house.

Beneath the floor of the subway lies the sewer of the house. The sewers are built of brick, and are trapped from each house. Into each sewer, which is well flushed and ventilated, there are convenient entrances by which they can be inspected, and through which the workmen can pass to make repairs or remove obstructions. The subway thus becomes a very important part of the construction of the house. It not only prevents the house from being charged with damp from beneath, but it leaves a convenient space in which all repairs connected with water supply, gas supply, and sewerage can be carried out.

The living part of every house begins on the level of the street, and the walls of the houses are built of a brick which is not porous, and which therefore cannot be saturated with water. Some kinds of common brick will take up, as Mr. Chadwick has found, a pound weight of water. A roughly built, exposed cottage during a short season of heavy wet may take up many tons of water, which water when the dry weather returns, is carried in vapour into the warm rooms, creating a damp as persistent as in wet weather, and leading to those physical evils from damp of which consumption of the lungs is the most prominent form. To avoid the dangers from this cause the bricks used are made of glazed substance, and are quite impermeable to water. The bricks are perforated, at the end of each is a wedge-like opening, and all the openings communicate. The walls therefore are honey-combed, and into them a body of air constantly circulates, which air can be warmed from the firegrates of the house. The walls of the living-rooms are lined with glazed tile, and can be washed down as an earthenware vessel is washed. The colour of the walls is grey, as a rule. The mortar and cement in which the bricks are laid, and all the timbers employed in the buildings are rendered free of moisture. Sea salt, so common an ingredient of mortar made from sea sand, and so often present in wood that has crossed the sea, and so efficient an absorbent of water, is carefully excluded.

The most radical improvements in our system of model habitations lie in the arrangements of the roofs and the kitchens. In the houses of the present day the kitchen is at the basement, while the upper part of

the house is carefully sealed down by the roof. The result is that all the close and disagreeable, and it may be, foul and dangerous vapours from the kitchens and lower offices, ascend to the upper rooms and passages of the house, just as gases introduced into an inverted bell-jar filled with water ascend to the upper part of the jar, displacing the water. In our model houses the risks from this cause are avoided by placing the kitchen at the top of the house, immediately beneath the roof. The kitchen acts as a ventilating chamber, into which all the air from the lower part of the house is drawn, and through the chimney and ventilator of which the air finds ready exit. Thus the house is kept free of the odours of the lower regions, and is ventilated at all times with fresh air derived from without and warmed by its passage through the honeycombed heated walls. The position of the kitchen at the upper part of the house is attended with other advantages than those just stated. From the kitchen there is distributed throughout the house a constant supply of warm as well as of cold water. The weighted dishes have to be carried down instead of up-stairs; the light dishes only have to be carried up-stairs. The kitchen is perfectly lighted, so that the least uncleanliness is readily detected. The scullery, which lies off the kitchen, communicates with the dust-bin shaft, and from every floor of the house a distinct communication, by a sliding door, is made with the same shaft. A sink also exists on every floor for receiving waste water, so that the plan of carrying the heavy slop-pail from floor to floor is dispensed with altogether.

Above the kitchen is the arched roof of the house. The roof, which is flat, or nearly so, on the exterior surface, is coated with asphalt, and, being barricaded with a light iron palisading, makes an airing ground, or a drying ground, or even a garden, according to the tastes or the requirements of the owner. The smoke from the chimneys is collected and drawn away to a central shaft, so that the air is kept clear of soot-dust, and a pure blue sky overhead is obscured only by the curtain of cloud which nature, in her grand designing, sees it wise sometimes to impose.

BENJAMIN W. RICHARDSON.

WHAT SHE CAME THROUGH.

BY THE AUTHOR OF "LADY BELL," ETC.

CHAPTER XLI.—MR. WOODCOCK'S PROPOSAL,
AND ITS SUCCESS.

THE following morning Mr. Woodcock set forth early from his chambers to seek the neighbourhood of the eastern station and of the Yorkshire

drawing-room. Now, he was surrounded by what is sometimes well-nigh as repulsive as squalor, particularly if the last be allied to picturesque decay. He was in the centre of common mean ugliness in a city street given over to clerks' and warehousemen's lodgings, and fourth-rate shops, with—as his destination—the Yorkshire Grey having a heavily-laden, huge carrier's cart blocking up the entrance.

It was not that Mr. Woodcock had not sufficient practice in his calling, and did not know enough of evil and harrowing family secrets, to have sometimes sought the womenkind of his clients in exceptional quarters. But he was brought back to himself by the reflection that this was the strangest place in the world wherein to seek a mistress of Shardleigh.

For a wonder, Pleasance had not yet returned to Saxford. She had stayed on in the city as much from sheer physical prostration, as from the necessity of seeing Clem Blennerhasset and visiting a few sights in order to satisfy Lizzie.

"She would be sure to ask about them, and what should I say if I had done nothing of the kind; or what should I have to talk about to her?" said Pleasance to herself.

Pleasance had become re-instated in the good graces of her hostesses, though, candid as she was naturally, she had told them no more than at the first. Her name was Pleasance Douglas, she had said. Her father and mother were both dead, and her own people were all gone. Yes, she was married, and she indicated the wedding-ring which she wore; but she had not been living with her husband, there had been objections to that. At this point she stopped. She was the kind of woman who, open by instinct, yet when necessity was laid upon her to be silent, not the greatest gossip in Saxford could have pressed her for farther revelation. As for the Toveys, their apprehensions were removed; and they paid her back liberally with family confidences on the death of old Mr. Tovey, and on the perversity of the only son of the house, who had chosen to be a carrier by sea and not by land, and to hail from Gravesend instead of from the Yorkshire Grey.

Pleasance in her sweet friendliness, found sympathy for those commonplace troubles of

Grey, to make terms with Pleasance, according to what the lawyer conceived of her.

His late conversation with Archie Douglas had by no means increased Mr. Woodcock's inclination to his mission. He had thought of Pleasance at first as of some poor raw, country girl, who would be a terrible thorn in Mrs. Douglas's flesh, a very unfit representative of the mistress of Shardleigh and the protectress of Jane, were Jane's mother to be taken from her before she had won another protector.

But after Mr. Woodcock had left his hansom and was walking down the side street in Shoreditch, he actually forgot what was to come in the realisation of the strangeness of the fact that he should be seeking the mistress of Shardleigh in a region like this.

Mr. Woodcock recalled swiftly the fine place which he had always been accustomed to regard with some personal pride in its imposing details. To him they breathed the perfection of repose, and quiet dignity—from the extensive park with its old timber to the charm of the winter garden, the architectural pretension of the porch and entrance hall, and the subdued luxury and sunshiny flower-scented grace of Mrs. Douglas's

commonplace people,—a sympathy which brought her a desirable distraction from her own distress. She gave part of the time, which would otherwise have hung heavily on her hands, to helping Mrs. Tovey with the arrangements of her household napery, and Miss Tovey with her accounts, and to writing out available country recipes for the kitchen of the Yorkshire Grey.

She was prepared to go out, when Mrs. Tovey came to her with an intimation that a gentleman had been in the bar, inquiring if there was a Mrs. Douglas—a young woman from the country—staying in the house, for he wished to see her.

Pleasance grew red and white by turns, and sank down on a seat, for her nerves had been shaken by her interview with Archie Douglas. She only recovered when Mrs. Tovey proceeded to say, with a shade of returning suspicion, that the gentleman was not only “quite the gentleman,” but was “that stout and grey headed” he must be sober-minded and to be depended on, if there was confidence to be placed in mortal man. Had it been otherwise, Lyddy would have thought twice before she had put him into the parlour, where he was waiting.

Pleasance drew a long sigh of desperate relief and sick disappointment, and rising under the conflict of feelings, went to the parlour. There she saw an elderly gentleman, who had more the easy, well-bred air of Lawyer Lockwood’s master, Sir Frederick, than the bluff self-importance of Lawyer Lockwood himself.

Mr. Woodcock, on his part, saw—not a sobbing, giggling village girl—not a miserable creature, fast verging on shamelessness and abandonment—but a fine young woman, struggling for perfect composure. She had a beautiful face, which in its present gravity of repressed agitation, seemed as if it belonged to a woman older in years than Archie Douglas; and she wore spectacles in aid of her short-sighted grey eyes.

For tawdry finery the young woman had on, as far as Mr. Woodcock could judge, the plainest black gown, jacket, and bonnet; and for pretension she held in her ungloved brown hands a large enough bag to have carried marketings, and a serviceable alpaca umbrella.

Mr. Woodcock rose, bowed, and offered Pleasance a chair with all the flurry of a man roused from one dream and lapsing into another and totally different vision.

Where on earth had Archie Douglas found her? And, having found her, what could

have put irreconcilable enmity between them? Was she the greatest deception, the most accomplished hypocrite that the world had seen since the days of Delilah? Was she a village schoolmistress? Was she a decayed gentlewoman? She was not quite like either of the two last. Mrs. Douglas, if not Archie, had spoken distinctly of Archie’s wife as belonging to the humblest class of workers with their hands, whom Archie had encountered when he was serving his own apprenticeship to manual labour.

After Mr. Woodcock came to himself, he remarked other anomalies. The young woman had put her umbrella and bag on the table before her, as if she were not ashamed of either of them, though she found them in her way just then. She had sat down neither on the edge, nor on the side of her chair, neither wriggling nor in a heap, but moderately erect, and with her brown hands as if they belonged to her, and were not a special burden upon her mind.

“You have been sent to me by Mr. Douglas of Shardleigh?” she said.

There was a little gasp at the name, else the calm, good-breeding would have been complete. The accent was provincial, but the tone and expression were unmistakably those of an educated woman.

“Yes, madam, you have judged correctly,” said Mr. Woodcock.

As she listened, a ludicrous association of his “madam” with the rude quizzing sense in which the word had been applied to her by the girls of Saxford, flashed across her mind.

“I am Mr. Douglas’s lawyer,” and he put down his card before her. He was seeking to assure her of his authority and his interest in the suggestions which he was about to make, as if she were a well-informed woman, capable of calling in question each, as he brought it forward.

She recalled his name, which had been mentioned to her by Archie Douglas in the course of his disclosure of his real position. She remembered every word that he had told her then, as well as all he had said when they were dearest friends and equals. “Yes,” she said quickly, “what did he bid you say to me?”

“I have been directed to make such arrangements, as you may approve, for your future comfort and well-being,” answered Mr. Woodcock, with caution.

“I do not wish anything,” she said, hastily. “I am able and willing to work for myself; I have done it since I was a girl. I should

be ashamed if I were not sufficient for my own support," and she smiled slightly.

Here was a clue if Mr. Woodcock could have followed it up. But the single notion that he acquired from it was an odd one. There must be women in the labour leagues, and they must have educated women for their leaders. Possibly the last were daughters or kinswomen of Chartist demagogues.

He replied, "Pardon me, Mrs. Douglas, you must have regard to your husband in this matter. As he happens to be a gentleman of station and fortune, you must consider what is suitable in his wife, as well as what belongs to your former experience, and what may be your inclinations in a question which does not—though it may seem so—concern yourself alone."

She had never seen the consequences of the announcement of her marriage in this light. But when the point of view was put before her, her ingenuousness and intelligence caused her to perceive at once that there was something in the argument. She paused disturbed and anxious.

"Would it be regarded as a reflection on him—a discredit to him, if I lived as I have been accustomed to do?" she asked wistfully, with a naïveté and a faith in his sincerity, which convinced Mr. Woodcock that, with all her self-command and dignity, and her amount of education, she was but a simple-minded girl after all.

"Certainly; the world would cry shame on any gentleman like Mr. Douglas of Shardleigh, if he suffered his wife, however she had been brought up, and whatever their private differences, to continue to work for her bread."

"But it would be very unjust in the world, supposing it ever came to know and care about it, if it were my own free will and choice to work for my bread," replied Pleasance, clinging desperately to her independence even against her equally strong instinct of justice.

"Madam, the world knows everything," said Mr. Woodcock sententiously. "Nothing is below its notice; and it looks only to appearances, not to the abstract justice of a case." Then he ventured to sound her further. "In view of a probable reconciliation—"

"There can be no reconciliation," Pleasance interrupted him quickly, with a sorrowful steadfastness. She did not tell Mr. Woodcock that Archie Douglas had deceived her, and that in place of taking the deception as a pretty compliment, she

had resented it bitterly. In her mind that would have been to expose Archie Douglas's deceit to his friends, and to cast a worse reflection on him than her working for her daily bread should have done.

And calling to mind what Archie Douglas had said to him to the same effect, Mr. Woodcock refrained from his attempt, at once confounded and disheartened.

"What did you think would be best for everybody? What had you proposed?" inquired Pleasance hesitatingly.

"There is only one proposal that can be made," said Mr. Woodcock in reply, "a separate maintenance, and the dowager house at Stone Cross. If you bear in mind that there is already a dowager, and another dowager house, with a life interest on the estate; and if you have regard to the fact, which you do not seem disposed to forget, that you have brought no fortune to my client" (the words sounded in his own ears like a sneer, but they were not so intended: they were a simple explanation on Mr. Woodcock's part, and Pleasance accepted them for what they were worth), I do not think that the allowance should be other than is moderate and modest, with due regard to the capabilities of the estate."

"Let me tell you," Pleasance interrupted him a second time, "I have a little money of my own. My father left four hundred pounds, and I have my cousin Mrs. Ball's savings of nearly a hundred more." She knew that the little sum was nothing to live upon, but her pride and honesty prompted her to mention it.

The announcement caused a new tangle in Mr. Woodcock's already mazed ideas. At the same time he received it as a melancholy, well-nigh pathetic, proof of her incompetency for her position.

"I was about to suggest that eight hundred or a thousand a year might be a fitting allowance," he said almost gloomily; "you need not spend more than you will want in order to live becomingly—Mrs. Douglas, the squire's mother, has five thousand a year, while Miss Douglas has her separate income, of course."

"It is very different with them," said Pleasance, instantly; "but for me it is hard to spend anything that I have not earned."

"The house down at Stone Cross is an old-fashioned house, furnished suitably, no doubt, but plainly, to meet the requirements of an older and simpler generation," pursued Mr. Woodcock, thinking that he was contending with the oddest difficulty that ever beset a

lawyer in accomplishing a settlement. "I believe there are two old servants in it who might form the nucleus of a quiet little establishment."

Pleasance was considering all these obligations thrust upon her. "Shall I be left to myself?" she said with a jealous tone in her voice. "Shall I be away out of reach, and insured against interference and molestation?"

"As for that," he told her, "Stone Cross is three counties removed from Shardleigh," and he added out of his experience, "By your acceptance of a separate maintenance, you not only pledge yourself to dwell apart, and have nothing to do with the life of the family of which you are legally a member; you receive a pledge from them which they are bound in honour to respect, that they will not come near you to call in question what you do. You are, in effect, your own mistress. The income which you derive from the estate, is simply your due, from a just claim."

"And will the world be satisfied where my husband is concerned?" she asked, returning pertinaciously to the great point in her eyes.

"It may be," answered Mr. Woodcock; "for, unfortunately, it is tolerably familiar with far less creditable arrangements."

"Then I shall agree to the maintenance, and go to Stone Cross," said Pleasance in a tone of resignation, as if she were condescending to a compromise, and consenting to a banishment.

Mr. Woodcock took her at her word, and told her that he should draw up a deed which would put her in possession of what had been agreed upon for her use, and which would be ready in a few days. After asking her if she had a lawyer engaged, he advised her to permit him to appoint a gentleman to look after her interest.

She did not see the necessity for an agent on her own account; she was willing to submit entirely to his judgment and trust herself to his good faith, acting as he was for Archie Douglas. But she was docile in this, as in every other particular, after her first concession. Mr. Woodcock had never known a more reasonable woman.

Mr. Woodcock tried to draw his last client into conversation; against this also she entered no protest. She sat and conversed with him on general subjects in her provincial accent, with her occasional quaint, old-fashioned idioms; and he had intellect and taste to perceive that there was a singular

charm which blended with, and prevailed over all. He asked her if she had seen much of London; she told him that she had only seen St. Paul's, she was keeping Westminster Abbey for another day, and she had been just starting for the Tower when he found her.

"But, my dear young lady," exclaimed the lawyer, thrown off his guard, "you don't mean to say that you are going there alone?"

"I am not a young lady," said Pleasance, "and I am accustomed to go about alone."

"We shall not quarrel about the relative meanings of the term lady," he told her. "I will simply say that, as your husband is a gentleman, and as the wife takes rank from the husband whom she does not repudiate, you *are* a lady."

"You must have patience with me," said Pleasance, with a little piteousness; "I have not been used to any more restraint than what is put on a working woman. How shall I bear it, even when I am left to impose it at my own discretion? Is it improper for a lady to go abroad by herself, in broad day, to see the Tower and Westminster Abbey?"

"Improper is a strong word," answered the lawyer, "but acts which are not strictly improper may be inexpedient. Allow me to send one of my nieces, with her husband or her brother, to call for you and take you to all you ought to see."

It showed the depth of the impression which Pleasance had made on Mr. Woodcock, that he should be induced to make this proposal, even where the wife of an employer and friend was concerned. Mr. Woodcock's nieces were as much cherished by him as if they had been his daughters—granted that the special niece whom he had in his mind was a married woman, with the privacy of her brougham and the support of her husband at her command, in any difficult or disagreeable task.

But Pleasance had been quick in taking the lesson to herself. Her going out in any fashion, her very presence in town, being what she was in manner, dress, and surroundings, was compromising to her husband. She had meant this morning to make an appointment with Clem Blennerhasset. She had fully intended, even after her conversation with Mr. Woodcock, to go back and bid farewell to Lizzie and Saxford, and all whom she knew there. But in the enlightenment which had come to her, she seemed to see that these would be steps unjustifiable where Archie Douglas's feelings and those of his

family, perhaps even where his social interests, were concerned.

What had to be sacrificed had better be done without delay. She was giving up all she had left to care for, her cherished resolution, her pride in her independence, her familiar associations. It would be but to relinquish a little more—the pleasure of seeing again an honest, friendly, boyish face, and learning that Clem at least was realising his ideal by Archie Douglas's means—the solace of hearing Lizzie cry that she would miss her, and of bidding Lizzie not miss her too much—the consolation of one last look at Anne's grave. She could write to Lizzie, and she would forego the rest.

She explained to Mr. Woodcock that on second thoughts she had come to the conclusion she had better see no one, and go nowhere, before she went down to Stone Cross. He applauded the resolution, and took his leave, revolving many marvels in his sagacious mind, and repeating to himself as their refrain, where on earth could Archie Douglas have found this rustic paragon, and what evil chance had come between them?

In spite of the poverty and obscurity which would have rendered her always, in a sense, an unsuitable wife for the squire of Shardleigh, she might have risen, if ever low-born and humble-nurtured bride rose triumphantly over the accidents of fortune and all superficial advantages, to grace his station. She might have made the honour and happiness of Archie Douglas's life in proving the fine counterpoise to all that was unbalanced and overweighted in him. She might have produced harmony in the man, and harmony in his life; developing in him, under God's providence, the very best of which a character, ominously prodigal in its promise, had been capable.

Mr. Woodcock went back to Archie and said, "Your wife will go to Stone Cross. She will do what is best for you, as I am certain she was willing to do from the beginning."

Archie looked strangely grateful for the implied rebuke, and was particularly gracious to Mr. Woodcock, during the few hours that elapsed, ere he — Archie — departed for Shardleigh. He imagined that he could have borne bravely and cheerfully the nine days' wonder, the comments and criticisms on the proclamation of his marriage, if it had but had a happy result. But burning and smarting as he was under a sense of its failure, and of his insufficiency for its consequences, he did not see why he should

continue to face alone the town's talk, the inquiring looks and cool hints which were meeting him on every side.

Mr. Woodcock went next, and had the confidence to sing Pleasance's praises in the ears of Mrs. Douglas. She was one of the finest young women he had ever seen, in any station. He could not comprehend what Archie had been thinking of—not in marrying her, that infatuation might have been easily pardoned, but in contriving to quarrel with her irreconcilably. He feared Archie must be less well-disposed than he had hitherto given him credit for.

Mrs. Douglas listened dubiously, keeping her daughter carefully out of the discussion. She said with a plaintive sigh that it was a sad affair, of course she could not understand it, but she regarded it as a great mercy that it was no worse. It was a distinct comfort and satisfaction to her to hear that Mr. Woodcock thought so well of the poor young woman who bore Archie's name, and alas! was to bear it thenceforth. Was she so beautiful? That accounted for everything.

In truth Mrs. Douglas, having been a beauty herself, in her day, and being still a woman who was personally charming, felt faintly propitiated by hearing that Archie's wife was a great beauty. At least Mrs. Douglas had not received the culminating injury that an old arrogant beauty and heiress urged against her son, when she alleged that he had put an affront on his mother, and on his own manhood, by conceiving an "unnatural" passion for a poor little girl of foreign extraction, who, in addition to every other offence, was absolutely plain in person. Yet Mrs. Douglas did not fail to reflect sorrowfully to herself, "Is it not grievous and humbling to see how men—even old Woodcock—have their heads turned by a woman's beauty? I am perfectly satisfied that this girl has twisted him round her finger."

"I shall take Mrs. Archie Douglas down to Stone Cross," volunteered Mr. Woodcock.

"Do, it will be so good of you," chimed in Mrs. Douglas. "It will be an act of charity. I shall write myself to old Perry to have everything ready, and to pay the poor young woman proper attention."

CHAPTER XLII.—STONE CROSS AND WILLOW HOUSE.

PLEASANCE tried to appreciate Mr. Woodcock's consideration in taking her down himself to Stone Cross. She strove not to feel

that she was a prisoner on parole, who had surrendered to a mitigated form of imprisonment, and whom a friendly jailer was taking the precaution to conduct safely into durance.

Pleasance's natural disposition led her to respond readily to friendly advances. Her original temperament had been gracious, accessible, and full of social fascination. She was forced to admit, against all her preconceived theories, that in less awkward circumstances she would have liked and got on well with the old lawyer, whom she felt by her own delicate instincts to be a gentleman, as much a gentleman as Archie Douglas's mother and sisters were ladies.

Pleasance did not even think that Mr. Woodcock was ashamed of the incongruity of her dress, and of the luggage which he carried for her, with the first-class carriage into which he handed her, and in which there were other travellers, who looked at Pleasance's common mourning-gown and shabby travelling-bag, as if she had mistaken her place.

It was hard upon Pleasance—among other difficulties—after she had grown up to a sense of suitability in her plain dress, and had even taken pride in its simplicity, that she should suddenly come to find it out of joint, and full of mortifying discrepancies. But she was bound to comply with the conditions to which she had agreed, and she was thankful that Mr. Woodcock did not mind the jarring discords of the position.

If she had known it, Mr. Woodcock did mind the covert remarks which he and his companion were provoking; but he had enjoyed long practice in keeping his feelings to himself, and was fortified by the knowledge that he was not a principal in the business. Besides, he was able to entertain, from the beginning to the end, a magnanimous admiration of his companion and her behaviour in the worst entanglement that was likely to occur from her rusticity and her unacquaintance with ordinary forms. And he derived some satisfaction from the idea that he was breaking to her the change which was to introduce her to a new order of things.

Pleasance tried to take an interest in the broken, wooded country—the more prominent objects in which Mr. Woodcock was ready to point out to her, as they approached the small cathedral town of Stone Cross. The landscape was a little like that in the neighbourhood of the Hayes, only less rich and more broken; but the reminder, though not unwelcome, was hardly constituted to render Pleasance more cheerful.

Stone Cross itself was a demure, dignified, miniature town—the social centre of which was the cathedral close, as the architectural centre was the cathedral—not one of the great stately minsters, but a minor copy, yet perfect in its kind and in the faithful, patient labour which had been bestowed on every detail. The very shops were mannerly and slightly sleepy in the fitful spring sunshine. Pleasance knew nothing of such a town and its ways. Her experience of towns was limited to the bustling, boisterous seaport town of Cheam, and to what she had seen of the city of London.

"This is our destination," said Mr. Woodcock, as the cab from the station drew up before a tall, red house, with grey copings. It had an old-fashioned and finely-wrought railing, with a high gate, the railing extending in front, and meeting a lofty, weather-stained wall, which ran back at the two sides, and made the house stand apart in its own grounds in the centre of the High Street. It was opposite the entrance-gates to the cathedral, the Grammar School, and the Close.

Mr. Woodcock had avoided using the word "home," and Pleasance felt how inappropriate it would have been. She was struck by a certain resemblance which the house bore to a prison or a private asylum. She began to realise how difficult it was for her to feign satisfaction in the prospect before her.

The servant whom Mrs. Douglas had spoken of as "old Perry," and whom Mr. Woodcock greeted as a former acquaintance, had been on the watch for them along with her husband, the gardener. The gate and the front door were thrown open with ostentatious hospitality. Pleasance was invited to walk in, and Mr. Woodcock was deprived of her bag, while he was formally questioned whether there was not more luggage for Perry to look after and carry in.

"Never mind the luggage," said Mr. Woodcock. "Make young Mrs. Douglas comfortable. I hope that you have got fires all over the house, Perry, for the wind is not out of the east yet, and that luncheon is ready for us."

He knew there would be fires, and that luncheon would be ready. He hoped that Perry would see it to be her interest, not less than her duty, to pay regard to her new mistress, who would be more in the servants' power than Mr. Woodcock cared to think of. But he wished to carry off the arrival, in the interest of all concerned, as well as he could manage it.

Mrs. Perry was painfully decorous and conscientious, and Mr. Perry was pompous and crusty, but he was not specially foolish apart from his pomposity; he was a well-disposed man, take him on the right side, and avoid any raid on his beds, especially his melon-frames. The Perrys would protect the young woman who was thus suddenly elevated into being their mistress; and they would not take greater advantage of her than was inseparable from fallen human nature.

Mr. Woodcock was totally unaware of the elaborate instructions forwarded to Mrs. Perry by her old mistress—with whose family Perry, in her own person, had been connected before Mrs. Douglas's marriage—and of the impression made on Perry's mind by Mrs. Douglas's letter.

"You must be fatigued, Mrs. Douglas: allow me to do the honours at so informal a meal as luncheon," said Mr. Woodcock, when Pleasance had been taken away to remove her bonnet, brought back, and ushered into the dining-room. He spoke more for the benefit of Perry than of Pleasance.

"You must have done the honours for me, whether I were fatigued or not, at any meal," said Pleasance, with a shade of impatience in her manner.

The next moment it struck her that her speech was ungrateful, and she made a hasty atonement. "But if this is to be my house, and you are my guest, I think I ought to look after your comfort," she said, and before he could prevent her she got up from her seat, and went round and gave him the wine for which he was at that moment looking—scandalizing Perry and touching Mr. Woodcock.

It was no great solecism, and it was her only one, unless he counted as solecisms her saying "Thank you" to Perry, her mistaking a sherry for a claret-glass, and eating tart with a spoon alone, without using her fork as an aid. She did not further deport herself like a South-Sea Islander in the neglect of that little instrument—to teach the use of which had been an important item in the programme of boarding-schools in Mr. Woodcock's younger days. On the contrary, she handled knife, fork, spoon, and table-napkin with the unconscious ease and adroitness of one who had been early accustomed to these supposed attributes of civilised life. Mr. Woodcock had never done speculating and marvelling over his charge, until he was in danger of losing the train.

When he came to say "Good-bye," he

shook cordially the hand which his late travelling companion offered him, and told her emphatically, "Now, Mrs. Douglas, you know that you have a lawyer of your own, who is in your service, to whom you are free to apply at any time. But if there is anything that I can do for you as a friend, I trust that you will do me the honour to write to me, or make Perry write to me. Believe me I should be only too glad to help you."

"I believe you," said Pleasance, with her clear voice, looking at him with her frank eyes. "I am sure that you have sought to be good to me—a stranger who has been, against her will, a trouble to you. Yes, indeed, Mr. Woodcock, that cannot be denied, but I shall pay you back in your own coin. If I want help, I shall seek it first from you, but I do not think I shall want help," and she parted from him, putting a brave face on her desolation.

"I am inclined to agree with the poor thing that she will do the best she can with the fragments which are left her, of what might have been her feast," Mr. Woodcock meditated, waxing poetic under the stress of circumstances, on his way back to the train. "And I liked that lad specially for his generosity and tenderness, but I suppose that he is not the squire of Shardleigh, at his age, for nothing. Besides, I could fancy that she is just the woman who if once outraged on a tender point, would be as implacable to herself as to the chief offender."

Pleasance was more forlorn than she had been at any time in her life since Anne's death. The strangeness of a strange place was about her, in addition to every other loss, and she did not even see the probability of growing reconciled to the strangeness.

These old provincial town houses, belonging to another day and another state of society, might not have been isolated in their youth, when there were many similar houses in every country town—the dwellings of aristocratic colonies who sought no faster town life. The houses might even have been cheerful when they were freely resorted to by squires and squires' dowerers, who flocked to them at certain seasons, or occupied them without thought of, or wish for, change all the year round, and year after year. But in the present generation, when only a few relics remain, and these, for the most part, are given up to tenants of a different class, the exceptional house which retains its original use, is apt to do it at the expense of a stranded, petrified

character in which the mouldiness of years can be felt, and the chill of ancient state and gone-by fashion, enters into the very bones.

The Manor House was an older house than the Willow House in Stone Cross; but the Manor House had descended into a farmhouse as by the natural course of things. It had taken fresh impressions, and allied itself with new associations. In addition, it was a country-house redolent of the freedom, the bounty, the ever-recurring changes of the country; above all, it was teeming with the animal life of office and yard.

Willow House was very stony, indulging in flagged halls and passages, and in flagged floors to some of the sitting-rooms, and in stone balustrades to the stairs, to an extent that was scarcely warrantable in a house dating back no farther than the reign of Queen Anne. The drab colour—not the green-grey or “water of the Nile,” dear to the hearts of artists—but an unmitigated sandy drab, in which our ancestors, from superior sobriety of taste, or from stricter views of economy, were prone to indulge, prevailed at Willow House. The drawing room, with its long French windows of a later era than Anne’s, was hung with drab, only relieved by a Van Dyck border of black velvet. The room which had been chosen for Pleasance’s sleeping-room boasted an extensive four-post bed, also hung with drab. The dining-room walls were painted in a hard drab without any gilding, and the two or three battered pictures—none of them portraits—poor French battle-pieces, good enough for a dowager house, were framed in drab wainscot. The carpets were not drab, but they were almost as sombre in their faded, dingy reds and greens; and the tall mirrors had their tarnished gilding supplemented by black velvet bands in a Venetian fashion, which was at least as funereal as it was quaint. All that had been really curious, interesting, or valuable in the old house in Stone Cross had been removed to Shardleigh.

When Pleasance sought to look out from the long French windows, they commanded nothing save a narrow turf walk, that might have suited a set of cowed monks, so thoroughly was it withdrawn from the world, not only by one side of the brick-wall, but by a row of willow-trees beyond, which unduly shaded, as well as bestowed a name on, the house. To complete the evil, this damp, dreary walk separated and hid the garden, of which it was a terrace, from all save the upper windows of the house.

Pleasance would willingly have given up a large proportion of her bounds in lofty ceilings and dim corners. She would have been happily rid of the chamber and table etiquette, the burden of made dishes, dinner and dressing bells, down-quilts and warming-pans, with which Mrs. Perry, for her own credit, as well as with reference to the directions that she had received, was prepared to overwhelm her. She would have thought them well exchanged for the sights, the sounds, and the familiar salutations of working-life. She pined for the dairy and household-work to do, for the yard, and the fields, with horses tramping by, cows lowing to be milked, hens and chickens ever straggling across the threshold. She sighed for the never-ending interruptions and enlivenments, were it only in the shape of the bailiff, old Miles, or Phillis Plum, or Ned, or a messenger from Saxford, coming in to ask for this or that article, and to stand and hear and tell the day’s news.

What should she do in this other life—less life than death, and of the narrow, feeble life of which she was utterly incapable? Should she fade away, or be suffocated under it, or break away from it in spite of her pledge?

Mrs. Perry and her husband were as unlike Pleasance’s old allies, as Willow House was unlike the Manor House. The Perrys prided themselves on being what they were in the estimation of the world they had known—model servants.

Mrs. Perry was a little, spare, large-eyed, hollow-cheeked woman, who wore a well-kept, black silk gown of an afternoon. Her husband was a tall, lean man, invested, when he was not in his gardener’s clothes, in a black suit, and trained to stand at the sideboard as a butler. He was a little less sensible than his wife, and therefore a little less self-controlled. He was over-weighted with conceit, and inclined to be irritable when he was contradicted with regard to his own particular charge and its importance.

Both wife and husband approached Pleasance with the utmost civility, and were even irksomely anxious to show her all the attention which they conceived that they were bound to pay. But as to entering into kindly relations of flesh and blood, and holding friendly communication with her, they avoided sternly such a line of conduct as equally detrimental to her and to themselves. They would no more permit than they would presume on familiarities. They would discharge their duty to Pleasance or to Mrs. Archie Douglas.

"WHAT SHE CAME THROUGH."

Pleasance regarded, half-piteously, half-curiously, the Perrys' becks and bows, their proffers of this chair, or that footstool, or wax-candle, of this plate of chicken, or that cup of tea, which with their solicitude as to her pleasure in reference to meals were their principal consideration. This appeared to be their substitute for conversation; and Pleasance thought that it was like being con-

demned to be permanently set aside, and have everything done for her by dumb waiters.

She bore the infliction as part of her ordeal. It wearied her indescribably, and oppressed her, but it did not intimidate her, because she was not a weak woman. If she had to suffer the deprivation—immense in her case—of friends, and have only

Page 675.

servants instead, at least there should not be presented the glaring anomaly—common enough in her position—of the servants becoming the masters.

Pleasance had another source of liberty, apart from her unimpaired strength and independence of character, a source which was partly to benefit her, partly to play her a sorry trick.

Mrs. Perry, with all her painstaking and wariness—perhaps because of these excellent qualities which dominated in her till they developed morbidness, had arrived at a distressing yet whimsical misconception of Mrs. Douglas's diplomatic letter.

Mrs. Douglas had written that her son's wife was coming down to reside by herself at Stone Cross. Perry would very probably

not have heard of Mr. Douglas's marriage ; but he was married, and circumstances had rendered it advisable that Mrs. Archibald Douglas should stay at the Willow House. Of course under the circumstances it was not to be supposed that the lady would care for visiting ; therefore Perry was to discourage all attempts which the families in the Close and the neighbourhood might make to become acquainted with her young mistress. Mrs. Douglas could fully trust Perry to attend to her wishes in this respect ; she could also rely on her old servant to take every care of poor Mrs. Archibald Douglas, and pay her all the attention which her peculiar position required.

The letter had fallen upon Perry like a thunderbolt. She had not heard of the young squire's marriage till that moment, although only a few days afterwards a report reached her that Mr. Douglas had been married for months, having contracted a private love-marriage, the discovery of which had driven his mother and sister out of town to take refuge at Shardleigh.

Mrs. Perry was not content with this solution. In her desire to apprehend her instructions, and to prove equal to her task, Perry saw much more than was expressed in Mrs. Douglas's letter, with its solicitous withholding of Pleasance from public notice, and at the same time its relenting recommendation of her to Mrs. Perry's care.

"The young lady—well, she's no longer a person, but a lady to us from this time—has had her 'ead touched by her exaltation. Depend upon it, that is what it is, Perry," said Mrs. Perry, in a confidential discussion with her husband. "It is a awful visitation on Mrs. Douglas, and the young squire ; but that is no business of ours. All that we have got to do is to manage the best we can for her. It will be a great additional trouble ; but Mrs. Douglas will take that into consideration, and it is in the way of our duty here. I ain't going to grudge anythink that can be expected of me."

"If she is not right in the upper story, I don't half like her getting loose among the garden beds, and them melon-frames, that Willow House has always been famed for, and that I 'ave strove hard to keep up the credit of, for the sake of the family," objected Mr. Perry, taking a practical and professional view of the subject.

"Hold your tongue, Perry," said his wife, who was decidedly the ruling spirit, and who was naturally more unceremonious with her husband than with the farthest removed

member of the family. "It is surely more for the honour of the family that young Mrs. Douglas—as she is now, to all intents and purposes—should be looked after, as we'll do it careful and considerate, than that these melons, which you are always going on about, and that can never be equal to their fellows in the forcing-houses at Shardleigh, should flourish. It will be a great weight on my mind. I wonder now," mused Mrs. Perry, with the lawul intent of lightening the serious obligation, "if a hint dropped about what is really wrong, might not be warranted, just once in a way, to keep people off? There is the Dean's lady is very free and easy in who she takes up with, and what she talks about. Her new housekeeper, that is just as thoughtless as her mistress, has been over here, in her lady's name, asking, as if it were my place to answer her, what truth there was in the 'orrid story about our Mr. Douglas. If the story gets wind, as to be sure it will when Mrs. Archie Douglas comes, Miss Mason, in behalf of the Dean's lady, will be pushing herself in, unless I can warn her well off the premises, to begin with."

CHAPTER XLIII.—A DOWAGER'S LIFE.

THE first thing that Pleasance did at Stone Cross was to extend largely by means of the instalment of her income with which Mr. Woodcock had furnished her, the purchases that she had made before leaving London, by way of preparation for entering into another sphere. She bought, alike boldly and judiciously, from the principal linen-draper in Stone Cross, what might constitute the simple wardrobe of a lady. But she declined Mrs. Perry's respectful suggestion to send the materials to be made up for her.

"I can make my own clothes, my gowns among the rest, Mrs. Perry, and I suppose there is no objection to my sewing," said Pleasance.

"One of her queer speeches," commented Mrs. Perry to herself ; "but sewing is soothing, they say, and I can fit the things on : I have fitted on for Mrs. Douglas when I was her maid."

Pleasance did not refuse the aid, which, though named by Mrs. Perry with proud humility, was far more available than Lizzie Blennerhasset's.

Pleasance sat in the drab rooms and stitched her heart from breaking and her brain from a fever, and having made the clothes, she put them on and appeared in outward attire like other ladies.

Mrs. Perry could not take it upon her, at the height of her own frenzy, to hinder Pleasance from walking abroad by herself in a place so quiet and so freely frequented by ladies as Stone Cross. Pleasance always came home again, and even paid regard to hours—a watch having been one of her purchases.

At first Pleasance had gone abroad with a vague idea of finding something to do, somebody to aid in her new circumstances. She was a lady in spite of herself, and was no longer at liberty to provide for her own wants. She must find the occupation—alas! not so unmistakable or so certain of its reward, which she understood was the resource of ladies, that of ministering to their poorer brethren and sisters.

As to ministering to her own household, it was out of the question—they did not seem to need it, and they certainly would not permit it—unless in the single rite of reading prayers, which Mrs. Perry had formally requested Pleasance to perform.

Pleasance's own household would have none of her ministrations. But surely there were other households that would be glad of those qualities of manual skill and strength on which poor Pleasance had learned to pride herself at the Manor farm, and which were now likely to rust for want of employment, and to leave their former possessor as useless a creature in her own eyes, as in those of other people.

But Mrs. Perry, from whom Pleasance solicited information, spoke in perfect accordance with facts when she said, with a mildly resolute shade of reprobation of any project in which the poor should figure, that there were not many poor people about Stone Cross, and such as did exist were looked after and relieved by organized committees of ladies and clergymen.

Pleasance, making an investigation for herself, could see no such wretchedness at Stone Cross as she had relieved in a small way at Saxford; and the poor tradesmen and mechanics of the cathedral town were a totally different class from the rough agricultural labourers.

She was too unused to her present position, too innocently a beggar turned porter, to be possessed of the tact and perseverance which might have disarmed opposition. She relinquished the campaign in despair. "I see that I am condemned to stand and wait like a blind man or a disabled invalid. Perhaps it is a punishment on me for my pride of usefulness which matched my pride of inde-

pendence. Once I was told that I was the proudest woman in the world," she recalled.

Pleasance pursued her walks for her own personal profit and pleasure. And though she still protested against and lamented over such a waste of life, she was capable of receiving a considerable amount of profit and pleasure from her solitary expeditions.

The cathedral was a consolation to her; and it was so near her, that though the principal sitting-rooms of the house looked perversely into the gloomy grassy walk, she never glanced out of her bed-room window, she never came out of her high iron gate, without confronting the cathedral gates—those gates which had each an old Saxon name, while the arch of one of them was crowned by a triangular building,—chamber or chapel of saint, which seemed to her, by comparison, not so very much smaller than the thatched-roofed, white-washed little church at Saxford. Within, there was first the grammar-school, pinnacled, buttressed, half draped in green, once a separate chapel. Then there were the hoary tower and massive building of the cathedral itself. She could visit it and linger in it at all hours, until nave, aisles, and choir, and great rose window, cloisters and crypt, were as familiar to her as to beadle or guide, who ceased to pester her, or even to the dean himself, who, in the fashion of the day, was an ardent antiquarian. She took an interest in everything, from the Norman pillars—up to the triforium and the richly-carved roof, and down to the elaborate wood-work of the stalls, and the monumental brasses in the pavement. She studied the tombstones of bishop, lord, and lady, and wondered what life had felt like to them. She questioned what the old monks of the original chapel of St. John's would have made of the troop of merry boys who rushed out of the grammar-school. She admired the endless patience of the carvers in wood and stone that had put the finishing touches to the work of the master-builders of the middle ages. She did everything save attempt to sketch. She sometimes saw artists sketching this or that vista, or central spot, screen, or canopy. But she smiled at the idea that her random scrambling pencil sketches which had just succeeded occasionally in catching the primitive outline and expression of a wind-mill or a barge, or "Daisy" or "Jowler," could transfer and make their own of the stately magnificent minor cathedral, which was not only full of all law and science of art, but teeming with symbol and emblem.

After the cathedral, Pleasance liked the Close, which she traversed and re-traversed, unconscious that she attracted any observation, since she was neither openly stared at, nor pointed at and jostled, as at Saxford. She held that the ancient, half-ecclesiastical houses, some of which had arched entrances to cloistered and grim courts, were next in interest to the ancient church.

She was fond of strolling about the whole old red town, watching for those green and brown glimpses into wooded and moorland country, which were supplied by its side-streets and lanes, with the effect of gaps in mason work. She had a special partiality for the ferries and the bridges, which were in fact gateways—one of them with a round tower in addition to the low, but substantial house over its arch—for Stone Cross was built on a river full and slow, like the east country rivers. Pleasance would stand on the bridges, and look up at the red houses in close proximity to the cool, green water, and fancy these must be similar to bits of German towns of which she had read.

But what Pleasance visited more regularly than the cathedral was the market, in the widest portion of the widest street, with the country stalls, and the countrywomen seated before them. She did not go there to buy, for the most part; she did not feel as if she belonged to the buyers. She went to gaze at the market-carts and ponies, the fowls and ducks, butter and eggs, and early vegetables, as if they were so many relics of a lost paradise. She had a great longing to speak to the wives and daughters of the humbler farmers, and who sat there, weatherbeaten, but tidy, even smart in their hats and jackets, with here and there a bright-coloured neckerchief or a white apron, as she never experienced a longing to speak to any of the ladies who passed her, sauntering along the pavement. But an ever-increasing shyness was stealing over her. She did not belong to them now, any more than to the others; she belonged to nobody. She did not resent the fate, though it was hard on a woman like her.

When her walks extended into the country near Stone Cross, Pleasance used to stand and watch the field work for many minutes at a time. Once she did more than watch. A flock of sheep had been driven out of a pen, and the shepherd and his dogs had gone on, driving the main body of the flock, without observing that a straggler remained behind. A lame young sheep had fallen in a rut by the hedge-row, in the long grass of which its legs were entangled; and it lay half

hidden and struggling, unable to recover its footing. Pleasance climbed without hesitation over the barrier, and raised and freed the sheep, getting her dress all smeared with the mire which recent rainy weather and the hoof-tread of the sheep had combined to produce. Mrs. Perry was rendered both frightened and fretful by that mud, though Pleasance did not fail to account for it, as she believed satisfactorily.

The adventure got abroad, as most things even distantly concerning the upper ten thousand, oozed out in the Close circle at Stone Cross in much the same spirit that gossip was rampant at Saxford. It gave rise to the report in certain quarters that the low-born, half-crazy young woman whom Douglas of Shardleigh had been mad to marry, was, in addition to her other demerits, the most masculine of her sex. This was said by the young ladies who, when the county hunt was in the neighbourhood, boasted of being able to ride across country and be in at the death, and who were fain to consider themselves good sports-women in other respects, since they could wield a rod in a salmon stream and land a panting fish, or fire a pistol at a target, in training for a tournament of doves, at which they hoped to be more than mere complacent spectators.

Pleasance had got all her little possessions, including her old school-books, forwarded by Lizzie from the Manor House. But there was already a small library in Willow House. Pleasance read in it for a time, and enlarged her knowledge of English classics.

Then she bethought herself of modern literature, and began to invest money in new books, and to read in a branch of Mudie's, at the principal bookseller's, and in Smith's at the station, pondering much over the latest tendencies of thought, revealed to her particularly in the novels of the day.

As Pleasance read and read with a world of books for her sole world, she began to entertain and cherish the idea of seeing more of the outer world for herself. Her wings were expanding, her sense of self-reliance increasing, her inclination for change and movement developing. If she could do nothing else, if she belonged to nobody, she might in time, when she was a little older, use the income she possessed to travel, to become even a great traveller like Lady Franklin or Madame Pfeiffer. The project was conditional on Mr. Woodcock's consent, for Pleasance was not without a painful sense of obligation, a feeling that as she was a

pensioner on the Shardleigh estate, she must submit to authority, like other pensioners. But she did not think that Mr. Woodcock would prove adverse in this instance, and in the mean time the hope of visiting foreign countries in her own person, and learning to know another life and other manners, was productive of results.

Pleasance took the enterprising step of engaging an elderly Swiss lady who advertised in one of the Stone Cross newspapers, and who was resident in the town for the purpose of giving lessons in French and German to the young daughters of the canons and church dignitaries, to renew the slight acquaintance of Pleasance's youth with the current languages of continental Europe.

If Pleasance had also a lurking hope to gain in Madame Berber a friend for her friendlessness, she found herself mistaken. Madame Berber was indeed a citizeness of the world, open to advances and advantages from any quarter; but she was also an exceedingly artificial and affected woman, from whose manifest falseness and egregious conceit Pleasance at once recoiled, and confined herself to the business of the lessons.

In truth "Madame Douglas" was a positive windfall to Madame Berber, insuring her sundry social attentions from the ladies of the Close, who, in the dearth of other entertainment, desired to hear the last report of the proscribed intruder into their ranks, the wife of Archie Douglas, sent to Coventry, and kept out of the way at Stone Cross.

"Mrs. Perry," said Pleasance one day, when the silence of the stony and drab house, and its dearth of animal life, had been more dreary than usual, "don't you keep a cat?"

"No, ma'am, there ain't no rats nor mice," answered Perry, with a drab-like neutrality in her voice; "but if you would care to have a cat, I shall make Perry inquire, and get one for you."

"No, thank you, don't trouble yourself about it," said Pleasance, in a disheartened tone, and she added to herself when Mrs. Perry had left her alone, "The poor beast would feel from home; it would be sure to commit depredations; and Mrs. Perry could not help seeking to keep it in its proper place, till its life became a burden to it."

But Pleasance was tempted by the contents of a bird-seller's shop, and first she bought a cage full of young canaries, carrying them home herself. Then she bought nest after nest of young linnets and gold-

finches, taking a melancholy pleasure in letting the birds fly away as soon as they were fully fledged.

At last, passing over a pair of turtle-doves, which the bird-seller pressed upon her, she brought home such a tame young jackdaw as she had seen Ned take out of one of the chimneys of the Manor House, and rear into all imaginable boldness and trickery. "It will live in the tool-house, and it will not do the least harm to the garden," insinuated Pleasance, for she was conscious that though the Perrys were too good servants to contradict her, she had got into disgrace with Mr. Perry on several recent occasions. He had taken to heart her last enfranchisement of native birds, and her begging him to spare the two crows' and the one wood-pigeon's nests in the row of trees beyond the garden. He had been still more wounded by her saying inadvertently, while looking at his worshipped melon beds, that she had only eaten melon once (Long Dick had brought a melon as an offering from a foreign ship in Cheam harbour), and she did not like it; she thought it tasted like sweetened turnip with a certain sickly flavour superadded.

"Ladies may think as they choose, Perry," his wife had admonished in private. "If our mistress sees fit to turn the drawing-room into a haviary, and that not with love birds or even parrots, as we have known ladies make pets of, but with common hedge birds that she could see in the fields any day; and if she chooses to walk about the garden with a nasty sooty daw fluttering and hopping, and caw-cawing after her—even if the vegetables and the fruit should suffer, is no business of ours. It is our part to please her, and a good thing it is that a lady like her, with her ways, is pleased so easy. We have nothing to do to interfere and prevent her goings on."

Notwithstanding Mrs. Perry's excellent advice and her corresponding practice, Perry aimed at Pleasance, behind his wife's back, a few severe reflections "on them wretched little birds, the most cunningest, destructivest creatures in creation," and on the insatiable appetite of even a single pair of wood-pigeons, which rendered Perry's sowing of late peas, or of smaller seed that season an idle farce.

Pleasance appropriated the speeches, without making any remark on their point, for she was acquiring social tactics. She was partly diverted, partly disconcerted; but she preserved her individuality and independence,

and she was not deprived of her rights, never openly attacked, only subtilly impugned. She kept Jacky and revelled in his forwardness and eccentricity.

CHAPTER XLIV.—THE OCCUPANTS OF THE GABLE HOUSE.

WHEN Mrs. Douglas gave Mrs. Perry the instructions which she misinterpreted, the lady had no notion that they would be so thoroughly carried out, as to admit of no reservation.

"Of course her clergyman will call for her," Mrs. Douglas had reflected with regard to her daughter-in-law, "no doubt she will attend either church or chapel; very likely she is a dissenter, perhaps a Methodist. If she has no higher motive—I am sure I hope she has—she will at least have been accustomed to go to church or chapel as the chief place for showing off her best clothes, and seeing her neighbours. Her clergyman will be kind to her, and his wife may take a little notice of her; they are bound to look after and do the best they can for any member of their flock, whatever her disadvantages. Her doctor will attend her. That kind of person is always fancying herself ailing, from finding her time hang heavy on her hands, and liking to feel herself of consequence. I dare say she suffers also—let us be charitable—from a new mode of life. Oh! she will soon get quite a little set of her own round her. But it will be far better for her, and for all, that she should not be exposed to overtures—mischievous and malicious—from idle members of our set; though I believe I shall never go near Stone Cross again, and I shall certainly keep Jane from that neighbourhood in future." Such had been Mrs. Douglas's expectations, but the sequel did not bear them out.

Pleasance was very healthy, and did not so much as fancy herself ill, or dream of calling in a doctor. As for her clergyman—the incumbent of her parish whom she heard along with the other dignitaries in the cathedral—he did call, and was admitted by Perry, who was also a regular and well-known attendant on his ministrations. After a few friendly words with his elder parishioner, his visit to Pleasance was of the shortest and most cautious description; and his following visits were all on the same model.

Thus Pleasance led an utterly solitary life, with her interest in her neighbours reduced to a casual curiosity. But she grew to know a good many people by sight; and

none among the better classes attracted her attention more than a family consisting of two ladies, with a large retinue of servants, who occupied the Gable House leading out of the Close.

The Gable House shared in many peculiarities of the Close architecture, and had undoubtedly been included in the ecclesiastical bounds in its day. It had not figured in a humble capacity, for it was one of the finest old houses—not excepting the Deanery—in Stone Cross, with a covered entrance, pointed windows, and a coat of arms carved above the door, which when open afforded a glimpse of a grand old oak staircase.

However, it was not the house, with its venerable stately charm, which fascinated Pleasance, nor was it so much its mistresses in themselves, as an intangible impression that they made on her.

The elder lady was a large overgrown woman, with handsome, heavy features, who went little abroad even in her carriage, and never without pomp and ceremony, as in the progress of a sovereign. The younger lady, about the age of Pleasance, was the reverse of the elder in looks and deeds. Certainly, she, too, was inclined to be stout, while she was not above the middle height; but it was the description of stoutness which may exist in company with much *verve* and buoyance. There was nothing sleepy about her, except her eyes, when they were not laughing, which was very often. She went a great deal about, and varied her goings in every way, for she seemed her own mistress, in spite of the dictatorial air of her senior. She walked early and late, as if she were in the heat of a match against her embonpoint, which, indeed, she was; she rode, and she drove, though she did the latter more rarely. She was accompanied by other girls, she was escorted by troops of men—young and old, or she was alone. In her rich silk, her delicate muslin, her yachting flannel, her grey camlet, she was for ever to be seen playing croquet, sketching in the cathedral, boating on the river, singing in the choir, or visiting the poor as the member of a visiting association.

Yet any one who studied her, might have had a perception that she knew exactly where to stop within certain prescribed limits; and that in a worldly sense she was very well able to take care of herself. Clearly she had established a license for herself. She could do with impunity what other girls like her were not permitted to do. She was even trusted as a person who had

experience, and who, with all her bravado, kept safely within conventional barriers.

Pleasance could not tell for a time why she should be—not so much drawn or repelled, as somehow arrested—by the ladies at the Gable House. She was driven to dwell on their characteristics and to try to recall similar traits in people she had known; while all the time her reason told her that she could never have been acquainted with anything like what she saw, in the different world in which she had lived, and that she was setting herself an impossible and unprofitable task.

The explanation came when Pleasance asked Mrs. Perry a few questions which were fully answered.

The one line of conversation in which Mrs. Perry felt at liberty to indulge with her mistress, was the annals of the Close and county families. These, like bits out of the *Court Journal* or *Morning Post*, were quite proper topics for discussion, and could not be too much discussed by Mrs. Archie Douglas. If Mrs. Perry had a weakness which rendered her garrulous, it had reference to her familiarity with such histories.

The ladies at the Gable House were Mrs. and Miss Wyndham, the widow and one of the daughters of Mr. Wyndham, of Sefton Hall in the same county. The Gable House belonged to Sefton Hall, just as Willow House belonged to Shardleigh, from which it was much farther removed; but in the old days the cathedral towns were connected, far and near, with the county gentry. Now the only other county house left in Stone Cross was Bridge House, the residence of old Lady Lewis, who was a connection of the family—only she was so very old that she visited nobody.

Miss Wyndham was a beauty, and a very lively young lady. She had known Miss Douglas when the two were children, meeting occasionally at Stone Cross. They had renewed the acquaintance when both families were on the Continent last year; and Miss Wyndham had been up in town, living with Mrs. Douglas in Grosvenor Square, at the beginning of the season.

Mrs. Perry hastened to quit this part of her subject, which her discretion warned her was trenching on dangerous ground.

Mrs. Wyndham had also been a beauty in her day, and was still a fine big lady. She had been an heiress as well, her father's property having come to her; and there had been mines put down on a bit in Staffordshire which had doubled its value. Yet it had all been needed, for Mr. Wyndham had

been a gentleman much given to horse racing; people said his son took after him; and the other daughter had married into a high but poor foreign family, and it was believed required assistance from her own people in addition to her portion.

Mrs. Perry—of all people to be bitten with diffuseness, conveyed the whole information to Pleasance without the least suspicion, that her listener was particularly interested in it.

Yes, Pleasance remembered everything—the name of Sefton Hall, the traits of the aunt, whom Pleasance had seen first and last, when she herself was only a girl of thirteen years, on the memorable occasion of her leaving the Hayes.

Even the laughing black eyes and mocking mouth of the young lady were the features of which Pleasance had got a glimpse in the companion of Archie Douglas and his sister in that miserable encounter in the Park.

How it had all come round! What a tangled web life was, with the same threads perpetually recurring and crossing each other as Pleasance had said to herself in the hollow of the Saxford moor.

And now she was sitting in the drab-coloured drawing-room of Willow House, surrounded by her bird-cages and her books. She was looking out on the dull green walk under the willow trees, which was nevertheless rendered less depressing by the figure of Jacky walking up and down stealthily in search of a place of concealment for some of his stolen goods, and, when he had accomplished his secret deposit, strutting backwards and forwards as if he were a gentleman with his hands beneath his coat-tails. She asked herself what difference could it make to her that her aunt and cousin—save one person, the nearest, nay, the sole relations she had in the world—were dwelling in the same town, within a stone's throw of her, as utterly unconscious of her proximity as she had been of theirs till within the last half-hour. They were probably even more unaware of her existence, for they had never heard of her, as far as she knew, since she was a school-girl; and she had at least made a wild guess at her cousin's identity with the Miss Wyndham of Clem Blennerhasset's story three or four months ago.

As for bearing malice against her cousin, Pleasance was incapable of it. She judged that she and Miss Wyndham were two different beings, brought up in entirely different spheres—for that matter, she could not fancy that in any circumstances she would have resembled Miss Wyndham.

Pleasance had not great sympathy with the other girl's superabundant laughter; and yet she heard the echo of the gaiety wistfully in midst of her own gravity—unbroken nowadays, as she would have looked at a ray of sunshine darting into a shady place. Whatever Rica Wyndham was, she was no hypocrite; and Pleasance, very true herself, turned instinctively to every form of truth in man or woman.

Pleasance had grown so well accustomed to the knowledge of who were the occupants of the Gable House that she had ceased to avoid them—which had been her first impulse—or to feel agitated when they did meet; and the ladies stared in a modified polite fashion at Pleasance.

One morning when the dog-roses were in blossom, as Pleasance was returning from a country road to which she repaired because it abounded in chickweed and groundsel for her birds, she encountered Miss Wyndham, as the latter would have said, "doing her constitutional" before breakfast.

The road was unfrequented at this hour, when the cousins were about to pass, as Pleasance supposed, without a word; but she reckoned without her host.

"Good morning, Mrs. Douglas," said Rica Wyndham in ringing tones; "I see that we are of one mind about rising early and improving the shining hour in this beautiful June weather; though upon my word I do not see why you should do it."

"I have always risen early," said Pleasance, a little fluttered by her own superior knowledge, but still more tickled by the coolness of the young lady.

"So have not I," said Rica Wyndham; "I used to enjoy my morning snooze immensely; all our mesdemoiselles and Fräulein were at their wits' end to get me up; but now no more sweet forbidden naps for me. I am forced to be self-denying. I have to get Hastings (your Perry knows her) to rout me out betimes every morning while mamma sleeps the sleep of the just, regardless of her figure, till ten o'clock. I should soon be a monster, and run the risk of ruining my whole prospects in life, if I did the same. Don't you envy the old matrons their privileges? Oh! I forgot that you are a matron—the enviable character that all we poor girls are dying to sustain."

Pleasance could not tell whether Rica Wyndham had an intention of being specially impertinent—or whether, being in the habit of laughing at everybody and every-

thing, she could not pull herself up and break herself of the habit, on the instant.

But what Pleasance could not divine was why Miss Wyndham should speak to her now. She had lived without question of greeting in Stone Cross for the last three months. Miss Wyndham had passed her, on an average, three times a day, during the greater portion of that time, without an attempt to make her acquaintance.

If Pleasance had been told that Rica Wyndham—in addition to the species of pride which bade her prove to herself how little she had been disappointed by finding Archie Douglas disposed of—had wagered, as she was fond of wagering, in contempt of scrupulous people, that she would make the acquaintance, without any formal introduction, of this tabooed, cracked Mrs. Douglas, and would be seen at least once walking and talking with her in the streets of Stone Cross, a light would have been cast on the difficulty.

As it was, Pleasance was not so resentful as she was diverted. Her spirit rose at the notion of an adventure with regard to which she herself, after all, was the holder of the secret that lent the incident all its zest and whimsicality.

"I don't think you look like dying of anything, and least of all of envy," said Pleasance.

"Now, I call that malicious chaff, whereas mine was perfectly innocent," retorted Rica, not at all ruffled, however surprised, by the terms of equality on which the rustic young Mrs. Douglas had met her audacious advances. "Of course it is a sore point with me that I don't appear as if I were pining away; and I suppose you think envy implies pining. Well, I daresay you are right. Don't you think Stone Cross awfully slow? I am sure it is the stagnant atmosphere which prevents me from growing small by degrees and beautifully less."

"I don't believe you would choose to be other than what you are," said Pleasance; "and I don't know about slow places. I have lived in the country all my life. I fear that the country would always be slow in your eyes."

"How plain spoken you are! I shall tell everybody that you are dreadfully sarcastic."

"I shall not mind, and I don't think that any other body will mind either."

"You are philosophic as well as sarcastic,—that is taking my trade over my head. But it passes my philosophy to understand how you can find Stone Cross lively—you who do not

attend choir practice, or play croquet, or join in any of the mild dissipations of the place, unless, indeed, you call cathedral service a dissipation."

"I should hope that I call it something better," said Pleasance, indignantly, "and I did not say Stone Cross was lively."

"Pray, wherein consisted the liveliness of the country where you lived?" pressed Rica Wyndham.

"In honest hard work to do for one's self and one's neighbours," answered Pleasance, without an instant's hesitation, "in life to be lived thoroughly in sharing familiar joys and sorrows."

"How delightful!" exclaimed Rica ironically, "though I must confess I find necessary exercise—I need a great deal of it—hard enough work, and that if my neighbours would considerably bestow on me the full reversion of their joys, I could dispense with their sorrows. What is your opinion of Banting's system?"

"I never thought about it."

"Humph! very selfish of you; and you call that sharing your neighbour's sorrows! I am afraid, Mrs. Douglas, you are a humbug."

The two young women looked at each other, and laughed, and the laugh established a sort of freemasonry between them.

While they had talked they had come into the town, and Miss Wyndham had not broken off from Pleasance, as Pleasance had half expected. Far from it, Miss Wyndham sauntered on ostentatiously, by Pleasance's side (according to the terms of Rica Wyndham's wager), receiving steadily the brisk fire of glances directed upon the couple by sundry clergymen and matrons of Rica Wyndham's set abroad for early service. She only consented to part with a friendly bow at the gate of Willow House.

From that date Rica Wyndham proclaimed loudly that she had found Mrs. Archie Douglas, instead of being insane, a character, a barn-door wit, as well as a beauty. She said poking fun at her was the last best thing out. She insisted on accosting, and having a small war of words with Pleasance whenever it was possible.

Now it was, "What is your plan for cultivating wild flowers, Mrs. Douglas? Will you impart it to me?"

To which Pleasance would answer, "I have none, unless it be like that of the wise doctor who gave the advice to his patient how to eat celery, he should sprinkle it with salt, and fling it over the left shoulder. I would let wild flowers alone; I do not be-

lieve they bear transplanting; certainly they do not repay the pain of the process."

Or it would be from Rica, "Did you ever hear of a quizzing-glass? Lady Lewis still gives that name to her eye-glass. I accuse you of quizzing us all through your spectacles."

From Pleasance, "If I do, I only give what I take, you cannot deny that."

Rica,—conscious that she had raised quite a controversy in the Close by her conduct; and that her mother, who could not in general see harm in what her daughter did, was yet puzzled and disturbed by her last act,—was greatly instigated in place of deterred from the course which she had adopted towards Pleasance.

As for Pleasance, she had her own thoughts of all this odd fitful intercourse.

CHAPTER XLV.—JANE DOUGLAS COMES TO THE CLOSE.

JANE DOUGLAS was with her friends, the Tuffinells, in the Close for the June Stone Cross musical festival, in spite of two facts. Mrs. Douglas had resolved that Jane should never, while she was under her guardianship, revisit Stone Cross; and Jane was an obedient, devoted daughter, with a young girl's implicit reliance on and faith in her mother.

The first explanation was that Archie Douglas had started on a yachting cruise to Norway, and northern Russia.

The second, that Mrs. Douglas, after remaining quietly with Jane at Shardleigh, seeking, according to the elder lady's tactics, to live down her son's great blunder and disaster, had gone in the middle of June to pay an annual visit to a sister in Wales.

This sister, whom Mrs. Douglas described with truth as her favourite sister, especially dear to her, had made a poor marriage with an officer in the army, who possessed little private fortune, and who had been compelled by bad health, while still young, to retire from the service and lay out the price of his commission on the purchase of a sheep-farm in Wales. There he and his family could live simply and cheaply; and there, with his subalterns, the shepherds, he could command an employment which was healthful, and which afforded some small return of profit.

Happily, Rhyngally was a beautiful place in a pleasant neighbourhood. Other families of small gentry, country clergy, and gentlemen farmers, made common cause to be content with a very moderate endowment of this world's goods, and to assert their

gentility rather by refined intelligence and cultivated frugality, than by desperate attempts at outward show and luxury.

Mrs. Douglas had always declared herself—and had really been to some extent—captivated by the unassuming cheerfulness and magnanimity which had prevailed at Rhynally. She had lamented feelingly that she could not exchange her son's great house at Shardleigh, with its staff of butler, footmen, grooms, and gardeners, its housekeeper and multiplied maid-servants, its carriages and horses, for another farmhouse *ornée* on a Welsh lake, with but a single elderly boy as groom, gardener, and general factotum, a cook and one tidy housemaid, a one-horse shay of the most primitive description for the elders of the family, and plenty of Welsh ponies for the young people.

So long as Archie and Jane were young, the two, above all Jane, went every summer to Wales with Mrs. Douglas, and spent several happy weeks in what was, to children, Elysium. But as Jane grew older her mother found more and more excuses for making the pilgrimage alone. The limitation was remarkable, since she had, over and over again, volunteered the premature assurance to her sister and brother-in-law that she could know no dearer wish than that there should be a mutual fancy between her poor rich little Jane and her eldest cousin. The latter was the most stalwart and worthy of fellows, who was reading for orders, with no higher destination before him, in the meantime, than that of assisting his old rector in his Welsh parish.

The time had come for Ned to be ordained a deacon, and to act as curate to his rector; but he and his cousin Jane were growing out of acquaintance with each other, it was so long since they had been brought together. Notwithstanding, Mrs. Douglas was as ready as ever to whisper to her sister that it would be a rest to one-half of her cares, if ever there should arise anything between Ned and Jane. Only the mother of a girl with a fortune was not like any other happy mother who could do as she would. There was so much interference and counsel from those who considered they had a right to advise; and she could not bear to bring the reproach on herself—far less on her beloved friends, that she had not afforded Jane every opportunity of seeing the world before she decided for herself in the most important step in her life.

Before Mrs. Douglas had gone to Rhynally on this occasion, she had disposed of

Jane safely, not on any account at Stone Cross, but in a country house fully fifty miles away. She had persuaded both herself and Jane that her daughter's visit was absolutely due; and that Jane must deny herself the pleasure of seeing her Welsh relations this year again, in order that she might not disappoint and affront the dear good Russels who had every right to expect their cherished guest.

But Mrs. Douglas had not calculated that one of the dear good Russels was a musical enthusiast, who after she had attended all the major musical festivals of the last two years, had set her heart on not missing the minor festival at Stone Cross, and urgently persuaded her family to go over there for the occasion. "The hotels will be choke-full," represented this special pleader, "but we can fall back on Dr. Hynd, who will put us up somehow; and if we cannot dispose of you, Jane, so unceremoniously, you have your old family connection, Lady Lewis, or your friends the Wyndhams, or the Tuffinells in the Close to go to. Madame Lemmens Sherrington is to sing; I never heard her in the solo she is to take. Shouldn't you like it, Janet? it would be charming variety for you. There will not be a great choir, still it will be a musical tit-bit in its way."

The Russels had only been made dimly acquainted with the scandal of Archie Douglas's unfortunate marriage, and could not appeal to Jane for more definite details. They had not even heard that young Mrs. Douglas was gone to reside at Stone Cross. Jane had not forgotten it; she was not a girl of lively imagination, but she had warm tenacious affections.

Necessarily Jane had become aware that her brother and his wife were separated for the present, but as to the separation being final she had no distinct conception. Loving her brother as she did, lamenting his error, and suffering with him in seeing him a changed man, Jane could not resist nourishing fond visions of atonement and reconciliation, almost as romantic as if she had possessed her mother's and Archie's imaginations.

She had not an older woman's scruple at interfering in a private matter which concerned others so nearly. She had a child's single-heartedness; and she could not resist the temptation of gratifying her intense curiosity, and seeing and judging for herself with regard to her offending yet innocent sister-in-law.

Jane did not imagine that her mother would seriously disapprove of the step which

she—Jane—was about to take in going to Stone Cross. Mrs. Douglas had not anticipated any chance of Jane's being enticed in that unpropitious direction, and whatever she had decided in her own mind, she had not seen the necessity of making the little cathedral town forbidden ground to her daughter.

Jane really believed that her mother would be thankful after it was over, that she had gone on an easy natural pretext and made her private observations.

In addition to her other strong impulses, she had a young girl's oddly exaggerated reluctance to hamper her friends, and balk them in a projected excursion.

Jane had by no means forgiven Rica Wyndham for her gratuitous implications with regard to the scene in the Park, the less so that poor Jane had been forced to acknowledge there had been some truth in the insinuations. Her own and her mother's Archie had not been the Bayard beyond reproach, that Jane had believed and boasted him to be.

In these circumstances she would rather not elect to bestow her company upon Rica Wyndham, though Jane was sure to meet Rica continually during the three days of the festival. She would prefer her Close friends the Tuffnells to the Wyndhams, and to her ancient kinswoman, who might lay hold of her and detain her by main force to do honour to the all-important celebration of that ninetieth birthday which had begun to take overpowering proportions in its tottering heroine's dim eyes.

CHAPTER XLVI.—THE SUGGESTION OF AN OLIVE BRANCH.

JANE was full of breathless expectation when she arrived at the Close, and in passing glanced across to Willow House, where she had occasionally lived with her mother and brother when she and Archie were young.

So far as the tall old red house was concerned, it gave no sign. No face or figure appeared at window or gate, to electrify Jane into making the silent emphatic note, "That is she—the humble woman who bewitched Archie, but having won him could not keep him."

Even after Jane had reached her destination, and was in the middle of a group consisting of merry chattering girls, gracious mother, father given to old-fashioned, courtly compliments, and freer, blunter brothers home from barracks and college for the festival, she made no way in the attainment of her object. She became all at once pain-

fully aware that she dare not approach by a single leading question her real reason for coming to Stone Cross; and she despaired of getting her ignorance enlightened and her curiosity gratified by a single incidental allusion to Willow House and Mrs. Archie Douglas. Not only were the speakers bound to avoid these interesting topics, as too awkward and distressing for Jane Douglas to be referred to even in the most masked and distant manner in her presence; in addition, the festival was engrossing the natives of Stone Cross as her birthday was engrossing Lady Lewis.

Helen Tuffnell was to sing in the choir, and so there was no end to the discussion of the choir's dress—in the case of its female members—to its obligations, and its expected triumph. Ralph Tuffnell had seen the professionals arriving, and was able to tell, if he chose—that is, if sufficient force were put upon him—who had kept faith, what the stars least known to Stone Cross were like, and which of them were gone to be the guest of the musical archdeacon and his sister.

There had been a dreadful whisper that the bishop looked coldly on the whole affair, and set his face against some of the pieces to be given at the second concert; but Mr. Tuffnell had been at a meeting of the chapter that morning, and was happy to have it in his power—from the private conversation which had preceded the business—to contradict authoritatively the unworthy stigma on their excellent bishop's liberality.

Mrs. Tuffnell wished to hear if anything more had been learned—if Jane Douglas had noticed anything said at the Hynds, where she had lunched with the Russels—of the story that "Mrs. Dean" was to have all the great singers, irrespective of social disadvantages, at her party; and that one of them had agreed to sing her special ballad, "The Lady of the Lea," for the delectation of Mrs. Dean's guests, and the glorification of her party.

Jane Douglas was musical in her tastes. Not having come out, even the mild clerical gaiety of Stone Cross festival ought to have been to her, as one of the poor dear Russels had said, for her own ends, a "charming variety." But Jane's young head was full of her own personal speculations and private cares for poor Archie and his poor wife. Mrs. Archie must be terribly out of place, and constantly exposing her deficiencies in the Stone Cross circle. Still Jane would be tender of her for Archie's sake, even though he was puzzling and confounding his sister far

more than he was perplexing his mother. Was he not acting as if he were heartlessly abandoning the woman whom he had chosen to withdraw from her natural sphere, in exposing her unsupported to all the difficulties of a strange region?

Jane had a somewhat formidable apprehension of what Mrs. Archie must be like, not altogether removed from that which Mr. Woodcock had entertained before his visit to the Yorkshire Grey.

Mrs. Archie ought to be a brilliantly painted piece of clay—rich red and white, perhaps already getting too deeply coloured. She should have chubby lips like those of a child, apt to fall open into a gape. She should have round cheeks, round eyes, a little round forehead, and fat dimpled hands. Her feet, like her hands, must be unrepresentable and hard to dispose of, as things not wanted, and therefore always in the way.

She would be prone to render herself conspicuous by indulging in the gayest of clothes, worn in the height of the fashion. She would stalk, or trot, or gallop, instead of walking. She would either mumble or shout, when she ought to speak. She would abuse her h's at the beginning, and her g's at the end of her words. She would run wild in her grammar, and betray ignorance—all the more dense and appalling that it was entirely unsuspected by herself, whenever she had the opportunity.

Jane took all these particulars as a matter of course, was girlishly dismayed and repelled, and yet was sufficiently true and good herself to draw a long breath when all were summed up, and tell herself that if that were all, redress—compensation in the end—might still be possible.

But listen and look, as Jane strove when she accompanied Helen Tuffnell to a private rehearsal on the part of the choir, she could not catch a glimpse of her sister-in-law. She had no better success on the first day of the festival—neither at the morning concert, nor at the great evening performance of the oratorio—when the hall was crowded to excess; and among the old familiar faces of the Stone Cross society Jane hunted up every new and strange face, and sought in vain to identify it with her preconceived idea of Archie's wife.

Archie's wife was not that little woman in sky-blue, with the amber-coloured opera cloak, beside the Jones' ? No; Jane had an impression that she had heard her unknown sister-in-law was tall, and unquestionably she was handsome; while this woman, making

every allowance for different standards, was neither the one nor the other.

She was not the lady to whom the archdeacon was talking with marked deference? She was both tall and fine-looking, but she was thirty years of age at the lowest computation. Besides, it was well known that the archdeacon was musically mad, and chose his favoured associates solely with reference to their knowledge and skill as executants, or to their natural qualifications as sopranos or contraltos, tenors or basses. Now, it was hardly to be supposed that Mrs. Archie could have come out of her cottage an English Jenny Lind, minus the requisite training.

In the first place Jane was proceeding on an incorrect deduction. She had never doubted that Archie's wife, who lived at Willow House, would be received on one footing or another in Stone Cross society.

Jane had imbibed from her mother an extravagant notion of Archie's importance as the Squire of Shardleigh. She had taken for granted that the reflection of a certain amount of his dignity, must fall on the woman to whom he had stooped to give his name.

Jane was saved from putting a plain question to Mrs. Tuffnell, on which she was reluctantly meditating, by the appearance of Rica Wyndham. After the first part of the oratorio had been gone through and received with the cordiality of provincial audiences, Rica, who was only an honorary member of the choir, so to speak, judged in her own interest that it could dispense with her farther services. She had herself led into the body of the hall, and seated among the company, in order to make game of the rest of the performers and their performance, with a distinct relish of the circumstance that the sacred character of the music lent an air of profanity to her jests.

"I imagine everybody in Stone Cross is here," said Jane Douglas, next whom Rica had elected to sit. Jane craned her neck, nevertheless, as if she were in search of somebody.

"Oh yes! the world and his wife and their whole turn out," answered Rica indifferently. "I wish you to pay particular attention to this trill on 'My sins are more in number than the hairs of my head.' I think it will give you the idea of recalling what Tom calls 'going to the bad' in the most daintily instructive manner. It is given to a little man—a native, Horace Wyville—who is quite bald, and whose voice always shakes with fear of the conductor, as if he were penetrated with the terror of retribution for his misdeeds."

The next moment Rica was criticizing the style in which a lady's hair was dressed, and remarking that she would be a passable beauty if she did not simper like a ninny. "Her face reminds me of your sister-in-law, Mrs. Archie Douglas, but Mrs. Douglas has the advantage," added Rica composedly, intending to make an impression, and succeeding, though the impression was not of the nature that she anticipated.

"Is Mrs. Archie Douglas here?" asked Jane, after a moment's pause, with commendable self-restraint, but with a very perceptible increase of colour in her fair complexion, while her flaxen hair, worn loose on her shoulders, was astir with expectation.

"Of course not, my dear Jane, what are you thinking of?" replied Rica with the usual background of rippling laughter to her marked emphasis.

"Why not?" inquired Jane, opening her grey blue eyes, and losing a little of her assumed calmness. "Is she not fond of music?"

"I cannot tell: I dare say she adores it, as we all do in this age of operas and oratorios. But, my dear child, you should know best why nobody knows her, and she goes nowhere."

"I do not know," said Jane quickly, "that is, of course, you are aware, Rica, that I do not know her." And then Jane was in a fever to exculpate whoever could be exculpated. "Come with me, Rica," she entreated in a whisper. "I do not so adore music, and neither I think do you, as to mind missing the next long duet; there is a side room to escape in from the heat, Helen Tuffnell took me to it last night; let us go there and have our talk out."

Rica went and listened at her ease to what Jane laboured to explain.

"Archie married without telling us, and without consulting mamma; because, I suppose, he did not wish to meet with the opposition which he was sure to provoke, since the wife he chose was not in his own rank," said Jane, with all her heart in her voice. "Mamma had cause to be offended, but after all there was no great wrong done, though there might be much imprudence on Archie's part, and we—mamma could forgive anything save great wrong to Archie."

"You are all very good, but I do not see why you should be ready to give me a wiggling," protested Rica, with her unblushing slang.

"We can understand," hurried on Jane to her unsympathetic listener, "that it must

have been a little hard for the two to get on together—after Archie had ceased to live as she lived when he was seeking to find for himself what a working man's experience was like, for the sake of working men. Therefore she has come here for the present; and he has gone away cruising about Spitzbergen and Archangel. That is all," Jane ended her shaky version with a deep sigh.

"That is a good deal, except to an innocent like you," said Rica, with her derisive scepticism. "Excuse me, Jane, but never say to any one else that Archie was seeking the public good when he was courting his peasant wife, else they will think you positively too good to live. They will look for your embryo wings, and declare that Archie did not need to sail to the north seas to visit any Archangel, when he had such a promising minor angel, like a minor canon, at home. The pun is execrable, but the blame is yours who tempted me to it. It was madly romantic in Archie to marry such a girl, without his giving out that he was in quest of a Holy Grail, or of the public good. I should rout all such nonsense out of his head in a month's time. I was near doing it when madam the low-born wife turned up."

"Don't, Rica," cried Jane, indignantly; but she was not disposed to quarrel with Rica, just at this moment, when she might cast light on the mystery of Mrs. Archie Douglas's exclusion from the festival. "I don't know what you believe."

"No more do I; but certainly I do not believe that Archie wanted anything else save his own way—to run wild, and do what nobody else did. At the same time I don't mean to say that Mrs. Archibald Douglas could help that; or that she did anything save what was natural under the circumstances. My dear Jane, you do not give me half my due for good-nature. I am young Mrs. Douglas's established champion here. I am the only person in these polite circles who has gone a step out of her way to take the lady up. I am quite fond of her. Mamma would tell you that she is a mania of mine."

"Yet you spoke as if she could not be here," remonstrated Jane in her bewilderment.

"Well, I don't do my manias in public. At least, I don't mind who are spectators; but one wants a little freedom for psychological studies. As to Mrs. Douglas's not being here, or at our bazaar, or even at our flower-show, I should say that she would have even less sense than she gets credit for, if she were to

go where money might admit her, but where she would know nobody, and nobody would know her; and where at the same time she would be an object of general remark, with her whole story and her antecedents raked up, if not flung in her face. You forget, Jane," finished Rica, with her admirable candour, "that Mrs. Archibald Douglas is a humbly-born young woman, from whom her husband has already separated, while he barely acknowledges her, and his family do not even go so far. You should be the last to speak; you ought to think twice before you reproach the good people of Stone Cross with not knowing your sister-in-law."

"I had no idea—" began Jane in dismay, and stopped short. She had not, in fact, had a suspicion of the wrong which Archie and his friends might have been doing to his forlorn wife, and of the neglect, even the injury, to which they might have condemned her.

"And if she is odd, as people say, though I confess I do not see it, then it might not be safe for her to be exposed to such an exciting scene as this," said the Job's comforter—Rica, with a sneer at the festival in passing, and into the bargain.

"Odd! what do you mean?" demanded Jane sharply, in the sickness of remorse and apprehension that was stealing over her.

"Why, isn't she a little touched in the head by her exaltation, or her desertion, I am sure I cannot tell which? The report came with her that she was one-third crazy, and that Perry and her husband were to be the keepers. Allow me to add that the county society of England, as represented at Stone Cross, did not feel flattered by having its chances of visitable neighbours abridged, with Willow House transformed into a private asylum."

"It is not true," cried Jane, in the greatest distress. "I never heard of such a thing. I should have been sure to hear of it. As if it were not bad enough without that! It is cruel and wicked to invent such stories."

"I believe they could be traced to Perry herself," said Rica quietly. "Pray do not give me the credit of the invention. My conscience is clear. I have always insisted that the young woman was only uncommonly clever; though I admit when I first spoke to her I took care there should be a man with a pitchfork in the next field."

"I shall go and speak to Perry about it," said Jane with tremulous imperativeness.

"The very thing to confirm the rumour, if you do not speak to Mrs. Archie Douglas

also," pointed out the astute Rica; "and don't you think that it would be more to the purpose, any way, if you spoke to Mrs. Archie Douglas?"

"If it would do any good," said Jane, half-eagerly, half-hesitatingly. "Mamma will be dreadfully sorry when she hears what has been said and done. There is nothing wrong with my brother's wife, except that she was born and brought up in a different station from his—and I suppose that has caused disagreement between them. Archie would have let his wife have Shardleigh, where mamma has always been mistress—Mr. Woodcock said so. If there would be any use in my calling on her—" repeated Jane, in desperate doubt.

"There would be the greatest use," declared Rica, always ready for an adventure, above all if it led a companion into mischief. "It would be lending her your support, and it would at once silence the absurd report that she is maddish. I shall go with you, if you like, and introduce you; for I am proud to say that I am on speaking terms with Mrs. Archie Douglas, since it has been my plan to take the bull by the horns, and to decline to be frightened by a bogey. I should not wonder if, after they hear that we two have broken the ice, mamma, and Mrs. Dean, with the whole clan at her back, follow our example, and take Mrs. Archie into their arms."

Jane made up her mind to the deed. In the light in which Mrs. Archie Douglas was regarded at Stone Cross, it was Jane's duty, and duty was a more powerful motive with Jane Douglas than with most girls. It was for Archie's honour too, and surely according to his secret inclinations; for he must retain some kindly feeling towards the woman whom he had loved so well as to seek to raise her to an equality with himself.

Jane did not wish to compromise the Tuffnells by communicating to them her enterprise, and asking them to join her in it. Though her good sense led her to see the reasonableness of Rica Wyndham's vindication of the town, Jane's pride and her tenderness alike remained hurt by the complete neglect which had befallen Archie's poor wife at the hands of Stone Cross.

Again, Jane accepted Rica Wyndham's companionship, because she did not believe that it would be possible to compromise Rica; and because though Jane had a spirit of her own, no girl of eighteen's spirit could help quailing a little before the difficult mission which she had undertaken.

Jane and Rica agreed not to patronise the

next morning's concert, but to go together and call at Willow House. Jane fired up for her sister-in-law, and yearned over her whenever she thought of the whole town—herself included—holding carnival, and of Archie's wife being forced to remain aloof. She began to think that they—even her mother and Archie, had been very wrong to act so as to bring about such isolation, and such cruel, false surmises. She began to ask herself what her father—for whose memory she had the most loyal, loving respect—would have thought of the manner in which his daughter-in-law had been treated—she began to suspect that Mrs. Archie Douglas would have fared differently if the old Squire and manufacturer had still lived. He too had risen from the ranks, but in place of being subjected to an ordeal from the torture of which even his man's strength might not have shielded him, he had been chosen by her mother with womanly pride in his being the founder of his family, and the maker of his fortune.

CHAPTER XLVII.—THE OLIVE-BRANCH BEARS PRICKLES.

MR. PERRY broke the news to Pleasance that Jane Douglas was in the Close.

It was a lovely June morning, and Pleasance had gone into the garden to console herself with the roses and the bees. She needed consolation specially, at this time, for indeed she had some of the feelings which Jane Douglas attributed to her, and which Jane suffered by proxy on Pleasance's account.

The town was keeping its festival for the first time since Pleasance had come to Stone Cross. It could hardly be said to extend freely to all classes; yet it was more or less felt and hailed by all, in the general influx of strangers and in the holiday preparations. The railway was continually disgorging fresh arrivals, who were conducted by triumphant friends to canons' and dignitaries' houses. There was a flutter among the native performers of practising, rehearsing, and hurrying to and fro, with sheets of music, to the hall. The shops were full of programmes and announcements. The lodging-house keepers were reaping a golden harvest. The very washerwomen were in extreme request for the muslins which were to do duty at the morning performances. Mr. Perry had an annual offering of evergreens and flowers towards the decoration of the hall, and of fruit towards the archdeacon's supper to the choir, for which the gardener

was in solemn preparation. Even Mrs. Perry had been in the habit of unbending, so far as to go to look at the supper, and at the archdeacon's company.

Only Pleasance, the most friendly soul in the universe, whom no sorrow of itself could make unsympathetic, was sentenced, for no fault of her own, to stand apart.

It was irksome to be compelled to fill a position which was at the same time not natural and was of no earthly avail—and that in a town where she and her story were so well known, that she could not do anything without being called upon to consult public opinion in reference to her husband.

Pleasance chafed more than she had ever yet done at the restrictions which she felt were laid upon her, and said that she would not wait, wasting her best days till she grew middle-aged at Stone Cross. She had been accustomed to think that she could take care of herself; she would no longer consent to resign her prized independence because she had ceased to be that happy creature, a working woman, and had become that miserable being, an idle lady. She would write and ask Mr. Woodcock—he had shown her kindness—whether she might not go abroad and live in some quiet, homely foreign place, where nobody had ever heard of her or of the Douglasses of Shardleigh. If Mr. Woodcock retained his scruples, then she would take leave to dissolve the compact, so intolerable where she was concerned.

Pleasance was in this frame of mind when she went down among the roses and the bees, and was met by Mr. Perry. He had been up to the house in search of his wife and had missed her; and he was compelled to return to his office of arranging fresh pots of flowers, in time for their transport to the hall, without being able to effect the communication with which he was primed.

Pleasance saw that her retainer—with regard to whom she could not help thinking again this morning, that he was half a gaoler, overflowed with some piece of information which, in the absence of his better half, he would not be able to keep to himself. But she did not expect anything of more moment than a mingled glorification and lamentation over the excellence of the Willow House fuchsias and geraniums, and the damage they would sustain by their service in the hall; and over the size and flavour of the Mayduke and Elton cherries, and the Hautbois strawberries, and the grudge with which their grower saw them destined to be “devoured by them choristers.”

But Mr. Perry had other intelligence to communicate, after he had touched his hat punctiliously to Pleasance, and told her formally that it was a fine morning.

"I have been down in the town with a load, Mrs. Douglas. I know it don't become a 'ead gardener to carry such, but I can't trust my flowers to a rogue of a boy, and I had your leave. Who should I see coming out of the Close but Miss Douglas from Shardleigh. She did not catch sight of me to speak to me, as I make bold to say she would have done; so I made inquiries and 'eard that she was 'ere by herself without either Mrs. Douglas or the squire. She is come for this 'ere festival, and is stopping with Mr. Tuffnell's family in the Close."

Pleasance observed—very little to the point—that she understood many visitors from different parts of the country had arrived to attend the festival, and retreated into the house, to digest the unpalatable tidings. But she had received a shock, for with the mention of the sister the brother's image had risen up before her, though the illusion had been dispelled before Mr. Perry had done speaking.

Pleasance decreed that this was the last straw which must break the camel's back. While she said so and sat in her room thinking of it, Mrs. Perry knocked at the door and announced with an inscrutable face that Miss Douglas and Miss Wyndham were in the drawing-room.

Pleasance hesitated for one moment. Should she refuse to receive them? But that would look like cowardice and as if she were ashamed of herself, while it was they who ought to be ashamed. It would also be a breach of that hospitality which is nowhere more respected than in the class of which Pleasance had so long been a member. During all those years at the Manor House she had not once heard "not at home" given in answer to the most troublesome and unauthorised intrusion.

In the meantime Jane and Rica—the former with a palpitating heart—sat in the drab drawing-room. Jane was quite familiar with the room, and it did not repel her by its coldness and bareness. She had pleasant early associations connected with it; and, in the light of later years, its space and comparative emptiness reminded her almost pathetically of the last Italian Palazzo in which her mother, Archie, and she, dwelling together as a united family, had found a temporary home.

But as she recovered coolness, and looked

round her, it struck her that the room had suffered change and deterioration.

On the closed and superannuated grand piano stood Pleasance's array of birds' cages—not fancy pagodas of brass wire, but clumsy square boxes of unpainted wood and iron wire; for Pleasance held that the brass dazzled the birds when the sun shone on it, that they pecked the paint till they were cruelly poisoned, while round cages turned their poor little heads. Plain as the cages were, they were not plainer than their inmates—for the most part half-fledged and with yellow gaping mouths, in rough imitations of nests constructed of straw and wool.

A pile of books lay on one little table, but they were conspicuously of the unornamental order of school-books, in grey paper or severely sober cloth covers. Some of them were old and worn. In particular there was a disreputable dictionary with the boards stitched and re-stitched, and in spite of that primitive repair, having one-third of its leaves in a loose and tattered condition. (Pleasance could have told that its price was above rubies, since over the time-honoured name of Surenne was written in a cramped school-girl hand, "Anne Hatton.")

Pleasance had, the very day before, stumbled at last on the case of a poor widow with a family calling for immediate relief. As a result, there were heaped upon another table the rudiments of such coats and garments as Dorcas might have made, and which Dorcas's followers in every rank still aspire to make, even with dainty fingers; but which, as a rule, are not found on drawing-room tables, unless on the occasion of a missionary or sewing meeting. Beside the calicot lay a thimble, which from its surroundings was not likely to be of gold, and was indeed of brass. (It was also invaluable to Pleasance. It had belonged to Lizzie Blennerhasset; and Pleasance clung with passionate fidelity to the smallest link of the past—having nothing else to cling to.) There was a great nosegay on the chimney-piece, but it was not from the Willow House gardens. Pleasance had got it in the market that morning, and had chosen it expressly for its long gold and silver rods, rampant blue lupins, straggling purple honesty, bunchy sweet Williams, honey-suckle, tansy, bachelors' buttons, and London Pride. She had not found time to soften the details in arranging them. She had simply stuck the flowers in a jar on the chimney-piece, where they presented a by no means brilliant mass, towering and yet solid, of subdued colour and sombre green. They gave the jar the

air of a cottage jug, which would have been such a nosegay's fit receptacle.

Jane Douglas would not have been offended by such particulars in their proper place; but she had the desire for fitness and the uneasy sense of incongruity which belongs alike to very matter-of-fact people and to people of the keenest susceptibilities. Jane was matter-of-fact, and she had, in addition, a share of her mother's susceptibilities. Mrs. Douglas was an original woman; but she hated originality's caricature—eccentricity, and she had deepened the girl's natural revulsion from singularity. And though Jane had lived much abroad, she had remained, like many English residents in foreign cities, insular in her prepossessions and prejudices.

While Jane looked round her discontentedly, Rica Wyndham took everything in at a glance, shrugging her shoulders and exclaiming in a stage aside, "I beg your pardon, Jane, dear, but was your brother's wife a seamstress originally? And is she still following her calling, on the sly, like the princess in the Arabian Nights, who was impelled to do her old cooking in the cream-tart-with-the-pepper business? Or is Mrs. Douglas teaching the young idea how to shoot in her own person, having recourse to copy-books and primers, in order to put Archie and the whole of us to shame, by coming out at last as a full-blown female Porson? I heard something of that old fat Madame Berber being in attendance. I was astonished, because Berber does not teach music, and to strum a tune on the piano is generally the beginning and end of a girl of the lower class's ambition to be educated like a lady. Shades of the Willow House gardeners! where did she get that flower? Not in the gardens here, surely, else Perry male is a degenerate son of Adam. I have not seen such a flower since we lived for six months in the depths of Cornwall, and an ancient gardeners' procession, of which Father Adam must have been the founder, walked through the little town near which we hung out. I am afraid, Jane, there is mint in it, and as there is no lamb to bear it company, do you think we might take the liberty of throwing it out of the window?"

Before Jane could object to the suggestion the handle of the door turned, and Pleasance entered and faced her visitors. She wore a delicately fresh blue-and-white gown, such as would have matched Jane Douglas's brown holland, when she was at home, of a morning.

Pleasance's little cap which she still wore, was not out of keeping with such a gown, and was, as it happened, somewhat in the fashion of the day, while it lent a matronly dignity and character to her simply dressed dark hair. Her costume was perfect of its kind, as Jane acknowledged in amazement at the first hasty glance. Her next admission was that Archie had found—not a pretty gawky or a strapping Amazon—but, as Pleasance looked at this moment, one of the most beautiful, distinguished-looking women whom Jane had ever seen. With the last conviction there darted upon Jane the dismayed perception that she had taken an utterly false and indefensible step.

Rica Wyndham, nothing daunted, was saying, in her contralto voice, rich with laughter, "Mrs. Douglas, I have the pleasure of bringing Miss Douglas to see you. You must make much of us, for we have stolen a march upon our friends, and forsworn this morning's concert on your account."

"I regret you should have made such a sacrifice," said Pleasance, striving to be courteous in words, though inevitably freezing in tones. "I am afraid that I cannot repay you."

But as she spoke she not only motioned her intruding visitors to be seated, she selected for their accommodation the sofa and the *chaise longue*, which were the most comfortable and pleasant seats in the room. Before she sat down herself, she pulled the cords of the Venetian blind so as to prevent the sun's rays from shining in Jane Douglas's eyes, and closed the side door, so that there might be no draught of air between it and the open window behind Rica Wyndham.

Rica, who was never at a loss for words, plunged into an animated description of the progress of the festival; while the two who had a near interest in each other, sat and supported their share in the conversation by monosyllables, as they revolved a maze of troubled thoughts.

Was this "divinely fair" woman, who must have driven Archie desperate by her coldness, indeed, the silly, quaking, rude, possibly gross-natured, country girl, with regard to whom Jane Douglas, in her nonage and inexperience, had boldly proposed to herself the difficult and invidious task, of catching her and taming her, and that within the few days of Jane's stay at Stone Cross?

This young girl could not be Joel Wray's sister Janey. Her most striking attribute

was the perfect good breeding which rendered her quietly self-sustained and unconsciously refined, so that Pleasance forgot to notice Jane's flaxen hair, so far removed from her brother's dark curls, or her blonde in contrast to his brunette complexion; and only remarked, instead, that Rica Wyndham—piquant, coquettish, aristocratic—in her most startling escapades, did not bear the comparison well, or look elegant beside her friend. This could not be the good little thing whom Pleasance had seen in imagination, a simple, homely girl, a mechanic's daughter and sister, rendered more sedate because she had to work with, and for, her widowed mother. That had been a girl Pleasance had made up her mind to be fond of; while she should be to her, when they did meet, in the few opportunities that working people could command, the kind elder sister that her lost Anne had been to Pleasance.

So the sisters met, without sisterly recognition, far less sisterly embrace. When Jane, with a deep sense of the horrible blunder she had committed, tried to say something to Pleasance, and asked her, "I hope you like Stone Cross, and find this house comfortable?" she could not address her by name, she could not call her Mrs. Douglas, she could not say her Christian name, if Jane had ever heard it; she had to speak to her impersonally. It was a small matter, but it afforded a subtle indication of the terms on which the two stood.

"I have no fault to find," answered Pleasance, driven to a negative form of speech; but she had no wish to be ungracious on this point, and she added immediately, "Stone Cross is an interesting town."

"Oh, you happy woman!" exclaimed Rica, in reference to the first part of Pleasance's reply. "I have faults to find with everything under the sun; indeed, I do not believe that I should care for anything much, if I could not exercise my Englishwoman's privilege of grumbling, for we don't resign the privilege to the men, do we?"

"I hope Perry suits you," said Jane again wistfully. "She was a favourite servant of mamma's. We always found that we could depend upon her."

"Mr. and Mrs. Perry are very good servants," said Pleasance readily enough; but the next moment she qualified her testimony with a haughty exception—not in reference to the Perrys' fallibility, but to her own inexperience—"at least, so far as I can tell; I have very little knowledge of servants."

Jane was silenced. She thought it was odd and objectionable in Mrs. Archie Douglas thus to remind them of her disqualifications.

"But why have you not countenanced the festival?" Rica was asking audaciously, in comfortable disregard of her own statement to Jane that Mrs. Archie Douglas, in her circumstances, did well to refrain from going where only money would admit her, and where, in social phrase, nobody would know her. "I assure you that you are losing a treat, not only in the performance of the great guns, but in our native tenor's swaggers, and our Stone Cross prima donna's sulks. He is Bell, the linendraper's assistant; and she is a *bonne* of the Ridley's, whom the archdeacon dug out, and who has to be constantly called to order for her *bêtises*. She makes such astonishing faces, that I always remember and fear the punishment with which we were threatened as children, of the wind's changing and arresting our *moués*. In that case, '*l'homme qui rit*' would be nothing to '*la femme qui boude*.'"

"The man would certainly have the best of it, if it were not for the grim satire of the conception," observed Pleasance, as unconscious of producing an effect, as when she had recognised the representation of "Dora" in the Manor harvest field. Then she answered the more direct question: "I do not go into company; I have not been used to it. I am not so fond of music—I am afraid that you will think it very shocking in this musical age," she broke off with a little smile—"that the festival should tempt me to break a rule. Neither do I know that I should be diverted, as you say, by the struggles of the Stone Cross musicians. I think I should rather have a fellow-feeling with them."

Again Jane Douglas had the impression that Pleasance was assuming a defiant attitude, and that she was discomfiting to deal with, since she showed a want of tact, even of proper feeling, in thus exposing rather than veiling her deficiencies. Jane ceased to congratulate and remonstrate, in the same breath, with Archie, in her own mind, and began once more to condole with, and be sorry for him.

It was true that Pleasance was inclined to unfurl and brandish her colours, in the differences that existed between the speakers, in this interview; but then Pleasance was at bay.

"Do come and try," Rica urged. "If the tickets are all sold, I shall make somebody give up his, or forge one for you. We will keep a seat for you in the front row."

"We shall wait for you in the cloak-room, if you wish it," Jane made an amendment on the proposal. She stood loyally by what had been her own idea, though she felt that its fulfilment, if it would be in one sense less trying than she had supposed, would in another be very disagreeable, when Archie's wife, beautiful and intelligent in spite of her provincialism, was also wrong-headed and self-willed."

"Thank you, I do not wish it," said Pleasance plainly.

"Not to see all the notabilities! not to get an introduction to Stone Cross society!" protested Rica, holding up her hands in feigned amazement, while Jane blushed hotly with chagrin at the assumption. In the presence of her sister-in-law, Jane comprehended that their offer, in place of being an act of graceful condescension, was a piece of intolerable officiousness.

"Those notabilities—and greater than they—may be seen elsewhere and at another time," said Pleasance with equanimity. "And what should I do with an introduction to society like that of Stone Cross? I should be out of my element in it. If you can understand me, I have no desire for it. Indeed, it is possible to be without social ambition." As she relieved herself by the declaration, a faint flavour of frankness and friendliness stole into her manner, and she ended amicably, "It is otherwise with you, who have been brought up differently."

"You are hard upon us," complained Rica, as she and Jane rose to go. "You mortify us dreadfully by drawing these strong lines, entrenching yourself behind them, and not caring to stir beyond them. Of what good is our gain, if we cannot make you court it?"

"That you must discover for yourselves," said Pleasance, laughing for the first time; "but I did not draw the lines, I found them already drawn; I only keep within them; that is my place."

But Pleasance did not think it her place to let her visitors go without offering them luncheon; and when they declined it, she failed to ring for Perry to show them out. She went with them, unwelcome intruders as she had counted them, to her door, opening it for them, and shaking hands on the threshold.

When that was done, Pleasance retreated within the fastness of her own room, shutting and bolting the door, even against the consummate prudence of Mrs. Perry, and sat down to think with piteous regret. "They

had no business to come; I did right to resent their coming. But if, after they came, the sister had but had a look of the brother—if she had once spoken of him, so that I might have heard what he was doing, and whether or not he was happy. He did not look happy when I saw him last, but it could not be expected then. I know he had a happy nature, though he was easily pained by another's pain. Oh! if I had not crossed his path!

"What do you make of her?" inquired Rica inquisitively, the moment the door was closed. "I do not believe one bit, Jane, that your sister-in-law is the genuine article—the ordinary village girl. She posed me from the beginning; but now it would be too ridiculous to be taken in by her. Did you notice what she could not help showing—that she knew Victor Hugo's novel? Depend upon it that she belongs to some of those queer sects who think it Christianity to level all social distinctions, and to delve and milk cows with their own hands. If it were attempted for a lark, I could understand it; but then they profess to be in earnest."

"I don't think you have grounds for such a supposition, Rica," said Jane gravely, not looking particularly cheered by the explanation.

"My dear, I assure you these worthy men and women are only fools—not rogues, though they may look like them," Rica told Jane. "Your sister-in-law's socialism is not even on the French model, for she comes to church, and says her prayers like a common sinner. The English brotherhoods and sisterhoods simply borrow and adapt a fragment or two, here and there, fitting them to what the latest founders reckon an apostolic pattern. But doesn't this view, as well as her beauty, account for Archie's subjection? His rôle was that of a reformer, and if he had played it out at all consistently, he should have been ploughing—not the sea, but his own fields, like another Cincinnatus, by this time."

"You are hard upon Archie," said Jane in her perplexity and vexation.

"Not at all," maintained Rica, "and it is an ill wind which blows nobody good. If Archie had been faithful to his convictions, and if he clave to his wife, as one would have expected of so peerless a knight, and if the two worked together, where would you and your mother be at this moment? Very likely cooking your own dinner and cleaning your own shoes, if you still wore shoes; and I might have been drawn into the vortex—

not that I should have minded, for a spell, to see how the rest of you got on. Besides, it might have been the undiscovered process, I am always in search of, for reducing, this too, too solid flesh, or fat. I might have had the great gratification of retiring from the society of 'Universal Helpers,' or 'Free-will Stone-breakers and Charwomen,' a permanent whipping-post."

Jane withdrew from the encounter, cured of the conceit of being a peacemaker between an alienated husband and wife, even though they were her brother Archie and her misunderstood sister-in-law—entirely cured of the fancy of her superiority to Mrs. Archie, and her capacity for reversing their positions, and chaperoning the matron in society.

Jane was honourable in all her ways, with the strict scrupulous integrity of the best brought up English girls. She made no concealment of the visit she had paid, nor did she leave it to come out in Rica Wyndham's good stories, adorned with the colours which that young lady laid on lavishly.

"It is all very sad, but she has brought it on herself, and no doubt she does not wish it altered," remarked Mrs. Douglas with her usual toleration. "Absurd in Perry to allow such a report to get into circulation, not to say to originate it! Of course that was one of Rica Wyndham's *canards*. I shall put a stop to that at once; but it is all we can do, my love. You have seen for yourself that it is not for us to interfere and

take up poor Archie's—to support her in the line of conduct, very likely, which drove him to separate from her."

"But, mamma, Archie must have known it all before. Do you think he was warranted in giving her up, though she was rustic and odd, and would not go into society—wore brass thimbles and did seamstress's work, and kept common birds' cages on her piano—even though she went into a field and pulled out by her unaided strength 'a ram caught in a thicket,' Rica Wyndham called it?"

"My dear," said Mrs. Douglas softly, "I do not wish to hear any more of the poor, handsome, half-educated creature's delinquencies. For anything more, I am thankful that it is not for me to condemn, or even to judge the conduct of my own children—of my poor rash boy, who has made such a fatal mistake in his bright life."

Mrs. Douglas renewed her private resolution that her dear little daughter, who was so sensible, only a little precocious, and carried away by inexperience and warmth of family affection, should be kept in future far apart from Stone Cross and its objectionable associations. To render assurance doubly sure, Jane should never again be entrusted in her impulsive youth to the care of the good oblivious Russels, or of kind easy Mrs. Tuffnell, above all, to the companionship of that arrant marplot and mischief-maker, Rica Wyndham.

THE EARLY LIFE AND TIMES OF ST. PETER.

PART I.

THE 30th of March and two following days will always retain their place in the mind of the writer of this paper as pleasant anniversaries of a visit to the Lake of Genesaret: of the many hallowed memories of a pilgrimage to Palestine perhaps the most hallowed. Above all other sacred localities (not even Jerusalem excepted) this now lonely inland sea possesses the undying interest of being the most frequent and familiar resort of the Divine Redeemer during the period of His earthly ministry. Every green hill and valley and thorny brake—every spire of grass and lily of the field—every sheltered nook of its winding shore—every tributary stream and fountain—every wave that ripples and murmurs on its pearly beach—either recall his words or are suggestive of His presence. If there be inspiration in dumb

scenery, it is surely here. No region on earth lifts one so near all that is great and holy. I felt gigantic Baalbec or Egyptian Pyramid, Athenian Parthenon or Roman Coliseum to be piles of cold magnificence compared with the sanctuaries of sacred thought which crowd in imagination these now desolate shores.

It may truthfully be added, that with the exception of thus tracing the footsteps of Him who gave to that region its highest consecration, no place was looked for with greater interest than the supposed site of *Bethsaida*—the village home of Peter and his fellow-disciples,—the special eyewitnesses of that Incarnate Glory. Although the locality of "the House of Fish," as *Bethsaida* means, cannot positively be identified, it does not at all events share the same amount of

doubt which surrounds many others renowned in Gospel Story. It might be enough, indeed, to know that *somewhere* on that north-west shore, the child first saw the light whose manhood and history are so interesting to us. But in pointing to the modern village of El-Tabijah as possessing the strongest claim to the honour, I am fortified by having the warrant and authority of nearly all the most reliable of Eastern travellers.

It was on a Monday morning when, after resting on the Sabbath "according to commandment," we sailed from Tiberias in company with two Jewish boatmen across the northern portion of the lake, to explore the ruins of Tel Hum. In returning to meet our horses and dragoman at Khan Minyeh on the Damascus road, we skirted the shore, and had a full view of the hills behind, rising in a succession of swells which may be said to terminate only with the heights of Safed, the latter perched like an eagle on its lofty rocky nest,—the reputed "City set on a hill." The land which at Tel Hum is comparatively flat, here becomes bold and even mountainous. The home of the apostle fishermen, if we can thus speak confidently of El-Tabijah, nestles in a natural recess or bay of fine pearly sand. Had time permitted us to land we might have explored the ruins of an aqueduct or aqueducts, as well as some remarkable streams, some of them hot and brackish, which burst from the hill above. Amid a fringe of oleanders and brambles we saw these combined streams rushing down by a mill erected near the beach, and which gives a picturesqueness, perhaps I should rather say a home look to the scene. In early spring (the season we visited it), here and there the black goats-hair tent of the wandering Arab may be noted occupying the spot where the old fishermen of Galilee spread their nets or reared their huts.

Though the birthplace can be thus fixed with tolerable certainty, we can only approximate the precise year in which the infant fisherman Simon was born. We cannot be far wrong in making his nativity ten years preceding that of the more illustrious Child of Bethlehem. So that we may think of him, when he became an apostle, as about forty years of age: a decade the senior of his Divine Lord, perhaps, too, the senior of most of his brother apostles.

Before farther describing his childhood and its surroundings, we may note the era of his birth in Hebrew History, in connection with any contemporary events that would be more likely to leave their impress on his youthful

feelings and imagination. During these years of his infancy and boyhood, Herod the Great ruled with almost despotic power in Palestine. He had reared for himself a new palace on Mount Zion. He had strengthened the city with gates, walls, and towers. The large importation of skilled artisans from Greece had enabled him to replace the baser architecture of Hebrew craftsmen with piles of surpassing beauty and costliness. More especially was this true in the case of the latest and grandest monument of his munificence, one so flattering also to the pride of those whom he ruled—the wonderful Temple, with its successive terraces and colonnades; its walls of white marble, its gilded roof and costly wrought gates; above all, its succession of cloisters with which even the boasted Loggie of the Roman Vatican, or the noble porticos of Bernini in the Piazza of St. Peter's can hold no comparison. Herod's jurisdiction extended to Galilee as well as to Judea. The young boatman's imagination, therefore, could not fail to be filled and awed with the stories of those cruelties, which had rendered the present sovereign's name a terror throughout the land. He had done all he could to render his rule hated and himself obnoxious. He offended the religious scruples of the Jews by offering, on his elevation to the throne, sacrifices to Capitoline Jupiter, and afterwards by placing a large golden eagle over the gate of the Temple. The massacre of the Innocents in Bethlehem, though the best known and remembered, was only one of many incidents in his "reign of terror." He must have ended his infamous career during Peter's early years; and his son Herod-Antipas—who, with greater weakness and cunning, inherited much of the wicked and wanton cruelty and ambition of his father—succeeded as Tetrarch of Galilee.

Another political occurrence during the period of Simon's youth, and one which agitated the entire nation, took place immediately after Herod's death, and could not fail, as any such stirring event among ourselves would have done, to form an absorbing theme of conversation in the fishermen's homes on shore, or in their boats on the lonely sea, as well as in Greek villas or Roman barracks. An insurrection was originated and headed by a warlike spirit, who made in the first instance the district round Bethsaida and Tiberias the main scene of his exploits. Although, indeed, called "Judas of Galilee," his birthplace, according to Josephus, seems to have been in Gamala

on the other side of Jordan; the same wild district—the "Palestine Highlands"—which had reared more than one hero-Prophet and warrior in earlier ages, such as Jephthah the Gileadite and Elijah the Tishbite. This man combined the frenzy of the Jewish devotee and zealot, the austerity of the ascetic, and the rigid sectarianism of the Pharisee, with the wild, brigand, freebooter life and nature of the Arab. Stung to the quick with the wrongs of his country under Roman subjugation, he roused the people to a religious crusade, espousing as their watchword, in imitation of the war-cry of the Maccabees, "We have no lord nor master but God." With the fiery eloquence with which Peter the Martyr stirred the religious enthusiasm of the middle ages, Judas, according to Origen, drew thousands around his standard, who welcomed him as an inspired deliverer, or rather as the predicted Messiah of his race. He had communicated his own reckless daring to his followers. They carried fire and sword first through the province, and then through the entire land, laying waste indiscriminately cities and homesteads, vineyards and corn-fields. They regarded with stoical indifference individual torture and suffering, animated with the one mastering thought of vindicating their God-given national rights, driving the usurping Cæsar from the theocratic soil, and restoring the sceptre of Judah to its legitimate owners. The shepherds and vinedressers on the hills of Galilee, the fishermen and craftsmen on the lake and from the adjacent towns, caught the general infection. Perhaps if Peter had reached the maturity of youth, he might have been among the first to be carried away with the popular enthusiasm, thus forfeiting his future place under a far different Master, and in a more noble cause: probably he might have perished in battle. The number as well as trained discipline of the Roman troops proved too much for the rudely-armed insurrectionists. On a bloody field they encountered the soldiers of Cyrenius. After a desperate engagement the rebellious bands were utterly routed; Judas was slain, and the villages of Galilee—probably Bethsaida among the number—were either made receptacles for the wounded, or echoed with wailing for the dead. Could the son of Jonas, with a nature such as his was, have listened unmoved to the story of these wild, ruthless adventurers? or rather, could he have seen unmoved the visible traces, all around, of the greatest Holy War since the days of Judas Maccabeus? He may even

have shared in the deep sympathies which we know not only were kindled, but which survived in the bosoms of thousands on thousands for a cause apparently lost, but which had struck its roots deep among the masses of the nation, and was only extirpated with the destruction of Jerusalem itself.

The true secret of the popularity and partial success of Judas and his followers suggests yet one other grand national "idea;" or rather, a great expectation and pervading thought, which could not fail to have its marvellous influence on these ripening years of the future apostle, as well as on every true Israelite whether old or young on the shores of Galilee. I allude to the universal, the growing conviction, inspired by their ancient prophets and deepened by the signs of the times—a conviction, moreover, which we are told by Tacitus had spread over the entire East among the astrologers of Persia and disciples of Zoroaster—that the Great Messiah Deliverer, the Conqueror of Judea and of the world, was about to appear. True, the Jews had entirely misread their holy books. The intolerant despotism of their foreign rulers had goaded them on to a purely carnal interpretation. The spiritual element in Messiah's reign was lost in the thought of the great warrior who was "to gird His sword upon His thigh;" whose "arrows were to be sharp in the heart of His enemies," and whose "right hand was to teach Him terrible things." With the death of Judas of Gamala on that fated field, the wild, extravagant hopes of many may have been dashed to the ground for the moment; but the hope itself of a Messiah yet to come, and soon to come, remained unextinguished. Can we suppose that the fishermen of Bethsaida were exceptions to the bright dream which haunted and inflamed the waking and sleeping thoughts of their countrymen?—of One "glorious in His apparel, travelling in the greatness of His strength," "mighty to save," heading a victorious army on the way to the Throne of David and the Palace of Zion? Rather, can we suppose that they failed to share the truer and nobler aspiration of others; that the long-drawn sigh and prayer of humanity, wearied with the atrocities and crimes of the darkest of ages, was soon to be answered:—that the Great Physician would ere long appear to heal all wounds and redress all wrongs; that the Great Sun of Righteousness would speedily arise on a benighted world?

Of Peter's father we know nothing, save that his name was Jonah or Jonas: while

tradition tells us his mother was called Johanna. He himself received the appellation common among the Jews of *Simion* or *Simon*, a word which means "hearing," and which was frequently bestowed, as has been supposed, by grateful parents in acknowledgment of their prayers being heard in the birth of a son. He had at all events one brother Andrew. We are permitted to think in imagination of a fisher's home; parents and children members of that sturdy, fearless, independent race which, whether on the shores of Tiberias or of Britain, have a character peculiarly their own; moulded much by the life of peril and adventure to which they are habituated—night after night out at their often unsuccessful labour—waited for in the morning, at times, by anxious inmates of their homes, who had listened to the roar of the hurricane coming down the gorges of the hills behind, and converting what was a placid surface the evening before, into a sheet of crested foam.

We are left to conjecture that young Simon would receive the elementary education common in his time and humble position, and which by legal enactment was compulsory on all Jewish youths. Schools in great towns had been founded seventy years before by Simon Ben Shelach, one of the great leaders of the Pharisees under the Asmonean princes.* A school was generally connected, too, with every synagogue; and if Bethsaida was not of such importance as to be possessed of either of these, we can picture the fisherman boy, in company with a group of Bethsaidans of similar age, pursuing the road by the lakeside to the adjoining city of Capernaum, attired in striped *abbâ*, either girded or ungirded, and the white *keffieh* protecting his head. The chazzân of the synagogue, an official corresponding to the Christian deacon or sub-deacon, was often employed during the week as schoolmaster of the town or village where the synagogue was. We have good reason, however, to infer that Peter's early education was more than elementary. From the conversation he held with Cornelius at a long subsequent period, it is evident he must have mastered the Greek language, and the same conclusion has been drawn by scholars, from the style of his Epistles. Nor must we adopt a different impression from the phrase afterwards applied to Peter and John, that they were "unlearned and ignorant men." In the words of Dr. Kitto, "This simply means that they had not received what was considered a high theological education, which added to

the common education a *critical* knowledge of Hebrew, an acquaintance with the law and the tradition of the Fathers: and whoever had not received this education in the schools was regarded as an uneducated man by the arrogant Pharisees of that day, whatever other knowledge he might possess."

If the child be the father of the man, we can with safety venture to draw a mental portrait of the son of Jonas in these youthful years, as open, artless, impulsive, rash, ambitious. Very probably, if we may use a modern phrase, the leader of the playground; tempted at times, perhaps, to lord it over his playmates; though with a strange mixture, too, of pusillanimity and courage: involved ever and anon in boyhood troubles with his Hebrew pedagogue, who, however, in his turn, would not be severe on the ardent nature of his young charge, when he saw that his rashness and outspokenness were counterbalanced by openness and frankness, generosity and gratitude. May we not think of him as foremost in every perilous adventure that had a charm to boy-nature then, as now; whether with his father out amid the familiar waves, "launching forth into the deep" under the stars of an Eastern heaven; or when a longer day's holiday beguiled him to daring deeds in the Valley of Pigeons, rising at early morn and brushing the dew from the spangled carpet of poppies, daisies, and anemones spread on his way; ascending among the rocky retreats of the conies, half hid with the caper plant; climbing to the nests perched on the top of pine and terebinth; or penetrating the robber haunts which had only a few years previously been cleared of their ruffian tenants by Herod, and still bore evidence of the perilous struggle. At another time his expertness in swimming (with which we are familiar at a later date), prompting him to some rash feat under the bluff gorges of Gadara, to the east of the lake. Or yet again, venturing, it may be, amid the shouting and wrangling of the caravans in the public thoroughfare,—Arabs from the desert on their swift horses, Egyptian traders with their camel-loads of spices and balm, Phœnician merchants with earrings and bracelets, caftans and *abbâs* from the bazaars of Damascus; may we not picture young Simon, thus mingling, close to his home, with the motley multitude around the immemorial halting-place of the modern *Ain el Tin*, the perennial "spring of the fig," though its present rim of mossy verdure, and noble guardian tree may have been then unknown, the precious fountain itself must

* See Jost, quoted in Smith's Bib. Dic.

have been a frequent and familiar resort. Or, yet once more, if we realise these early years of boyhood under the domestic roof, we can think of him as aiding his mother in her smaller household cares—trimming the lamps of red clay, bruising the parched corn, watching the boiling pottage of lentiles, or preparing the fish of the lake on the glowing charcoal embers; re-adjusting the mats for the frugal meal alongside the baked bread or

oil and honey cakes, the earthen jars of *leban* and occasional wine-flagons of fig *sherbet*. At other times shaking the olives, carrying water from the stream that tumbled into the lake; or, it may be, spreading the maize and hemp to dry on the roof-top in the summer sun, ready for the distaff to beguile the long autumn and winter hours, while the seafarers were still out at their precarious and protracted toils on the lake.

J. R. MACDUFF.

THE HARP OF FIONBELL.

"Feargus, called Fionbell, or 'the Sweet-voiced,' was one of the most distinguished bards of ancient Erin." An ode of his is said to have produced the effect mentioned in the following verses.

FULL many triumphs hath music won in cottage and bower and hall,
 Since David harped in the days of old, to quiet the soul of Saul;
 The evil spirit departed then, and the moody King "was well;"
 And evil spirits were charmed to rest, by the Harp of Fionbell!
 Who shall revive thy magic spell,
 O silent Harp of Fionbell?

Long time ago, when the ancient bards and wandering minstrels sang,
 With lays of love and with martial strains their quivering harp-strings rang;
 They soothed or melted or fired the soul, as the thrilling cadence fell—
 The victor's pæan—the hymn of praise—the warrior's parting knell.
 But mightier was thy magic spell,
 O gentle Harp of Fionbell!

The voice of music hath roused the brave, and kindled the champion's zeal;
 The voice of music hath softly lulled the sorrows it could not heal;
 The voice of music hath roused to life fierce passions and purpose fell—
 Of revels wild, and of festal mirth, the spirit of song can tell.
 But thine hath been a loftier spell,
 O silent Harp of Fionbell!

The power of music is imagined forth by the fabled Orpheus' lyre—
 The voice of music hath skill to quell the glittering serpent's ire—
 It wakes an echo in human hearts; from the organ's grandest swell
 To tiny sighings of poisoned airs that lurk in an ocean shell.
 But holier was thy magic spell,
 O gentle Harp of Fionbell!

Not only nerving the hero's arm, or vaunting the vanquished foe;
 Or reaping laurels of smiles and tears, and conquests of joy and woe;
 Not only breathing the notes of love, but pleading for war to cease,
 In strain so dulcet that strife was stilled, and weapons were sheathed in peace!
 So rare—so sweet—thy magic spell,
 Long silent Harp of Fionbell!

Two hostile chiefs meet in armed array on the plains of Droom-Choll-Coil,*
 In hot dispute to contest their claim of right to the battle-spoil;
 And face to face with the marshalled foe, their valiant followers stand:—
 What turns the wrath from the angry brow? the axe from the lifted hand?
 Only a song of magic spell
 Harped on the Harp of Fionbell!

The silvery tones have calmed the strife—the warrior feud is done—
 The hostile chieftains are clasping hands, with a nobler battle won!
 The battle over the *self within*, where deadliest foemen dwell;
 With bloodshed stayed, and with friendship sealed, by the Harp of Fionbell.
 O, to renew thy magic spell!
 Victorious Harp of Fionbell;

Where *now* would foemen forego their feuds, at the harping of a bard?
 Hath poet-genius no magic left? or are heroes' hearts more hard?
 Alas! alas! that the minstrel's art should triumph like this no more!
 Alas! that never such "sweet-voiced" bard should waken on Erin's shore,
 To work again thy mighty spell,
 O glorious Harp of Fionbell!

H. E. HUNTER.

* "Droom-Choll-Coil," the "Brow of a Hazel-Wood," was one of the ancient names of Dublin.

THE LAUREL BUSH.

An Old-fashioned Love Story.

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

PART V.

"Shall sharpest pathos blight us, doing no wrong?"

SO writes our greatest living poet, in one of the noblest poems he ever penned. And he speaks truth. The real canker of human existence is not misery, but sin.

After the first cruel pang, the bitter wail after her lost life—and we have here but one life to lose!—her lost happiness, for she knew now that though she might be very peaceful, very content, no real happiness ever had come, ever could come to her in this world, except Robert Roy's love—after this, Fortune sat down, folded her hands, and bowed her head to the waves of sorrow that kept sweeping over her, not for one day or two days, but for many days and weeks—the anguish, not of patience, but regret,—sharp, stinging, helpless regret. They came rolling in—those remorseless billows—just like the long breakers on the sands of St. Andrews. Hopeless to resist, she could only crouch down and let them pass. "All Thy waves have gone over me."

Of course, this is spoken metaphorically. Outwardly, Miss Williams neither sat still, nor folded her hands. She was seen everywhere as usual, her own proper self, as the world knew it; but underneath all that was the self that she knew, and God knew. No one else. No one ever could have known, except Robert Roy; had things been different from what they were; from what God had apparently willed them to be.

A sense of inevitable fate came over her. It was now nearly two years since that letter from Mr. Roy of Shanghai, and no more tidings had reached her. She began to think none ever would reach her now. She ceased to hope or to fear, but let herself drift on, accepting the small pale pleasures of every day, and never omitting one of its duties. One only thought remained; which, contrasted with the darkness of all else, often gleamed out as an actual joy.

If the lost letter really was Robert Roy's—and though she had no positive proof, she had the strongest conviction, remembering the thick fog of that Tuesday morning, how easily Archy might have dropped it out of his hand, and how, during those days of soaking rain, it might have lain, unobserved by any one, under the laurel branches, till the child picked it up, and hid

it as he said—if Robert Roy had written to her—written in any way, he was at least not faithless. And he might have loved her then. Afterwards, he might have married, or died; she might never find him again in this world, or if she found him, he might be totally changed,—still, whatever happened, he had loved her. The fact remained. No power in earth or heaven could alter it.

And sometimes, even yet, a half-superstitious feeling came over her that all this was not for nothing—the impulse which had impelled her to write to Shanghai, the other impulse, or concatenation of circumstances, which had floated her, after so many changes, back to the old place, the old life. It looked like chance, but was it? Is anything chance? Does not our own will, soon or late, accomplish for us what we desire? That is, when we try to reconcile it to the will of God.

She had accepted His will all these years, seeing no reason for it; often feeling it very hard and cruel, but still accepting it. And now?

I am writing no sensational story. In it are no grand dramatic points; no *Deus ex machinâ* appears to make all smooth; every event—if it can boast of aught so large as an event—follows the other in perfectly natural succession. For I have always noticed that in life there are rarely any startling "effects," but gradual evolutions. Nothing happens by accident; and, the premises once granted, nothing happens but what was quite sure to happen, following those premises. We novelists do not "make up" our stories, they make themselves. Nor do human beings invent their own lives; they do but use up the materials given to them—some well, some ill; some wisely, some foolishly; but in the main, the dictum of the Preacher is not far from the truth, "All things come alike to all."

A whole winter had passed by, and the spring twilights were beginning to lengthen, tempting Miss Williams and her girls to linger another half-hour before they lit the lamp for the evening. They were doing so, cosily chatting over the fire, after the fashion of a purely feminine household, when there was a sudden announcement that a gentleman, with two little boys, wanted to see Miss Williams. He declined to give his name,

and said he would not detain her more than a few minutes.

"Let him come in here," Fortune was just about to say, when she reflected that it might be some law business which concerned her girls, whom she had grown so tenderly anxious to save from any trouble and protect from every care. "No, I will go and speak to him myself."

She rose and walked quietly into the parlour, already shadowed into twilight; a neat compact little person, dressed in soft grey home-spun, with a pale pink bow on her throat, and another in her cap—a pretty little fabric of lace and cambric, which, being now the fashion, her girls had at last condescended to let her wear. She had on a black silk apron, with pockets, into one of which she had hastily thrust her work, and her thimble was yet on her finger. This was the figure on which the eyes of the gentleman rested as he turned round.

Miss Williams lifted her eyes inquiringly to his face—a bearded face, thin and dark.

"I beg your pardon, I have not the pleasure of knowing you, I——"

She suddenly stopped. Something in the height, the turn of the head, the crisp dark hair, in which were not more than a few threads of grey, while hers had so many now, reminded her of—some one, the bare thought of whom made her feel dizzy and blind.

"No," he said, "I did not expect you would know me; and, indeed, until I saw you, I was not sure you were the right Miss Williams. Possibly, you may remember my name—Roy, Robert Roy."

Faces alter, manners, gestures; but the one thing which never changes is a voice. Had Fortune heard this one—ay, at her last dying hour, when all worldly sounds were fading away—she would have recognised it at once.

The room being full of shadow, no one could see anything distinctly; and it was as well.

In another minute she had risen, and held out her hand.

"I am very glad to see you, Mr. Roy. How long have you been in England? Are these your little boys?"

Without answering, he took her hand, a quiet friendly grasp, just as it used to be. And so, without another word, the gulf of fifteen—seventeen years was overleaped, and Robert Roy and Fortune Williams had met once more.

If anybody had told her when she rose that morning what would happen before

night, and happen so naturally too, she would have said it was impossible. That after a very few minutes, she could have sat there, talking to him as to any ordinary acquaintance, seemed incredible, yet it was truly so.

"I was in great doubts whether the Miss Williams who, they told me, lived here, was yourself, or some other lady; but I thought I would take the chance. Because, were it yourself, I thought, for the sake of old times, you might be willing to advise me concerning my two little boys, whom I have brought to St. Andrews for their education."

"Your sons, are they?"

"No. I am not married."

There was a pause, and then he told the little fellows to go and look out of the window, while he talked with Miss Williams. He spoke to them in a fatherly tone; there was nothing whatever of the young man left in him now. His voice was sweet, his manner grave, his whole appearance unquestionably "middle-aged."

"They are orphans. Their name is Roy; though they are not my relatives, or so distant that it matters nothing. But their father was a very good friend of mine, which matters a great deal. He died suddenly, and his wife soon after, leaving their affairs in great confusion. Hearing this, far up in the Australian bush, where I have been a sheep-farmer for some years, I came round by Shanghai, but too late to do more than take these younger boys, and bring them home. The rest of the family are disposed of. These two will be henceforward mine. That is all."

A very little "all," and wholly about other people; scarcely a word about himself. Yet he seemed to think it sufficient, and as if she had no possible interest in hearing more.

Cursorily, he mentioned having received her letter, which was "friendly and kind:" that it had followed him to Australia, and then back to Shanghai. But his return home seemed to have been entirely without reference to it—or to her.

So, she let all pass; and accepted things as they were. It was enough. When a shipwrecked man sees land—ever so barren a land, ever so desolate a shore—he does not argue within himself, "Is this my haven?" he simply puts into it, and lets himself be drifted ashore.

It took but a few minutes more to explain further what Mr. Roy wanted—a home for his two "poor little fellows."

"They are so young still—and they have lost their mother. They would do very well

"THE LAUREL BUSH."

in their classes here, if some kind woman would take them and look after them. I felt, if the Miss Williams I heard of were really the Miss Williams I used to know, I could trust them to her, more than to any woman I ever knew."

"Thank you." And then she explained that she had already two girls in charge. She could say nothing till she had consulted them. In the meantime—

At this moment the tea-bell sounded. The world was going on just as usual—this strange, common-place, busy, regardless world!

"I beg your pardon for intruding on your time so long," said Mr. Roy, rising. "I will leave you to consider the question, and you will let me know as soon as you can. I am staying at the hotel here, and shall remain until I can leave my boys settled. Good evening."

Again she felt the grasp of the hand: that ghostly touch, so vivid in dreams for all these years, and now a warm living reality. It was too much. She could not bear it.

"If you would care to stay," she said—and though it was too dark to see her, he must have heard the faint tremble in her voice—"our tea is ready. Let me introduce you to my girls, and they can make friends with your little boys."

The matter was soon settled, and the little party ushered into the bright warm parlour, glittering with all the appendages of that pleasant meal—essentially feminine—a "hungry" tea. Robert Roy put his hand over his eyes as if the light dazzled him, and then sat down in the arm-chair which Miss Williams brought forward, turning as he did so to look up at her—right in her face—with his grave, soft, earnest eyes.

"Thank you. How like that was to your old ways! How very little you are changed!"

This was the only reference he made, in the slightest degree, to former times.

And she?

She went out of the room, ostensibly to get a pot of guava jelly for the boys—found it after some search, and then sat down.

Only in her store-closet, with her house-keeping things all about her. But it was a quiet place, and the door was shut.

There is, in one of those infinitely pathetic Old Testament stories, a sentence—"And he sought where to weep: and he entered into his chamber and wept there."

She did not weep, this woman, not a young woman now: she only tried during her few minutes of solitude to gather up her

thoughts, to realise what had happened to her, and who it was that sat in the next room—under her roof—at her very fireside. Then she clasped her hands with a sudden sob, wild as any of the emotions of her girlhood—

"O my love, my love, the love of all my life! Thank God!"

The evening passed, not very merrily, but peacefully; the girls, who had heard a good deal of Mr. Roy from David Dalziel, doing their best to be courteous to him, and to amuse his shy little boys. He did not stay long, evidently having a morbid dread of "intruding," and his manner was exceedingly reserved, almost awkward sometimes, of which he seemed painfully conscious, apologizing for being "unaccustomed to civilisation, and to ladies' society, having during his life in the bush sometimes passed months at a time without ever seeing a woman's face.

"And women are your only civilisers," said he. "That is why I wish my motherless lads to be taken into this household of yours, Miss Williams, which looks so—so comfortable," and he glanced round the pretty parlour with something very like a sigh. "I hope you will consider the matter, and let me know as soon as you have made up your mind."

"Which I shall do very soon," she answered.

"Yes, I know you will. And your decision once made, you never change."

"Very seldom. I am not one of those who are 'given to change.'"

"Nor I."

He stood a moment, lingering in the pleasant, lightsome warmth, as if loth to quit it, then took his little boys in either hand, and went away.

There was a grand consultation that night, for Miss Williams never did anything without speaking to her girls; but still it was merely nominal. They always left the decision to her. And her heart yearned over the two little Roys, orphans, yet children still; while Helen and Janetta were growing up, and needing very little from her except a general motherly supervision. Besides, *he* asked it. He had said distinctly that she was the only woman to whom he could thoroughly trust his boys. So—she took them.

After a few days, the new state of things grew so familiar that it seemed as if it had lasted for months, the young Roys going to and fro to their classes, and their golf-playing, just as the young Dalziels had done; and Mr. Roy coming about the house, almost

daily,—exactly as Robert Roy had used to do of old. Sometimes it was to Fortune Williams the strangest reflex of former times; only—with a difference.

Unquestionably, he was very much changed. In outward appearance more even than the time accounted for. No man can knock about the world, in different lands and climates, for seventeen years, without bearing the marks of it. Though still under fifty, he had all the air of an "elderly" man, and had grown a little "peculiar" in his ways—his modes of thought and speech, except that he spoke so very little. He accounted for this by his long lonely life in Australia, which had produced, he said, an almost unconquerable habit of silence. Altogether, he was far more of an old bachelor than she was of an old maid, and Fortune felt this: felt, too, that, in spite of her grey hairs, she was in reality quite as young as he, nay, sometimes younger; for her innocent, simple, shut-up life had kept her young.

And he, what had his life been, in so far as he gradually betrayed it? Restless, struggling; a perpetual battle with the world; having to hold his own, and fight his way inch by inch—he who was naturally a born student, to whom the whirl of a business career was especially obnoxious. What had made him choose it? Once chosen, probably he could not help himself; besides, he was not one to put his shoulder to the wheel and then draw back. Evidently, with the grain, or against the grain, he had gone on with it; this sad, strange, wandering life, until he had "made his fortune," for he told her so. But he said no more; whether he meant to stay at home and spend it, or go out again to the antipodes (and he spoke of those far lands without any distaste, even with a lingering kindness, for indeed he seemed to have no unkindly thought of any place or person in all the world), his friend did not know.

His friend. That was the word. No other. After her first outburst of uncontrollable emotion, to call Robert Roy her "love," even in fancy, or to expect that he would deport himself in any loverlike way, became ridiculous, pathetically ridiculous. She was sure of that. Evidently, no idea of the kind entered his mind. She was Miss Williams, and he was Mr. Roy—two middle-aged people, each with their different responsibilities, their altogether separate lives; and, hard as her own had been, it seemed as if his had been the harder of the two—ay, though he was now a rich man, and she still little better than a poor governess.

She did not think very much of worldly things, but still she was aware of this fact—that he was rich and she was poor. She did not suffer herself to dwell upon it, but the consciousness was there, sustained with a certain feeling called "proper pride." The conviction was forced upon her in the very first days of Mr. Roy's return—that to go back to the days of their youth was as impossible as to find primroses in September.

If, indeed, there were anything to go back to. Sometimes she felt, if she could only have found out that, all the rest would be easy, painless. If she could only have said to him, "Did you write me the letter you promised? Did you *ever* love me?" But that one question was, of course, utterly impossible. He made no reference whatever to old things, but seemed resolved to take up the present—a very peaceful and happy present it soon grew to be—just as if there were no past at all. So perforce did she.

But, as I think I have said once before, human nature is weak, and there were days when the leaves were budding, and the birds singing in the trees, when the sun was shining and the waves rolling in upon the sands, just as they rolled in that morning over those two lines of footmarks, which might have walked together through life; and who knows what mutual strength, help, and comfort this might have proved to both?—then, it was, for one at least, rather hard.

Especially when bit by bit, strange ghostly fragments of his old self began to reappear in Robert Roy: his keen delight in nature, his love of botanical or geological excursions. Often he would go wandering down the familiar shore for hours, in search of marine animals for the girls' aquarium, and then would come and sit down at their tea-table, reading or talking, so like the Robert Roy of old, that one of the little group, who always crept in the background, felt dizzy and strange, as if all her later years had been a dream, and she were living her youth over again, only with the difference aforesaid. A difference, sharp as that between death and life—yet with something of the peace of death in it.

Sometimes, when they met at the innocent little tea-parties which St. Andrews began to give—for of course in that small community everybody knew everybody, and all their affairs to boot, often a good deal better than they did themselves, so that there was great excitement, and no end of speculation over Mr. Roy—sometimes, meeting, as they were sure to do, and walking home together, with the moonlight shining down the empty

streets, and the stars out by myriads over the silent distant sea, while the nearer tide came washing in upon the sands—all was so like—so frightfully like!—old times, that it was very sore to bear.

But, as I have said, Miss Williams was Miss Williams, and Mr. Roy Mr. Roy, and there were her two girls always besides them; also his two boys, who soon took to "Auntie" as naturally as if they were really hers, or she theirs.

"I think they had better call you so, as the others do," said Mr. Roy, one day. "Are these young ladies really related to you?"

"No; but I promised their father on his death-bed to take charge of them. That is all."

"He is dead, then. Was he a great friend of yours?"

She felt the blood flashing all over her face, but she answered steadily: "Not a very intimate friend, but I respected him exceedingly. He was a good man. His daughters had a heavy loss when he died, and I am glad to be a comfort to them so long as they need me."

"I have no doubt of it."

This was the only question he ever asked her concerning her past life, though, by slow degrees, he told her a good deal of his own. Enough to make her quite certain, even if her keen feminine instinct had not already divined the fact, that whatever there might have been in it of suffering, there was nothing in the smallest degree either to be ashamed of, or to hide. What Robert Roy of Shanghai had written about him had continued true. As he said one day to her, "We never stand still. We either grow better or worse. You have not grown worse."

Nor had he. All that was good in him had developed, all his little faults had toned down. The Robert Roy of to-day was slightly different from, but in nowise inferior to, the Robert Roy of her youth. She saw it, and rejoiced in the seeing.

What he saw in her she could not tell. He seemed determined to rest wholly in the present, and take out of it all the peace and pleasantness that he could. In the old days, when the Dalziel boys were naughty, and Mrs. Dalziel tiresome, and work was hard, and holidays were few, and life was altogether the rough road that it often seems to the young, he had once called her "Pleasantness and Peace." He never said so now; but sometimes he looked it.

Many an evening he came and sat by her

fireside, in the arm-chair, which seemed by right to have devolved upon him; never staying very long, for he was still nervously sensitive about being "in the way," but making himself and them all very cheerful and happy while he did stay. Only sometimes, when Fortune's eyes stole to his face—not a young man's face now—she fancied she could trace, besides the wrinkles, a sadness, approaching to hardness, that never used to be. But again, when interested in some book or other (he said it was delicious to take to reading again, after the long fast of years), he would look round to her for sympathy, or utter one of his dry drolleries, the old likeness, the old manner and tone, would come back so vividly that she started, hardly knowing whether the feeling it gave her was pleasure or pain.

But beneath both, lying so deep down that neither he nor any one could ever suspect its presence, was something else. Can many waters quench love? Can the deep sea drown it? What years of silence can wither it? What frost of age can freeze it down? God only knows.

Hers was not like a girl's love. Those two girls sitting by her day after day would have smiled at it, and at its object. Between themselves they considered Mr. Roy somewhat of an "old fogie;" were very glad to make use of him now and then, in the great dearth of gentlemen at St. Andrews, and equally glad afterwards to turn him over to Auntie, who was always kind to him. Auntie was so kind to everybody.

Kind? Of course she was, and above all when he looked worn and tired. He did so sometimes: as if life had ceased to be all pleasure, and the constant mirth of these young folks was just a little too much for him. Then, she ingeniously used to save him from it and them, for awhile. They never knew—there was no need for them to know—how tenfold deeper than all the passion of youth is the tenderness with which a woman cleaves to the man she loves when she sees him growing old.

Thus the days went by, till Easter came, announced by the sudden apparition, one evening, of David Dalziel.

That young man, when, the very first day of his holidays, he walked in upon his friends at St. Andrews, and found sitting at their tea-table a strange gentleman, did not like it at all. Scarcely even when he found out that the intruder was his old friend, Mr. Roy.

"And you never told me a word about

this," said he reproachfully to Miss Williams. "Indeed you have not written to me for weeks; you have forgotten all about me."

She winced at the accusation, for it was true. Beyond her daily domestic life, which she still carefully fulfilled, she had in truth forgotten everything. Outside people were ceasing to affect her at all. What *he* liked, what *he* wanted to do, day by day—whether *he* looked ill or well, happy or unhappy, only he rarely looked either—this was slowly growing to be once more her whole world. With a sting of compunction, and another, half of fear, save that there was nothing to dread, nothing that could affect anybody beyond herself,—Miss Williams roused herself to give young Dalziel an especially hearty welcome, and to make his little visit as happy as possible.

Small need of that; he was bent on taking all things pleasantly. Coming now near the end of a very creditable college career, being of age and independent, with the cosy little fortune that his old grandmother had left him, the young fellow was disposed to see everything *couleur de rose*, and this feeling communicated itself to all his friends.

It was a pleasant time. Often in years to come did that little knot of friends, old and young, look back upon it as upon one of those rare bright bits in life when the outside current of things moves smoothly on, while underneath it there may or may not be, but generally there is, a secret or two which turns the most trivial events into sweet and dear remembrances for ever.

David's days being few enough, they took pains not to lose one, but planned excursions here, there, and everywhere—to Dundee, to Perth, to Elie, to Balcarras—all together, children, young folks, and elders; that admirable *mélange* which generally makes such expeditions "go off" well. Theirs did, especially the last one, to the old house of Balcarras, where they got admission to the lovely quaint garden, and Janetta sang "Auld Robin Gray" on the spot where it was written.

She had a sweet voice, and there seemed to have come into it a pathos which Fortune had never remarked before. The touching, ever old, ever new story made the young people quite quiet for a few minutes; and then they all wandered away together, Helen promising to look after the two wild young Roys, to see that they did not kill themselves in some unforeseen way, as, aided and abetted by David and Janetta, they went on a scramble up Balcarras Hill.

"Will you go too?" said Fortune to Robert Roy. "I have the provisions to see to; besides, I cannot scramble as well as the rest. I am not quite so young as I used to be."

"Nor I," he answered, as, taking her basket, he walked silently on beside her.

It was a curious feeling, and all to come out of a foolish song; but if ever she felt thankful to God from the bottom of her heart, that she had said "No," at once and decisively, to the good man who slept at peace beneath the churchyard elms, it was at that moment. But the feeling, and the moment, passed by immediately. Mr. Roy took up the thread of conversation where he had left it off—it was some bookish or ethical argument, such as he would go on with for hours; so she listened to him in silence. They walked on, the larks singing and the primroses blowing. All the world was saying to itself, "I am young, I am happy;" but she said nothing at all.

People grow used to pain; it dies down at intervals, and becomes quite bearable, especially when no one sees it, or guesses at it.

They had a very merry picnic on the hill-top, enjoying those mundane consolations of food and drink which Auntie was expected always to have forthcoming, and which those young people did by no means despise, nor Mr. Roy neither. He made himself so very pleasant with them all, looking thoroughly happy, and baring his head to the spring breeze with the eagerness of a boy.

"Oh this is delicious! It makes me feel young again. There's nothing like home. One thing I am determined upon: I will never quit bonnie Scotland more."

It was the first clear intimation he had given of his intentions regarding the future, but it thrilled her with measureless content. If only he would not go abroad again, if she might have him within reach for the rest of her days—able to see him, to talk to him, to know where he was and what he was doing, instead of being cut off from him by those terrible dividing seas—it was enough! Nothing could be so bitter as what had been; and whatever was the mystery of their youth, which it was impossible to unravel now—whether he had ever loved her, or loved her and crushed it down and forgotten it, or only felt very kindly and cordially to her, as he did now, the past was—well, only the past!—and the future lay still before her, not unsweet. When we are young, we insist on having everything or

nothing; when we are older, we learn that "everything" is an impossible, and "nothing" a somewhat bitter, word. We are able to stoop meekly, and pick up the fragments of the children's bread, without feeling ourselves to be altogether "dogs."

Fortune went home that night with a not unhappy, almost a satisfied, heart. She sat back in the carriage, close beside that other heart which she believed to be the truest in all the world, though it had never been hers. There was a tremendous clatter of talking and laughing, and fun of all sorts, between David Dalziel and the little Roys on the box, and the Miss Moseleys sitting just below them, as they had insisted on

doing, no doubt finding the other two members of the party a little "slow."

Nevertheless Mr. Roy and Miss Williams took their part in laughing with their young people, and trying to keep them in order; though after a while both relapsed into silence. One did at least, for it had been a long day and she was tired, being, as she had said, "not so young as she had been." But if any of these lively young people had asked her the question whether she was happy, or at least contented, she would have never hesitated about her reply. Young, gay, and prosperous as they were, I doubt if Fortune Williams would have changed lots with any one of them all.

SUNSET AND MOONRISE.

A Reminiscence.

FAIR as a woman with her ornaments

The gleaming Girvan lay, and in its woods
Pavilioned, sang a song low to itself.

Yon holm, so glowing in the sun's "good night,"
To us, two image-seekers, as we walked,
Seemed the bright hearth of bonny Girvan Vale.

And what to all her sons is Girvan Vale?
Oh, what indeed but a loved house!—a home
Furnished with old and dear associations!

Its northern wall—Dalquharran's stately woods—
Where on each season's coronation day
The harping winds play on the tremulous trees.

Its southern—Haggart's frontier-rising height,
That, ridging westwards to the sea, beholds
Far-looking Ailsa, couched to guard the vale.

Oh me! the beauty of that summer eve:
We stayed our walk—spelled to the spot—to watch
The sunset glorifying earth and sky—

Nor left off gazing when the sun had sunk
Behind Dalquharran in the red north-west,
But with large eye-fuls took the landscape in.

And long we lingered, leaning on a gate,
And gloated o'er the greying scene, nor knew
How fast the gloaming deepened into night.

For all along the far horizon then
Every lone house and tree distincter stood
Than in the sunny glare that gauzed the noon.

At last we turned us from the gate, and set
Our thoughts and steps for home; when, lo! from
heaven
A meek white face looked down and smiled on us:

A meek white face with a half-hurt expression—
A sense of mute wrong-bearing in the smile;
And we stood self-accused—my friend and I.

For we had seen the gentle moon begin
Her milding mission a full hour ago—
But, thoughtless, scarce had looked at her till now.

And now that smile, so spiritually calm,
Which was her all to chide us, touched our hearts,
Already softening in the melting eve.

"Lo!" cried my friend, "even as a kindly dame,
Whom young folks love to visit, has a gift
To slip into the hand at parting time,

"So Nature will not have us go away
Before she drops into the yielding heart
A something we may think of—it is this:

"One comes with conscious worth and finds the world
Taken up with other matters—busy-blind—
And he must wait its leisure—Let him wait.

"Wait and keep sweet—worth yet shall work its
way—
Outlive the death of unregard, and shine
Attractive to the world's beholding eyes."

And with such talk we lengthened out the night,
And shortened the road home, and then at times
We fell into a silence deep with thoughts.

The world was tranced into a slumberous hush,
We walked as in a dream, and all things looked
Unreal in the star-light, fairy-work.

And now, ere we had thought of it, there lay
Our village—silent in its silvery sleep,
And there for us the growing sleep of youth.

DAVID STEVENSON.

THE SERVICE OF STEAM.

III.—THE WALTER PRESS.

IF the Electric Telegraph is the most wonderful invention by which we moderns profit, the older invention of Printing must, we think, be admitted to be the most important. The period of its discovery is virtually the point which marks us off from "the dark ages." It brought mental light and freedom in its train, and placed the tree of knowledge, so to speak, within the reach of all. It has been the keynote to a greater revolution than any or all of those that have been wrought by bloodshed, and has done more than aught else to make the whole world kin.

In giving some account of the Walter Press, the last great achievement in the mechanical progress of printing, it is necessary to glance at what was done before, even though it were only the better to appreciate its special superiority and, if we may be allowed the phrase, its individual excellences. For, though it marks an era in the history of the mechanical progress of printing, it must still in a broad treatment of our present subject be taken as the crowning factor of a long series of improvements in printing presses.

In the more exhaustive treatises upon the history of printing, seals (occasionally alluded to in the Jewish Scriptures), and the hieroglyphical stamping of clay as exemplified by entire and undecayed bricks from the tower of Babylon and other structures of antiquity, are spoken of as containing the germs of the idea of printing; but practically the invention is a comparatively modern one, for little more than four centuries have elapsed since the first printed book was issued from the press. To any who have studied the history of inventions, it will seem almost a matter of course that there should be a rivalry among nations in claiming the honour of having given birth to the inventor of this great art, and accordingly we find the Dutch claiming it on behalf of Laurence Coster, and the Germans on behalf of Johannes Gutenberg. It is very probable that in this, as in other inventions for which an age is ripe, a number of individuals were separately and independently upon the track of discovery, and made various degrees of progress. But, be that as it may, Gutenberg's name is the one associated with the first triumphs of the printing art. When the first piece of actual printing was accomplished is not accurately known, but it is known that about the year

1438, Gutenberg was executing work with movable wooden type, and somewhere about 1450 he produced the first really important piece of printing—a copy of the Latin Bible, now distinctively known as the "Mazarin Bible." This famous work was executed with *cut* metal type, and consisted of six hundred and thirty-seven leaves. Copies of it are still extant in the great libraries of England, Germany, and France, some of them printed on vellum. Metal types of any kind were, of course, a great advance upon wooden ones, but it is obvious that while each type had to be cut, type-making must have been a very slow and laborious affair. Happily for the progress of knowledge, type-cutting was soon superseded by *type-casting*, the latter invention being due to Peter Schoffer, Gutenberg's immediate successor, whose first work in printing was an edition of the Psalms issued in 1457, and noteworthy as being the first book to which the place and date of publication and printer's name were affixed. For a time printers cast their own types, but, as might have been expected, this was soon made a distinct industry, which has been brought to a high state of perfection by the type-founders of to-day, some of the most widely and justly celebrated of whom are established in Scotland. Into the minutiae of this branch of the general art of printing there is no occasion to enter here, but as an indication of the proportionate usefulness of the several letters of our alphabet it is worth while to give the make-up of a modern *fount* of type, which runs as follows:—

a . . . 8,500	j . . . 400	s . . . 8,000
b . . . 1,600	k . . . 800	t . . . 9,000
c . . . 3,000	l . . . 4,000	u . . . 3,400
d . . . 4,400	m . . . 3,000	v . . . 1,200
e . . . 12,000	n . . . 8,000	w . . . 2,000
f . . . 2,500	o . . . 8,000	x . . . 400
g . . . 1,700	p . . . 1,700	y . . . 2,000
h . . . 6,400	q . . . 500	z . . . 200
i . . . 8,000	r . . . 6,200	

The first printed books imitated the peculiarities of contemporary manuscripts, and the first types were consequently in the Gothic or black-letter character, which is still the recognised type in Germany. On the art of printing reaching Italy, however, the character was gradually modified until it assumed its present Roman shape. Though there have been attempts to discredit the fact, it is generally believed that printing was introduced into England by

William Caxton, who had acquired a knowledge of the art during travels abroad, and established a press in Westminster about the year 1474. Thirty years later the art was introduced into Scotland, and seventy years later into Ireland. Until about the middle of the seventeenth century its progress in Great Britain was slow; but after the revolution of 1688, when there arose a demand for news sheets as well as for literary productions in book form, it advanced rapidly, and a decisive impetus was given to it by the works of the great band of writers who arose in the reign of Queen Anne.

For our present purpose there is no necessity to go into details concerning the work of the compositor, the one branch of the printing art which remains pretty much as it was in the beginning. The construction of composing or type-setting machines has been frequently attempted during the last thirty-five years, but hitherto with very slight success indeed. Numerous patents for such machines have been taken out in America, and several in England, and the latest of these, a machine patented by Hattersley and Mackie, has, we believe, been used to a limited extent. None of them, however, have sufficiently answered their purpose to recommend themselves to general use, and the compositor remains as he was in Gutenberg's time, a skilled hand-worker. There are many niceties in his art, a description of which might be interesting were we dwelling specially on this head of the subject, but here it is enough to say that he sets up *in type* the sheet or leaf to be printed.

Though in speaking of the early days of printing we have made no express mention of presses, any printing whatever, of course, implies the use of some form of press. What were the exact forms of the very earliest presses is not accurately known, but the mechanical probabilities of the case point to their having been some rude form of the screw-press, screw power being the most obvious for flat pressing machines, which the earliest presses must undoubtedly have been. The first known presses were of the screw kind, and the screw press improved in details, by Willem Jansen Blaew, a Dutch mechanic, who followed the calling of a mathematical instrument maker, remained in general use throughout Europe till near the beginning of the present century. It was then superseded by "the Stanhope," or lever press, which by an ingenious arrangement of levers distributed the pressing power

more effectively, and materially lightened the labours of the pressman, while at the same time enabling him to give greater regularity and delicacy of impression. This press was named after its inventor, the third Earl of Stanhope, father of the celebrated Lady Hester Stanhope, and well known in his day as an ingenious mechanic. This was improved upon by others much more rapidly than the screw press had been, and some twenty years after its invention it was in its turn in a great measure superseded by the Columbian press, introduced into England by its patentee, Mr. George Clymer, of Philadelphia. But even the best machines, up to this period, were very poor affairs, judged by present day standards. The most that could be got out of them was two hundred and fifty impressions, or a hundred and twenty-five sheets per hour. The taste for reading, and especially reading newspapers, had increased in a much more rapid ratio than the productive powers of the press, and the urgent necessity for greater rapidity of production giving a stimulus to invention, the great central idea of the modern printing-press as it exists at this day was hit upon—the idea, namely, of cylinder printing. The substitution of the revolving cylinder for the flat pressure of the screw or lever, was the mechanical key-note to fast printing. The first cylinder printing machine was got to work in the *Times* office in 1814. Since that time the independent, though incidental invention of stereotyping has practically multiplied the producing power of any modern printing machine, and there have been immense and wonderful improvements in details in the machines themselves; but as regards the leading idea of the cylinder, these improvements have been *only in details*, or perhaps it would be better to say that where they have dealt with the cylinder-principle they have only been improvements in the sense of being developments. The Walter Press, the last and greatest of printing machines, a machine so immensely superior to even the best of its predecessors, that its advent may be taken as distinctly marking a new and advanced era in printing—this monarch among printing machines is more essentially than any that has gone before it a cylinder machine. As early as 1790, Mr. Nicholson, at that time editor of the *Philosophical Journal*, took out a patent for improvements in printing, which included the cylinder and almost every *principle* that has since been successfully applied in the construction of printing machines; but to

Mr. Koenig, a German, was reserved the eminent merit of being the first to carry cylinder printing by steam power into practical effect. To this distinguished man the world is greatly indebted, and seeing what a very monumental age this is, it is almost matter for surprise that there has never been a proposal for a Koenig statue. It has been said that Koenig acted upon a knowledge of Nicholson's ideas, but there is no certain information upon the point. With his mechanical studies turning upon improvements in printing machines, it is probable enough that he may have been aware of the other inventor's patented *ideas*; but, on the other hand, it is equally probable, and rather more in keeping with the general tenor of the early history of great inventions, to suppose that the principles upon which his machine was constructed occurred to him quite independently. Even, however, if he had been indebted to others for any germ of his discovery, immense credit would still be due to him. Those having any actual acquaintance with such matters will know that to demonstrate the practicability of a mechanical idea in a drawing, or the specification for a patent, is one thing; to embody it in detail in a successfully operative machine, another and infinitely more difficult thing. Koenig came to London about 1804, and for some time was engaged in devising improvements in existing forms of printing machines, but presently abandoning all plans in that direction, he devoted himself exclusively to the construction of a cylinder machine. Having made a small machine, he submitted it to the notice of Mr. Walter, the then proprietor of the *Times*, and father of the gentleman after whom the Walter Press is named. So satisfactory was the experiment, that an agreement was entered into for the construction of two larger machines which were to embody farther improvements which had already suggested themselves to the mind of the inventor while working on the smaller machine. The new machines were completed in due course, and on the 29th of November, 1814, the reader of the *Times* was informed that his journal that day presented to the public "the practical result of the greatest improvement connected with printing since the discovery of the art itself." "That the magnitude of the invention might be justly appreciated by its effects," a brief account of the action of the machine was given, concluding as follows: "The whole of these complicated acts is performed with such

velocity and simultaneousness of movement, that no less than eleven hundred sheets are impressed in an hour." Wonderful as that rate of speed was considered at that time, it was literally not a twentieth part of the speed at which the Walter Press habitually works. The Koenig, and indeed all other machines up to the Walter, printed only one side at a time, each sheet having to be passed through twice, while the Walter, printing both sides, "perfects" twelve thousand sheets per hour, equal to twenty-five thousand impressions of a Koenig. But relatively insignificant as were its powers, the Koenig was for its day as great an advance as the Walter, and as emphatically marked a new era in printing. The name of Walter was thus honourably associated with the introduction of steam printing, and to the energy, enterprise, and liberality of the present representative of the name, the general progress of the printing art is much indebted, even apart from the specific advantages of the wonderful press that bears his name.

It may be as well to mention here that it is to these characteristics of energy and enterprise in him that we owe the production of the Walter Press. Though it justly bears his name, Mr. Walter is not the inventor of the press in the ordinary or strictly mechanical sense of the term. Indeed, it may fairly be said that this particular press was not invented at all in the common acceptance of the word. It was the outcome of an elaborate and costly series of practical experiments such as could only have been carried on in a printing establishment of the magnitude of that pertaining to the *Times*, and conducted in the enterprising spirit in which—as regards all means and appliances of production—the *Times* establishment is conducted. The particular and most material improvements to be attained having been agreed upon, the necessary series of tentative and systematic experiments were carried out in the *Times* office by the *Times* staff working under the general supervision of Mr. Walter, and at his sole cost. They extended over a period of three years, and how successful they were in the end, the press itself is the best evidence. It is in this sense that the world is indebted to Mr. Walter for his wonderful press, but it is nevertheless easy to understand how, from his name being attached to such a splendid piece of mechanism, there should have got abroad a popular idea that he must be a great mechanical inventor. That the existence of his press is as much

and as directly owing to him as though he were its inventor, there can be no doubt, and public gratitude is as fully due to him; but as a simple matter of fact he is not, as he has himself ungrudgingly placed upon record. At the anniversary festival of the London Association of Foremen Engineers and Draughtsmen, the name of Mr. Walter was coupled with the toast of the House of Commons, and it was said of him by the proposer of the toast that he was "a gentleman of great mechanical ability who had turned his mechanical power to the spreading of intelligence by the throwing off of so many more thousand copies per hour than before of the great journal with which he was connected." Upon this point Mr. Walter in his reply spoke as follows: "My honourable friend, however, misinformed you on one particular. I am myself no mechanic at all, but I have the advantage of employing many mechanics, and many engineers of ability and skill, and it is to their skill, perseverance, and indomitable courage I am greatly indebted for much of the success I have attained in life."

The Koenig machine was in a few years superseded by an improved one patented by Messrs. Applegarth and Cowper, in 1818, and still used for book-work. Other improvements followed, leading gradually to the Hoe machine, the best and fastest known until the advent of the Walter. The Hoe, as most people are aware, is an American invention. It was first introduced into England in 1857, is capable of printing one side of a newspaper at the rate of ten or twelve thousand copies per hour, and being equal to the production of all papers under the first-class, and capital being sunk in it, it is still generally employed. It is second only to the Walter, though a long way second; and as it is in comparison with it that the advantages of the Walter Press will be most apparent, it will be well, before passing to a detailed description of the Walter, to briefly point out the leading features of the Hoe. In previous machines there had only been pressing cylinders, the "forms" of type being placed on a flat table which travelled backward and forward to meet the revolving cylinders carrying the sheets to be printed. This backward and forward movement could not be carried on at anything like the speed at which a rotary motion might, and the leading idea of the Hoe machine was the substitution of a type-carrying cylinder for a table. On this the main cylinder of the machine, the types in the shape of stereo-

type plates cast in the form of the segment of a circle, are fastened, and between this and a series of smaller pressing cylinders, two, four, six, eight, or ten in number, the sheets pass as the cylinders revolve, as many sheets as there are pressing cylinders going through at a time. The main cylinder forms pairs with the smaller ones, and to each pair there has to be attached a skilled "layer on" to feed in the sheets, and on a large machine these and the other machine-men make up a rather large and expensive staff; while a still more important circumstance is, that the machine being hand-fed, is practically limited by the skill of the layer on, and he is a good hand who can be depended upon for an average of two thousand per hour. Moreover it was found that machines above the four-cylinder size became so complicated as to be very liable to get out of order.

Such are the salient features of the Hoe machine, and if the reader will bear them in mind, he will be readily able to follow, and appreciate the "points of departure" in the Walter Press.

The first things about the Walter Press that strike an observer having any general knowledge of machinery are its strength and compactness of form, thorough finish of workmanship, simplicity of arrangement, and get-at-ability of every part, should any necessity arise for overhauling or repairing the machine. These are details to be noticed while the machine is standing still. When it is put in motion a still more important feature is made apparent, namely, that the machine must be beautifully balanced; for notwithstanding the tremendous speed at which it works, there is literally no shake about it. In other words, it is a machine in which "wear and tear" are reduced to a minimum. The general appearance of the machine is that of a series of rollers and cylinders working in an upright framework. These consist of a tension roller, a pair of damping cylinders, a pair of nipping rollers, an upper pair of impression cylinders which print the first side, a lower pair which prints the second, and a pair of cutting cylinders. The self-acting feed of the Walter Press is effected by the substitution of continuous rolls of paper for the ready-cut sheets "laid on" by hand in other machines. These rolls are generally from four and a half to five miles long, about three feet six inches in diameter, weigh upwards of eight hundred pounds, and make five thousand sheets of the *Times*. In the centre of each roll is a

circular hole about two inches in diameter, left by the withdrawal of the spindle on which it has been wound. Through this an expanding "mandril" is passed, and tightened after it is entered. It is longer than the width of the roll, and its extending ends, accurately turned as "journals" or axles, fit into the bearings of a pair of up-rights which form the rear of the framework of the machine, and stand just below the tension roller. When in its place, the mandril is subject to the action of a self-regulating spring break which checks the tendency to irregularity in the "paying out" naturally arising from the weight and momentum of the roll. When the paper is in place, the free end of the roll is led over the tension roller, through the damping cylinders and between the gripping rollers, and then the machine is started. The paper passes between the first impression cylinder and its pressing cylinder; after being taken completely round the impression cylinder, it goes between the two pressing cylinders to the lower impression cylinder, in passing around which the second side is printed. The printing being completed, the paper is passed on to the cutting cylinders, one of which is fitted with a serrated steel knife, while the other has a corresponding groove or "slot," into which the knife works, cutting a sheet at each revolution. The knife is so shaped that it leaves a narrow slip at each edge of the sheet uncut, that degree of continuity being still required to ensure regularity of run over the delivery tapes. These tapes consist of an upper and lower set, between which the outgoing stream of printed paper runs, being carried, so to speak, on a barred framework the width of the sheet. Running taut over a series of rollers, the tapes form an endless chain. Three of the rollers are so arranged as to form an inclined plane, and in going over the highest of these rollers the two sets of tapes converge, and in doing so complete the severance of the sheet, which is then carried down perpendicularly until, as it is nearing the ground, it is thrown out by the action of a fingered "rocker," which, working pendulum fashion, and with its fingers arranged to strike between the lines of the tapes, throws out a sheet at every in-and-out stroke, laying them in even piles on saddle-shaped tables placed on either side to receive them.

Such, in very brief and very general terms, are the leading features of the manner in which the Walter Press accomplishes its

work; but we think we may safely say that it is beyond the power of mere words to convey an *adequate* idea of the speed, certainty, and regularity with which all this is done. To realise this, the machine should be seen at work, and indeed at a first glance it is scarcely realisable even then. Not only are the eyes dazzled by the sheer speed, but the magic-like sight of the raw material—the paper—being fed in at one end of the machine and coming out at the other fully printed copies of the *Times*, at the rate of two hundred per minute, is calculated, for the moment at any rate, to dazzle the mind also. With this marvellous speed is combined a degree and uniformity of perfection such as is to be found in the work of no other press. Let any reader critically examine for himself a sheet of the *Times* or *Daily News* (which latter paper is also printed by Walter presses), and he will at once be struck with the uniformity of impression visible in every column and line, and (where there is an opportunity of comparing a number) every sheet. There are no heavily-inked more or less blurred patches in one part of the paper, or faintly-impressed more or less illegible ones in another, as might have been seen in these papers in by-gone days when the Walter Press was not, and may still occasionally be seen in newspapers still printed by the old-fashioned machines. Such uniformity, printers will tell you, is hard of attainment, even with slow one-side printing book machines, but it is secured in the fast-working Walter by a most ingenious and workmanlike arrangement for keeping the stereotype plates evenly inked. In the ink-supply trough, which is fed by a pumping apparatus, revolves a feeding roller almost in contact with a "true"-edged knife, which scrapes off any undue quantity or thickness of ink that the feeder may take up. Working lightly against the feeding roller is an equalising roller, having a lateral as well as a revolving motion—this motion, as even an uninitiated person may understand, adding materially to its powers of equalising the film of ink. Following the equalising roller, and working on to each other, come four distributing rollers, two of these having also a lateral motion. From the last of these the inking rollers take the ink, which they in turn spread over the face of the revolving stereotype plates, with which they are in contact. It will be easily understood that by this means a perfect equalisation of distribution is secured, and the result is the wonderful uniformity of impression of which

we have been speaking. In this connection it may also be mentioned that the self-acting feed of the Walter Press does away with any chance of the "rumpling" or displacement which sometimes occurs with hand-fed sheets, and results in some reader finding a blank or half-printed space in some part of his morning paper.

The means by which the paper is damped in its passage through the machine is also notably ingenious and workmanlike. The damping roller consists of a metal cylinder perforated all over its surface, and thickly wrapped with a soft absorbent woollen material. A jet of steam plays into the cylinder, and, being condensed by contact with the metal, furnishes a constant and regular supply of water, which, by the centrifugal force generated by the revolving motion of the cylinder, is sprayed out through the perforated surface, and forced into the woollen covering, which is thus kept thoroughly and evenly wetted; and the water being warm, at once strikes through the paper that is carried over the roller.

Other noteworthy inventions within the invention in chief might also be mentioned, for the speed at which the machine was to work, and the variety of processes it was intended to accomplish, necessitated invention at every step, and the press is as wonderful in its details as in its completeness or capabilities. It is only by a consideration of the details of the machine, and the many and varied difficulties they have successfully overcome, that a just estimate can be formed of the patience and perseverance, as well as high inventive genius and mechanical ability, that must have been brought to bear to perfect the invention of such a machine in the short space of three years. That the thing was achieved within such a time is to those who understand the difficulties and failures that as a rule intervene between the first conception and the successful execution of a great mechanical idea, conclusive evidence that in this case the insight must have been unusually clear, the theoretical reasoning unusually acute, the disappointments and harkings-back incidental to experimental processes in applied mechanics unusually few.

Any account of the Walter Press, however cursory, would be incomplete without a reference to the invention of stereotyping, without the aid of which, cylinder-printing, at anything like a Walter-press speed, would be impossible. This art, as most of our readers are probably aware, consists in pro-

ducing, by a rapid process of metal-casting, counterparts of the type forms set up by hand by the compositors; and with the work of bringing this art to the pitch of perfection to which it has attained in the present day, the name of Walter is honourably associated. The invention of stereotyping dates back to about the year 1785, and is generally attributed to William Ged, a goldsmith of Edinburgh. His process, still used for certain classes of work, is known as the stucco process, stucco being the material used to take the impression from the type and form the matrix. The stucco is poured on to the face of the page of type, in liquid form, and hardens in cooling. As, however, the stucco matrix cannot be bent into semicircular form, it is useless for cylinder-printing, and for newspaper work has been entirely superseded by the *papier-maché* process, which, though not invented, has been chiefly developed and perfected in the *Times* office. It was first taken in hand there,—being at that time a recent and crude invention,—during the period of the Crimean War, when, with all previously-known appliances, it was found impossible to complete the daily publication of the great journal before nine or ten o'clock in the morning. In the able hands of the engineers and mechanicians of the establishment, a series of experiments, and step by step improvements, gradually led up to the admirably simple, rapid, and effective method used to supply the cylindrical stereotype plates for the Walter Press, and of this a brief description may be given. The "form" of type, as set up by the compositor, is oiled by means of a flannel-covered roller; a wet sheet, consisting of several thicknesses of soft paper carefully pasted together, is then laid on the oiled face, and covered with a blanket. The form, thus covered, is passed under rollers, which by their pressure force the face of the type into the paper in such a way as to make it a perfect mould or matrix of the form. Another sheet of paper is then pasted upon the back of the mould to strengthen it, and the form, with the soft paper still upon it, is placed upon a hot plate covered with several folds of dry blanketing, and a press screwed down on the top. In the space of two or three minutes the drying process is completed, and the mould lifts cleanly off. The edges are then trimmed, and the *papier-maché* matrix, pliant enough to be bent into a complete circle if need were, is laid face downward in a semicircular casting-box,

having a core of the exact diameter of the impression cylinder of the press. Metal just hot enough to run, and so composed as to solidify rapidly, is poured into the mould, and on drawing the core a semicircular casting of the page of type is upon it. A sharp tap or two brings it off, and it is then put under an ingeniously-constructed circular saw, which cuts off the overflow metal gathered at the edges. It is next dipped in water to accelerate the cooling and harden it a little, and then fixed in a small double-tooled lathe, a few revolutions of which finishes the trimming of the edges, and cuts the ledges, which are necessary to keep the "dogs," by which it is held in place on the impression cylinder, "flush" with the surface. From this lathe the plate passes to a revolving planing machine made to fit it. In this it is placed face downwards, so that the inside of the plate is presented to the cutting tool by which it is "trued," so as to ensure its having a dead bearing on the impression cylinder, for being placed upon which it is now ready.

Described in words, this process may perhaps seem somewhat complicated, but in practice it is extremely simple; and how speedy it is our readers may judge for themselves, when we tell them that in the *Times* office, the production of a plate from first to last is the work of only eight minutes. A practically unlimited number of plates can be cast from a single matrix, and by keeping it reprints can at any time be made without the trouble, expense, or delay of again setting up type. In conclusion, as bearing on the question of economy, we may point out that the plates, after doing their work for the day, are melted up again, and recast, so that the same metal may be in use all the year round.

When the powers that be, in Printing House Square, had decided upon carrying out the experiments that have been crowned by such striking success, and as their result wrought a complete revolution in the art of newspaper production, they saw that it would be a material advantage to have their own workshops, and shops were accordingly erected, and fitted with the necessary machinery. It was also determined to waste no time in making models, but at once and perseveringly to "go for" the thing actually wanted—a full-sized working machine, capable of doing all that the Walter Press now so deftly and swiftly does. After three years of anxious toil, cheered, however, by constantly growing assurance of ultimate triumph, the first completely successful machine was

in 1867 got to work, and by 1869 this had so far approved itself as to justify Mr. Walter in having three others made on the pattern of the first; and in order that this might be done promptly, the workshops were very considerably enlarged. Since that time, various improvements in details have been made in the machine. For instance, the machines made at a later date for the printing of the *Daily News* were fitted with an expanding gear by means of which the sheet can at pleasure be printed in its ordinary size of six columns, or in seven or eight columns. A still more important addition to the machine is a folding gear, by which the press, in addition to the processes already cited, accomplishes that of delivering the *Times* neatly folded in a size one-fourth of that of its own page. Though run at the twelve thousand an hour rate, as a fair working speed, the press can and has been worked up to eighteen thousand per hour. Such a speed as this, however, if continued day after day, would probably have a damaging effect upon the nervous system of the workmen attached; and in the *Times* office, at any rate, there is no need for a higher than the twelve thousand speed, as at that the paper can be thrown off at the rate of seventy-two thousand copies per hour, six machines being employed. The *Scotsman*, as well as the *Daily News*, is printed by Walter presses; three of them are at work in the *New York Times* office, and others are in course of construction for America. Among the minor advantages of the machine is that of occupying much less space than the old Hoe machine. It is about nineteen feet long by six wide and seven high, and, manufactured in the *Times* workshops, and under the superintendence of the inventor, is, as a piece of workmanship, all that could be desired, whether as to strength or finish. It is far and away the most economical printing machine ever invented. By its aid the *Times* is printed in less than half the time previously required, and with a fifth of the number of hands; while the loss on capital sunk in the machinery displaced by it was, by its work, covered in a space of two years.

Though generally regarded as exclusively a newspaper press, it has been shown to demonstration, that the Walter can throw off book as rapidly as newspaper work. It may be that to make it *specially* suitable to book work, modifications in detail might be required, but they would only be such as would be very simple matters to such men as the inventors of the Walter Press.

THE DEATH OF HOSEIN.

THE great Mahommedan festival sacred to the memory of Hosein, son of Ali, was held in Bombay on the 7th February, 1876.

"The history of Islam," says Macaulay, "contains nothing more touching than the event which gave rise to that solemnity. The mournful legend relates how the chief of the Fatimites, when all his brave followers had perished round him, drank his latest draught of water, and uttered his latest prayer; how the assassins carried his head in triumph; how the tyrant smote the lifeless lips with his staff; and how a few old men recollected with tears that they had seen those lips pressed to the lips of the prophet of God. After the lapse of near twelve centuries, the recurrence of this solemn season excites the fiercest and saddest emotions in the bosom of the devout Moslem of India. They work themselves up into such agonies of rage and lamentation that some, it is said, have given up the ghost from the mere effect of mental excitement." I had long wished to get a glimpse into the life of the Mahommedan faith, and to be present at one of their great festivals, but it has not been considered safe for Europeans (or at least for European ladies) to venture of late into the crowd during the Mohurram, the riots between the Mahommedans and Parsees having produced much excitement and bitter feeling. It may be remembered that the government of Bombay thought it necessary to forbid the Mahommedans from carrying their "tabots" in procession as usual in consequence of these riots, and general discontent and sullenness prevailed in the Mahommedan community. This year, however, they seemed to be inclined to allow that cause of complaint to be forgotten; they surprised us with an outburst of loyalty on the arrival of the Prince of Wales; the mosques blazed with lights on dome and minarets, and the Mahommedans seemed to be determined that they were not to be eclipsed in their demonstrations either by Hindoo or Parsee. This seemed to be a favourable time for being present at the "death of Hosein." A friend who is personally acquainted with many influential Mahommedans, arranged beforehand that we were to be permitted to enter.

Down into the heart of the native city we drove, where, in all the teeming crowds I did not discover one white face.

We were met at the gate by a Mahommedan gentleman, the acquaintance of one of our party, who acted as our guide, and explained the different acts of the sacred drama. We were much indebted to his courtesy; in our ignorance of Persian, the language in which the actors recited, we would have lost the significance of the scenes, had he not been good enough to explain and translate for us. We found two or three Europeans besides ourselves; no ladies were present, but we were afterwards joined by three.

We found ourselves in a large upper storied building, with a great court in the centre. The upper gallery or verandah was crowded with women and children; we could see the flutter of their gay dresses, but could not distinguish their faces. But though they were in one sense unseen, let it not be supposed that they were unheard!

Some of the surrounding Arabs were so majestic-looking that my companion asked if the sight of the men did not make me think of Abraham? I could only reply "Yes, and the sound of the women makes one think of Babel."

In the court before us grew a large banyan-tree; clusters of human beings swarmed over it, nestled in the lower branches, and clung to the upper ones. From the highest branches large awnings were hung and fastened to the buildings round the court to shelter the dense crowd below from the sun. The first glance at that crowd made one shiver; there were faces there that led one's thoughts involuntarily back to the days of the mutiny. Others were so beautiful, so strikingly and wonderfully noble, that they recalled the Patriarchs in the picture Bible, over which one pored in childhood. There were Persians, with clear cut and delicate features, Arabs with the proud calm air of sons of the deserts, and Africans, thick-lipped Nubians, whose massive figures and sullen faces made us congratulate ourselves that we were ensconced behind a stalwart Briton, the very embodiment of English power and English order—the superintendent of police. The tranquil air with which he surveyed the crowd, taking in at a glance all that was going on, was comfortable to behold.

The performance did not commence for half an hour or more after our arrival; they waited for Agha Khan, under whose special direction and permission it takes place. Agha Khan is the representative of the

"Old Man of the Mountain," chief of the Assassins, and as in him I saw a connecting link with a wild page of Oriental story, I pause to recall the tale of the far-famed garden of his terrible predecessor. Deep in a fertile valley the "Old Man" planted his garden of delights.* "In it," to use the quaint words of the traveller, Marco Polo, "were erected pavilions and palaces the most elegant that can be imagined, all covered with gilding and exquisite painting." It was to be the earthly realisation of Mahomet's paradise,—

"Deep meadowed, happy, fair, with orchard lawns,
And bowery hollows crowned with summer seas,"

By the promise of admission to this charmed spot, the "Old Man" won slaves to his wicked will. The only passport was deeds of violence, the only distinction pre-eminence in crime. The Old Man's emissaries were the terror alike of Crusaders and Saracens, and long is the list of princes and nobles who were murdered by their hands. Conrad of Montferrat, King of Jerusalem, was among their victims, and they feared not to attempt the life of the great Saladin himself. So rapid was the growth of this kingdom of violence, that when, in the thirteenth century, it was suppressed, it numbered a hundred strong fortresses. The accomplices in crime of the Old Man were known by the title of "Ashishin," and they have left us a memorial of their evil deeds in the English term assassin.

Agha Khan is acknowledged in Bombay as "genuine heir and successor of the Vieux de la Montaigne" of the Middle Ages. Though shorn of temporal power he wields spiritual authority, and is held in great reverence. He is the head of the Shiah sect of the Mahomedans, those who adhere to the family of Ali, and who specially commemorate the death of Hosein. So great is the reverence in which they hold him that they believe his power to be almost miraculous; women bring their sick infants and lay them at his feet in the hope that his touch may work a charm. The other portion of the Mahomedan community in Bombay, the Sunnis, struggle against his authority, and protest against his claims, much as Protestants do against the spiritual claims of the Pope. Agha Khan is a picturesque looking old man, with a keen, penetrating eye, and a long beard. He arranges for the performance of this sacred drama, and chooses the performers; these are not hereditary nor

official, but the younger members of distinguished Mahomedan families, and some of Agha Khan's grandchildren are among the actors.

After Agha Khan had seated himself a general silence prevailed; the loud reading of the Koran to the men on one side ceased; the chattering of the women above died away, and a general hush of expectation followed.

A path having been made through the crowd, Hosein slowly enters. He seats himself on a raised platform in the centre, where a space is kept clear. He is accompanied by a veiled figure, personating his sister, and is followed by a troop of little children. "Hosein," we acknowledge after a glance, has been well chosen; he is a noble and dignified-looking young man; the so-called sister is rather gaunt, and we marvel how the little children have been trained to perform their part with such perfect composure, undismayed by the dense crowd around them. Suddenly a warrior starts from the crowd brandishing a sword; he loudly calls upon Hosein to go forth to battle; with many protestations he entreats him to put himself at the head of an army which only awaits his presence and is ready to follow him. This, our Mahomedan friend explains to us, is a plot for Hosein's life, the army are traitors. After the warrior has ceased the sister rises; in a loud, pathetic, wailing voice she implores him not to listen to the call of the soldier; seating herself on the ground, she pours dust on her head, kisses his dress, clings to his feet, beats her breast and weeps. She implores him to remember that he is their only hope, and warns him that if he goes forth with the army he must die. Hosein replies that he knows that death awaits him, that God has revealed to him that he must die, but that his death will bring good to the nation, that it will do more for them than his life, and that he submits himself to the will of God.

The children then come forward; throwing themselves before their father they implore him not to leave them; they cling to his feet and beseech him to stay. He replies to them as before. Long and tenderly the sister pleads, but finding it of no avail she at last unfolds from her breast her *last gift* and lays it at his feet—his shroud. He lays aside his long loose robe, draws on the white shroud, and calls for his horse. A pure white Arab is now led in; standing under the great tree, with its crowded branches, it seemed startled and frightened, but I never

* See the "Book of Ser Marco Polo," a new translation, with valuable notes, by Col. Henry Yule.

saw a more beautiful creature. As they begin to saddle the horse, Hosein's sister rushes forward, no hands but hers must do anything for him now. A long farewell follows and he mounts his steed, but his children cannot let him go, they cling to him still; springing down he embraces them once more, and lifts them, one by one, on the raised platform, then while the little ones are all huddled together he snatches up a curtain, throws it over them all that they may not see him depart, and rides away.

A low suppressed sobbing sound had

gradually been arising during this scene, a sound rather to be felt than heard, the emotion of a great crowd. Now, as Hosein rides away, the tide of sorrow bursts forth in a perfect storm of grief. Young men beat their breasts, gesticulated, and sobbed; old men sitting more quietly wept bitterly. How seldom do we see the aged weep! One imagines that life's sorrows must be less bitter, or tears more precious as life advances; yet here I watched old men shedding floods of tears over an event that happened twelve centuries ago!

The comment of our Mahommedan guide was like an echo of our own holiest and most cherished belief,—“it was because he gave his life; he knew he should die; he was willing to resign himself to the will of God; an angel offered to fight for him, he refused supernatural help, he gave his life willingly in obedience to God”! All those comments were interrupted by tears.

And now we have the closing scene. A procession slowly enters with the banners of an army; lofty banners with rich colours are borne in, they are followed by a bier. Hosein lies dead. The bier is carried aloft

on men's shoulders, at the foot sits the sister, her face covered in an attitude of extreme grief. A white sheet sprinkled with blood covers the dead man; on his breast sit two white doves, and as they flutter their snowy wings we see that they are dabbled with blood. The little children follow on led horses; they are supposed to be dying, having been murdered after their father left them according to the legend. The children are a horrid sight, being represented with blood streaming down over their wan little faces. The bier, followed by the children, is slowly carried round and round

the court. After the bier was brought in an extraordinary multitude of between two and three hundred men rushed into the midst of the assembly. They were stripped to the waist, and threw up their arms wildly, lamenting and wailing and beating themselves fiercely on the breast, arms, shoulders, and head. It was explained to us that those men were wailing for Hosein and repenting for their sins; and we were assured that the part of the body which they struck would never be burned by the flames of hell!

As the bier was carried out, we were told that we had better slip quietly away, which we at once did, wishing to escape before the rush of the crowd commenced.

Pondering deeply on the exciting scene we had just witnessed, the first question that suggested itself was this, where did they get that wild devotion to the idea of self-sacrifice? Professor Max Müller reminds us, in his recent lectures on Missions, that Mahomedanism is inexplicable without Christianity, and doubtless many of the nobler sentiments expressed at this ceremony seemed but the reflection of our faith. The death of Hosein seems to have been brought into special prominence from the time of the Crusades. It may have been that the story of the Cross was seen to wield so strange a power over the minds of men that the Mussulman found it needful to claim for his hero also, the glory of having "laid down his life for his friend." If this was the history of the commemoration and the emotion that accompanies it, we may regard it "as one of the indirect benefits of Christianity." For surely we may admit that it is well for man to be reminded by any and every voice, that in resignation to God and love to man is his highest life. If on the other hand the ideas embodied in the representation of the death of Hosein, are not borrowed from Christianity, we must regard them as a spontaneous tribute of human nature to *self-sacrifice* as the highest effort of which it is capable. The idea of sacrifice was familiar to the Mahomedan from the rites of the Jewish church, and going back still further, beyond the period of temple or tabernacle, the legend still lingered in the desert of Abraham having been called on to offer up his son. It is a remarkable fact that the Mahomedan claims that mysterious story as an episode in the life of Ishmael. We have heard the late lamented Dr. John Wilson tell how more than once in conversation with Arabs, he was abruptly interrupted with the question, "Which of his sons was Abraham called on

to sacrifice?" When in accordance with our scripture he replied "Isaac," they indignantly exclaimed, "You know nothing of it, it was Ishmael;—Ishmael was the dearly beloved, it was Ishmael that Abraham was called on to sacrifice; it was Ishmael who suffered himself to be bound and whom God saved." The idea was thus familiar to them that God will provide for himself a sacrifice. The innocent children and the white doves represented as suffering in some mysterious way for others, are in harmony with that idea. The doves used in the services of the Jewish temple, probably suggested their introduction in the ceremony.

The representation of the death of Hosein appears to supply an element which would otherwise be lacking in the Mahomedan faith, but without which it is difficult to understand how it could retain its hold on the people. Without the aid of sacraments or of images, giving no sign by miracles or wonders, there would seem at first sight to be nothing in a mystical monotheism to arouse popular enthusiasm, it seems so far distant from human life and sympathy.

The history of Hosein presents men with human excellence which they can appreciate; his death offers them food for *human pity*. It gives also an occasion for the full expression of popular emotion. To this no doubt is attributable the influence that this history exerts on the minds of the Shiah. Another source of the popularity of this commemoration may also lie in the fact that it is all easily understood; not only are the odes and orations spoken in a modern language,—no dead language such as Zend or Latin having been employed in any part of the performance,—but as these odes are composed anew every year, they avoid the danger of weakening the effect by stereotyped expressions. They adhere rigidly, we are told, to the facts as handed down to them, but each generation tells the tale in its own words. Alas that a tale so pathetic should so often have been a prelude to deeds of violence! Alas that in the history of this world we should find that religious zeal has too often gone hand-in-hand with bigotry and cruelty! Yet we may hope that the evil has not been unmixed with good. The representation of resignation and self-sacrifice should appeal to men's best impulses, and we may surely believe that there are noble spirits among the followers of "the Prophet" who have become nobler in contemplating the death of Hosein, son of Ali.

J. B.

LION STORIES.

"LION stories" have a great charm for even the most pacific members of the community; the hunting instinct survives in most of us (though with some it may take the form of a chase after china, or etchings, or old oak furniture). And of all hunts, the most exciting has always been that of the king of beasts, who was supposed to have a more "noble" nature than the tiger, to be more interesting in every way than the rhinoceros or the hippopotamus, and to be more "generous" than panthers and bears. He is the emblem of power in the most ancient records of our race "Judah is a lion's whelp," "He couched as a lion, and as an old lion: who shall rouse him up?" "Who shall dare to awake him?" is the French version.

The "four beasts with four faces," which in the vision of Ezekiel, uphold the throne of the Most High, are supposed each to represent the chief of its species, the lion of wild beasts, the ox of domestic animals, the eagle of birds, and man of all creatures.

There seems to be no particular reason why the lion was allotted to St. Mark, in the distribution of these emblems among the four Evangelists, but it always figures by his side in all pictures and statues of the authors of the Gospels, and is immortalised in this capacity as the guardian of Venice, in every possible position, high in air on the column overlooking the Lagunes, in costly mosaics on pavement and dome in the cathedral of St. Mark—in public documents and private missals, while two great stone lions brought from ancient Greece guard the gate of the Arsenal.

He is even the emblem of the Saviour in the Apocalypse, where "the Lion of the tribe of Judah" is said to have "prevailed."

In Pagan antiquity he is the attribute of power, and is the "sign of the strong gods," such as Cybele and Hercules. The statues of lions placed by the ancient Egyptians in front of their temples were intended as emblems of vigilance; they were supposed "to sleep with their eyes open."

In later times a lion was generally sculptured at the foot of effigies of the great potentates of the middle ages, as a visible sign of their power, while on the tombs of the saints he is given as emblematic of a moral conquest over the power of the demon. This has been translated in various legends into a literal taming of a literal lion, as in the story of St. Jerome in the Syrian desert, and of St. Simeon, where lions wait upon

the pious hermits, bring them food, and perform for them all menial offices, the well-known anecdote of Androcles having apparently served as a model. When St. Paul the hermit died, St. Anthony, who was paying him a visit, "being a weak old man, was unable to bury him, when two lions came from the desert and dug the grave with their paws, deposited the body in it, raised a loud howl of lamentation, and then knelt down before St. Anthony, to beg his blessing." In another legend the lion figures as discovering and unearthing the relics of St. Mary the Egyptian, which had been lost sight of.

The poetic version of the idea of the triumph of purity over brute force, is represented in the beautiful type of Una and her lion.

Lastly, he figures among the heraldic supporters of our own Crown, where he is understood to signify all kinds of great and noble qualities.

As civilisation gradually encroaches on the vast deserts and solitudes which are necessary for the existence of the animal in a wild state, he is becoming more and more rare, and the man who has seen a lion (free) will soon be as remarkable as the beast himself. Even Lieutenant Cameron, in his journey across Africa, of thousands of miles and occupying two years and seven months, seems to have come across him only on one occasion, when very early in the morning he saw a lion and his wife slouching slowly along the top of a low hill, having evidently had a night of it, and returning home to their lair tired and sleepy, when the sun rose. He says they "looked like a couple of over-grown sheep," a most unheroic comparison!

Here are first two stories concerning caged lions. There was recently an old lioness at the Zoological Gardens of Dublin, who fell sick. (This institution is eminently successful in rearing cubs, which are sold to different ménageries at great prices, a hundred pounds or more, and we may come at last to owe our knowledge of the animal to such rather ignoble sources.) As the poor lioness became more and more infirm, the rats, which were tempted into the den by the pieces of flesh lying about it, grew so bold that at last they began to nibble her majesty's poor old toes, and troubled her exceedingly. A little terrier was put into the cage to keep them in order; but the lioness resented his entrance and showed her dislike in every

sort of way. At length, however, she saw the dog catch a rat, when its *raison d'être* seemed to strike her. She became exceedingly attached to her little protector, let him sleep upon her front paws, right under her nose, every night for warmth, a place of honour, no doubt, if a somewhat alarming one, and testified her tender affection for him continually until her death.

The second relates to a French lion, or at least a lion in a French ménagerie, whose actions, as is the fashion of his adopted country, were more sensational and dramatic than with us! Edgar Quinet in his journal tells how one day he went with the naturalist M. Geoffroi de St. Hilaire to the Jardin des Plantes. "In one of the cages were a lion and a lioness together. They were standing up, quite motionless, and seemed not even to see us. Presently the lion, lifting up his great paw, placed it slowly and softly on the forehead of the lioness, and both continued in the same attitude as long as we remained before them. What was intended by the gesture? A painter who should have desired to represent calm grief and the deepest compassion, could not have invented anything more striking. 'What does it mean?' said I to Geoffroi. 'Their lion whelp died this morning,' replied he. Then I understood what I saw; pity, good-will, sympathy, all these sentiments might be read in those fierce countenances."

My third story was told by that Nestor among missionaries, one of the earliest and best workers in Africa, who is like a fine old lion himself. It was related to him by the people of the Bechuana tribe, among whom he worked so long and so zealously. The faculty of memory, cultivated by constant practice, is much developed and very vivid among a people who have no written records, as was the case among our own forefathers, and indeed in all early civilisations. Long poems and stories are handed down from generation to generation with great accuracy, and no assistance whatever from letters—Iliads and Odysseys, stories of gods and heroes, of different degrees of value.

Among the African tribes the relations often take the form of struggles with wild beasts, and are given with an immense amount of minute and picturesque description.

Once in Bechuana not long ago there was a woman, a captive from another tribe, whose husband had gone forth to fight, and she went and stood to see them return from the battle, and there came one holding up a spear to show they had been beaten, but he knew

nothing of the fate of the man, and again another passed by, and he too had no news, but at last came one and told that he was dead. And she tore her hair and threw herself on the ground and bewailed, and called on the wind not to blow, that her sighs might be heard, and for the rain to cease, for her tears would water the ground. And she had two children left to her, a little girl of five, and an older boy about eight, and she consulted them, and said, "I want to go back to my old place, I hear that those are come there who can make men wise" (the missionaries). Children have a voice in Bechuana when very young, particularly the male child of a widowed mother. So when they consented, all three set forth together, carrying their few goods, and a little dry food of meal. It was a hard way, for they had to pass through the thick "bush," and places where it was known that the wild beasts abide.

"What should you do if you met any," said Dr. Moffat to the narrators.

"Set fire to the grass if we could and shout," was the answer.

Very small children will walk sometimes as much as twenty miles in a day, but at length the two were quite tired out and could get no further, and she set them down under a tree and told them to rest while she went to look for water, so that they might make a fire and cook some pulse, and then go on again refreshed. She was long away, and they grew frightened and hungry, and set off to look for her, crying, "Ma," the word there also for mother, with one of their thirty-two pronouns added to it, as used by the little girl, and "Ma," with another pronoun, by the boy. But there was no answer, and the two little ones grew more and more restless and went farther and farther afield, and were soon lost in the low bushes and scrub.

Presently back came the mother—and the old narrator enacted the scene as the negroes had given it, so that it seemed to pass before one's eyes—"she ran this way and then turned again to that side, and again went forward, throwing herself on the ground to see if she could find the print of their little feet, and calling to them with all her voice. But there was no reply. At length, madly rushing to and fro, she came out on a bare level plain beyond the 'bush,' where there was no cover whatever, and there she saw her two little ones, hand in hand, going along forlornly and slowly, and some distance off a large lion walking quietly forward to meet them. The children took him for a great yellow calf, they told afterwards, and were

not a bit frightened. She knew that if she called them and made them run to her, the nature of the lion is immediately to pursue the flying, and he would be upon them in a second. She rushed forwards, therefore, at her utmost pace, and got between them and him. Then she called loudly, 'Lion, lion, lion! run and hide!' and the little ones set off as hard as they could and concealed themselves among the bushes."

Meantime she went on facing the great beast, who was still walking leisurely forwards, probably much astonished to see any one who did not fly from his lionship. Then she began to abuse him with all the bad epithets in Bechuana (and it is very rich in them). "You brute! you rascal! you blood-thirsty wretch! you slayer and robber of other folk's goods. You want to murder my children, you bloodsucker, you villain!" cried she. She was now within thirty or forty feet of him, and she shook her fist in his face and threw her arms over her head, and never ceased gesticulating and scolding, and raving and cursing.

The lion stood still and swung his tail from side to side, backwards and forwards, always a sign that his wrath is rising (and the narrator imitated the heavy motion), and looked full at her. Presently, as she got hotter and hotter in her wrath, he shook the long tawny mane of his great big head, and still he looked full at her, and still she stormed on.

At length he lay down right opposite her,

resting the mighty head upon his fore paws, the heavy thud of the tail on the ground was heard, and still he never took his eyes off her, nor she off him. If even for a moment she had left hold, as it were, with her eyes, she knew that at two bounds he would be upon her, and after her would have followed and devoured her children. At last he rose up again and began once more to swing his tail backwards and forwards, but now a little undecidedly; and then as she still held on with her vehement objurgations, he turned away from her tongue and began to walk quietly off, wondering probably not a little, as having never been so outfaced by man, woman, or beast before.

She remained without stirring on the same spot (which must have been the most difficult effort of all), as she watched him gradually retreating farther and farther, growing less and less on the bare plain. Once he turned and looked back to see what she was about. If even then she had begun to move it was all over with her and her children, he would have been after them like lightning; but she kept her ground till the mighty beast disappeared quite in the distance, among some low sand hills and prickly bushes. Then she set off, rejoined her children, and did not stop for food or rest, but hurried on till they reached her old tribe in safety—a magnanimous hero of a woman.

"It was not a pleasant position to be in, there in front of the lion—I know what it is!" added the old man significantly.

F. P. VERNEY.

BY LIGHT AND SOUND.

TRAVELLERS leaving Dover for the Continent may perceive on clear, bright nights, two brilliant points of light shining over the Channel from the direction of the South Foreland. These proceed from two lighthouses placed one above the other on the chalk cliffs of that promontory. Standing in the lamp-room of the lighthouse, and looking out over the water, we can discern, some eight or ten miles away, a small one-masted ship, marking the edge of the much-dreaded Goodwin Sands; serving also as a fog-signal station, to warn by sound when the most powerful electric light is unable to pierce the fog. Our knowledge of "sound signals" has recently been much extended, nay, *revolutionised* is not too much to say, by Professor Tyndall's researches, carried on at the South Foreland Lighthouse. The per-

fect arrangement of the lighthouse is attained by joining the electrical discoveries of Faraday with the optical knowledge of Fresnel. It is our purpose to give in this paper some account of the discoveries of these men of science, showing, as they do yet again, that experiments apparently purposeless and unmeaning may contain within them the germ of usefulness to mankind and magnificent practical results.

That some provision is necessary during foggy weather, is shown by the fact that during the last ten years as many as two hundred and seventy-three wrecks have taken place on our own coasts at times when light-signals have been useless. However, owing to doubts as to the value of warnings by sound, and discrepant statements as to the range at which they could be heard, this

method of signalling was falling into disrepute. In this condition of the question, Professor Tyndall, at the instance of the Trinity House, undertook the investigation of the subject. Until very recently it was considered that the optical transparency of the atmosphere was directly connected with its power of transmitting sound, so that a clear air was thought to be the most favourable acoustic medium. It was also held that fog, being a collection of minute liquid particles, from which the sound could be reflected, was therefore a damper of sound. Both views were by this investigation shown to be false.

Humboldt had noticed that the falls of the Orinoco sounded louder by night than by day, and he concluded, from thermometric experiments, that the convection currents of the atmosphere during the day caused the sound to be deadened by reflection at the limiting surfaces of these different layers of air. Tyndall applied this principle to explain the extraordinary quenching of the sounds of the fog-horn at distances of less than three miles, when the air was clearest, and the apparatus producing the sound was plainly visible. He conceived that between his position and the source of sound unequal evaporation from the sea created mixtures of air and vapour of varying density, from which the sound was reflected. If this was so, he argued that echoes should be heard, produced by the reflection from these "acoustic clouds." On placing himself behind the source of sound, his inference was confirmed. He sums up his observations on this point in the following words: "Whatever might be the state of the weather, cloudy or serene, stormy or calm, the aerial echoes, though varying in strength and duration from day to day, were never absent; and on many days, under a perfectly clear sky, they reached (in the case of the syren) an astonishing intensity."

But the special merit of Tyndall's researches is the devising a means for testing these views by means of experiments. Using a sensitive flame, and causing a number of layers of gas, with such different specific gravities as carbonic acid and coal gas, to be interposed between it and the source of sound, he found that the waves of sound were unable to penetrate these layers and affect the flame. He then carried his experiment a step further by interposing—first, layers of air of different density; and then air charged with water vapour and other more volatile liquids; in these cases also the same effect was produced. Next, he showed that reflection did actually take place according to the ordinary

law for light, heat, and sound. It must be premised that in the experiments above mentioned, by skilful manipulation, one layer of heated gas or air charged with vapour was found sufficient to intercept the sound waves. The apparatus used to show reflection was as follows:—Two tin tubes, open at both ends, and about two feet long, were arranged in the form of a V, across the near ends of which air of a different density to the rest was caused to rise. A bell, or high-pitched reed to produce sound waves was placed at the end of one of the tubes; and at the corresponding end of the other, but screened from the direct action of the waves of sound, was placed a sensitive flame. When the sound was produced, it was (as before) found incapable of affecting a sensitive flame placed beyond the layer of light air; but reflected from this down the other tube, it threw the sensitive flame placed there into violent agitation. This investigation shows then, that a non-homogeneous medium, though optically transparent, may be acoustically opaque.

Next he destroyed the doctrine, prevalent since the time of Derham, that fog, rain, snow, and hail were dampers of sound. Observations in London and at the South Foreland showed that after rain, hail, and snow, sounds rose perceptibly in power; they showed also that fog did not intercept sound, because of the long distances from which it could be heard. Experiment also bore out these observations. Artificial fogs, formed of gunpowder smoke, steam, the fumes of chloride of ammonium and of phosphorus when burnt in the air, were unable to stop the sound waves, which passed most easily and showed themselves by their action upon the sensitive flame. These observations and experiments led to the conclusion that atmospheric homogeneity was the condition most favourable to acoustic transparency; and in a fog, snow, or hail-storm this condition seems best fulfilled.

In conclusion of this part of the subject, let us briefly describe the steam-syren, the instrument most suitable for "phonic signals," owing to its generally trustworthy performances. It consists of a trumpet sixteen feet long, varying in diameter from twenty-seven inches at the widest to five inches at the narrowest part. Across the narrow end is fixed a disc, with radial slits cut in it, behind which rotates another disc at about two thousand revolutions a minute, also provided with openings. When the slits of the two discs correspond, the steam which is used to drive the syren escapes in puffs, giving the sound.

Having glanced at this investigation, the

importance of which cannot be overrated, let us now visit the lighthouse to examine the appliances there, and make ourselves acquainted with the principles upon which they are constructed.

On entering we find ourselves in a place like the hall of an observatory. Before mounting to see the lamp, we notice the store of diamond and half-diamond panes of glass used in the face of the lighthouse. They are made of the best flint glass, half an inch thick; the whole lozenges are nearly five feet high, the half panes look like the shields of feudal knights. Hanging on the walls are the Trinity House regulations for lighthouses; and we note that the oil lamp (for the light we are to see above is electric) is to be lit for one hour in each week, in order that all emergencies may be provided for. The times of lighting the lamp, and the hours during which visitors are allowed, are also laid down. Two attendants are to serve the lamp, keeping each other company during the night-watches; so that in case of accident, either to the guardians or their charge, help may quickly be called for. And now let us mount the winding stairs and see the illuminating apparatus, or holophyte, as it is called.

The light itself is produced by electric discharges passing between the ends of two rods of gas carbon, separated from each other by a distance of about three inches, and kept at this distance, as the rods wear away, by clock-work arrangement. These rods or "poles," are about three-eighths of an inch square, and each pair lasts in the lamp about six hours. They are made of a hard substance called gas carbon, obtained in the manufacture of gas, from the inside of the retorts in which the coal is heated.

The arrangements for utilising the light and casting it to the furthest possible distance was first suggested by the French philosopher Fresnel, but improvements have been introduced by Messrs. Stephenson, and also by Messrs. Chance, of Smethwick. It consists first of all of a large lens, the use of which is to concentrate the rays of light and render them parallel; round this is a glittering array of prisms set in a frame, and so disposed round the central light, that all rays not passing through the lens are either rendered parallel by the front prisms, or caught by those behind, and after two internal reflections are passed again through the focus of the holophyte, and, falling upon the first prisms,

are utilised by them. This is the dioptric or refractive system, as opposed to the catoptric or reflective, and is the one now used in all our lighthouses.

It remains to glance at the electrical discoveries, which are embodied in the machinery used to produce the electric currents, which, passing between the carbon points, give the light in the lamp we have been viewing.

These researches were made by Michael Faraday, in the year 1831; and one point most noticeable about them is the short time he was engaged in experimenting before he arrived at results of the highest importance. He began his experiments in the early part of September, 1831, and in less than two months had made his two great discoveries of current and magneto-electric induction. Faraday found that a wire, in which a current of electricity was circulating, when brought near another wire, caused a current in the opposite direction to appear in the one that previously carried none. This was called a direct induced current. Also when the inducing-wire was withdrawn, then another momentary induced current appeared in the opposite direction to the first. This was called an inverse induced current. Such was Faraday's discovery of current electric induction; his other discovery is directly connected with it. He further found that a magnet behaved exactly like a wire carrying a current; that is to say, a coil of wire, by approaching and receding, in passing the poles of a magnet, had two induced currents produced in it. It is on this principle that the four machines, used at the South Foreland to generate the electricity, are constructed. An eight-sided frame has seven series of magnets, each capable of sustaining from fifteen to thirty pounds, arranged round it. In the six spaces between the magnets, making three hundred and fifty revolutions a minute, are six wheels, all "keyed" on the same axis. Each of these wheels carries sixteen coils, which, by passing in front of the poles of the magnets, produce the induced currents. From the "machine-house" the electricity is sent by wires to the two light-houses, to supply the lamps, as explained before.

Such is a brief description of the methods of warning by light and by sound established on our coast. In no case is science more nobly employed than this—tending to the safety of those "who go down to the sea in ships."

"Je suis la résurrection et la vie."

BESIDE A TOMB.

"Je suis la résurrection et la vie."

LIKE a sweet face all soiled with tears,
Rain-sodden, the "rich valley" * lies ;
The sky, once blue as children's eyes,
Grey, blank—so unlike heaven !—appears.

While up and down the weary earth
The wind goes like a human cry :
"Why live we, since we soon must die ?
What is the use of death or birth ?"

Beside these wooden crosses poor,
His granite tomb stands white and still,
Emblem of that unconquered will,
That steadfast spirit, strong to endure,

With calm pure heart and equal mind,
Whether blind Fortune smiled or frowned :—
And is all hidden underground ?
Is nothing, *nothing*, left behind ?

* Le Val Richer, Calvados.

When to the fireside we turn back,
What find we ? Ah, an empty chair ;
A silent absence everywhere,
A bitter universal lack.

Do our dead know we love them yet ?
When we stretch out vain hands and weep,
Smile they, as we o'er our child's sleep,
Whose cheeks with foolish tears are wet ?

Dreams, that *we* know will end with morn.
Soul well-beloved, is it thus with thee ?
"La résurrection et la vie :"
We die. Is it thou that art new-born ?

Can our dead hear us when we cry ?
Could they across the ocean's roar,
They—landed on the further shore—
Send back clear answer, "It is I.

"The Resurrection? It is found.
The Life? I live it; in His sight
Who out of darkness bringeth light,
And flowers from seed sown in the ground.

"I have believed, and now I know :
Believe ye ! " Who would not believe ?
Who would for even a moment grieve
If we were certain it was so ?

But God Himself this silence deep
Has made, and His behest be done !
We trust Him, in or out o' the sun.
We love Him, waking or asleep.

He must love us, whence all loves flow :
Our faith He could not falsify :
So, when these leave us, glad we cry,
" Whither thou goest, I will go."

D. M.

SPIRITUAL RELIGION.

[The following is a sermon preached by Arthur Penrhyn Stanley, D.D., Dean of Westminster, in the Abbey Church of Paisley, on August 20, 1876, on the occasion of the reopening of that church after a temporary suspension of public worship.]

THERE are some portions of the sermon which have special reference to the interest connected with Paisley. It is impossible not to view with a reverential feeling the church which was founded by the first progenitor, and which contains the ashes of the earlier generations of that great family of the Stuarts, which, with all their failings, have furnished to Scotland and to England the most tragic elements of the history of the two kingdoms, and through which the present royal family of England claim their inheritance of the Imperial crown. It is impossible not to feel an admiration for the zeal with which the successive ministers of Paisley have done their best to rescue their noble church from the neglect and desecration in which it had been left. It ought to be impossible for any member of that great branch of the house of Hamilton to view with indifference the cradle of their family, from which their fortunes and their titles were derived, and in which for two centuries their ancestors resided, and found their last resting-place. It is not too much to hope that English and Scottish Christians, of whatever Church, should strive to preserve and to restore a monument so national in its origin, and which might be rendered so truly national in its worship.—A. P. S.

"God is a Spirit."—JOHN iv. 24.

I propose to set forth the value of spiritual religion ; in other words, some of the meanings of the great doctrine which we profess when we say, "I believe in the Holy Ghost."

"The Father" is a most dear and sacred name, "Jesus Christ, His Son," is also a most dear and sacred name, but even of these we may have false and perverted notions unless we also remember that the innermost,

deepest, truest idea of God is that which is conveyed in the not less dear and sacred name of "the Holy Spirit." There is a poem of a great German genius who describes how when he was a little child he believed in God the Father, who made the beautiful earth and all things in it ; and how, when he grew older and understood more, he believed in the dearly-beloved Son, who loved us, and revealed all love to us, and for His reward was crucified by the foolish world ; and how, lastly, when he had read more and travelled much, he learned to believe, heart and soul, in the Holy Ghost. "A thousand knights, a thousand gallant soldiers, have been," he says, "chosen for the Holy Spirit, and such knights and soldiers ought we to be." That well describes the gradual growth of true religion in the human soul and in the human race. Our religion is a true religion, a deep religion, a high religion, a wide religion, in proportion as it grasps more and more firmly the spiritual aspect of religion, as it believes more and more firmly that God is a Spirit, as it recognises more and more fully that the highest revelation, the revelation which gives light and force to Natural Religion, and to Historical Religion, is Spiritual Religion.

Let me illustrate the value of this truth by taking a few obvious instances. 1. First, let any who may be perplexed by thinking of the Divine nature, observe how many difficulties are cleared away by dwelling on this aspect of it. As, when we ask, what is a man? the answer is, not his body but his spirit, not his outward form but his inward affections ; so when we ask, what is God? whilst there is much that we cannot answer, yet when we think of Him as a Spirit, we are taught to believe that it is in His Spirit we can best understand Him—that is, in those attributes

of goodness, love, and wisdom, which are most the same attributes in man. The best spirit of man is the nearest likeness that we can form of the Holy Spirit of God, more like than any graven image of outward beauty, even though it be of the Olympian Jupiter or the Belvidere Apollo—more like even than the vast and splendid system of the universe, which is, as it were, but His outward vesture. There is no bodily shape or form. "No man hath seen God at any time." But there is a likeness of God in Jesus Christ, and in those who are in any measure like Jesus Christ; and that likeness is found because Jesus Christ is one with God through the Spirit of goodness and wisdom; and in that same Spirit bearing witness with our spirits, we also may be in our measure one with the Father and the Son.

2. The same truth places in their proper light all the words or phrases which either in the Bible or elsewhere have been used to describe the nature of God. In proportion as those words describe the Divine Father under the form of goodness and truth and wisdom, as the breath which is the animating life of our souls and of the world, in that proportion they describe Him as He really is. In proportion as they describe Him under the forms of expressions taken from the physical or metaphysical constitution of any particular man or thing, in that proportion they are parables and figures of speech. Rock, Fortress, Shield, Champion, Husband, King, Shepherd, even the great name of Father, which are admirable words, so far as they express the spiritual relation of the Almighty towards us, would yet mislead us if any of them were taken in the gross literal sense of earthly relationships. And much more is this true in the more anthropomorphic expressions of the Older Covenant, jealousy, anger, nostrils, hand, feet; or, again, in the metaphysical words of later times, such as Procession, Generation, Substance, Persons. Each of these, when taken literally, leads us away from the spiritual—that is, the essential—nature of God; they are, at best, figures by which the human soul tries to grasp the immeasurable. The definitions of God that we find in the Bible are at once much simpler and much deeper than any of those, and in most of the definitions which have been made by men those definitions of the Bible have found no place. There are three such definitions in the New Testament of the Supreme Father, and they all agree in this spiritual character. "God is a Spirit," or,

as the word should be translated, "God is Spirit;" again, "God is Light;" and, again, "God is Love." Let us hold fast to those three definitions, which all express to us the spiritual and the moral nature of God, and which therefore express to us the very essence of the Christian faith.

3. This same aspect of the Divine nature tells us by what means it is, that He wills that the world should be brought towards Him, not by compulsion, not by fire and sword, not by external decrees of authority, not by reproaches or curses, but by the ready assent of the spirit of man seeking and finding its communion with the Spirit of God. Not, again, by mere miracles and signs of outward power. These may be secondary means of persuasion, they may arrest the attention, they may have an effect on particular moods of mind. But they are not the main instruments by which the world has been or is to be converted. The world was converted to the Christian faith in the first instance by the internal evidence of the spirit of Christianity, not by the wind, the earthquake, or the fire, but by "the still small voice" of conscience. It is this intrinsic and essential divinity of the spiritual aspect of God which makes the difference between the various offences which may be committed against things divine. Our Lord Himself drew that distinction when He said, "The blasphemy against the Son of Man shall be forgiven, but the blasphemy against the Holy Ghost shall not be forgiven." That is to say, if we may venture so far to interpret His sacred meaning, whatever mistakes a man may make concerning the outward form in which the divine truth is manifested shall be forgiven. Even though he insult, affront, and blaspheme the Son of Man Himself, that may meet with mercy and pardon; for every earthly manifestation, even of the Divine, must be liable to misunderstanding and misconception; and therefore, the blasphemy, the wrong, the calumny aimed against the Son of Man often is not aimed against the holy, wise, loving Jesus, but against some false conception that has been formed of Him in our own minds. Many a so-called heretic has been more orthodox than he who is called orthodox; many a so-called infidel has been more Christian than he who is called Christian; many a man who stumbles at the outward evidences of belief has been a truer believer than he who has accepted them without understanding, and therefore without real belief. For such blasphemers as these the Son of Man has forgiveness; He

has Himself asked the Father to "forgive them, for they know not what they do." Of such blasphemers, if they have in them the Holy Spirit of God in any degree, the Gospel requires us to believe not that they shall without doubt everlastingly perish, but that they shall without doubt live for ever in God, in the communion of Him whom, not having seen or known, in spite of themselves they love and adore. But there is a blasphemy, an insult and outrage against holy things, which is quite different. If there be any one who hates goodness because it is goodness—if there be any one who closes his heart against holiness because it is holiness—if there be any one who scorns and despises and reviles the good, the just, the pure, the generous, because he is selfish and impure and they are good and generous and just—such a one has blasphemed not the mere outward form, or name, or show of God's nature, but the holy inward spirit and essence of God Himself. That carping, slandering, deaiming, depreciatory spirit which delights in pulling to pieces what is good is exactly what is meant by the word "diabolical." The diabolical, whether in man or in angel, means the slandering, cynical, Mephistophelic spirit which, so far as it prevails, makes goodness very difficult in individuals, and would, if it prevailed entirely, make it impossible in the race. Let us hope that such a blasphemy, at least in its full extent, against the Holy Spirit is very rare—let us hope that it is almost never found. But let us clearly understand that this, and this only, is the insult which the Almighty Father and the dearly-beloved Son regard as almost beyond the reach of forgiveness.

4. It is through the inward spirit of all things, not their outward form, that God is approached. It is not the letter of any creed or ordinance, or even of the Bible itself, but its spirit and meaning, that vivifies and explains everything. The letter killeth; it is the meaning that gives life. This teaches us that the signs and ordinances of religion derive all their force from the directness with which they address our intelligence, our reason, our conscience, our memory, our affections. The outward form may vary immensely, but if the inward meaning is the same, the essential grace is there. It is so even with regard to the Bible itself. Even in the letter of the Bible there is no doubt much that is beautiful, much that is perfect. But that which constitutes the peculiar excellence of the Bible, that which constitutes, as the very word implies, what we call its "in-

spiration," is the elevation, the dignity, the purity, the truthfulness of its general spirit. "Our whole persuasion and assurance of the Divine authority of Holy Scripture," as the Confession of Faith in the Church of Scotland truly says, "is from the inward work of the Spirit bearing witness by and how with the Word in our hearts, and showing us by its own incomparable excellences that it doth abundantly evidence itself to be the Word of God." And so of all forms of worship. That is the spiritual worship, whatever it be, that carries along with it the conscience, intellect, and heart of the worshippers. God doubtless can be worshipped anywhere—in Gerizim as well as in Jerusalem, in Jerusalem as well as in Gerizim—if He be worshipped in spirit and in truth. He can be worshipped on the heath or the moss or the hillside of the Highlands, or in the upper room of the primitive Christians, as well as in the most splendid abbey or cathedral. But we must always remember that the reverse is equally true—that He can be worshipped with as much spirit and as much truth in the most splendid cathedral as on the bare hillside, or as within the four corners of a barn. And that is the most spiritual aspect of religion which recognises the possibility of both those forms of worship—which is assured that neither form nor the absence of form availeth anything, but the keeping of the commandments of God. That is the most spiritual aspect of religion which, on the one hand, comprehends all the highest manifestations of the human spirit—architecture, music, painting, poetry—and yet steadily subordinates them all to the moral graces of truth and purity, by which alone man can truly "glorify God here, and enjoy Him hereafter." It is for this reason that every one who values spiritual religion may rejoice in every effort to reclaim for the Church of Scotland the beauty of an ancient and venerable building like this, which appeals to every sentiment alike of art and patriotism and long familiar associations of reverence and love. It is, as it ought to be, the glory of a Presbyterian Church that it can appropriate all that is ancient and beautiful in the past without ministering to those modern fancies and superstitions to which perhaps other churches afford a more ready access. It is not the sublime or the grand, but the mean, the ugly, and the barbarous, in architecture or painting or music, that lends itself to idolatrous usages—not the vast aisles of a venerable temple or abbey, but the narrow

cell, the dark recess, the wayside chapel,—not the awe-inspiring figures wrought by a Raphael or a Michael Angelo, but the hideous black picture, the rude wooden image, and the fantastic apparition, that have in every age become the objects of absurd pilgrimage and excessive adoration. There is a well-known saying of the great Reformer Luther, “Do not listen to the Devil when he opens his great mouth wide, calling out Spirit, Spirit, Spirit, and then breaks down all the bridges by which the Spirit can enter.” No, make the most you can of all the various gifts God has given you. They are all bridges by which the Holy Spirit of God can enter into your spirits; only remember—and this we have to remember in all Churches—that they are bridges only, and not the promised land itself. The innermost sanctuary of the Holy Ghost is and can be nothing else than the individual conscience and conviction of a pure, just, upright man. This is the end; all else is the means. Any, even the plainest, worship becomes unspiritual of which we have lost the meaning, and which does not tend to make us better and wiser. Any worship, even the most elaborate, is spiritual, if it helps us to do our duty and to be more loving to men and more devoted to God. “Keep your mind open as wide as you can,” said a good French nobleman to his children, “but I entreat you to keep your hearts open also.” “Be as broad as the charity of Almighty God,” was the last public speech of Norman Macleod, “but be as narrow as His righteousness.” That is the true religion of the Spirit.

5. This value of the spiritual aspect of religion is yet more visible in proportion as we apply it to the whole history of the human race or of the human being. It is sometimes the custom to draw out schemes of various schools, or parties, or Churches, and to imagine that these exhaust all the religious tendencies of Christianity. But there is one element which in such schemes is often omitted and often despised, which, notwithstanding, is the most important of all. It is the school which you can find in all schools, the tendency which you can find running across all tendencies, of those who believe in the religion of the spirit, who are—as the German poet sang—true “knights and soldiers of the Holy Ghost.” There has never failed altogether a succession of those good men who have seen the spirit beneath the letter, the meaning beneath the form, the sense beneath the nonsense, the moral beyond the material; and these have been the

true backbone of Christendom—the true soul of the Church and its doctrines. What would the early Church have been without such men as Clement of Alexandria and Chrysostom of Constantinople! How much poorer would the mediæval Church have been without Thomas à Kempis, the Church of the Reformation without Erasmus, the Church of England without Hooker, Jeremy Taylor, and Butler, or the Church of Scotland, whether Episcopalian or Presbyterian, without the apostolic name of Leighton! It is the perception of this universal and far-reaching element which forms the connecting thread of those articles at the close of the Creed common to almost all Western Churches which, as if by a natural instinct, have gradually fastened themselves to the single article of the primitive church which says, “I believe in the Holy Spirit.”

Take these one by one. “The holy universal Church.” That is to say, the Spirit of God works on the spirit of man by the influence, the atmosphere, the public opinion of the whole congregation of Christian people dispersed throughout the world. So far as any large mass of Christian men, women, and children are good, they are the images, the likenesses, the dwelling-places of the Holy Spirit of God. The fact that such Christians are not confined to any place or country is the direct result of the spiritual character of the religion of Jesus Christ—because God is a Spirit pervading and inspiring with His gracious influence all nations, all Churches, all races of men. The old heathen religious communities did not tend to raise the thoughts of men to goodness and holiness; and, therefore, they were not truly holy. The old Jewish community was confined to a certain nation, and, therefore, it was not truly spiritual. The Christian Church, if it rises to the meaning of its high vocation, is intended to make men good, and therefore it is holy and the work of a holy God; it is universal, and therefore it is the work of the universal Father, who breathes His spirit unto all races of men, and who gathers to Himself His true children from the best spirits of every outward Church.

“The communion of saints”—that is still the same idea, further carried out, of the goodness, the spiritual character of Christianity as enlarged and intensified by the fellowship and communion which the saints of God of all ages have with one another. The fellowship, the friendship, the affection and admiration which good men of the most diverse opinions, tastes,

and character have, or ought to have, one to another, is at once the most powerful means by which the Spirit of God can work, and also again the most decisive proof that the God, whom we worship, is, above all other things, not unholy but holy, not flesh but spirit, the supreme moral and the supreme spiritual Father.

"The forgiveness of sins"—what is the special connection of this with the belief in the spiritual character of God? It is that the appeal which God makes most directly to the hearts and consciences of human nature, and with the most engaging attraction to them to become holy as He is holy, is the principle proclaimed throughout the Bible, and especially in the life and death of Jesus Christ, that the Supreme Father forgives us all that is past in the hope that we will serve Him and love Him for the future. That is the free and princely spirit, for which the Psalmist prayed, "O, give me the comfort of Thy free spirit;" or when he said, "I will walk in Thy commandments when Thou hast set my heart at liberty." It tells us that it is possible to desert our past sins and follies, to leave them far, far behind us, and to enter on a new service, which shall be free because it is holy, and holy because it is free.

"The resurrection of the body and the life everlasting." If for a moment there is here a trace of the materialism of the ruder ages of early Christianity, yet immediately the spiritual truth reasserts itself. "Flesh and blood," as the Apostle says, "cannot inherit the kingdom of God; neither doth corruption inherit incorruption." It is not the natural but the spiritual body which shall rise again; it is not the perishable part of our mortal frames, such as we possess in common with the lower animals—it is the eternal part of our spiritual existence, in which we hold converse with the Father of Spirits, and which in Him shall live for ever. It is through the spirit, the thoughts, and affections, not through the mortal remains of the departed, dear as they must always be, that we hold converse with them, and hope to hold communion with them hereafter; for the life everlasting of the human soul is the eternal, the undying vitality of those affections, of those graces, which are part of the essence of the Holy Spirit. Those affections, those graces have their immortality from the same source as the eternal existence of God Himself. If it be of the essence of His being that He is holy and that He is spiritual, then there is the hope that, as surely as God exists, so surely will those godlike graces

continue also. How we know not, where we know not, but we shall know at last, and this is the best approach towards knowing it now. It was said by a gifted Scotsman of last generation, speaking of another saintly countryman, "When I think of God I think of that man; when I think of that man I think of God." So it is in a measure with all that we honour, value, admire, and love in those who in this life deserve our love and honour. They shall live because God lives, or, as the early Christians said, alike of the living and the dead, "they live in God." Eternity is not so much another period of existence succeeding upon this as a state of things which lies behind and beyond the range of our outward senses, and which surrounds us in this life as well as hereafter. "The things which are seen are temporal, the things which are not seen are eternal." As we believe that the true self of a man even now is not his outward shape, but that which is behind his outward shape—as we believe that behind this outward world there is a Supreme Spirit which is the soul of the universe,—so we believe that behind the grave and gate of death there is a life immortal—"a house not made with hands eternal in the heavens."

These are some of the truths which I venture to lay before you on the value of spiritual religion, and the belief in the Holy Spirit of God.

PRAYER.

Lord of all power and might, by whose spirit the whole body of the Church is governed and sanctified, the author and giver of all good things, graft in our hearts, we beseech Thee, the love of Thy Holy name, increase in us true religion, nourish us in all goodness, and of Thy great mercy keep us in the same, in our going out and our coming in, in public and in private, in our dealings with one another, in our dealings as citizens of the same kingly commonwealth, under one supreme visible head, the sovereign of these realms, as members of the same spiritual communion dispersed throughout the whole world, under one supreme Invisible Head, Jesus Christ the True, the Holy, and the Good. Teach us all to bow before one authority in all outward things, the law of our country, and before one authority in all inward things, the law of the Spirit written in Thy holy word, and in the consciences of Thy faithful servants.

May Thy Holy Spirit be with the Queen and with all her children, with all councillors and magistrates under her, with all estates of men within her dominions. Grant that they

may all do their best to govern and be governed in Thy faith and fear, striving to put down all that is evil and to encourage all that is good. Grant that they may understand and feel how great a work Thou hast given them to do for this mighty empire ; give them the spirit of power and of love and of a sound mind, to enact and to pursue things wise, and things just, and things merciful, to the putting away of all wrong and all oppression everywhere. May the spirit of mercy and justice reach into the furthest extremities of the human race, and relieve those of Thy suffering children who in any part of the world, and from whatever cause, are in sorrow, peril, sickness, tribulation, persecution, violence, or tyranny. From all profaneness and superstition, from false pride and false humility, from hardness of heart and neglect of the poor, from drunkenness and impurity, from evil-speaking, lying, and slandering, and from all uncharitableness, deliver and evermore protect us, in the vast congregation present in this venerable church, and the vast population of this town not present here, but no less needing Thy fatherly love. Fill us with all uprightness, purity, and charity.

Inspire continually the universal Church with the spirit of truth, unity, and concord. Take away from us all hatred and prejudice, and whatever else may hinder us from godly union of heart and soul, in one holy bond of truth and peace, of faith and charity. Let the various Churches of this land be drawn together in all just words and works—let

each seek not only its own good, but the good of others ; let each supply to each the gifts which the other lacketh ; let it be the aim of all not to pull down, but to build up—not to tear asunder, but to bring together—not to find enemies, but to make friends.

We thank Thee for all the mercies which Thou hast conferred upon us, for all the blessings of this life, for the glory of this summer season, for the enjoyment of sea and mountain, of lake and river, of health and strength. We thank Thee for our inheritance in a nation so great, and a church so free, for the light of Thy Gospel, ever brightening more and more into the perfect day ; for the riches of Thy Word, ever yielding up treasures, new and old, to those who humbly, fearlessly, truthfully seek them ; for the growth of knowledge in all forms amongst us, enabling us better to understand Thy holy will and to do Thy blessed work. We thank Thee, lastly, for the hope, the humble and constant hope, of a life beyond the grave, where the wicked cease from troubling and the weary are at rest ; where the whole counsel of God shall be revealed, no longer doubted nor disputed of men ; where the aspiring visions of unity and association that fill the souls of the righteous here below shall be accomplished in the restitution of all things ; where the sorrows and separations of earth shall be ended in the catholic and perfect union of men with one another and with Thee, O Father, and with Thy Son Jesus Christ our Lord, through thine Eternal Spirit ; to whom be glory for ever and ever. Amen.

THE REIVER.

(A MODERN GREEK SONG.)

DARK on the hills the night-shades fell ;
Snow lay on peak and scaur :
Far o'er the wild and gloomy fell,
The crumbling cliff, the dusky dell,
The Reiver went to war.

His falchion in his right hand, bare,
Resplendent as a sun :
The mountain height his mansion fair :
His canopy the boundless air :
His trust is in his gun.

Pale with their fear the tyrants fly
His dark and deadly brand :
His head from toil is seldom dry ;
With Honour both to live and die
Well doth he understand.

"Base trickery rules the worldly race
And Fortune's wicked power ;
Those get the gold who ne'er had grace :
Lost Virtue in this rugged place
Hath built her secret bower.

"Nations, like sheep, are bought and sold
By kings, who mock the earth.
Here, in this lofty mountain-fold,
Arm'd Freedom from her aweless hold
Peals forth her echoing mirth.

"Go, kiss the footstool of the great
Where slaves in flattery fall !
Here, in this green and shady seat,
The sword defends their loved retreat,
Who love the Cross through all.

"Mother, dost weep? When I return,
Thou'lt boast thy son was brave.
Over one lost one thou shalt yearn:
But oh! my heart for shame doth burn
That I should die a slave.

"Kind eyes, and do your fountains fill,
Blue eyes, that please me well?
Your rising tears even shake my will.
But free I have lived upon the hill,
And 'Free,' thou'lt sing, 'he fell.'"

Earth trembles at the cannon's might,
"Boom, boom!"—the sound appals.
On each hand slaughter and affright,
On this side wounds, on that side flight!
In death the Reiver falls.

Sad, with bare head, with reverent tread,
His comrades in one breath
Sang, as they bore him to his grave,
"A freeman lived the Reiver brave,
Now, he is free in death."

LEWIS CAMPBELL.

THE HEREDITARY BURDEN.

"OUR fathers," said the Jews in their captivity, "sinned; and we are punished. The way of the Lord is not equal. This is not fair."

It was quite true that they were suffering because of their fathers' transgressions; but was it therefore also true that the way of the Lord, who allowed this, was not just?

Not so. "No man liveth to himself." What begins with one ends with another; and he who makes the beginning often has no idea what the end may be. And the nearer you come to another in kindred or affinity of any sort, the more inevitable and extensive is the bond of influence. Children are influenced by their parents more than by any other persons. Not only do they receive from their parents earlier and more immediate influences than they receive from others, but they inherit from them tendencies and characteristics which may, in some cases, be traced back through generations. Each generation does not emerge into existence, as if from an entirely new germ, of whose probable development you can tell nothing, but brings with it the special properties that are to mark it, and which it inherits, with its blood, from the generations that have passed away. If you know what these generations have been, you can tell what the future will be like. If you can, for example, look back on ages of slavery, oppression, and ignorance, you can foretell that the heirs of these ages, though set free from their oppressors, will not possess the characteristics of freedom, will not all at once get rid of the ancient inwrought taint, but will be, yet awhile, cunning, spiritless, revengeful, incapable of using liberty except in the shape of license. If you can look back on a long period of moral corruption, during which falsehood and dishonour have perverted the relations of society, and licentiousness has sapped its strength, you

need no gift of prophecy to discern that the generation to come will be morally and physically enfeebled, and will be subdued as soon as it has to face an enemy of higher principle and more orderly life than its own. Such illustrations of the truth of inherited qualities are written at large, over and over again, in the history of nations. They are written with the same plainness in the history of families. We see physical resemblances in feature and complexion, and not only so, but in manner and what we call "ways," descending from parent to child, so that the child reproduces the parent, not consciously or by imitation, but because qualities and characteristics which make up a likeness are part of his very birthright. So, too, with moral qualities. You see the child inheriting the tendencies of the parent, and this often with such constancy that certain families are, even proverbially, known as the possessors of certain qualities, again and again transmitted from sire to son—pride, guile, courage, gentleness, or the like. And in these moral regions we sometimes can mark a measure of confusion wrought by the transmission, when it is incomplete. Thus you may see men of the strictest life and principle and of undoubted piety, who have been rigid in their adherence to what they held to be true in belief and right in duty, succeeded by those who have taken from them their rigidity, but have let slip their piety and elevated principle; so that the son of the strict and earnest godly man may turn out the mere self-righteous Pharisee, as the good and high-minded Puritan of one era of our history lapsed into the harsh and narrow sectarian of another. So, one has known habits of carefulness and economy, inherited from industrious and honest parents, reproduced in children without the honesty, and becoming, simply, habits of greedy money-

making, unchecked by the parental rectitude which qualified the parental thrift.

Still, with whatever irregularities and omissions, the law holds generally true, that the children inherit alike the outward and inward characteristics of the parents.

What is commonly called "original sin" is an illustration of this law. It is the inherited tendency to go wrong, to do evil. The term does not mean that the sin of the first man who sinned is reckoned ours, and, in the language of theology, "imputed" to us, as though we had, somehow, a share in the guilt of it. To suppose that this were the case would be to deny the rule laid down by the prophet, "The son shall not bear the iniquity of the father, neither shall the father bear the iniquity of the son." According to that rule, God cannot regard any sin or guilt as belonging to any one, except the person who has actually committed the sin, and incurred the guilt. But we, descending from those who have sinned, inherit from them, in virtue of our descent, a tendency to sin after their example.

We inherit evil inclinations, corrupt desires, a will out of harmony with the will of God; all in us from the first, and ready, as opportunity or temptation suggests, to manifest themselves by breaking out into violence, passion, licentiousness, and all manner of self-will and self-indulgence. The origins of sin are in us, the roots of all visible and actual transgression. It is in this sense the sin of the first sinner has come down to his descendants; not as a burden of imputed guilt, but as a root of evil, ever ready to spring up and bring forth bitter fruit. There is in this no arbitrary arrangement laid down by God for His own mere pleasure. It is according to a natural law of life. If God were to lay down the rule that we were to be held guilty of a sin committed thousands of years ago, and to have the guilt of it laid to our charge as part and parcel of that sum of transgression which makes us sinful creatures in His sight, this would be an arbitrary arrangement. There would be nothing in the natural instinct of justice which God has given us, which could lead us to acknowledge this as just. Suppose, for example, the master of a ship runs his vessel on a rock and loses her, and his son grows up and follows the sea, and in his turn becomes a master too, and by-and-by does the same thing, you would not say it was fair that, in trying him for his fault in so doing, the father's fault—though of the same kind—should be brought up and made part of

the charge against the son. If he inherited a careless or reckless spirit from his father, and thereby was the readier to commit the fault, that inheritance was a sufficient penalty falling on him for his father's transgression. The transgression itself could in nowise be counted his. Neither would there be ordinary justice in counting the sin of Adam our sin, seeing it was actually another's and not ours, and could only be called ours by a mere arbitrary and irresponsible decree. But the sense in which that sin descends to us is in harmony with the great law of life, according to which all qualities tend to transmit themselves from parent to child. If there were no such law, life would lose most of its character and much of its responsibility. If each new individual sprang into being unaffected by the experience of previous individuals, and not bearing in himself the germs of influences that have been for generations working together towards definite results in constitution and character, then all education, all civilisation, all human development would become impossible.

It is the law of all life—in plant, in beast, in man—that the results of the last generation's life are found in the next. An individual here and there may possibly by a strong effort break the force of the law as he finds it acting in himself, and work himself free of its effects, as far as he is conscious of them; but generations, as a whole, cannot, and have to accept the law, whether they will or not. Like all God's laws, it is a just and good one. If it lays up suffering for sin, it stores up also blessing, in the shape of accumulations of knowledge, of power, of freedom, for truthfulness, righteousness, and self-sacrifice. And where it inflicts suffering, it does so only to mark with a fiery mark that sin and evil are somewhere, lurking or active, in the life that is called to suffer; and to the end that these being found painful may become also hateful, and may, haply, be forsaken or overcome.

Now, it was this law that was laying its burden on those who made their complaint to Ezekiel: "The way of the Lord is not equal." Their fathers' corrupt, idolatrous, immoral life had eaten away the strength of the nation, and it had fallen before its enemies. The children were now bearing the exile and depression which had been earned by many a long year of apostasy and godlessness. They could not soon or easily get rid of the consequences of these sins. Their force was not spent: until it was, the iniquities of the fathers must be visited on the

children. There was no help for it. You may light a fire, and then wish to stop its burning; but the fire must have its way, until you can bring a stronger power than its own to quench it. You may launch your boat, and go off without oar and rudder, and by-and-by wish to land again; but if the wind and current be against you, you cannot, and must go whithersoever these may carry you. The law of the wind and the tide is greater than your will. And so with all God's laws; so with this law of inherited tendency. It is stronger than you; and that not for your destruction, but for your good. If you could ever get the better of the law and abolish it, you would only work confusion and ruin in your life. It is the best wisdom not to strive against it (it is never wise to strive against divine laws), but to acknowledge it, and shape your life according to it. If you feel that a burden in any shape has descended from your parents to you (and such a feeling may be inevitable with some, who realise that their parents' improvidence, or neglect, or self-indulgence, has bequeathed to them a legacy of outward trouble or inward dispeace—perhaps an enfeebled constitution, or a weakened nervous system, or an excitable brain, or a passionate temperament, by reason of which they have to suffer in body and mind), it is of no use to murmur. Accept your lot; but be warned by its character to give all heed that you, in your turn, leave no such bequest to them that will come after you. Be careful, with Christ's aid, so to order your life in righteousness, temperance, and self-control, that your children may inherit from you nothing that is not healthy and helpful—a blessing, and not a burden.

We must always be careful to distinguish between this transmitted burden, and sin. The burden is part of our lot, of our discipline. It may render it harder for us to do justly, and to love mercy, and to walk humbly with our God, to keep our garments white, and ourselves unspotted from the world; but it cannot render it impossible. It may lay trouble and temptation on us; it cannot lay sin on us. It is here we mark the limit of the law, "The children shall bear the iniquities of the fathers." They must bear suffering; they never have to bear guilt. We may have to suffer for another's sin: we have to answer only for our own. It is only when "original sin" passes into "actual transgression" that it becomes a thing for which God will judge us. The soul that actually sinneth, it alone shall die. Every human soul, according to one just law, shall live in its own righteousness, or shall die in its own iniquity; shall be condemned for no other's sin, in which it has taken no part; shall be saved for no other's sinlessness, with which it has had no sympathy. We may be certain that this is an eternal, as well as a just, law. Even that sinlessness of Christ our Head, that perfect righteousness to which we trust as setting us right with God, is ignorantly trusted to, if it is regarded in the light of Law only, and apart from its moral bearing on our characters. We may be assured that it can be imputed to no one in whose heart there is no sympathy with its purity and holiness; whose daily desire and effort is not to gain a living union with the Righteous One, who alone can help us to carry every burden, and make us perfect in every good work to do the Father's will.

R. HERBERT STORY, D.D.

NATIONAL HEALTH.

V.—HEALTH AND RECREATION.

THE old proverb that eight hours of the twenty-four of each day should be passed in work, eight in sleep, and eight in play or recreation, is one of those true sayings which science willingly accepts and confirms. In our modern days, however, no rule of life is more deliberately broken. The age is so decidedly and decisively competitive, that the race daily run for wealth, reputation, fame, name, honour, is spent on the trial who shall do most work with least sleep and least recreation. In fact, sleep and recreation have ceased to be considered

as useful parts of existence; they are looked upon as so much loss of time. The ungallant Caliph Omar is reported to have said of women that they were great evils, but that the greatest evil of all was that they were necessary. Our busy man of the present day says, practically, the same thing respecting sleep and recreation; they are great evils, but the greatest evil of all is that they are necessary.

In the race that is being run for wealth, reputation, fame, name, honour, success, success no doubt, does now turn on the time

that can be devoted to work. The law of the survival of the fittest was never so actively carried out as it is at the present hour. They who make solid and rapid progress are the strong workers, those who can endure most fatigue and perform the largest amount of mental or physical strain, or combined mental and physical strain, in the shortest intervals. The weak go to the wall in one way or other. Some of the weak—the majority—serve the stronger. Others of them, thinking they can make up in cunning what they want in power, try intrigue, practise criminal acts, as a means to reach the forward ranks, and, failing, find a home in the gaol instead of the mansion. A third set of them sink into the workhouse or charitable asylum, and live on the alms of those who are above them.

Through the whole of the classes that really work, the tendency to excess of work is relatively developed. The strongest drag the weakest in their train, and make the work and hours of work for all, according to their pleasure. Thus the hours of recreation, whatever may be said of them, are ordained by fashion, and no man, unless he be quite independent, when he, generally, by a reaction against work altogether, has none other but hours of idleness, can be so placed as to have a choice or voice in regular and systematic recreative delights.

When, some time ago, I published a series of remarks similar to those written above, it was answered by one of my learned brethren, for whose opinion the utmost possible respect is due, that there was a considerable amount of disease induced by idleness, and that the idea of production of disease by overwork was problematical. The observation led me carefully to reconsider the facts involved in this question, but without finding any reason for modifying my former views. I do not for a moment deny that many people suffer from idleness. I fully admit, and have already written, that idleness, which I am bound to look on as a physical infirmity, is destructive, in a certain sense, to those who indulge in it. But when I come to consider the number of persons who suffer from idleness and compare them with the number who suffer from sheer overwork, the comparison is absurdly small of those in whom idleness has taken baneful root, by the side of those who toil into the foils of disease.

Idleness is an infirmity. In its completest development it ignores recreation as much as it ignores labour. It is a paralysis of the will, and in certain cases may be looked on

as in itself a distinct and fairly defined disease, which nothing can immediately cure. I have observed, further, that this disease, idleness, may be born from two sources. There are families in which idleness is an hereditary curse. You may blame these families as much as you like; you may punish them, but you cannot directly change them. It is only by the admixture of the elements of them with the elements of other families, only by breeding industry into them, that a change of a permanent kind can be specifically perfected. In some instances the introduction of specific diseases or taints into the hereditary line is the cause of that physical and mental inactivity which nothing can animate, and to which we give the name of idleness; and these influences must remain until they are gradually removed by the introduction of an improved sanitary system permeating all classes of society, and rectifying the social errors that everywhere prevail. These hereditary influences are of ancient date. They come down from the times when men in masses were begotten to bondage, when the masses were indeed herds, herding together as best they could; less cared for than the cattle and swine they tended, less free and worse provided for: when the food that was eaten was collected without the slightest knowledge of its properties beyond those that satisfied the rude appetite or gratified the taste: when the food, even if it were good and nourishing, was cooked so badly that all the force of a stomach taxed to its utmost was unable to complete the resolution of the substance into new body and blood: when the dress was insufficient to protect the body from the vicissitudes of weather: and when infectious diseases, springing from unclean houses and over-crowding, under cheerless, cold, and dark shelters, spread like wildfire through the ranks, and left many whom they did not slay hereditarily maimed.

In our present day the worst of the evils springing from such sources are greatly modified, because, bad as things are, they are better than they were to an extent it were difficult to depict by any art of history less facile to read than that which the painter by his magic force places upon the canvas. But the modification is partial after all, and even now there are in various new phases origins of the disease of inaptitude, idleness. Amongst these causes not one is more potent than the strain of labour after success to which I referred above. That parents who are worn out by the struggle of life have

enfeebled offspring whose powers of work, whose facilities for work, and whose proclivities for work are impaired is one of the most striking physiological facts of the present day. It is as though men, and women too, were laying before the eyes of the physiologist a great physiological experiment on the influence of labour on life in which they and their children are the subjects of experiment. It shows that nature puts fetters even on industry, wills that the work of the world shall be distributed through the various generations of men, and that each generation shall take its equal share of labour, and no more—or if it insists on more, there shall follow, in compensation, a new generation or new generations which shall not be able to imitate their fathers, but shall rest and regain what their fathers have prodigally lost.

It has been constantly repeated by the philosophical historians that different ages present different and, as it were, alternate pictures of mental and physical power. This age was one of genius, that of mediocrity; this of war, that of peace; this of quiet inventive thought, that of quick, sure, successful inventive application and manufacture; this of pleasure, that of laborious anxiety. To the physiologist these phases are all natural phenomena, following from simple causes, as day follows night and night day. The age of genius wore itself out by its own efforts; the ages of war, of active mechanical labour, of travel, did the same; then followed the ages of quietude and rest, in which the exhausted energies were recruited, in which the potential of living action was stored up; in which the man universal practically slept and dreamt to rise again in new form, charged with new energy for new efforts like a man who has risen from a night of sound repose. We are passing through one of these phases, one in which the whole soul of the man universal is quickened to mechanical work, to liberation of all his potentiality in regular and systematic order, through work given out and expended by the hands. Every man's hand is becoming mechanical, and there is as much active brain now in some men's hands, as there was in the whole organization of the majority of men who lived a century ago. Such, too, is the force of moral contagion, that for the first time in the history of the world women are entering the lists with men, and no longer content

"To guide the spindle and direct the loom,"

are determined, at least for a time, to share the field of active combat with their sterner

partners, and to join with them in the common handicraft struggle for wealth, reputation, fame, name, and honour.

With this mechanical tendency, this desire to cultivate every branch of knowledge on the mechanical principle, so that even mental operations are expected to move with the precision of a steam-engine, there is developed another tendency, that of working in grooves, and attaining what is called perfection in special departments of art, science, and literature. To some extent this division is perhaps a necessity, but carried into such minuteness as at present exists, it is hurtful beyond expression. The ideal of individual perfection in the performance of the one particular art or craft, without diversity of occupation,—that is to say, the devotion of a life to a single intent or purpose, is of all exercises the most ruinous to the vital nervous power. It brings the whole nervous energy into concentration upon special sets of the motor instruments of the body, and before maturity is attained the living man is transformed into an automatic mechanism which becomes so distinctive that no other motion except that which the habit directs is tolerable. Limitation of view, limitation of knowledge, of thought, of sympathy, of muscular movement, becomes a second nature, and leads to dependence of one man on the other and others, until the perfect master in his own department is a helpless child so soon as he is out of his own narrow sphere. Dependency breeds dependency, while the splitting up of departments into departments continues without end.

The special desire for attainment of special excellence extends itself from work to play, and men tie themselves to a particular recreation as they do to the work by which they live. The wealthy men who can afford to play at politics in the Houses of Parliament find it necessary to specialise there; to take up some subject, and to talk, and write, and argue on it, until by iteration and reiteration they become publicly ticketed with their speciality. The men who can afford to amuse themselves in other ways in their own homes or clubs, work up some particular game, whist, chess, billiards, until they have gained the reputation of being the best of that art, in their own circle masters of the art, and so exclusively devoted to it that they know of none other pastime. Into this acquirement of a second nature in what is considered to be recreation, the mechanical taste of the age again shows itself. The man is known by his play. He has a system

which he invariably follows, and out of which he is never at home. Sometimes he improves his system on others, and becomes a teacher of it; sometimes, most commonly, he keeps his system to himself as something too precious to be made common property with the rest of the world. The effect of all this is that an accomplished man, in the complete sense of that term, is not now to be met with, and if he were met with would be looked upon as superficial, or as knowing too much to know anything well. Now and then an accomplished woman is met with, and is tolerated, but even she is *rara avis in terris*.

The effect of this intensity for one exercise is to turn that which is called recreation into work, and often into work of the hardest kind. The City man, or the hard-worked professional man, or the mechanic engaged all day in the workshop, is tempted in the evening to take a few hours' drill in a volunteer corps, or to encounter a long march, or to have a turn at the butts and strain every muscle and nerve in competitive desire to be the best marksman. If volunteering be not the recreation, then cricket, or bowls, or rowing, or gymnastics, or bicycling take the place, and the struggle in these recreations is, again, to arrive at such excellence that the amateurs shall compete successfully with the professionals who make the pastime an art by which to live. The same strain is followed in indoor game and exercises. If the dance is the amusement, it must needs begin at the natural hour of going to rest, and must be continued until the time when the natural hours of work ought to begin. If music be the evening's pleasure, it must be carried on as if the performers were on the orchestra platform of the Philharmonic, and were forced to get their bread by the skill of their performance.

If four old fellows, or young fellows, or middle-aged fellows, sit down to a rubber, they must lay down their stakes and play as if dear life depended on the measure of the die. They must tax their memories to remember what cards are in or what cards are out, until they are dizzy with the effort; they must learn Blue Peter and all the newest dodges; they must call up old experiences in order to remember good finesses and leads; they must carry in their minds a whole book of rules; and if they would keep their reputation as first-rate players, they must be ready at any moment to dispute every point of play; to argue out how this would have happened if that had been done; to bet on

results, and stand by loss or gain with equal composure; to bear the anger of a partner who loses, and to protest to the last, if a stake has seemed to be lost by some misadventure or loose play, that the principle was correct and the result the same as if any other play had been carried out. To crown the whole of this recreative business, time is obliged to be considered no object. "Time was made for slaves," and the slaves acknowledging the argument keep up the effort until sheer weariness and irritation at loss, or exultation at success, drives them to their broken rest. They tell you that at the end of a year they are as well off as they were at the beginning, however great the stakes may be for which they have played, so thoroughly does constant play over a long period of time equalise the risks. This refers to the money lost and won: not a word is said, not a word is thought, of the health that is lost, of that worthiest of possessions and choicest of gifts, which is never equalised by any length of time occupied in the play, and the loss of which once entered is always down on the debit side of the account to the end of life.

In the more philosophical game of chess the method of play is little different now from that of cards. It is true that high stakes are not commonly played for at every table when men or women sit down to play, and that the honour of winning at chess is considered as a *quid pro quo* for a money prize. In this sense chess takes a much more exalted place than cards. But the mental labour that is expended on the game by those who become infatuated by it, the strain of calculation to which it subjects its votaries, the inventive and speculative thought it enforces even at times when the game is not in progress, is exhaustive to a degree that is little understood by any, and least by those who are under the spell of the fascination. The chess-player who has once got the game so in his mind that one of the great objects of his ambition is to master it and be a distinguished player, carries, virtually, a chess-board and all the pieces in his brain, where, like automata, the pieces move about by day and by night, to the infinite cost of the owner's life force, and the ruin of his rest.

In making these criticisms, I am not urging a line against the recreations themselves to which I have invited attention, or to any other recreations. All good and wholesome recreations are useful diversions from the daily life, as pure pleasures. I would not take

one away, and I would thank the man or woman who would invent more. I have indeed always felt that the man who invented the comparatively new game of croquet has not received a tithe of the recognition and thanks which he really deserves. Against the games there can be no objection whatever, but the contrary. The mischief commences when, as now, the games cease to be recreations and become muscular and mental labours. When they are carried to such extent that they who carry them on would feel them burdens too heavy to be borne if they were enforced by tyrant masters, then the games cease to serve the purposes for which they were originally intended, and instead of being reliefs from the cares and necessary labours of life, are so many added cares, so many added and unnecessary labours, by which so much strength that ought to be conserved is carelessly and cruelly thrown away. Day by day adds to my experience of the evils arising from the causes I have described, and my duty were not performed if, in deference to popular taste, I hesitated to expose them.

In the course of my observations so far, I have made reference mainly to persons who have passed childhood and the heyday of life. Whatever errors in respect to work and recreation are committed amongst them, are committed and intensified amongst the younger classes. It matters little into what class of English society we enter,—into the homes of the manufactures of earthenware in the pottery districts, into the manufactures of large towns, into the agricultural districts, into the homes of the middle and upper classes,—there is the same unnatural system in progress, the forcing of the young into the active duties of life, and the resort to recreations and exercises which really are not recreative pleasures, but too often recreative tasks that belong to the schoolroom rather than to the playground. The children of the industrial classes are becoming more favourably circumstanced than they were a short time ago. The introduction of the half-time system into manufactories; the introduction of the system by which children under ten years of age are forbidden to work; the introduction of board schools; and, the educational system, half instructive and half recreative, which is aimed at in the schools;—these are all good omens for the future of the children of those five million industrials who constitute the backbone of the country.

Amongst the children of the wealthier classes the errors are as they have long been,

and in some directions they are undergoing multiplication and intensification. Our youths of both sexes, under the pressure of the competitive system of learning which prevails at this time, are practically forbidden recreation. I have recently been watching a young man who has been preparing for graduation in honours for one of our universities. I have recently been watching a young lady who has been competing for a first place in the high-class university examinations. I have looked at the lessons these pupils have been forced to learn; at the charges of knowledge they have been obliged, in a given time of short duration, to stow away in their brain, which charges must, when the examiner pulls the trigger, be exploded on the examinational paper. I have looked at one particular subject of examination with which I am best acquainted, and I have asked myself, "How long would it take me, who am a fair hand at learning anything I may apply myself to, to get up sufficient information to answer all the questions that are set for these young minds to answer?" The conclusion I have been forced to arrive at is that the tasks on the one subject on which I am best able to form a judgment, because it has been a pursuit of my life, would be more than sufficient to fill properly all the time that is given to learn the whole programme. I see, indeed, a trained specialist in one department of learning putting forth his trained strength to wrestle, on his own ground and on his own conditions, with a youth who has been straining to get up a similar contest with a number of other trained specialists, not one of whom could wrestle with his colleagues off his own ground. The process amounts to an inquisition, and it were better for the upper and middle classes if there were no universities at all, than that such a pressure should be inflicted on their children. To have sent a Faraday, a George Stephenson, a Fergusson, a John Hunter, a Newton, a Shakespeare, a Bacon, through any such an ordeal, would have been either to have whipped them into silence on the stage of the world, or to have made them the merest pedants. In time, as Nature declares herself with her clear voice, the blunder will stand out too distinctly to be unrecognised. When it is seen, as it will be seen in another generation of manhood, that the humble board schools, teaching the "three R's," are the training schools for all the genius and mental greatness of the country, and that the men and women who have been pressed into the university service are beaten into fits by their

lower and freer neighbours,—are, in fact, nurtured imbeciles compared with their lower and freer neighbours,—then the follies of the existing plans will be discovered, and the rectification of them will be the earnest question of the day. At present it would seem that matters must stand as they are. The university scholars have it all their own way: they have no competitors as yet in the race, and no comparisons can be made of a practical kind until the competitors from the board schools are on the field. We can therefore only look in advance to see what will happen, and predict the future from the psychological and physiological lights which lie before us for our guidance. These, fortunately, are decisive enough, and they are helped by the facts which the history of man has given for our edification. The lights show us that young brain unduly exercised becomes old altogether while it is yet young, and that old brain moderately exercised remains young in parts when, as a whole, it is old. They show us that the mind which will throw off the most brilliant work, the mind that will master the most difficult inquiry, the mind that will lend itself most readily and earnestly to the hardest tasks, is the mind which has simply been put in the way of doing work, and which, possessing the elements of method,—reading, writing, calculating,—has been left to its own freedom.

The modern student of the middle and upper classes of society, during the time he or she is preparing for examinations, which means the most critical time of his or her life in respect to health, finds no time whatever for healthy recreative pleasures. The exigencies are so pressing; the dread that failure on a single subject may cause “plucking” is so incessant, the mind has really no peace except when the eyes are bending over the book, and are straining to take in still more and more of the hard lesson. The anxiety brings sleeplessness; the sleeplessness increases the anxiety; then the body becomes feverish, and at last, when the great effort has been made, the result, whichever way it turns, is in the end bad. To win is to secure a passing advantage bought at the cost of some years of life, and with the mental faculties forced into grooves out of which it never quite frees itself. To lose is to be subjected to a nagrin and annoyance which in sensitive natures runs actually into remorse, shame, or a dazed imbecile carelessness which, in a person past maturity, would lead to dementia, and which, in the young, is at no time fairly recovered from and never fully forgotten.

I am perfectly alive to the fact, that in writing what I have written above, I am stating some very hard and unpleasant truths. But “if an offence come out of truth, better is it the offence come than the truth be concealed.” I am but telling as a true physician what experience teaches me of the physical conditions induced by the excessive and useless exercises of labour to which the younger and as yet better brains of our community are subjected. I am but telling the experience of other members of my profession who feel as I do, if they do not express themselves so freely. After a lecture I had to deliver in one of our large provincial towns during the past session, and in which I spoke what I have here committed to paper, one of the eminent physicians of the place came to me afterwards to thank me for the statement, and to give me the following personal experience. “My own son,” he said, “a youth of good intellectual parts, made up his mind to go in for his degree at a university”—naming the university in which, in this kingdom, the process of intellectual destruction is most scientifically and systematically carried out—“and determined also, if it were possible, to win a good place in the lists of honour. He worked through all the preliminary grades with untiring industry, taking no rest, and unable to find time for any. He went in for his great effort, lost, and now is wandering on the Continent utterly broken down, mentally and physically; more like an idiot, for the time, than a youth of good intellectual capacity originally, on whom every expense has been bestowed to insure for him a good education.”

These results of their system, they who plan and carry out the examinations do not see. They who manage the university are intent only on the sustainment of what they, most honestly I know, consider to be the credit of the university, the maintenance of its high character, that none but brightest scholars should appear on the rolls of its graduates. The examiners look purely, as is their duty, for the direct efficiency of those who come before them for examination. Neither manager nor examiner can ask after the antecedents of those whom they take in charge. They do not know that the student may be the subject of tubercular diathesis, of heart disease, or brain affection; and that out of every three students one at least will be under some such disqualifying hereditary influence. They proceed, adding difficulties upon difficulties, as if every student had the same

powers of present endurance and the same capacities for meeting the future.

It adds to the evils pertaining to the mental training of youths who are passing through the university mill, that such recreations as they do venture on, are, in accordance with the spirit of the time, of an exhausting or debilitating character. Running, rowing, indulging in furious gymnastic exercises, billiards, taking long and wearying walks, or lying by and smoking,—these are the kind of reducing pastimes which the hard-worked student selects as a relief from his mental strain.

The youths of other sections, who, having no university or professional scholastic career before them, are engaged in commercial or mechanical callings, or who are acting as clerks, copyists, or artists, though they are more favourably circumstanced in regard to mental exercises of a severe kind, are equally indifferently circumstanced in respect to recreative enjoyments of a natural and healthy character. The long hours of business to which they are subjected, the closeness of the air in which they labour, the cramped position of the body under which they work, demand that the recreations they indulge in should be in pure air, should include simple but not fatiguing exercise of the body, and should secure what are the real and instinctive pleasures of the mind. "The love of simple pleasures,"—says Mr. Hunt, a writer who has written so admirably, it is a thousand pities he has written so little,— "which find their home among flowers and forests, mountains and rivers, and the wide sea, is far more strong, not only in childhood, but at all ages, in uncontaminated minds, than the love of pleasures and amusements artificially invented." The proof of this true and wise expression is fully shown in our present system; the pleasures which are named in it are those for which the hearts of our youths yearn, but which they rarely obtain. The artificial pleasures they can obtain are therefore not real and abiding joys, but are too often mere transferences of labour from one kind of employment to another, and though, because they are such transferences, they are better than the continual grind at one occupation, they are poor representatives of those true recreations on which the health of mind and body so largely depends. They become injurious recreations when they are carried on, as they often are, in the close heated air, charged with tobacco smoke and vapour from gas, of the billiard-room, card-room, debating arena, or close music saloon.

The amusements and recreations of children are, in all classes of society, somewhat better than they were a few years ago. The earlier times for holding children's parties which have been adopted in London during the past two seasons, and which allow the children, after five or six hours play, to get home to bed by nine at night, are much more reasonably and naturally selected than formerly obtained. The introduction of croquet, and of other out-door games in which girls as well as boys take part, and which give good exercise without violence or exertion, is a great advancement. The re-introduction of the good old-fashioned dances for children, in which freedom of movement of the body without the stiff formalities of set dances of the Parisian school, is another good revival calculated to prove both interesting and healthful. While the custom, becoming so general, of taking children for a month every year to the seaside, and of allowing them perfect freedom of action to wander by the shore, and paddle, and dig up sand forts, and bathe and learn to swim, is one of the greatest improvements of modern life, one of the surest means of bringing up a healthy race of men and women to fill the places which the present men and women now occupy and to perform, in a more advanced manner, future duties.

These improvements in the recreations of the child-life are not to be over-estimated. They are, nevertheless, very much marred by other combinations of work and so-called play, connected with the different systems of education. School hours for young children are one-third longer, at least, than they should be. The device of making children take long and solemn walks in rows of two and two, as if they were taking part in a daily funeral; the restriction of the exercises, of girls especially, to mere formalities of muscular movement; and, worst of all, in relation to both sexes, the introduction of that ruinous competitive prize system, by which mere babblers are named to speak and argue and deliver facts and opinions with the assumed authority of matured minds, and are inducted into this precocity by a method of forced training, which destroys all future power, is an evil which counterbalances the good that in some other directions is springing up to improve the mental and physical tone of the rising generation. I believe that, here again, the board-school system will have a great influence on the systems that lie above it; and that

parents will learn from the simpler system that the simplicity of childhood demands simplicity of education.

In all phases of life, recreation is a necessary part of the daily existence. It must change in character with every age, but it belongs to every age of life. The proper application of it lies in the pure and simple method of making it innocent, varied, and simple. For persons advanced to or beyond maturity, in whom the physical growth and development is completed, all extreme physical exercises can have but one effect, that of reducing more rapidly an already wavering or declining power. In like manner, for these matured organizations all vehement competitive mental games, billiards, whist, chess, are equally injurious when they are carried into excitement, anxiety, fatigue; for the body runs down by the nervous as readily as by the muscular centres, and the mental fatigues named, with others similar, are rapidest of destroyers: by them the descent down the hill gains a momentum which is even less easily checked than by the speed incident to extreme physical exertion.

For the matured man, exercise within fatigue in the daily work is the desideratum. Work then becomes a means of prolonging and improving life. Work then is carried on that may be made of the most enduring character. But in this period of life, recreation must be recreation. It must be something that the eye or the ear can take in without labour, without effort. Beautiful scenes, and works of nature that unfold themselves so as to be comprehended at a glance; beautiful works of art, dramatic, pictorial, that in the best of human representations imitate nature; clear and eloquently simple discourse, that teaches and explains, without tedious argument, what is newest and oldest and truest; readings of a like character; mental games, which bring into play old and acquired knowledge, or which, if they call for new knowledge in their exercise, are moderate in their demands; physical exercise that shall amuse without creating weariness or subjecting the body to shocks and sudden cessations from rapid motion and falls,—these are the only recreations fitted for the majority of men who are over the meridian life, and have arrived at the stage when all rapid changes of the body are essentially dangerous. The reserved stock of life, the *vis vite* that impelled youth, is failing, cannot be regained, and must not recklessly be exhausted.

The exercises of recreation, fitted for

youths and for men who have not reached the meridian of life, may be as active as the players will, provided the players exceed not the bounds of nature, and do not carry wearied limbs and minds into recreative sports, which are but another name for hard labour, and which being made the end of each day's toil are carried into the night, to the forfeiture of a portion of that eight hours' term of sleep which is essential for the perfect renewal of the vital motion; provided also, that the recreation do not unduly precede the day of hard work; and provided also, that the recreation, whether it be of mind or body, be carried on in pure air, and be sustained by wholesome foods and unstimulating drinks.

In regard to the female population, there is great improvement of late owing to the new recreative out-door amusements they follow. The croquet-lawn has to be accredited with much of this good and wholesome change, and the more we see it developed, in every reasonable way, the better will it be for the future mothers and children of our country. It cannot be too strongly urged that all recreations which bring the young of both sexes together are doubly useful. Such combinations in recreation impart courage and strength to woman, gentleness and strength to men.

In childhood all recreative exercise should be free as the air. Even in close towns, those children who roam the streets and alleys and very slums are better off for health than are they who are kept in the close nursery or parlour. If we compare, in such a place as London, the street children with the children of the squares, we see a comparison which is not unfavourable; but if we compare both these classes with those children of the shopkeepers who are too respectable to be let free of the streets, and too poor to find a playground in the squares, we see how striking is the comparison; how strong and well the out-door urchins are, rich and poor, by the side of the unfortunates who pine in-doors, or find their longest stroll from home to school, and school to home. But through all the classes reform is demanded. Less of forced work; more of recreative freedom; less life in-doors; more life in the gardens, on the hills, by the sea. Learning is cheap now, and whoever can read and write can become a scholar, if he can become a healthy being. The dearest thing in the market is health, without which learning, be it ever so cheap, is bought for a sacrifice, and is burnt on its own altar.

BENJAMIN W. RICHARDSON.

WHAT SHE CAME THROUGH.

BY THE AUTHOR OF "LADY BELL," ETC.

CHAPTER XLVIII.—LADY LEWIS'S BIRTHDAY.

P LEASANCE'S solitude, a solitude which she felt was good, in its comparative independence and exemption from burdensome notice, though her

young nature fretted at its dulness and stagnation, and was tempted to long for any variety of enlivenment, seemed fated to have no farther existence.

Within a few days of Jane Douglas's impromptu visit, Pleasance, who had never even needed to give a "not at home" to visitors, heard, as she sat at work in her drab drawing-room in the early afternoon, an ominous double knock. Before she could conceive who might be the intruder, and make a motion to prevent it, Mr. Perry, released from his gardening and invested in his orthodox black to serve at Pleasance's early dinner—which he called luncheon—was heard on the stairs ushering up company. He threw open the drawing-room door and announced—with a little trip of the tongue for which he did penance in humiliation to Mrs. Perry afterwards, and which he asserted was caused by the lingering recollection of banquets and balls, in which he had once figured in the hall or on the staircase—"Lady Lewis and party."

The company thus grandiloquently summed up, consisted of one very old lady in black silk gown and white shawl, close telescope bonnet, and long green veil of fashions at least two generations back; and an elderly

factotum half companion, half maid, in black silk also, but with a bonnet in its quietness still many fashions in advance of that of her mistress.

As Pleasance rose to greet the two—old Lady Lewis, who was nearly blind with age, did not see her for a moment, and was besides engrossed with her own individuality and its last feat. "Yes, 'Lizabeth," she said quite aloud, in a piping treble voice, "I have got my breath, and I have not felt the stairs so much, not so very much, and here I am at young Mrs. Douglas's, as I said I would be; now get me a seat, and bring her to me."

'Lizabeth was finding her mistress the most suitable chair in the room, settling her in it, putting a footstool beneath her feet, and looking carefully to all the doors and windows, in spite of Mr. Perry's pompous show of precaution—altogether irrespective of Pleasance's presence.

Pleasance was disarmed and diverted by the sovereignty of age, more than of rank, which was thus without any question of her inclination, taking possession of her domain. She was touched also, she had that tenderness for age, which, much more than any fondness for children, is the test of the highest manhood and womanhood.

For there are men, and, strange to say, still more women, to whom the infirmities of age seem to present themselves in lights altogether repulsive and almost loathsome.

Pleasance came forward, not as she had greeted Jane Douglas and Rica Wyndham, with unconscious stateliness and stiffness, but with frank, kind cordiality to listen to Lady Lewis, who on her part was never doubting a welcome, but was simply bent on delivering her credentials and achieving her purpose.

"I am old Lady Lewis," she supplemented Mr. Perry's magnificent announcement, in the easiest manner, nodding in emphatic confirmation of her words. "How do you do, Mrs. Douglas, you are young Mrs. Douglas, aint you?" She made sure of Pleasance's identity, but as if it were a matter of inferior consequence. "I am a connection of the Douglas's—through Mrs. Douglas and the Etheringtons, of course—for Mr. Douglas was not of such birth as to have any connections that one hears of, though he was a

most worthy wealthy man; he had bought Shardleigh before he married Clara Etherington, and he made Clara very comfortable. You know Shardleigh was quite a place; Willow House, which belongs to Shardleigh, as a dowager house, is nothing in comparison. I was once at Shardleigh twenty—no, five-and-twenty years ago—how long ago was it, 'Lizabeth? when my sight had failed, and my last teeth had grown loose, so that I could no longer eat with any pleasure, and had to get in a complete new set. It was before the heir—your husband, by-the-bye, my dear—was born."

Pleasance, with all her good-will, had nothing to say to these records of the Douglasses and of Shardleigh, which culminated thus. But it was clear that Lady Lewis had no malice prepense in her speech, and indeed that she was not thinking to whom she was speaking.

"My grandmother was an Etherington of Kingsland—a sister, no, a grand-aunt, of Mrs. Douglas's Etheringtons. It is a very old story, for I am ninety years on my birthday, the 2nd of July, which comes round next Thursday," she made the announcement with empressment, and a certain harmless self-glorification evidently counting by anticipation on the impression she would produce.

"It is a great age," said Pleasance, with proper admiration and awe, "and you look wonderfully hale."

"There is no mistake," the old lady assured her, anxiously seeking to obviate any suspicion that might arise, before it could take root, "I have my register to show on Thursday; but I am very well, I am thankful to say. I drive out and walk round the garden, the last sometimes before breakfast, don't I, 'Lizabeth? I was always an early riser. I don't choose to get out of a good habit, so long as the fine weather continues, and before I lay myself up for the rest of the year. My sight is nothing to boast of," continued Lady Lewis, blinking at Pleasance, and dwelling on her private and personal statistics as the most interesting subject in the world. "But my hearing, as you will observe, is just a little impaired, if my memory would not serve me such shocking tricks. There is old Mott, the attorney, he says, or rather his family say it for him, for he is hardly fit to answer for himself, that he is ninety-eight on his next birth-day, in October. Nearly ten years older than I, and in the same town, too! I cannot believe it, though I admit I recollect young Mott, a well-grown lad, when I was a little girl with

my doll; but sizes do differ, don't they? one can never tell one's age from one's looks. There, you said I looked wonderful for ninety. But I was going to tell you about old Mott, he is as deaf as a post, and has to be wheeled out in a chair, besides only seeing mid-dling, and his mind is clean gone—though he is to make a point of coming to me on my birth-day, aint he, 'Lizabeth?—ever since his only son was drowned bathing in the river, more than twenty years ago. Mott was seventy-six and all alive then, and though people thought he would not survive the blow which he took so much to heart, that he broke down all at once, yet he has lived on, in his dotage, till he is eight years older than I am."

Pleasance was struck by the curious mixture of envy and slightly contemptuous commiseration—envy [of the greater age, together with half scornful, half boastful pity for the greater weakness, borne by Lady Lewis towards her single contemporary.

But Lady Lewis was at that moment broaching the purport of her visit in the same breath with an apology for not having paid it sooner. "I should have waited upon you, my dear, certainly, when you are a Douglas by marriage, and I am an Etherington by descent, but I go nowhere, I have not, as a rule, paid visits since I completed my eightieth year."

Pleasance ventured to interrupt the speaker. "I could never have expected such a piece of attention from you," she said, gently, having respect to the withered yellow face at the end of the long scoop of a bonnet from which the cumbrous veil was thrown back, to the shrunken, bony hands just shaded by the black mits—for Lady Lewis found mits more comfortable than gloves in summer, and she had ceased for these dozen of years to attend to anything save comfort in her attire—and to the palsied tremble of the whole attenuated figure, "I think you are entitled to claim, not give attention."

"Yes, yes, you are perfectly right," answered Lady Lewis, well pleased and without the least disclaimer, "that is a very pretty, proper speech; I have not heard a prettier, or a more proper since my nephew John wished me to go and live with him and his wife and children, you remember, 'Lizabeth? All about their being feet and eyes to me, when I had lost my own eyes—and I did look after him at school, and had him home for the holidays when his father and mother were in India, only the other day. But I could not. I had kept house too long, and I wanted to

divide my little means equally among all my nephews and nieces, since Providence did not give Sir William and me any children, which was a great disappointment in its day, but it wore by, it wore by—and now they would have been elderly men and women themselves, with establishments of their own, very likely, and not able to look after me. My nephew John is very good, but there are the others, Tom and Dick, and Fanny and Sophy, good boys and girls too; and Sophy is a widow, and gone as blind as I am myself; and John might think if I went to him, and he with so many daughters, and no great provision made for them, that I owed all to him. I do not mean that John or his wife either—she is a broken down invalid, though not above sixty—is rapacious, but I could not risk it. Don't you think I was right not to risk it?"

"I have no doubt you were," said Pleasance, smiling, "but you are the best judge."

"And I have come at last," exclaimed Lady Lewis, triumphantly, always returning to the charge which she had in reserve, "to bid you to the celebration of my ninetieth birthday which I am to hold, if I am spared, —and after I have lived so long I don't suppose that the Lord will let me fail at the last moment—on Thursday—"

"Thank you very much, you have done me too much honour," said Pleasance, with more gratitude than she had ever expected to display for an invitation into high society. "But I do not go anywhere, and I should be no addition to your company."

"I am the best judge of that," replied Lady Lewis, with a smartness that did her ninety years credit, "you must come when it is my ninetieth birthday, and I have come myself to bid you."

"Indeed, I would be very happy to do you any favour," represented Pleasance, "but I am sure you do not need me among your many friends, and I am not really a Douglas, far less an Etherington; I am only connected with them by marriage—a humble connection, as I dare say you have heard, Lady Lewis," said Pleasance, with an effort, and a flush, "at the same time I am not a sufficiently humble woman to take a place by favour. I must beg you to excuse me."

"I shall do nothing of the kind," said the ancient lady, bluntly, and with an amount of irritation that was certainly not good for her, and so her faithful 'Lizabeth began to make appealing eyes at the perplexed Pleasance. "I do not care for anything that I have heard of you. You might be beneath Archie Douglas when he married you, but you could not be

farther beneath him than his father was originally beneath his mother, and we were not only happy to receive him, we were proud to acknowledge him our cousin and host at Shardleigh—which he had bought with his money, to be sure—and you have no money, I suppose, but you have your husband's rank. Ay, nobody can take that from you, though you disagree, which is entirely your own matter, since there is nothing against your reputation as far as I have been able to ascertain, or you would not be here. If you have been a little ailing and nervous" (here Pleasance was thoroughly bewildered and imagined that the old lady's memory was at some of the tricks of which she had accused it), "I can bear witness you are as well again, and as much to be depended on, as any of us; you must come to grace my birthday. Everybody in Stone Cross and round it is coming. My nephews and nieces, and their families—all that are in the country—are to be here. Tom and his wife, and their London sons and daughters, are to arrive to-night. I am to give a dinner at tables on the lawn, to ninety poor men and women—but there aint one of them so old as I, only seven of them are over eighty—and Mott, who is my senior, is to come wheeled in his chair. My health and many happy days to me, is to be drunk both indoors and out, and the young people are to dance if they please, for fiddles are provided. We have not had such doings since I came to Bridge House half a century ago; not since my Sir William came of age at his place of Nuthurst, and we were married the same year, when I was just turned nineteen. We are to keep early hours because of the dew and the rheumatism, and our party in the house is to break up so that 'Lizabeth here is to have me snugly tucked up in bed by eleven o'clock, else my doctor—Doctor Martin Stowe, a young blade of fifty, that I remember in long clothes when I was a middle-aged woman—says he will not allow me to commit any imprudence," and Lady Lewis laughed, with a dim reflection of glee, over the incongruity of the sentence.

"Please, my Lady, you are imprudent as it is," put in 'Lizabeth, warningly, "you are talking too much to Mrs. Douglas; you will be put off your after-dinner's sleep."

"Aint you reminded of hearing children told that they are stuffing their mouths too full?" resisted the old lady. "But you will come to my birthday?"

"I am sure Mrs. Douglas will come, and will not hurt you by giving you a refusal, when you have come in person to ask her, Lady

Lewis," said 'Lizabeth again, throwing out another strong hint to Pleasance that my lady was far too old, not to say too great, to be contradicted.

But the venerable celebrator of her birthday rites, was passing with the rapidity of childhood from great good humour, and a happy flutter of excitement, to testiness and weariness. "Speak when you are asked, 'Lizabeth, I am not to begin your training again, at this date. Goodness knows! I had enough trouble with your wilful ways thirty years ago. Mrs. Douglas, do you mean to tell me that not a Douglas is to be represented on my birthday? Etheringtons and Lewises, and Hobhouses and Turners, are to support me in abundance. But your sister-in-law, Jane Douglas, though she was in the town, and made a pretence of paying her respects to me, did not think fit to stay for an event which will not occur often in her history—I should say she won't live to see ninety years, and to remember the French revolution, and young George III. in his prime—a flaxen-mopped, China cheeked chit of a girl!" exclaimed Lady Lewis with wounded feelings and pardonable acrimony. "Of course, Mrs. Douglas, Clara Etherington, my own relation, your mother-in-law, is too fine and delicate to be here. She was always full of airs and ailments, was Clara Etherington, while her plain worthy husband had to dance attendance upon her. Archie Douglas, your husband, is away cruising at the ends of the earth, for his own ends, without any reference to what is happening at home; and when I am come myself to invite you—the only Douglas that is left, do you mean to tell me that you will let some stupid whim come between and disappoint me, and put a slight upon me, on that day of all days, before the rest of my people, and my neighbours? Did you hear me say I had come here myself, contrary to my usual habits, to ask you to be my guest, and now you are vexing and heating me, so that very probably I shall be ill and die before my birthday. Yes, you have cause enough to shake your head, 'Lizabeth," and poor Lady Lewis was at the point of weeping.

She had dwelt on her ninetieth birthday till its celebration rose to prodigious moment in her imagination, and she could not bear that the honours with which it was to be accompanied, should be shorn in the slightest particular. If not a Douglas were to be represented on the occasion, the universal homage of kith and kin, to the fourth generation, would be sensibly impaired. In this

light, the very scurviest Douglas was better than none—the very name, to figure in the county paper, was not to be despised.

The motive was not specially flattering, while Pleasance was not without a tickled sense of the absurdity of the situation. She to represent the Douglasses whom she had distinctly repudiated, on whose wealth and culture she was a stigma! But she could not find it in her heart to remain obdurate; she could not continue to dash, by her denial, the last festive gratification that ninety years was likely to claim.

No doubt, she would not only be lonely, but lonely in a crowd, pointed and whispered at, because of her peculiar circumstances, her humble origin, her rise in life—none but herself knew how unintentional it was—her separation from her husband. She had been accustomed to broad comment in the old days at Saxford, this would not be open but covert, yet because of that and the sting it contained, it would be inexpressibly more painful. Pleasance seemed to have grown thin-skinned and tender.

But she was young, and because of her youth she could endure any sharp pain better than Lady Lewis could bear thwarting. Pleasance even told herself, a little bitterly, that she might pass muster with no one else to keep her company—at least, among the ninety poor men and women who were to dine at tables on the lawn; she might occupy herself with them, and retire even earlier than Lady Lewis. If she yielded and let herself be enticed into exposing herself to be publicly patronised or put down—Pleasance did not know which would be worse—by the Douglasses set in Stone Cross, it would not last long; and she had almost made up her mind to leave, ere long, Willow House and Stone Cross, with or without Mr. Woodcock's permission. She could afford a concession so small that she was almost ashamed to count it a concession, for the sake of the old woman whose death she would not have at her door. 'Lizabeth's imploring face and gestures were, as her mistress said, uncalled for.

"Very well, Lady Lewis, I will come to please you and—and myself," said Pleasance, speaking very slowly and distinctly, yet with a stammer at the end, as if she were guilty of putting more colour than was warranted on her consent. She had small thanks, on the spot, for the breach of consistency she was about to make.

"Why did you not say so before, and save all this trouble?" asked Lady Lewis shortly, too sensible of the merits of the case

to be impressed by any conquest it achieved, or to be easily propitiated. "Of course I knew all the time that you would come, but you young married women must make yourselves of consequence, if you please; you are a great deal worse than girls," she commented indignantly. "I am quite worn out, as if I had been dancing all night, or making such a speech as my Sir William used to address to his constituency. Get me home the best way you can, 'Lizabeth; and see that you are in time, Mrs. Douglas," firing a parting shot at Pleasance. "We are to begin by noon; grace is to be said then at the old men and women's tables, on the lawn, and if it should prove wet—but the weather must be fine—the tables are to be set out in the coach-house."

CHAPTER XLIX.—"PLEASANCE, NOT
PATIENCE."

PLEASANCE found herself bound to keep her promise, and repair to the Bridge House grounds, in compliance with the imperative summons of its mistress, on the 2nd of July. Happily the weather answered the venerable heroine's sanguine expectations. The day was dry at the commencement of a dry season, if it was not one of the Arcadian days uniting impossibly all the attractions of freshness, brilliance, sunshine, and shade which are coveted for auspicious occasions.

Bridge House was another tall, old, red brick house, out of date, like Willow House, but it was not out of keeping with its mistress, while it did not fail to present a gay, bustling spectacle on her ninetieth birthday. The whole house was flung open to guests. Every room was crowded, and overflowing with gala company. The very grounds, of limited extent, and overgrown with old trees and old-fashioned shrubs, were swarming with the ninety poor old men and women in their Sunday's best, who had been selected from the oldest and most virtuous of the humble inhabitants of the parish, in order to check off the fourscore and ten years of Lady Lewis's protracted span of life, and to testify to her gratitude. The servants—old for the most part—were stirred out of their usual torpor, in sympathy with their mistress, and were sporting white ribands as for a wedding or a christening. There was a superabundance of flowers in bouquets, in nosegays, in wreaths round Lady Lewis's and her long defunct spouse's pictures, in triumphal arches spanning the front door and the gateway, indeed wherever flowers could bloom in recognition of a hoary head.

The central figure of all was Lady Lewis, in her richest *moiré antique*. She had worn black as a widow, and black again in her age, for more years than even 'Lizabeth could recollect, but she had a few festive-coloured gowns, still, and the one she wore on this great day was of silver-grey, like her hair, which was covered by a head-dress of her finest old lace, having butterfly bows and strings—the last were tied comfortably under the peaked chin—of lavender riband. As dainty as a bride, and half laughing, half crying, like a young bride, she was tottering on this or that feeble old elbow of a friend and contemporary, who had himself descended far into the vale of years, though not quite so deep down as his ancient ally—with whom he had kept Christmas and midsummer, and played games and quoted poetry before the most of the gathering of all ages present, had opened their eyes on this weary world. Or she was grasping the stalwart young arm of some grand-nephew, or neighbour's grandson, who had the grace to be proud of the feeble burden.

She was very self-conscious, but also very sincere; and as she went here and there, basking in the radiance of her honours, and at the same time bent on shedding the light of her countenance on all—heaping the plates of her ninety poor old men and women—taking notice of the youngest and smallest guest there, and causing her or him to remember the day, nobody grudged the old heroine her triumph, and but a small minority found food in it for cynicism and mockery.

Pleasance had taken heart of grace, and consulted Perry, and Perry had risen to the emergency, and confided to her mistress, merely as a matter of proper ladylike gossip, what dresses the younger ladies of the Close were to appear in, and even what presents some of them had prepared as a fit offering to the giver of the feast, in commemoration of the day.

Pleasance put on a nankin-coloured China silk, the nearest approach she had made to "silk attire," in order to be like her neighbours, and added to the gown the black lace shawl which the heat of the weather had induced her to acquire, and the dove's neck coloured gauzy little bonnet, and dove's neck coloured gloves that were the gravest things of the kind with which the great milliner's establishment in Stone Cross could supply her. She meant to render herself as little conspicuous as possible by these approaches to the standard of the Stone Cross

ladies; but the absence of conspicuousness was hard to manage, when Pleasance in this costume, and carrying the wonderful work-basket which she had provided for the Douglas's old kinswoman, entered the Bridge House gate, and was at once, beyond question, the handsomest and most distinguished looking woman within the bounds. The very shyness in which her slight trepidation showed itself, took a form which was like hauteur, and lent her in the eyes of many people present that last grace of style in which it had been imagined that she would be lamentably deficient.

However, Pleasance found that she had exaggerated the difficulties and disagreeableness of the day's task. Either higher breeding was a more effectual defence than she could have anticipated, or attention and interest were a good deal divided. Pleasance went through the ordeal with thankfulness, inasmuch as she was not sensible that she was creating any great impression; a few side-glances, a murmured word as she passed, being all the remark that she was aware she excited.

Lady Lewis received Pleasance as one of a multitude come to do her honour, to whom she was at pains to be equally cordial, accepted the work-basket with all the exclamations that she could spare to its merits, and just named Mrs. Douglas to this and that nephew and niece, who took the cue and passed it on. It appeared to the uninitiated Pleasance, that by the simple magic of having her name pronounced, and receiving the mention of another name in exchange, she was in the middle of complacent men and women, who were always near without overwhelming her, spoke to her quietly and courteously now and then, were ready to inform her of any change in the programme, or to offer her refreshments.

The welcome might not go a great way. Pleasance was the last person to put weight upon it; but at least it relieved her from her present concern, it reminded her that there was such an obligation as *noblesse oblige*, and that she had been illiberal in forgetting its influence; and it braced her with answering pride to be sufficient for the occasion, to speak to those calmly polite people with corresponding politeness and equanimity.

The single individual who shook Pleasance's resolution and disturbed her serenity was Rica Wyndham. She would not meet Pleasance as a slight transitory acquaintance.

Rica always preferred to air a code of manners totally unlike those of her natural

associates. Besides, this was the first excellent opportunity that she had found of playing off her one-sided intimacy with Pleasance, and amazing and if possible scandalizing her friends, including her mother.

Mrs. Wyndham loomed large and stately, filling the seat of one of the open windows, from which she never stirred.

Mrs. Wyndham never saw that anything which Rica did, could be wrong. Still her daughter perpetually overturned all her theories, which no one else dared to impugn, and filled her with continual trouble lest the dear, rash child, with her great originality and delightful spirits, should get into any harm.

It was trying to Pleasance to be accosted by Rica within the very range of Mrs. Wyndham's cold, questioning eyes. The owner of these eyes retained a trick of lowering their lids, in keeping with a bland smoothing out of the curves of the, red-lipped mouth, while the complexion in the full, rather heavy cheeks, if too deep in the grain, was still the remains of a very fine complexion of its kind, to which Rica's soft ivory tint afforded a complete contrast.

Rica wore a pale pink gown, with grey feather trimmings, so that, as she said, her plumpness might be lost in her fluffiness; she had a hat encircled with the same feathers, and she did look like a softly rounded, exquisitely tinted cockatoo.

"Here you are, Mrs. Douglas; how well you are looking, how glad we are to have you amongst us!" She came forward, and waylaid Pleasance, put an arm through her's, and drew her to a garden-seat in the centre of Rica's particular circle of mischievous or mindless girls, and of knowing, or would-be knowing young men.

Pleasance sat down for a moment, the better to make her escape from the party.

"Yes, I dote on roans, high-stepping roans," said Rica, repeating a former assertion. "I am afraid that I could sell my soul—I hope none of the canons hear me—if the choice were offered me, for a pair of roans and a mail phaeton."

"Do you mean that the canon would clench the bargain, or object to it?" an attendant on Rica professed to seek an explanation.

"Oh, you may take it either way you please," answered Rica. "If Mephistopheles did not object to a professor's gown, I suppose neither would he decline a canon's. Why don't you set up a mail phaeton, Mrs. Douglas?"

Pleasance flushed slightly, while there re-

turned to her voice that defiant tone which seemed to prove that she had been right in refusing to the last to be a lady, for in the character she could only be uncomfortable and make others uncomfortable.

"I don't know that I ever saw a mail phaeton," said Pleasance; "my experience of curricles was of a very different description."

"Tell us it, if it was anything new. We do want a novelty in driving, since Norwegian gigs get tilted so often, that the very spilling becomes monotonous," said Rica with lazy impertinence.

But Pleasance was not so easily drawn out for the entertainment of those whom she was inclined to regard as her born foes.

"My experience would be of no use to you," she said, declining the cool proposal.

"I don't know that," said Rica in objection; "but at least you love roans?"

"I am not sure of the colour," said Pleasance with a half smile; "bay, and chestnut, and dappled, even piebald and sorrel, as well as black and white horses, I can identify, but I am not clear about roan."

"Permit me to say that your confession of ignorance does you credit in days when ladies are only too fond of professing their knowledge of the points of horses, and exposing its shallowness at the same time," said one of the elder of the young men present, coming to the rescue. He admired Pleasance's beauty, whether he were struck favourably or unfavourably with her candour. He rather thought that this tall, handsome, quietly dressed lady did credit to parvenues.

"Well," said Rica, affecting to emulate Pleasance's candour, "I am horsey to the backbone, and I make no bones about it. It is in our family—witness my brother's feats at Doncaster and Newmarket, and I have heard that papa paid heavily for the same taste. But you have suddenly become a convert to femininity, Mr. Ancaster. What was I told of a pair of ponies you are in search of? and does not Miss Ancaster outstrip all the ladies in the field in riding to hounds? Well she may, being the daughter of an M.F.H."

Mr. Ancaster was believed in polite circles to be on the point of an advantageous marriage, which was not made public, in consequence of some difficulty with exacting relations on the bride elect's side. But this did not prevent Mr. Ancaster from having his future wife—whom he had still no established title to purvey for—in his eye, in the premature purchase of ponies. He was, besides, known to undergo the penance

of possessing a decided girl-of-the-period, whom he could not by his utmost efforts keep in tolerable order, in a motherless sister. All this was familiar matter to Rica Wyndham, and she winged her arrows accordingly with the audacious freedom of a sportswoman in whom feeling never interferes with such light warfare.

Mr. Ancaster, who was no match for Rica Wyndham in spite of his six feet, hung fire immediately, muttered something hastily of a commission for a friend, and of no man's being accountable for his sister's pursuits. He proceeded hastily to divert the conversation to the topic of the day—patriarchal age in the person of Lady Lewis and the solicitor, Mr. Mott.

"Do you suppose the patriarchs were like these two?" inquired Rica, with an affectation of innocent surprise. "Isaac, though he was blind and foolishly fond of venison, an old fogie, like Mr. Mott there, basking like a log in the sun, and waited upon by his dutiful juvenile daughters! When I think of it, I have heard one of the Miss Motts is called Rebecca. Then I dare say we must bear some resemblance to the apostles. Can you fancy Paul or John in millers' hats, with lockets at their watch-chains containing the hair of the mother of Zebedee's children, and of old Mrs. Paul—whoever she might be—like Dicky Lewis the younger and Bertie Mostyn?"

"I believe if the apostles were here in person you would find something to laugh at in them, Miss Wyndham," said Mr. Ancaster dryly.

"I fancy I should," said Rica coolly. "But I do not find fault with our patriarchs, though I laugh at them. I do not see why one should make a fuss about herself or himself growing old, as if it were a gain and not a nuisance to the world in general, as if wise savages did not kill off their own fathers—not to say their own mothers—when they remained an unconsciously long time after they had ceased to be any earthly use or pleasure. I do wonder no political economist—Mr. Lowe, for instance—has brought in the practice with us, when nothing, save a purely selfish love of life, stands in the way of the innovation. But I do not pretend to be an Iphigenia myself; and I have a sneaking kindness for the poor old things who live as long as they can crouch over the ashes of their former fires. Fancy people so mad as to crowd after Lady Lewis or Mr. Mott, in search of a dying spark of beauty or wit!"

"Do you know, Rica," one of the girls said, "old people were set to run races last century for the diversion of the public? So the Dean told me."

"Dear! How I should have liked to see them!" cried Rica with her rippling laughter. "Lady Lewis hobbling and wheezing against Mr. Mott—no, he drives his chair—against any of those other old persons—I imagine he or she would consider it an honour to hobble and wheeze against my lady; it would be better for the spectators than pigeon-shooting or polo."

"No, Miss Wyndham," said a frank-faced lad, colouring up with anger and shame, "we are bad enough, but we are not so beastly bad as that."

"One would think there had been no sons and daughters in those days," said Pleasance, almost involuntarily raising her voice.

"Except those who enjoyed the game and shared in the spoil," said Rica, nodding. "I am sure I would have no objection that mamma, in course of time, should enter for a heat; but I know I should have to poke her on."

"Child, you will catch cold sitting without your hat. What are you saying about me?" said Mrs. Wyndham from the window just behind, where she had caught her name and nothing else. "I trust that it is something pleasant."

"Never mind, mamma," said Rica carelessly; "I'll not put on my hat, and I'll not catch cold, like the Duchess of Marlborough, who would not put on a blister and would not die; and you must know there is a proverb that 'listeners never hear good of themselves.'"

"Foolish child," said Mrs. Wyndham, smiling fondly on the folly.

Pleasance got away from the flippant, hard irreverence of Rica Wyndham's pleasantry, and strolled over to where Mr. Mott sat, with his chair wheeled so that his body might be in the warmth of the sun, while his head was in the shade of a big yew, that had seen still more storms than the man had seen, but looked less old than he. He had the framework of a big man, massive in decay; while Lady Lewis had been under the middle height, and had shrunk with years. A dead calm, which had been unruffled since the troubled waters of his poor old soul closed in upon it, after the shock that had stricken him down—already an old man, when Pleasance was a child—lay on the whole torpid figure, which was wrapped in a woman's shawl, and on the face, grey and gaunt with the white

hair above it, drawn back from the eyes, under a skull-cap. How much of human life, its changes and lessons, could these grey-bearded lips, which had not been shaped to prattle old wives' tales—as Lady Lewis prattled—have disclosed, but that they were sealed in a solemn repose that looked a type of the last great rest. But Mr. Mott was not utterly oblivious or incapable of communicating with others, as one of his daughters who came forward—Pleasance could not help thinking to show him off—told her.

"He knows where he is, and what he has come for—my lady's ninetieth birthday, and all that—except when he forgets at times, and looks round for his own garden and shrubs, or for his drawing-room screen," said well-meaning, fussy Miss Mott. Then she proceeded to enlarge to Pleasance on her father's wonderful age (which was his daughter's passport into higher society than they would otherwise have entered), and the powers that were left him.

"Don't he look well for his ninety-eight?" said Miss Mott affectionately. "Becky and I assert he grows younger every day, and will be quite a youth when he sees his hundred, which the doctor says he has little doubt he will, unworried as he is—so that we never feel able to be old," and Miss Mott shook the streamers of her girlish hat in a happy indemnity from age, on her father's account. "He is fine company with us at home, and can chat a little on old stories. He understands every word we say, for all his deafness, and can let us know what he wishes as well as ever—though he has not been able to carry on his business for quite two-and-twenty years, since our brother—our only brother—Richard was drowned while bathing in the river, in the pool behind our garden, where he had bathed hundreds of times—a terrible day, Miss Douglas, that none of us likes to recall, and my father has never mentioned it—never. But we have a cousin—a good cousin—Thomas, who has done all the business for my father, and allows him his share, as is only just and right; but you know men will—you understand—and my father is able to help cousin Thomas with old information, if father is taken in the right way. Cousin Thomas is here to-day—for he manages everything for Lady Lewis, though she has so many nephews. She likes to keep matters in her own hand, which is best. She would take no denial that my father was to be here. I was terribly afraid lest anything should happen—rain or a bad

"WHAT SHE CAME THROUGH."

night, and she should be—she likes her own—you understand—but as it has turned out, it is all right,” and Miss Mott smiled benignly on Pleasance.

At this moment the sun, which had come round the yew-tree, began to shine in Mr. Mott's untroubled face, and Pleasance, in the temporary absence of the other Miss Mott and of cousin Thomas, aided in wheeling round

the chair an inch, so as to place its occupant again in the partial shelter of the yew.

As Pleasance bent over the old man while his daughter was uttering voluble, incoherent thanks for the little assistance, his glazed, well-nigh fixed eyes, with their far-away look, startled Pleasance by glancing up, with speculation, in her face, and the voice, hoarse and frosty with death's fog in the throat, ad-

Page 735.

dressed her plainly enough, “You are my niece, Patience.”

“Upon my word he takes you for my cousin Patience Steel!” cried Miss Mott, before Pleasance had time to answer; “and she is something of your figure, only not so—you know. No, no, my dear father!” she screamed, “this is none of our relations; this is a stranger lady, who has done you the

honour”—a tickling cough stopped Miss Mott's further explanation.

“I am Pleasance, not Patience,” said Pleasance, fancying that the old man looked at her, and trying to pitch her voice in a key that might reach his palsied ears. It did reach him, for he repeated “Pleasance,” and stirred slightly in his chair.

“Thank you, my dear madam,” said Miss

Mott, recovering herself. "Pleasance, it is a sweetly pretty name, and very uncommon. I don't think I ever heard it before."

"Pleasance, growled the old lawyer, moving again with all the motion which his helplessness left him—"Pleasance; what more?"

"Oh, pray, don't think he means to be rude or inquisitive," cried Miss Mott, in discomfort and vexation, shaking the youthfully crowned head on the end of the long thin neck deprecatingly, like a proud mother whose baby is not behaving so as to do it and her credit, "when, I have no doubt, like me, he never heard the name before."

"Pleasance Douglas," said Pleasance. "Do you think I mind saying my own name?" she added in an undertone, with some amused surprise. "I am happy to gratify your father."

But Mr. Mott was not gratified. He tapped his great gaunt fingers on the front of his chair.

"That's not it," he objected gruffly.

"Pleasance Hatton it used to be," Pleasance amended her statement, a little puzzled at the effect which her Christian name produced on the dotage before her.

"Ah! that's it," said Mr. Mott with a gusty sigh of relief, and subsided into silence.

Pleasance was prevented from attending to any more of Miss Mott's excuses, by being summoned to the main business of the day—the sitting down of the ninety old men and women to the roast beef and plum-pudding.

Lady Lewis's health, and thanks for her bounty, followed, drunk in glasses of good sherry, and proposed by the most fully qualified in his own and his neighbours' eyes, of the men of eighty.

Lady Lewis answered for herself in a well-conned speech, in which she expressed her satisfaction at being spared to furnish this banquet, and her hope that she and every one of her special guests might live to see, and help her to keep, her hundredth birthday—a hope which was hailed with loud applause.

The less formal and more varied feast within-doors was held afterwards, with Mr. Mott, in his chair, seated next Lady Lewis. In the pauses of the entertainment her ladyship questioned Miss Mott narrowly whether the family had the baptismal register, that proved beyond mistake her father's ninety-eight years, or condoled with her upon his infirmities.

Later there was the attempt at dancing

among the young people, which Lady Lewis had boldly proposed; but she would not lead off herself—not with her youngest collateral descendant; she said she had forgotten her steps; she was not Mrs. Piozzi, who had opened the ball at Bath when she was ninety or a hundred—which was it, 'Lizabeth?

At last, at the early hour fixed upon in consideration for the hostess, lest she should die of the very happiness of celebrating her birthday, and lest the few grains of sand left in her hour-glass should be roughly shaken out by rejoicing, the company dispersed. Bridge House was left gradually to subside into its accustomed drowsy sobriety.

CHAPTER L.—ASKED TO COME AND HEAR OF SOMETHING TO HER ADVANTAGE.

THREE days after Lady Lewis's birthday Pleasance was about to enter her own door, returning from the Cathedral—the coolest place in the town that hot July—when she was nearly run over by a stout, middle-aged man, rushing along in extreme agitation. He hardly stopped to beg her pardon before he told her in the same breath, "It is you that I want, Mrs. Douglas. Madam, I beg you to come with me instantly, to learn something which you ought to have known long ago. I can say no more at present; but, if I am not very much mistaken, it is worth your while to accompany me, and you will find it greatly to your advantage."

The man delivered his communication in a series of excited gasps, at the same time his manner, though extremely flurried, was not bullying or threatening.

Pleasance listened in amazement, looked at the stout man's spotless linen, good broad-cloth, and general unobtrusive evidence of respectability.

Pleasance could not set down her accoster as an impostor, though his sanity might be a matter of dispute. "I think there is some mistake," she suggested.

"Oh no, not at all," he said. "You are Mrs. Douglas, of Willow House. I have seen you pass frequently. I am Thomas Mott, of the firm of Mott and Son, Water Street." He took off his hat as a necessary step to the communication, but replaced it with such carelessness, in his hurry, that he put the back of his hat with the joining of the hat-band in front, so as to lend the most incongruously rakish touch to his appearance. "When I have stated that I am the member of a legal firm, need I say any more in the public street?"

In the midst of the stoutness and professional pomposity, Pleasance detected a reflection of Miss Mott, lean, dark, and with a shade of obsequiousness in her speech and bearing, which warranted the speaker's announcement so far as the name went. Pleasance still held that there was an error, since she could not imagine the Motts a medium of communication between her and Archie Douglas—indeed, Mr. Mott, in the few words of his address, had referred pointedly to something she should have known “long ago,” thus putting Archie Douglas out of count. But she settled to accompany the man to his office, as the easiest means of coming to an explanation.

Mr. Thomas Mott said no more, except in muttered reflections of “the strangest circumstance,” “terribly awkward,” “no blame could attach”—in the disjointed style of his cousin. Happily the distance was not great from the Cathedral to Water Street, the old-fashioned side street in which the place of business and the house of the firm—once the chief attorneys of Stone Cross—were situated, otherwise Pleasance's patience and curiosity might not have held out.

Her coming was expected, and the door was opened before Mr. Thomas Mott could apply his latch-key—not by a junior clerk, but by one of the Miss Motts, who were so like each other that Pleasance judged it was her acquaintance of Lady Lewis's birthday, and was going to greet her accordingly. But this Miss Mott—in a calicot morning gown, with a tiny Dolly Varden cap, perched by way of head-dress on the extreme verge of the scanty locks, and far above the scraggy neck, leaving the lantern-jaws exposed—said that her elder sister was with her dear father. However, she could not wait for an introduction, before she stepped forward to say for everybody, and especially for dear father, who was no longer able to speak for himself—else, indeed, this would never have happened—how sorry, how shocked they were—so terrible an overlook, and never to be detected till that day; she had not been able to think or speak or do a single thing since cousin Thomas turned out the paper—from poor Richard's hairy trunk, too, of all places; and she was still in her worst morning gown—she had not been fit to see about making a change, so that Mrs. Douglas must be so good as to excuse her.

“But I do not at all know what you mean. I think you must be labouring under some strange delusion,” represented Pleasance, as

she was taken into the Miss Motts' drawing-room. This was a little apartment furnished in a flimsy style, and cumbered at the present moment with a quota of tin boxes and other receptacles for papers that seemed to have been the centre of a recent investigation.

Amongst these insignia of his old profession reclined Mr. Mott, unaffected by the evident confusion and consternation reigning around him—nay, with something like a complacent smile flickering over the dead stillness of his face.

Mr. Mott's elder daughter was fussing about him, but broke away to receive Pleasance—“So kind, so noble of you to come, Mrs. Douglas. Our poor room is in a sad state for the reception of a visitor; but that is not to be thought of for a moment; grieved—shocked, indeed, at what has occurred, utterly unlike our dear father—but we have sent to tell you the very first thing, and surely something can be done to set matters right, as I said to my cousin Thomas.”

“Leave it to me, cousin Sophy. Don't say another word, cousin Becky. Pray sit down, madam, interposed cousin Thomas, preparing to enter upon the business in a business-like fashion. “Will you answer me some questions, if you have no objection?”

“I have no objection,” said Pleasance; “but I should like to know what it is all about,” and she could hardly forbear smiling, though she saw that the Miss Motts, and even Mr. Thomas, were in excited earnest.

“All in good time”—Mr. Thomas Mott waved his hand emphatically—“and all in your favour, my good—lady”—woman he had been going to say, showing the ordinary line of clients with whom Mr. Thomas Mott dealt, but he corrected himself before it was too late. “Was your maiden name Pleasance Hatton? as Miss Mott is of opinion she heard you say it was, at Bridge House on Lady Lewis's birthday.”

“My maiden name was Pleasance Hatton, as Miss Mott heard me say,” confirmed Pleasance.

“Good,” said Mr. Thomas Mott, crossing his legs and clasping his hands.

“Can you tell me your mother's name?”

“Pleasance Fowler.”

“Exactly. Now are you prepared to say that your father was a brother of Mrs. Wyndham's, of Gable House, here, and of Sefton Hall, in Warwickshire—a son of Guy Hatton, of Redmead, and Heron Hill, in Warwick and Staffordshire?”

“I should not have said it, if you had not

put it to me," said Pleasance, beginning to wonder and even tremble a little; "but I am aware that Mrs. Wyndham is my aunt, though the relationship has been hardly acknowledged, and she does not know me to be her niece. For Redmead and Heron Hill, I believe I have heard the names, but I can say nothing of them, for my father died at New Orleans, when I was thirteen years of age; besides, I had been parted from him since my mother died, when I—a mere child then—was sent to school with my sister."

"With your sister Anne Hatton," said Mr. Thomas Mott, rubbing his upper lip.

"How do you know about my sister Anne and me?" demanded Pleasance, unable to contain herself any longer; "what is your motive for collecting all this old information which has no interest in the world save for me?"

"I am ready to answer you, Mrs. Douglas, and to give you the explanation to which you are entitled," said Mr. Thomas Mott with something of the simple dignity which may come to a perfectly honest, even though a vulgar and stupid, man on a trying emergency. "And I do not even ask you to judge my uncle Richard's lamentable lapse of memory with candour and forbearance. Happily the heavy injury of which he has been the innocent cause, is not, I trust, in your case irremediable. But it is the saddest proof that I have yet had of his shattered mental condition—not that he could have been guilty of so tremendous an act of forgetfulness, but that on his obliviousness being brought to light—by his own instrumentality we must own—he should sit and smile like a child, or an idiot over the turning up of the deed, in place of showing himself overwhelmed with shame at the wrong done, and at the stain which may be cast on his professional character."

"Oh, Mrs. Douglas is too good, too kind, she would never blame dear father for his misfortune following on our poor brother Richard's death—so hard and cruel even to suppose—you cannot mean it, cousin Thomas," chimed in the two Miss Motts in a chorus.

"You forget," implored Pleasance, feeling as if she were becoming stifled by the mystery which was closing in round her, and which she could not penetrate, "you have not told me a single word."

"A very few words will suffice to lay before you a great injury of which, I grieve to say, madam, you have been one of the victims," said Mr. Thomas Mott. "My

uncle, Mr. Richard Mott, must have been summoned to Warwickshire twenty years ago last April." He paused, while his listeners hung breathless on his words to unlock a box on the floor, with a key which he took from his pocket, and to draw out a legal paper and examine the date. "The 22nd of April, I see by the deed, to re-write and add some codicils to the will of your grandfather, Mrs. Douglas, Mr. Hatton of Redmead. I can even give, if it be desired, the probable reason for Mr. Hatton's not employing his own agent, but an attorney from a distance, with whom he had a little business connection, in reference to his daughter's settlement, when she married Mr. Wyndham, of Sefton Hall, of which Gable House is the dowager house, since my uncle had always acted for the Gable-House property. Old Mr. Hatton must have had residing with him then, his younger son, Frederick, who confided to his father—as I find by the deed which was thus executed—that he had married some time before, without the knowledge of any of his family, a young woman named Pleasance Fowler, and had become by her the father of two daughters, Anne and Pleasance, for whom he naturally desired that a due provision should be made by his father. In complying with his son's request, Mr. Hatton, I conclude, was desirous of keeping the settlement secret, and of anticipating the remotest chance by which it might come to the ears of the other members of his family and provoke their remonstrances. My uncle Richard Mott must have executed the deed, seen it signed, and taken it in charge. But I suspect that Mr. Frederick Hatton—your father, madam—had not been aware of more than might have been inferred from his father—doubtless justly offended by the communication made to him—allowing a promise to be drawn from him to do something for the children—if Mr. Frederick understood so much. For I cannot think that on the death of Mr. Hatton any close search had been made for a recent deed, or that any great expectation had been entertained that such a deed existed. In the meantime my cousin Richard met his death by accidental drowning, and my uncle, who was very fond of Richard—caring more for him than for the whole of the others put together, in fact—was so painfully affected by the loss of his only son, coming upon him suddenly, that he was reduced within a few weeks from being an uncommonly shrewd, hale old man, to the state of second childhood in which you see him. You are a witness to the fact

that a man may discuss the most momentous transactions nearly concerning Mr. Mott's honour and prosperity before his face, and even if the words reach him through his deaf ears, he will pay no more heed to them than to the idlest tale with which he has not the slightest concern."

"What are you saying of me, nephew Tom?" growled the old man, all at once, with the most startling contradictory effect. "You have found the paper with the name in it—that should be seen to, as I said to you; but you would not believe me." He ended with an unearthly chuckle that brought on a wheezy cough, which sent both the Miss Motts off in search of his liquorice.

"Ay, there it is!" exclaimed Mr. Thomas Mott in an accent of exasperation. "He pottered about and made the most awful mess among his papers, after he was quite unfit to see to them, but while he was still able to walk into his private room, and sit an hour or two at his desk, and before the family could be brought to comprehend that all business was at an end for him. If he had died outright, at the time of his son's death—if I may say so, before the poor old fellow too," remarked Mr. Thomas Mott, divided between desperation at the consequences of his uncle's prolonged life, and remorse for his own reflection on the same, "it would have saved a great deal of trouble, and all this worry, and been no great loss to himself or anybody; but Providence don't seem to take those things into consideration."

"Oh, cousin Thomas!" cried the two Miss Motts in simultaneous horror, "how can you?—so dreadfully hard-hearted and profane—so unlike you."

Cousin Thomas only shook his head and proceeded with his complaint. "Indeed he will muddle by fits and starts still, and harp on this security that has gone to the dogs half a life-time ago, and that annuity that has lapsed this quarter of a century—enough to drive a man of the present day mad," protested Mr. Thomas Mott, ruffling up his already stubbly hair.

"Oh, cousin Thomas!" again exclaimed the two daughters, this time in undertones of deepest reproach and of hurt feelings, taking out pocket-handkerchiefs and applying them to their eyes, while they wagged the Dolly Varden caps on the extreme crowns of their long heads, "when dear father tries his best, and is quite bright sometimes."

"I cannot help it, Sophy and Becky," maintained cousin Thomas stoutly; "the truth must be spoken, in justice to every-

body—your father included. I have done what I could from the first to put and keep what is left of the business in order; but of course I could not overlook and amend every blunder. I had no more notion, when he kept hammering for the last day or two on a paper which concerned two minors—and one Pleasance—that there was anything in it, save some old story which has been shelved these score of years, than that I should live to be the Lord Mayor of London or the Governor-General of India. It was more for peace and quietness than anything else that I agreed to make a search this morning, and when I was turning over boxes that I had rummaged a hundred times before, in the middle of my investigation he roared out, 'You blockhead!'—I was reared in his office, besides being a near relation, which warranted him in taking liberties—'why don't you look in the hairy trunk?' 'Why, sir, that was cousin Richard's college trunk; you forget,' I said mildly; 'that was never a place for papers, like the office boxes.' But, 'Look in the hairy trunk,' he held on, and I thought he would have a fit if he were contradicted. So we had in the hairy trunk, Becky and I lugging it between us, down from the garret—where it had lain since shortly after Richard's death. When I opened it, what should I find but a whole lot of papers, that my poor uncle, in the maze into which he had fallen after his great sorrow between his grief for Richard, with his dwelling on every relic that belonged to his son, and his desperate attempts to resume the care of his business, had stuffed into Richard's trunk? I turned the papers over with fear and trembling, my uncle laughing at the sight, in a way to make the blood run cold, all things considered, as he did just now. Among the very first that I came to, what should I read, to my horror, but a will—the will of your grandfather, Mr. Hatton of Redmead, made so shortly before his death, that there is every presumption it was his last will, in which, after the disposal of Redmead, according to the will which was proved and acted upon, and by which the property went soon afterwards, in consequence of other deaths in the family, to his daughter, Mrs. Wyndham, there was an entire reservation and alteration of bequest with regard to his small property of Heron Hill? It was set aside for the benefit of his granddaughters, Anne and Pleasance Hatton, daughters of his son Frederick Hatton, by his marriage with Pleasance Fowler, which Frederick

Hatton had owned and certified to his father, so as to cause him to reconsider and rewrite his will."

Pleasance interrupted the deliberate, prolix narrative at last. "My sister Anne and I were acknowledged and provided for, from the first," she said, drawing a long breath.

"Undoubtedly, and the provision which was under the joint guardianship of my uncle, Mr. Richard Mott, and your father, Mr. Frederick Hatton, until the legatees came of age, was a fair provision for the granddaughters by a younger son, of a squire like Mr. Hatton. Heron Hill, which I have often heard discussed in relation to Mrs. Wyndham, of the Gable House, was a very inconsiderable place in comparison with Redmead, but its value was about eight thousand pounds."

"Then all might have been saved, Anne and all," said Pleasance, scarcely knowing what she said, as she sat thunder-struck, and gazed at the recumbent, stranded author of her misfortunes.

"Stay, madam," cried Mr. Thomas Mott, excited and turgid as ever in his excitement and long-windedness, "there is more to be told, unless, indeed, you are already familiar with the particulars, and apprehend what is to follow." Pleasance shook her head. "Why, Mrs. Douglas, it is on Heron Hill that the last great discovery of Staffordshire coal and iron stone has been made, which has trebled the Wyndhams' income. In fact, as both Mr. Wyndham and his son have been sporting men, and have contrived to dip Sefton Hall deeply, and even their interest in Mrs. Wyndham's property of Redmead, pretty considerably, the Heron Hill rental is now the mainstay of the family's affluence and consideration."

"I am sorry to hear it," said Pleasance, mechanically; and then she roused herself by a great effort. "What have you done farther, sir?" she asked gravely. "Have you communicated with Mrs. Wyndham and her son, or with their lawyers?"

"No, I have not taken that step," said Mr. Thomas Mott, a little stiffly. "Mrs. Wyndham, or her advisers, have withdrawn the Gable House property from our charge within the last ten years. They have done me the despite in the eyes of my townsmen of not regarding me as qualified to discharge the smallest part of my uncle's once numerous obligations; our firm has nothing to do now either with Mrs. Wyndham or her son." And for the first time Pleasance thought she detected a shade of gratified malice in Mr. Thomas Mott's manner.

"The more reason that you should communicate with them without delay," she said, a little sharply, with a passing pang at the suspicion that Mr. Mott was only exhibiting a tithe of the ugly feelings she might be expected to entertain, and with which, for aught she knew, her own heart might swell to bursting before she had done with the life-long injury and the late retribution she could not yet realise.

"I shall retain the will for my own sake and my uncle's, till I can deliver over the trust to a competent authority," said Mr. Thomas Mott, a little doggedly. "My imparting the painful discovery to you, one of the two persons principally concerned, and my perfect willingness to come forward and state all the trying circumstances, ought to clear me and Mr. Richard Mott from all suspicion of malice, not to say collusion."

"I am sure there will be no suspicion," said Pleasance, much more gently; "how can there be? Who was to be benefited by such silent years of treachery? But, write to Mrs. Wyndham's lawyers, Mr. Mott. I shall write to Mr. Woodcock. I think he will not refuse to look into the business for me; perhaps it may turn out to be nothing—I mean of no avail, after all these years. I am like most women, ignorant of law, but the lawyers will decide for me." She rose and stood for a moment looking steadfastly at the wreck of the old lawyer, who, in simple obliviousness, had done her so much wrong. "You do not know me, or why it should concern you to know me," she said, with a faint smile, "and it is well I have not even to say that I forgive you, for there is nothing to forgive. No, no, I am not angry, Miss Mott, how could I be? No one could help it; it is 'by the will of God,' as people say of accidental deaths; but I must go home and think over it all."

CHAPTER LI.—HOW A MAD YOUNG FELLOW LIKE ARCHIE DOUGLAS CONTRIVED TO UNDO THE BEST JOB HE HAD EVER DONE IN HIS LIFE.

MR. WOODCOCK had been informed of the extraordinary coming to light of what proved Mr. Hatton of Redmead's last will. Mr. Woodcock had satisfied himself of the perfect genuineness and legal correctness of the will. He had farther established the fact beyond doubt, that Mrs. Douglas was the sole surviving granddaughter of Mr. Hatton indicated in the will. There were still legal inquiries and forms to be gone through, and probably some compromise to be effected, between the

incredulous, indignant Wyndhams and the heiress of Heron Hill, which had become a land of Ophir, but there did not remain the shadow of a doubt in Mr. Woodcock's mind of what the result would be.

Mr. Woodcock declined to say that he was altogether surprised. "I saw from the first that she was something out of the common—as different from an ordinary country lass as a diamond from a bit of glass. I always suspected that there was a wheel within a wheel. I should not have wondered any day, though she had been announced a countess in disguise, a peasant countess like the peasant Lord Clifford of the middle ages."

Certainly the young squire of Shardleigh did not need an heiress to patch up his shattered inheritance, like many a broken-down young squire of ancient stock; but what wise man would despise a large accession of riches, honourably come by, which might indeed, had all things gone well, been looked upon as the due reward of his having had the taste to appreciate the choice flower blushing, unseen and unsuspected among rude surroundings?

There was an estate, likely to come into the market, in the neighbourhood of Shardleigh, the purchase of which Mr. Woodcock had always looked forward to, as all that was wanted to make Shardleigh the finest property in that part of the country. But then the purchase was so extensive that to make it would cripple even the late Mr. Douglas's heir for ready money in the future, and if Archie went on with his schemes, at the rate he had begun, it would not be a moderate sum at his banker's which would suffice him.

And Archie had actually held the prize within his grasp, had shown that he possessed the discrimination to detect a jewel in the grass, yet the end of it all was, that he had, by some intolerable fickleness or captiousness, flung away his prize, and lost it for ever. Mr. Woodcock could not flatter himself that this enlightenment, with regard to Mrs. Archie's antecedents, and what she was entitled to in the matter of fortune, would serve as a powerful aid to a reconciliation.

Mrs. Douglas had taken advantage of Brighton's not being in season to carry her daughter there, to have ten days' benefit from the sea breezes, while Archie, who had escaped shipwreck on Spitzbergen and Jan Mayen, was gone to his Scotch moor, and before Shardleigh and other country houses began to fill in anticipation of September.

Mr. Woodcock, on inquiry at the house in Grosvenor Place, heard that Mrs. Douglas was not at Shardleigh, for which he had been bound; and, boiling over with sympathetic indignation, tending to personal savageness, as he was at the time, he immediately discovered that after fagging at his chambers since early spring, nothing would set him up like the glare, dust, and unaristocratic turmoil of Brighton in August.

He had no sooner arrived than he made his way from the Bedford Hotel, where he had established himself, to the private hotel in Brunswick Square, where the Douglasses had their rooms. But he had not to go far to meet his friend, for as he took his way along the parade, threading the motley multitude of promenaders, among whom elderly gentlemen, suffering from a prolonged course of clubs, and a pronounced preference for port, formed no insignificant feature, he caught a glimpse of Mrs. Douglas in her carriage, going the usual length of the King's Road. Jane had begged off from the drive, and was away with her maid, reading under an artist's umbrella on the shingle of the beach.

Mrs. Douglas discovered him as soon as he saw her, pulled the check string, and with the most winning expressions of pleasure at encountering her friend, asked him to join her.

The opportunity was excellent, and Mr. Woodcock had no compunction for the manner in which he proposed to spoil sun, sky, and sea, to the gentle lady beside him.

"So glad to see you, Mr. Woodcock," repeated Mrs. Douglas, after the carriage had gone on with its double freight. "I hope only recreation has brought you down. Brighton is refreshing to a poor semi-invalid like me, even when it swarms with complete invalids, or with nobody knows whom."

"I cannot say that I came for my own solace entirely. I had some news which I thought I might as well bring you," said Mr. Woodcock, blunt as he was wont to be to Archie's mother.

"Thanks, thanks. Anything about my son?" inquired Mrs. Douglas quickly, smiling still, but unable to keep out of her liquid dark eyes the anxiety which had been lurking in them ever since Archie went abroad with her a changed man, last autumn. The announcement of his marriage, with the arrangement of a separate maintenance for his wife, ought to have constituted a crisis; but it brought no relief, for Archie had been still more unlike himself, and more restless and unmanageable, after the crisis.

"Nothing bad, in the first instance," said Mr. Woodcock, touching his hat slightly to an acquaintance in a passing carriage, "and it does not concern Archie directly, it has to do with his wife."

"Oh! that poor mistaken, out-of-place young woman; she is quite a weight on my mind," said Mrs. Douglas, with a sigh, while she was rapidly resolving that nothing need be said—she would warn Jane to that effect—even to the family friend, of her daughter's girlish adventure with her unacknowledged sister-in law. "What has happened to her now? I hope she has got into no fresh scrape!"

"That has happened to her which none of us would object to having occur to ourselves," said Mr. Woodcock, with a little grimness in his humour; "her last scrape is only too enviable in this needy age. She has succeeded to a large fortune."

"Impossible!" exclaimed Mrs. Douglas, raising herself up from her graceful lounging attitude, and staring at the handsome acute elderly face in its setting of white hair, opposite her, as if Mr. Woodcock must have gone out of his senses—"a girl of the people, a working girl—pardon me, but it cannot be."

"She may have been a working girl, but she turns out no more of a girl of the people than Archie's sister is, if you will forgive the comparison." Mrs. Archie Douglas's mother was a yeoman's daughter, but her father was Fred Hatton, younger son of old Hatton of Redmead, and brother to Mrs. Wyndham."

"How could it be? Why were we never told so? I knew all the Hattons long ago," cried Mrs. Douglas, her eyes sparkling with curiosity and eagerness, her wonderfully youthful animation and sympathy as at times, coming out in full force.

"You may ask that of your son, or, better, of his wife. I suppose Fred Hatton, of whom I knew something also, and who was a dreamy shilly-shally fellow, at the best, had not treated his humbly-born wife and unacknowledged children so well, that they should make it the business of their lives to recollect him, and boast of the relationship."

"I assure you Fred Hatton was not half a bad fellow, he was a great deal nicer than his elder brother. He was more womanly than manly perhaps—unquestionably more womanly than his surviving sister, that red and white *beauté de diable* Mrs. Wyndham, or that incarnation of mischief, her daughter Rica."

"Then I have been misinformed that you looked not unfavourably on a pro-

bable match between Archie and Miss Wyndham," said Mr. Woodcock, dryly. "I remember she was staying with you last spring when his marriage came out. I fancied that she and Miss Douglas had been friends. There was some tattle of a nearer connection among your acquaintances."

"My dear sir, what would you have?" said Mrs. Douglas, with impatient energy that was in marked opposition to her usual caressing suavity. "People will talk, whether they have occasion or not. How could there be anything in such a report, when as it turned out the poor boy had been married for six months? But what could I do? The Wyndhams were old acquaintances, I was bound to be civil to them, and Rica Wyndham would not have been a bad match, in a worldly point of view, for Archie, with regard to whom I seemed to have a presentiment that he would throw himself away, in making a mad marriage. As for Jane, she detests Rica more than I think it right for a girl to dislike any companion. But we are wandering from the point, except, indeed, that the young Wyndhams and this young lady, Archie's wife, must be cousins. That does make a difference; you are sure that her father was married to her mother? It is an odious question, but it is best to start by being certain, and so obviating horrible mistakes."

"There is no mistake here, Mrs. Douglas," Mr. Woodcock assured her.

"And pray where do her riches come from? I have always been led to believe that Fred Hatton ran through his patrimony."

"From her grandfather's last will and testament, madam, made after Fred told him of the marriage, and which has been lying *perdu* ever since, in the repositories of a doting old idiot of a lawyer, who ought to be flayed alive, only his skin must be parchment already at this date. That will secure to Mrs. Archie Douglas and an only sister, who died young, the succession to Heron Hill, on which the great fields of coal and ironstone have since been found."

"Good heavens! these are what supply the gaps in the Wyndham estates," exclaimed Mrs. Douglas, excitedly; "then she steps into the chief source of their remaining wealth, and becomes rich by their impoverishment."

"Quite so, I am afraid. If justice be done, the last result cannot be helped. But the Wyndhams will still be far from paupers. If Tom Wyndham choose to pull up and put out Sefton Hall with his mother's place of Redmead, which he has been plundering, to

nurse, for the next half dozen of years, he may do very well yet."

Mrs. Douglas was silent thinking. A hectic brightness was in the olive of her cheek, her mobile mouth was compressed. "I am very, very glad to hear it," she broke out suddenly, holding out her two little gloved hands ecstatically to Mr. Woodcock. "Why, Mr. Woodcock, it is quite a romance; Mrs. Archie Douglas will be the heroine of the day; there is nothing that she may not do. I was always romantic myself, it is from me that dear Archie takes his romance; and do you know that your friend Jane, whom we always thought such a good, sensible, prosaic girl, has been bitten in her turn? I did not mean to tell tales, but she has made Archie's wife's acquaintance, in the most wilful, unconventional manner. Yes, she has, Mr. Woodcock. It seems she could not rest till she knew more of her sister-in-law, and had tried what she could do, like a loving young soul, to set the little differences right. She stole a march upon me, when I was in Wales, and she was with the Russels of the Moat. She went with them to Stone Cross, and there she managed it all. Of course I could forgive anything in such a cause; and I may add that Jane came back perfectly captivated with the beauty and natural graces of my daughter-in-law, as indeed you announced yourself from the first."

"I hope the captivation was mutual," said Mr. Woodcock, dubiously. "I have some confidence in Jane, but if she has been able to accomplish a marvel of reconciliation by the youthful audacity of putting her fingers in so delicate a pie, I shall be surprised."

"It is a very delicate affair, as you say," reflected Mrs. Douglas evasively. "I believe Mrs. Archie is very shy, and that it will require the greatest pains to draw her out, but with the strongest motive, surely, it can be done. This strange, unhappy misunderstanding must be dissipated, and cease to cloud two young lives, otherwise so well endowed and so full of promise. Is Archie aware of the change in his wife's fortune?"

"Not so far as I know—not through me."

"But you intend that it should be communicated to him immediately?" said Mrs. Douglas with a little involuntary accent of wonder.

"Of course I have neither the power nor the right, if I had the will, to keep to myself information which the newspapers—if they are not anticipated—are sure to convey to your son; only I suspect its influence may be different from what you count upon."

"You do not mean that our boy, that Archie—the most generous, kind-hearted fellow in the world—will not rejoice at any good fortune which has come to his wife, however she may have offended him? Oh, Mr. Woodcock, I think that you are wrong there," said Mrs. Douglas, making great eyes, and speaking reproachfully.

"That was hardly my meaning," said Mr. Woodcock, smiling a little coolly, and not choosing to explain himself farther.

"And you will convey the good news to Archie yourself without fail, and at once," said Mrs. Douglas, persuasively. "It is not fair that he should not know it already—of course I would be only too happy to write or tell it to him, but you know I have been always scrupulous of interfering with business matters where my son is concerned, believing that the relation between us should have another foundation and another expression. Of course Archie's best interests were my first concern, but after them, I have desired that he should love me with all his heart, as he loved me when he was a child, and my pet and darling; I have wished that he should have no association of contradiction and restraint—nothing but pleasant memories connected with his mother. Can you blame me?"

"I do not presume to blame when I am not a mother, and have only had a father's unvarnished part to play."

"Do not say that. And a man, especially a young man, will take freely from his father, or his father's friend—in short from a fellow-man—what he will not tolerate, or at least will be sure to recall with a grudge if it has been authority openly exercised and insisted upon by a poor mother. Now I cannot tell how Archie will feel, where he himself is concerned, about this inheritance of his wife's, though he can only experience satisfaction on her account. He has always been odd in some things, in his goodness and cleverness, and I am afraid he grows more uncertain and impracticable every day. He might resent my intrusion into his affairs, though it were to bring him this news of his wife's succession; he might construe it into arrogating a title to meddle and advise, which would be more invidious than ever, now that he is his own master. But none of these objections hold good with you, who are Archie's appointed legal adviser, as well as one of his oldest friends. He will always be delighted to receive and listen to you; he will not mind your recounting and dwelling as a man of business on so extra-

ordinary a piece of good fortune. Dear Mr. Woodcock, you must go north immediately, see Archie, and tell him what so nearly concerns him."

"I do not decline to comply with your request, my dear Mrs. Douglas; indeed I had already meditated a run north; and I do not wish to fling cold water on your amiable fancies—facts may they prove with all my heart; but there are two ways of regarding things. Permit me simply to state that I am by no means certain my friend Archie will accord to me and my news the ready and entire welcome that you anticipate. I have a fear that our meeting, if accompanied by remonstrances or entreaties on my part, will prove stormy rather than sunshiny. More than that, I am not convinced in my own mind that the news which I am to carry are really such good news for Archie—not to say his wife—as you, in your partiality, hold."

"Don't be a prophet of evil," she entreated him; "let me think all will be well, and that this splendid piece of good fortune will not be wasted."

He did not know whether to admire or to be affronted by the ease and rapidity with which she had got over the shock of the announcement. Nay, with her large share of the versatility of women, she had so accommodated herself to it, on the spur of the moment, that her whole views and intentions had undergone a transformation within the compass of a short drive.

The blazing sun of Brighton had not sunk perceptibly so as to lengthen the acceptable afternoon shadows. The hot multitude clung still to their refuge on or under the pier, and sought to temper the fierce heat with what moist, salt-flavoured air was stirring. In despair of other shade, people resorted to the ascending squares and steep side streets—given over to lodging houses or to a thriving trade in luxurious edibles and fast and fashionable attire—and after passing the faded toy grounds of the old Steyne, arrived at the green oasis of a modern croquet ground, among the mature trees and bushes encircling the grotesque hideous barbarism of the Pavilion. The various brass bands continued to clash and clang, as if the individual men were so many crickets and salamanders to which warmth was a natural element. The fishermen and fishwomen who shouted soles and screamed "red mullet and mackerel all alive—o," were pursuing the even tenor of their way. The girls who ought to have been at Cowes or Ryde

in their blue yachting dresses—the more amphibious girls in the Galatea stripes and brown Hollands—the full-blown and bouncing—the lean and stiff matrons and maidens—the jaunty old—the lounging young men, strolled on the parade or occupied the benches. The invalids jogged along in unbroken file, and looked with wistful, dazed eyes at their better-faring fellows. The carriages of high and low degree, from coroneted coach to ramshackle cab, with the occupants of the last more elevated in spirits than the first, rolled and rattled along. The riding parties of school girls and riding masters, fathers and daughters, brothers, sisters, friends, and lovers, and idle young men, ambled and cantered, trotted and galloped in spite of the heat, and clattered generally the same as ever.

Jane had been too lazy to do more than turn a page of her book, and to wonder if her mother were returning, and whether afternoon tea could be refreshing in such weather, when her mother had heard tidings which caused her to forget five-o'clock tea, dressing, dinner, even the expediency or necessity of asking Mr. Woodcock to join the little party. For Mrs. Douglas's mind had sustained an upheaval and overthrow on the most important interest of her life. She had recovered her balance and taken her cue with admirable if astounding celerity. But all the same her altered sentiments must pervade and affect her own and her daughter's future comfort and happiness, and assist in colouring the remainder of their lives.

Mrs. Douglas's quick brain and lively imagination were already full of schemes and projects, hopes and expectations. To marshal and conduct these, with pliant deference and subtle sweetness, would be sufficient to occupy and engross even so well-armed and accomplished an actress on the world's stage, for many days.

CHAPTER LII.—REPUDIATION AFTER REJECTION.

MR. WOODCOCK had some business which imperatively demanded his presence at Sharnleigh, but after it was settled his next destination was the north of Scotland. In the facilities for travelling which awaited his necessities and his convenience, within three days of his drive with Mrs. Douglas on the King's Road, Brighton, he found himself in a scene well-nigh as far removed in features from the colossal watering place on the coast of Sussex, as Timbuctoo is from Tyburnia.

In place of the low bare downs, the white

chalk, the limitless sea, he had the lofty mountains, the grey granite, and the narrow rushing rivers of north-western Perthshire. For the tumult and hum of London on the shore, he had the silence of the everlasting hills, broken only by the echoing roar of the railway which has invaded even these solitudes, or the stray crack of a gun, and the crow of a moor-cock.

Since he left the train, Mr. Woodcock having hired what he called a fly and the hotel-keeper a carriage at the Station Hotel, drove into yet deeper recesses of the Highlands, until the wilds—not in their salient features merely, but in their lesser individual traits—were all around him. Here were waving birch, and mountain ash—with the berries turning from wax to coral, thick oak coppice, brakes of blue green junipers, endless reaches of yellowing bracken, purple heather and red ling, tall purple and white fox-gloves among the rocks, downy white cotton grass on the bogs, and the scent of the bog myrtle, and the reek of the peat hovering over all.

Mr. Woodcock had often been in the Highlands before, and had leased shootings of his own, which had brought him into closest contact for weeks with that landscape which, when not blurred by rain, or shrouded in mist, can boast in its poverty such giant forms and grand outlines, such colours of "purple, and orange, and grey" in heather, lichen, bracken, golden oats, and bald crag, as no other province in this great, prosperous, and fertile Great Britain can show.

Archie had taken a shooting lodge in the shadow of Schihallion, and was keeping house there for the present with several old college men, to whom Douglas once of King's shootings formed common ground.

Notwithstanding the host's inherent sociality, Mr. Woodcock was told that Mr. Douglas had gone out alone. And it was coming back alone from the hill in his shooting coat and knicker-bockers, with his dog and his gun and a heavily laden game-bag, that Mr. Woodcock—taking advantage of a fine evening to stroll from the unfenced lawn up on the moor—met the man of whom he had come in quest. Archie's dark face—burnt to a tint nearer that of mahogany than any it had taken at Manor farm—first flushed purple, and then paled to a yellow brown, as he recognised his visitor, and without any of his mother's gracious dissimulation, called out, "What brings you here, Woodcock? Is there anything wrong with—" he stopped a second without supplying a name, and then he changed the form of his

question, "Have you come from my mother and Jane?"

"I saw them at Brighton the other day, but I have not come directly from them. I am from Shardleigh, and I have taken a run north, for the purpose of talking over a curious example of the law's delay, or rather an incredible instance in which law and justice have fallen short—till now—in which you have an interest."

"Is that all?" inquired Archie in a tone made up of intense relief and a faint echo of disappointment. "Thanks for your attention to my interest, but your story will keep. I shall be late for dinner, and the fellows in the Lodge there are always as hungry as hawks; neither, I dare say, will you have any objection to having your creature comforts seen to after your journey. You must stay a week, and we must give you the best sport as well as the best cheer going, in return for your tramp, or rather your ride. The grouse are suffering from some of their usual ailments, but they are no worse here than elsewhere, and the fellows say the cook is up to the mark."

It was spoken with a well-simulated reflection of the ready unstinted hospitality which might have been expected from Archie Douglas, or Joel Wray, but there was a strong, half smothered effort at spontaneity which a practised eye could detect in the whole reception.

"I have shot with you, Archie, and you know the length of my tether," said Mr. Woodcock, with alacrity and with a modest consciousness of his own merits as a sportsman; "but I am not going to brag of the steadiness of my eye and my hand, not to say the length of my wind, in a trudge over the moors with a parcel of lads who might be my grandsons. And unless the grouse are the reverse of shy, I could not undertake to make so heavy a bag as that," glancing aside at the trophy of Archie's skill. "Are the birds bold, or were you early out?"

"I don't know that the birds or the amount of time have much to do with it," said Archie, playing with the lock of his gun. "I really believe that, conceit apart, I deserve what credit is going. I am in capital 'fettle' for slaughter, as Laren says," he added with a laugh. "The other fellows get weary, or hungry, or have letters to write, or want to pay visits to the next shootings; but I go in for hard work, and I never seem to need an unyoking. I was out at five this morning, and I started again after luncheon—the very keeper lay sleeping with his

bonnet over his face by the spring, when I stole a march upon him—but I am afraid I have lamed my best dog, poor brute, good Flora! she would limp after me, though she must have seen that I was unconscionable. Commend me to a dog for fondness. I must see to her foot and her supper myself, before I sit down to my own dinner, so come along, else the fellows will be fit to gnaw their own boots, or fall foul of each other."

Mr. Woodcock had no chance of speaking to Archie till three hours afterwards, when cigars and bed-room candles were lit in company. Archie was determined and indefatigable in serving his friends and guests, as only a genuine host can serve them; just as he went in for hard work in sport, or cared for his dog's foot, or had been given to patronising everybody in past days and in a different sphere. If there was a disproportionate price paid for the privilege of serving, only the servant himself in such silent, passive tokens as the harassed, careworn lines imprinting themselves on the pleasant prepossessing face and depriving it prematurely of its youthfulness, was there to own it.

The room used by the gentlemen as a smoking-room was, in the homely adaptability of the lodge, a little library where correspondents wrote letters; a stray book on a lounging chair, even indicated that reading was occasionally done there when the weather was hopelessly wet, and when eyes did not close and heads nod with sheer fatigue, and the strength of the mountain air.

Mr. Woodcock took up one of these books of light reading, and found that it was Clough's Poems, opening in the middle of the Bothy, with Archie Douglas's name on the title-page.

"It is a parcel of lies, like much poetry and many books," said Archie, curtly, not appearing to relish Mr. Woodcock's inspection of his studies. "I took it up before these fellows came. Mrs. Maclaren, that is the wife of Laren Maclaren, the head keeper who had the sense to marry a cook—the same that 'does for us'—has a *rara avis* in her assistant, who cannot have touched the chair from that time to this. What would any of you fellows give for such a dame in college, or clerk in chambers? As for me, I think I shall renounce chambers and libraries as resorts for owls and bats. I have a fancy for setting out on long travels out of order, Woodcock. I have rather a notion of making acquaintance with the Bret Harte fraternity—the heathen Chinee and the rest of them, and of coaching

them into greater honesty and less brutality, and being coached by them, in return, in muscular Christianity, away over in California. I should not object to seeing the man in Oregon, up amongst the bears and the snows, who went about clad in sacks, armed with a long bow and a bowie knife, and kept a copy of 'Nicholas Nickleby' in his provision chest."

"In the meantime I must have a few words with you, on my business, Archie, and as the day is given up to sport, we must make the best of what is left of the night," said Mr. Woodcock, drawing Archie out on the lawn. There walking up and down with the rays of the young moon, too faint to light up tell-tale faces, though it revealed dimly vast ranges of mountains, called in their indefiniteness, and to distinguish them from the towering, distinct and separate sentinels of the landscape such as Schihallion, Ben Lawers, or Ben-y-Gloe—glens, Glen Ordell, Glen Dowart, Glen Ard—Mr. Woodcock told Archie Douglas of Pleasance's acquisition of fortune.

Archie heard the tale silently. His first observation was, "Did she send you to me?" and except for the restraint, so extreme as to sound harsh in his voice, nothing could be drawn from it.

"I cannot say she did," said Mr. Woodcock, with a little hesitation, "she made a communication with reference to you—a natural communication from her point of view. It was that she would not want anything more from you."

"Yes, I see, I thought so," said Archie, with bitterness, "having refused to fulfil her obligations, the moment it is in her power, she adds repudiation to rejection. She will have nothing more to do with me—not so much as to accept the wretched dowager house at Stone Cross with the pittance attached to it."

"You forget," said Mr. Woodcock, preferring to take the remark literally, "that it has been in her power all the time, since you conceded her right to dwell apart, to refuse to accept from you the provision which I induced her to take, for your credit and good name in the world. The fact is, that since she married without any settlement, and since her grandfather made only such provision for the marriage of the girls as turns out worthless, she has no separate control of her property. I must inform her she is as much dependent upon you as ever."

"That is all fudge, and you know it, and so does she. It is very well in the eye of

the law," said Archie, in a tone of exasperation, "but you are aware sense and feeling have something to say to it also. The plain truth is, that I have married a woman with whom I have quarrelled, who has on that account declined to live with me, and who on her accession to an unlooked-for inheritance throws me back the allowance which she had from me. Of course I have nothing to say against it. I have nothing to do with her wealth—if wealth it be, though I will go so far as to say that I suppose I ought to be glad, and to wish her joy of her good fortune which has freed her from any claim on me. I believe she will make an excellent use of it. Your super-human, super-wise, unrelenting woman, is apt to be as virtuous to the world at large as she is pitiless to the one offender—the worse luck to the weak, erring wretch, who would collapse before her tremendous superiority, if she had anything to do with him."

"Archie," said Mr. Woodcock, "there are some affairs which a man must manage for himself, and in which he must be the best judge of his own good; but you will hear this appeal from an old friend. You are a young man, you have a long life, I trust, before you, which may be made or marred by your present conduct. Is your quarrel with your wife—who was your own choice, and, as it seemed to me, one of the most attractive women I ever met—irremediable?"

"I believe so," said Archie, doggedly. "No, Mr. Woodcock, it won't do. Both she and I made a capital mistake, and utterly misunderstood each other. This will not mend it. Mend! it will but serve to consummate it. There was no occasion for your coming north to tell me that Mrs. Archie Douglas was gently born, on one side of the house like myself—I knew that from her own lips already—and had succeeded to tens of thousands, making her one of the heiresses of the day. That is news to me, but it is certainly no concern of mine, as I do not happen to be a better sort of black leg, to make harvest of our division, and seize upon my wife's fortune, which does not belong to me. Having Shardleigh and rather more money than I can spend, I have not even the pretence of needing to spoil her goods as well as to make her miserable; but really I will do myself the credit to say, that I do not think I have the inclination. You can conceive what the forgiveness of such a woman thoroughly offended means—sad cold condemnation. She cannot help it, it is the essence of her unbending righteousness of

character which has rendered the punishment heavier than the offence; but she is incapable of weighing that. I could not stoop and subject myself to it, not while I retained a man's strength and spirit. If I were old and broken, I grant you, I might creep home and beg her to pardon and speak a soft word to me—if that could be—the last thing; but I could not do it now. We will not speak any more of it, save that I could have waited for the tidings that I am saved a second dowager's allowance. But come, old friend," broke off Archie, his passion melting into kindliness, "don't let it interfere with your satisfaction on her account. She is your friend, you know, which I can freely own is to the honour of both. Don't let it prevent your having a jolly time, like the other fellows, up in Glen Ard. What would you like to do to-morrow? Shall it be deer, or grouse, or salmon trout? And have you any choice of the quarter any more than the victims? You shall have my best gun or rod, and Laren will lead a pony in case you get foot sore; you are not case-hardened as we are."

All the comfort Mr. Woodcock could take under the circumstances was, that so much remained of the Archie of old, in this impracticable Archie caught in the toils, and refusing to stir hand or foot, to break the meshes towards his own deliverance.

CHAPTER LIII.—A FREE WOMAN—AN EMBASSY FROM THE GABLE HOUSE.

PLEASANCE was free—so far as being constrained to be the chief pensioner on her husband's bounty, and to submit to the rules laid down for a dowager, were concerned. Her second inheritance, of an amount or property which would have overwhelmed her and been a distressing anomaly in the old days at the Manor House, had done her this good turn. And as gifts alter with standards, so Pleasance, after the first sharp recall of what might have been, was only sedately impressed by the prospect of the large income which would not only, as she imagined, entitle her to live where and how she liked, and to travel far and near, but which would bring with it its own duties and obligations.

Pleasance said she was, and was sure she was, thankful for independence, for her father's acknowledgment of his children in this proof of his fatherly concern for their welfare.

She tried to keep from thinking how much more joyous that earlier inheritance had

been, which came clogged with no burdens. It brought only pleasures, and reached her when the future lay all before her, and no disaster beyond cure had robbed life of hope and heart to her—that small heirship over which she had sung as she portioned it into friendly offerings of a softer chair for Mrs. Balls, a new whip for Long Dick, a crutch for Lizzie Blennerhasset, and a collar for Pincher.

With regard to her personal inclinations, Pleasance told herself, with a little laugh, that she should like nothing so well as to have a farm of her own like the Manor farm, whether at Heron Hill or elsewhere, engage servants, stock it with animals, and be her own steward. It would give her some pleasure to wander in her own fields, and superintend her own dairy and poultry-yard, to see to the feeding of her own oxen and sheep and hogs, as well as to pet her lambs and calves.

Then she shook her head at the idea, and renounced it, not only as too full of memories, but as belonging to the past with which she had done, and to a stage in her life on which she felt the curtain had fallen. She had a conviction that there was neither right reason nor true morality in insisting on retracing her steps, and taking up again the associations and aspirations which had been dropped in the natural course of events. That would be at once like "greetin' ower scailt milk," and like putting new wine into old bottles. Better go on her journey of life treading fresh paths, and learning, if possible, wider and higher lessons.

Pleasance had written to Mr. Woodcock immediately after she had been summoned by Mr. Mott to have her grandfather's will disclosed to her, and she had then expressed the intention which he had conveyed to Archie Douglas, that if the will took effect, she would not accept a further allowance from Mr. Douglas of Shardleigh. The conclusion had seemed to Pleasance merely just and a matter of course. She had written it not only without a particle of malice, but without much thought or feeling on the subject.

It was not till the realisation of her purpose drew near, that she recoiled from what might look like a swift, contemptuous, and triumphant casting-off of the countenance and support which she had received. She became sensible that she was about to quit all that she knew of home for a second time in her life. She was to go forth once more on the world, not only a much poorer woman,

in reality, than the young working girl who had entered so gaily on her portion of a few hundreds, but actually, in the middle of her independence, a more desolate and exposed woman than the alien wife who had consented to be dependent, and had been passed on and established under cold, tolerating, and protecting auspices in the dowager establishment of Willow House.

In the meantime all the good that Pleasance got out of her inheritance was, that she felt suddenly freed from a fear which had lately visited her, lest the dowager income settled on her, which had seemed so large at first, should prove in the end, what with her vicarious house-keeping, her charities, and her prospects of travel—if she should be enabled to put them into execution—insufficient for her wants. This result appeared so intolerable in her case, that Pleasance was resolved it should never happen with her will, if denial of private tastes and staying at home for the rest of her life, could prevent it.

But there was no longer the fear of a collapse. So Pleasance, who had been growing penny-wise, and in danger of taking to scraping and hoarding, indulged herself in unlimited supplies of market flowers and native birds, in such bits of old brown carved wood and blue and white china, with maize and scarlet Mentone baskets, as she had learned to fancy, to relieve the hard, rather than cool prevailing grey, of the Willow-House drawing-room.

That drawing-room remained no longer uninvaded. The Dean's wife, followed by the wives of subordinates in the Close and of members of the smaller gentry in the neighbourhood, took advantage of Pleasance's recent appearance on Lady Lewis's birthday to set on foot inroads on Pleasance's retirement and to make overtures to her acquaintance, which she did not know how to repel. She continued shy and indifferent, for she could not see how she could do any good to these people, or they to her, so that they would never be really friends; but she had ceased to be actively hostile.

She received the explanations delicately made to her by her neighbours of their having heard that she was out of health, and desirous of living in strict seclusion, while she believed them so far as to think she had brought the influx upon herself by going to Lady Lewis's. She was still so unworldly that it hardly occurred to her, in the middle of her lingering prejudice, to attribute the tide of company to the discovery that she

was descended from the Hattons of Redmead, and was the true heiress of Heron Hill and its mines.

Pleasance paid the penalty—so far as she understood it—quietly; she had not been accustomed to call social fatigues a bore, and she found her guests perfectly civil in her own house. She endured them stoically, though she was chary of returning their civilities.

If Pleasance had known it, her manners, with their curious mixture of educated intelligence, formality, rusticity, native friendliness, and that tinge of shyness, which was held sensitive pride, were highly approved of at Stone Cross. They were voted original and charming, the very manners for a newly-found heiress.

Pleasance had one little surprise in connection with her visitors. A voluble lady let fall the singular piece of information that her old friend Mrs. Douglas, from whom she had heard lately, had evidently taken it for granted that she, Mrs. Fielding, must know Mrs. Douglas's daughter-in-law. Mrs. Fielding further inferred, from the letter, that Mrs. Douglas was coming herself to Stone Cross during the autumn, and hoped to meet Mrs. Fielding and Pleasance together.

"You must be mistaken," Pleasance had said coldly; "I shall be gone from Stone Cross before then;" but in her own mind afterwards she could not account for the mistake. A still greater shock in the form of an ovation was in store for Pleasance.

She had seen and heard nothing of her kindred at the Gable House lately. She believed that they had started without a day's delay for London to meet the son and brother, and to consult with the lawyers on the receipt of the startling, unwelcome intelligence which threatened to oust them from Heron Hill, with its mineral wealth, and instal in their place the long-neglected relative, who had turned up unpropitiously in the person of Archie Douglas's low-born wife, the very young woman whom Rica had been bent on treating as a tool and butt.

Sometimes it had crossed Pleasance's mind that the recent flocking of old friends and neighbours of the Wyndhams to greet their rival and successor in the coveted possession of Heron Hill, was not very complimentary to the allegiance of those good folks. She had certainly never expected to see the Wyndhams themselves at her door, or in her drab drawing-room. She had decided that her cousin Rica's first visit with Jane Douglas would be her last. Pleasance had

been fully persuaded of the conclusion, even when she had answered Mr. Woodcock's request for her mind on the matter, by giving him entire power to make such concessions in remitting past obligations as could be permitted in the interest of both parties. "I am quite aware," Pleasance had wound up her letter to Mr. Woodcock, "that the involuntary suppression of my grandfather's will, of which everybody concerned—not even excepting poor old Mr. Mott—was innocent, has been a great misfortune to the Wyndhams, as well as to me."

A few weeks afterwards, Pleasance coming down stairs, and glancing out of the stair-case window which commanded the Cathedral and the street, saw the Wyndhams' phaeton drawn up at the gate of the Willow House, Rica already alighted and Mrs. Wyndham in her imposing proportions, preparing, with her man-servant's assistance, to follow slowly her daughter's example.

Pleasance needed the little time that she had gained to recover herself.

It was all very well to have preached to herself tolerance and amnesty in time past, and to have recalled her own offences and bidden herself be charitable towards her fellow-offenders. It was equally simple to say that outward familiarity had deadened the pain, and almost taken away the consciousness, of looking upon the woman of her own blood who had yet been so pitiless to her youth and to Anne's, and whose pitilessness had been the cause of Anne's death and of all the confusion and suffering which had followed.

It was another thing for Pleasance, not only to be brought face to face with her aunt, but to have that aunt come to the niece whom she had relentlessly turned back to her proper place, as Pleasance instinctively felt Mrs. Wyndham must have come, an appealing suppliant. And if Pleasance grew giddy and sick with the reversal, what were Mrs. Wyndham's feelings? What were the feelings of Rica, who had been twice superseded, and who, when only partially acquainted with the facts, had sought in her philosophical fashion to amuse herself with her humble supplanter in Archie Douglas's favour?

Pleasance with her quick sympathy put herself in her aunt and cousin's goaded and galled places, bearing her own burden all the while, and could have sunk into the earth under the double consciousness. It was only when she began to recover that she became sensible with a faint gleam of

humour flickering across her pain, that she was feeling for all three. However sorely and grievously disappointed, intensely chagrined, even considerably alarmed, Mrs. Wyndham and Rica might be, they were still cool and confident mistresses of the situation. It was Pleasance, who was hot and cold, and quivering, distracted and penetrated with shame for those who might be mortified, but who in their obliviousness and audacity carried their mortification cavalierly, and felt little or no shame for themselves.

"I suppose I must be mistress of the ceremonies," said Rica, "as I have the advantage of a previous though slight acquaintance with the lady of the house. Mamma, this is Mrs. Archie Douglas, your long-lost niece as it proves, who has turned up so opportunely for herself, and so inopportunely for us; but is there not a proverb, it is not lost that a friend gets? Cousin Pleasance, we must renew our friendship in a fresh form: I am sure you will forgive me, if I do not take to it at first so aptly as to the old."

"Yes, my wild girl anticipated matters, it seems, by breaking down barriers and insisting on knowing you," said Mrs. Wyndham, making an effort, and looking with her cold, dark eyes into Pleasance's agitated face.

"Romantic people would say it was the mystic tie of blood that impelled me," said Rica, "but I am not romantic, and I should not think the mystic tie would extend to cousins, that would be making it too cheap."

"How long it is since I have lost sight of you!" said Mrs. Wyndham again, with a very slight shade of awkwardness, but rather in an accent of lofty reproach. "Why did you not seek to communicate with me again? I had nearer relations and many engagements, but you were not so engrossed. You, my brother Frederick's child, ought to have made some attempt to revive my recollection of you and to win my regard."

"You forget, Mrs. Wyndham," said Pleasance with returning spirit, "that in the only letter we, Anne and I, had from you, we were told that you had done with us, and forbade us to approach you in future."

"But I had received provocation," Mrs. Wyndham prepared to defend herself.

"You might have had," said Pleasance.

"You were two very rash, foolish, I must say rude girls; you were badly advised by your friends."

"We had no friends," said Pleasance with a sad fleeting little smile. "I must take all the blame that is due."

"I do not wish to reflect upon your poor sister."

"We had better not speak of her," said Pleasance, drawing her breath faster and making a restless movement. In reality Pleasance had a great fear of herself, lest she should be driven to retaliate on the enemy who was in her power.

"Indeed I do not desire to pain you, Mrs. Douglas," said Mrs. Wyndham, suddenly recalling the motive of her visit. "I believe that in family quarrels there are generally faults on both sides." Having made the liberal admission, she smiled with a kind of stony graciousness, settled the folds of her rich dress, and looked the beauty she had been before Pleasance was born. "For that reason the past is better let alone, don't you think so? I am glad that you have managed to do well for yourself, in spite of omissions which we may still be able to effect something to remedy."

"In short, now that mamma has found you, she is prepared to be proud of you. I do not say that it is your reward for captivating and fixing for a sufficient length of time a *parti* understood to be so fastidious and capricious—in spite of his deceptive good nature—as Archie Douglas. I am afraid that we should never have discovered and made the best of you, even for that great merit, had it not been for the last strange turn of affairs which we feel to our cost, and which has made cultivating you our best policy. I am honest, Mrs. Archie Douglas, or cousin Pleasance, let it be which you prefer, but I mean it to be a mutual benefit," said Rica with her bold bravado.

"My dear Rica!" protested her mother, but with unfailing indulgence, "Mrs. Douglas, my niece, had need to be acquainted with your naughtiness, which passes all bounds."

"Mamma," interposed Rica again, "I don't think that it is any compliment to your niece, as you have grown fond of calling her within the last ten minutes, though we had scarcely heard that you had a niece till five or six weeks ago, to suppose her such a goose as not to comprehend that we cannot help ourselves. We have been completely sold by the impropriety—according to our side of the question—of grandpapa's having let himself be played upon by Uncle Fred, to make what is for us so fatal an alteration in his will, and by the drivelling imbecility of that old wretch Mott, who ought to be hanged for his part in the transaction. But the abominable will is right and good, and we are forced to throw up the game, and

make what terms we can with the winners. I hope you admire my frankness, Mrs. Douglas."

"I think I estimate it at what it is worth," said Pleasance.

"Rica, Rica, do not interrupt me perpetually, child, and increase my difficulties a hundredfold by making game of this disaster as of everything else; of course you are in jest, and Mrs. Archie Douglas sees it. But let me speak, let me do what I am come here for," began Mrs. Wyndham again, with a submissive patience and self-abnegation, where her own child was concerned, that went near to touching Pleasance. I do not attempt to conceal," continued Mrs. Wyndham, with a return to her dictatorial pomposity, "that this discovery of a later will of my father's, devising away Heron Hill, now that it is become far more valuable than Redmead, is a very serious matter to us. And as my father never could have contemplated benefiting you and your sister whom he had not seen or heard of until a few days or weeks before he made this will, at the expense of his other grandchildren whom he knew and loved, it strikes me that circumstance should be taken into account in the decision. But the lawyers will not hear of it."

"It is the chance of war," said Rica.

"Neither could my father's father have contemplated our reverses," said Pleasance.

"I grant there may be some truth in what you say," admitted Mrs. Wyndham; "but only think of it, make it your own case," she urged with increasing warmth. "My children have been brought up in luxury, with warrantably high expectations. My son, whom you have never met" ("That pleasure is in store for you, and you two are safe to agree," said Rica, with the utmost gravity), "my only son," Mrs. Wyndham resumed the lead in the conversation without suffering herself to be put out, "has never done anything that his mother could find fault with," she added proudly, "though I might have wished that he had gone into Parliament, where I have no doubt he would have made a figure, or married and settled down quietly at Sefton Hall, his father's place, or at Redmead, mine—" ("What a pity you are married, cousin Pleasance!" said Rica in another audible aside.) "But such has not been his inclination, and as he has had the expensive tastes and pursuits of his age and class, both properties have become a good deal burdened. There was no occasion for him to save, with the

Heron Hill rents always increasing and coming in to supply all deficiencies. I need not say that it was with my entire consent he borrowed money on Redmead."

Rica looked what she would fain have said, but still had the grace left to refrain from saying—that her brother was the most selfish, unscrupulous man upon the turf, who ever ran through family possessions, and impoverished and encumbered his widow mother, whose estate was not nominally his, in her lifetime.

"My elder daughter Nelly," Mrs. Wyndham spoke on, standing in the breach, and waxing long-winded for the honour and profit of her family, "has married into the ancient and noble Roman house of Barbarelli, compared with which the houses of our English nobility are only of yesterday. It was a connection that would have been a source of satisfaction to any Talbot or Howard among us, since our insular prejudices are not proof against the superior culture of the higher classes. My son-in-law, Count Pietro, is a noble fellow in himself; while Nelly's palace in Rome has such gems of art, such pictures, cabinets, and tapestry, and the grounds of her country-house have such cypresses and citron-trees, as put our poor sign-painters' daubs, upholsterers' hangings, and ribbon-bordered gardening to shame. But only a few of the old Italian nobles retain much beyond their palaces, and lands which are not profitable in a commercial sense, and the Barbarelli are not among the few."

"That is to say," explained Rica, "that my thrice-noble brother-in-law, count of the Roman Empire, as far back as it will go, and as fiercely proud as a paladin, is as poor as a church-mouse. Poor Nelly in her palace is constantly begging mamma to send her cheques—to furnish her and the little counts and countessina's with necessities—not to say, to defray Count Pietro's display on the Corso, and his losses at cards."

"Rica's playful exaggeration is a version of the truth," allowed Mrs. Wyndham with a sigh. "Nelly, in spite of her promotion, is forced to seek help from her family, until the death of Count Pietro's father."

"Until doomsday," asserted Rica coolly, "the penurious old count standing in the gap, does more than prevent the settlement of present claims, he stops the incurring of fresh debts, which will go on apace when he sleeps with his fathers. Count Pietro is so used to insolvency, that it is like native air to him; even his pride, does not prevent his flourishing

upon debt, like a child, who neither knows how to spend nor how to spare the first money it has had in its life, while Nelly has grown desperate."

"Rica and I don't require much," proceeded Mrs. Wyndham, with a sort of haughty humility; even if we should never be able to afford another season in town, we can keep house here, or at Redmead, when Tom does not want it, quietly enough. Only it goes to my heart to look forward to my child's being deprived of the advantages to which she is entitled, and of all proper opportunities of settling in life."

"Don't mind me, mamma," observed Rica carelessly. "I was getting sick of seasons in town, when the proper man was never spoony upon me, and I had begged off from the last. I should not mind trying the village-maid dodge, seeing how it prospers."

"You do not understand—a dear, thoughtless, unworldly girl cannot measure such losses," said Mrs. Wyndham, in melancholy comment on Rica's impertinence.

"Will you excuse me for asking you a direct question?" said Pleasance to Mrs. Wyndham. "As far as I have been able to follow, you have described the advantages, with their attendant disadvantages, that your children have enjoyed; but why tell it all to me? Indeed, I seek to be just and gentle where our claims clash; but I had rather that you would say plainly what you expect from me, and I shall comply if I can."

"Thanks, I could not for a moment imagine that you would be utterly unreasonable. I did give you credit for a little tact. It was impossible for me to suppose you could be guilty of refusing to meet and consult with me as a friend on our mutual position," acknowledged Mrs. Wyndham with the most comfortable self-satisfaction, instead of the most uncomfortable gratitude.

"I told you that the benefit was to be mutual," said Rica nodding.

Pleasance did not see the mutual nature of the benefit, but she possessed her soul in patience and was silent.

"My dear—you will allow me to call you so?" said Mrs. Wyndham with increased condescension.

"Call me what you please," said Pleasance; "but surely we are, to say the least, stranger kinswomen to each other."

"That fault will soon be amended," announced Mrs. Wyndham, with what sounded like a ponderous copy of Rica's airiness. "I am afraid that I must approach a delicate subject in explaining myself farther to

you. I do not pretend yet to my niece's confidence, but I must allude to an incompatibility of temper between her and your husband, which has resulted in a separate maintenance. I must refer to the fact that the Douglas family have not taken you up, or given you the least countenance beyond the permission to reside here, which is only one way of getting rid of you."

"Mrs. Wyndham," said Pleasance with burning cheeks, "if you mean to insult me after all, which I can hardly conceive under present circumstances, I decline to be insulted by the truth which you have spoken. But what have my personal affairs to do with this discussion?"

"A great deal, if you were not too brusque to suffer me to finish what I had to say," retorted Mrs. Wyndham; "you must get rid of this brusqueness, if you would have me make anything of you. Mrs. Archibald Douglas, you must be aware that you will be, even with the inheritance which you propose to take—I do not say unwarrantably, I allow naturally, when it is in your power—from my children, a young woman in a very difficult position. You will need not only all your newly-acquired fortune, but all the friends you can win to support you, in order that you may get a proper introduction into society and standing in the world."

"And mamma and I will undertake for a trifling consideration—plain speaking is best, is it not?—for some compensation to Tom and the rest of us, and for mamma and me, the use of your town-house, or opera-box, or of your carriage-horses when we don't have our own—bagatelles of that kind, simply to tame you, coach you, and introduce you into the great world under our all-powerful auspices. What do you say to it? I assure you I am quite in earnest," declared Rica coolly.

In her excitement, indignation, affront, and sense of ludicrousness combined, Pleasance did not cry that it was too much; when she found that her forgiveness was to merge into her being suborned and bribed, she startled her newly-found relatives by laughing tremulously. "I beg your pardon," she said, abashed at her own untimely mirth; "but you are quite mistaken in my aims and expectations, and I am utterly incapable of profiting by your kind intentions. I was not even aware that I required an introduction or standing in the world, which I entered very nearly twenty-two years ago, and in which I have made my own way till very lately. Shall I say that I am not to be

bought, and neither am I to be laughed out of any favour that I can confer? For anything more, you are freely welcome to the best terms that your lawyers can make—I have written to that effect—or to any other worldly benefit that I can render you, for I agree with Mrs. Wyndham, that the case is a hard one for you in the end, as for me and mine in the beginning. But you must consent to take any favour as a gift—as your right if you will—but not as your purchase. It is not only that I refuse to barter such small power as has fallen into my hands, and that I profess to be incorruptible, but that literally you can offer me nothing. I will not enter into your world, I do not own your standard.”

“Ah,” said Rica quickly, “your disinherited prince who has come into his own again, or your beggar millionaire is apt to be *tête exaltée* at first; but wait a bit, till the gates—not of heaven, but of the pleasantest places of the earth, don’t fly open to his ‘Open Sesame,’ as he in his conceit has fancied, but grate on their hinges for want of a little of the oil of old-established proprietorship, *convenance* and *savoir faire*, he is fain to come down a flight, and accept the obliging aid which he spurned before. I don’t despair of being your Mentorina and right-hand woman yet, cousin Pleasance.”

Mrs. Wyndham had been staring blankly. “I am ready to excuse a great deal that is odd and unpleasant, I am ready to encounter and conquer it, if possible, for the sake of my children, and of my niece to whom I had hoped that my experience and influence might have been of use,” she said almost speaking to herself in her amazement and incredulity. “Of course no knowledge of the world, no good breeding even, was to be expected. Still, you do not mean that you reject the good offices of the only relations you have in the world, Mrs. Douglas; relatives who, I may say it without partiality, would be a priceless boon to any *débutante* or *nouveau riche*, and who have shown you a worthy example in ignoring the painful rivalry involved in your claim?”

“I do not mean to fail in magnanimity,” said Pleasance, inclined to laugh again.

“Impossible! you cannot understand,” persisted Mrs. Wyndham, “Frederica and I had talked the matter over, and we had agreed that you should spend the next winter in Rome; Nelly’s palace has suites of spacious rooms at the command of visitors.” (“Especially if they be heiresses. The Roman palaces have no end of accommodation for heiresses. I should not wonder if

they would lodge you in the Vatican itself,” commented Rica.) Her mother went on without attending to the comment, “Nelly and the count will dispense to you a princely hospitality. You will see the best Roman society at and from their house. You will acquire a good foreign style, which is generally admired, and which will conceal the deficiency in early training that is much to be regretted now, as events have happened; but who could have foreseen them?” asked Mrs. Douglas with a tragic emphasis.

“A good foreign style, like charity, covers a multitude of sins,” put in Rica. “Indeed, Mrs. Douglas, you will be a great fool not to take our embassy in good part, and make the most of it. It has just struck me that the position is like that of Cinderella, who, I have no doubt, married her two usurping sisters to gentlemen about court, that they might be conveniently at hand to supply her with little hints for her behaviour as a princess. Do think of Cinderella, and not of the ‘Mysteries of Udolpho,’ or the ‘Romance of the Forest’ (I know you read novels); believe me the Italian bravo with his stiletto is quite out of fashion. We have not the slightest intention of making away with you, in recommending you to spend a little time with Nelly at Rome.”

“I do not think you have,” replied Pleasance; “but I must refuse what I cannot avail myself of.”

“Never mind, mamma,” said Rica, “beggars should not be choosers. A truce is established. Mrs. Archie Douglas is to deal with us poor usurpers leniently. Ah! I forgot that the Christian charity was to be all on our side; but so it will come about eventually, and until then we shall bide our time;” and Rica drew away her mother before she had done more than express a tithe of her astonishment at Pleasance’s continued refractory attitude after all these years and changes. Not all Mrs. Wyndham’s devotion to her children’s interests could, for the moment, stifle her displeasure at the reception given to her fine stroke of diplomacy.

When her visitors were gone, Pleasance’s ill-timed laughter passed into a few quiet, but bitter, tears of pain, wrath, and ruth over her nearest relations in the world, as Mrs. Wyndham had said, who were worse than strangers to her, and over what seemed the mockery of forgiving offenders who would not be forgiven, who saw no occasion for forgiveness, and whose unblushing overture was made with the open purpose of retrieving a portion of their losses.

ON FELLOWSHIP WITH THE FATHER AND THE SON.

BY THE EDITOR.

WERE the question asked, "What is the object for which Christ lived and died, and the grand aim of the Christian ministry?" we could imagine many good Christians discovering considerable difficulty in giving an intelligent answer. Some familiar phrases might perhaps be used in reply, to which no definite meaning is attached. It might, for example, be said that the one end of Christianity is to "save souls," so that when this world shall have passed away men may be delivered from the punishment of hell, and be received into the joy of heaven. Now, such an answer, if rightly understood, would, in a measure, be true, and yet the ideas associated with such a statement are frequently very unreal, or at all events inadequate.

Perhaps the most suggestive and profound answer that Scripture contains to the question, "What is salvation?" is to be found in the First Epistle of St. John, where, after speaking of the manifestation of eternal life in the Son, he goes on to say, "That which we have seen and heard declare we unto you, that ye also may have fellowship with us: and truly our fellowship is with the Father and with His Son Jesus Christ. God is light, and in Him is no darkness at all. If we say we have fellowship with Him and walk in darkness, we lie, and do not the truth; but if we walk in the light, as He is in the light, we have fellowship one with another, and the blood of Jesus Christ His Son cleanseth us from all sin." For it was to bring man to have fellowship with the Father and with the Son, and with the whole company of those who know and love God, Father, Son, and Spirit, that the work of redeeming love has gone on since the earliest dawn of the Church till now. It is the will of God the Father, Who has made us in His image, to bring us to be in fellowship with Himself, to share His own holy and blessed thoughts of peace and joy. This is implied in the command, "Be ye holy, for I am holy," and in His calling us to be His "sons and daughters." To bring us into this fellowship was the one desire of Jesus Christ. "O righteous Father, the world hath not known Thee." "Glorify Thy Son, that thy Son may glorify Thee." "I have given unto them eternal life, and this is life eternal, that they might know Thee, the only true God, and Jesus Christ whom Thou hast

sent!" This is the one great work of the Holy Spirit, whose office is "to shine into our hearts, to give the light of the knowledge of the glory of God in the face of Jesus Christ." It is in order to lead to this fellowship that the Gospel declares the forgiveness of sins, reveals the mind of God, and promises grace for the attainment of all good. And this end is the great aim and purpose of the Church, as consisting of all those who possess the same life, and love, and sympathy, and who labour to bring all men to share the good which they themselves enjoy.

St. John speaks of this fellowship as "walking in light." According to a characteristic usage, light is taken by him as the highest image of the pure, revealing, quickening glory of Divine perfection. And no image could suggest the character of God with greater vividness, for there is nothing in nature so glorious as this mysterious effulgence which sweeps from horizon to horizon, revealing the utmost depths of sky, making the clouds burn with splendour, the seas flash into a floor of diamond and topaz, placing a crown of gold upon the mountains, and making the valleys glow with a million tints. This light, whose fountain is on high, and which reaches to the lowliest home of earth, is surely of all emblems the most appropriate for the all-penetrating goodness, the clear sanctity, the stainless righteousness of God, which, ever shining, is ever revealing the true nature of all things. It is this light of God which fills with joy all those who truly know Him. It is for this the Seraphim adore Him, crying, "Holy! holy! holy!" and the whole Church in heaven falls in worship. It is the light of God's glory, as seen in His goodness and righteousness and truth, which engages every eye, which fills every heart, and satisfies and quickens every desire. But this is possible only in so far as these spirits have themselves fellowship with what God is. The measure of their joy is proportionate to their entrance into light.

This fellowship is but another word for salvation. There has never been a saint on earth, whether under the old covenant or the new, who has not been more or less in fellowship with the Father and the Son, and that which constitutes the life and blessedness of the saints in glory is but increasing fellowship with the Father and the Son. To possess this is to be saved. We must,

to some extent, be in sympathy with the absolutely holy and righteous will of God, we must love God for what He is, and find joy in what gives joy to Christ and to all saints and angels, or heaven can be no heaven to us. If we have not this mind in us, then no change of place will deliver us from the hell of being at enmity to God.

Now Jesus Christ came into the world to reveal the character of God, and thereby to throw light on all the darkness and evil of earth. He lived out in the world the truth of both God and man, and so the life that was in Him became "the light of men," making manifest at once the sin of ungodliness and the glory of sonship. But His work was more than a revelation. He came to bestow the same kind of life which He Himself possessed—"To all who received Him, to them gave He power to become sons of God." This life of sonship, of its very nature, puts us into fellowship with the Father and the Son.

But in what sense can we have fellowship with the Father and the Son? In what way, or in reference to what subjects, is that to be attained? This may best be answered by giving an example. When the Father contemplated the life of Jesus in the flesh, He said, "This is my well-beloved Son, in whom I am well pleased." There was accordingly not a thought, not a word, not an action, from Bethlehem to Calvary, with which the Father had not perfect sympathy. When we are called to have fellowship with the Father, we are, in other words, required to share that sympathy. We are to see the rightness of all His feelings of Christ, the goodness of all His actions, the truth of all His teaching, the glory of His mind, life, sufferings, and death, and be well pleased and in harmony with their character. But if we are to have fellowship with the Father in His mind towards the Son, we are also to have fellowship with the Son in His mind towards the Father. Christ found it His "meat to do the will of the Father." It was His very life to obey and serve Him, and to yield up everything to His guidance. He had fellowship with the Father in His just condemnation and hatred of sin, and in His good-will towards a sinful world. Now, in proportion as we possess the mind that was in Christ, we enter into these thoughts, and perceive that what He felt was not only right, but that it is the truth of our being to be in harmony with what He was. And these convictions correspond to the purpose of Christ con-

cerning us. His one great desire is to bring us to be like Himself—to know God as He knows Him, to see every object as He sees it, to view sin as He views it, to love holiness as He loves it—so that what gives Him joy or sorrow may affect us in a similar manner. This is the grand aim of all His teaching and discipline.

But here another question suggests itself. Is it possible for us to attain to a condition of being which so far surpasses any feeble comprehension we may now form of the Divine life? Two difficulties may be mentioned which meet us at the outset.

If God is light, that light of its very nature must reveal our darkness. How, then, is it possible for us to be in sympathy with the light which condemns ourselves? St. John lays full emphasis on this contrast. "If we say we have no sin, we deceive ourselves, and the truth is not in us." But there is really no contradiction nor inconsistency here. A man can be made conscious of evil only as he is in sympathy with holiness, and that sympathy at the same time delivers him from the power of the sin which he condemns. The two go together. It is the vision of purity which makes impurity disgusting, and thereby leads us away from its defilement. It is the spirit of generosity which makes us at once detest and cast out all selfishness. In proportion as a man sees the true nature of sin, so does he cease to have sympathy with it; he treats it as an enemy against which he is to make war; he keeps it no longer as his life, but mortifies and crucifies it; he does not walk any longer in darkness, but comes into the light, and looks at everything as in the light of God. Therefore, instead of there being any contradiction, there is the most perfect harmony between having fellowship with God and condemning ourselves as sinners.

Another difficulty arises from the enormous distance between anything we can attain to and so glorious an end as having fellowship with the Father and the Son. But the contrast between what we are now, and the infinitely high standard of possessing the mind of God and Christ, which is set before us, does not invalidate the trueness of the fellowship, even when it is no more than as the first rays of a new dawn upon the spirit. The difference between the seedling oak and the mature tree is one of degree only, which a few years may obliterate. But the difference between the seedling and the weed is one not of degree but of kind, and which becomes the more manifest the more they

grow. The difference between the sincere penitent and the most advanced saint is only one of degree. There is an element of sympathy which unites the highest and the lowest. The cry from the depths uttered by the broken and contrite heart, which in self-loathing longs for deliverance, is a cry with which every saint before the throne can sympathize. The man who, beating upon his breast, can say no more than "God be merciful!" is uttering a response to the mind of God, for he is seeing his sin as God would have him see it, and is, so far, in agreement with Christ and in fellowship with the redeemed. The prayer from one who in very agony struggles with evil, and craves for the clean heart and the right spirit, is in perfect harmony with the will of God. The man may be as yet very far from God's presence, "tears" may be "his meat day and night," and his soul may be "sorely vexed within him;" nevertheless, if his sorrow springs from such true desire that he can say, "My soul thirsteth for God, for the living God," "Show me Thy way that I may know Thee, I beseech Thee show me Thy glory," then, although he has "no language but a cry," it is one which meets the

will of God, and is in perfect keeping with the mind of Christ, and of the whole Church of the redeemed in heaven and earth. Let there only be present such a perception of the nature of sin and the excellence of holiness as is in agreement with the eternal truth of things, then, should the man be no better than the thief on the cross, he possesses that kind of life which distinguishes heaven from hell; his mind is so far in fellowship with the Father and the Son, and with every saint before the throne. This is the one true religion. There is none other possible. Eternal light and eternal darkness depend on whether we possess fellowship with the right or with the wrong—with the mind of Christ or the mind of the devil—whether we have the spirit of children or the spirit of rebels. There is nothing arbitrary here. Christ came "a light into the world, that we should no longer walk in darkness, but have the light of life." "This is the condemnation, that light is come into the world, and men loved darkness rather than light, because their deeds were evil." This decision forms the turning-point of all religion; it is the boundary-line between life and death.

CINDERELLA.

A Child's Song of the Season.

BY ROBERT BUCHANAN.

I.

WHERE Cinderella stitches,
The daylight dimly reaches,
And when the sun is setting,
The red rays faintly find her
With eyes that still grow blinder
Through famine and through fretting,
While lower, lower drooping,
She hums a weary air,
Above the bright robes stooping
Her sisters are to wear.

Her sisters?—they are creatures
Of softer, sweeter features,
Tall, stately, and resplendent
With jewels in their dresses,
With pomp and trains attendant,
And many a jewel pendant
Amid their drooping tresses.
Their beauty and their gleaming,
As lonely she sits dreaming,
Poor Cinderella guesses.

Oh she has seen them passing,
On sobbing, rainy nights,
When the wet streets are glassing
The glory of their lights.
And they have seemed unto her
As creatures far above her,
Too fair, even if they knew her,
To note her or to love her.
Yet as they pass'd so fleeting,
She watch'd them with heart beating,
And from their pride did borrow
Pure pleasure and no sorrow;
For while into her chamber,
Her little feet did clamber,
"How sweet!" she thought, all glowing,
"Just only to have noted
My lovely sisters going;
Fair, lustrous-eyed, white-throated!"
And with that glimpse of gladness
No canker flower did blossom,
And sweetness and not sadness
Fill'd Cinderella's bosom;

For all the night before her,
While she is dumbly sewing,
A happy spell is o'er her,
Of great lights coming, going,
And ever, scarce repining,
She feels it, and rejoices
To see her sisters shining,
And hear their happy voices.

II.

"This, and this only, would quite content me,
If once, once only, a glimpse was lent me
Of the fairy court and the fairy queen there,
And my sisters dancing in golden sheen there.

"I would not speak, I would keep from view,
Nor tell them I was their sister too;
Yea, lest my clothes and my face should
shame them,
I'd crouch in a corner and never claim them.

"But oh to see them moving and fitting
In the halls where the fairy queen is sitting,
My sisters round her, bright lamps above
her,—

I'd sew for a lifetime and think it over!

"Little Jesus with golden hair,
If I might wander to-morrow there,
Take just one peep at the light and laughter,
Come back and think o'er it for ever after."

O'er Cinderella's pallet small,
A picture was pasted on the wall—
Cheeks of red and eyes of azure,
A little Child, with a smile of pleasure.

Some might deem it a poor device,
Daub'd and sold for a copper price;
But to her it told of a golden story:
Our Lord it was, as a Child of glory.

All night long, as she slept, above her
The picture bent and seem'd to love her.
Still as she sew'd, for a moment raising
Her eyes, she saw that the Child was gazing!

"To-night the queen of the fairy land
Holds her court in the palace grand;
My beautiful sisters all are going,
One in the robe that I am sewing.

"Little Jesus with golden hair,
If I might only see them there!"
Ev'n as she prayed, with a glimmer splendid,
The picture flash'd and the Child descended!

III.

O'er Cinderella's bosom,
A strange calm awe was stealing;
She felt her poor heart blossom
With bright ecstatic feeling;
She saw and did not fear Him,
She knew and seem'd to love Him,
She thrill'd so to be near Him,
But blest the light above Him,—
The aureole and lustre,
Which round His form was beaming.
In many a golden cluster,
His happy locks were streaming;
But less she seem'd to dread Him,
Because the dress that clad Him
Was poor and sad to seeming.
A Child He was, yet under
His child-looks woke strange wonder,
And soft angelic dreaming.
"Come!" said He, smiling sweetly,
And gave His hand unto her.
Dumb-stricken now completely,
She felt the touch thrill through her!

The door flew open slowly
Before that Infant Holy,
And all the city of wonder,
Wrapt in its dim and grey light
Of smoke and mist and daylight,
Surged with a sound of thunder
Beneath, as the pale woman,
Unseen by all things human,
Was by a Hand Immortal
Led to the palace portal!

IV.

The sun was shining. Before the door
There huddled a crowd of ragged and poor
Children and maidens and women thronging,
With gaunt wild eyes of wonder and longing.

And Cinderella, unseen by them,
Clutch'd at the Infant's raiment hem.
"Oh who are these poor shivering creatures,
Ragged like me, and with human features?"

"These are thy sisters, and theirs!" her
Guide,
Looking up in her face, replied.
She gazed again, and their looks seem'd
younger,
With her own soul's passion, her own soul's
hunger.

She stood amid them, and felt their breath
Heavy with famine, fever, and death ;
And while she linger'd, the Infant with her,
Her beautiful sisters in throngs came thither.

In flashing slippers and luminous dresses,
With white pearls powder'd among their
tresses,
Gentle and common, and young and old,
They throng'd to the beautiful gates of gold.

But Cinderella's heart grew bright.
"Oh!" she cried, "what a beautiful sight!"
She turn'd and look'd on the Infant's
features—
Shrivell'd they seem'd like a frozen creature's.

"These are thy sisters!" said the Child.
He waved His hands with an anguish wild.
"These are thine own dear sisters truly ;
Look on them well, and remember duly."

Then Cinderella became aware,
That floating over them in the air
Were evil spirits, misshapen, horrid,
Each with God's death-cross on his forehead.

Mammon was there with his yellow skin,
Pointing them on with a miser's grin ;
Envy and Folly, sister and brother,
Were clinging to Ignorance, their mother.

Belial, swollen with lust and pride,
Guided these spirits evil-eyed ;
Wildly they hover'd in his view there,
All the devils, black, yellow, and blue there !

Cinderella hath hidden her face :
"Take me away from the dreadful place!"
And then she murmur'd, sobbing blindly,
"My poor, poor sisters! God keep them
kindly!"

v.

Then spake the Child, and on His hair
Strange light, as if a hand moved there,
Came trembling as He spake: "Indeed,
These are thy sisters and thy seed ;
And blessed be the charity
Thou giv'st, and which they gave not thee.
Behold them naked to the day !
Possess'd by devils even as they
Whom I of old cast into swine.
These are our sisters, thine and mine !
And yet I say by one alone
Of those bright glittering gems they own,
And proudly wear, might now be fed
A thousand mouths that starve for bread ;
And yet I tell thee all the while
They gather here with painted smile,
Forgetting thee and all God's poor,
Who wail unheeded at the door,
Dark day by day, my Father on high
Sits unremember'd in the sky ;
And yet I tell thee many here
Maintain my shrines from year to year,
And worship, one day out of seven,
My Image, and a God in heaven !"

vi.

Poor Cinderella started,
And found she had been dozing.
Then, sad and weary-hearted,
Her gentle eyes unclosing,
Up at the dark wall peeping,
She saw the Picture there,
Not living, but yet keeping
The dim light on its hair,
As of a hand of blessing,
Illuming and caressing !
She sigh'd and dropt her sewing,
Then rising and forth-gazing,
She saw the day was going,
O'er the red house-roofs blazing ;
Then while her poor heart flutter'd,
She watch'd the darkening gleam,
"How glad I am," she mutter'd,
"That it was but a Dream !"

THE LAUREL BUSH.

An Old-fashioned Tale Story.

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

PART VI.

AS it befel, that day at Balcarras was the last of the bright days, in every sense, for the time being. Wet weather set in, as even the most partial witness must allow does occasionally happen in Scotland, and the domestic barometer seemed to go down accordingly. The girls grumbled at being kept indoors, and would willingly have gone out golfing under umbrellas, but auntie was remorseless. They were delicate girls at best, so that her watch over them was never-ceasing, and her patience inexhaustible.

David Dalziel also was in a very troublesome mood, quite unusual for him. He came and went, complained bitterly that the girls were not allowed to go out with him; abused the place, the climate, and did all those sort of bearish things which young gentlemen are sometimes in the habit of doing, when—when that wicked little boy whom they read about at school and college, makes himself known to them as a pleasant, or unpleasant, reality.

Miss Williams, who I am afraid was far too simple a woman for the new generation, which has become so extraordinarily wise and wide awake, opened her eyes and wondered why David was so unlike his usual self. Mr. Roy, too, to whom he behaved worse than to any one else, only the elder man quietly ignored it all, and was very patient and gentle with the restless, ill-tempered boy—Mr. Roy even remarked that he thought David would be happier at his work again; idling was a bad thing for young fellows at his age, or any age.

At last it all came out, the bitterness which rankled in the poor lad's breast; with another secret, which, foolish woman that she was, Miss Williams had never in the smallest degree suspected. Very odd that she had not, but so it was. We all find it difficult to realise the moment when our children cease to be children. Still more difficult is it for very serious and earnest natures to recognise that there are other natures who take things in a totally different way, and yet it may be the right and natural way for them. Such is the fact; we must learn it, and the sooner we learn it the better.

One day, when the rain had a little abated, David appeared, greatly disappointed to find the girls had gone out, down to the West Sands with Mr. Roy.

XVII—53

"Always Mr. Roy! I am sick of his very name," muttered David, and then caught Miss Williams by the dress as she was rising; she had a gentle but rather dignified way with her of repressing bad manners in young people, either by perfect silence, or by putting the door between her and them. "Don't go! One never can get a quiet word with you, you are always so preternaturally busy."

It was true. To be always busy was her only shield against—certain things which the young man was never likely to know, and would not understand if he did know.

"Do sit down, if you ever can sit down, for a minute," said he, imploringly; "I want to speak to you seriously, very seriously."

She sat down, a little uneasy. The young fellow was such a good fellow; and yet he might have got into a scrape of some sort. Debt perhaps, for he was a trifle extravagant; but then life had been all roses to him. He had never known a want since he was born.

"Speak then, David; I am listening. Nothing very wrong, I hope!" said she with a smile.

"Nothing at all wrong, only—When is Mr. Roy going away?"

The question was so unexpected that she felt her colour changing a little; not much, she was too old for that.

"Mr. Roy leaving St. Andrews, you mean? How can I tell? He has never told me. Why do you ask?"

"Because until he is gone, I stay," said the young man doggedly. "I'm not going back to Oxford leaving him master of the field. I have stood him as long as I possibly can, and I'll not stand him any longer."

"David! you forget yourself."

"There—now you are offended; I know you are, when you draw yourself up in that way, my dear little Auntie. But just hear me. You are such an innocent woman, you don't know the world as we men do. Can't you see—no, of course you can't—that very soon all St. Andrews will be talking about you?"

"About me?"

"Not about you exactly—but about the family. A single man—a marrying man, as all the world says he is, or ought to be, with his money—cannot go in and out like a tame cat in a household of women, without having, or being supposed to have—ahem!—

intentions. I assure you,"—and he swung himself on the arm of her chair, and looked into her face with an angry earnestness quite unmistakable—"I assure you, I never go into the club without being asked, twenty times a day, which of the Miss Moseleys Mr. Roy is going to marry!"

"Which of the Miss Moseleys Mr. Roy is going to marry!"

She repeated the words, as if to gain time, and to be certain she heard them rightly. No fear of her blushing now; every pulse in her heart stood dead still; and then she nerved herself to meet the necessity of the occasion.

"David, you surely do not consider what you are saying. This is a most extraordinary idea."

"It is a most extraordinary idea; in fact, I call it ridiculous, monstrous; an old battered fellow like him, who has knocked about the world, heaven knows where, all these years, to come home, and, because he has got a lot of money, think to go and marry one of these nice, pretty girls. They wouldn't have him, I believe that; but nobody else believes it; and everybody seems to think it the most natural thing possible. What do you say?"

"I?"

"Surely you don't think it right, or even possible? But Auntie, it might turn out a rather awkward affair, and you ought to take my advice, and stop it in time."

"How?"

"Why, by stopping him out of the house. You and he are great friends; if he had any notion of marrying I suppose he would mention it to you—he ought. It would be a cowardly trick to come and steal one of your chickens from under your wing. Wouldn't it? Do say something, instead of merely echoing what I say. It really is a serious matter, though you don't think so."

"Yes! I do think so," said Miss Williams at last; "and I would stop it, if I thought I had any right. But Mr. Roy is quite able to manage his own affairs; and he is not so very old—not more than five and twenty years older than—Helen."

"Bother Helen! I beg her pardon, she is a dear good girl. But, do you think any man would look at Helen when there was Janetta?"

It was out now, out with a burning blush over all the lad's honest face, and the sudden crick-crack of a pretty Indian paper cutter he unfortunately was twiddling in his fingers. Miss Williams must have been blind indeed not to have guessed the state of the case.

"What! Janetta? Oh David!" was all she said.

He nodded. "Yes, that's it, just it. I thought you must have found it out long ago; though I kept myself to myself pretty close, still, you might have guessed."

"I never did. I had not the remotest idea. O how remiss I have been! It is all my fault."

"Excuse me, I cannot see that it is anybody's fault, or anybody's misfortune either," said the young fellow, with a not unbecoming pride. "I hope I should not be a bad husband to any girl, when it comes to that. But it has not come; I have never said a single word to her. I wanted to be quite clear of Oxford, and in a way to win my own position first. And really we are so very jolly together as it is. What are you smiling for?"

She could not help it. There was something so funny in the whole affair. They seemed such babies, playing at love; and their lovemaking, if such it was, had been carried on in such an exceedingly open and lively way, not a bit of tragedy about it, rather genteel comedy, bordering on farce. It was such a contrast to—certain other love-stories that she had known, quite buried out of sight now.

Gentle "Auntie"—the grave maiden lady, the old hen with all these young ducklings who would take to the water so soon—held out her hand to the impetuous David.

"I don't know what to say to you, my boy; you really are little more than a boy, and to be taking upon yourself the responsibilities of life so soon! Still, I am glad you have said nothing to her about it yet. She is a mere child, only eighteen."

"Quite old enough to marry, and to marry Mr. Roy even, the St. Andrews folks think. But I won't stand it. I won't tamely sit by and see her sacrificed. He might persuade her; he has a very winning way with him sometimes. Auntie, I have not spoken, but I won't promise not to speak. It is all very well for you; you are old, and your blood runs cold, as you said to us one day—no, I don't mean that; you are a real brick still, and you'll never be old to us, but you are not in love, and you can't understand what it is to a young fellow like me to see an old fellow like Roy coming in and just walking over the course. But he shan't do it. Long ago, when I was quite a lad, I made up my mind to get her; and get her I will, spite of Mr. Roy or anybody."

Fortune was touched. That strong will

which she too had had, able, like faith, to "remove mountains," sympathized involuntarily with the lad. It was just what she would have said and done, had she been a man and loved a woman. She gave David's hand a warm clasp, which he returned.

"Forgive me," said he affectionately. "I did not mean to bother you, but as things stand, the matter is better out than in. I hate underhandedness. I may have made an awful fool of myself, but at least I have not made a fool of her. I have been as careful as possible not to compromise her in any way; for I know how people do talk, and a man has no right to let the girl he loves be talked about. The more he loves her, the more he ought to take care of her. Don't you think so?"

"Yes."

"I'd cut myself up into little pieces for Janetta's sake," he went on, "and I'd do a deal for Helen too, the sisters are so fond of one another; she shall always have a home with us, when we are married."

"Then," said Miss Williams, hardly able again to resist a smile, "you are quite certain you will be married? You have no doubt about her caring for you?"

David pulled his whiskers, not very voluminous yet, looked conscious, and yet humble.

"Well, I don't exactly say that. I know I'm not half good enough for her. Still, I thought, when I had taken my degree, and fairly settled myself at the bar, I'd try. I have a tolerably good income of my own too, though of course I am not as well off as that confounded old Roy. There he is at this minute meandering up and down the West Sands with those two girls, setting everybody's tongue going! I can't stand it. I declare to you I won't stand it another day."

"Stop a moment," and she caught hold of David as he started up. "What are you going to do?"

"I don't know and I don't care, only I won't have my girl talked about—my pretty, merry, innocent girl. He ought to know better, a shrewd old fellow like him. It is silly, selfish, mean."

This was more than Miss Williams could bear. She stood up, pale to the lips, but speaking strongly, almost fiercely.

"You ought to know better, David Dalziel. You ought to know that Mr. Roy has not an atom of selfishness or meanness in him, that he would be the last man in the world to compromise any girl. If he chooses to marry Janetta, or any one else, he has a perfect

right to do it, and I for one will not try to hinder him."

"Then you'll not stand by me any more?"

"Not if you are blind and unfair. You may die of love, though I don't think you will; people don't do it nowadays" (there was a slightly bitter jar in the voice); "but love ought to make you all the more honourable, clear-sighted, and just. And as to Mr. Roy——"

She might have talked to the winds, for David was not listening. He had heard the click of the garden gate, and turned round with blazing eyes.

"There he is again! I can't stand it, Miss Williams. I give you fair warning I can't stand it. He has walked home with them, and is waiting about at the laurel-bush, mooning after them. Oh, hang him!"

Before she had time to speak, the young man was gone. But she had no fear of any very tragic consequences when she saw the whole party standing together—David talking to Janetta, Mr. Roy to Helen, who looked so fresh, so young, so pretty, almost as pretty as Janetta. Nor did Mr. Roy, pleased and animated, look so very old.

That strange clear-sightedness, that absolute justice, of which Fortune had just spoken, were qualities she herself possessed to a remarkable, almost a painful, degree. She could not deceive herself, even if she tried. The more cruel the sight, the clearer she saw it; even as now she perceived a certain naturalness in the fact that a middle-aged man so often chooses a young girl in preference to those of his own generation, for she brings him that which he has not; she reminds him of what he used to have; she is to him like the freshness of spring, the warmth of summer, in his cheerless autumn days. Sometimes these marriages are not unhappy—far from it; and Robert Roy might ere long make such a marriage. Despite poor David's jealous contempt, he was neither old nor ugly, and then he was rich.

The thing, either as regarded Helen, or some other girl of Helen's standing, appeared more than possible—probable; and if so, what then?

Fortune looked out once, and saw that the little group at the laurel-bush were still talking; then she slipped up-stairs into her own room and bolted the door.

The first thing she did was to go straight up and look at her own face in the glass—her poor old face, which had never been beautiful, which she had never wished beautiful,

except that it might be pleasant in one man's eyes. Sweet it was still, but the sweetness lay in its expression, pure and placid, and innocent as a young girl's. But she saw not that; she saw only its lost youth, its faded bloom. She covered it over with both her hands, as if she would fain bury it out of sight; knelt down by her bedside, and prayed.

"Mr. Roy is waiting below, ma'am—has been waiting some time; but he says, if you are busy he will not disturb you; he will come to-morrow instead."

"Tell him I shall be very glad to see him to-morrow."

She spoke through the locked door, too feeble to rise and open it; and then lying down on her bed and turning her face to the wall, from sheer exhaustion fell fast asleep.

People dream strangely sometimes. The dream she dreamt was so inexpressibly soothing and peaceful, so entirely out of keeping with the reality of things, that it almost seemed to have been what in ancient times would be called a vision.

First, she thought that she and Robert Roy were little children—mere girl and boy together, as they might have been, from the few years' difference in their ages—running hand-in-hand about the sands of St. Andrews; and so fond of one another—so very fond! with that innocent love a big boy often has for a little girl, and a little girl returns with the tenderest fidelity. So she did; and she was so happy—they were both so happy. In the second part of the dream she was happy still, but somehow she knew she was dead—had been dead and in paradise for a long time, and was waiting for him to come there. He was coming now; she felt him coming, and held out her hands, but he took and clasped her in his arms; and she heard a voice saying those mysterious words:—"In heaven they neither marry nor are given in marriage, but are as the angels of God."

It was very strange, all was very strange, but it comforted her. She rose up, and in the twilight of the soft spring evening she washed her face and combed her hair, and went down, like King David after his child was dead, to "eat bread."

Her young people were not there. They had gone out again, she heard; with Mr. Dalziel, not Mr. Roy, who had sat reading in the parlour alone for upwards of an hour. They were supposed to be golfing, but they stayed out till long after it was possible to see balls or holes; and Miss Williams was

beginning to be a little uneasy, when they all three walked in, David and Janetta with a rather sheepish air, and Helen beaming all over with mysterious delight.

How the young man had managed it—to propose to two sisters at once, at any rate to make love to one sister while the other was by—remained among the wonderful feats which David Dalziel, who had not too small an opinion of himself, was always ready for, and generally succeeded in; and if he did wear his heart somewhat "on his sleeve," why, it was a very honest heart, and they must have been ill-natured "daws" indeed who took pleasure in "pecking at it."

"Wish me joy, Auntie!" he cried, coming forward, beaming all over, the instant the girls had disappeared to take their hats off. "I've been and gone and done it, and it's all right. I didn't intend it just yet, but he drove me to it, for which I'm rather obliged to him. He can't get her now. Janetta's mine!"

There was a boyish triumph in his air; in fact his whole conduct was exceedingly juvenile, but so simple, frank and sincere, as to be quite irresistible.

I fear Miss Williams was a very weak-minded woman, or would be so considered by a great part of the world—the exceedingly wise and prudent, and worldly-minded "world." Here were two young people, one twenty-two, the other eighteen, with—it could hardly be said "not a half-penny," but still a very small quantity of half-pennies, between them—and they had not only fallen in love but engaged themselves to be married! She ought to have been horrified, to have severely reproached them for their imprudence, used all her influence, and if needs be her authority, to stop the whole thing; advising David not to bind himself to any girl till he was much older, and his prospects secured, and reasoning with Janetta on the extreme folly of a long engagement, and how very much better it would be for her to pause, and make some "good" marriage, with a man of wealth and position, who could keep her comfortably.

All this, no doubt, was what a prudent and far-seeing mother or friend ought to have said and done. Miss Williams did no such thing, and said not a single word. She only kissed her "children"—Helen too, whose innocent delight was the prettiest thing to behold—then sat down and made tea for them all, as if nothing had happened.

But such events do not happen without making a slight stir in a family, especially such a quiet family as that at the cottage. Besides, the lovers were too childish happy

to be at all reticent over their felicity. Before David was turned away that night, to the hotel, which he and Mr. Roy both inhabited, everybody in the house knew quite well that Mr. Dalziel and Miss Janetta were going to be married.

And everybody had of course suspected it long ago, and was not in the least surprised, so that the mistress of the household herself was half-ashamed to confess how very much surprised *she* had been. However, as everybody seemed delighted, for most people have a "sneaking kindness" towards young lovers, she kept her own counsel; smiled blandly over her old cook's half-pathetic congratulations to the young couple, who were "like the young bears, with all their troubles before them," and laughed at the sympathetic forebodings of the girls' faithful maid, a rather elderly person, who was supposed to have been once "disappointed," and who "hoped Mr. Dalziel was not too young to know his own mind." Still, in spite of all, the family were very much delighted, and not a little proud.

David walked in, master of the position now, directly after breakfast, and took the sisters out a walk, both of them, declaring he was as much encumbered as if he were going to marry two young ladies at once, but bearing his lot with great equanimity. His love-making, indeed, was so extraordinarily open and undisguised, that it did not much matter who was by. And Helen was of that sweet negative nature that seemed made for the express purpose of playing "gooseberry."

Directly they had departed Mr. Roy came in.

He might have been a far less acute observer than he was, not to detect at once that "something had happened," in the little family. Miss Williams kept him waiting several minutes, and when she did come in, her manner was nervous and agitated. They spoke about the weather and one or two trivial things; but more than once Fortune felt him looking at her, with that keen, kindly observation, which had been sometimes, during all these weeks, now running into months, of almost daily meeting, and of the closest intimacy, a very difficult thing to bear.

He was exceedingly kind to her always; there was no question of that. Without making any show of it, he seemed always to know where she was and what she was doing. Nothing ever lessened his silent care of her. If ever she wanted help, there he was to give it. And in all their excursions she had a quiet conviction that whoever forgot her, or

her comfort, he never would. But then it was his way. Some men have eyes and ears for only one woman, and that merely while they happen to be in love with her, whereas, Robert Roy was courteous and considerate to every woman; even as he was kind to every weak or helpless creature that crossed his path.

Evidently, he perceived that all was not right, and though he said nothing, there was a tenderness in his manner which went to her heart.

"You are not looking well to-day; should you not go out?" he said. "I met all your young people walking off to the sands; they seemed extraordinarily happy."

Fortune was much perplexed. She did not like not to tell him the news, he, who had so completely established himself as a friend of the family. And yet to tell him was not exactly her place; besides, he might not care to hear. Old maid as she was, or thought herself, Miss Williams knew enough of men not to fall into the feminine error of fancying they feel as we do, that their world is our world, and their interests our interests. To most men, a leader in the *Times*, an article in the *Quarterly*, or a fall in the money market, is of far more importance than any love affair in the world, unless it happens to be their own.

Why should I tell him? she thought, convinced that he noticed the anxiety in her eyes, the weariness at her heart. She had passed an almost sleepless night, pondering over the affairs of these young people, who never thought of anything beyond their own new-born happiness. And she had perplexed herself with wondering whether in consenting to this engagement she was really doing her duty by her girls, who had no one but her, and whom she was so tender of, for their dead father's sake. But what good was it to say anything? She must bear her own burden. And yet—

Robert Roy looked at her with his kind, half-amused smile.

"You had better tell me all about it; for, indeed, I know already."

"What! did you guess?"

"Perhaps. But Dalziel came to my room last night and poured out everything. He is a candid youth. Well, and am I to congratulate?"

Greatly relieved, Fortune looked up.

"That's right," he said, "I like to see you smile. A minute or two ago you seemed as if you had the cares of all the world on your shoulders. Now, that is not exactly the

truth. Always meet the truth face to face, and don't be frightened at it."

Ah no! If she had had that strong heart to lean on, that tender hand to help her through the world, she never would have been "frightened" at anything.

"I know I am very foolish," she said, "but there are many things which these children of mine don't see, and I can't help seeing."

"Certainly; they are young, and we are—well, never mind. Sit down here, and let you and me talk the matter quietly over. On the whole, are you glad or sorry?"

"Both, I think; David is able to take care of himself, but poor little Janet—my Janet—what if he should bring her to poverty? He is a little reckless about money, and has only a very small certain income. Worse, suppose being so young, he should by-and-by get tired of her and neglect her, and break her heart?"

"Or twenty other things which may happen, or may not, and of which they must take the chance, like their neighbours. You do not believe very much in men, I see, and perhaps you are right. We are a bad lot—a bad lot. But David Dalziel is as good as most of us, that I can assure you."

She could hardly tell whether he was in jest or earnest, but this was certain, he meant to cheer and comfort her, and she took the comfort, and was thankful.

"Now to the point," continued Mr. Roy. "You feel, that in a worldly point of view, these two have done a very foolish thing, and you have aided and abetted them in doing it?"

"Not so," she cried, laughing; "I had no idea of such a thing till David told me yesterday morning of his intentions."

"Yes, and he explained to me why he told you, and why he dared not wait any longer. He blurts out everything, the foolish boy! But he has made friends with me now. They do seem such children, do they not? compared with old folks like you and me."

What was it in the tone, or the words, which made her feel not in the least vexed, nor once attempt to rebut the charge of being "old?"

"I'll tell you what it is," said Robert Roy, with one of his sage smiles, "you must not go and vex yourself needlessly about trifles. We should not judge other people by ourselves. Everybody is so different. Dalziel may make his way all the better for having that pretty creature for a wife, not but what some other pretty creature might soon have done just as well. Very few men have tenacity of nature enough, if they

cannot get the one woman they love, to do without any other to the end of their days. But don't be distressing yourself about your girl. David will make her a very good husband. They will be happy enough, even though not very rich."

"Does that matter much?"

"I used to think so. I had so sore a lesson of poverty in my youth, that it gave me an almost morbid terror of it, not for myself, but for any woman I cared for. Once, I would not have done as Dalziel has for the world. Now—I have changed my mind. At any rate, David will not have one misfortune to contend with. He has a thoroughly good opinion of himself, poor fellow! He will not suffer from that horrible self-distrust which makes some men let themselves drift on and on with the tide, instead of taking the rudder into their own hands and steering straight on—direct for the haven, where they would be. O that I had done it!"

He spoke passionately, and then sat silent. At last, muttering something about "begging her pardon," and "taking a liberty," he changed the conversation into another channel, by asking whether this marriage, when it happened—which of course could not be just immediately—would make any difference to her circumstances?

Some difference, she explained, because the girls would receive their little fortunes whenever they came of age, or married, and the sisters would not like to be parted; besides Helen's money would help the establishment. Probably, whenever David married, he would take them both away, indeed he had said as much.

"And then, shall you stay on here?"

"I may, for I have a small income of my own; besides, there are your two little boys, and I might find two or three more. But I do not trouble myself much about the future. One thing is certain, I need never work as hard as I have done all my life."

"Have you worked so very hard, then, my poor——"

He left the sentence unfinished; his hand, half-extended, was drawn back, for the three young people were seen coming down the garden, followed by the two boys, returning from their classes. It was nearly dinner-time, and people must dine, even though in love. And boys must be kept to their school-work, and all the daily duties of life must be done. Well, perhaps, for many of us, that such should be! I think it was as well for poor Fortune Williams.

The girls had come in wet through, with

one of those sudden "haars," which are not uncommon at St. Andrews in spring, and it seemed likely to last all day. Mr. Roy looked out of the window at it with a slightly dolorous air.

"I suppose I am rather *de trop* here, but really, I wish you would not turn me out. In weather like this our hotel coffee-room is just a trifle dull, isn't it, Dalziel? And, Miss Williams, your parlour looks so comfortable. Will you let me stay?"

He made the request with a simplicity quite pathetic. One of the most lovable things about this man—is it not in all men?—was, that with all his shrewdness and cleverness, and his having been knocked up and down the world for so many years, he still kept a directness and simpleness of character almost childlike.

To refuse would have been unkind, impossible; so Miss Williams told him he should certainly stay, if he could make himself comfortable. And to that end she soon succeeded in turning off her two turtle-doves into a room by themselves, for the use of which they had already bargained, in order to "read together, and improve their minds." Meanwhile she and Helen tried to help the two little boys to spend a dull holiday indoors, if they were ever dull beside Uncle Robert—who had not lost his old influence with boys, and to those boys was already a father in all but the name.

Often had Fortune watched them, sitting upon his chair, hanging about him as he walked, coming to him for sympathy in everything. Yes, everybody loved him, for there was such an amount of love in him towards every mortal creature, except—

She looked at him and his boys, then turned away. What was to be, had been, and always would be. That which we fight against in our youth as being human will, human error, in our age we take humbly, knowing it to be the will of God.

By-and-by in the little household the gas was lit, the curtains drawn, and the two lovers fetched in for tea, to behave themselves as much as they could like ordinary mortals, in general society, for the rest of the evening. A very pleasant evening it was, spite of this new element; which was got rid of as much as possible by means of the window recess, where Janet and David encamped composedly, a little aloof from the rest.

"I hope they don't mind me," said Mr. Roy, casting an amused glance in their direction, and then adroitly manœuvring with

the back of his chair so as to interfere as little as possible with the young couple's felicity.

"Oh no, they don't mind you at all," answered Helen, always affectionate, if not always wise. "Besides, I dare say you yourself were young once, Mr. Roy."

Evidently Helen had no idea of the plans for her future which were being talked about in St. Andrews! Had he? No one could even speculate, with such an exceedingly reserved person. He retired behind his newspaper, and said not a single word.

Nevertheless, there was no cloud in the atmosphere. Everybody was used to Mr. Roy's silence in company. And he never troubled anybody, not even the children, with either a gloomy look or a harsh word. He was so comfortable to live with, so unfailingly sweet and kind.

Altogether, there was a strange atmosphere of peace in the cottage that evening, though nobody seemed to do anything, or say very much. Now and then Mr. Roy read aloud bits out of his endless newspapers—he had a truly masculine mania for newspapers, and used to draw one after another out of his pockets as endless as a conjuror's pocket handkerchiefs. And he liked to share their contents with anybody that would listen; though I am afraid nobody did listen much to-night, except Miss Williams, who sat beside him at her sewing, in order to get the benefit of the same lamp. And between his readings he often turned and looked at her, her bent head, her smooth soft hair, her busy hands.

Especially after one sentence, out of the "Varieties" of some Fife newspaper. He had begun to read it, then stopped suddenly, but finished it. It consisted only of a few words:—"Young love is passionate, old love is faithful; but the very tenderest thing in all this world is a love revived." That is true."

He said only those three words, in a very low quiet voice, but Fortune heard. His look she did not see, but she felt it—even as a person long kept in darkness might feel a sunbeam strike along the wall, making it seem possible that there might be somewhere in the earth such a thing as day.

About nine P.M. the lovers in the window recess discovered that the hair was all gone, and that it was a most beautiful moonlight night; full moon, the very night they had planned to go in a body to the top of St. Regulus tower.

"I suppose they must," said Mr. Roy to Miss Williams; adding, "Let the young folks

make the most of their youth; it never will come again."

"No."

"And you and I must go too. It will be more *comme il faut*, as people say."

So with a half-regretful look at the cosy fire, Mr. Roy marshalled the lively party, Janetta and David, Helen and the two boys; engaging to get them the key of that silent garden of graves, over which St. Regulus tower keeps stately watch. How beautiful it looked with the clear sky shining through its open arch, and the brilliant moonlight, bright as day almost, but softer, flooding every alley of that peaceful spot! It quieted even the noisy party who were bent on climbing the tower, to catch a view such as is rarely equalled—of the picturesque old city and its beautiful bay.

"A 'comfortable place to sleep in,' as someone once said to me in a Melbourne churchyard. But 'east or west, home is best.' . . . I think, Bob, I shall leave it in my will that you are to bury me at St. Andrews."

"Nonsense, Uncle Robert. You are not to talk of dying. And you are to come with us up to the top of the tower. Miss Williams, will you come too?"

"No, I think she had better not," said Uncle Robert, decisively. "She will stay here, and I will keep her company."

So the young people all vanished up the tower, and the two elders walked silently side by side, by the quiet graves—by the hearts which had ceased beating, the hands, which, however close they lay, would never clasp one another any more.

"Yes, St. Andrews is a pleasant place," said Robert Roy, at last. "I spoke in jest, but I meant in earnest; I have no wish to leave it again. And you," he added, seeing that she answered nothing—"what plans have you? Shall you stay on at the cottage till these young people are married?"

"Most likely. We are all fond of the little house."

"No wonder. They say a wandering life after a certain number of years unsettles a man for ever; he rests nowhere, but goes on wandering to the end, but I feel just the contrary. I think I shall stay permanently at St. Andrews. You will let me come about your cottage, 'like a tame cat,' as that foolish fellow owned he had called me—will you not?"

"Certainly."

But at the same time she felt there was a strain beyond which she could not bear. To

be so near, yet so far; so much to him, and yet so little. She was conscious of a wild desire to run away somewhere—run away, and escape it all; of a longing to be dead and buried, deep in the sea, up away among the stars.

"Will those young people be very long, do you think?"

At the sound of her voice he turned to look at her and saw that she was deadly pale, and shivering from head to foot.

"This will never do. You must 'come under my plaidie,' as the children say, and I will take you home at once. Boys!" he called out to the figures now appearing like jackdaws at the top of the tower, "we are going straight home. Follow as soon as you like. Yes, it must be so," he answered to the slight resistance she made. "They must all take care of themselves. I mean to take care of you."

Which he did, wrapping her well in the half of his plaid, drawing her hand under his arm, and holding it there—holding it close and warm at his heart, all the way along the Scores and across the Links, scarcely speaking a single word until they reached the garden gate. Even there he held it still.

"I see your girls coming, so I shall leave you. You are warm now, are you not?"

"Quite warm."

"Good-night then. Stay. Tell me"—he spoke rapidly, and with much agitation. "Tell me just one thing, and I will never trouble you again. Why did you not answer a letter I wrote to you seventeen years ago?"

"I never got any letter. I never had one word from you after the Sunday you bade me goodbye, promising to write."

"And I did write," cried he, passionately. "I posted it with my own hands. You should have got it on the Tuesday morning."

She leaned against the laurel bush, that fatal laurel bush, and in a few breathless words told him what David had said about the hidden letter.

"It must have been my letter. Why did you not tell me this before?"

"How could I? I never knew you had written. You never said a word. In all these years you have never said a single word."

Bitterly, bitterly he turned away. The groan that escaped him—a man's groan over his lost life—lost, not wholly through fate alone—was such as she, the woman whose

portion had been sorrow, passive sorrow only, never forgot in all her days.

"Don't mind it," she whispered, "don't mind it. It is so long past now."

He made no immediate answer, then said, "Have you no idea what was in the letter?"

"No."

"It was to ask you a question, which I had determined not to ask just then, but I changed my mind. The answer, I told you, I should wait for in Edinburgh seven days; after that, I should conclude you meant No, and sail. No answer came, and I sailed."

He was silent. So was she. A sense of cruel fatality came over her. Alas! those lost years, that might have been such happy years! At length she said, faintly, "Forget it. It was not your fault."

"It was my fault. If not mine, you were still yourself—I ought never to have let you go. I ought to have asked again; to have sought through the whole world till I found you again. And now that I have found you—"

"Hush, the girls are here."

They came along laughing, that merry group—with whom life was at its spring—who had lost nothing, knew not what it was to lose!

"Good-night," said Mr. Roy, hastily. "But—to-morrow morning?"

"Yes."

"There never is night to which comes no morn," says the proverb. Which is not always true, at least as to this world; but it is true sometimes.

That April morning Fortune Williams rose with a sense of strange solemnity—neither sorrow nor joy. Both had gone by; but they had left behind them a deep peace.

After her young people had walked themselves off, which they did immediately after breakfast, she attended to all her household duties, neither few nor small, and then sat down with her needlework beside the open window. It was a lovely day; the birds were singing, the leaves budding, a few early flowers making all the air to smell like spring. And she—with her it was autumn now. She knew it, but still she did not grieve.

Presently, walking down the garden walk, almost with the same firm step of years ago—how well she remembered it!—Robert Roy came; but it was still a few minutes before she could go into the little parlour to meet him. At last she did, entering softly, her hand extended as usual. He took it, also as usual, and then looked down into her face, as he had done that Sunday.

"Do you remember this? I have kept it for seventeen years."

It was her mother's ring. She looked up with a dumb inquiry.

"My love, did you think I did not love you? you always, and only you."

So saying, he opened his arms; she felt them close round her, just as in her dream. Only they were warm, living arms; and it was this world, not the next. All those seventeen bitter years seemed swept away, annihilated in a moment; she laid her head on his shoulder and wept out her happy heart there.

* * * * *

The little world of St. Andrews was very much astonished when it learnt that Mr. Roy was going to marry, not one of the pretty Miss Moseleys, but their friend and former governess, a lady, not by any means young, and remarkable for nothing except great sweetness and good sense, which made everybody respect and like her; though nobody was much excited concerning her. Now people had been excited about Mr. Roy, and some were rather sorry for him; thought perhaps he had been taken in, till some story got wind of its having been an "old attachment" which interested them of course; still, the good folks were half angry with him, to go and marry an old maid when he might have had his choice of half-a-dozen young ones: when, with his fortune and character, he might, as people say, as they had said of that other good man, Mr. Moseley—"have married anybody."

They forgot that Mr. Roy happened to be one of those men who have no particular desire to marry "anybody"; to whom *the* woman, whether found early or late, alas! in this case found early and won late, is the one woman in the world for ever. Poor Fortune—rich Fortune! she need not be afraid of her fading cheek, her silvering hair; he would never see either. The things he loved her for were quite apart from anything that youth could either give or take away. As he said once when she lamented hers—"Never mind, let it go. You will always be yourself—and mine."

This was enough. He loved her. He had always loved her: she had no fear but that he would love her faithfully to the end.

Theirs was a very quiet wedding, and a speedy one. "Why should they wait? they had waited too long already," he said with some bitterness. But she felt none. With her all was peace.

Mr. Roy did another very foolish thing,

which I cannot conscientiously recommend to any middle-aged bachelor. Besides marrying his wife, he married her whole family. There was no other way out of the difficulty, and neither of them was inclined to be content with happiness, leaving duty unfulfilled. So he took the largest house in St. Andrew's, and brought to it Janetta and Helen, till David Dalziel could claim them; likewise his own two orphan boys, until they went to Oxford; for he meant to send them there, and bring them up in every way like his own sons.

Meantime, it was a rather heterogeneous family, but the two heads of it bore their burden with great equanimity, nay, cheerfulness; saying sometimes, with a smile which had the faintest shadow of pathos in it, "that they liked to have young life about them."

And by degrees they grew younger themselves; less of the old bachelor and old maid, and more of the happy middle-aged couple to whom heaven gave in their decline a St. Martin's summer almost as sweet as spring. They were both too wise to poison the present by regretting the past—a past, which if not wholly, was partly, at least, owing to that strange fatality which governs so many lives, only some have the will to conquer it, others not. And there are two sides to everything: Robert Roy, who alone knew how hard his own life had been, sometimes felt a stern joy in thinking no one had shared it.

Still, for a long time, there lay at the bottom of that strong gentle heart of his, a kind of remorseful tenderness, which showed itself in heaping his wife with every luxury that his wealth could bring; better than all, in surrounding her with that unceasing care which love alone teaches, never allowing

the wind to blow on her too roughly, his "poor lamb," as he sometimes called her, who had suffered so much.

They are sure, humanly speaking, to "live very happy to the end of their days." And I almost fancy sometimes, if I were to go to St. Andrews, as I hope to do many a time, for I am as fond of the Aged City as they are, that I should see those two, made one at last, after all those cruel divided years, wandering together along the sunshiny sands, or standing to watch the gay golfing parties; nay, I am not sure that Robert Roy would not be visible sometimes, in his red coat, club in hand, crossing the Links, a victim to the universal insanity of St. Andrews, yet enjoying himself, as golfers always seem to do, with the enjoyment of a very boy.

She is not a girl, far from it; but there will be a girlish sweetness in her faded face till its last smile. And to see her sitting beside her husband on the green slopes of the pretty garden, knitting perhaps, while he reads his eternal newspapers, is a perfect picture. They do not talk very much, indeed they were neither of them ever great talkers. But each knows the other is close at hand, ready for any needful word, and always ready with that silent sympathy which is so mysterious a thing, the rarest thing to find in all human lives. These have found it and are satisfied. And day by day truer grows the truth of that sentence, which Mrs. Roy once discovered in her husband's pocket-book, cut out of a newspaper—she read and replaced it without a word, but with something between a smile and a tear—*"Young loves are passionate, old loves are faithful; but the tenderest thing in all this world is a love revived."*

THE END.

A POTTERY HOLIDAY.

IT is Saturday, and a very bright morning in early September. All the previous day it would have been seen, in one of those large manufactories which produce painters' palettes, saucers, and colour-boxes by the thousand, and caster-rollers, and door knobs and handles by tens of thousands, that something unusual was in prospect. The throwers, moulders, turners, decorators, burnishers, riveters, and packers, as also the clay pressers and preparers, were working overtime, and as speedily as they could. Even the firemen were some hours beforehand and slackened

their great fires earlier than usual. The fact was, the morrow was to be a holiday, and just two hundred workers were to spend it amid the moorlands which lie not far away.

The major part of the men and women live near their "bank," as a potwork is locally called, and all are early astir, for the special train they go by starts betimes. A few of the more responsible men have been already to their respective "shops" to see all was safe; but now they join this group or that group of friends and fellow-workers. All are dressed in their best; thus forming a

"THE LAUREL BUSH."

striking contrast to the busy passers-by, of their own class, who, just from breakfast, are hastening to their half-day's labour. Holidays, in this lovely season, are so general among potters as to make it probable that these workers hastening to their "banks" have had theirs, or else that they have one at hand. So the general greetings are cheery and kindly, and good weather is invoked.

These holiday-takers are, with but few exceptions, well dressed; for potters are a highly paid, intelligent, advancing class of artisans, and must not be confounded with the ruder and more ignorant population who work in the pits and furnaces of North Staffordshire and the Black Country.

How jauntily and airily the younger people pass on! The morning is so divine that even in this region of perpetual smoke the air is comparatively clear and balmy. All anticipate a delightful holiday, for most from experience know how glorious both sun and air will be when they reach the valley of the Churnet, and climb the alpine solitudes which lie beyond.

Those who live nearest to their "works" make their way to the Cobridge Station. Others go from Burslem, and are ready at the station when the train stays there. Here are the two chiefs and sundry friends; the former being men in the prime of life. The one grave and kindly; the other *débonnaire* and *en beau* in a velvet coat; yet not less a consummate man of business in counting-house, on political platform, or magisterial bench. The chiefs, as they move about, have a kindly word for their people; for those nearest to them, for those crowded in the train, or those fast entering it. Thus gathered together you see a motley, yet well-behaved company. A few women carry babies, a few fathers take care of elder children; and almost all these sober, married folks bear with them reticules and baskets. The younger people, who are in prominent majority, omitting this class of impedimenta, give place on the arm to wavy folds of scarves and shawls. The prospect of sweet sounds is also betokened, for one man carries a violoncello of conspicuous size, another a fiddle, a third a clarinet, and three accordians or concertinas are indicated by as many boxes. Well-dressed men, young and old, carry books and rolls of music; and some of the smartest of the girls, who being in their best are for the day "young ladies," carry their roll of part-songs with the jaunty air of fashionable prima donnas. Every style of dress and decoration is here. White mus-

lins, *à la Japanese*, and frills, are popular. There are polonaises and overskirts of every fabric and form. Black silks, light silks, watches, chains, crosses, and lockets are not uncommon. Hats, flowers, and feathers rest on conspicuous crowns and chignons of hair. There is, as a matter of course, good taste and bad taste. Most of these fashionable or "tip-tops" are young, and earn a good deal of money. They are not yet wise enough to lay a portion of it by, but hope by this proper show of comeliness and dress *à la mode*, to lure some smart young potter, or other desirable youth, into matrimonial toils. There are older single women in more sober style, whose visions of matrimony have faded away, and so wisely realise the natural and economic fact, that a day must come when neither man nor woman can work, and that dependence on the charity of others is as unwise as it is sorrowful. These last dress in plain silks, and other simple fabrics, and one takes with her a beautiful pet dog. Then, mingled with the rest are homelier women, who are chiefly dressed like maidservants of the old school, in print or woollen dresses, in serviceable bonnets, and here and there in shawls. These women are generally "treaders," that is, movers of, by a skilful sort of jumping, the lathes of the turners, though in many high-class works these movements are now all effected by steam-power. The treaders earn a pound a week, or more, and are in many cases bread-winners for sick husbands or orphan children, and their general cleanliness and homely, honest looks are good to see.

The train is ready to start, and the Babel of tongues, so loud on the platform a moment before, is transferred to the carriages, and the broad vernacular speech of northern Staffordshire reaches the ear.

There has been difficulty in taking in the huge violoncello, and even now it occupies so much good space as to be a nuisance. So a man in the next compartment bawls out,—

"Tum! thy big fiddle's knockin' off my 'at."

"An' thy yed too, if Tum dugna look out," laughs a second.

"Fayther!" shouts a little lad, "th' big fiddle's squazin' my toos awful."

"I'm sure," simpers a young burnisher, who wears a highly starched dress, "such nasty, noisy, ugly things ought to be put i' th' luggage van. My frock 'll be a pratty mess, an' mother standin' ironin' it an yest'rday."

"Niver thee mind, Sophy," calls out a gallant young potter, "it 'll squeak meusic

out to an on us presently. An' we'n have 'Off to th' Weddin' fust thing."

"Not *thy* weddin', Joe," replies Sophy, with a gay toss of her pretty head. This retort is followed by a peal of laughter.

"Mester" (so the word master is pronounced in northern Staffordshire; it is "maister" in Shropshire), calls out another young girl to the man with the fiddle, "scrape us a bit o' meusic. Summet merry. That'll be it."

"We'n have meusic anuf just nai," says another. "Let's talk."

At this point, one of the steady, middle-aged women calls out to one of the least educated and cultivated girls, who leans on a carriage window, and looks out, "Sall! pull" (the u sounded as in the word "hull") "in yer yed, the mester's lookin'," and as all the "bank" are on good behaviour to-day, and wish to please partners Gravity and Velvetreen-coat, Sall "pulls" in her head accordingly, and the train proceeds.

Here and there for a short space on the outskirts of the town, various places and persons are recognised.

"Ello! Mrs. —," ery two or three in a breath, "there's that naece o' yorz clanin' some misisiz aise. Wai dunner ur come onto a bonk an' earn money, an' goo ait a 'oludeein' a this'n?"

"Au dunna know. Ur auwiz was a wench for messin'."

Then a young potter joins in. "Fred! theer's ar Sunday-skew tacher gooin' dain that ere road. Is he gooin' a 'oludeein'?"

"Not he. He gooz oor that wee a' Saturdays. He's pee'er at a pit."

A little further on an older man joins in. "Ben!" he calls, "luck thi eer. Dain theer's th' place weer Joonz feight his dog Bounce agen Tum Pritchard's Fan. Ha! an' a precious feight it wur."

But the general talk is of the sentimental, literary, and domestic order. One middle-aged dame gives the history of her "mester's" illnesses, and what doctors he has had. Another enters fully into questions relative to them "childer o' mine, and the djel o' larnin' they're gettin' at th' new Board School. 'Wei, ar little Bob—he's gettin' t' raid like a clerk; an' he's larnin' jog'fry, or summet o' that sort, that's comin' t' know a abait t' other countries, as well as ariz'n. Yesterdee 'e wur telling me abait Africans, and t'other aitlandish sort o' folks—but I wur weshin' ye see, an' didnar pee much haid to th' lad. I ony hope they wunner crom his yed too full o' book larnin'."

"Naoo," (a pronounced as in air) "indeed!" ejaculates another matron, "when th' yed's o'er full, hands dunner goo quick, and that's summat, when folks at home are clemmin'."

"Ay! indeed."

Other matrons and spinsters are hard at it too.

"Ony think! them Joonz livin' o'er th' wee, han gotten a bigger shop debt 'en ever, and th' mon 'll sarve 'em wi' noo moore. An rait too, for gotten debts, as a thatn's as bad as robbin'."

"Dun yu know ur never gen me back that weshin-jao, though 'twere borrit five wick ago."

"Ay! just think, ur's gooin' t' be married agen—and moor fool ur, says I, for the mon is a sportin' sort o' chap an likes his pot an poipe, an 'll allays be at th' Red Lion, ur may reckon."

"That lad o' urs that went off to Liverpool, a tidy bit a goo, 'as gotten a ship, they say."

"You remember Betsy's lass—dunna yo? ur that went off to Australy a year ago last Martinmas? Well! urs married tip-top, an' sent th' folks awhom a biggish bit o' money."

This conversation—partly real, partly imaginary—is given to show the vernacular spoken by the homelier workers, and, true to human nature, the homely subjects in which they take interest. But such is no test of the mental standing and acquirements of the great majority of the young men and girls out on this day's "oludeein;" for, as partners, Gravity and Velvetreen-coat well say, "many of our workpeople are better read, better spoken, than average tradesmen and many prominent employers." Of course, here and there, the trained ear catches somewhat of the vernacular tone and expression, but, otherwise, the whole run of ever-varying conversation testifies to much substantial and moral advance. Of course the majority of the girls prefer the fiction of sensation and Rosa-Matildaism to other kinds of literature, and provincial narrowness may rule in the religious and political opinions of the men; but this said, there is proof enough that the more skilled workers of the Potteries are there, as elsewhere, preparing themselves for that rapidly-approaching future, when social unification will be no longer a mere speculation of philosophy, but a tangible and realised fact.

There is a little feminine chatter among high and low which must not be passed

over, being a reality. For where were ever women gathered together, in which some turn in the conversation did not bring in the question of "dress?"

"Matilda," says a homely girl to one much above her, and touching as she speaks the frill of a dainty "costume," "what did'n ya giv' a yard for this eer thing?"

The young lady twirls her roll of part-music—for she is a singer—and looks reprovingly at her ruder and simpler shop-mate.

"I don't keep my shop-bills, Suke, and when folks are out pleasurin' they should behave themselves."

"Well, a didn'a mean to be rude, 'Tilda, so ya needner put on th' grand. I jist ask'd ya to tell me—'cause when th' mesters reez my wages at Martinmas, aw just mean to have summut like it. I had'na had yer learnin' nor yer teachin' i' singin', but I anna rude, as ya well knows."

Presently there comes a question which stops this general talk, and makes many listeners. It is addressed to a pretty, well-dressed young woman, of superior mien, who is a domestic of one of the "mesters," and not on the "bank."

"I say? es'nur there a lady with the mesters?"

"Yes."

"Where does ur come from?"

"From London."

"What's ur going to do?"

"Speak to you all."

"What abait?"

"Why! cooking, and tidiness, and improvements of many kinds."

"Ur makes stories out on ur yed, dunnur ur?"

"I believe so?"

"Ay! fayther says he's read mony a one on 'em years ago. I'm thinkin' ur's gettin' an owdish lady now! Well! I hope will tell us a story. Cookin' ain't th' thing for 'oludeez! My mother could teach ur *that*."

"No! not such cooking and order as she knows about," replies the pretty maid, who, attending the lady, is thus her defender.

Now the train stays at a pretty station bearing the classic name of Milton. Here a few other holiday-makers, waiting on the platform, and who have chosen a country walk this glorious morning, take their place. From hence the picturesque moorland country begins to show. High cuttings, rocky gorges opening therefrom, and a wealth of wild flowers, conspicuous among which is the foxglove of various hues and kinds. Rivulets

and tiny cascades pour through and down the rocks, and more or less the water is thick and very ruddy-coloured, thus betokening the vast beds of ironstone and red sandstone through which it has made its way. Occasionally come wider openings and more level tracts, amid which lie thinly-scattered cottages and farms, backed by picturesque uplands, and beyond these again a wild and lonely country of rock and moor. Before noon, the train reaches the Rudyard station, and here, amid the loveliest scenery of the Churnet Valley, the halt comes.

The station opens into a hilly lane, bounded on either side with hedges still gay with wild autumnal roses, and most profusely so with eglantine. The mingled perfume of both is most exquisite, and in the hollows beneath a variety of ferns and alpine flowers lend charming effects of colour, light, and shade. Wherever the holiday-takers see the flowers, they express their delight and admiration, and it has been pleasant to hear the remarks of those possessing some little art-knowledge. Presently, to the right, a rustic gate opens on to a private path, still on the steep incline. On the left is a plantation and a little stream fenced off; and to the right a lawn sloping upwards like the path; and following this, the holiday-makers, in groups and lines, come out on to the gravelled platform of the Rudyard Hotel, a place which, in itself and its environments, has the air of a gentleman's country-house rather than that of a hostelry open to all comers. From this platform is a splendid panoramic view of the moorland town of Leek, of Harracles, a country house of Jacobean architecture, and where the ancestors of the illustrious potter, Josiah Wedgwood, passed lives of utility and good repute; while to the right of this, high on an acclivity, there is seen the charming old country church of Horton, where many of these Elizabethan and Jacobean Wedgwoods lie buried, and where many of their race made marriage vows and bore their children to the baptismal font. This churchyard is so silent, and beautified by nature in so many ways, as, in Keats's touching words, "to make one in love with death, in order to be buried in so sweet a spot."

The elder portion of the holiday-makers take their place on seats and forms placed pleasantly about in sun as well as shade, on the broad platform in front of the hotel, or on the sloping lawn to which two or three steps descend. A few youngsters, as well as elderly men, are off to have a game of bowls

or else nine-pins, in the shade of a group of trees at the rear of the house. But the major part are mad for a dance, and so the fiddler, tuning his instrument, scrapes away at the old-fashioned dance-music, so long wedded to the movements of happy feet. Thus summoned, the light-hearted, giddy young things set off with the quadrille and the waltz, and like children out of school are wild with fun and frolic. Messrs. Gravity and Velvetreen-coat join presently in these dances, and are as full of fun as the rest. Ladies and friends also take their part, and so the innocent joy goes on, till the fiddler is tired and there must be a pause. Meanwhile the rich affluence of the September sun sheds its glory over all; the air just rustles the leaves of the surrounding trees, and amid them the birds pipe their sweet trills and melodies.

A sort of luncheon follows of coffee, bread, butter, and buns, set forth in the hotel, in a very large, newly-built room, with lofty windows looking far and wide over the lovely panoramic view just spoken of. "Welcome," cut out in coloured paper, is prettily wreathed on the walls; while on the mantel-piece, and otherwise set about, are various vases and other ornamental pieces of modern Wedgwood ware. For even the landlord is a potter of note at Hanley, as als · its mayor, and in his day has worked at modern Etruria. Luncheon over, there is, generally speaking, another and greater dispersion of the holiday-folks. A few of the simpler matrons and spinsters take their place on the rustic seats for a gossip. Some of the elderly men gossip too, as stretched out on the incline of the lawn, they enjoy their pipes. The younger children play about, and a few of the solo-singers and part-singers have a little music. The latter make trial of their glees and madrigals; partner Gravity, who is an excellent musician, timing them and giving them a lesson when needful. Eight of them sing—men, youths, and girls—and their ditty is old, and thus :—

"Oh, dear! what can the matter be?
Johnny so long at the fair.

He promis'd to buy me a bunch of blue ribbon
To tie up my bonny brown hair."

But the key they have taken it in is too screaming and high, so partner Gravity bids the violin-player touch a note, and he leads the singers in the proper key, beating time meanwhile like a skilled *maestro*.

At the rear of the hotel stretches a breadth of woodland; a mountainous road leading to

the moors, skirting it to the left, while sloping to the right, the woodland fringing it for long way, lies Rudyard Lake, so well known to Staffordshire people. It is an artificial piece of water, two miles in length, and covering about four hundred acres of land. It was formed in 1793, for the purpose of feeding a branch of the Trent and Mersey canal. A wide sluiced embankment, forming a sort of bridge in dry weather, separates in a most picturesque manner the Rudyard end of the lake from the valley of the Churnet, lying far below; the great blocks of masonry forming the embankment, as also the gorge through which the surplus water flows, being picturesquely decorated in clefts, nooks, and on ledges with ferns, lichens, mosses, and alpine plants; while here and there tall grasses and weeds wave to and fro in the light summer air. The right bank of the lake rises in very abrupt acclivity, the sides being deeply wooded; while at the foot, and on the margin of the lake, and running towards Macclesfield, is the railway the holiday-makers left at noon. From this point, the line known as the Churnet Valley, is renowned for its wonderful alpine beauty, and is, in the flush of summer and the fall of autumn, worthy of the tourist's eye and foot. Sc, indeed, is the whole region of these picturesque, solitary moors. For amid them is something to delight the eye of every wanderer, be he geologist, archæologist, botanist, antiquarian, or simply an artist with his sketch-book in his wallet.

The water of the lake is, however, too motionless to be in the fullest sense beautiful. It looks dark, deep, and deadly, as though those who had mischance thereon would never see the surface again; and this impression is intensified by the depth and height of the woodland shadows which wind onward with it. But "distance lends enchantment to the view." So distance here lends picturesque effects; and a mile or so away where stronger lights break in, the result is very fine, and such as would give intense delight to the best of our landscape painters.

One or more of the holiday-makers have brought rod and line, and essay an hour's fishing. Others wander away through the woods above the railway, gathering as they go the alpine or indigenous raspberries, which here and far away on the Derbyshire and Yorkshire moors grow more or less in great profusion; so much so, that in the moorland towns, as Leek, Ashbourne, and Bakewell, they are brought into the markets

for sale. Other of the holiday-makers ramble off to the picturesque town of Leek, to traverse its hilly streets, to look up at the vast factories for the weaving and making of such small silk goods as buttons, cords, silk twistes, and fringes; as well as at many of the quaint, old-fashioned houses, where weavers and buttoners a century ago, ere the day of factories, plied their primitive machines and looms. These houses, some of them still thatched, look, with their quaint long lines of windows, as though a section of the oldest part of Spitalfields or Bethnal Green were transported to these moors. In fact, some of the descendants of the Huguenots came here from Macclesfield, Congleton, and Derby, in the early part of the last century, and settled down as dyers and weavers. But the great point of attraction to those who have come so far, is the view from the churchyard. Nothing finer is to be seen in the United Kingdom. From thence is visible the more southern portion of the Pennine range, the Alps of central England; the wild summits and moors of which, useless save for sheep grazing, are left to solitude, and the perpetual mists which hover over them.

Others who keep nearer home pay a visit to the now scanty ruins of Dieulacres Abbey, where for somewhere about three hundred and twenty-five years, civilisation held its own in this region of primeval forest, moor and rock. All but the bases of a few splendid columns have passed away. But built into the walls of the farmhouse and steading adjacent are beautiful bosses of Gothic groining, corbels, circles including trefoils; enough, and more than enough, to indicate the artistic capacity of our race, and also raise a sigh in the breast of the thoughtful, that any sign of beauty should perish, even though only graven out of stone.

While partner Gravity teaches the choir, partner Velvetreen-coat is off up the mountain-road to the left with the brightest and youngest of the "bank," male and female. There is laughter, as also merry jests, and no doubt flirtations, for some of the maidens are very comely; and flower-gathering and decorating is universal. So, when the merry wanderers return towards three o'clock, every bonnet, hat, and vest is gay with colour. Even the Velvetreen-coat has more than one button-hole full of flowers; and the deer-stalker's hat which accompanies it looks rakish in a wreath of mountain-ash berries.

All but the furthest wanderers have returned by three o'clock, and the glee-singing and solo singing begin in earnest. At four

o'clock comes the feast of the day; cold, substantial viands, with good and abundant tea. The great room, as some of the folks say, is "crommed," a large parlour on the opposite side of the hall is "crommed," a room up-stairs is "crommed," while some of the musicians take tea on the capacious landing; among whom, sitting conspicuous, is "th' mon wi' th' big fiddle."

There is no heading the table or formal attempt at superiority. Messrs. Gravity and Velvetreen-coat take their place each in the midst of the two long tables, and the ladies find a place near at hand. The gentlemen, foremen, and others, settle down just anywhere, the minister says grace, and the meal begins.

"Will yo do th' pourin' out, missis?" asks a matronly, cleanly "treader," who earns a guinea a week, and by this means supports an invalid husband. The lady addressed declines, so the matron sets to to her task with hearty good-will. Her seat being just in front of a capacious urn full of tea, she sweeps, with a bend of her arm, a score of cups and saucers towards her, and begins "th' sugarin'" and "th' milkin'," and then turning down the tap of the urn, gives to each cup full measure and more, for the saucers are full too. Then she gives the lady beside her the very fullest and sweetest cup.

"Theer! just yo be a tastin' it. It's swaet enough, I reckon." The lady says she does not take sugar, and requests a cup without.

The matron is lost in wonderment. "Not take sugar!" she exclaims, and drawing a little off, so as to give greater expression to her wonder, "Wai th' ought. Sugar's a nourishin' thing, they say." Her wonder thus ventilated, she presents the unsugared tea with hearty good-nature, and then she concentrates her interest on another object.

On the opposite side of the table, a little way up the room, sits "John," in front of a huge piece of roast beef, to carve which it has fallen to his share. He is a stout, good-looking man, whom it is as pleasant to see at his lathe in his "shop," for he is a skilled and much-prized workman, as here, wielding a mighty knife and fork. His name, as just said, is "John," and the homely, kindly matron is his "treader."

"John," she calls, "give th' lady a paice o' baif. Not too fat, or too raw. They moight'n a' roasted it a bit more nor that."

John sedulously complies, and then the matron is careful that salt, mustard, pickles, and bread and butter are duly presented.

She herself partakes heartily of "baif and pickles," yet looks well to the cup-filling, as also to the lady.

"Yo're makin' a poorish tea," she says, with evident concern, and measuring another's power of food-consumption by her own. "Wun yo have a paice o' veal—it looks tonder, an' a paice o' 'am with it." Speaking thus, and before the lady can make reply, she has called out to some one a little way down the table, "Tum, give this eer lady a paice o' 'am, not too fat, an' mind yo cut it delicate."

Such is the call upon the matron's urn as to soon need the addition of two or three capacious teapots. Conspicuous among which is a brown glazed one, of good form, the lid being surmounted by a little old woman, wrapped in a cloak. Of this the original was modelled by the great Wedgwood himself just over a hundred years ago.

"What does such a teapot cost in this country?" the lady asks.

"Oh! they're made at lot's o' bonks. Well, maybe I'd give fourpence."

"Why, in London such a one costs half-a-crown."

"Ay! they charges a djel theer, I dussay, for everything. I've heerd that afore."

Meanwhile tea-pouring, carving, and conversation go briskly on. The general buzz and intermingled scraps of talk are highly amusing as they meet the ear. "A bit moor 'am." "No moor fat." "I dunner loike them theer pittles." "Give me that last bit. Colliflower, I mean, and no juice. Too much grocer's oil in it for me." "Missis," to the waitress, "some moor bread an' butter." "A cup moor tea, please." "This 'ere tea dunner do for me—it's too weak." "Ai smart yo look, Mary." "Shall I," in a very soft tone, "hav' th' pleasure of walkin' 'ome wi' yo?" "I sea, look at ur, ur's flirtin'. It's well ur mother dunner sea ur—theer'd be a toidy mess at wom." "Ay, I know ur was auwiz a flirt." "Jist look at ur. Another new dress sin' Wissuntide," and so on. These colloquies in the vernacular being largely mixed with those much more refined in tone, and grave or merry in purpose, as the case may be.

At length the meal is ended, and the waitresses who have been on the watch incontinently seize the "baif an 'am," for the volunteers from Etruria have arrived and want their tea. So the minister says "grace" and silence is proclaimed. Then partner Gravity rises and speaks earnest words to the people as to the capable work they have done through the past year; and as to the

happy spirit which reigns in their own special manufactory between employers and employed. He tells them what fame their goods have in the market for taste, novelty, and quality of workmanship, how their trade is in consequence extending, and how presently their works will be enlarged by new buildings erected on a site lately purchased, and as yet covered by an iron foundry. The firm thus commercially prosperous, for goodwill and mutual duty unite all together, progress and improvement must still go on. The workers must be self-helpful, true to themselves individually. The young men, and young women too, must make good use through the evenings of the schools and institute open to them; and by such means not only elevate the tone of their moral life, but the character of their labour, so as to meet any demand made upon it by their employers. To this partner Velvetten-coat follows in a lighter and more excursive vein. He says how pleasant is this social gathering and pause from ceaseless labour. He explains how much social good arises from this sympathetic commingling of class with class. He refers with pride to the prizes the young men and lads have won in the local Art Exhibition, and to their obviously growing taste for mental culture. Mr. Velvetten-coat having said thus much, and much else which is merry besides, he introduces the lady as a very old friend of the working classes of this country. He is also good enough to read an address she has written and brought with her. This is soon found to be more specially addressed to the women, young and old; and refers to the great necessity which exists for individual improvement in the simple, yet important, arts of domestic life. The foremen and overlookers then have their say. The banker, the minister, and one or two other friends add a few words, and then a vote of thanks sum up the whole.

The great room is vacated, and out on the wide-gravelled platform and lawn a performance of vocal and instrumental music follows. There is a quiet bar in the hall of the Rudyard Arms, and soon there are a few parting glasses among friends. Cider and sherry are popular with the young; and prudent modicums of brandy and water with the elder. This is the only drinking; a mere "loving cup" passed round.

The railway whistle is heard; the sun is dropping low, the moon begins to show herself in the skyward distance of the moors; and, good time being kept, the holiday is over.

ELIZA METEYARD.

ON AN AUTUMN DAY.

I.

FAREWELL, broad downs! whose long unbroken
swell

Is bordered only by the grey sad sky,
And grey sad restless seas that outward lie
(As those far lines of burnished silver tell),
With noise and fret of beaten waves. A spell
Of peace is on these grassy wastes, and high
Full sweep of winds that break through searchingly,

The fans of feathered fern and swift dispel
Low gathering mists, driving the crisp strong
scent

From out the nestled thyme, chasing the lark,
Puffing his feathers, gurgling in his throat,
Till his shrill singing with their rhythm blent
Gives utterance to the waste's wild voices—Hark!
How freedom thrills the first exultant note.

II.

A golden belt of sunset round the meadows,
Woods growing dusk and lapsing into rest;
Quiet the noisy farm, all still and shadowed
The silent house, that waits me for its guest.

Her garden mute, the soft air rich and weighted
With scent of ripened fruit and roses dead,
A parting shaft of sunset spent and shattered,
On crimson leaves about her doorway shed.

XVII—54

Short while ago her white dress fluttered o'er them,
Here lies her book left open on the lawn,
While patient doves, about her window clustered,
Wait for the jealousies to be withdrawn.

Surely she will not tarry; for her coming
Will break the brooding silence of its spell,
Wake it to new delight or passionate sorrow,
To give me "Welcome!" or to bid "Farewell!"

C. BROOKER.

THE EARLY LIFE AND TIMES OF ST. PETER.

PART II.

THE *religious* knowledge imparted to Peter, like that of all Jewish youths, would, in accordance with the strict injunctions of the Mosaic law, be communicated by his parents, saving perhaps some simple instruction by the *Sopherim*, or other attendants of the synagogue.

Though doubtless devoid of the intellectual training of his great contemporary, Saul of Tarsus, and in the refinement which accompanies it, yet, judging from his subsequent powers as a preacher and writer, we can imagine that, as he passed from youth to manhood, his natural gifts made him abundantly capable of appreciating the varied loveliness of that wondrous picture in outer nature which was constantly unfolded to his eye. An eloquent writer has said: "If Christianity was to be the offspring of mere beauty of Nature; it might assuredly have found a more enchanting birthplace, such as the golden shores of Ionia, or those magic isles which rise out of a sea of azure on the shores of Asia Minor."* And yet, at the age in which Peter lived—not certainly in Palestine—we question if in many places out of it could a scene alike more unique and diversified be witnessed than around the Sea of Galilee. Gennesaret—almost unknown in Old Testament times (the Chinneroth of Joshua, xii. 3), or memorable only as the spot where the first Amorite shepherds pitched their tents—had become, in the reign and mainly through the munificence and luxury of the Herodian court, the most populous and fashionable district of the kingdom. Its waters were girdled with at all events nine proud cities and their varied palatial homes, recalling to many a Roman the sumptuous villas, temples, baths, and theatres which crowded their favourite Lucrine lake or the shores of Baia.

We may try for a moment to embody in words, the view, which, day after day, would meet the gaze of the youthful fisherman, either as he was preparing his nets on the beach for the night of toil, or shall we rather say (realising in thought the season when all secular work was suspended), on the Jewish Sabbath-even, when, seated with his parents and companion brother in the green alcove on the top of his flat-roofed dwelling, he had leisure in Nature's "still, golden hour" to drink in the wonders of the

prospect. Nigh at hand, though possibly half hidden by a rugged promontory to the left, the waves of the lake would lave what are now piles of ruin, but which were then the edifices of proud Capernaum, with its barracks and wharfs, the gleaming marble of its white synagogue doubly luminous under such a sky:—a city with which Simon was afterwards to be sacredly associated, not only as his own adopted home, where he lived with his wife's mother, but where most of the miracles of his Divine Master, of which he himself was most generally spectator, were performed. It was, moreover, the only settled residence which the Homeless One claimed,—“His own city.” Farther east would rise before the eye of the young spectator the edifices of Chorazin, all the brighter, too, in the setting of black basalt rocks around. In front, to the right, where now is a miserable, battered village with a solitary palm, he would have before him the town of Magdala, which in future he would associate with a touching story of Divine goodness and grace; while other two miles in advance, and occupying the more commanding situation, were fast rising, if not already built, the stately towers and imperial edifices of Tiberias; a city built by Herod Antipas in honour of his master, on the site whereon Jerome tells us once stood a city called Chinneroth.

Simon and his fellows would have these waters, doubtless, much to themselves in the lonely night watches, only now and then would they note the glistening wake of some friendly craft in the clear moonlight or starlight. But by day, or in the cool of the evening, the whole expanse would be alive and furrowed with pleasure-boats, sumptuous barges, galleys, and pinnaces, gay as the Venetian gondolas of a later age; while vessels of heavier tonnage would be seen plying between the ports of Bethsaida-Julias and Capernaum, or moored in the busy wharfs filled with merchandise, where officials, like the future Apostle Matthew, would be seen sitting at the receipt of custom to collect the impost. Nor had Nature left what was attractive to art and man. The setting was beautiful as the jewel. That remarkable basin, six hundred and fifty feet below the level of the Mediterranean, enjoyed a tropical climate. Flowers and shrubs that would have drooped on Olivet, Bethle-

* Pressensé's "Life of Christ."

hem, or Samaria, grew in exuberant luxuriance there, and made it, what it was called, a terrestrial Paradise. The oleander, with its luscious blossoms, the vine, the pomegranate, the orange, the tamarisk, the lotus, the fig, the agnus castus, not forgetting the now unfamiliar palm—all had a home in this clime of the sun. Well may "the smiling district" be designated by a well-known French author as "the true home of the Song of Songs." The crimson and pink anemone, the "lilies of the field," familiar still at every turn, which were afterwards pointed to as excelling the glories of Solomon—weaving a richer mantle than any Syrian loom—mingled their brilliant hues with the green turf and the ebbing and flowing waves lapping the silver strand.*

Amid, then, such surroundings as these, the Fisherman boy was trained for the great work of the future; a befitting school surely for his subsequent varied labours. The rough life of adventurous toil, the heats of summer and storms of winter, which braced his physical frame, would nerve and inure him to cope with sterner difficulties. He had doubtless no thought in these his earlier years, save of living an unobtrusive life, and of dying an unnoted death by this Galilean lake. But the God of his fathers had a nobler destiny in store for him. Nets and toils and buffeting elements undreamt of by the sailor of Bethsaida, were to supersede his homely labours. The modest name of the village on the Sea of Tiberias was ere long to take its place among the memorable spots of earth; as memorable, though for a very different reason, as either Rome or Athens. In a sense which the great prophet of the nation never imagined his words to convey, it might be said of that whole region, alike with regard to the bounties of Nature and of grace, "O Naphthali, satisfied with favour, and full with the blessing of the Lord."

Although this paper was intended to give a sketch only of Peter's early life, we may connect it, ere we close, with the next important crisis in his history.

He emerges from the seclusion of Bethsaida, on the banks of the Jordan.

As he and his fellow-fishermen were occupied with their wonted callings on the Sea of Tiberias, we may imagine the conversation turning on the all-engrossing topic of the day—at least what was so among the earnest-minded of the Jewish people—the Great Revival Prophet, the son of Zecharias a priest, who had risen in Judea, and whose thunder-tones, far more than the warlike appeals of Judas, were stirring society to its depths. Never since Elijah's age had bolder words been uttered; never had a more vehement shaking taken place amid the dry bones of the degenerate nation. Leaving his childhood's dwelling amid the sunny vineyards of Hebron and Eshcol, he makes his adopted home the scathed and blasted deserts around the Dead Sea shores and the Ghor of the Jordan. The proposal and agreement is made among these Bethsaidans, that before going up to the City of Solemnities for the Passover, they would undertake a special journey, in order with their own ears to hear the burning words of this new messenger from heaven; who, in addition to the interest which had gathered around his own person, had announced himself the herald of a Greater,—the "voice of one crying in the wilderness, 'Prepare ye the way of the Lord, make His paths straight.'"

What a singular scene must have met the eye of Simon and his brethren when crossing the sacred river at Bethabara near Succoth! At the great ford they found themselves, in the midst of a motley multitude. The whole country, from the passes of Lebanon to the pastures of Beersheba, seemed to have caught up the sacred enthusiasm,—flocking to this wild Sanctuary of Nature in East Palestine, to listen to the strange ambassador of heaven—with his unshaven locks, clothed in rough camel-hide fastened with leathern zone, reminding of the fiery Tishbite, living in a cave by night, and, after satisfying hunger with wild desert fare, coming forth by day to deliver his faithful, fearless message. There were Pharisees from Jerusalem, publicans from Jericho, Gilead freebooters, Bashan shepherds bringing their sheep and lambs across the river for Temple sacrifices, Galilean fishermen, Samaritan vinedressers and husbandmen, soldiers from the barracks of Cæsarea, Tiberias, and Jerusalem; mothers with infants in their arms, old men leaning on their staff for very age, bereaved ones with dimmed eyes and broken hearts, profligates sated with guilty pleasure, rich men

* I have thus elsewhere recorded my own impressions of the surroundings in relation to familiar scenery at home. "They reminded one less of the northern Highlands of Scotland than of the peculiar pastoral hills in Ettrick and Yarrow in the South, or in Cumberland and Westmoreland; while in the upper end of the lake, as they proceed to girdle in the fertile 'Plain of Gennesaret,' they display here and there bold, rocky cliffs, beginning above the now ruined Magdala; more broken and not so continuous, yet those who are familiar with Salisbury Crags at Edinburgh may have a tolerable impression conveyed to them of their peculiar character and contour."

whose gold had failed to answer the question, "Who will show us any good?" poor men, hanging in the rags of want, driven to despair by the unkindness and cruelty and selfishness of others. All are seen gathered listening with arrested ears to the spare, worn, sunbrowned, ascetic man, whose words are evidently bringing tears to eyes that never wept before, and sending swift arrows home to hardened hearts, as he calls upon all without distinction of age, or sex, or history, to "flee from the wrath to come."

In common with others of his associates, the impressible nature of the son of Jonas had been touched with the fervid appeals of the desert preacher. He felt the stirrings within him of a new and nobler life, as he listened to the trumpet-call, "Repent! For the kingdom of Heaven is at hand." New thoughts and aspirations had broken in upon the monotony of his life of toil and the gains of the Bethsaida fishery. That bold prophet had not only flashed upon him a sense of his guilt,—“made him possess the iniquities of his youth,”—but, more than all, had he stirred within him intense longings to see the great "Consolation of Israel," whose advent was declared to be imminent—"the true Light which lighteth every man that cometh into the world."

We need not rehearse the familiar story; how "the Lamb of God" was pointed out in the first instance, to Andrew and John, and how in obedience to the invitation "Come and see," these two disciples accompanied Him to the place where He dwelt, and "abode with Him that day, for it was about the tenth hour." This according to the Jewish computation, would be four o'clock in the afternoon. How long the interview lasted we are not informed. Probably it was far on towards midnight ere they separated. The bright stars and moon may have been shining on the cliffs and foaming waters of the Jordan when the two disciples came forth from the most memorable meeting of their lives. Next morning still farther reveals what had been the result of that intercourse on their own souls. In their dreams, a ladder, brighter and more glorious than that of their great ancestor with its troops of clustering angels, had been present to them, and transformed the banks of the historic river into a second Bethel—a truer "House of God" than that of the patriarch. Andrew, eager to make others he loved partakers in the joy with which his own heart overflowed, hurries in breathless haste to his brother Simon to communicate the tidings: "We have found the Messiah,

which is, being interpreted, the Christ (the Anointed One). And he brought him to Jesus."

How much is contained in that brief announcement, Simon "brought to Jesus!" the first introduction of Peter to the heavenly Master, in whose service he was henceforth to be enlisted. How could he ever forget that moment when his Lord beheld him, and said, saluting him by name, "Thou art Simon the son of Jona: thou shalt be called Cephas, which is by interpretation, A stone"?* Do not these words seem as if the omniscient eye of Christ had discerned at a glance the strong features in the character of His great follower; his natural weakness, his ultimate greatness, his rock-like boldness, firmness, fearlessness; a nature which, unrestrained and ungoverned by higher principles, might have developed itself into what was violent, headstrong, overbearing; but which, despite of a few exceptions, grace moulded and transformed into what was resolute, stable, inflexible, patient, enduring—the result doubtless of living union and contact with the great living "Rock"? As in the case of the illustrious father of his nation centuries before at Jabbok, to whom the new name was given of "the hero of Jehovah," so, "as a prince," he too was "to have power with God and to prevail." The good Shepherd "callesth His own sheep *by name*, and leadeth him out."

From this hour, Peter had enrolled himself among the number of Christ's disciples. It was in every sense the most momentous turning-point in his history—the time when a hundred hours are crowded into one. The suddenness and instantaneousness with which he accepted Jesus of Nazareth as his Saviour, was in accordance with the impetuosity of his character. The calm, reasoning, cautious Thomas would have taken days, possibly weeks, to ponder the evidence of the Messiahship claimed by a Galilean workman's son. The other takes his determination at a bound; and forestals, without hesitation, a future utterance, "Lord, I believe." In the absence of any miracle at this first meeting to authenticate the claims of Jesus, we must infer that there was something in the look and deportment of the Lamb of God, "fairer than the children of men," which attracted

* Cephas—"the rock." The equivocal meaning of the word was, no doubt, evident in the original Aramaic dialect spoken in Galilee. The French alone of modern languages exactly retains it: "Vous êtes Pierre et sur cette Pierre" (Milman's "History of Christianity," vol. i. p. 210). Langu renders the words, "Thou art Simon, the son of the shy dove of the rock: hereafter thou shalt be called the protecting rock of the dove."

and over-awed the new disciple with an irresistible sense of the Divine Presence. It was the felt power of intrinsic goodness and holiness, and spoke as convincingly as if the shining hosts of Bethlehem had again hovered over the scene, and repeated their natal song.

Not long after this interview these earliest disciples of the Messiah seem to have resumed, for a time, their wonted occupations. We can only picture how the hearts of the "Pilgrim brothers" of Bethsaida burned within them. The summer sunshine, the song of bird and breath of flower, would be in accordance with a strange, new, inner joy. When out on the sea with their boats and nets, girt in their rough hides, how would they love to rehearse these never-to-be-forgotten hours at Bethabara, when He (of whose peerless dignity, however, they still could only have a vague consciousness) met

them, and they pledged to Him their obedience and love. They little dreamed, doubtless, then, of the higher vocation and more intimate fellowship in store for them, when summoned from their retirement they were to be made a spectacle to devils, and to angels, and to men. Peter's heart was now given to the Christ of Nazareth, and he only waited a more definite call to abandon for His sake his pleasant home and manly toil, and to surrender his time, his services, and ultimately his life. Though sadly failing on several earlier occasions, to "endure hardness as a good soldier," yet, he who was reared amid scenes, recalling above all others in Palestine heroic memories—Israel's olden age of chivalry, was, by a lengthened process of training and discipline, to be fitted for the stern moral conflicts of his later career, and finally to be made more than conqueror through Christ who loved him.

J. R. MACDUFF.

PNEUMATIC DRAINAGE.

SECOND NOTICE.

OUR notice of Captain Liernur's singularly ingenious and most effective system of drainage,* in which air is the motive power employed for the removal of sewage, has excited much attention, and we willingly comply with many requests for more information regarding what competent judges consider the drainage system of the future.

Assuredly there is need of "*improved town drainage*." We self-conceited moderns turn up our noses at the primitive domestic usages of our forefathers, but what will posterity think of our ignorant folly in constructing so many thousands of miles of sewers, into which we deliberately introduce every species of abomination best fitted to generate mephitic gases, to exclude which from our streets and dwellings is impossible?

We must, if we be wise, at once throw aside what a Madras correspondent terms "chronic and priggish" prejudice as to the discussion, save in scientific journals, of plans for promoting health and saving human life, which at present is being recklessly thrown away through the imperfection of our system of drainage. We must at once do what can be done to wipe away the reproach of being debilitated in mind and body by

preventable disease, leading to premature mortality.

The public mind requires to be enlightened as to the real sources of danger, and most deplorable is the general indisposition to believe that from "properly trapped" pipes and drains there can be any injurious reflux of poisonous gases into our houses. Many give no heed to the fact that Dr. Fergus, of Glasgow,* has visibly demonstrated that such gases ascend through every contrivance intended to imprison them in regions subterranean, and that their corrosive action is such as to destroy, within from twelve to twenty-one years, lead pipes. Neither will they be warned by the eminent engineers who warn us that the very best sewers permit the escape of putrid matter, which gradually saturates the surrounding soil, and, not without reason, is deemed one of the sources of those epidemics which so often attack great towns.

The first thing to be done is to make people dissatisfied with things as they are. "Why trouble ourselves about Liernur and his *air drainage* in a country like this, where *water* is so handy? Why part with the very comfortable arrangements now in use?" Those who so speak are in a fool's paradise,

* See GOOD WORDS, June, 1874.

* "The Sewage Question, with Special Reference to Traps and Pipes." See p. 22, Fig. 2.

and need to be told that it is admitted by the most competent authorities that water is a specially dangerous vehicle for the removal of those impurities which must be got rid of, if the claims of health and decency are to be duly provided for.

To Captain Liernur belongs the merit of revolutionising all our ideas as to town drainage, of managing it on a new principle, and of giving effect to that principle by the employment of an agent commoner even than water, found everywhere and always, and costing nothing—the air, in short.

We shall seek to gratify the curiosity of our readers regarding the pneumatic system by giving a succinct and not too technical explanation of its nature.

In order that our observations may be presented to our readers methodically, we arrange them in the following order—(1) How it is effected; (2) where it has been carried out; (3) why it should be introduced into this country.

I. We did not require Captain Liernur to tell us that a vacuum being produced, the air or water in a pipe might be made to rush towards the place deprived of air. His merit consists in so applying the motive power thus producible, that, by means of pneumatic draught alone, the drainage of a single house, or of all the houses in a great city, can be effected thoroughly, speedily, and without annoyance to any one, and all this so economically as to be within the reach of any community. This is not all. He so utilises the fæcal matter thus procured *that it yields a revenue so large as soon to repay the cost of introducing his system, and henceforth a large annual income.*

(1.) His first axiom is, that the object of town drainage shall be, not the mere removal of filth, but also the keeping pure of the air, the soil, and the subsoil water, and the maintaining of this last at a permanently low level. He insists that all this shall be done without additional burdens to ratepayers; which, disliked by all, are especially hard upon the working classes. He denounces the injustice of forcing them to use water-closets, costly in purchase, and costlier to maintain, for in the houses of the working classes they are subject to as many disasters as a timepiece in the hands of children. The remedy is—abandon water for the removal of sewage, and, at the same time, the old method of collecting all city filth in *one sewer*, and floating it away somewhere: in the end it is sure to be an annoyance to man, beast, and fish, because

it spreads defilement through the air, the land, and the waters. Call to your aid the blessed air; blow, or suck, every fæcal product of our dwellings into one place, there convert it into a dry powder, which sell to the agriculturist, sure to welcome "*quid faciat latus segetes*," as Virgil has it.

Step the first is to bring order into the present sewer chaos of all that is abominable. Its contents are classified and treated separately. The sewers proper are for water drainage only, and are devoted to house, kitchen, and rain water. In towns already having sewers, these are employed. All excrementitious matter, and all fatty products of kitchen sinks, are kept out of the common sewer by arrangements alike ingenious, simple, and effective.

The waste products of industry are also excluded from the common sewers, unless purified at the cost of the person to whom they belong. Of course this requirement raises a host of interested opponents. In our presence Captain Liernur was asked, "How comes it that your system is not yet adopted at Berlin, which so much requires it?" Here is the animated reply:—"For reasons quite independent of the system. When manufacturers and others, accustomed to convey everything into the sewers, came to comprehend that this could no longer be permitted, they became very angry, shook their fists in my face, and said, 'We will see you hanged first!'" We can well believe it! Interfere with a man's right to enrich himself to the annoyance of his neighbour, and he is very likely to swear at you, and to continue the annoyance if he dare! When, therefore, the Liernur system has the collateral advantage of restraining human selfishness, and forcing pollutionists to remedy, as far as possible, the nuisances they create, the public have a powerful interest in wishing for its adoption. For the reasons already indicated the general sewage of a Liernurised town is treated by itself. The pipes conveying to the sewers the refuse liquids of trade and manufacture are provided with a slight bend, which always contains some of the water flowing off; and on it a short tube is erected, reaching to the pavement, and through this tube the Inspector of Nuisances can at any time take a sample for examination. If not tolerably pure, the person producing the nuisance can at once be interdicted.

(2.) The subsoil drainage is effected by small agricultural drain pipes, laid at a higher level than the sewer itself, and discharging

into it by vertical pipes at suitable intervals.

(3.) All fæcal matter, and the fatty and sedimentary products of kitchen sinks, are removed by a separate system of pipes; the peculiarity of which is, that air pressure is used instead of water.

This peculiarity of the system is carried out thus:—In the town to be drained, a central building is provided containing two or three air-pump engines, the aggregate horse power being such as is required for working purposes only, and the division into two or three engines is for convenience in case of cleaning, repairs, or accident. Under this building are air-tight, cast-iron reservoirs, towards which, as to a common centre, all fæcal matter is sucked. These tanks are connected by pipes with other tanks at the intersection of the principal streets, so as to command areas of from thirty to fifty acres. Pipes are laid along the streets leading to the tanks, to act as "mains," and from these mains other pipes branch off right and left to the houses, where they are connected with the closets and other receptacles to be drained. Every tank has thus as many mains as there are streets leading to it. Each main, with its branches, is, however, as to its drainage action, a distinct and independent arrangement, and has a stop-cock for itself, at its junction with the street tank.

When a vacuum is made in the tank, and the stop-cock of any one of its mains is opened, all the closet pipes connected with that main are emptied simultaneously, and their contents conveyed into the tank. Experience demonstrates that a simultaneous action is obtained even through mains nine hundred feet long. One tank can thus serve for draining all houses within a radius of that length, equal to an area of about fifty acres; so that, other circumstances permitting, towns may be divided into drainage compartments of about that extent, each of them being practically independent of the others, just as each main pipe of a tank is independent of every other.

One main pipe operates on a number of houses, one tank on several main pipes, and one central engine on numerous tanks. The central pipes, however, serve not only for communicating the vacuum to the various tanks, but also for conveying their contents to the central engine buildings, after the several main pipes have all contributed their quota.

The system is manipulated thus:—The air-pump engine maintains during the day a

three-quarter vacuum in certain central reservoirs below the floor of the building, and at the same time in the central pipes. Workmen, perambulating the town, visit each tank once a day. To drain the houses commanded by one tank, they open alternately the connecting cock of the central pipe and the stop-cock of any main pipe; the first to obtain a vacuum in the tank, the second to utilise this by emptying the closet pipes connected with that particular main. After all the mains of the tanks in question have been operated upon, and their contents collected in the tank, the workman turns the discharge-cock, in order to send the whole mass to the central building for immediate conversion into poudrette.

A remarkable feature in the system is this. In the whole network of pipes there is not, except the cocks referred to, a single valve or other movable mechanism which is expected to do something when the pneumatic force is applied. All parts of the arrangement are fixed and immovable. Hence there is nothing to get out of order or to necessitate costly repairs; and when these are needed they are effected with ease. In proof of this, and of the care with which every detail of the system has been elaborated, it deserves to be noted that in all the places where it has been introduced the utmost satisfaction is expressed.

In an article like this, intended for general readers, it is not desirable that we should give a detailed account of the pneumatic closet invented by Captain Liernur. Those accustomed to the present system may still employ water, at the additional cost of 1s. 8d. per head. But in the pneumatic closet recommended for general use not a drop of water is employed. Nevertheless, the result is most satisfactory, there being nothing in any way offensive. The vacuum having been made in the street tank, communication is effected with the closet, and at once the contents depart as easily and completely as by the mechanism now in use. In a second all is still, and the most timid and fastidious can raise no objection, æsthetic or otherwise. What an improvement on existing arrangements!

The treatment of the fæcal matter thus procured is the culminating point of the Liernur system, and promises to be of the highest importance to agriculture.

The process is as follows. Captain Liernur utilises the waste steam of his air-pump engines, which still contains 92 per cent. of the heat imparted to it. Having a temperature of about 105 degrees Cent., it is passed

through a Green's economiser in the chimney of the boiler, and thus super-heated to about 115 degrees Cent. The steam is then conducted through copper cylinders revolving in troughs full of fæcal matter, with a thin layer of which, on the lower side, they are covered.

This layer is exposed to a drying heat of 115 degrees Cent.; but this temperature being rather low for evaporation, the revolving cylinders are housed in air-tight reservoirs, communicating with the air-pump engine, so that the outer surface of the cylinder and the thin layer of fæcal matter are exposed on the outside to a $\frac{1}{2}$ -vacuum, while the inside is heated to 115 degrees Cent. The resulting evaporation is so rapid that the fluid fæcal matter is converted into a dry crust before the cylinder has completed its revolution. By a stationary knife, placed nearly under the cylinder, and parallel with it, the powder is scraped off into a long box, which stands on wheels, and can be readily removed. How the vapours from one evaporation are made to serve for the purposes of a second evaporation, and the vapours of the second for a third evaporation, thus giving a great economy of heat, would take up too much room to describe; but we may say that in a town of moderate density as to population, the waste steam thus used is amply sufficient to convert all the undiluted fæcal matter into poudrette without any further cost for fuel. The same principle of evaporation is used extensively in sugar refining.

The process, then, is this. The contents of the street tanks having arrived in the central tanks, as shown by a float indicator, they are at once, and without contact with the atmosphere, conveyed to a tank where they are mixed with a little sulphuric acid, to prevent the loss of nitrogen during evaporation, and thence they pass to the drying apparatus to be turned into poudrette. By the time this operation is effected a new quantity of fæcal fluid has arrived from another reservoir, and the process is repeated. The two operations may go on together the whole day, so that in the evening all offensive products are converted into a powder, ready to be packed in bags or barrels, and forthwith sent to market. Looking at it, and being told by Captain Liernur the singular process by which it had been so speedily produced, we could hardly believe our own eyes.

Having thus described the *modus operandi*, let us now look at the Liernur system in actual operation.

II. We have discussed *how*, let us now tell our readers *where* it is carried out, either in part, or in all its divisions—that is, including Liernur subsoil drains and impervious common sewers, along with the pneumatic arrangements, and the manufacture of poudrette.

Modesty in defining the bounds of the possible should be the characteristic of philosophers—nowadays especially, when the marvels of science and the achievements of engineering are so astonishing. Nevertheless, the pneumatic system, when under discussion by the sanitary section of a certain Philosophical Society, was thus spoken of by a gentleman having an expensive scheme of his own for the drainage of one of the greatest cities of the kingdom:—"After all the noise which had been made, the simple truth was, there was not a single place where at present it was successfully carried out. It was like the showman, always going to begin; but it was long of beginning. He had no doubt whatever of the utter absurdity of the scheme."

We hope this incredulous engineer will not be too much disconcerted by what we are now to relate. He is not the first who has obstructed human welfare, by denouncing as impracticable that which was actually doing good service.

The pneumatic system has been for some years in operation at Amsterdam, Leiden, Prag, Brünn, and Olmütz. It was exhibited in operation at the Vienna Exhibition of 1873, was most favourably reported on by the International Medical Congress, and was inspected by the Emperor of Austria, who knighted Captain Liernur, in recognition of the merits of his invention. The system, in all its parts, has been adopted by St. Petersburg, Dordrecht, and Winterthur, the aggregate population of these three towns being no less than 646,000. Moreover, Captain Liernur has been consulted as to draining pneumatically Milan and Naples, and is in correspondence with the authorities of several great towns in this country; and, while we write, our enterprising neighbours, Messrs. Laird, are constructing the pneumatic apparatus for their linen factory in the county town of Forfar. We have also, privately, been told of the large sums agreed to be given for permission to use the successful inventions of Captain Liernur in Holland, Bohemia, and in Great Britain.

Instead of relating what has been done in several places, we shall make special mention

of Amsterdam, where the difficulties to be overcome were unusually great, as appears from the following sketch by the lively pen of the author of "The *Rob Roy* on the Zuider Zee :"—

"The town of Amsterdam is all built on piles, and the houses lean hither and thither as the soft foundation yields to centuries of pressure. The tall crooked gables seem to bolster up each other : they have not room to fall. The canals are for roads and drains, a wretched barbarism. Sanitary laws are laughed out of countenance. Few people have seen more cities in their wanderings than the crew of the *Rob Roy*; but this queer old town of Jews and Hollanders, bridges, bricks, and cigars is a puzzle to them for filth."

Those desirous to know all about the filthy ways—canals rather—of Amsterdam, should read the very clever and interesting report by the special correspondent of the *Southport News*; the terms of whose commission were to investigate the Liernur system from beginning to end, to question friends and foes, to witness results and practical operations, where possible, in Amsterdam, Leiden, and Dordrecht.

The canals which encircle Amsterdam having long been the common receptacles into which the lazy Dutchmen pitched all sorts of rubbish, garbage, and excreta, it was hard to get the people to comprehend that the Liernur closets were intended for the conveyance of the last of these only. Hence they were loaded with very much more than the pneumatic draught could be expected to remove. Yet, such is its power, that minor objects, as old shoes, rats, &c., found their way to the tanks. In one of them was found a valuable dessert plate, which, having been chipped by a fall, was thrown into the pneumatic closet by a terrified maid-servant, vainly hoping that her mishap would in it be as effectually hidden as in the canal.

The new system was violently and persistently opposed by a pragmatical Alderman Tindal, who took it upon him to discontinue as unnecessary a certain pipe, forming an essential part of the apparatus. The result was the production of an odour so unspeakable that a horrified Englishman wrote home, savagely denouncing the pneumatic process as embodying the abominations of all bad modes of treating sewage. When the said pipe was in its proper place, a party of English gentlemen witnessing the same operation found it as harmless as the filling of as much clean water would have been.

M. Bergsma, chief clerk of Public Works, Amsterdam, declares that where Captain Liernur's plans have been carried out to the letter there has been no failure whatever. So convinced is he of the superiority of the system to every other, that he petitioned that it might be applied to his own house and neighbourhood. Mr. Kalf, director of Public Works at Amsterdam, in his report to the Common Council in 1874, recommending the extension of the system to about a hundred and fifty thousand of its inhabitants, declares that in the history of applied science there never has been an invention which in so short a time has arrived at such a degree of perfection. The civic authorities certify that with the practical efficiency and the sanitary effects of the pneumatic system they are completely satisfied. Knowing that a pecuniary gain was also anticipated, but that actually, as yet, in Amsterdam there has been none, its enemies glory over Liernur, and impeach his veracity. Quite unreasonable, however. The fault is in themselves, and he can afford to wait until the scientific, sanitary, and economic education of the good folks of Amsterdam is so advanced as to lead them to do as Liernur bids them, and provide sinks for their house slops. At present they carry out his views partially, and allow the collected excreta to be mixed with water and other superfluous ingredients to the extent of two-thirds. Farmers, of course, are shy of having much to do with such comparatively bulky and worthless stuff, which must be used at once or become valueless. When reduced into a portable form, according to the Liernur process fully carried out, the sewage of the great city of Amsterdam will assuredly yield large pecuniary profits, in addition to the important sanitary advantages confessedly realised. These must be striking, seeing that people of the highest intelligence congratulate themselves on living in a quarter of Amsterdam in which pneumatic drainage is in use.

Moreover, the commission from Winterthur, in Switzerland, in their report of December, 1873, write thus :—"In spite of the antipathy of some men in power, in spite of the defective and irregular management, the system steadily gains ground in Amsterdam." It is thus manifest that with those who talk of its failure there, "the wish is father to the thought." It must be added, that the town of Winterthur has adopted the whole of the Liernur system.

Its advantages are more visible in Leiden, although even there it is as yet being carried

on under unfavourable conditions, which will be removed when the whole town has been Liernurised. Last year the pecuniary gain from four districts, after payment of all expenses, was only £26; on an estimated expenditure, in cost of plant, engineers' commission, &c., of £3,000. The manure was sold at the rate of 2s. 9d. for each individual, whereas it is estimated that the faecal products of each individual are worth from six to ten shillings a year. Well, that is something, whereas the anti-Liernurists declare that the pecuniary profit will be *nil*. Moreover, the value of the manure has already largely risen. Last year it advanced twenty-five per cent.: the contractor gave 1s. instead of 9d. per barrel. Of what other manure can this be said? So that when things are better managed, it may be reasonably expected that the pecuniary result will be amply remunerative. Even now the Mayor and Aldermen declare "it is a matter of certainty that all expenses will be repaid, and our capital returned."

A very striking evidence of the value of the Liernur system is found in the fact of its having been adopted in all its parts by the poor and decayed town of Dordrecht, with a population of twenty-six thousand. Mr. Van der Kloos, a gentleman of high attainments, a distinguished engineer, and the director of Public Works, being asked his candid opinion of the Liernur system, made this reply:—"I consider it technically and sanitarily perfect, and financially I have the best hope of it." And so have we; for a friend writes to us, "The Poudrette works at Dordrecht are now in permanent operation, and are a *complete success*. They commenced formally on 13th May. Liernur is jubilant in the extreme." This fact has an important bearing on the financial aspect of the question. The farmer who sees poudrette will, we are confident, be eager to buy it.

III. The *how* and the *where* of the Liernur system having been now described, we have still a few words to say as to *why* it should be introduced into this country.

It comes before us claiming to have solved the difficult problem of satisfying at once the interests of agriculture and of the public health. The value of poudrette to the farmer is proved. Sir Philip Rose, Bart., sent a sample of it for analysis to Professor Sibson, whose report is as follows:—

"Moisture 15.34; nitrogenized organic matter and salts of ammonia (containing nitrogen 8.30; equal to ammonia 10.08) 64.13; phosphates and oxide of iron (con-

taining phosphoric acid equal to phosphate of lime 3.14) 5.40; alkaline salts, &c., 11.13; insoluble matter 3.80—total 100. This is an excellent manure, containing no less than ten per cent. of ammonia, with three of phosphates and other constituents of lesser value. It is superior to any sewage manures or similar products now in the market. This sample is very suitable as a corn manure, and for all purposes for which guano and other ammoniacal manures are commonly employed."

Another sample, sent to be analyzed by Professor Voelcker, was found to contain nitrogen 9.35, equal to ammonia 11.35. He estimates its value to the manure merchant at £8 10s. per ton.

Mr. Arthur Angell, F.R.M.S., public analyst for the county of Hants, values poudrette made by him upon the Liernur principle at £11 or £12 per ton.

The effect of the new system on the public health is of the highest importance. The increase of mortality from diphtheria, cholera, and diarrhoea, appears coincident with the extension of the present system. In the five years 1838-42, when water-closets were comparatively few, the average mortality from these diseases, per million per annum, in England and Wales, was 298. In 1847, London was compelled to drain by sewers, and other towns followed its example. These sewage diseases increased enormously, as is demonstrated by these figures taken from the Registrar-General's returns:—During each quinquennial period from 1847, there is a most significant increase, which in that of 1867-1871 attains this frightful amount, 1,282. Typhoid fever, killing from 15,000 to 18,000 every year, is also by all modern investigators traced to excremental pollution. Scarlet fever, partly attributed to the same cause, produced in 1838-42 a mortality of 63,000, which, in 1867-72, mounts up to 112,963! Till 1851 there was not a single case of diphtheria; and Mr. Simon, in his report to the Privy Council, asks why this disease, which over-ran Europe in the sixteenth century, and since then has been scarcely heard of, should recently have become a formidable disease in this country? Dr. Fergus, of Glasgow, believes the answer to be simply this—"we have been drinking water and breathing air contaminated by excretal matter in a state of decomposition." Dr. Lyon Playfair, M.P., in his recent address to the Medical Congress at Edinburgh, having alluded to two cases of water pollution in London, the water being introduced in cream and milk, observes that

when excrementitious matter is introduced into the human system as a fluid, though the contagium is not soluble, it seems more certain in its effects than when respired as air. Of this, while we write, we are furnished with a remarkable proof. The health of a family in a rural locality having long been unsatisfactory, the water forming the only supply of the household was analysed. It is pronounced highly dangerous, owing to the well being polluted by a sewer drain. And yet the family physician never seems to have suspected why his patients were suffering.

And then the dreadful cost of the water-system of sewage which has had so much to do in killing us! Since 1846, London alone has spent thirty millions sterling.*

What a different story shall we have to tell when London, Liverpool, Edinburgh, and Glasgow, and other centres of population, are drained pneumatically! The saving of water will, assuredly, be worth considering: the saving of human life and health, not to be estimated by a money price, will, we are persuaded, be manifest. However noxious the excreta, treated separately by the Liernur system, they cannot possibly be injurious. From the moment they leave the closets till converted into a dry powder they are shut up in air-tight vessels. Their liquid ingredients, having been evaporated and again condensed, return to the streams as distilled, and consequently pure water. The gaseous products of the evaporation, still possibly laden with disease-germs, are blown, along with the rest of the air sucked out of the tubes and pipes, into the fireplace of the boiler and burned. It is indeed hard to conceive that a typhoid germ can survive such a fiery ordeal, preceded by exposure to sulphuric acid in the poudrette part of the process. It is, therefore, most reasonable to anticipate that the introduction of the pneumatic system will be an era in the annals of hygiene. Such is the unanimous opinion of the Medical Inspectors of Holland. The civic authorities of Leiden certify that already the health of the worst part of their city is improved, and that the improvement of their physical condition has been accompanied by a change for the better in the habits of the people.

Finally, the pollution of rivers, streams, and estuaries, will be in a great measure prevented, to the satisfaction of man, beast, and fish. For although we have spoken principally of the pneumatic system with reference

to putrescible matter, we must not forget that Captain Liernur attends to the whole drainage of a town. He prevents any street detritus entering the sewers, and causing silting up either in them or in the river. Where required, he purifies by a simple filtration process the house and the rain water, which alone are allowed to enter the common sewer; and when sewers do not exist, he provides his own improved sewers with separate subsoil drainage, which together are only half as costly as those now in use. The details of these various arrangements we have neither time nor space to enter upon. They are greatly needed. In September, 1867, masses of sewer-poisoned fish were found along the shores of lakes Constance and Geneva. The last salmon caught in the once-silver Thames was in 1824. The salmon-producing rivers of Scotland are, in many instances, shamefully defiled. Perusal of the evidence given to the Commission of Inquiry as to the operation of the Tweed Fisheries Acts makes us wonder that fish are still to be caught in the Tweed, the Teviot, the Ettrick, the Jed, the Gala, seeing that, apparently, not a factory on their banks is provided with a filtering tank for the interception of what is fatal to fish.

When this piscicultural folly brings along with it danger to the health and life of human beings and domestic animals—when river pollution is certain discomfort, and too probably an accelerated death rate—it is to be hoped that reasonable and religiously-disposed people will be prompted at once seriously to inquire whether by adopting pneumatic drainage we shall cease to be chargeable with the suicidal folly of robbing the soil of the manure which we cast into sewers, and the atmosphere of its purity, so that we breathe with difficulty and perish prematurely amid filth which we have not yet learned how safely to remove. Holland for many a year was our instructor in hydraulic works. In the sixteenth century much fen-land in the eastern counties of England was drained by Dutch labour directed by Dutch engineers.

Let us be thankful that in the nineteenth century, Captain Liernur, a Hollander, has invented what is expected, in the opinion of his countrymen, to prove the sewerage system of the future; seeing that it is simple, marvelously efficient, and within the reach of all willing to incur a moderate expenditure for the all-important object of lessening preventable mortality; the amount of which is among the greatest of our sins.

* Krepp's "Sewage Question," p. 64.

We invite attention to these vigorous words from the Report of the Commissioner from Southport:—"At Dordrecht my labours came to an end. I had seen all that Holland had to show in the form of public applications of the Liernur System. I had obtained opinions, official and private, as to its merits and demerits. I had traced its rise and development, and *I was convinced that its universal application was only a matter of time. That it will supersede all other modes of dealing with sewage of every description I am assured, for it has all the elements of*

victory, and the others are all suffering from ignominious defeat. There is not a town, village, or city in Europe that is unaffected with some form of zymotic disease, and that is nature's declaration that imperfect drainage is her abomination, and under her ban."

D. E

THE COMMUNION-TABLE IN CHESTER CATHEDRAL.

V.—THE CROWN OF THORNS.

ALL who have written on the Natural History of Palestine tell us that thorny plants are abundant and very various in that country.* It may be that this various thorny growth is more abundant there now,† after ages of neglect and bad government, than was the case in older days, as when the Hebrews themselves were prosperous, and every man dwelt "under his vine and his fig-tree," or in the time of the Romans, which was also the time of Christ, when all the country was thickly peopled and well cultivated.

Still it seems evident that this tendency to the production of thorny plants belongs inherently to the Holy Land. Indications of this fact meet us everywhere, in both the Old Testament and the New. In the first parable of Scripture—or first fable, if we prefer so to call it—the bramble is conspicuous.‡ This kind of growth furnishes the prophets with the imagery of some of their admonitory predictions. Thus in Isaiah, "I will lay my vineyard waste: it shall not be pruned nor digged: but there shall come up briers and thorns." And again, "Thorns shall come up in her palaces, brambles in her fortresses."§ So also with the imagery that gives life to precepts and exhortations: "Son of man, be not afraid of them, neither of their words, though briers and thorns be with thee."|| So, to turn to the New Testament, in our Lord's proverbs: "Of thorns men do not gather figs, nor of a bramble-bush gather they grapes."¶ And in His parables—if indeed we can dis-

tinguish between His proverbs and His parables—"Some seed fell among thorns, and the thorns sprung up with it and choked it: ...that which fell among thorns are they, which, when they have heard, go forth, and are choked with cares and riches and pleasures of this life, and bring no fruit to perfection."*

The mere fact of the Crown of Thorns being one of the accessories of the Passion arrests our attention, when we are endeavouring to follow in imagination, from one point to another, that association of the Cross and the Garden, which has been taken as our guiding thought. It was when our first parents were "driven forth from the Garden," with a flaming sword placed at the east, "which turned every way, to keep the way of the tree of life"—it was then that the sentence was passed upon man and upon the earth, "Thorns and thistles shall it bring forth to thee."† Thus thorns are the emblems of the curse and of separation from Paradise; and we see here in this Crown of Thorns the truth symbolically expressed that Christ took this curse upon His sacred head, and by His Crucifixion opened the way to Paradise again. Would that those thorns of the heart, which we know so well, might be eradicated by the power of the Cross, so that this heart might become a Garden of all holy thoughts and of graces growing fresh and strong! Would that we might think with a more customary and reverential fear of the warning given in the Epistle to the Hebrews concerning some, who "crucify to themselves the Son of God afresh and put Him to an open shame"—with the judgment added: "The earth which beareth thorns and briers is rejected, and is nigh unto cursing; whose end is to be burned!"‡

* See for instance Canon Tristram's "Natural History of the Bible," p. 423.

† It is a popular mistake that the prickly pear, which was introduced from America into the Levant, is native in Palestine.

‡ Judges ix. 14.
|| Ezek. ii. 6.

§ Isa. v. 6; xxxiv. 13.
¶ Luke vi. 44.

* Luke viii. 7, 14.

† Gen. iii. 18.

‡ Heb. vi. 6, 7.

The antithesis is as strongly marked as possible between the Garden and the Thorn; and yet how the thorn itself seems to be ennobled, since the time when that Crown of shame and victory was placed on the brow of the Crucified Saviour! The thorny growths of the natural world have an eloquence since that day, which tells us, not of despair, but of recovery and restoration.

We must pass, however, from these mere general thoughts to a more exact contemplation of that part of the Passion of Christ which is connected with the crown of thorns. The holy task set before us in this course of meditation is, by the help of such aids as are within our reach, to picture to ourselves the particulars of that suffering and dishonour. We have reached now that part of the narrative which is most properly named the Passion. The institution of the Eucharist, and the agony in Gethsemane, are left behind; and we are now in the midst of the scenes which immediately preceded the Crucifixion. That which it is best to select, for artistic delineation and for description, according to the method here proposed to ourselves, is evidently the Thorny Crown.

Among the prickly growths of Palestine, which, as was remarked above, are abundant and various, we are not able precisely to say which was used for the Crown of Thorns. Nor, indeed, in itself—as regards questions of deep religious truth—is this a matter of much moment. Still, two plants may be named, which, in different ways, suggest to us instructive thoughts, and between which our choice must practically lie. Scientific descriptions would, of course, here be out of place. In this kind of commentary we are dealing with Art rather than with Science. One condition, however, must be satisfied by the artist who represents to the eye, whether in drawing or in carving, the thorn with which Christ was crowned. It must have been more or less flexible, to admit of that deliberate plating, which is named as one of the incidents of the Passion. St. Luke does not allude to the subject at all. The other three Evangelists specify, not only the crown, but the *plating* of the crown.*

Some are inclined to think that the true "Christ's Thorn" was a plant in which the leaf is more conspicuous than the prickle—the foliage being more or less like the foliage of those plants which were used when garlands were placed on the head, denoting joy or

victory or royalty. On this view the Crown of Thorns was simply or chiefly part of the mockery, which was completed by the red cloak* of one of those savage soldiers for a kingly robe, and a worthless wand† in contemptuous imitation of a sceptre. This is the plant which is figured on the front of this Communion Table in the two panels immediately north and south of that which is in the centre. The thorns are not absent from its branches; but the leaves make a greater show, and clearly they might be well adapted to be platted into a wreath for Him who was mocked as "King of the Jews."

Others might be more disposed to make choice of a different thorn, the cruciform spines of which are terrible in their size, their strength, and their sharpness. No one who has ever seen the plant, and thought of it in connection with the crowning of Christ, can ever forget it.‡ This form of growth has been chosen for the central panel, where it is intermingled with grapes§ and ears of corn—for the embroidered cloth, where it is interwoven with the palm—and again for the upper part of the retable, where it appears once more in combination with the same emblems of the Eucharist. If this was the plant really used by the soldiers, then part of their purpose was to inflict pain; and in that lacerated and bleeding brow we see the bodily suffering of the Crucifixion already begun.

The choice of lessons for us from this Crown of Thorns are the Christian bearing of shame for Christ's sake, and the Christian bearing of pain for Christ's sake. Or rather we have both lessons here in one. How men shrink from scorn and ridicule, when this trial comes on them in the course of a religiously-consistent life! How many have sinned under this trial! How many have absolutely fallen away! How hard to bear is this temptation, especially to the young! If you, who are reading this, are conscious of the power of such temptation, look to the Saviour's head, wreathed with these leaves of mock-royalty, in the midst of the scorn and ridicule of the soldiers; and from that sight gain strength to be consistent and brave. And if extreme pain be our lot, that too is no slight trial. We can honour God by bearing it patiently, and by thanking Him in the midst of it; and power to do this comes in the thought that Christ's human body was

* Matt. xxvii. 28.

† Ib. 29.

‡ The actual specimen used in this instance was from a plant grown in Malta, said to be propagated from one that came from the Holy Land.

§ It will be observed that one thorn pierces a grape.

* Matt. xxvii. 29; Mark xv. 17; John xix. 2.

like our body, exposed to extreme suffering, and sensitive as ours is sensitive.

St. John, and St. John only, mentions the Crown of Thorns a second time, just as he only mentions the "branches of palm leaves," the "garden" of the agony, and the "garden" of the entombment. When the account of the insults of the soldiers is over, this Evangelist says that Pilate brought the Saviour forth to the people with all the insignia of mock-royalty. "Then came Jesus forth, wearing the purple robe and the crown of thorns; and Pilate saith, Behold the man."^{*}

This is a moment which has been seized by many artists, with a consciousness of its power over our feelings. This is the "*Ecce Homo*," which we have from St. John alone.

It is to be added that the crown of thorns remained to the last. We read that "after they had mocked Him," they "took the robe off from Him, and put His own raiment off Him, and led Him away to crucify Him." So it is written, both in St. Matthew and in St. Mark.[†] But we nowhere read that the soldiers removed the thorns. So far as I know, there is no picture of the Crucifixion without "the crown of thorns."

VI.—THE REED AND THE HYSSOP.

The Crucifixion itself is our subject now: nor is it difficult to decide upon the plants, which, following still the same course of meditation, we ought to select at this point for description and for suggesting reverent and serious thoughts. The Reed and the Hyssop are prominent at one most solemn moment in the events which we commemorate on Good Friday; and they are suitable for artistic delineation on the Lord's Table which is before us.

The Cross itself might indeed have been our chosen topic in strict harmony with our method of illustration; and it is not altogether irrelevant to allude to what has been written on this topic by older writers, who, if very fanciful, were also devout and reverential. The following Latin lines contain a summary of notions which have been entertained concerning the trees which supplied the wood for the Lord's crucifixion:—

"*Pes Crucis est Cedrus : Corpus tenet alta Cupressus :
Palma manus religat : titulo lætatur Oliva.*"

Another fancy makes the oak to have furnished the material of which the Cross was constructed; and the religious meanings of

this supposed fact are given by one writer at great length. The olive, meanwhile, is still viewed by him as the tree which supplied the wood on which the inscription over the Cross was written or engraved: and the combination is expressed in a Latin couplet, thus:—

"*Quercus atque oleæ stabili se fœdere jungunt :
Cerne Crucem : Pax hic Justitiæque rigor.*"

Such conceits, however, though not to be despised, do not suit our present habits of thought. We are dealing, too, with the literal truth of the case, and not with mere fancies, if we allow our minds to dwell upon the plants which are actually named in the sacred account of that part of the Crucifixion, when the Lord said, "I thirst."

During Passion Week we endeavour to set clearly before our minds, and to impress upon our memories, the *facts* of our Lord's suffering. The facts, thus carefully and reverently apprehended, preach their own sermon. Now, with regard to the point which is immediately before us, it is essential, for the sake of accuracy, to bear in mind that there were two distinct moments in the history of the Crucifixion, when vinegar or wine was offered to the Saviour. I imagine that the two words mean the same thing, and that what is called vinegar in one place, is simply the sour wine which was the common drink of the soldiers. Unless we distinguish the two occasions, when the vinegar-wine, as we may call it, was offered to Christ, the history will become confused in our minds, and much of its solemn instruction lost.

The first two Evangelists tell us that, just before the Crucifixion began, there was offered to Christ what St. Matthew terms "vinegar mingled with gall," and what St. Mark terms "wine mingled with myrrh." In each case it is added that "He would not drink: He received it not."^{*} I need not repeat here what I have just said respecting the words "vinegar" and "wine." With regard to the "myrrh" which is mentioned by one Evangelist, and the "gall" mentioned by the other, it is difficult to identify them confidently with any modern drugs; but it seems that they were some bitter or aromatic substances that were mingled with this sour wine.[†] It might be that the soldiers preferred to drink it thus: though the general explanation is that to those who were condemned to be crucified this drugged and

^{*} Matt. xxvii. 34; Mark xv. 23.

[†] Probably "myrrh" as well as "gall" in this instance is simply a generic term.

^{*} John xix. 5.

[†] Matt. xxvii. 32; Mark xv. 20.

stupefying wine was given before the hideous business-like cruelty of this mode of inflicting death began, that it might dull the senses, and in some degree deaden the pain. It is further said that this was not strictly a Roman custom, but a Jewish custom occasionally adopted by the Romans.

However these things might be, this incident is quite different from that offering of vinegar-wine to the Saviour's lips, during the crucifixion, when He had uttered the words, "I thirst." St. John says, after the mention of the utterance of these words, "Now there was set a vessel full of vinegar; and they filled a sponge with vinegar, and put it upon hyssop, and put it to His mouth." St. Mark says: "And one ran and filled a sponge full of vinegar, and put it on a reed and gave Him to drink."* Here it would seem at first sight that two different plants are named in connection with the raising of the sponge full of vinegar to the Blessed Saviour's lips. In one case it is a reed, in the other it is hyssop. What are we to say concerning this apparent discrepancy?

As regards the Reed, there is no difficulty in respect of either the facts of the narrative, or our free choice for artistic representation. And, as to our selection of this vegetable form among others for our illustrative purpose, it is to be observed that this is the second time—indeed the third time†—that the Reed has been named in the account of the Passion. Thus it could not with any propriety have been omitted. The growth of reeds, some of a very great size, is common enough in Palestine. Many are found in the neighbourhood of the Jordan; and this, perhaps, gave occasion to the question of the Saviour concerning John the Baptist: "What went ye out for to see? a reed shaken by the wind?"‡ Reeds in the Holy Land of various kinds might easily be named, which would be suitable for the placing of a mock-sceptre in the hands of Christ, when the soldiers bowed the knee before Him in ridicule, and said, "Hail, King of the Jews!"—secondly, for the insult, when they spit upon Him, and took the reed and smote Him on the head—and now, thirdly, when the sponge full of vinegar was placed upon the reed, that it might be raised to the Saviour's lips. The bulrush has been adopted here, side by side with the hyssop, for the panels of the north end of the Communion Table, and another reed of lighter growth, for

variety, in the embroidered cloth at the same place.

The Hyssop, if we are to judge from other passages of Scripture, must have been a plant of a growth quite different. It is so described in the Bible as to convey the impression of being small and flexible. It is used for sprinkling;* and in the description of the botanical studies of Solomon "the hyssop that groweth out of the wall" is at one extremity of the vegetable kingdom described by him, as "the cedar of Lebanon" is at the other.† Still, as it was observed just above, in reference to myrrh and gall, that it is not easy to identify modern drugs with ancient drugs, so is the identification difficult of plants which now bear certain names with those that bore the same names of old, whether in Classical or Scriptural writers; and it is quite reasonable to suppose that the plant here called "hyssop" had a long straight stem, which might popularly be called a reed. Moreover, it is probable that the elevation of the sacred crucified body of our Saviour from the ground was not very great. It is not unlikely that religious pictures have led us into a general mistake on this point. For my own part, however, I am inclined to adopt another explanation, and to imagine that a bunch of hyssop was placed upon the reed, and the sponge in the hyssop. On either supposition the difficulty vanishes. The plant which is carved on one of these northern panels and embroidered on the cloth is that which scientific men, who have studied the Botany of the Bible, accept as the most probable representative of the Scriptural Hyssop.

Some of the circumstances in this part of the narrative tend to give what we may call a terrible vividness to this moment in the Crucifixion. The words, "I thirst," were spoken just when that darkness was passing away, which had overspread the scene for three hours—so that the ghastly spectacle of the three crosses, with the three who were suffering on them, became then distinctly visible to the crowd again. And we see there that vessel set full of vinegar-wine, for the drink of those rude soldiers, when heated with their murderous task of setting up the crosses. And we see the sponge. Why was it there? I suppose it was for the cleansing of blood. And one little touch in the narrative at this point we should not fail to notice—the quick running of the soldier on hearing the words, "I thirst," that he might

* Mark xv. 36. So Matt. xxvii. 38.
† See Matt. xxvii. 29, 30. ‡ Matt. xi. 7.

* Exod. xii. 22; Heb. ix. 19. † 2 Kings iv. 33.

fill the sponge with the cooling drink, and raise it to the Sufferer's lips. There might be mockery in the act; but I imagine there was compassion too. In the roughest and hardest men there is often a tender place that can be touched by the sight of woe. As to the Hyssop and the Reed, this was the only way in which refreshment could be brought now to those sacred, burning lips. The hands that had blessed the cup a few hours before were now nailed to the branches of the Cross.

If we were occupying ourselves here with deeper subjects, we might say much concern-

ing these words, "I thirst." They are an indication of the intense reality of the suffering of Christ. Wounded men on the field of battle are often in agony from burning and consuming thirst; still more must this have been the case with those who were crucified. The Saviour then, even to the last, tells us how literal was His incarnation, how truly He was one of ourselves. And how affecting is the fact that He allows Himself thus to be waited on at the last! Once again He is in conscious contact with the common daily things of this outward world. He accepts one poor consolation before He dies.

J. S. HOWSON.

The Central Panel of Communion-Table.

BEHIND THE VEIL.

"All our thoughts are but degrees of darkness."—RUSKIN.

VEILED and we cannot see beyond;
Is not that the end, though our sight be clear?
Death is a veil we cannot pierce,
And Life is a veil thrown o'er us here.
Mysteries perplex us,
And many troubles vex us,
And we cannot see beyond,
We can only cry like Goethe for "More Light."
E'en the friends whose hands lie close in ours,
Whose laugh and jest speed fast the merry hours,
Even they have something hidden
Which we may not know nor guess.
Oh, the griefs and passions surging
In a wild tumultuous throng,
And the petty cares absorbing,
What to better things belong.
Oh, the chaos of emotions, seldom lulling into rest,

In each human breast,
Behind the Veil!
Behind that veil we would not strive to pass,
Each glories in the boundary that screens him from
the mass.
But there are other veils of man's own weaving,
In which he shrouds himself, the while believing
His own especial dogma, creed, or fable,
To be the only way to make salvation stable.
And all the time maligning,
Harshly judging, and consigning
To a future of despair,
All who dare
To deny,
And forgetting that the holiest,
Was the tenderest, the lowliest,

That ever trod our earth.
 There are many veils conventional
 Which men wear with grace intentional,
 Never thinking that those veils must warp the judgment
 and distort the vision,
 Till they worship what is false, and hold the holiest in
 derision.
 While the *SOUL* is held in most supreme indifference,
 And to the things of earth is paid the greatest deference.

In the pitiable worship of that creed
 Of gold, of dress, position, and that breed,
 A miserable worship which is all a lie, a sham,
 delusion; but—

Behind the Veil!

The *True* shall triumph o'er the false of earth,
 Th' unseen then shall have its own true worth.
 By what thou *art*, and not by what thou *hast*,
 Shall be God's judgment on the soul at last.

That we believe,—what do we *know*?

Nothing.

The more on earth we wander,
 The more we think and ponder,
 Comes that irksome, sad summation

Of all our meditation,

The more we think, the less we find we know,
 The more we think we know, the less 'tis really so.
 Brain cannot solve for us our strange existence,
 With all our knowledge, by extreme persistence
 Something called *Spirit* is mysterious still,
 And mocks each effort of man's strongest will.
 What is that spirit, how, and whence, and why?

Hush!—comes no answer, but the hopeless sigh,
 "Behind the Veil."

Behind the Veil! What Veil?

Is *Death* the veil concealing
 What shall never know revealing,
 Till our spirits pass that portal
 Into lands unknown to mortal?

Or is *Life* the veil that shrouds us
 In a mist that dimly clouds us,
 And we cannot see beyond,
 Cannot reach the golden glory of our dreams,
 May not catch a transient vision of the gleams
 From the wonderful Unseen,
 Till the Veil of Life is riven,
 And the rending shows us—Heaven?

Death and Life thus intertwine,
 For the Life we love must leave us,
 And the Death we hate must cleave us,
 Ere existence be divine.

But then, ah! glorious ending
 Every joy upon us blending,

All our idealisation
 Finds a full realisation
 And *Fulfilment* is perfection of delight!

And all our aspirations,
 All our high anticipations,
 Vague desires;

All are laid at rest,
 In a calm that knows no troubling and no pain,
 In a light that knows no shadow and no stain,
 Behind the Veil!

HELEN K. WILSON.

NATIONAL HEALTH.

CHAPTER VI.—HEALTH AND ALIMENTATION.

HEALTH and Alimentation go so closely hand in hand, we may recognise in some characteristic series of healthy conditions the qualities of food on which they are sustained. We may recognise equally well from the evidences of certain forms of disease that either deficiencies of foods or unnatural kinds of foods are present in the diets of the diseased.

Buckle, in his desire to prove that all natural characteristics are due to a few simple physical laws, has dwelt unjustly on the influences of foods as determinators of such characteristics. He held it possible, "by the application of a few physical laws, to anticipate what the food of a country will be, and therefore to anticipate a long train of ulterior consequences." Hence he assumed that a particular food was natural to a particular community placed on special parts of the earth—rice to the natives of India, bread to

XVII—55

men of these northern climes. In the view that the qualities of a people are determined largely by the qualities of the foods on which they subsist, the distinguished author of the "History of Civilisation" was right. In the view that each part of the earth specially provides the best foods for the inhabitants of that part, he was generalising too far. To a considerable extent it is true that in each portion of the world the people living on that portion find in the products of it all that they require, but not according to any particular design bearing upon that particular people; because, when all the facts are examined, it is found that such food as is really the best for one people or one race is the best for all people and all races. A community that is confined too severely to any one food is never a healthy community in the strict sense of the term, and a community that is truly healthy may safely be accredited with the

possession of such variety of alimentary substance as would sustain all the rest of the world with equal excellence.

The errors that have crept into the arguments on these subjects are due to other errors of a physiological and local character, from which such great observers as Buckle himself are not altogether and at all times free. For example, Buckle, from the premise that in India rice takes the place which in England is held by bread, and is the essential article of diet to the millions of India, argues that rice therefore is the natural food of those millions, and has founded upon this assumption the generalisation I have quoted. But the premise was incorrect, and therefore the conclusion; for it is physiologically impossible for any human being to exist on rice, seeing that rice cannot yield muscular substance, and, as Mr. Cornish has most ably demonstrated, it is not true that rice is the essential article of diet to the millions of people who make up the bulk of the Indian population.

The true scientific position of the question is that to form the healthy man anywhere and everywhere, the same qualities of food are required for him anywhere and everywhere; and when differences arise from differences of quality, they are not to be accepted as special results of natural selection for the particular welfare and health of a people, but as physiological variations resulting from varieties of food which may be very good, or very bad, or indifferently good or bad, according to circumstances, and certainly without reference to such physical provision as Buckle has assumed. An East Indian may exist largely on rice because he cannot get other food; a Russian, for the same reason, may exist on rye bread; a Norfolk labourer on Norfolk dumpling; a Scotsman on oatmeal cakes; but because these foods are or may be to those who eat them the foods natural to their countries, it is not to be assumed that they are all-sufficient, or that they supply what is sufficient to maintain the most perfect standards of health.

I introduce the subject of alimentation in its relation to the national health with the above remarks for the purpose of enforcing the principle that food has now to be considered in the first instance from a physiological point of view. The best method for feeding the people has always been a great political question. Plague, pestilence, and famine, battle and murder, have in the most solemn manner been classed together, and of all these calamities famine, perchance, has most terrified

the rulers of mankind. The time has come when the question of food supply must pass through the hands of the teachers of science before ever it reaches the hands of the politicians. It is the duty of men of science to show what is food in the most simple and necessary sense of the word. It is their duty to study what is sufficient quality of food and what is sufficient quantity. It is their duty to study, further, what is over-sufficient, what is under-sufficient, and what are the evils of over-sufficiency and of under-sufficiency.

In a reformed world the understanding of the food question will be simple enough. In the course of the present century science in the most wonderful manner of exactitude has discovered the elementary organic parts of the animal body, and has so analyzed the outside sources of those parts, from which the wasting body is supplied, as to know the precise value of all foods which are in common use. By the first of these studies it has been found that the constitutional structure of the body is made out of a very few principles. Of water; which forms seventy-nine per cent of the blood, eighty per cent of brain, eighty per cent of muscle, ten per cent even of bone, and which is the fluid menstruum and only natural fluid menstruum of all the substances that are in solution. Of albumen. Of fibrine; which forms the solid part of the muscles. Of gelatine; which is found in bone, tendon, and cellular tissue. Of fat. Of phosphate of lime; which forms the earthy and resistant base of bony substance. Of chloride of sodium (common salt), and other saline substances which, existing in the blood, add to the specific weight of that fluid, and perform some secondary offices in the secretions. And, not to enter too far into detail, of the metal iron which in the corpuscles of the blood makes them, as it were, into a metallic chain running through the whole circuit of the blood in all the minute ramifications.

By the second of these studies it has been found that the constructive materials of a living body are made ready for the body outside itself, and that, with the exception of a portion of the water and of some saline substances, the materials for the body are made in the vegetable kingdom. The vegetable world is discovered to be the grand laboratory of nature in which, in line of continued experiment, with the sun as the furnace and source of energy, the products necessary for the animal life are elaborated and are so prepared that they are all but ready for use. One food which the animal

itself more perfectly elaborates out of what it receives from the vegetable supplies,—I mean the secretion on which the mother feeds her young and which may be accepted as the one typical and, when it is taken from a healthy source, perfected food, *milk*, is the only exception to this rule.

Scientific inquiry has made these simple truths as clear as clearness can be, and, extending the observations from the particular to the general, has further shown that in all climes and under all conditions the elementary facts of construction are the same. Each living animal of the same construction requires the same materials for constructive purposes. The quantities of materials respectively may vary according to climatic necessities, more oleaginous food being required in one locality, more muscle-forming substance in another; but the qualities remain in all cases fixed by an arbitrary rule of nature from which there cannot be divergency of action with persistency of health.

The course of investigation has led to the demonstration that the ultimate resolution of food within the body, during which and by which resolution the body is animated and sustained with animation, is traceable through what are termed technically the animal excretions, the excretions of the lungs, the skin, the kidneys, the bowels. Those products which the vegetable world elaborates by its chemistry resolve accurately, within the animal, into new products which approach at last to the earthy substances that in turn give food to the plants. Only the water remains unaltered. That coming to plant and animals alike from its primitive sources, continues as water, unchanged itself in chemical quality, though itself the medium in which all the changes of other substances take place, and so accommodates itself to form of structure that it becomes, by combination, solidified in muscle, brain, bone, and sinew, fluid in the blood and secretions, vaporous in the breath.

Given therefore a fixed diet the ultimate products of the animal sustenance will be formed upon it. The products due to the resolution of the fat-making materials will be evolved from the lungs as carbonic acid; the products due to the resolution of the muscle-making materials will be evolved by the kidney in the form of a salt known as urea. The products also will be eliminated according to the supply of the material from which they are formed. An excess of animal food will, for example, lead to an excess of urea in the renal secretion, and if the body be

kept at rest the amount of urea secreted will hold a definite relation to the amount of animal muscle-forming matter that is consumed in the food.

Stillmore, we now read by the light of science, that during the process of improper feeding certain internal changes of the body take place, which, though unseen while the body lives, are as definite as any of the changes of an external character that are visible in shape and form. From excess in the use of some foods extreme changes occur in the blood vessels by which the vessels are charged with fatty substance, and are thereby weakened or obstructed. By excess in other foods the minute muscular fibres are made to undergo degeneration, and the central muscle of the circulation, the heart, is reduced in its power and impeded in its functions. By other excessive uses of foods, visible or objective changes of the body are induced, such as obesity, eruptive conditions of the skin, and diseases so distinctive as that once terrible chronic plague of our naval forces, sea scurvy.

The diminution of food, the limitation of qualities of foods apart from quantities leads in its way to special deflections from the standard of health of the most striking character. The extreme reduction of foods, and especially of muscle-forming foods, leads to the development of the contagious malady or plague called famine fever. The reduction of the inorganic bone-forming structure, phosphate of lime, leads to the development of a disease of the bones in which from their suppleness they bend and give a misshapen skeleton.

Thus, without the introduction of any injurious foreign substances into foods and drinks,—and under the head of foods I include all that is capable of sustaining the body, be it in the shape either of food or drink,—there may be induced by feeding certain definite changes in the animal body, which changes invariably follow the error that is committed according to fixed rule, and which afflict alike, when they are in operation, men of every race, of every clime, and of every age.

In studying the effects of alimentary substances on the national health it is necessary, therefore, to consider, in the first place, the essentials of foods, what are wanted and what are not wanted. If we extract from foods any part of what is wanted, the health is not maintained; if we put into them anything that is not wanted, the health is not maintained; if we give the right things in excessive quantities, the health is not main-

tained ; if we give the right things in insufficient quantities, the health is not maintained.

Suppose we divide these essentials of food into their respective parts. They then present themselves before us in five groups. There is first and foremost the water, which we have seen makes up so large a part of the body as water simply and in its purest form. Secondly, there is the muscle-forming food ; called, sometimes, because the element nitrogen enters into it, *nitrogenous food*, or because it assumes in the organism the colloidal or jelly-like state of matter, *colloidal food*, or, because it has been assumed to be derived from albumen, *albuminous food*. Thirdly, there is the saline, or, as it is sometimes designated, *mineral food*, of which the lime salt in bone is the most striking example. Fourthly, there is the metallic constituent of which the iron present in the blood is the marked element. Lastly, there is the *hydro-carbon class of foods*, the foods which, burning within the body, sustain the necessary animal temperatures, and which have their best representatives in rice, potatoes, arrow-root, or other starchy substances, and in sugars, oils, and fats.

By a process of learning, by an experience in some sense scientific, yet standing apart from professed science as we moderns know it, man in the course of civilisation, has arrived at the art of preparing foods so as to supply all these bases and basic properties. But though he has thus learned an art, and discovered various methods by which to divert and delight the palates of those who depend upon it, his labour has been too sensual to be wise and too crude to be economical. The refinement of culinary art, so far, has consisted in getting together more than sufficient of all the bases ; in making the mess delightful to the sense of taste, and in leaving the system of the man who feeds to work out the problems of application and elimination. By this ignorance in art, or want of scientific direction, the health of the most civilised communities has been injured, sometimes fatally injured, by plenty ; by the same ignorance the health has been injured, sometimes fatally injured, by famine in the very midst of plenty, if the plenteousness could but have been seen and judiciously applied.

At the present hour throughout the whole of our communities these great errors of art in relation to food are in active existence. The sensual appetite rules the roast, and proclaims its determination to be gratified at all costs. The rich man feasts on his mixed incongruous foods and drinks, as if

his body were made solely to be the servant of his luxurious desires. The poor man takes, with grumbling, his common fare as if it required no preparation, and no consideration except its plentifulness and the convenience with which it can be obtained. He, like the rich man, goes in for quantity, and when his means allow him, for luxury too. In some mining districts when times are good and wages are high, the working miner looks on his luxuries for the stomach as the great objects of existence. He must have everything in season, and not content with that supposed advantage, must force the natural gifts out of their season, and on the earliest of the forced viands, from the fields, from the gardens, from the herds, must indulge his trained appetite to the full bent of its depraved capacity.

It is a peculiarity of natural ordinance that the provisions of nature seem to be in excess of every necessity. I say seem to be, because the excess cannot really be greater than is necessary, though to our limited appreciation of the universal system, it appears so to be. Thus the multiplication of life on the planet is so rapid in all forms of life that were it not for the balance of death in thousands of premature ways, our small globe would soon be overstocked and would cease to find sufficient sustenance for its inhabitants. In like mode man seems in many things to imitate the instinct of nature, and to provide himself always, if he can, with more than he requires. The fact is most strikingly evidenced in the case of feeding. There is scarcely a man or woman to be found who does not, when the opportunities are present, consume more food than is possibly requisite for the healthy sustenance of life and activity. The fable of the belly and the members is the truest of histories. To the wants of the digestive organs all other organs must contribute ; hands and feet, eyes and ears, brain and nerves must labour primarily for the insatiable stomach ; that first master which, in turn, proves the first minister to their necessities.

It is not to be presumed that anything will, in essence, modify this natural primary craving. It is not to be wondered at that every measure which tends to satisfy this craving should be considered amongst the most beneficent and remarkable ; that the politician who gives the cheap breakfast and takes the tax off the loaf, or the agriculturist who makes two blades of corn grow where one has grown before, should be the most popular and the most honoured of men.

It would be as foolish to unite against these instinctive habits and desires after food, as to unite against life itself and its continuance. At the same time, as we are all endowed with reason as well as instinct; as we have an outside not less than an inside nature, which outside nature, like the clothes we wear, or the manner we assume, or the thoughts we speak, show the wisdom with which our existence is tinctured, it cannot be useless to train the instinctive desires into something that is within control, or to learn by the light of advancing knowledge, to what extent we often exceed necessity and bring upon ourselves and ours the injury that ever follows upon extravagance.

In no department of life, as it at present exists, is the correction of instinct by reason more urgently required than in this matter of alimentation. At no period in the history of this nation have happiness and comfort so prevailed as in the present age. In no age have the people been so well provided with food, so well clothed, so well housed, so well educated. And yet it is true that, in the matter of feeding, nothing could be systematically worse than the systems which still prevail. The errors lie on every side.

Altogether there is an exaggerated importance attached both to eating and drinking. Everybody seems as if he carried about with him a spoon with something in it to put into somebody else's mouth, "Won't you take something," is the first expected word of common hospitality and good-nature. If a great event of any kind has to be signalled, it must be distinguished by what is characteristically called a feast, which means the supply of certain articles of food and drink beyond what is taken in the ordinary rule of life, and beyond what is in any rational point of view commendable. If a friend be invited to dinner, the immediate object is not to give that friend what will be good for him and for his health, but what may be doubtful for him and extravagant for the giver. In the exuberance of generosity the friend is asked to eat what is no longer food, but so much money which he cannot digest, and which would not help him if he could. If a man praises his cook, and asks a visitor to his table because he has at command the best *chef* in the world, he does not speak of that *chef* as of a man who understands the relation of food to the wants of the body, and who can make the simplest supplies of nature applicable to the readiest and easiest building up of the bones, the muscles, the

brain, the senses. He speaks of an artist who can spend the largest amount of wealth in ministering, in the greatest number and variety of modes, to the sense of taste, and who can, thereby, induce the visitor to wreak the worst vengeance on his stomach, and other oppressed organs, which, being over-taxed, make all the body feel with them the weight of the taxation.

From this point of view of alimentation, the art of cooking has but one object,—that of making a huge excess of food find agreeable entrance into the body. There is, however, another mode in which the art of cooking food is degraded. Amongst the working masses, in their everyday life, the food that is eaten loses more than half its value by the faults peculiar to its preparation. You see the working or labouring man going to laborious duties which call for the best and most perfect adaptation of food, so that the force that the food can supply may be all converted into working force; and there is the precious food, the compressed energy of the man for his labouring hours, tied up in a handkerchief, with little regard to its cleanliness, or to the place where it is to be stored until it is required. If you look at the mode in which that food has been cooked, it will strike you, in nine cases out of ten, that the ready digestion of it is beyond any human possibility. The bread will be dry, hard, and probably coarse; the animal food either partly cooked or cooked to dryness; the pastry thick, heavy, cold; the cheese, if as a supposed luxury it be provided, dense, or soft, or acid, or of strongest flavour. To the whole will probably be added one or two cold potatoes, which at their best were hardly boiled, that is to say were boiled hard that they might hold together. Physiologically speaking, a meal of this kind, prepared in the manner I have stated, and prepared in a manner I have copied from direct observation, loses more than half its value. If it contain all the elements necessary for nutrition, it is digested with difficulty and labour; the force expended on it by the stomach, and which ought to be expended in muscular labour of the limbs, is so much labour utterly thrown away. Neither is the mischief finished here. The laboured digestion brings on what is commonly called indigestion; the stomach and intestines are distended with flatus; the nervous surface of the alimentary canal is rendered irritable, and the mind thereupon is disturbed; hard work becomes annoying work, and after a long time the body generally suffers in its

nutrition owing to the persistent nervous irritation to which it has been subjected.

Thus in the richer and in the poorer classes of our society the errors in the preparation of food are all pervading. In the one class the alimentary organs are injured by satiety and luxurious excess; in the other the alimentary organs are injured by the extra labour and irritation to which they are daily exposed. The same mistakes extend also through the middle classes of society, though not to so extreme a degree; for here is found occasionally the house-wife who can cook decently, and who, from the necessity for economy, learns, in a practical rule-of-thumb way, the kind and character of food that best suits those under her charge, and the cheapest and most efficient modes of preparation.

If in the above observations I have seemed to speak too extremely on the follies that are extant in the methods of administering to the sense of taste, it certainly has not been with the intention of decrying that artistic preparation of foods which tends to make them agreeable to the sense. The first requirement in the preparing of alimentary substances for the table is so to prepare them that they shall be presented in a form best fitted to be assimilated, and in a form best fitted to sustain the wants of the body without excess on the one hand, or deficiency on the other. Such a process represents the *science* of preparing food for the table, but it does not interfere with the *art* that would, in a moderate and simple manner, please the sense or senses. To set forth foods in a mode that is pleasant even to the eye, is harmonious and healthful; and to make them so that they shall be pleasant to the palate is still more healthful. The science and the art, in fact, go well together. The evil begins when the art is allowed to override the science, and when the senses are gratified at the expense of the whole body. Against that system I protest, and that alone.

If faults of the gravest kind are to be found in the systems of preparing substances for alimentation, faults equally serious are to be detected in the qualities of substances that are prepared for and are used by the community as foods and drinks.

The fact has already been noticed, that within the body the fluid which makes up the mass of the soft tissues, holds the soluble saline matters in solution, and acts as the menstruum of the colloidal substances, is simple pure water. The entirety of all the mechanism of the organic parts in their

individual and in their united capacities rests on this arrangement. The specific weight of the blood, the specific weight of the fluid secretions, and the important relative balance of weight between the blood and the secretions rests on this arrangement. The proper suspension of the colloidal albumen and fibrine in the blood in conditions ready for their application, for filling up the waste of the solid tissues, rests on this arrangement. Any process that interferes with the proper relationships of the water of the blood to the tissues, interferes with the natural uses of the water, and leads inevitably to a perversion of function which proclaims itself with more or less of intensity as a disease.

The supply of water for maintaining all the vital purposes is from what we drink as fluid directly, or from what we take in, in combination with solid foods all of which hold in them a quantity of water. Some animals, those which subsist on moist vegetable food, find in such food itself sufficient water for their wants, but man requires a certain small measure of water over and above that which is conveyed by foods. In a natural state of living the quantity for a full grown man need not exceed twenty-four fluid ounces in the twenty-four hours, and I know one individual who, though he leads a moderately active life, confines himself to twenty ounces of liquid in the period named. The quantity is of importance, but it is of greater moment still that the quality shall be unalloyed, that the design of nature shall be carried out in all its perfection, and that the blood shall carry no other fluid in its own columns, and into the membranes and tissues, than the one fluid water. Let the water be overcharged with saline matters, with common salt, with salts of lime, or with soluble organic substance, and speedily the injurious effects of the admixture are developed. Unfortunately in many, I might, indeed, say in most, of our water supplies some or other of these foreign agents are present, and a considerable amount of disease is produced by them. But their effects are small compared with the admixture of another foreign and injurious thing which enters into the drinking water of the large majority of our community, which, under an utterly erroneous impression respecting it and its uses is considered too often to be a necessary addition, but which is, in truth, an unnecessary pollution. The foreign agent I now refer to is the liquid called alcohol. This liquid forming often twenty-five per cent., nay, sometimes forty per cent., of the

vinous drinks, and taken in these extreme proportions, in excess often of the actual amount even of water that is required, transforms the whole organism, and modifies all its functions; transforms the very character of the man, and produces an animal which is not, strictly speaking, a man, as man was devised by the Supreme Power, from and by whom he proceeded, but a new and lower creation. Health and alimentation are at once separated when the grand deterioration of the body by this agent is made a part of the daily business for re-supplying the body with what is called food: and though, happily for us all, no animal save man himself is subjected to this perversion of the order of nature, the evils are sufficiently dire from the error as it is, to make us wonder at the egregious folly of it, and shudder at the consequences it entails. A royal commission on the pollution of rivers has sat and said. When will a royal commission sit and say on this pollution of the rivers of life?

The errors in qualities of solid food are of less moment than the fatal and singular error in relation to drinks, to which special reference has just been made, and yet they are sufficiently numerous. They spring in some instances from subservience to mere taste. In other instances they are due to ignorance. In a certain large number of instances they are the effect of necessity. The result as a whole, is that in the midst of the wildest and most useless extravagance there occurs, what must needs be the consequence of extravagant indulgence, a large amount of disease and of premature death from excess; a large amount of disease and discomfort from misappropriation of food that ought to be better applied; a large amount of miserable health, deformity of person, crime, and occasionally death itself, from direct privation of the ailments that are necessary for the maintenance of life.

From a view of all classes of society it is seen to be impossible that any of them can be at this stage of our national existence properly sustained by food. Those of us who as physicians have under our observation the more affluent classes, are drawn to the conclusion that amongst those classes a much larger quantity of alimentary substance is consumed than can possibly be of service, and which being of no service is a cause of injury to the digestive organs, and equally so to the muscular organs which by interposition of fatty matter are impeded in their motion. The discomfort, the languor, the debility, which occur from one of these

induced evils alone, I mean the deposit of fat around the heart, are of a kind which none but the physician can properly compute.

For these and other reasons there is springing up amongst the members of the medical profession a truly wise system of prescribing not only abstinence in regard to alcoholic drinks, but abstinence also in diet; reduction of quantity, and more accurate selection of those articles of diet which are absolutely requisite.

In the affluent class we see the errors of excess: the too corpulent body; the distended stomach; the slow and uncertain muscular movement; the easily puffed-out lungs; the feeble and readily fainting heart; the sleepy brain. By a ridiculous use of words the physician, when he directs these sufferers to let themselves down to a natural proportion of food and drink, is accused of prescribing a starvation treatment which, indeed, is the only remedy, and which is, as a rule, a success beyond expectation when it is faithfully followed.

Amongst the less affluent classes, but amongst those who know nothing of what is actual want, we begin to notice errors in the matter of selection of food. The affluent have at command so much of everything, they feel no necessity to make selections. The needier man needs to select, but not appreciating the need looks commonly on quantity as the thing to be obtained, and buys what is cheapest and most abundant. He exhibits the same prevailing fault, desire for excess, which desire is greatly increased in communities where large masses are congregated together in densely populated cities and towns. So marked is this fault in relation to the use of animal food, that during the cotton famine I computed, in 1862, that if throughout the whole population of England, the average quantity of fresh animal food used by each person was seven and a half ounces per day, the proportion to each inhabitant rose in London to twenty-two ounces. It may fairly be concluded that much of this excessive amount was not actually eaten, but was practically thrown away or misapplied; but that a gross excess was consumed, there can be no reasonable doubt, and I fear that since the period named, the increase of wealth has added to rather than reduced the evil.

In the midst, however, of increasing luxury amongst the upper and middle classes of society one disease is, I am bound to say, markedly decreased. I refer to the disease known as gout. Every practising physician

who can carry back the recollections of disease for thirty years, as I can, must be specially struck by the remarkable limitation of this malady, this special malady of luxurious living. A right-down case of genuine acute gout, such as I remember to have seen as a very ordinary phenomenon indeed in the early days of my career, is an exceptional phenomenon now. This decline of one of the most common and most painful of human evils, can, I think, be traceable only to one circumstance, the departure from the custom of indulging in deep potations of port and other rich, strong, sweet wines. Considering that gout is a disease which once induced by indulgence becomes hereditary, it is remarkable, and hopeful as remarkable, to witness that such a brief abstinence from one national custom should have been followed by such signal and good results. I think there is no reason to doubt that if total abstinence from all spirituous drinks were to become as universal as total abstinence from those drinks of the vinous class which specifically induce gout, not only that disease, but many others, which have their origin in the use of alcohol, and which descend in line, would be equally reduced, and in two or three generations effectually wiped out.

Amongst the lower classes of our communities the question of health and alimentation is presented to us in a somewhat different light. We see in the deformed weakly children of the very poor evidence of deficiency of the foods out of which the skeleton is built, and from which also the brain substance and nervous material should be supplied. We see in these examples the effects of food too watery and too exclusively formed of the bread and water type. We see in the women of these classes nervous enfeeblement from excess of tea and from subsisting on bread, or bread and butter, unmixd with better and varied sustaining foods. We see again, too commonly in the men, the bloated enfeebled condition induced by excessive indulgence in beer, coupled with the persistent indigestion incident to the consumption of badly selected, badly prepared, foods, whether of the animal or vegetable series.

Fortunately we know that these conditions are not a necessity, are not truly the effects of want of food, but of want of knowledge. There are few men now out of the work-houses so poor but that they can get as much food, and as good food, as the persons who are incarcerated in our prisons, and certain it is that prison fare, though it may not be so palatable as the free man at little extra cost can easily make it, is, for all essential purposes, a good alimentary sustainment, and one towards which every member of the community might incline with benefit to his health, and with certain addition to his wealth.

If men would remember that pure water is the only natural beverage, and that under ordinary circumstances the adult man or woman does not require more than twenty-four ounces of it in twenty-four hours; that of solid food, animal and vegetable combined, the same number of ounces is, under usual conditions, sufficient; that of solid food not more than one-third need to be of the animal muscle-feeding class, leaving the vegetable starchy and oily or heat-supplying substances to make up the remaining two-thirds; that the foods should be cooked so as to be freed of their rawness, without being reduced to tenderness or shreds or hardness by over-cooking; that the foods should be themselves pure and of healthy origin; that the division of food by meals should be into three periods, at times of equal length and of about five hours' duration; and that the gratification of the gustatory sense should be made secondary to the actual requirements of the body for its aliment, should, in fine, be kept as neutral as is the taste of the young child who feeds on the most natural and at the same time most neutral of all foods, milk.—If these rules were remembered and acted upon, without divergence into feasts for indulgence or fasts for penance, the national health would make an advance that would lead to the development of a race constructed for an enjoyment of happiness which, except in the imagination of the poet, has had no existence on earth since Paradise was lost.

BENJAMIN W. RICHARDSON.

WHAT SHE CAME THROUGH.

BY THE AUTHOR OF "LADY BELL," ETC.

CHAPTER LIV.—A SUDDEN SUMMONS.

P LEASANCE was still at Stone Cross, when the morning post brought her, along with some law papers, a private letter from

Mr. Woodcock.

He had accepted her as a client, and had written to her frequently in the settlement of her affairs. Such letters were in the course of his duty, and he did not depute them to a clerk, because he had a genuine respect and liking for Archie Douglas's wife.

Pleasance opened the letter at her breakfast-table, without a suspicion of anything extraordinary, but she had not read a line of the scrawled and blotted half-page, a contrast to Mr. Woodcock's usual strong, clear handwriting with which he was in the habit of covering a page and a half, or two pages, of paper, without being aware that some startling calamity had thrown even a man like Mr. Woodcock off his balance.

"DEAR MADAM," he wrote, "I am grieved to inform you that bad news has just reached me, indirectly, which you ought to know, and not to read first in the newspapers. A grievous accident has happened to the shooting party at Shardleigh. The telegram for a London surgeon simply stated that Mr. Douglas had received a gun-shot wound, that the hæmorrhage was great, and the worst apprehensions were entertained. I have not a moment to lose, as I am starting at once to do what I can for the poor fellow and his mother and sister. I shall write to you by

the first post after I arrive at Shardleigh; and if anything remains to be done, you may command my best services.

"Your faithful and obedient servant,
"GEOFFREY WOODCOCK."

It was on a September morning, the year having advanced through its prime into its first decay, when Pleasance sat alone in the dining-room at Willow House with that letter on the table-cloth before her, and when her eyes all at once began to swim.

She recovered presently, so as even to hear the sweet, cheery song of a robin on one of the willow-trees, that peculiarly autumnal song associated with the garnering in of ripe fruit, and the pathetic, peaceful smile of the autumnal sun over the reaped and stripped fields and orchards, to which Archie Douglas had first called her attention.

Archie—Joel Wray—badly hurt, dying, perhaps dead already—no, the last could not be with the sun shining in the sky, and she sitting there with no intimation of it—only let God spare Archie Douglas to walk the face of the earth, to breathe the same air with her—only let God not cut him off in his fresh youth, and she would ask nothing more.

What of the early quarrel between husband and wife? What of their obstinately maintained separation ever since, and of the people who would not hesitate to say that the couple who had never been happy together, never borne and forborne, and shared good and evil as husband and wife ought, but who had fallen apart and kept apart from the moment of their union, could surely, of all the couples in the world, best afford to be parted? These people knew nothing of the love that in its bitterness may be the very root and source of discord, and which can survive all discord and all disunion, though its undying existence be but an undying anguish till love and life be put in harmony. It was the very reverse of what they said. Archie Douglas and she who were severed and at enmity, could of all the couples in the world least afford to be sundered by death.

Archie, if he were conscious, might think of her; wish for her presence, seek to accomplish their reconciliation in death, as

he had sought it in life. Pleasance would no longer fail him, since the shadow of death obscured all worldly distinctions. Would there be any room left save for primitive wants—especially in the heart which was naturally single and tender? Would not the one passion of his life, which had exercised such all-powerful sway over him, as in Pleasance's eyes to make havoc of his integrity, reassert its sway, even in the middle of the most solemn considerations? Would not love prove indeed strong as death, and, outlasting all other human emotions, cause him to sigh with his passing breath for the sight of his wife—for an assurance that they were one at last, and in spite of all, for an embrace in which he should gather up and bid farewell to mortal good?

Pleasance rose up quickly to go on her errand; she had not called together her small household, or announced to the Perries a catastrophe in which they, too, had an interest.

Pleasance could not tell what she might have done had she been a happy wife, only parted for a day from her husband. But even then she had a dim notion that she could ill have borne sympathy; that she could not have called in her servants to weep and lament with her over the worst, or to attempt to revive her soul with vain hopes and feeble consolations; she would rather, if it might have been, have played the part of that Shunammite woman who had been the object of her youthful admiration, and said, "It shall be well; and then she saddled an ass and said to her servants, Drive and go forward, slack not thy riding for me except I bid thee." As it was, she did no more than tell Mrs. Perry that she had heard news which would cause her to take a journey at once, and that she could not tell when she might return.

Mrs. Perry, watching her mistress narrowly under her deference, made no opposition.

For that matter Mrs. Perry was in the receipt of recent letters from her old mistress, demolishing the original construction which Perry had put on her instructions, and abounding in injunctions which had Mrs. Archie Douglas's supreme will and pleasure, her highest honour and satisfaction, for their constant text—"Something has come to her, Perry, but it is no business of ours to make remarks; there is a light in her eye and a set of her mouth, that I never saw matched in my proper Mrs. Douglas. Our present Mrs. Douglas is growing up and taking on, Perry. All she said was, 'I must go, Mrs.

Perry, get me a time-table;—yes, it must be the first train north-west. I cannot say anything about coming back;' and not another word or sign, as if she had only to speak and have what she wanted done, and it was not for her to give reasons. I shall offer either you or me to go with her as maid or man, although she do lead us a dance. I don't think she will, she has grown so—fit company for the Dean's lady, and the rest, don't they know it? This last Mrs. Douglas has picked up that purse of her own which my lady did not bring with her, but she has found more—she has found mind, manners, everything. Whatever can Mr. Archie be thinking of to continue to turn his back on his lady, who has grown to be so fine a lady? She was always handsome, as can be seen. But we have nothing to say of our master and mistress; and I only hope, Perry, that they will see we have acted with discretion, and done our duty."

Perry was compelled to acquiesce even to the alarming suggestion of sending him away as man with young Mrs. Douglas on an unknown journey with no termination specified—when his melon beds were in their most critical condition.

But Pleasance declined the company of either Mrs. Perry or her husband—her growth as a fine lady had not extended to any such necessity in her eyes. "I have travelled before by myself, I can manage perfectly," she was a little impatient in refusing to be helpless.

Mrs. Perry might pack a trunk for her mistress, prepare sandwiches and put them in a sandwich case, and Perry might go with her to the station, where, however, Pleasance abruptly dismissed him, and took out her ticket, starting alone on her journey of life or death.

Stone Cross and Shardleigh were three middle-sized counties apart, but these counties could be traversed in the course of one autumn afternoon, so near had Pleasance been to her husband when he was at his own place, by the speed which annihilates distance. As yet she did not feel it near as she sat with her fingers clasped tightly together, and looked out mechanically on the shifting scene through which she was whirled along.

It was a grey still day; but the country through which Pleasance passed and which rapidly became more and more wooded in its landscape, showed no change in the heavy dusky green foliage of later summer. In spring, these coppices, coverts, and

stretches of young plantation, and old woodland, would present every variety of delicate green, daintily brushed and powdered with red and brown. Six weeks later than this September day, they would be gorgeous in their autumn patches of yellow and crimson. Even in midwinter, when the varied tracery of the boughs became exposed, with the copper-coloured stems of firs, the white bark of birches, and the misty purple tinge of beech twigs brought out in fine mellow relief against a dark back-ground, there would be no monotony such as was presented by the present sombre uniformity of colour and shade. Even when she did not know that she was looking at it, Pleasance had a dreary sense of summer fulfilment, without the glory of autumn.

The hedges with their burnished wealth of hips and haws, the very bare fields, were an unconscious relief, after these dark woods, where birds were silent, and last year's nests deserted, where hyacinths and primroses had long withered and seeded on their stems. The belied bleak east country, with its openness and width of light, had been less depressing than these unrelieved masses of wood.

It chanced that Pleasance had no companions for the first part of her journey; towards the close the train got mixed up with and lost in a whole series of trains which had been running with special regard to a volunteer review held in the neighbourhood.

It had been a monster review, inspected not only by a field officer and his staff, but by one of the royal princes, and had attracted a large company of spectators in addition to the volunteers themselves. Each carriage of the train employed for the purpose of the review, was crowded to overflowing, until at a junction where Pleasance's express train stopped, its carriages were pressed into the service. At last, when third and second class carriages were crammed beyond further expansion, a portion of the travellers were transferred to the first-class carriages. A couple of elderly, well-to-do farmers, returning, not from the review, but from the next market town, were drafted upon Pleasance as her share in the reversion. "No intrusion, I hope, miss; you see we cannot help ourselves, if we are to get home to-night," said one of the invaders. They were both of them bluff and stout men. Both wore dark frock coats which had a Sunday air, and each made a considerable display of shirt front.

The speaker addressed Pleasance in civil

deprecation, glancing at her general air, but failing to recognise in it any sign of matronhood.

At another time Pleasance would have been diverted with the humour of such an excuse to her—pointed as it was, by the recollection of her own intrusion into a first-class carriage under the wing of Mr. Woodcock, when her ill-fitting pilot jacket, and newly-bought gloves, had not proved a sufficient passport to so elevated a position. In her present circumstances Pleasance uttered only a gravely gracious negative to the idea of intrusion. She sat gazing dreamily out of the window, wondering how the noisy and extremely mundane farce of a fight, like a review, could be acted in close juxtaposition to that last tragic and very real single combat, between life and death, which is the last scene here below of our strange eventful history.

The two farmers were not gentlemen farmers, though they appeared to be yomen of substance and respectability. They sat in the farthest corner from Pleasance, and were either silent or conversed for a time in undertones, suffering themselves to be subdued by the presence of the young lady, whom they mentally pronounced in looks and manner, if not in dress, a "stunner."

Gradually the restraint wore off, and the farmers carried on their conversation audibly. Their talk reached Pleasance, and although she was not attending to its sense, by that curious faculty which the mind possesses, the words entered into her ears, so as to make an impression, capable of being retained and recalled, on her brain.

The farmers were not speaking of the market and its prices, or of the prospects of their crops and cattle—probably these interesting topics had already been disposed of—they were comparing notes on the more speculative question of their squire, his opinions, his worth and his weakness. They spoke of him as elderly men do of men much their juniors, and as men in the struggle of business, or who are only moderately affluent, speak of other men—the select few, raised far above business fluctuations, born with silver spoons in their mouths, and amply, even excessively provided for during their threescore years and ten, while still in their cradles. Such men, with their equally lucky daughters, sisters, and wives, if women be included in the estimate, are rarely spoken of with envy by elderly men and women. On the contrary, the duke and duchess and the millionaire are

apt to be indicated with a gentle indulgence and a mild pity, which broadly hint it is on the cards that all is not gold that glitters.

It became clear by the tenants' comments that their squire had other claims on their tolerance, besides his advantages as a great young squire. His opinions evidently did not coincide with the pronounced conservatism of the farmers. He seemed suspected of liberalism and radicalism; he was plainly charged with being too much on the side of those rascals of labourers. Yet even in this far more serious and culpable offence than the mere accident of having been born a squire's eldest or only son, and thus rendered exempt from these toils and the responsibilities in procuring a living, which go far to render men manly and thoughtful, the farmers spoke of their squire with considerable leniency. It was evident they looked over—even submitted to utilise—his youthful flush of confidence and enthusiasm, in giving in to the notion that such as he was in position, might be the natural arbitrators between county boards, parish vestries, and individual employers of labour on the one hand, and the Hodges of labour on the other.

The whole tone of the criticism implied that there must have been the good offices of possibly more than one generation between the contending parties.

Pleasance listened and noted vaguely this talk of the yeomen about their superior, wondering as vaguely all the time, how in the tumult and miserable anxiety of her mind, she could listen to what she was but partially capable of comprehending, to what she knew was of no moment to her.

She had ceased to listen, every pulse in her body was beating too impetuously, before she reached the last little country station, which the train would sweep by, before it approached Westbrook, the country town close to Shardleigh.

There were people waiting at the little station, at which there was no stop, and a salutation was waved amidst perceptible excitement from the group on the platform to some traveller in the train. "Do you see that? it will be to some friend of the gentleman," said one of Pleasance's companions, who had paused in his talk and was looking out. "There is Woodgreen where he was carried, and is lying"—he pointed to a farm-house, which the train was passing.

"He is not from these parts, you know," said the other, not looking at Pleasance, as she leant forward with heaving breast and convulsive grasp of the side of the carriage

to steady herself. The speaker was utterly unconscious of the profound impression which he was making, as he went on with his speech which carried enlightenment in its careless words; "his name is Scotch, and so for that matter is the squire's, though I believe he is no relation, only a college chum who had come down with the other friends of the family, and was stopping in the house. I hear our Mr. Douglas, who, whatever may be his faults, has his heart in the right place, and no mistake, is terribly cut up by the accident. He has never left the other's bedside, day or night, any more than if he had been the squire's brother."

There was an unexpected silence in the carriage, for the second farmer's eyes were riveted on Pleasance.

"Has there been one accident or two?" she was forcing herself to ask, in a husky voice, raising her veil. "Who is hurt?"

The farmer, who had remarked her agitation, dismissed his first conjecture that the young lady was the friend of the injured gentleman, to whom the signal had been made, and before whom he and his crony had begun indiscreetly to talk over the accident which, until to-day's review, had been the great topic of every circle in the neighbourhood. "She may have no concern with this accident, but, poor soul! young as she is, she has had to do with some other in her life, so that the mere mention of the trouble has given her a turn."

"Only one, miss, and that one too many," he said in civil explanation. "It was an accident in Mr. Douglas of Shardleigh's party, as they were shooting over Furze Brow yesterday. One of the bushes caught a gun, as should not have been loaded, carried by a lout of a beater, and the charge went into the shoulder of a stranger gentleman stopping up at the house. He went down like a shot, and was taken up bleeding like a bullock, from an artery, they say, and carried to Woodgreen. He was given over by the first doctor that saw him, but as he lived on, and was one of them folks that could afford more help, he had a dozen medical men around him in no time, while a tip-top surgeon from London was called in. Now I hear they agree between them, that since he has not given them the slip in the meantime, there is some chance for him left."

"I am glad," said Pleasance, in thankfulness for the respite to the man she had never seen, clasping her hands, the tears breaking forth and streaming over her cheeks.

She dried her tears, leant back, and told

herself that it had been a great mistake. No doubt Mr. Woodcock had telegraphed, or written, or travelled away in hot haste, to remedy, so far as she was concerned, the blunder that had been committed. But she could not find time to think of herself, her idle journey and wasted pain; she was full of a blessed confusion of relief and gratitude, in which the needless sorrow and perturbation to herself, that would have been foremost in a more selfish and colder-hearted woman's mind, found as yet no room.

Then she became aware that her companions, with quite as much natural delicacy as engrossing interest in their own talk, had resumed their interrupted conversation. But only a few more words reached her ear when it flashed upon her that Archie Douglas was their squire, on whose proceedings they had been animadverting. She listened for what more was to come with tremulous eagerness, but it met her in a form which she had not expected, and overwhelmed her with discomfort and dismay. She had the proverbial fate of the hearer, though her hearer had related, as far as she knew, to talk of another—not of herself, and was done in open day. The speakers were proceeding to speak of her before her face, without their knowing it. One of them was saying that the squire might have taken a lesson from his own unfortunate marriage not to favour violently the lower class and every vagabond, as he was inclined to do. The other was correcting him and telling him that he reckoned there was some mistake, for the squire's wife had proved to be a lady with a great fortune. But no doubt she was a bitter bad one, whatever she had come from or had in her hand, when even the squire—who, poor young fellow, was friendly to everybody—could not put up with the woman he had made his wife.

Pleasance had to endure the bewildering sense of impersonality, the strange feeling of shame, with which one has to sit and hear his character and history spoken of as that of another, without the power to prevent it. It would be worse than anything which had gone before both for herself and these two stout tenants of her husband's, innocent of evil, if she were to say aloud, looking in their faces, "I am the squire's wife, and I have been as much sinned against as sinning."

CHAPTER LV.—ONE LOOK AT SHARDLEIGH.

WHEN the train stopped at Westbrook, the sprucest and least shy of the farmers paused after getting out, and said civilly to

Pleasance, "Can't I do anything for you, miss—call your servant, or look after your luggage? We are quiet enough at Westbrook in general, but the stir of this review seems to have turned things topsy-turvy here also."

"Thank you," said Pleasance, "but I have no luggage and no servant. I shall return by the next train. I find there has been a misunderstanding about my coming here," she added hastily, seeing that her volunteer ally looked surprised.

"Ah! that is unlucky, but I would not let myself be too easily put out," the elderly man proffered his sensible advice. "There is no end of railway mishaps," continued the farmer, remembering with regret old coaching days, attributing every error to railway mismanagement, and proceeding to condole with Pleasance on what he concluded was her plight, with fellow-feeling. "There is no train goes right through, I mean as far as me and my friend were taken up, till pretty late in the evening, and the daylight has drawn in a bit by now; you would be landed at your destination in the dark, and no friends expecting you again, it is like; better stop the night here. There are good hotels where even a young lady like you, though she may feel a trifle awkward, will be perfectly safe and pretty comfortable. I am going to pick up my horse and trap at the best (the Swan), and will be happy to show you the way, if you wish it. It is a crying shame there ain't damages to passengers for being misinformed, as well as for accidents, though damages might be no object to the like of you."

Pleasance, feeling weary and bewildered, readily accepted the friendly service, but before she could get out of the station she was again accosted, by a gentleman's groom this time. He came hurriedly up, looked about him, and approached Pleasance, touching his hat. "Beg pardon, ma'am, but is your name Douglas?"

Pleasance gave a great start and a gasp. Had detection found her out the moment that she had come within a mile of Shardleigh? But she could not deny her name, let the result be what it might. "Yes," she said, trying to speak firmly.

"Then she is a friend of the poor gentleman's, after all," reflected the attentive farmer; "but what the dickens did she mean by a misunderstanding about her coming?"

"I have been sent over to fetch you; the carriage is at the gate. Gentleman is better, ma'am, I am most 'appy to say; looking up

decidedly; the worst is over, they apprehend. I was bidden be sure and tell you the first thing. The squire he would have come himself, but he has been so taken up to-day with the prince and everythink; he was only seeing the prince off when I left."

"I think there is another mistake," said Pleasance with a faint smile, growing sick in the middle of her sense of deliverance at the bare thought of the danger which she had narrowly escaped. She felt sure, too, that her wits were giving way under the shocks and trials of the day, when she could jumble up the mention of a prince with Archie Douglas and his engagement in attending on his friend.

"I am not a relative of the sick gentleman's, but another Douglas."

Her assertion was corroborated by a shout from the farther end of the train. "Here, Waterton, here is the lady for Woodgreen," and Pleasance, with a little thrill of interest that withdrew her for a moment from her own pressing cares, joined the rest of the travellers, and the railway functionaries standing aside to make way for, and to gaze sympathetically at the pale, red-eyed woman for whom Pleasance had been mistaken, and whose piteous case she had held, not an hour before, to be her own.

"To be sure," Pleasance's farmer friend was saying. "Douglas is a common name—seems so, at least—no end to misunderstandings, this way, miss, to the Swan."

He never for a moment, in his recent discovery of the commonness of the name of Douglas, associated the beautiful young lady whom he was proud to be of use to, and in so doing, to teach his neighbour Hipwell manners—with the wife of whom even his philanthropic young squire was fain to get rid, and whom the farmer himself had been lately denouncing as a reprobate.

Westbrook, though a good old town of some size and respectability, added to a certain old-fashioned sober beauty, was not a manufacturing town. The commotion in its crowded streets was due to its contingent to the review, and to the fact which Pleasance and her conductor learned as they walked along, that the young prince who had naturally been the hero of the review, had passed through the town in the afternoon.

Even the elderly man of bucolic interests was moved by the honour which had been done to the place, and indulged in regrets that his women-folks had not known in time to go and stare at the real live prince with the rest.

The news did not prevent Pleasance's companion from discharging his office as guide, but his desire to talk the great event over in the bar of the Swan, and to carry the tale home, largely eclipsed the sensation which Pleasance had created in his mind. Nevertheless, he was more than willing to do a good turn to this pleasant-spoken beauty, who was about the age of his youngest daughter; but since he regarded himself as a leading man in his line in the district, and was fond of taking an active part in every public matter, he was rather glad to get his strange young lady off his hands, and to think no more of her. He was ready to rush into the heat of the discussion going on in the bar of the Swan, whether it were possible to get up impromptu fireworks to celebrate loyally the honour done to the town.

The Swan, where Pleasance was as desirous of finding shelter as her conductor could be of disposing of her, and where the farmer handed her over as a strange young lady who had come to grief by losing her way on the railway, fully deserved the character it had received. It was a county town inn of the best sort, and where, even in the midst of the universal commotion, Pleasance was immediately shown to a good private sitting-room, and was waited upon by a neat, clever, soft-spoken maid.

The landlady had only got time to catch a glimpse of Pleasance arriving without luggage or attendant under the championship of Mr. Burrows, of Hog's Lane Farm, but she, like the old landlady of the Yorkshire Grey, was favourably impressed. She leapt to the conclusion that Mr. Burrows was right, the guest was really one of the gentlefolks who had been victims to the disorder on the line that day, and whom it was alike the landlady's duty and policy to treat with every attention.

If it had not been for the special supper given in the Swan that night to the Westbrook volunteers, the landlady would have devoted herself to Pleasance; as it was, she told off for her use the nicest of her chambermaids.

Pleasance had grown, as Mrs. Perry had declared, since the days of the Yorkshire Grey, and since her acquaintance with the ways and doings of the Brown Cow. The result of the months and months spent at Willow House, under Mrs. Perry's careful auspices, was that Pleasance took all those marks of distinction as a matter of course, and confirmed the chambermaid in her report to her mistress, that the new-comer was quite

my lady; such another as Sir John's daughters, when they had rooms for the county ball.

Pleasance ventured to ask her attendant about Shardleigh, and found that—after the prince, who would have been the preferable subject of conversation, there was nothing that any inhabitant of Westbrook would speak of with greater readiness and gusto than Shardleigh. It was not only the finest place in the neighbourhood, but the squire was very liberal, as his father had been before him, in allowing the use of old rights of way, and in throwing open his grounds, and especially his winter garden on set days to the public. The family resided part of every year at Shardleigh. Mrs. and Miss Douglas, the squire's mother and sister, were there then; and the prince had called that afternoon at Shardleigh, which had been the reason of his passing through Westbrook. Of course the prince could not be in the neighbourhood—nobody ever was in the neighbourhood—without visiting Shardleigh grounds.

The family always employed the town tradesmen; and not only Mrs. Douglas, but the squire and his sister took a deal of trouble with the workpeople, and were very good to the poor. And a prince had actually been to Shardleigh in token that its attractions were transcendent.

"How far was it from Westbrook to Shardleigh?" Pleasance questioned.

A full mile by the road to the principal gate, then another mile through the park to the winter garden and the house, her willing informant told her; but there was a lane which led by the house, as it stood in the corner of the park, and from one point of which—where the lane crossed Burnham Brook—you could catch quite a near view of the house with the great conservatory and the terrace. The lane was not above a quarter of a mile from the town, but few people cared for it now, since every Tuesday, any one who liked could drive in at the main entrance, and go right up to the house, and walk all over the gardens and the conservatory; even when the family were at home, they took care to be out of the way, or they greeted the visitors pleasantly. Mr. Douglas had even been known to turn aside in order to set right a party of tourists. People said that it was beneath him, and that he should know his own place and think more of himself; but the pleasant-spoken chambermaid thought he was a very fine young gentleman indeed, and was sure he would be as kind as a woman to the poor gentleman lying badly hurt at Woodgreen.

"I am sure he will," said Pleasance with eager acquiescence.

She had dined in the golden glow of an approaching fine September sunset in which the grey day had ended; she was detaining the maid who had acted as nimble hands and feet to a venerable grey-headed waiter—nominally serving, while Pleasance cut an apple into minutest sections, and turned over its seeds. "I should like a stroll this beautiful evening," she said hesitatingly setting about the first piece of duplicity she had been guilty of in her life, and necessarily bungling it; "could I find the lane you spoke of? is it easily reached?"

Quite easily, the maid said with decision; she had only to go as far as St. Nicholas's Church—the old church with the square tower—in sight of the Swan windows, and pass it, when she would find the lane which turned off fifty yards or so beyond the churchyard. It was a very quiet walk; Westbrook was generally quiet, for it had no rough mill hands, or swaggering soldiers, or tramps to speak of. But this night, when there was talk of rockets to be thrown up, or at least a bonfire lighted in the Elm meadow, the maid would go bail that the lady would not meet a living soul in Shardleigh Lane.

She would not meet a living soul, Pleasance repeated in feverish reassurance, for a longing had seized her to look for this once, when she was so near, on Shardleigh, which might have been her home. She had no apprehension of meeting Archie Douglas, whose post was by his friend at the farm-house, a station distant. The only other person whose recognition Pleasance feared was Archie's sister Jane. But Pleasance argued that it was very unlikely, when she only knew a single girl in the whole population of Westbrook, numbering ten thousand, that this solitary girl should be the very person Pleasance would meet in a deserted lane, in the evening, of all times, when a girl in Jane Douglas's rank must have dressed for dinner, and be obliged to confine herself to the conservatory or the terrace.

Besides, though this single girl was her own sister-in-law, Pleasance, whom she had only seen once, and that for a short time in the Willow House drawing-room, would not probably recognise her in her walking-dress with hat and veil.

Pleasance ruled that there was no risk of discovery from this enemy; and she herself would be gone early the next morning on her return to Stone Cross.

So she went out before the yellow light of the sunset had reached its climax, and found the few streets she traversed not only restored to their usual quiet, but already forsaken for the anticipated rejoicings in the Elm meadow.

She had no difficulty in finding St. Nicholas's Church—the old parish church of the town—and in striking upon the lane beyond the churchyard. But in consideration that the lane had the high park wall on one hand, and an equally high hawthorn hedge on the other, and lay deep in the shadow, Pleasance not only feared that the September dusk would find her there, but doubted that she would have nothing save her walk for her pains. As far as she had gone for the first five minutes, she could only see the grass getting a darker and darker green beneath her feet, and the sky changing from blue to purple over her head. She could not conceive how, with such barriers on each hand, her prospect could be extended.

But just as she had brought herself to say she must give up the foolish quest, she saw that the park wall and the hedge before her gave way on the right hand and on the left to the low parapet, ivy hung, of an old bridge. The green-garlanded arch, with the brown water stealing through below, presenting an agreeable feature, varying the park scenery as viewed from the great house beyond, was doubtless one of the reasons why the lane itself had been allowed to remain.

When Pleasance stood on the picturesque old cow bridge over Burnham Brook, the park with its clumps of magnificent timber stretched before her under the lingering radiance—all the more impressive because of the sombreness of the lane, of this loveliest September sunset. It retained an after-glow made up of the precious "dust" of the sunk sunbeams, and the slight mist which come between her dazzled eyes and the glory, bathing and softening the undulating lines of the trees, and the sweep of the grassy openings.

The pile of the house appearing so close to her, as to startle her for a moment, was very similar in Pleasance's unsophisticated eyes, which knew little of architecture save what she had drawn from her haunt in Stone Cross Cathedral, to any other large, handsome building the size of which makes it imposing. She could not see, and could not very well have appreciated, the gateway and portico, which were not incongruous excrescences, as they are in most instances, but were fine integral portions of the older wing of the house,

constituting Mr. Woodcock's chief pride in the mansion as a man of enlightened taste. Of the winter garden, of which every lady made so much, and of which Pleasance had heard in a former stage of her existence, when she had little guessed its history, she could see merely the towers and cupolas still reflecting the sunlight, but only giving her a vague hint of the fairy world within.

Yet, with all its deficiencies, the glimpse of Shardleigh under that wonderful mellow light, which would have transformed the meanest, most barren prospect of a wretched quarter of a great town, or a bleak chalk down, or a black peat moss, into a place almost fair, almost invested with interest, for the moment—ravished Pleasance's soul with its rich and stately beauty.

She stood leaning against the parapet of the bridge, and looking her heart out. As she looked there came back upon her in a flood the same impression with which she had gazed in the early morning, in London, on the house in Grosvenor Place—that very sense of incongruity with which Mr. Woodcock had recalled Shardleigh when he was on his way to find Archie Douglas's wife at the carrier's inn in the side street, near the Shoreditch Station. Pleasance was perfectly aware that she had changed since the time—a few months ago—when she had thought a London cab a fine carriage, and been at home in the Yorkshire Grey. She had not forgotten that in the interval she had become an heiress worthy of the name even in sight of Shardleigh, and who could, if she chose, provide herself with a home almost as fair, refined, and exclusive as this home. But the rearing and experience of many years came back upon her, in a rush, at this moment, and were all the more irresistible since, during the whole previous day she had been thinking and dreaming of Archie Douglas as Joel Wray in the surroundings in which she had so quickly learned to know and love him, at the wheat-hoeing and on the harvest-field, on the beach at Cheam, in the old Manor House room—rustic places, with their homely figures, widely removed from this scene, so noble in its repose, that it did not seem unmeet that a prince had been a guest there that day.

While Pleasance stood on the bridge and noted that bright lights were springing up in the house, she was so near it that the sound of a window being opened, drew her attention to the terrace which she had overlooked. It lay before the long French windows, just

lit, which Pleasance had judged rightly belonged to a drawing-room, and had flights of steps leading to a lower terrace, and thence to a flower-garden, which was almost entirely out of Pleasance's scope of vision.

The window opened was one of the drawing-room windows reaching to the floor, and out of it—relieved against the light background, taking Pleasance's breath away with

consternation for the instant, and causing her to draw back in the utmost agitation and alarm within the shadow of the park wall—came a lady and a gentleman. The gentleman, as Pleasance knew in a second through the gathering dusk, was Archie Douglas, no longer watching by the bed of his friend in the farm-house three miles off, and the lady, Pleasance guessed by the flaxen hair flowing

Page 818.

loose over her shoulders and white gown, must be his sister.

For a moment of acute distress Pleasance laboured under the delusion that she must be seen and recognised, even as she saw and recognised the figures before her. When she recovered and knew herself safe, she gave herself up to one long ardent gaze at the man she had loved and wedded, whom she

had not seen for months, whom she had thought to see that morning stretched lifeless, or sighing out his life before her. But Pleasance had never seen Archie Douglas look as he appeared then, not even in the last encounter at a fashionable hour in a fashionable park.

As if in an echo of Pleasance's conviction of the gulf which divided them, he came out

on the terrace in the magnificent scarlet and gold uniform of the officer of a yeomanry regiment, which he had put on when he hastily joined the review, in order to escort the prince to Shardleigh. The dress, though fantastic in Pleasance's eyes, enhanced as she could not have believed it was in the power of dress to set off the natural elegance of Archie Douglas's figure, and the comeliness of his prepossessing face.

Jane Douglas also was not in her ordinary evening dress of simple white muslin. An impromptu garden-party had been assembled at Shardleigh as soon as the prince's intentions were known, and Jane retained its demi-toilette, in which Pleasance could distinguish the gossamer fall of lace, and the gleam, against the light within, of gold and jewels at the throat, the bosom, and the wrists. A third member of the party who had followed the others to the window and stood there, had a costly Indian shawl drawn round her figure, slight and graceful as a girl's, and showed the same flashes and points of light, where the setting of a locket, the eyes of a serpent bracelet, the stones of a cross, came out on the black and white of her dress.

The family party were alone after the dispersal of their guests, including the chief. The honour and the fatigue were alike over, and the mother, son, and daughter were left by themselves, not too exhausted, to indulge in natural satisfaction, and compare notes on the occurrences of the day. Added to this welcome conclusion, there was in the Douglasses' case the increase of a very lively sense of relief from a recent burden of anxiety and sympathetic distress. The temporary effect of these combined influences on an impressionable young fellow like Archie Douglas, was to render him for the hour in exuberant spirits. Pleasance, standing not so far off, on the bridge, in the lane, could hear the gay voices and laughter, with Archie's rising pre-eminent. She could see the two younger figures fitting in their freedom and gladness backwards and forwards, with Archie's arm drawn through his sister's in place of hers drawn through his, to hold her by his side, and the two contrasted heads, dark and fair, in closest confidential contact, as their two owners pursued their merry stroll. It did not seem that anything or anybody was wanting to the group. How could there be, especially when the one who had voluntarily excluded herself, and who stood unsuspected, looking into Paradise, was only Pleasance? What could she have in common

with the young fellow before her—a great one of the earth in his peacock plumage? Was he indeed the same footsore reaper to whose primitive wants she had once ministered? If he had been what he had seemed, she might have served him in a thousand ways, and proved his best friend; as it was, she was right that he had no need of her; she would have been at the best a tolerated intruder, a wearisome drag on him and his friends.

A sharp pang went through her heart as she told herself this, and added that her own eyes saw and testified to the ultimate wisdom and integrity of her course. But she had been accustomed to think of Archie Douglas as still remembering and regretting her, however foolishly. True, he had been in the animation of pleasant social intercourse when she had met him riding with his sister and Rica Wyndham in the Park; but his tone had changed instantaneously at the sight of her; in their interview after he had acknowledged her as his wife, he had shown himself full of restless pain and misery. Mr. Woodcock had always talked of him as of a man disappointed, dissatisfied with his abundance of good things.

Altogether it was a great blow which struck to Pleasance's heart to see Archie Douglas the happiest of the happy. She did not pause to inquire whether she had any right to resent it.

But her heart spoke out more truly in its inconsistent cry, "You are cruel, Archie Douglas—you whom I thought so kind, cruel and heartless, you are like the rich man who took the ewe lamb. You sought me with a false pretence; and now, though our lives are sundered, you can be as happy as if you had never known of my existence: it is as if you chose the time when I had flown to you in what I held to be your extremity, to show me that you never knew what love meant. You have made me lose my love Joel, as well as my husband Archie Douglas. I have wasted my whole heart upon a dream."

The glow in the western sky paled, faded and darkened; Shardleigh park and house paled and darkened with the sky; the first star came out, and the dews began to fall.

The mother within tapped on her children, who obeyed the summons reluctantly.

The mute shadow watching all, stole back through the silent lane to the inn.

CHAPTER LVL—RICA'S PRIVATE MISSION.

WHEN Pleasance was back at Stone Cross for the weeks that were left her there, she

consented to go through the form of paying a visit to her aunt, amidst the dignities of Gable House.

Such a visit was no pleasure, but a penalty to Pleasance; but she could not in her conscience withhold it, when she took into account that Mrs. Wyndham was her father's sister, and actually, save Pleasance's husband, her nearest surviving relation. Pleasance could not comply even in the most restricted manner with the requirements of society where other recent visitors were concerned and leave out Mrs. Wyndham, without inflicting on her a marked slight. It might even involve a false suspicion on the part of the world of the Close, and the neighbourhood, that Pleasance accused her aunt of having been in some measure privy to the will which had so long lain in abeyance.

All Pleasance's rampant justice rose up in arms against subjecting Mrs. Wyndham or any member of her family to so unfounded a suspicion. Pleasance would call every day of her life at the Gable House and have the Wyndhams calling every day back again at Willow House, invading her privacy and disturbing her peace, sooner than do them or any other human being such a wrong in cold blood. Pleasance would rather sit half an hour with her aunt and endure the associations which she recalled. The younger woman would look at the elder's slow, pompous movements, and at the traces of the beauty which had remained so long unfaded and unforgetten. Pleasance would listen to Mrs. Wyndham's confidently imperious apologies and excuses in reference to the past, and her laboured attempts at promoting greater friendliness for her family's ends in the future. The listener would endure the speaker's lengthened emphatic dissertations on her children's merits, and her half-indignant remonstrances against, and lamentations over Pleasance's perversity in not grasping at their overtures. She ought to make it her very first arrangement to go to Rome for the coming winter, to live with Nelly in her palace and see the first society in Rome. Pleasance should seek to pick up such a tolerable foreign style, that, on her return to England Mrs. Wyndham and Rica might have no difficulty in taking her up and going out with her. Of course, Pleasance was too young, and above all too peculiarly situated to dispense with influential countenance.

Rica never stayed much beside the mother, who idolised her, so that in consenting to sit with Mrs. Wyndham, Pleasance was at least safe from Rica's more direct

assaults, whether of mere flippant levity or reckless importunity. For Pleasance had learned to take the true measure of Rica's hilarity and frankness. But the best established inferences sometimes fail, so Pleasance was forced to admit, when after doing her utmost to bear and forbear with her aunt at Gable House, she returned home to find Rica established in the drawing-room at Willow House. There she was turning it upside down for her own convenience and amusement, flinging any market flowers with a suspicion of herbs in them out of the window, tossing about Pleasance's books, meddling with and scaring her birds, and inserting the most villainously destructive stitches into a little bit of old and fine embroidery which Pleasance was trying to repair.

"Here you are, cousin Pleasance, and here I am sick to death of waiting for you," the culprit hailed the mistress of the house. "What can you find to say to the poor poky old *mater* with whom you were not such great friends, to begin with? But you had better take a chair," she invited Pleasance to a seat in her own house, "before I open my budget, which happens to be a long and special one. I wonder if I feel like the Chancellor of the Exchequer when he prepares to lay his before the House? I dare say I am a great deal more in earnest, since, except in the light of his office, he cannot care a straw for what no more concerns him than it concerns the other millions in the kingdom."

"I hope people are sometimes in earnest about what concerns their neighbours. I need not say, I hope, I don't doubt that there are such feelings as philanthropy—even true patriotism," said Pleasance with something between a twinkle and a sparkle in her eye.

"Well, there are such hobbies," said Rica, "and people mount them and ride them to death, pretending all the time that they are disinterested; but what is a hobby, unless a man's way of entertaining himself, and proving his superiority to his fellows? I should like nothing better than to come out as a public benefactress, but then I should always be candid, and own that I did it for a whim and to amuse myself. The new Lady Bountiful, with her woman's rights, her advanced education, and her extended charities, has a good deal of in her, and is great fun. She is not half such a 'do' to herself, at least, as her predecessor was."

"Do you mean," asked Pleasance, "that you cannot conceive of any real wrongs

which any class or section of women may suffer, with redressors of such wrongs, working in the dark and making mistakes and messes, doubtless, but perhaps working towards the light all the same. Do you intend me to believe that you cannot imagine an actual amount of shallow, narrow ignorance which well-instructed people have a genuine desire to lessen? Have you no faith in much patent sore suffering which the friendly souls in the world would seek on the highest authority to relieve? Is it to you an idle play of shams and by-words, assumptions and fashions, of which you can freely make game? Do you see nothing above and beyond the folly of it?"

"Not I," said Rica with unabashed coolness. "But, although I don't believe in saints and martyrs since the time of the apostles, I suppose—and if I had lived in the days of these old gentlemen I dare say I should have had a crow to pluck with them too—still, I have no particular quarrel with the one-ideaed souls who think they are serving God and man, when they are only airing their own sneaking good-nature and fondness for popularity, or their spite against some neighbour who goes and does the reverse. I think they are worthy enough—a little blind, that is all."

"They are much obliged to you, Miss Wyndham," said Pleasance; for she had never been able to give Rica the right hand of intimacy, in responding to her freedom of address, by calling her cousin by her Christian name.

"What would you have?" said Rica, a little impatiently; "I am a humorist. As for you, if you cannot see a joke, you should make a pretence you do. Your solemn people who take everything *au grand sérieux*, are too terrible, even when they are not atrocious hypocrites. I do not think I could stand them."

"I used to fancy I could see a joke," said Pleasance, "but to turn everything into a joke is being too much of a light princess to suit my conscience. It seems to me that it is left for the most modern humorists—or those who profess to be so—to put irreverent, unfeeling hands on human nature as a whole, and treat it as beneath respect, if not beneath contempt."

"Well, so it is," said Rica with a yawn, "there is no great thing in it—I am sure you have lived long enough to find the truth of my words—except that it is mostly good for a laugh. But spare me sermonising; it ain't quite fair to impose it just yet. By-and-by I shall take my doses, but I need

not anticipate the horrible process, need I? I assure you that while I thrust my tongue in my cheek and laugh in my sleeve—you will not be so tyrannical as to refuse me so much liberty—I shall turn out a good, fat, jolly associate sister of a morning, if you make reforming the world your cue, when we keep house together."

"Keep house together!" exclaimed Pleasance astounded.

"Yes, my dear child, that is just what we are going to do," said Rica with frank decision, "and if I were not stupidly honest, I might come over you by hinting that you would do me no end of good. To win such a light-minded, worldly sinner to the side of earnestness, self-denial, and good works would be a grand tribute to your power. But you see I am honest, and I don't hint at having lost my senses, and fallen over head and ears in love with you and your Christian socialism, or whatever it is, though you are very handsome, and have grown rich—at our expense, alas! The utmost that I propose is to make a highly judicious *mariage de convenance* between us two. Seriously, cousin Pleasance, I do not wonder that you have repulsed mamma's heavy artillery of proposals. It is trial enough for me to be tied to her apron-string, and dragged about in her cumbrous, slumbrous way. Then the idea of you going to Nelly, which was so plausible at the first glance, and to which I lent my support, had its disadvantages. You might be gone ever so long, and Nelly and her count might appropriate you altogether, since you have no near tie, or none the holder of which cares to claim it. That is my side of the objection. For yours, the count is exquisitely noble and high-bred, like his palace; but he is as empty of all, save ancestral distinction, as the wide staircase and vast rooms of his dwelling. I have already told you that he is as proud as Lucifer, and as vain as a peacock; he is not easy to get on with. Poor Nelly has her own trials. She is apt to be dismal and occupied with calculations concerning the death of the old count, and she cannot understand why the last should not be as interesting and enlivening to her audience as to herself. Honestly, I think it would be pleasanter for you to stay at home, or merely to travel here and there with me for your duenna, governess, whip—what shall I call it?"

"But I have no idea that I want a duenna or a governess, not to say a whip, whose duties to me I cannot fathom."

"Oh, I should keep in order, fight, and

bring recalcitrant members of society to vote that you would not only pass muster, but that you were quite 'good style,' explained Rica, "as the parliamentary whips serve their leaders."

"And where would your mother be?"

"Oh, mamma would learn to do without me, as she has to do without Tom and Nelly, as she must do if I can manage to marry to suit me—I make no secret, that it is a question of management and suitability. Home is the best place for dowagers, and if mamma is not a dowager, it is all Tom's fault. He ought to have provided me, long ere this, with a presentable, tolerably energetic sister-in-law to take me about. Nelly is *hors de combat*, and I protest mamma makes a spectacle of herself, dragging on some unhappy man's arm, at breakfasts and garden parties, and nodding on her seat during the last waltz after supper," cried Rica in pettish disgust. "As for yachting, she and I together would sink any yacht of light burden; and as for fishing in Norway, or scrambling and roughing it among the Dolomite or any other mountains, or doing anything that one really cares to do, or that is worth doing, it is as entirely beyond her capacity as a flight to the moon. I am always preaching that to sit still is the strength of age, but she will not appropriate the text. Now, you may come in quite handy—you are a matron in name at least, which is all that is necessary. If we can persuade her that it will be for Tom and Nelly's good as well as for mine, I have no doubt that mamma may be induced to depute the care of me to you, and you to me. I should write to her of course, and Jobbins, my new maid, writes a legible hand, and could keep her still more *au fait*, with regard to our movements."

"And where should we move to?" inquired Pleasance curiously.

"Oh, wherever there is anything good going on. You are a free woman without any encumbrance, as people take care to advertise, but you do not half prize your freedom. To town in the season, of course, for I have had just enough of country society this summer, at Stone Cross, to whet my taste for blood again. Where shall we go—do you ask? wherever there are worlds and men to conquer, to be sure; and it will go hard with us, if with your beauty, money, novelty, and strange eventful history—I am too modest to say anything of my poor little attractions, centring in my tongue—we do not revenge ourselves on Archie Douglas, and take the world by storm."

"But Archie Douglas is my husband; and I do not care in the least for taking the world by storm. Besides, Rica Wyndham, if I were so happy as to have a mother, or even a loving old friend left to me, I should not think there was any pleasure in the world worth being with her."

"Do you mean to say that you reject my suggestion as you did mamma's?" questioned Rica, speaking slowly and seriously, for her.

"Yes, I do, absolutely," answered Pleasance. "I should have said that I was obliged to you for coveting my company, or caring to serve me, only that I might appear to be mocking you, for you have been telling me in every word, it was your own greater freedom and fancied better entertainment you coveted, and that it was to serve yourself you spoke."

"Quite so, you are perfectly right, Mrs. Douglas," said Rica, getting up with a laugh which sounded harsh.

Rica's face had till now been looking its best, in its dimpling, rippling laughter, with only the slightest tinge of excitement colouring its ivory hue; but as she rose to go, a purple flush of passion spoilt the delicacy of colouring, and the curves of the mouth were drawn into a sneer which looked bitter and fierce upon a face that was young, and a woman's.

"What," she said, "you can decline every favour we demean ourselves to ask of you, after we forgave your supplanting us in Heron Hill and its wealth, by a base piece of intrigue on the part of your low-minded and cowardly father! But I do not wonder at it, for you, too, have had something to forgive—something that no woman ever can forgive."

"I do not understand you," said Pleasance, standing up stiff and cold, taken aback by the sudden burst of rage and its reviling.

"I mean," said Rica, "that you drew Archie Douglas into a low marriage, which was no sooner committed than it became detestable to him, and which he did his best to ignore and escape from. I mean that he sought his solace in me, that he would fain have taken refuge in a pursuit—idle it must have been since, like your father, he could only have been half a villain—of me and my society; but you, perhaps, because you condemn fine ladies on principle, were not burdened with a lady's scruples of pride or delicacy—you followed and exposed him."

"It is not true," said Pleasance in vehement indignation, but calming down even while she spoke. "You know that you are not speaking the whole, or even the least

part of the truth, that you are twisting and distorting facts to suit your own bad purpose."

"I believe, however, that mine is the general version of the story," said Rica, recovering her self-control in part, and smothering the rage she felt in addition to every other ground of offence, at having been betrayed into a rage—for was not her rôle that of a laughing philosopher, and did it not detract from her mercurial philosophy to show feeling of any kind? "My theory was held at the time by the persons who should have known best—Mrs. Douglas amongst the rest. If you take my advice, cousin Pleasance, you will have nothing to say to your gentle, enthusiastic mother-in-law when she comes to the neighbourhood of Stone Cross next week, that she may be no longer able to avoid making your acquaintance, and when she is so charmed with you at first sight, as to fall into your arms. She has been very fond of you, all along, has she not? stood by you and taken your part? She has not come to you late in the day, when by the shameful misappropriation of grandpapa's property, you are a rich woman? You snubbed poor little Jane Douglas, you know, when she took it into her foolish head to patronise you. But really Jane could do it much more gracefully, for you were only Archie's poor, low-born wife in those days. Archie Douglas has not been particularly strong-minded, honest, and faithful in the course of the history, in spite of his juvenile heroics. It is so easy to be heroic before the time. However, he has left it to a refined, sensitive model woman, like his mother, to be shamelessly mercenary. Or is it that his objections are insuperable? You should know, since it seems I have given a garbled version of your relations. Do you know you have given me the lie direct; but of course you were in jest—you said you could jest, not a very polite jest, but you despise politeness. It may pass between cousins—only I had better take my leave for the present."

Pleasance was left alone to realise what an insulted woman feels, and to ask herself was this really the world's version of Archie Douglas's conduct and hers? Did the light-minded and ill-natured—and how many people were light-minded and ill-natured in her world!—judge him especially according to this definition?

Pleasance was certain that it was false. She had told herself down at Shardleigh the other day, listening unperceived to his light-heartedness, that Archie Douglas had forgotten her. She had accused him of being

cruel and heartless in the completeness of his forgetfulness; but now she indignantly repelled Rica Wyndham's insolent assertion, and told herself that she knew better.

He might have learned to laugh since then, so that she, listening to the light laughter, had said that his love was dead, and he had never loved her. But she had slandered him, and that true love which could never die, and that had once ruled his heart. It must awake, stir, and fill him with vain longing, whenever his better nature spoke to him out of the silence.

Could the world not see the difference between the truth and Rica Wyndham's malicious statement? Could it be that the difference might cease to exist, and that in the course of years, in the void in his heart, and the sense of failure in the life, to which he was sentenced in the middle of his outward prosperity, Archie Douglas would harden, sour, and sink into seeking ever lower and lower compensations, until she who had thought to save him, still more than herself, from the consequences of his folly, would have too surely wrought his destruction?

In addition, was Mrs. Douglas really coming soon to Stone Cross, confirming the report of one of Pleasance's visitors, to mock Pleasance with advances, to bring upon her all the evils of an unsuitable connection, from which she had fled with everything that was hateful rendered positively loathsome by mean hypocrisy being joined to resentful scorn? Ah, how Pleasance wished she could get away from the strife, take to herself the wings of a bird, and flee into the wilderness and be at rest!

CHAPTER LVII.—SPEEDING THE WILLING TRAVELLER.

PLEASANCE was more fortunate than most people, when they desire to go aside for a season, and leave behind them the conflict of their lives. An opportunity presented itself to her at that time to quit Stone Cross and forget her troubles, as she hoped, in the renewal of old ties.

A letter came from Lizzie Blennerhasset, in which the writing, in place of being blurred with the dismay of a false alarm, like Mr. Woodcock's, was all tremulous and performing fantastic flourishes with justifiable exultation.

Lizzie had received another letter from Dick Blennerhasset, detailing his rapid rise in the world beyond the Atlantic, and, as if that were not sufficient to swell Lizzie's tender, unselfish heart with gratitude, the

letter said a great deal more. Long Dick promised stoutly that he was taking care not to risk the success of which he was so proud, and had entirely left off sprees, when he had no village cronies. He did not seem, thank God, so much as to feel he wanted sprees any more; he was so thundering busy with his forge, his lot of land and his shanty; only he drove his Whitechapel cart every Sunday a dozen miles to the nearest church, not merely to see his neighbours, but to say his prayers, as he had done at home.

But his log-house, which he was taking so much trouble with, and his garden which he was clearing and sowing with English seeds, were a thought lonesome. He had taken it into his head that if his cousin Lizzie would come out to him and be his wife, she might cheer him a bit, and give him all that he missed. He did not fear that he could give her a return for what he got, and the two be as happy as the day was long. All that was past was like a dream to him—he did not mean that it could be dreamed over again—but he had begun to think that Pleasance might have been right, since she had not only come of gentlefolks herself, but had found a gentleman for her husband in Joel Wray. As to Joel's thinking light of her, and being parted from her by his friends, Dick could not take that in; he knew a thing worth two of that. Joel was not made of such miserable stuff; he had been as sweet as man could be on Pleasance. And where could he find among all his grand belongings of fine kin, a lass like Pleasance Hatton?

However, Long Dick was not writing about Pleasance, who had dropped out of his horizon, and in dropping had carried away all the burning pain, and left but the pensive memory of his first love. He had thought that the wild fresh air of these far western woods might do wonders for his cousin Lizzie's health. Somehow he had always seemed to have a special interest, equivalent to a right of ownership in her, since he had saved her life when she was a child. And in the gradual fading and dying out of his passion for Pleasance, he could recall, in his lonely well-doing, nothing so sweet and satisfying as the devoted presence of his little cousin.

To say that Lizzie was acquiescent, to say even that she was happy, was to say literally nothing in the presence of what she felt. Even under all the labour and restraint which a written letter cost to Lizzie, the pride and joy of her heart danced and

sung so as to ring through the heart of the reader.

"To think that I d' be to be married at all! I as everybody thought were a owd maid, branded and told off as any shorn sheep, and before Nancy and Kitty, as are well favoured, and hale in wind and limb, and as never looked to dance at my bridal, or at my way-goin', which is all the same. Well, it d' sound stammin', kinder hard on en, and I wonder, I do, they bean't more spitefuller than they be at times; but married right off to sich a man! I am to be lady of three cows, not to speak on Dick's pair of hosses; and there d' be a servant man; and us is to drive in the Whitechapel cart—dev you remember driving me, Pleasance?—like gentlefolks or farmers to church on Sundays: but that's nowt to the man. Why, Pleasance, it's not for me to sing his praises not no longer; but you d' know there bean't Long Dick's marrow not in Saxford, nor Applethorpe, nor Cheam, nor in the world! I 'a done nor'n to deserve such a fine lot.

"I'm like to go crazed along on pride, I am; but the thought do keep me down a bit, that he as were evened to you, is only to get a poor silly lameter like me, whose very passage he 'a offered to pay. But I 'ould not rob him in money, me as is to get all and bring so little to him. I up and tow'd far'er I could make out part on the passage with my savings in the dressmaking, and if he 'ould not give me the rest, to get me off his hands, and well cared for in time to come, I 'ould bide till I could work for the money. At the same time it were not very likely Long Dick, when he came to take second thoughts, 'ould bide by so fine an offer, and so a grand chance for far'er's own darter—and his poor cripple darter as were not, by no manner on means, every man's bargain—would be lost. Then mor'er, and even Kitty and Nancy, backed me up.

"And so I am to sail in ten days for 'Merika—no less; and if so be you 'ould care to see me once more afore I go, now's the time, for I 'a come to be a lass in request. Folk d' say you mun be growed too grand a lady to care to see me again, or to hear on Dick; but I'll believe none on it of the gal as knew my Long Dick as you knowed he, and as he cared for ooncommon, as were nat'ral the days when you were both wanters, and were the likeliest lad and gal far or near.

"And if you d' think on comin', Pleasance, I 'a spoken to Missus Gooch as 'a taken Missus Balls's place up in your owd house at Manor; and her is a quiet, purpose

'oman, and says they 'a a room and to spare, and 'ould not objec to a lodger for a week or thatten."

It has been said no woman hears that a man who has once loved her, is consoled for her loss, and has replaced, or is in the act of replacing her by another woman, without a little recoil of mortification and displeasure. But Pleasance only thought, "If Archie Douglas has forgotten me in part, Long Dick may well have forgotten me altogether."

"I will come, Lizzie; I shall see one woman under God's sun perfectly happy. I shall get away from Stone Cross, from society with all its claims, from mocking mischief-makers and furious assailants like Rica Wyndham, from the speciously bland apparition of my mother-in-law, to something simpler, ruder, truer. I shall return to the folk of Saxford whom I know, to Lizzie whom I love, and who does not in her day of triumph bear me a particle of malice because I was Long Dick's original choice, but has love to spare for me even from the huge mountain of love that is his due."

"I have the advantage of being free, as Rica Wyndham said. There is some good in being a woman of independent fortune, after all. I shall write to Mr. Woodcock. I am afraid he will disapprove; but I must vex the friendly old gentleman on this occasion. There is no help for it, that 'the nest is flown,' and the bird has gone back, with her clipped wings and encumbered feet, to the spot of earth whence she took flight."

Pleasance was as good as her word, and arrived at the nearest station to Saxford within several days of Lizzie's sailing. Pleasance did not take a cab, like Mr. Selincourt, when he was on his mission of inquiry, and was forced to invade the precincts of the Brown Cow. She did not come down in style and impress her grandeur on the natives, as they had predicted she would do from the moment they had heard of her expected arrival. She walked to the Manor House, as she had walked from it, though she left her luggage, rendered more bulky by special marriage-gifts—a travelling suit to Lizzie—the last improved set of harness to Long Dick, and by sundry other gifts to old acquaintances and allies. And Pleasance wore her plainest striped calicot morning gown, the nearest in material to the old gowns which she had worn when she was a dairy-maid, deputy housekeeper, and farm servant under her cousin at the Manor.

It was just about the equinox when the bare pastures and the abounding water of the

east country were being scoured and tossed out of their last remnant of summer verdure and tranquillity.

The Manor House had undergone changes since Pleasance had quitted it in early spring. Its yellow walls had been subjected to a process which had removed its weather-stains and restored its pristine ochry hue in somewhat glaring contrast to its wavering, bulging out, sunken-down outline. A great part of its old olive thatch, with its luxuriant house-leek, had been removed and replaced by new bristling straw, hard in outline and pale in tone.

At the lattice window, instead of stout, hearty Mrs. Balls, there looked out the quiet "purpose," Mrs. Gooch, a young, thin, hesitating woman, shrinking from the responsibility which she had incurred. She curtsied to Pleasance, and did not usher her into the great kitchen, where Anne and Pleasance had once done their best to fill the two oaken chairs, and round whose walls Pleasance's crows' scratches of drawings had been wont to flutter. It had long been her home, but it had ceased to know her, and she ceased to know it as the house-place of Joe Gooch, his missus and family.

Pleasance was shown—she could no longer take it upon her to walk where she would—into the best room, made up of cast-off relics of ancient gentility, and of out of keeping, coarse bits of modern Cheam upholstery—the room which Pleasance had always avoided as the least habitable and likeable room of the Manor House.

Pleasance had a meal there—no longer of souse cheese, apple turnover, cyder and ale, but of a slice of stale, shop-bought cake, with a glass of sourwine. She found it discomposed Mrs. Gooch, when Pleasance crossed the threshold of the room assigned to her. Mrs. Gooch, and even her husband, could by no means comprehend, but were inclined to be suspicious—though they were themselves honest people enough—of Pleasance's eager interest in the farm-stock and of her impulse to go and greet every animal that had been there six months before. "She be in Lawyer Lockwood's interest; she be here to report any shortcomings; you never oughtn't to have had her here; 'ware on her, missus," was Joe Gooch's warning to his missus.

Pleasance had to put up with the altered lines in the house and its inhabitants—with the oblivion into which she had begun to fall where the bucolic equine and canine memories of Daisy, Dobbin, Growler, and their compeers were in question.

She was the sooner reconciled to it, that she felt with a mixture of proud regret, of half sorrowful diversion, and nascent unconfessed hopefulness, that there was a change in herself. The little world of the Manor farm could not be to her, any more than she could be to it, what it had been. She had gone beyond it; her bands were enlarged. The place no longer fitted her, nor she the place. It was like her own image in Long Dick's mind—a vision of the past to be fondly remembered, but to be left behind.

She stood in that room to which regard for the Gooches' feelings confined her, and looked out with the greatest interest on all the operations in which she had once taken so prominent a part, but with no great desire to resume them. She felt as if she had engaged in them in another state of existence and another world.

It was the same in her intercourse with the natives of Saxford, always excepting Lizzie Blennerhasset. Upon the whole, Pleasance thought the villagers—the girls took it less amiss that she should have been carried back to her natural sphere, by Joel Wray's doing her justice in money matters, or by her coming into a fortune—they were not at all particular which—than they had regarded her presuming to wear spectacles while she stood in the rank of a working girl. But they were shy of her, while interested in her, as the better specimens of the poor people of Stone Cross had been shy.

True, in this instance the shyness wore off a little, and the girls got the length of asking Pleasance, and of listening with curiosity to her answer, what she did when she was no longer called upon to dirty her fingers? They required a catalogue of her wardrobe, were amazed and a little scandalized to find it no finer than it was, but were greatly pleased when Pleasance showed them a new fashion and offered them a pattern. Still, it was as impossible for Pleasance and them to go back and re-occupy the old footing, as it was impossible to gather up the drops of water which had flown miles in their progress to the sea, and restore them to their place at the source of the brook.

Only Lizzie Blennerhasset, with Anne and Mrs. Balls in their graves, remained the same as ever to Pleasance.

Great joy, like great grief, smooths out artificial distinctions. Lizzie in her exaltation could not realise that Pleasance had been removed from her sphere. And where there was no realisation there was no removal.

XVII—57

So far from Lizzie feeling that Pleasance was raised above her, Lizzie, in her glory of rewarded, satisfied love, recognised that Pleasance had suffered a great, irremediable loss, and was far below her old companion whom she had helped and favoured.

What was Pleasance, the grand lady living in alienation, as Lizzie comprehended by instinct, from Joel Wray—though Pleasance never said a word—to Lizzie, the thrice-happy bride of Long Dick? Lizzie intensely pitied Pleasance, to whom she was stooping; she almost reproached herself, only Pleasance encouraged her, for pouring out, as Lizzie poured, her bliss in Pleasance's ears.

The strain rang always with the same changes. Who would have thought that Lizzie would have been married at all, and to such a man—Lizzie's king of men! Not as she had once been fain to crave when he was worn and worsted, soiled and beggared of all that men and women prize, but while still in the flower of his youth, in his conquest over his lower inclinations, in that worldly victory of which men approve so highly under the name of success. Even Lizzie's cool and but slightly sympathetic neighbours readily owned that the girl's luck had been prodigious.

Pleasance was wrong in begging Lizzie to say no more of her—Lizzie's—unworthiness, because it moved Pleasance strangely, and brought the tears to her eyes to hear it, since it was a safeguard to keep the fragile human heart from bursting, as it has been known to burst under a mighty flood of happiness. As it was, Lizzie's health had never been so good as on the eve of her voyage and marriage; a little colour flickered in her cheek, her blue eyes were bluer and sweeter than ever. Pleasance even fancied that, by dint of sheer happiness, Lizzie limped less, or else the limp was less perceptible.

It was a small matter to quit her parents, who were pleased to get rid of her creditably, who had never taken much heed of—not to say pride in her, till now, and whose very pride at present was mingled with doubtful apologies. She did not mind parting from her sisters, with whom she had little in common—even from Clem, who had his music at last to his heart's content, and needed her no longer—or from Pleasance, who had become again outwardly the lady that she had always been inwardly. Nothing was any trial worth speaking of to Lizzie Blennerhasset, when it was counterbalanced by her going a thousand and odd miles to marry her cousin, Long Dick.

"Across the hills and far away,
Beyond their utmost purple rim,
Beyond the night, beyond the day,
Through all the world she'd follow him."

Although Lizzie had never been on a sheet of water bigger or more exposed than the Saxford Broad, while she had seen the sea and heard of its wild work at Cheam, she was not afraid to propose, in the middle of a raging equinox, to cross an ocean, a sickly little steerage passenger, alone, unprotected, save by her very weakness, in an unruly crowd, to reach Dick. The discomforts and hardships of a voyage, however prosperous, even to a homely girl like Lizzie, would pass lightly over her, in her long ecstasy. Doubtless, she would entertain all her fellow-passengers who would listen to her, for the whole length of the voyage, with tales of her matchless felicity and her grand man. And the strangers would listen and marvel, and laugh in her poor little face. They would ask each other if she were crazy, or if some rascal were taking "a rise" out of her, so that she would find him gone out of sight and sound, or married to another woman when she arrived—till the last moment, when they might chance to see Dick, stalwart and faithful, ready prepared with a tender welcome.

Lizzie would have been willing to pass again through fire as well as through flood, to attain that bourn.

Pleasance became familiar with the end of the story in anticipation, until in a short time it ceased to fill her imagination, which would stray irresistibly to her own affairs and those of Archie Douglas.

It was a bad choice that Pleasance had made of a place to forget herself and him in. She had come back unwittingly to the very locality where their short, close connection had its beginning and ending. Every spot was associated, not only with the tranquil years which had succeeded the one great tempest of Pleasance's youth, but with the halcyon days of Joel Wray's coming a poor stranger and day's man to Manor farm; of their working together and knowing each other as if by intuition; of his swiftly-developed, openly-shown preference and frank, fearless rivalry with Long Dick; of his wooing and winning her, up to the disastrous exposure in the church, and the bitter parting which followed.

Why had the love, so much more spontaneous and equal—after all, been so much less fortunate than Lizzie's one-sided worship and her cousin Dick's mild liking? Was the contrast between the two women's experiences a case of Dives and Lazarus? Had

Pleasance's and Lizzie's gifts, their good and evil things, been apportioned in the beginning to be reversed in the end?

It was close upon the very season of Pleasance's wedding only a year before, that season whose sober and chastened charms Archie Douglas in the wilful and headstrong passion of his youth, had been able to teach her fully to perceive.

How kind he had been then, not only in his keen sympathy with the shipwrecked sailors at Cheam, or in the first devotion of the love which she had accepted and returned, but in his patience with the obligations which she had asserted, and his indulgence to her partialities and prejudices.

These arrangements had been but a makeshift; he had been consciously deceiving her all the while. Therein had lain the fatal flaw. But he had been so eager to spare, so reluctant to thwart, so fain to gratify her to the last moment, when concealment came to an end, and when she had repaid his wistful breaking of the blow with unmixed scorn and reprobation.

That girl of whom he had told her, in the play,—that beautiful, ambitious girl whom the gardener lad had wedded under the guise of a prince, though she had met the discovery with furious revilings, had relented, after it was too late, indeed, but still long within the proverbial year and a day. Had she been less upright, or had she been more loving than Pleasance? Was it true, what he had said, that she had not only been unforgiving, but that she had suffered the accidents of fortune, which he had refused to count where she was concerned, to come between and part them?—that she, the poor woman, had shown herself more influenced by the world in the end, than he, the rich man, had proved in the beginning? And by her incapacity for forbearance had she forsaken the man whom she had chosen as he had chosen her,—failed in her obligations and her solemn vow, and left him to struggle and to perish as he might in the weakness of his error?

Was death more sacred than life? Would she have gone to him for a brief reconciliation and a passing satisfaction, and would she continue to stand aside and let two lives be wasted? Within the sight and sound of Lizzie's primitive bliss, primitive passions took larger proportions.

Pleasance turned from the ceaseless wearing reiteration and discipline of these questions to go with Lizzie to Cheam, to see her on board the ship, and be the last of her friends to leave her.

Lizzie's happiness underwent no cloud; the dull October evening was a June morning to her; and the tar-smelling, confusion, and noise on the deck of the emigrant ship was already Dick's white-washed house in the lone green woods. Notwithstanding, she was touched by the assiduity of Pleasance's friendship, and she suggested—

"Happen you'll come out and pay us a visit, Pleasance—you, who are your own mistress, and 'a more money than you can spend, else I 'ould never 'a let you spend so much on me. Dick and me as are one now, eh, we 'ould be mortal glad to see you out there. Or happen we'll come back and see how all you owd folk d' be farin'."

To Lizzie, in spite of her modesty, Dick and herself, in their approaching honeymoon, were invested with a kind of perennial youth, in keeping with the new and fresh land in which their lots were cast. The people and the world she was leaving behind her, were alike old and faded—to be regarded with gentle patronising toleration and pity, which in a less meek little woman would have been allied to contempt.

"There is something to come before that," said Pleasance. "Dick will have word of the arrival of the vessel, and be in the port waiting for you."

"I hope not," answered Lizzie seriously, "if there be his hay to take in, or his patch on corn to sow, or his cows ailin', or any press on hoss-shoein'. Whatten for should he take the trouble? Arter I 'a gone so far alone, I can go a bit far'er, it stands to reason. And I should not like to begin by burdening he, that 'ould be a bad, oonhand-some, and ooncalled-for beginnin'."

"How should you like to find him then? What circumstances would you choose for those of your meeting?"

"Wool, I 'a no petickler choice; if so be hisself is there, anything will do famously," said Lizzie brightly, as she looked with dazzled eyes over the side of the vessel, out to the heaving, moaning sea, and not back to England. "Tell'ee what though, Pleasance, I mean to lay up the pretty gownd, cloak, and bonnet you 'a gin me to travel in—anything is good for salt water and ship's company, Dick not bein' there. I'll put 'en on spick and span the day we land, for I 'a a fear sometimes, though you are good enough to say 'appiness d' be main settin', Dick mun 'a forgotten my looks, my limp and that; and I 'ould giv' en all the help I can for the first day. Arter that—wool, I can lay my hair among's feet to prevent him

ever mindin' he were that generous and kind."

"He'll never rue it, Lizzie, nor will you."

"I? I dessay not," exclaimed Lizzie in laughing disdain. "I 'a been born under what folk call a lucky star; and its luckiest shinin' were when our 'owd smithy went on fire, and Dick—he thought on me, wakened me up, and carried me out with the stair cracking aneath his brave feet. I remember, that I do. Tell 'ee what, Pleasance, I should like just to find Dick a-sleepin' soun' hisself, that he should a-waken up and fin' me in his own house place, with nobody but our two sens to see. I think he 'ouldn't be disappointed then—not as if he 'ad been a-waitin' and a-watchin', with folk a-speakin' and a-twittin' him about his gal."

CHAPTER LVIII.—PLEASANCE DOUGLAS'S OBLIGATIONS.

PLEASANCE struggled a little longer with the gall and fret of the obligations to which she was gradually awakening, and which the sight of the Manor House and of Lizzie Blennerhasset's willing feet starting on their loving pilgrimage, quickened to tormenting activity. Then Pleasance yielded to the compulsion which was on her, and took another desperate resolution, carrying it out in her uncompromising fashion.

She did not write and ask the advice of her friend Mr. Woodcock; she did not appeal to Mrs. Douglas, who, as she had been told, was now much inclined to play the part of peace-maker; she did not solicit the more unsophisticated kindness of Archie Douglas's sister. These were the old *bêtes noires* of Archie's friends and kindred, whom she would face at the proper time and place, but she would never seek their help. Pleasance would have no go-betweens, no mediators between her and Archie Douglas.

She left the Manor House where she had still lingered, and travelled straight across the autumn country to Shardleigh. She passed through the same woodlands that she had traversed in early September, when she had come from Stone Cross, believing Archie Douglas lying near to death in his house. The sombre monotony of the late summer green, had been broken up by October into a splendid wealth and variety of colour. The beeches were red gold, the chestnuts yellow gold, the hedge maples straw colour, the oaks tawny, while the ash had regained, in fading, a vivid apple-green. Where ornamental trees of foreign origin had been recently introduced into some of the gentlemen's parks which she

passed, the sumach was a flaming crimson, and the last imported oak a royal scarlet. The bracken seen between the trees was a rusty brown or a pale maize. Pleasance was sure that there must be a new spell of life in the woods after the slumbrous pause of over-blown summer; acorns and chestnuts must be dropping on every side, rabbits and hares must be scudding, squirrels leaping, and little robins trilling from bough to bough. It was the Indian summer before the nightly frosts grew sharper and more biting; before mists gathered earlier in the evening, and lingered later in the morning, and the branches stood picked out in their thinning leaves, and waxed barer and barer—till what with the mists and the darkness, wanness, and greyness contrasting with the black-green of such foliage as was left, brown October waned into a chill, shadowy forerunner of the dreariness and deadness of November and December.

It was still far from the desolation of the year, and Pleasance, spurred on to a great effort at self-abnegation, to an entire yielding up of her will, and a full atonement, took some comfort from the beauty which was born of rough wind and weather, of icy frost as well as of genial sunshine. Pleasance did not go to Westbrook this time. There was not a prince every day at Westbrook to divide and distract public attention, and coming deliberately, as it were, of her own free-will, knowing her purpose, Pleasance shrank more than ever from observation, and seemed to apprehend detection in every encounter.

She travelled by a slow train, and came out at the little Woodgreen Station, near the farm-house, where the gentleman who had suffered from the accident had lain for several weeks.

It was too late to go further that night, and Pleasance, asking where accommodation could be had near at hand, was referred to that very farm-house, and permitted to lodge in the same rooms where Archie Douglas had watched. She was entertained, as a matter of course, by the farmer's sister, who served her with the great story of the gentleman's accident, danger, sufferings, and recovery, and the attention paid to him by the squire. The chair which Archie Douglas used to occupy during the watches of the night, was pointed out to Pleasance. When she was alone, she went and sat down in it, and leant back her head, with her eyes fixed on the bed, saying, "So I might have sat here, and he lain yonder." Then she started up in fright lest her senses had forsaken her.

In the morning Pleasance found on inquiry that there was a little pony-carriage kept for the farmer's old mother, and which she might have for a consideration to the boy who drove it, to take her over to Shardleigh.

No one wondered that after she had been ciceroned to the corner of the field where the gentleman was accidentally shot, she should go on to Shardleigh, the show-place of the neighbourhood. With Westbrook and its abundant railway opportunities in the immediate vicinity, there seemed no occasion for her to return to Woodgreen, and its little station, where few trains stopped.

Something in Pleasance's beauty, her independent mode of travelling, and perhaps, —who knows?—an utterly unconscious tragic element in her simple speech and manners at this time, put it into her last hostess's head that the stranger was "a play-acting lady," wonderfully civil and quiet for her kind, connected with a company of actors in the neighbouring town.

Unaware of the inference, which she would not have heeded had she guessed it, Pleasance, in the intensity of her determination, stepped "like a queen" (albeit a stage queen, to the mind of her hostess) into the little carriage. She was driven along the pleasant shady road to Shardleigh, up to the great old stone gateway, old and stately enough to dispense with armorial bearings.

The lodgekeeper threw open the gates, as it was a public day. When Pleasance dismissed her little curricule and driver with his gratuity, and announced that she meant to walk up the avenue, the woman prepared to chat affably with the new-comer, to tell her the points of interest in the views of the house and conservatories, and to indicate the special groups of trees which she was to look at on the road.

Pleasance interrupted the speaker to ask briefly if the family were at home.

Yes, some of the family were staying at the house, but that made no difference, not the least in the world, on a public day. "I hold the place on trust, don't you know, Jenkins?" the Squire had once said to the lodgekeeper's husband, when, as under gamekeeper, he had objected to visitors straying as far as the head keeper's cottage, and disturbing the young pheasants, "and I wish I could give the public more enjoyment than they get in Shardleigh." "Them were the Squire's very sentiments, and his father's before him," the speaker continued to recount. "Of course visitors don't ought to go

and abuse such kindness, picking and stealing flowers, and disturbing any game as is about."

Pleasance only responded to the hint, if it were meant for her benefit, to respect her husband's property by saying, "Is the Squire——." The word spoken by her sounded so strangely in her ears that she stopped and began again, "Which of the family is at home?"

"The Squire himself," the woman answered promptly, and Pleasance's heart gave a great throb; she could not have told whether of thankfulness or reluctance.

"But he is going to-morrow for a great way, and a long while, the more's the pity," the servant volunteered the information.

Pleasance was silent, considering how nearly she had missed her object.

The lodgekeeper liked a gossip. She had by this time made up her mind that she would pay the handsome, solitary lady who had come so early, the compliment (the Squire liked the visitors to be attended to) of strolling with her as far as the road which turned aside to the offices, where the woman had, or imagined she had, business with half-a-dozen satellites. Her little girl "Hemmar" would look to the gate, as well as her mother could, in her absence. The Squire objected to fees paid to his servants, but he was not the hard-hearted gentleman to find fault with pence chucked to a child.

If Pleasance pleased, the lodgekeeper would take her the length of the sycamores, which were older than the house, and the stone-pines, which had been planted by the former family.

Pleasance could not choose but please; and as they walked, she kept asking herself where her feet were carrying her, and getting giddier under the knowledge, while her companion furnished an under-current of monologue by way of conversation, out of which Pleasance caught snatches of information that nearly concerned her.

The Squire was going away as far as Queensland, if the lady knew where that was. The lodgekeeper was aware that it was a deal further off than France or Italy, where Mrs. Douglas had often gone for her health. But it was nothing that the ladies of the family should not make any stay at Shardleigh—the neighbours and servants were used to that; and, as it happened this year, Mrs. and Miss Douglas were gone to pay visits before meeting the Squire in London to see him off, after which they were to try wintering at Torquay. But everybody had de-

pended on the Squire's remaining at home when he was done with his college and his travelling, and since all connection had been broken off with the great Lancashire mills on his father's death. His mother was not the least disappointed of all at this last flight; she had done what she could to prevent it, and she quite "took on" about it. So fond as the Squire had been of the country when he was young, too, and so little as he cared for a fine gentleman's life in London. People had hoped that he would have stayed still, though his misfortune, which was not connected with the place, prevented him settling in life as he might have done.

The speaker caught herself up, and broke off her confidences for a moment. With all her communicativeness, she was too well disposed and honestly attached to her master to desire to impart the slur of the Squire's unhappy marriage to a stranger.

Pleasance need not have kept her eyes riveted on the ground, and felt her cheeks begin to burn, in anticipation of a repetition of the farmers' talk in the railway carriage six weeks before.

She could tell—the lodgekeeper hastened to resume the one-sided, and, on that account, all the more enjoyable, conversation—why the Squire had fixed on Queensland for his present destination. He had a friend—one of his many friends, whose father had been made head man of some sort (governor it was called) of that end of the world, and the Squire he would go and help him and his son. The Squire was mad to help to govern, to see after the emigrants who sailed there, and to find whether it was a good settlement for any poor bodies who could not get on at Shard Common or in Westbrook. It was like the Squire, and his going might be of service to many, the woman owned; but it was disheartening to the folk at home, and the servants at the house—she for one, would miss him. He had always been coming and going, with a pleasant word for everybody, and an interest in everything. He overweighted himself with interest. Only this last night there had been word of poachers about; and though the Squire might have trusted Warwick, the head keeper, who had been in the place before his master was born, and her husband, a keeper's son, bred to the work, nothing would serve the Squire but he would go with the men to hinder mischief, and speak the rogues fair in the first place, if the gamekeepers fell in with their enemies; but of course the prowling scamps took good

care to be out of the way, when they were sought for.

The guide had forgotten to point out to Pleasance the sycamores and the stone-pines, and she was at the road which led to the offices, where she turned off with a parting assurance to Pleasance that she could not lose her way. She had only to hold straight on, when she would have fine views of the house and conservatories. Just as she was close upon them, she would come to the laurel walk, which would lead her to the south garden door, and there one of the under gardeners would be sure to be in waiting.

Pleasance did not think it necessary to say that the laurel walk and the gardens, even the winter garden, had no place in her plans.

She walked on alone through all the stateliness, beauty, and sweet scents of an old avenue of fine trees, in one of the two seasons of the year when such an avenue is most attractive. The flowering shrubs of spring had put on their wealth of berries, which the birds had not yet plundered. The gloss and bloom, and subtle or splendid tints of these berries were hardly inferior to the loveliness of the flowers, while the glory of the leaves could be compared to nothing save that sunset glory which is too beautiful to last.

Pleasance walked along as in a dream, with a dim sense of harmony and grace all around her; but she failed altogether to mark the fine porch, after Inigo Jones, which was the pride of Mr. Woodcock's heart.

The hall door was standing open, and as she put her hand on the bell, the butler, who was crossing the hall, came to her.

"There is no order required for seeing the gardens on Toosdays, madam," he told her courteously, before her lips could frame a question.

He was a stout, elderly man in an undress of grey, instead of in the "cloth" of his order, and looked more hearty and less solemn than butlers generally look. He struck Pleasance with a passing, ridiculous sense of acquaintance, from a slight resemblance which he bore to the Manor House bailiff.

As he stood, speculating what she wanted farther, and feeling disinclined, though he was an obliging man, to go out, and that on an October morning, in his slippers, only to take one of the already sufficiently indebted public—even a handsome young lady, round to the gardens, Pleasance managed to say in a low voice, "Can I speak with Mr. Douglas?"

Then he concluded that she had some special favour to ask of the squire, perhaps had brought a letter of introduction, though it was odd that she should deliver it in person, betimes of a morning. Only ladies were learning to do their own errands nowadays, and were less mealy-mouthed than they were formerly.

"Will you walk in?" said the butler, following up this idea, "till I send some one to inquire. We were late up last night; indeed, I do not know if Mr. Douglas went to bed at all, or if he has not lain down now."

He did not explain why the head of the house had been at large during the small hours. Probably, though he was remarkably free from official pride, he had a conventional prejudice that it would be more to Mr. Douglas's credit as a gentleman, and less to his discredit as an eccentric, rich democrat, to let it be supposed that he had been racketing the night away.

Mr. Debreë took Pleasance to the library, and after glancing round, showed her in, and shut the door behind her, while he proceeded to look up a footman to look up his master.

Pleasance stood for a moment staring in her agitation at the book-cases, with their volumes and busts, the long table covered at this moment with maps, the chair standing empty before it.

Something, she could not tell what, made her turn quickly round the next moment, and there on a couch behind the door lay Archie Douglas with his arms above his head, fast asleep, undisturbed either by the opening door, or a presence he little wotted of.

The very circumstances which Lizzie Blennerhasset had idly projected in the height of her happiness, as those in which she should choose to meet Long Dick in the Backwoods, were those in which Pleasance found Archie Douglas at Shardleigh, in the midst of their trouble, and while she was altogether uncertain what his awakening might bring forth.

Archie Douglas slept, and Pleasance held her breath, to feed her famished eyes on the traits which had been and were so dear to her. There was no chance of his offending her with his levity and indifference at this moment. He did not look a fellow who could be extravagantly gay, though there came back to his face in sleep, in contrast to the fast maturing lines which Mr. Woodcock had remarked in Glen Ard, a certain abiding youthfulness which hardly leaves some faces. Still Archie Douglas looked sad, even stern, with the set muscles of the face relaxed and un-

formed into the pleasant look which they were wont to wear, for the benefit of his fellows, in his waking moments.

In his dress, and in his wearied air, he was infinitely more like the Joel Wray—the footsore tramp that had first presented himself to Pleasance—than the joyous, gorgeous young Yeomanry officer just come from entertaining his prince. He had put on an old shooting-jacket to be “neighbour-like” with his gamekeepers, in whose company he had spent the night, when he had gone out to keep the peace, and speak a last protesting word to the inveterate delinquents against his own and his father’s liberality. The night’s adventure, foiled as it had been in so far as a close encounter with the poachers was concerned, had taken him through hedges and ditches, and along byways muddy after recent rain, so that though he had changed his boots, his shabby disordered dress was full of earth stains. They went at once to Pleasance’s heart, reminding her of the traces of a labouring man’s toil, for which she had seemed to love Joel Wray more passionately, than for the grace of his address and the softness of his speech, or the cleverness of his resources, and the amount of his book knowledge.

He slept soundly, and such sleep in its defencelessness and unconsciousness appeals strongly to the bystander, be he friend or foe.

“Death’s twin brother” sometimes simulates death wonderfully. Pleasance’s heart began to flutter with indescribable awe, terror, and anguish, when the lively dark eyes continued closed and immovable. As it seemed to her, she could no longer distinguish the rising and falling breath on the lips, pale with recent fatigue, and grave with an absolute gravity, which had struck Pleasance with the first sensation of timidity that Archie Douglas had inspired in her. But she began to feel that she would not mind, though he should prove hard and unbending in his reception of her submission—as she never could have imagined him; nay, that she would welcome cold rebuke and harsh repulse with delirious gratitude, if he would but stir and give some sign of life.

Only a few weeks ago she had been in a degree prepared for seeing her old lover, her husband, dead or dying. Then she had set out for Shardleigh with small prospect before her eyes of a more merciful conclusion. Now when she had come on a different errand, with other thoughts in her heart, was she to find the threatened dread awfully fulfilled? Was she to be too late after all?

In her paroxysm of fear and despair, Pleasance did not call out, or touch him to put her ghastly doubt to the test; she did not summon help, or drop down senseless herself. She drew nearer and nearer to the recumbent figure, as if drawn by an irresistible fascination. She bent over it for a second, with a face as blanched and lips as breathless as its own.

CHAPTER LIX.—A SECOND MARRIAGE DAY.

AT that instant Archie Douglas opened his eyes, looked up and recognised his wife. “Pleasance. Good heavens, am I dreaming?” he cried, starting to his feet, with the blood rushing to his head.

Pleasance’s own face changed with the swiftness of lightning, from pallor to a scarlet flush. “No,” she said looking down, “I am come, Archie, to see what you would have me to do.”

“What I would have you to do?” still in wild confusion, and with the blood coursing hotly through his veins. “Do you mean that a sense of duty has brought you here?”

“Yes,” she said, “as soon as I saw my duty.”

He struggled for composure. “It is well that you see it at last,” he was able to reply, speaking coldly, and with a shade of scorn in his tone, “for, however I might have sinned against you, it was not your part to deny your obligations.”

“I know it now,” she stammered. “I am here to fulfil what are left of my obligations.”

“And I have said it is well for you as for me,” he answered with rising irritability; “but you cannot expect me to thank you for your late resolution.”

“No,” she said faintly, “I do not deserve—I do not wish thanks.” She spoke in the humility of her conviction of wrong doing, with her heart sinking and ready to break at every word.

He placed a chair for her; and then he stood and looked at her, not directly—he had not looked her in the face after his first amazed gaze of recognition—but with a furtive glance, as if he did not know what to do either with her or with himself. He put his hand to the bell. “I must have Ramsay the housekeeper summoned, and tell her the mistress of the house has come,” he said with feverish haste.

“Not yet,” she said imploringly, scarcely knowing what she said.

“But there is no time to lose,” he insisted. “You must be put in possession of your place

here before I go to-morrow. You knew I was just leaving for Australia?"

"No," she said sadly.

"No?" he echoed with a little incredulity, "but how should you know or care!" he added quickly; "no, it was not like you to inflict that additional cut"—he broke off, "Why should I say what was like you? we mistook each other utterly," he declared ruefully.

Pleasance was silent, she could not go a-begging with her love, not even when she was there to admit her error, and to offer what compensation was in her power. She was not like Lizzie Blennerhasset.

The conception had been her rooted conviction, and it was part of her very nature, that it was for man to pursue and implore—it was what his strength could do without degradation; and it was for woman to retreat and keep her treasure till she was sure that it was wanted, and would be prized—else the treasure in its fulness would be lost to both man and woman. It was by such self-respect that woman's weakness became dignified, and that the noble relation of helpmeet was established. The man was the woman's head, and she should call him lord; but he was also her brother and fellow-worshipper, and she should come to him as a friend comes to a friend, not as a servant to her master, a slave to her owner. There was a love which was a fond dog's love, and a love which was a truest friend's.

Pleasance had loved Joel Wray in response to his ardent love, and owned her love all the more freely, that he had come before her poorer and more friendless than she was. She had stood by her election and confirmed it, till it had become, to her mind, void by his deceit.

She had been wrong, and she had travelled to Shardleigh to confess it, and to re-establish, if he would, Archie Douglas's authority over her; but no more than in the beginning could her love go a-begging, though she was quite conscious that the reticence put her at what might be a fatal disadvantage.

She could not tell what she had expected of reconciliation, of propitiation, of two hearts once so loving and united, springing by intuitive perception to the hidden motives, the piteous relentings, and the yearning tenderness on each side. She only knew that her inmost soul sickened at the formal pretence of re-union which Archie Douglas was proposing, while she was ready to consent to it, as to her duty. With her duty she could and she had gone a-begging, but all expres-

sion of her love at the first unappeased, haughty sparkle of Archie Douglas's eye and curl of his lip, shrank back into the furthest and most secret recesses of her spirit.

Archie Douglas sent for Mrs. Ramsay, who, though she was a woman of the world and of Mrs. Perry's code of manners, stood aghast at the abrupt communication that a mistress of Shardleigh had arrived on foot, in the early morning, walking in upon the household unexpectedly and unrecognised as if she had been a spirit. And this was the young Squire's wife about whom there had been such divided and contradictory accounts—who had been now described as a low young woman working with her hands—now a proud and perverse young lady of birth and fortune who had been kept out of her inheritance, and whom the Squire's mother had taken to speaking of with marked respect and a certain indefinite anticipation. Was this Mrs. Archie Douglas—this woman quiet and lady like as she was handsome, who stood subdued and self-restrained, suffering the Squire to present her to his chief servant, and even saying, of her own accord, with gentle friendliness, "Yes, I hope that we shall know each other better," in answer to Mrs. Ramsay's flurried greeting. And, to complicate the mistress of the house's arrival, there was the master's departure the very next day.

Mrs. Ramsay could scarcely control the whirl of astounded, conflicting feelings which beset her, till she was at liberty to rush to her own room and call a counsel of the more responsible servants, headed by Mr. Debree, to tell them the tale, and to advise with them how to behave in the strange emergency in a household of position and respectability like the Douglasses'.

After he had installed her in the house, Archie Douglas formally apologized to Pleasance for leaving her alone, that he might go to Westbrook to transact pressing business in reference to his immediate departure. "I shall write to my mother," he said with the same forced, exaggerated politeness—in which there was an element of restless anxiety, that he had used from the beginning—"she will rejoice to learn that you have assumed your proper place; she will welcome you, if you care to have her welcome. You have no opposition or the slightest blame to apprehend from her," he added with an impatient half smile and incipient shrug of the shoulders; "she has arrived at setting her heart on your presiding at Shardleigh. As for my sister Jane, she is innocent of intending to do harm; she is as

good and true as gold, and she has no sister of her own, you and Jane should be friends," he finished with implied reproach quickly suppressed. Pleasance could not tell whether he had been told of Jane's visit to Willow House, but she fancied he knew of it.

When he was gone, she stood at the library window, until Mrs. Ramsay came in state, and ushered her to a drawing-room which, with the adjoining suite of rooms had been closed, but had been opened up and put in order, on the spur of the moment, for her reception. Then Pleasance stood at the drawing-room window—a long French window opening on a terrace—she believed the very window out of which Archie Douglas and his sister had stepped, the night she had watched them from the bridge over Burnham Brook in Shardleigh Lane. She could see the ivy-hung bridge as well as a portion of the flower gardens at her feet; and beyond the gardens—a blaze still with purple and white asters, African marigold, scarlet geraniums, and blue salvia—lay the park with its slopes—sunny even in October, its ferny dingles, and noble groups of forest trees.

Her eyes seemed to lack lustre, she could not take in the beautiful landscape before her. The bare pastures and meadows of the Manor farm were constantly coming between and taking the place of the real scene. Her mind was in a stupid maze. Could she be the same Pleasance Hatton who had worked diligently in the fields, and laughed to scorn the idea of becoming a lady? Could the master of Shardleigh, who spoke only to be obeyed, be the very Joel Wray whom Long Dick had rated for his bad wheat-hoeing, to whom Dick, mocking, had set the unsuitable task of hoisting the sacks of corn into the cart for the mill?

Pleasance was lonelier than on the day when Mr. Woodcock had brought her to Willow House. As the hours wore on, the portion of the flower garden and the park on which her eyes were fixed, ceased to be solitary. They became peopled on this public day with visitors from Westbrook and the neighbourhood, who availed themselves of what was likely to be one of the last fine days of the season, to stroll in groups here and there, stand and make comments on the flowers, or sit and rest under the trees. Pleasance said to herself that no figure there was or would be such a forlorn stranger at Shardleigh as its mistress. She had an instinctive comprehension that the whole house was in a state of excitement—of

rebellion for anything she knew, though everybody was studiously civil to her; but excitement and rebellion were alike over for her. She asked herself was it retribution? Had she by flying from her fate brought it down upon her with tenfold force?

Archie Douglas took every precaution to avoid awkwardness, and to save what might be Pleasance's feelings. He said in her hearing to the servants that Mrs. Douglas's luggage was to follow her, and bade them let the two have dinner without ceremony in the library.

But although he had said "without ceremony," and although Pleasance wore of necessity the blue serge gown in which she had travelled, Archie Douglas dressed punctiliously even to the diamond ring on his brown hand, and the fresh camellia in his coat, and in that guise, as he might have led a duchess to a seat of honour, came and offered his arm to Pleasance and put her at the head of the table.

This dinner was the first meal that the two had eaten together since they became man and wife a year before. In that sense it might have been considered as replacing the marriage feast in the Manor House kitchen from which both bride and bridegroom had been absent. But there was little hilarity to celebrate the occasion; and if Archie Douglas remembered it, he did not betray the remembrance in the painfully measured conversation, kept studiously devoid of allusions, which, as if he were striving to entertain a stranger, he made for his wife, even after he had dismissed the servants from the room, and Pleasance and he sat alone together over their dessert.

He had asked her what impression the neighbourhood had made upon her, as if she had seen it for the first time.

Pleasance, answering as mechanically as he questioned, said she had admired the woodlands more on this occasion than on the last. She was conscious the next moment that she had implied an earlier acquaintance with the country, and so she added, with an increase of colour, "I was here before."

"Indeed," he said, so surprised as to cause him to raise his eyes quickly to her face and let them fall again, but he would not allow himself to put another question.

Pleasance felt this was worse and worse. On what occasion, or for what purpose to spy out the land or to spy upon him might he not suppose that she had been there?

"I came to Westbrook on the first of September, when there was an accident," she forced herself to explain, desperately.

He looked at her fully this time. He had not the cruelty to suggest, "And you expected to find yourself a widow, no doubt?" He was too much agitated if he had had the heart. "I know that there was a mistake and confusion of names," he muttered, "but Woodcock came down at once and found out the blunder."

"But I had left before I heard from him again," said Pleasance briefly.

"It must have been the day that the prince was here," Archie Douglas reflected, speaking out his thoughts, "when the other Douglas, my double, was pronounced out of danger, and I had to get into a red coat, half-asleep as I was, and ride to the review, and back here to do duty as host. But everything went off well; I remember Janey and I got quite merry over it, after the affair was over."

Pleasance could have told him that she had also been a witness to their merriment; but she was occupied with the thought that his account of it in place of grating discordantly upon her, somehow sounded pathetically in her ears.

He forestalled her rising from the table by suddenly proposing to show her the winter garden, since the hour for closing it to the public had struck, while his manner grew gentler and more uncertain.

Pleasance could only comply, and fill up the rôle of this strange unreal first and last day with Archie Douglas at Shardleigh. She could bear to the full the torment of such intercourse, realising that there was in the torment the lingering thrill of former bliss, and knowing that it was to come to an end within a few hours.

The winter garden deserved its renown in its labyrinths, alleys, and central hall, where there was a great fountain. The umbrageous flowering partitions, and flowery ceiling, the bosky verdure, brilliant blossoms and tropical fruit on every side, consisted of the choicest productions of Italy, Spain, Egypt, and farthest Mexico. The strangers who were permitted to breathe the luxurious, perfumed air, to look up at lemon and palm trees, and down on lotuses and cacti, called it as good as varied foreign travel or fairy land. To the couple whose toy paradise it was, and who were straying there for the first time together, two severed souls within its bounds, with the world whispering and peeping at them in the distance, it was like a region under a spell—not out of keeping with their own unnatural position and tumult of feeling.

Each remembered how and when Archie

Douglas had spoken of the great conservatory to Pleasance, and each knew that the other remembered. When they had made the round of the whole, they paused at the aviary at one end, where Archie pointed out to Pleasance every gold and silver pheasant, turtle dove, and love bird, as if he were bent on making each introduction to her himself. He even put off some time in attempting to catch the birds that he might put them into her hands for her to inspect more closely, with no other result from the proceeding, than the evidence that their hands trembled too much to hold a bird.

He took her a second time past the huge myrtle which had been a great plant when his mother brought it from her father's old-fashioned green-house, where it had supplied her and her sisters with their bridal wreaths. It was not in blossom, but he plucked some sprays and offered them to Pleasance. "I have imagined something like this, a hundred times," he said, "still the picture was different." He hesitated a moment. "Pleasance," he said, impulsively, "answer me one question—Was it duty that brought you to Shardleigh the very day you heard of my supposed accident?"

"I did not think of duty," she replied hurriedly, plucking to pieces the sprigs of myrtle. "I could not help coming."

"If such helplessness had only befallen you earlier—" he exclaimed, half dryly, half sadly. "Do you know, Pleasance," he began again, "if I had been actually shot, and brought down to the verge of the grave, I have a notion that I should have sent for you, in view of not being able to go to you myself, and after I was broken down in strength and spirit, remember, begged your pardon humbly, once more, and sought a word of grace."

"Oh! no, no," she cried, "I am glad it was not so. It was not for you, though you had done wrong, to humble yourself afresh in the dust. It was your wife's part which she was slow to learn, to submit."

"Pleasance," he said again, with his eyes kindling and his breath coming fast, "what if we have mistaken each other a second time? I could wish I were not going away to-morrow, that I might begin all over again, and perhaps make it up at last, but I have volunteered my services, and Sir Ashley depends on me. Pleasance, Pleasance, you have not forgiven—you will never forgive me. Why do you not say, 'Stay, Archie, for my sake?'"

"I cannot," she said with a sob; "I had rather say, 'Go, and take me with you.'"

He took both of her hands in his. "What!" he asked, "is Shardleigh, then, nothing worth in your eyes? Can you foresee the tedious voyage, the rough colonial life?"

"I believe Shardleigh is the most beautiful place in the world," she said solemnly, "but the voyage would not be tedious, nor the colonial life rough to me; and then, when we had earned the reward which we had both forfeited, we might come back, and Shardleigh would be home."

He saw that she was wise, and for that matter he was ready to forego Shardleigh for the half of his existence, if he might have Pleasance, his wife, come back to him in very deed, seeking him, not Shardleigh.

He took her in his arms with an ejaculation of passionate satisfaction, and Pleasance did not withdraw from his embrace, but receiving it as a sign of his consent to her wish, as well as a seal of their reconciliation, put up her arms to his neck and offered her lips for his kiss; and Pleasance was a woman whose caresses were sufficiently rare to be exquisitely precious, yet not so rare as to make those she loved pine for them.

So the October night fell on their true marriage day.

CHAPTER LX.—WHAT SHE CAME TO.

MRS. DOUGLAS always said that her son and his wife had the most romantic story she knew, and that Archie took his taste for romance from his mother, so that all about his marriage, and her daughter-in-law above all, was the greatest delight to her. Mrs. Archie was the daughter of Fred Hatton of Redmead, and her mother was a Fowler—Mrs. Douglas was persuaded, one of General Fowler of Capley's family.

Pleasance had said to her mother-in-law distinctly, "My mother came of plain yeomen. I never heard that she had any connection a general."

But Mrs. Douglas had kept to her point. "Depend upon it, my dear child, the family is the same. You have Amy Fowler's eyes, and your sister's name was Anne, while to my knowledge there was an Anne Fowler of the elder branch. Straws show how the wind blows."

"But this is such a small straw. Anne is a common name," argued Pleasance against the honourable connection imposed upon her. "If it had been Pleasance, my own name, and which was also my mother's, occurring in another family of Fowlers, there might be something in the fancied affinity;

though even then there is this to be said, that in old country places, where St. Placentia once took her turn of worship in the Romish calendar, Pleasance is occasionally to be found to this day."

"I will not be disabused of my theory, and of the second version of Amy Fowler's eyes—even to the short sight," said Mrs. Douglas playfully; "General Fowler's family themselves think the relationship highly probable. My love, you must not be exclusive, and mortify the good people by declining it."

Mrs. Archie's father and mother's marriage, Mrs. Douglas went on to relate, had also been one of those charming love marriages which show that the slandered world is not so heartless after all. But the marriage had been against the grain with the heads of the families; there had been the usual reprehensible neglect, under which the poor young couple had died; and the orphan daughter, darling Pleasance, had been suffered to grow up in the most wonderfully "sophisticated" fashion.

But Archie had found out for himself the Sleeping Beauty, and won her before the great change in her fortune, when her grandfather's last will came to light, and she was discovered to be the real heiress of Heron Hill. That property had only been held, in consequence of an overlook, by the poor Wyndhams, her aunt and cousins. Mrs. Douglas was very sorry for the Wyndhams, especially as the late Mr. Wyndham and his son had spent a great deal of money; and Nelly's Roman count would fain swallow up more than her portion, while Mrs. Wyndham had not yet secured an establishment for Rica.

Heron Hill, with its mines, was a mine of wealth in itself, which Archie certainly did not need with his wife, and he had not coveted it. But Mrs. Douglas could say that her son and daughter were good stewards of their large possessions: witness their going out to Queensland, and remaining two years there in the suite of Sir Ashley Morgan. They took a deep interest in emigration. Indeed, what did they not take an interest in that concerned their fellow-creatures, and especially their own people? Mrs. Archie was not a bit behind her husband; she made him a perfect wife, and they shamed older folk by their chivalry. Mrs. Douglas called these modern crusades against poverty, ignorance, and vice, the highest chivalry; she was proud to think that both her son and daughter—not to speak of her other daughter, her little Jane, who was only her mother's companion yet—belonged to the order.

Pleasance could never quite comprehend or become wholly intimate with Mrs. Douglas, in spite of her ultimate pronounced partiality for her son's wife, for which Pleasance was in a measure grateful—in spite of Mrs. Douglas's delicacy of health, which proved a special attraction to Pleasance, and prompted her to nurse the invalid tenderly whenever she had the opportunity.

But Pleasance and Jane Douglas lived fully to realise the expectation entertained, in different circumstances, of their becoming friends and sisters. This was the case above all, after Jane fulfilled her destiny—urged on to it by her mother's elaborate precautions to prevent it, even while Jane thoroughly believed in and dearly loved her mother—in carrying her large portion, her youthful bloom, and her genuine goodness, to the penniless curate, her Welsh cousin. Pleasance took at once, and without the least pretence, to the plain living and high thinking of Welsh gentility in the curate's circle. She induced Archie Douglas to spend in it many happy holidays like those of his youth.

All that happened years after the Douglasses' return from Queensland, and after Pleasance was settled at Shardleigh, which she was not tempted to forsake for Heron Hill. Nevertheless the vexed question of the welfare of the miners, whose toil contributed so largely to the Douglasses' wealth, was studied in all its bearings by husband and wife, until Archie Douglas threatened to forsake the light of day, and take a "shift" in the coal and ironstone workings, as he had done a turn at farm labour. If he had fulfilled his intention, he would have but followed the example of an ancient Scotch earl.

Rica Wyndham had judged rightly that Pleasance's beauty, wealth, good descent on one side of the house, and natural ability, together with the originality bred of her history, were elements of popularity in any class.

Pleasance had not to grow a noble lady; but the nobleness that was in her from the beginning was enlarged and stripped of the fetters imposed upon it by injury, suffering, and prejudice.

As for the stories of early incompatibility between Mrs. Archie Douglas and her husband, and of their having spent the first year of their marriage apart, Pleasance's neighbours unanimously agreed to cancel them, shrewdly concluding that there was more than met the ear in explanations which were not given to the public, else why had Mr. and Mrs. Douglas gone out together, without any call,

to Queensland, and why were they notoriously one of the happiest, most inseparable couples in the county?

So soon as Pleasance began to feel that not only the great, well-appointed, hospitable country house, not only Archie with his energy, generosity, and good temper in full swing, but that she herself with her inexhaustible friendly sympathy and human interest, could be of service to oppressed mothers and dissatisfied daughters, harassed fathers and unsatisfactory sons, in halls and lodges, as well as in cottages, her heart began to warm to the first as to the last.

Even the seasons in town lost their unpalatableness. Her neighbours' wants followed and found her there. Archie was in Parliament, labouring for his fellows, making use of his experience as a senator, and she had blue books to read, extracts to copy out, applicants and petitioners to see for him. She went into company with him that they might have yet more fellowship, receive still more enlightenment, and as iron sharpens iron, she felt her own wit sharpened, and enjoyed its play and the play of other wits, where intellect is keenest and most brilliant.

Nothing pleased Pleasance better than Mr. Woodcock's secret pride and satisfaction in Archie Douglas's having set at nought all Mr. Woodcock's own alarming predictions, in proving a worthy son of his father in the yet more difficult task of spending, as it ought to be spent, than of earning a fortune.

Mr. Woodcock himself found idle hours to escort Pleasance without his niece, and when Archie was in committee, to the Tower and to those sights of London which never palled upon her.

Mr. Selincourt ate his leek to the extent of owning that Archie Douglas had been the most far-sighted, and he—Mr. Selincourt—the most purblind of men.

With Lizzie Blennerhasset and Long Dick, who continued to thrive across the sea, Pleasance and Archie Douglas kept up pleasant relations.

Pleasance's intercourse with her kindred the Wyndhams was not so satisfactory. The limit of Pleasance's concessions having been reached, Mrs. Wyndham was no longer impelled by her family's interest, to cultivate a late regard for her niece. But as Pleasance had done well for herself, Mrs. Wyndham, who had an immense respect for worldly success, was never anything save pompously civil to Mrs. Archie Douglas, when they did meet.

It was otherwise with Rica; she did not

forgive the slight which she considered Pleasance had put upon her by the rejection of her companionship. She really resented it far more than the fact of Pleasance's having taken Archie Douglas from her. Rica was not in the least sentimental, though she was passionate, and Archie Douglas had not stirred her passions. Rica showed her hostility, as openly as she had once shown her patronage. All—happily it was but little that baseless slander, bold allegation, and unconcealed malice could do—she directed against Pleasance, even after Rica had married a wealthy old man—old enough to have been her grandfather, and who, though he was vicious rather than weak, she contrived to browbeat to her own ends. But

Pleasance was well protected from Rica Wyndham's shafts, which flew around her well-nigh innocuously. When Pleasance and Archie Douglas wished to get away from the petty spite as well as from the honourable cares of life, they were wont to go off for holidays, which they enjoyed even more than those among their Welsh relations. The couple left their home and the children born to them, and resorted to the heart of the moors of the Scotch Highlands, or to out-of-the-way nooks in the Black Forest, or among the Hartz Mountains, where the husband and wife made believe to live over again the days of their expatriation in Queensland, or the more distant days of their service on the Manor farm.

THE END.

THE COMMUNION-TABLE IN CHESTER CATHEDRAL.

VII.—SPICES AND FINE LINEN.

"IN the place where He was crucified there was a Garden; and in the Garden a new sepulchre, wherein was never man yet laid; there they laid Him; for the sepulchre was nigh at hand." These words take our thoughts, along the path which has been chosen, from Good Friday to Easter Eve.

With the taking down of the Lord's body from the Cross we come immediately and literally to the Garden which St. John names; and with this express association, and with some of the thoughts which it suggests, we shall presently conclude. But in another sense, too, the same association demands our attention by the way.

If we are to complete our enumeration of the plants and trees which come before our notice in the history of the Passion of Christ, and to fill in all the details of the Garden (in this sense) which surrounds the Cross, we cannot omit the "myrrh, aloes, and fine linen," which accompany the Entombment.* We have to deal—not simply with natural growths, as the Palm and the Olive—or with the use that may be made of such natural growths, as in the case of the Reed and the Hyssop,—but with plants made into articles of manufacture and articles of commerce. This description might be given of the Bread and the Wine which come from the corn and the grape; but reverence seems to forbid our

pursuing such a thought in connection with that part of our subject. Human industry, however, and human trade, in connection with the vegetable world, have a place, which must not be overlooked, in the account of what belongs to Easter Eve, and in our corresponding artistic representation.

In the Western world we have no notion of the great part which spices and perfumes have always played in the Eastern. A comparison in this respect reveals one of the characteristic differences of the East and West. It has been said that "the whole air of Southern Asia is filled with the smoke and sweet odour of these perfumes, the most precious products of Arabia, the Eastern Archipelago, and China; and it is in the bazaars of these countries—where their use, and in many instances their very names, have been kept in an unbroken tradition—that the identification of the precious perfumes named in the Bible can be studied with the greatest interest and the best chances of success."* How the habit mentioned by this writer prevailed of old, we can see from the frequent notices of these fragrant substances in the Bible. "Spices" were among the presents sent by Jacob through his sons to Joseph in Egypt.† The "traffic of the spice merchants" was prominent in the commercial system of Solomon.‡ "All thy garments smell of myrrh, aloes, and cassia," is a familiar sentence of the Psalms.§ In the

description of the Garden in the Canticles we read: "Thy plants are an orchard with pleasant fruits, with spikenard and cinnamon, with myrrh and aloes, and all the chief spices.*"

Such fragrant products of the cultivated garden were especially used at the interment of the dead. Of the burial of Asa it is written in one of the Books of Chronicles, "They buried him in his own sepulchre, which he had made for himself in the city of David, and laid him in the bed which was filled with sweet odours and divers kinds of spices prepared by the apothecaries' art."†

This is enough to illustrate what is immediately before us. It is somewhat remarkable that St. John only tells us of the "myrrh and aloes" in connection with our Lord's entombment, as he only mentions certain other particulars which have furnished subjects for the successive parts of this course of meditations. Along with Joseph of Arimathæa, says this Evangelist, "there came also Nicodemus, which at the first came to Jesus by night, and brought a mixture of myrrh and aloes, about a hundred pound weight: then they took the body of Jesus, and wound it in linen clothes with the spices, as the manner of the Jews is to bury." And then follows the text concerning the Garden, which has supplied the general motto for these papers.

As to the particular ingredients which were lovingly and reverently brought together, in such large and lavish quantity, by Joseph of Arimathæa and Nicodemus, we cannot speak with any positive certainty. There is much greater difficulty, however, in identifying that which is termed "aloes" than the substance named "myrrh." There is no reason for supposing that it was the same substance as that which receives the same name in the account of the medicated wine or vinegar mentioned in the last section. However this may be, we have fair reason for believing that we know the plant from which the "myrrh" of the Entombment came. That which is carved here on the olive-wood and embroidered in the needlework at the south end of the Table is in accordance with the opinion of the majority of competent writers on the subject.

And now—to turn to the "fine linen," in which that sacred body was reverently folded—here we are in contact with no merely eastern custom, but with that which is common to East and West and to all the world. The fibre of the flax underlies, so to speak, all human civilisation. The blue

flower of the flax is familiar to almost all nations. And as with its geographical range over many countries, so with its continuous use throughout all ages. The "flax" has a most distinct place in the account of the plagues which came on the land of Egypt.* So it has likewise in the account of the entry of the Israelites into the land of Canaan.† Of the model mother of a household in the Book of Proverbs it is said, "She seeketh wool and flax: she is like the merchants' ships."‡ This plant is the basis even of a proverbial saying quoted in the Gospels.§ The phrase "fine linen" occurs again and again in both the Old Testament and the New. This is continued even into the Book of Revelation, where we read that "fine linen is the righteousness of the saints."|| The flax, as a subject here both for carving and needlework, is in itself beautiful, and truly Biblical, and by no means recondite in its meaning.

But this must suffice for a glance at that part of our general subject. We are also to bear in mind, in our meditations for Easter Eve, that our Lord's body, after crucifixion, was *literally* laid in a garden. And what reflections does this suggest to us? It suggests many.

Let us consider this—that this laying of our Lord in His grave at the close of those hours of agony and shame was such as to help all our feelings of reverential love and calm devotion. It might have been otherwise. That sacred body, so torn by the nails, so pierced by the spear, so blood-stained and marred, might have been neglected and dishonoured. The disgrace might have been continued even after death, so as to have made our minds shrink with horror. This was not so appointed. But it might have been. It would not have affected the reality or the efficacy of the Atonement. But it would have made a great difference in the meditation of all devout souls that seek to find peace and complete rest in the death of Christ.

"In the place where He was crucified was a garden: and in the garden a new sepulchre, wherein was never man yet laid." There the sinless body was placed in the pure rock; and around was the evening fragrance of the flowers. Was it not evidently right that this should be? The flowers are always soothing in sorrow: the sight of flowers causes no distress, no fatigue: they are welcome in the sick chamber: we place

|| Rev. xix. 8.

them in wreaths on the coffins of the dead. Surely we are right to surround in our imagination, as we are invited to do by St. John, the Redeemer's grave with flowers.

Remember, too, that it was spring, the season of freshest beauty and life, the season which speaks to us of the resurrection. And spring in the Holy Land is more than it is with us; and it comes earlier. All travellers tell us of the charm of the flowers at this season in Palestine. One of them, a very eminent writer, journeying from the desert into the more cultivated land just at this time, and finding spring astir more and more at every step, and struck specially by the red anemones, which are termed there the "blood-drops of Christ," in the fields of tender green, adds, "In that solitary ride, through this peaceful passing away of death into life, there was indeed no profanation of the days of Passion Week."*

VIII.—CONCLUSION.

We have now passed in review, with Biblical and devotional comments, the chief features of the Communion Table, which is placed in the restored Choir of Chester Cathedral. There are still other parts of its structure and ornament which might be dealt with in the same way in order to make this treatment complete.† But these remaining paragraphs may be occupied to greater advantage by further reflections arising out of that text, which, placing the Cross and the Garden close together, has been taken as the general guide to our thoughts.

Let us revert to the Crucifixion. In that solemn interval of time which came between the agony in the Garden of Gethsemane and the entombment in that other Garden, there is a very marked instance of this combination of two thoughts which at first sight seem strongly contrasted. The expiring Saviour on the Cross said to the malefactor by His side, "To-day shalt thou be with me in Paradise.‡ Now this word "Paradise," denoting a Garden, is a term which, coming from the East, where the delights of cultivated flowers and fruits have always been peculiarly welcome, has enriched the Greek language, and then all European languages, with thoughts of beauty and rest. Many questions, of course, arise, and grave and difficult questions,

when we try to consider deeply those words addressed by Christ to the penitent sinner, who was crucified near Him. But that which we are concerned with here is the image, which our Saviour, in those last moments of agony, Himself employs, to denote the calm assurance of forgiveness, and the safe repose which immediately after death the forgiven enjoy in the prospect of immortality. We see here a Divine sanction given to the association which is before our minds. The dying lips of the Saviour Himself surround the Cross with the image of a Garden.

And thus, too, the Garden, where our Lord Himself was laid after the Crucifixion, becomes to us, as it were, a parable, representing to us in a visible image the place where the souls of the faithful departed are at rest. His soul was now in Paradise, while His body lay in that new tomb; and it is because He was crucified, that His faithful servants after death are in peace and safety within that far-off Paradise. Thus again, in another way, and quite truthfully, we have the thoughts of the Cross and the Garden put side by side. One of the Greek fathers says, that "the new tomb in a garden signified, as by a type, that the death of Christ was to us the forerunner and beginning of our re-admission into Paradise."

This will be for us hereafter, if we are truly His while waiting for the resurrection. Meantime, even for this life, there are thoughts of instruction and comfort, which may be drawn from this near proximity of the Crucifixion and the Garden—this solemn fact that close by the very cross were the fragrance and freshness of the flowers. We may turn this subject into an allegory, and find fulfilments of this allegory in all parts of the experience both of the Church collectively and of the separate Christian.

Is it not true, for instance, that in whatever country the Cross is planted, there straightaway grows a Garden? Follow the progress of real and successful missionary work, and you are sure to find this result. Wheresoever "Christ crucified" is set forth among men—set forth, it may be, with suffering and toil, and with the pains of martyrdom—there in due time the wilderness begins to "blossom as the rose." And if we suppose this sacred place, close to the crucifixion at Jerusalem, to have been rather an orchard than a garden, as indeed may well have been the case*—a place of fruits still more than a place of flowers—the resemblance here traced be-

* Dean Stanley's "Sinai and Palestine," p. 99. See p. 139.

† It ought to be added to what has been said in a note at the beginning that Mr. Armitage designed, as well as carved, all the panels except one. This note too affords an opportunity for expressing warm thanks to Mr. Carruthers of the British Museum, for help given in the identification of Scripture Plants.

‡ Luke xxiii. 43.

* See GOOD WORDS for September, p. 604.

comes almost more exact. Take the instance of that first successful mission at Philippi, when St. Paul brought Christianity from Asia into Europe: what opening of the heart took place, what charity, what hospitality, what tender sympathy, what faith, what joy—"even as the trees of lign aloes which the Lord hath planted beside the waters!"* So it has been everywhere, in a greater or less degree, under like circumstances. This Apostle, in one of his letters, speaks of Jesus Christ as "evidently set forth, *crucified* among" his converts;† and in another part of the same Epistle he says that "the *fruit* of the Spirit is love, joy, peace, gentleness, goodness, faith."‡ Wheresoever missionary zeal does faithful work, there, in the presence of that Crucifixion, are the fruits of the Lord's Garden.

And now consider what the Cross is to the individual heart. It is "the power of God unto salvation."§ It is death surrounded by life. It is through the Cross that the new life comes into the soul—the happy state of free pardon, with renovation through the breath of the Spirit of God. Truly thus there is a Garden in the heart—thus, and not otherwise. No Cross, no Garden. If sin is not forgiven, if the heart is not renewed, there cannot be growing life, there can only be decay. St. Paul says, "I am *crucified* with Christ: nevertheless I *live*; yet not I, but Christ liveth in me; and the life which I now live in the flesh I live by the faith of the Son of God, who loved me and gave Himself for me."|| It is through the apprehending of Christ by faith that we breathe freely, notwithstanding our guilt, and find our sorrow and shame turned into joy. The air is fresh

and fragrant around us, because Christ has died. In closest connection with His death is a new spring-time of life. There is in very truth for the soul that is thus blest "a garden enclosed, a fountain sealed, an orchard with pleasant fruits, a fountain of gardens, a well of living waters:"* and a voice is heard "amongst the trees of the garden," saying, "Be not afraid; my Cross is thy salvation."†

And now, finally, if we turn our thoughts to the Great Future, some glimpses of which, through mysterious clouds, we are allowed to obtain by sharing in the vision of St. John, still the Cross is visible in close proximity to that peace and joy that are presented to us under the image of a Garden. It is a city indeed which we see in the vision; but it is a garden too. "He showed me a pure river of water of life, clear as crystal, proceeding out of the throne of God and the Lamb. In the midst of the street of it, and on either side of the river, was there the tree of life, which bare twelve manner of fruits, and yielded her fruit every month; and the leaves of the tree were for the healing of the nations."‡ It is Eden once more, but a more glorious Eden than the first. Our Paradise regained is far better than the Paradise we have lost. Yet *even there* is the Cross. The Lamb that is the centre of all homage and praise is "a Lamb as it had been slain."§ Victory is obtained even there "by the blood of the Lamb."|| Christ crucified, as He was the shame of the earthly Jerusalem, is the glory of the heavenly. "Thou art worthy," says the chorus of praise, "for Thou wast slain, and hast redeemed us to God by Thy blood."¶

TO CHRISTINA ROSSETTI.

THOU hast filled me a golden cup
With a drink divine that glows,
With the bloom that is shining up
From the heart of the folded rose.

The grapes in their amber glow,
And the scent of the blood-red wine,
All mingle and change and flow
In this golden cup of thine.

Sweet, sweet the curling vine!
Fleet, fleet, the rose's breath,
Sweet voice and song of thine,
Voice of love, and song of death.

DORA GREENWELL.

THE SERVICE OF STEAM.

IV.—THE ROMANCE OF RAILWAYS.

By J. SCOTT RUSSELL, F.R.S.

(II).—WHAT IS A MODERN RAILWAY?

AS we have now discussed thoroughly, what is the measure of work our steam-horse has to do, and how each kind of steam-horse has to be constructed so as to be fit for its kind of work, we are next conducted to that branch of modern engineering which has to settle what is to be the nature of the iron way along which our iron-horse will have to travel and to drag his burden. The loads he can drag we already know and have calculated. The speed he can go we equally know. The way fit to receive him, and carry him and his load safely, surely, and quickly to his way's-end we have now to consider.

The design of a modern railway requires due and mature consideration of the following points:—

1. Permanent way, or what the road is to be made of, and how laid.
2. Gradients and curves, or up and downhill, and roundabout.
3. Works, or bridges, tunnels, embankments, and cuttings.

To know anything at all of the nature of any one railway, we must know its features in these three respects:—

XVII.—58

If the permanent way is of the right nature, and if it be carefully maintained in good order, you may have a safe railway.

If the gradients and curves are well chosen, you may have an economical railway to work on.

If you have unnecessary cuttings and embankments, and costly bridges and tunnels, your money may have been wasted, and the good line may yield bad return.

These are three points to be well considered by all who think of having anything to do with railways, either as passengers, directors, or shareholders. These three points give the main reply to the question, What is our modern railway?

Now there is one ruling condition which should govern the character of every railway which is proposed, undertaken, or constructed—*What sort, size, and weight of things has it to carry?*—If it has merely to carry passengers, post, and parcels, it may be of one nature. If it has merely or mainly to carry minerals, raw materials, and heavy goods, it may be quite of another nature. If it has to do both at once—to combine a slow heavy traffic of goods and minerals with a speedy,

punctual, passenger and parcels traffic, it must be of another and more difficult nature, the most arduous of the three.

It is plain, therefore, that the governing element, preliminary to constructing or using a railway, is the special nature of the traffic for which it is required. A train laden with hay, straw, roots, fruits, grass, and cattle requires one sort of waggons; while a train full of copper ore, iron, stone, steel bars requires quite a different class of waggons. For heavy materials in small bulk, one strength of rails are wanted. For light materials in large bulk, a different strength of rails will serve, and for high speed quite a different sort of way is required from what will serve slow speeds. It is plain, therefore, that a railway, as designed for one purpose, may be a very good railway, and as used for another purpose, may be a very bad railway. Before designing a railway its special use and purpose must be clearly set forth and deliberately settled. The nature and amount of traffic; the heaviest load it has to carry on each pair of wheels; the largest size of its waggons and carriages; the greatest speed to be used;—these should rule the design and govern the cost.

"Before we can take an intelligent interest in railway affairs, we must know something about them," was a remark made by an exceptionally able man, when asked to become a director of a new grand railway. "Nothing of the kind is necessary," said his intended colleague. "Your lordship will only have to occupy the chair a couple of hours a fortnight, sign the minutes, take luncheon, and pocket the fee! Leave all the rest to us!"

But in modern civilised life railways play so large a part, that even a mere railway passenger cannot fail to take some interest in the nature of the marvellous mechanism to which he entrusts his life and all that is dear to him, and on which his food and his work, his pleasure and his usefulness so much depend. Railway directors may choose to remain ignorant, and repose in the board room in security if they please; but railway passengers have a much more important, permanent, and real interest in railways, than an ordinary director.

Let us now proceed to examine,—

1. *The Iron Road or Permanent Way.*

The iron road is really the essence of the modern railways. It is the means of speed, the element of economy, the guardian of safety.

To a railway passenger, therefore, who wants me to tell him what is the essential

nature of a railway, and what enables it to give the public the enormous advantages of speed, punctuality, economy, and safety, which make the good railway a model of perfect travelling to him who commits his life and property to its charge, I will try to tell in the fewest words what a modern railway is, and what it should be.

I remember asking one of the oldest railway engineers, one of my oldest colleagues, his definition of a railway. He did not reply, "It is a grand public work, with costly stone architecture, or noble brick buildings called termini." He did not say, "It is a noble public road, covered with costly viaducts a hundred feet high, with bridges over valleys, miles long, with tunnels piercing mountains through and through; with cuttings through hills, reducing them to level plains; with embankments across valleys, raising them high up into the air." He did not say they were marvels of human skill in architecture and engineering; gorgeous monuments of human waste and human wealth, and extravagant expenditure of other men's means for a few men's profit. He said nothing of all that, for he was a man who spent his own money, and spared other men's money. He said only this—"A railway means two bits of iron, laid side by side, five feet apart," and all the rest means merely—"how to place them where we want, and how to keep them there."

(1.) *Two bits of iron, laid side by side, five feet apart.*

These two bits of iron are the essential conditions of railway existence, and as they are good or bad, ill-made or well-made, ill-laid or well-laid, ill-kept or well-kept, so is the railway a safe one or an unsafe one, a smooth or a jolting one, an economical or a wasteful one. All these things have been done wrong, and sometimes done right!

Perfectly straight, perfectly even, perfectly smooth, seem simple enough conditions, and easy enough to fulfil. To take two bars of iron and lay them along a straight road, quite straight, seems easy. To lay two more bars accurately in a straight line with the first two, so as to continue the others straight on seems easy. To lay them on a level with each other, so that the straight line shall not be broken either right or left, nor up and down—all this seems easy, even though it require exactness and care.

Now all this is easy, quite easy, and the way to do it is simple and sure. But then comes the real difficulty. Having laid the rails right, how to keep them there—that is

a grand difficulty, which years on years of time, and millions on millions of waste, have scarce succeeded in teaching our railway men.

What was there about rails and laying them, which railway men did not know? They did not know even the following simple axioms:—

(1.) Rails to keep even should be long.

They made them short in little bits.

(2.) Rails to keep straight must be held together.

They made them free and independent.

(3.) Rails to run smooth must have uniform support.

They stuck them upon isolated detached points.

What, then, is a perfect rail?

A perfect rail should be a single piece of iron, at least twenty-two feet long, quite even, straight, and smooth. It should weigh forty pounds a yard, sixty pounds a yard, or eighty pounds a yard, according as it is to carry heavy engines and trains, or light ones; to last long, or wear out soon. Each rail will thus weigh from about three hundred, to about six hundred pounds, and it will require two hundred and forty of them to cover a mile. A mile of light rail thus weighs just over thirty tons, and a mile of heavy rail over sixty tons, and a line of way of two rails weighs, if light, sixty tons, and if heavy, one hundred and twenty tons. So that rails alone at £10 a ton for the iron, cost £600 to £1,200 a mile. For double ways going and coming, or double roads, rails alone cost £1,200 to £2,400 a mile.

Thus it will be seen that perfect rails need not cost more than £1,200 a mile for a single line, or £2,400 for a double line of railway.

The next question now arises—

What is a perfect way of holding rails together?

Rails made in long lengths of twenty-two or thirty-three feet have the great advantage, that every part of the rail gives help to every other part. If a bit of a rail yields, the other bits, if still in place, lend their help to keep it in place, and impart their own stiffness to it. This is one reason why long rails are wise, and short bits are foolish. But as even the long rails must end somewhere, where they end must be weak, for the iron on one side of the break can give no help to the other.

It is curious to learn that great engineers did not know this simple truth, that for many years some of the greatest fought

against admitting this truth. Those who knew it, took timely precaution against it. They invented a cure, and adopted it to great public advantage. The others fought against it, and their ignorant prejudice caused public danger and public loss, until at last they were driven into it.

This simple cure was called "splicing the rail." It is often called "fishing." Every sailor knows what it is to splice a rope. When there is a break in a rope, the sailor takes a portion of the same material as the rope itself, consisting of an equal number of strands. He places the centre of this material in the centre of the break, and extends its two ends along the parted ends of the rope sufficiently far, and incorporates the material of the splice so perfectly with the rope, that all the strength of the one is given through the splice to the other.

The wise engineer did the same thing, he took two bars of iron, laid them across the break between two rails, brought them together on each side of both, and then bolted them together so firmly as to bind them into one. Some engineers even added a third splice below, and others incorporated the break into a sort of envelope. By these means the break is made as strong as the rest of the rail; both rails help each other to carry weight and to keep in place; both ends meet and unite and keep right; and thus great strength, security, and smoothness are given to the way at small cost by simple means. At last nearly all engineers have been compelled to do this.

How to give uniform support to the rails from below is the next great question.

This problem, too, has remained as long in the vale of doubt and ignorance as the rest. "Let us take the hardest granite in large blocks, lay them under the rails along in line some four feet apart. Where the break of rails comes, let us have a larger heavier block to take the heavier strain, let us fasten to the summit of each granite block a flat block of iron, so shaped above that it will carry the rail on an elevated seat and hold it as a hand holds a rod; and thus clutched by an iron railway chair, and perched on the summit of a granite block, we shall be able to create a mathematical point strong enough to last for ever, and to sustain the rail in power and strength against time and strain."

Alas! This best possible was merely the worst possible. Than such a solid stone and iron foundation, nothing can be more costly, less durable, or more dangerous.

Let us study how this came to be done, and how it came to be abandoned. It was done by the doers' having a smattering of science, but not true science itself. Nothing is so dangerous as a little science—you should know "all or none." Of that science with which you have practically to deal, a little misleads you and those whom you lead.

In the early days of railways science was just risen above the horizon of the world of practice. Tradesmen had just been taught that there were new truths their fathers had not taught them, because they themselves did not know them. There was a rush of engineers into engineering who knew just enough to make others believe they knew, and their smatterings of science produced strange smatterings of work. They had seen in treatises on natural philosophy, the statement that the strongest form of beam, bar, or girder, was a "parabola." What a grand captivating word was a parabola! In plain mother English the "navvie" translated it into "fish-belly," and the fish-bellied rail became "a grand invention," and millions were spent on it. Now, the granite block, the pivot iron chair, and the fish-belly, or parabolic rail, all went together as a grand whole—only all were wrong.

In one way of looking at it the parabolic girder is right—it is the best form. The iron chair or pivot is all right. The granite block suits them both. Only all three make a bad railway. If we take the parabolic or fish-bellied form of beam, and call it a rail, or iron bar forty-eight inches long, if we rest the ends of this iron beam on two bearing points or pivots of iron, standing on two bases or chairs of iron, which sit on the summits of two granite blocks; if we take these granite blocks, and set them with their centres four feet or forty-eight inches asunder, and seat them solidly in earth, we have done three clever things, all seeming scientifically correct. The fish-bellied beam is the form of most strength with given material; the iron chair seated on the block and bearing the parabolic point of the beam on its point or pivot by a fitting seat or bearing; the granite block itself taking the strain from the crane of the iron chair, and spreading it out over the square yard or square ell of ground which it covers, is all right and correct as a beam, as a chair, and as a stone foundation—only as a railway it is all wrong.

This railway, with its fish-bellied rails rolled in wrought-iron bars, was nonsense, because it was an agglomeration of patches of good things, but without consistency as a

whole. I have travelled over many railways made on this system. Every granite block you feel as you cross it by a jolt up or down. Every chair works loose and jerks between block and rail, and as the weakest part of the rail is where it crosses the chair, there is no continuity in the rail, and you endure, and the train endures, and the railroad endures, a series of concussions every few feet of travel, up and down, or side to side, regularly or irregularly, according to the better or worse state of the road.

This beautiful thought of making each bit of a railway perfect by itself, on its own independent foundation, by fish-bellied bars, pivot chairs, and granite blocks, has ruined, not its thinkers, but its victims, owners of many railways. The larger and fitter truth gradually displaced the shallow scraps of truth, and so a sound system of constructing safe, stable, and economic railway lines slowly took its place.

I will call the sound system of railways—the continuous system.

I will call the past system—the broken system.

Now it is right to say that the errors of railway engineers in adopting a false system of constructing their ways, was not an error peculiar to themselves—it was merely an example of the manner in which untrained human nature gropes its way to truth. Most men see only a little bit of a question at a time, they take this little bit for the whole, and only when it is too late they see the rest of the truth. Only these men do us this good, that they teach those who come after them, by means of the blunders they have made; and the reader is now reaping the fruit of knowledge extracted from years and millions of expensive blundering.

The lesson taught by all this is in laying down a railway to adopt a continuous system, and to maintain its continuity always perfect.

Instead of fish-bellies resting on iron points, in short lengths, make your rail a long even parallel iron bar, with no difference in its shape or size at any one point from any other, let it be five inches deep, two and a half inches wide, above five inches wide below; let it weigh, say seventy pounds each yard long, and let it continue even and unbroken as far as you can.

Where the one rail ends and the next begins, let the joint be so spliced as to give, as nearly as possible, equal strength and perfect continuity as if it were all in one. This you do by wise splicing.

In order that no jolts may be felt, try that no place may be on a stronger or on a weaker foundation than another, no hard granite blocks, no strong stone sleepers. Lay the flat bottom of a continuous rail on a flat beam of wood, lay the beams as close as practicable, so that the rail is everywhere supported on sound, even, level surface. These wooden sleepers are practically beams of nine or ten feet long, ten or twelve inches wide, lying across the rails, as near as can be, with convenience for getting at the ballast under them for repair, and six to eight inches thick. When the bottom of the continuous spliced rail, four or five inches wide, lies across a close series of these sleepers, the large flat faces of rails and sleepers fit continuously. The spliced rail gives longitudinal continuity. The cross sleepers brought near together give vertical nearly continuous support. Each sleeper also acts laterally in keeping the rails at their fixed distance asunder, and so gives lateral as well as vertical continuity.

There is one great virtue in these wooden sleepers across the line, not clearly seen by the advocates of exclusive longitudinal sleepers. I mean the maintenance of the two opposite sides of the way in continuous agreement with each other. The want of this I had once the opportunity of proving, by being asked to examine a line laid down by a staunch advocate of the exclusively longitudinal arrangement—that is, laying a longitudinal series of wooden sleepers right along under each rail—instead of laying them across under both rails. On travelling along the line a new and strange motion became sensible. Each rail following the little irregularities of the ground, gave to opposite sides of the carriage independent motions, rising and falling as if lying on independent waves, and this at high speeds became so great as to make a cause of so much discomfort and danger that it was abandoned.

The cross sleepers have this advantage, that being bound together by the two opposite rails which keep them in place longitudinally and vertically, they in turn keep the opposite rails in one plane, and keep them at the same time equidistant and evenly supported. In railways, therefore, as in many others matters, we have come back from complicated ingenuity to wise simplicity. What can be more simple and plainer to sound sense than two long bars of iron lying flat on a series of wood logs laid across under them, the bars and logs fixed together so that each helps to hold all

the others in place, and each helps the others' weakness.

Such is the iron way, two straight bars of iron, five feet apart, laid on cross wooden sleepers. Firmly united, wisely joined together—forming an even, uniform, continuous whole—every part giving strength to every other, so that a strain on one is spread among all the others round about, and all hold well together and do the common work.

2. *Up-hill and Down-hill, Gradients and Curves.*

When railways for locomotive engines were first made, it was the belief of great engineers that they could not climb hills nor descend slopes, that their exclusive use was for a dead level, or a line nearly level. This belief was an important cause of extravagant cost in railways, because, to avoid what we now consider a very gentle rise or fall of level in the line, these engineers erected enormous viaducts and pierced enormous tunnels.

To appreciate what they did in this way, let us compare accurately the different steepness of rise and fall in going up-hill and down-hill. Let us begin with a common staircase on which we ascend in our own houses. Imagine each step of our staircase to be six inches high and twelve inches wide. We thus ascend at each step we take six inches, while we go forward twelve inches. And technically we call this a rise of one in two. This is rather steep for a staircase. I next take a gentler rise, by a staircase whose steps are five inches high and fifteen inches wide. So that while I rise five inches at each step, I go forward fifteen inches. Technically we call this a rise of one in three. A still gentler staircase would be made of steps four inches high and sixteen inches wide, or a rise of one in four, and I have even seen a flight of stone steps as gentle as three inches high and eighteen inches wide, or one in six; but this gentle rise in steps is rare.

When we get beyond one in six, we do not require steps, as a sloping way, with common gravel, used as a walk, will take us up a slope of one in seven, one in eight, one in nine, one in ten, without the expense of cutting or placing steps. If I call my length of pace in walking thirty-three inches, and if the slope of the road be such that in each step I rise three inches, that is a slope of three inches rise for thirty-three inches forward, or one in eleven.

One in eleven is an easy rise for a foot-way. One in twelve is steep for a horse-way, and steeper than that is generally avoided even in country roads, although for a short dis-

tance it is practicable for a horse and cart. For a man on horseback it is quite easy. Calling one in twelve the steepest road, we may consider one in twenty-four as the standard road. As a rule, on such a road, a carriage driving rapidly down, can travel ten or twelve miles an hour, without requiring the horses either to pull forward or to push backward. This is an advantage. On going up-hill there is twice as much strain on the horses as on the level; but as on going down there is next to none, the two are deemed to compensate one another.

Calling one in twenty-four or one in twenty-five a standard of the rise or fall of common roads going up-hill and down-hill, it is almost needless to say that if you wish a horse to draw the heaviest possible load at a slow speed, the dead level will enable it to draw the heaviest extreme load, and also that the gentler the rise in the roadway, the heavier the load the horse can draw. But highways are not made exclusively for heaviest possible loads, they are made also, perhaps equally or predominatingly, for fast traffic, especially main highways, some of which do not rise more than one in thirty or one in thirty-three.

Now this mode of rising up-hill and going down-hill, by slopes not exceeding an inclination of one in twenty-five or one in thirty-three, can only be put in practice where the nature of the hills and valleys permits it. Where steeper slopes cannot be avoided they must be encountered. But those steeper slopes have been and can be avoided. The Roman roads of the Cæsars, in England, as elsewhere, used to run nearly straight, taking the hills as they came, and making grand works to keep them straight. But the modern Cæsar, when he laid out his roads across the Italian Alps, added the improvements of modern engineering, and even in crossing terrible passes, cut noble ways, which remain there still as monuments of perfect science skilfully applied. The way in which hills and even precipices are made practicable for modern highways is familiar to men who have trodden the Alps or the Highlands. The road is made to wind around the slope of a valley, or the promontory of a hill so as to make the way much longer than if it were straight. As we know that we cannot diminish the height of the hill we have to surmount, what we do is, ingeniously to lengthen out the way we have to go over, before reaching the top. By this means, we do not diminish the height to be attained, but we do diminish the part of the

height we attain in each single mile we go forward.

Let us now see what heights we can conveniently conquer in this way. Take a thousand feet high and consider how we can conquer it by a good practicable carriage road. The summit of one thousand feet is two miles off—each mile is five thousand two hundred and eighty feet—two hundred feet rise in one mile is almost exactly one in twenty-five.

Therefore to rise one thousand feet requires five times two hundred feet, or five miles of roadway. The distance being only two miles direct, the engineer must make the road wind round about the rising slopes of the hill for three miles more. By this means the ascent of one thousand feet by horse-carriage becomes long and gentle.

The problem of going over hills and mountains is not very different in its nature, as between horse-ways and railways. Yet the objects to be gained are sufficiently diverse to cause wide differences in the application. It is the peculiar differences between roads and railways which have led to the gigantic tunnels of the Mont Cenis and the Gotthard.

Up-hill and down-hill on a railway is as much more difficult for the railway, as the railway is better than the road. On an ordinary railway a horse-power can draw on a level ten times as much as on a road. Where the road loses power is when we come to speed. When the railway loses its power is when we come to steepness.

On a road it requires some one hundred and ten pounds of horse's-power to drag a ton two or three miles an hour. Up to twenty miles an hour, we can say that on a level it requires about eleven pounds of power to draw a ton of load on a railway. Therefore the advantage of a railway on a level is immense in heavy loads.

But on steep roads, the drawing power required is but little increased by steepness. On railways it would be increased *tenfold* with the same degree of steepness; and we must now proceed to modify all we have said about slow and heavy traffic on roads and on railways, up and down-hill, and accommodate our mechanical notions of up-hill and down-hill to the mercantile notions of time and money, of speed and price.

The superiority of railways over roads for heavy and slow traffic disappears as the railway and the road become steep; so that on the slopes of a common road, rails and railways become valueless. Modern tramways

are of this nature—they are lines of rails laid along common roads. For *level roads* they are a great gain. For *steep roads* they are worthless. Where level roads predominate over the steep ones in number and in length, tramways may still be employed advantageously in populous districts. Where steep roads predominate, tramways may fail to be useful.

Hitherto all we have said about the value of railways and roads going up-hill and down-hill, is true of heavy traffic and slow trains. When we come to speak of high speeds and passenger trains, all we have said has to be modified on account of the high value of extreme speed in modern life! "Speed at any cost" is nearly accepted as the companion to the other modern maxim, "Time is money." And there is so much truth in both, that we are compelled to count with both of them. To understand the question of the value of up-hill and down-hill on railways, we have to compare the effects of steep and gentle gradients on two things—on the *load* an engine will draw, and on the *speed* it will go.

The following is a list of the speeds a train will go, and the power it takes to draw it.

DRAGGING POWER WANTED FOR DRAWING RAILWAY TRAINS ON LEVEL LINES.

20 miles an hour uses 11 lbs. of power per ton of train.				
30	"	"	22	"
40	"	"	33	"
50	"	"	44	"
60	"	"	55	"

Thus we see the great economy of slow trains, and the great cost of express trains. Sixty miles an hour costs five times as much as twenty miles an hour in dragging power alone. Hence the possibility, that in districts of heavy traffic, we may one day make separate lines of railway for heavy and slow traffic, and others for speedy and light traffic. This will be not only a measure of safety, but in some cases of economy; but it can only be used where the traffic being excessive for one line, will pay for the separation into two lines.

The speeds got by given dragging powers as we have shown them on level lines, cannot be got on lines that go up-hill and down-hill. For each gradient of steepness, much additional power is wanted to drag the train up-hill—to the following amounts.

ADDITIONAL DRAGGING POWER WANTED FOR TAKING RAILWAY TRAINS UP-HILL.

STEEPNESS OF HILL.	ADDITIONAL DRAGGING POWER.
Rising 1 ft. in 200 ft.	wants 11 lbs. per ton.
" 1 " 100 "	" 22 "
" 1 " 70 "	" 33 "
" 1 " 50 "	" 44 "
" 1 " 40 "	" 55 "

We now see the nature of the struggle which is daily taking place on every railway between speed and economy. On the level line, twenty miles an hour only costs eleven pounds of power. On the rise of one foot in two hundred feet of line, the cost is doubled by the eleven pounds power used in steepness of way. When the line rises a foot in each hundred feet of line, the cost is tripled, twenty-two pounds power being used by the steepness, or in all thirty-three pounds required to draw a ton instead of eleven. The following table shows the practical results:—

DRAGGING POWER FOR RAILWAY TRAINS GOING TWENTY MILES AN HOUR UP-HILL.

Gentle	rise of 1 ft. in 200 ft. wants 22 lbs.	{ of total dragging power per ton.
Common	" 1 " 100 " 33 "	
Steeper	" 1 " 70 " 44 "	
Very steep	" 1 " 50 " 55 "	
Steepest	" 1 " 40 " 66 "	

DRAGGING POWER FOR RAILWAY TRAINS GOING FORTY MILES AN HOUR UP-HILL.

Gentle	rise of 1 ft. in 200 ft. wants 44 lbs.	{ of total dragging power per ton.
Common	" 1 " 100 " 55 "	
Steeper	" 1 " 70 " 66 "	
Steeper	" 1 " 50 " 77 "	
Steepest	" 1 " 40 " 88 "	

DRAGGING POWER FOR RAILWAY TRAINS GOING SIXTY MILES AN HOUR UP-HILL.

Gentle	rise of 1 ft. in 200 ft. wants 66 lbs.	{ of total dragging power per ton.
Common	" 1 " 100 " 77 "	
Steeper	" 1 " 70 " 88 "	
Steeper	" 1 " 50 " 99 "	
Steepest	" 1 " 40 " 110 "	

These tables enable the public who pay to judge whether it is to their interest to go fast or to go slow, to have steep and cheap railways, or level and costly railways—it is a mere question of what speed, steepness, and capital cost the public. Speed has a given cost; steepness has a given cost; capital has a given value. Each must be duly balanced against the other, and only the public can judge which is the best for them.

Speed at any cost?—Level lines for lavish expenditure of capital? or moderate speed, moderate steepness, and moderate cost? If, therefore, the inhabitants of a valley or a village, or a town, or a county, or a country, want a railway, it is their duty, as it is also their very serious interest, to settle what sort of railway they want.

(1.) Are they content with twenty miles an hour?

(2.) Is their traffic heavy or light?

(3.) Does the nature of the country allow of easy level way at small cost?

(4.) Does the nature of the country allow

of steep rising and falling way at small cost?

(5.) Does the nature of the country exclude a cheap railway? and is the necessity for the line such as to justify extravagant waste on creating lines at enormous cost?

On the answers to these questions depends the practicability or impracticability of the public having the use of the proposed railway.

1. If the lie of the land is favourable, a line of railway may be made at a cost of £3,000 a mile, an interest of £150 a year. It may be supplied with engines and trains at £1,000 a mile, and it may have moderate

stations and works at £1,000 a mile—say £5,000 a mile in all, or say a pound for each foot forward, which is £5,280, finished complete and ready for traffic. Of course, if the county wants the railway, it gives the land free?

Few railways in this country have cost so little as £5,000 a mile—most of them have cost more than five or six times that sum. A yearly interest of £250 per mile would be paid by a net revenue of a pound a day per mile: most people and most places can easily pay this. But the actual cost to this country for her railway system has been £25,000 to £36,000 per mile!

A YEAR AGO.

A YEAR ago we walked the woods,
A year ago to-day;
The lanes were white with blackthorn bloom,
The hedges sweet with may.

We trod the happy woodland ways,
Where sunset lights between
The slender hazel-stems streamed clear,
And turned to gold the green.

Thrushes sang through the cool green arch,
Where clouds of wind-flowers grew:
That beauty all was lost to me,
For lack of love to you.

And you, too, missed the peace which might
Have been, yet might not be,
From too much doubt and fear of Fate,
And too much love of me.

This year, O love! no thing is changed:
As bright a sunset glows;
Again we walk the wild wet woods,
Again the bluebell blows.

But still our drifted spirits fail
Spring's happiness to touch;
For now you do not care for me,
And I love you too much!

D. NESBIT.

"A YEAR AGO."

GRETNA, PAST AND PRESENT.

RAILWAY passengers flying across the Solway Moss and the tiny Sark get a poor idea of the amenity of Gretna. The best way to learn the beauties of the district is to take your stand on a summer's evening on Gretna Hill, which, though only about two hundred and fifty feet above the level of the sea, commands a view of the mountain-ranges of upper Eskdale and Liddesdale, of Canobie Lea, Netherby, and all the "Debateable land" of the Grahams, of the wall-like Bampton hills, of Saddleback and the towering Skiddaw, with Helvellyn, Scawfell, and the long serrated ridge through which the rays of the sun play with delightful undulations, and behind which lies the enchanted ground of Wordsworth and the lake poets. Beyond are the Westmoreland hills, gradually sinking into the busy Lancashire, and, seawards, the little antiquated ports Allonby, Maryport, Workington, and Harrington, with the flourishing harbour of Whitehaven, and the Cleator ironworks, which send up a constant volume of smoke by day and a glare of fire by night. The bold rocks of St. Bees complete the view southwards, unless Sneafell or the Manghold Head rise out of the Irish Channel and reveal the Isle of Man,—

"Whose rocky shore beats back the envious siege
Of watery Neptune."

Nearer at hand may be seen the stalks of Carlisle, the Burgh marsh with the obelisk that marks the spot where the stalwart Edward I. succumbed on his march to Scotland, then Bowness with its rustic windmill, and the two-mile viaduct that spans the Solway and makes another connecting link between England and Scotland.

At the feet of the admiral roll the combined waters of the expansive Eden, of the Esk, ever liable to flood; and, often in olden times, the grave of tardy horsemen wending their way home at night from "Carl" market, and the little Sark, so frequently dyed with the blood of desperate combatants. Westward, the view is shut in by the patriarchal Criffell, constantly reminding one of his age by putting on a misty cap, while the interval is filled up with level, rich, arable land, diversified here and there with little patches of rising ground, and clumps of trees or ridges of sandstone. A walk from Meg's hill to Torduff point will amply repay the pedestrian, for it will include the remains

of an old Druid temple, enclosing about half an acre of ground (one of the standing stones consists of a block of rough whinstone, probably twenty tons weight, carried ten or twelve miles, no one knows how), the traditional scene of ancient alliances between England and Scotland, near Old Gretna, the Anglo-Saxon Gretan-how. Occasionally he may stumble on the vestiges of an old peel-tower, the stronghold of a border chieftain in the days when the Maxwells ventured thus far from Caerlaverock castle to keep up some feud and fill their larder. Crossing the romantic Kirtle (Kirkconnel Lee, where lies "Burd Ellen," with her lover Adam Fleming, is a few miles higher up) by a rickety wooden bridge, he will reach the prettily-situated Redkirk Mill. A good story is told of the late miller, who lived before the call for a public analyst arose, and scorned adulteration. Being asked by the sheriff, who was fixing the "Fiars" prices of grain, the value of a stone of oatmeal, he replied, briskly, "Two shillings, my lord." "How is this?" said the sheriff, "the others appear to sell at about 1s. 10d. Have you much custom?" "Ay, and mair orders," said the miller. "But how?" asked the sheriff. "O," said the miller, "I mak a' my meal frae oats." "Well," replied the judge, "and what do the others make it from?" "Ah!" responded the miller quaintly, "they are of age, ask themselves!"

About a mile to the west of the Kirtle is Redkirk farm (famous for wheat and well-bred short-horns), where stood the old church of Renpatrick assigned by Robert the Bruce to the monks of Giseburn, to which the name of *Redkirk* was given from the deep red colour of its soft sandstone. There were saltworks at various places on the shores of the Solway in early times. The monks of Melrose had one at Renpatrick, which they let to the monks of Holm-cultram in 1294. It was but the other day that the ruthless plough overturned the last of the stones in the churchyard consecrated for the Scotch (which in those early days meant the Irish) colonists.

A mile further west, on the very edge of the Firth, where the tide rises to the door-steps, stands the ancient whitewashed village of Browhouses, where you may still find a few descendants of the hardy fishermen, who speared the salmon *à la* Waverley, and vied with the inhabitants of Springfield in the

lawless occupation of smuggling, by which the border combatants maintained themselves for a century after the union put an end to international feuds and forays.

Marvellous stories are told of the white "bore" rushing up the sands at the gallop. The writer has frequently seen this foaming head of the tide, from two to four feet in height, approaching at the rate of eight miles an hour; and he has a vivid recollection of running before it from a stake net facing an English village, carrying a salmon and some twenty dozen flounders in a creel (no light weight for a boy), and escaping only at two o'clock in the morning, half wading, half swimming in the darkness through a "gitter" by which the treacherous tide had surrounded him.

As Newcastle is famous for coals, and Sheffield for cutlery, Gretna Green is famous for *runaway marriages*. Peers and judges have begun their married life here; while many a broad acre and many an envied title has depended simply upon the proof of a Scotch wedding at Gretna. The place had no privilege beyond other border districts, but its position on the highway between the capitals, the easily-marked boundary of the Sark, together with the number of distinguished parties flying to it, made it the great resort of all who were dissatisfied with home restraint and unbending guardians. The marriage ceremony consisted merely of a declaration by the contracting parties, before witnesses, that they were man and wife. This was followed by their living together as such, and the union was complete. Certificates were sometimes given on printed forms, and these were useful enough before the days of compulsory registration. I have heard of a presumptuous use of canonical dress and ecclesiastical forms, but this was contrary to law. There is no record of a blacksmith having acted the priest here. Perhaps the welding of young hearts glowing with ardour suggested the notion. Innkeepers, weavers, and others took up the trade according to circumstances; and a profitable trade it was. As much as £50 have been received for one marriage. If I mistake not, one man petitioned the House of Commons to allow him £500 per annum, when they ruined his trade by requiring one of the parties to reside twenty-one days in Scotland before marriage. Whatever merit the Gretna Green marriage had in the eyes of the English, many of the Scotch labourers thought the skill of the priest consisted chiefly in untying and tying anew the knots

of Hymen, according to the wishes of the candidates.

The writer suggested to the late Lord Brougham, when legislating for the removal of this scandal, that provision should be made for acquiring, at a fair price, all the private registers of these irregular marriages which are tumbling about inns and private houses in Gretna, Annan, and other places, to which even peers have had to go and search with trembling of heart for evidence. Late as it is, many of these registers might still be obtained and lodged in security.

The neat little whitewashed cottage, on the right bank of the dividing stream, where one man kept his witnesses in readiness to make the runaway couples happy with incredible speed, and the more stately Gretna Hall, to which the grooms whipped up their steaming horses with bespattered carriages, are still regarded with interest and curiosity, for there some sowed the seeds of future greatness and prosperity, and others married in haste to repent at leisure.

After this general and hasty sketch of Gretna as it is to-day, let us cast a glance backward and see what was its social and ecclesiastical condition one hundred and fifty years ago. The source of our information shall be the records of its ecclesiastical court preserved in the beautiful handwriting of a distinguished pastor who began his labours in the parish about that time. An ordained minister was necessarily very much more to his people in those days than now. It often happened that he was the only learned man in the parish, and therefore he was regarded as the centre of enlightenment. His communication with the universities, and his professional reading kept him in the van in all matters of science and political economy. His correspondence made him the exponent of news before there was any newspaper worthy of the name. Civil and sacred functions were so intermixed that the parish minister was the local magistrate, who, with the help of the elders as assessors, inflicted summary punishment upon petty offenders, without calling in the justices of the shire, or depending upon a police force not then in existence. Whoever had a friend ambitious of higher learning than the parish school afforded, or a venturesome son desirous of pushing his way in the world outside the family circle; whoever met with an accident, or had a dispute to settle, a case in court, or a will to make—all came to the minister for advice. He was the father

and the friend of his people, as well as their religious instructor and guide. It is only in such an out-of-the-way place as Bressay in Shetland, where the islanders have at present to lament the loss of their dear pastor, friend, and adviser, Dr. Zachary Macaulay Hamilton, that it can be fully realised how much a minister of the gospel was to his people in earlier times. Moreover, the minister was settled among his people generally for life, and became so strongly attached to them and to his parish that he resisted every attempt to lure him away. It happened, therefore, after a number of years, that he had baptized nearly all the inhabitants, married a great portion of them, and officiated at the funeral of nearly all their relatives. His face was familiar, and his form would have been missed in any assembly of the parishioners, whether for business or holiday-making, for mirth or mourning.

Whether it was that the ministers of Gretna were in reality what they styled themselves, "the first ministers in Scotland," or, as their witty compeers said, like "the selvage of the cloth, a poor remnant unworthy of promotion," certain it is that they were not a migratory race. I propose to give a sketch of one who was minister of Gretna from 1730 to 1787. An old parishioner, lately gone to his rest, remembered the subject of this sketch as a venerable octogenarian with a fine face and distinct features, a well-knit frame somewhat bent with years, walking with his hands crossed behind his back, while a little dog, his constant companion, trotted beside him. The name of James Gatt is still fondly cherished in Gretna, his picture is carefully preserved by a daughter of the manse, and many a cottage is enlivened with stories of the piety and quaint humour of the old and beloved pastor.

James Gatt or Gath was born at Cullen in Banffshire, A.D. 1700. Having a knowledge of the Gaelic tongue, he was recommended to the General Assembly in 1722, studied theology under Professor Hamilton in the University of Edinburgh, and, being presented by David Viscount Stormont, was ordained minister at Graitney (this is the old and orthodox spelling) in 1730. He died in the year 1787 in his eighty-eighth year, and the fifty-eight of his ministry. Mr. Gatt seems to have had considerable classical attainments, and especially a predilection for Latin composition. Whether he could have addressed learned societies in Latin, like Professor Mommsen and a few continental linguists, we cannot tell; but he seems to have translated

the book of Job into Latin verse. His "Proverbia" and "Miscellanea" are still extant, the latter containing many amusing things. He wrote a beautiful poem on the death of his mother. Indeed, his annual compositions for the Exchequer bursary seem to have begotten a habit of scribbling, for we find, among other remains, a poem, "On going to the Synod of Dumfries," with a delightful sojourn at Comlongan Castle by the way. Many of his sermons have been preserved. Where the text is taken from the Old Testament, it is prefixed in Hebrew with the points, where from the New, in Greek. As to their substance, they are excellent practical discourses, distinguished by judgment and fine feeling, although frequently marred, according to the custom of the time, by long-drawn alliteration. "The three R's" are considered enough for many; but Mr. Gatt, in describing the blessings of salvation, particularises Regeneration, Reconciliation, Renovation, Restoration, Redemption, Rejoicing, &c. In regard to the appearance of Christ, he writes, (1.) Of the Sacrifice, (2.) Of the Service, (3.) Of the Season, (4.) Of the Sufficiency, (5.) Of the Suitableness of it, and so on. Year after year, and week by week, we find the subjects of Mr. Gatt's lectures and sermons carefully noted. Spurgeon's "Inexhaustible Barrel" is nothing to the preaching of those days. What made it lighter, however, for the preacher was this, that he preached very much the same discourse from any group of texts. His great influence seems to have been acquired by diligent pastoral work. In the homes of his parishioners, where he was welcomed as a father and friend, he did most lasting good. Many of his "Good Words" were widely circulated, and some are current still. Mr. Gatt had a good help-mate in Jane Gowanlock, from Kirkpatrick-Fleming manse, who would have been entitled to a golden wedding had such a German institution prevailed in those days, and who died only a year before her husband at the age of eighty-six. There is a tradition that all the valuables of the parish were stowed away in the garret of the manse to escape Prince Charlie's men, and that Mrs. Gatt entertained his officers so well that they quite forgot to rifle the house. The minister hid himself first at Raeburnfoot, and then crossed the Firth to Bowness in Cumberland. According to custom, he celebrated these stirring events in Latin. Fortunately, while the farmer at Floshead suffered greatly by the predatory bands, Mr. Gatt lost nothing but "duo apiaria," while the busy bee of his own

household was undisturbed, as we learn, from his statement, "*Conjux servata est incolumis.*" The manse was still further regulated and managed by an old servant or family friend known by the soubriquet of Mr. Gatt's Mary, a well-known character in the parish. Whether or not her ear was bored after the ancient Levitical fashion, she thought of nothing less than life-service.

Let us now glance at a few of the more notable incidents in connection with Mr. Gatt's ministry as recorded in the sessions records. He seems to have commenced his labours by a vigorous effort to remove the abuses at marriages and funerals. The writer of this article once attended a funeral at Gretna conducted on the old liberal idea of entertainment to travellers. First the table was spread with loaves of bread, and scones, and beer. A second course consisted of wines and cake, &c. The tables having again been cleared, and religious exercises engaged in, the company were offered biscuits, spirits, &c., and the procession got under weigh two hours and a quarter after the hour of invitation. Many poor persons have been stinted for months afterwards on account of such ill-timed expenditure. In 1730 Mr. Gatt began the double task of cleaning the Augean stables of drinking at "*Lykewakes*" and at "*Penny Bridals.*" It is recorded, "*The Kirk-Session, canvassing all pretences for those occasions of riotousness, drunkenness, and debauchery, and finding them frivolous and irrelevant, determined that these practices should be discarded.*"

The "*Penny Bridals*" were hard to put down, however, for complaints are made, year after year, of the "*tentations to which children are thereby exposed, seeing and hearing much evil which may soon be learned and hardly ever forgotten.*" It was agreed "*to inhibit all who pretend to make a free wedding and yet sell brandy, and require that none shall have more than two-and-thirty persons at a wedding, conform to the act by which all were stinted to eight mess (four persons making a mess); and if they sell liquor in a private house, or have more guests invited, then the married persons shall forfeit the pawns (ros.), which must be given in to the session clerk before the banns of marriage be proclaimed at all.*" It is a comparatively modern innovation, and by no means a commendable one, to have marriages and baptisms in private houses in Scotland. Mr. Gatt says, "*Who are married irregularly are to pay half-a-guinea; none are to be wedded but in church without they give half-a-crown*

to the poor." In 1731 seven couples, including a doctor among the offenders, were rebuked for contracting irregular marriages. Sabbath-breakers staying in ale-houses in the time of or after sermon are to be publicly rebuked, and pay so much for the benefit of the poor. A blacksmith was censured for shoeing a horse to an officer who threatened to shoot him if he didn't. A tailor waiting upon a customer on Sabbath, explained that he did not measure him as alleged, having an old coat for a pattern. Two men were summoned for letting down nets to catch fish when the tide made before eleven P.M. on Sunday.

In a case of witchcraft tried by the session in 1733, it was found "*that they burned rowan-tree and salt, they took three locks of Francis Armstrong's hair, three pieces of his shirt, three roots of wormwood, three of mugwort, and boiled all together; then they anointed his legs with the mixture, and assayed to put three sups in his mouth, and meantime kept the door closed, being assured by Isabel Pot, at Cross in Rockcliffe, commonly called the 'Wisewoman,' that the person who had wronged him would come to the door, but no access was to be given.*" Francis told them that they were using witchcraft and devils' charms. Isabel further ordered south-running water to be lifted in the name of the Trinity, and the slut—*i.e.* a rag dipped in tallow—to be lighted and carried round his bed." The persecution of unhappy old women charged with witchcraft continued till far on in the eighteenth century. When the penal statutes against witches were repealed, the Seceders lifted up their testimony against such laxity in defiance of the law of God, which said, "*Thou shalt not suffer a witch to live!*"

Herostratus burned down the temple of Artemis to make his name famous. Mr. Gatt cleverly records the burning of Gretna church in 1734 thus: "*Some unhappy persons, whose names should be buried in silence, because of the infamy and reproach, and therefore shall be nameless, shooting swallows in the churchyard, set fire to the heather with which the church was thatched, and everything was consumed except the walls and the bell.*" The warmth of the pastor's affection for the house of God may be learned from the words with which he closes the record, "*O Lord, turn away the stroke of deserved wrath.*"

In Gretna, in the year 1735, the "*stent,*" or tax, for the schoolmaster's annual salary was proved, and amounted to £5 11s. 6d. In 1748 the Kirk-Session resolved that the

school should no longer be kept in the church, but that special efforts should be made to build a schoolhouse.

A difficulty with which parochial boards have to contend in the present day crops up in a resolution of the same year: "To punish all those who entertain lodgers without a character, who contribute to the columns of illegitimacy, and waste the funds which ought to be given to the deserving poor."

Bibles were not so common in those days. Hence it is carefully noted that the old, black-letter, church Bible, in folio, gifted by "Cockpool" (one of the Murrays, an ancestor of the Earl of Mansfield), in 1612 was in the custody of W. B., one of the elders.

The old records of the Kirk-Session of Gretna do not contain mere dry and uninteresting details of discipline, but notices regarding the health of the district, the prosperity of the country, the sufferings of the people from storm, and the still more dreadful things that have to be endured in time of war. In August, 1744, there was a flood in the district, by which a village was overturned, the cows had a narrow escape, and the corn was carried down the Esk in vast quantities to the sea.

There are a few interesting notices of the rising in 1745, when Prince Charles Edward so nearly effected a temporary restoration of the Stuarts. Mr. Gatt was a stern Hanoverian, and probably, however much we admire the Jacobite songs and sympathize with the Stuarts ever greatest in distress, had we lived in those days we should have been as decided in our preference for law and liberty.

After noticing the battle of Prestonpans and the death of good Colonel Gardiner, the record states, "On Saturday, 9th November, the Highland army passed by here, and on Sabbath and on Monday. On Friday Carlisle was given up to them. Mr. Gatt retired in a vessel to Bolness, and was in the greatest

danger. There was no sermon at Gretna on Sabbath, 10th November, Mr. Gatt being in England, and a column of the Highland army here. On the following Sunday Mr. Gatt preached, but the bell was not rung, the Highlanders being still in sight." It is further stated, "My Lady Ailmer and my Lady Lovat, on their return from Carlisle, came from Gearaston, where they had been detained by the water being impassable, and heard sermon. On the 18th December the Highlanders on their retreat came to Carlisle, and afterwards threatened Mr. Gatt as they came through Esk. On the 20th December the Highlanders passed Esk at Gleinorfoot. Some went by the road of the moor to Ecclefechan, but the Camerons and Macdonalds with their hussars came through Gretna Green, and their prince. Several suffered by them considerably. On the 21st they went all out of the bounds. On the 31st December Carlisle was surrendered to the Duke of Cumberland, who, on the 16th April in the following year, gained a complete victory over the Highlanders at Culloden. On the 17th August the congregation assembled without in the green, because the church had been filled with prisoners concerned in the rebellion or suspected, Colonel Lee's regiment bringing in no less than one hundred and forty-four in one day."

It is not given to all to have their names inscribed in the annals of their country, to wield the sword of victory, to write a nation's laws, or wear the martyr's crown; but thousands have lived a noble life in the service of the Master, and died in a faith which gives life again, having soothed the sorrows and healed the wounds of innumerable unnamed sufferers, and passed into a higher sphere, where their saintly faces are encircled with a halo which reflects the love and purity of the Divine Son. And among these may surely be reckoned the name of James Gatt, the good minister of Gretna.

R. EDGAR.

THE FABULOUS IN ZOOLOGY.

ZOOLOGICAL science has ever been famous for the fabulous forms which fancy and superstition have from time to time included within its limits. And this, for the very good reason, that the animal world affords the most likely and suitable series of objects upon which the imagination of the superstitious might play. A very long stretch of history is attached to the present subject.

Indeed, the first beginnings of natural history science had their dawn and origin in the myths and fancies which the earlier naturalists and writers gave forth as the veritable accounts of the true and real in the animal world. Ranging thus, from the classical times, with their tales of monstrous forms of undefined shape and name, through the middle ages with their accounts of gigantic

cuttlefishes, mermaids, and other beings, down to the enlightened present, in which the legendary "sea serpent" still holds its own, the fabulous part of natural history science may be shown to have an ancestry worthy, in point of age at least, of any branch of philosophic thought that can well be named.

Nor, perhaps, has the belief in, and investigation of the mythical in science been without a powerful influence on the real and true in natural history studies. The very desire to ascertain or prove the falsity of any given statement, has frequently set afoot the work of verification, and has resulted in the overthrow of most of the beliefs which had come to be respected from their great age and venerable antiquity, if from no other or more reasonable cause. This principle of attaining the real through the ideal is not confined to biological investigation. It forms a mode of inquiry common to many branches of orderly thought; and frequently presents to the truth-seeker the only available means of tracing the origin, growth, or actual nature of many subjects in the history even of man himself.

In the present topic, therefore, not merely the zoologist, but also the antiquary, may feel a deep and kindred interest; and the study of the mythical in biology may in time be included, as it certainly deserves to be, among the most fascinating of the pursuits proper to the student of antiquarian and folk-lore.

The subjects of the mythical zoologist are by no means confined to the highest groups of the animal world. On the contrary, and as we shall presently observe, animals of a comparatively low degree of organization have from time to time contributed to swell the list of his idealities. And groups of organisms, very far removed from each other in all the aspects of scientific relationship, have sometimes been united in a mythical bond, in the records and systems of fabulous fauna.

Chief among the traditional forms familiar to all, are the "mermaids" and "mermen" of the mariner. These beings are of strictly classical kind, inasmuch as the sailors of past ages entertained a firm belief in their existence, and the mermaid, even in our own day, has come to hold a stable place in the legendary lore of the sea. Probably the more classic siren, or syren, and the ruder mermaid, have originated from a common root-stock based on mythological foundations; since, as every schoolboy knows,

there are no lack of analogous tritons, in the retinue of the great sea-god, Neptune himself.

The more modern and prevalent idea of the mermaid, however, was that of the upper half of a beauteous female form, united to the scaly tail of a fish. And the mariner generally represented this fair being as engaged in toilet operations, dressing her luxuriant tresses,

"With a comb and a glass in her hand,"

as the old sea-song has it. To the mermaidens were also ascribed certain qualities not usually or naturally associated with intelligent beauty, namely, the power of luring amorous navigators to destruction by singing to them siren-like lays, and of thus enticing them below the waves into the depths of the sea. In this latter phase of mermaid character, it is not difficult again to perceive a relationship to the classical siren, and to the more modern Lorelei of the Rhine.

The zoological representatives of the sirens are most nearly found in those creatures allied to the whales, and known by the general name of *Manatees*, or "sea-cows." These are aquatic mammals of large size, inhabiting the estuaries of rivers, and the shallow waters of ocean-bound shores. The Dugongs (*Halicore*) thus occur on the shores of the Indian Ocean, and on the Australian coasts; whilst the only other genus of living Sirenians—the *Manatees* (*Manatus*)—are found on the Atlantic coasts of Africa and South America. The sirenia possess the front limbs in the form of swimming-paddles; the hinder members being totally unrepresented. The head is proportional in size to the body, which terminates posteriorly in a horizontal tail-fin resembling that seen in whales.

These creatures have the habit of raising themselves in the water in a semi-erect posture, and their appearance in this position, together with the intelligent aspect of the face, and the position of the mammary glands on the chest, gives them, especially when viewed from a distance, a close resemblance to the human "form divine." Indeed, the zoological name "Sirenia," applied to the special order of mammals in which these animals are included, has been given to them in allusion to their thus counterfeiting, as it were, the siren-like aspect of the fabulous creatures of the mariner.

By some travellers, also, the Sirenia are said to use the front limbs so as to imitate the motions of humanity when it disports itself amid the water; and the young are

described as occasionally being fondled in the "arms" of the parents; although confessedly this latter statement requires confirmation. There can, however, be no question as to the striking likeness which the sirenias, in their semi-erect posture, present to human beings standing in shallow waters. And it can readily be imagined how naturally the earlier navigators, superstitious with all the nature of their race, and with but imperfect knowledge of the objects they gazed upon, should tell their tales, verified by eye-witnesses, to stay-at-home people, of the wondrous sea-maids and mermen they had beheld disporting themselves in the waters wherein they had sailed.

The Dutch name for the manatee means "little bearded man;" the Portuguese name signifying "woman-fish;" whilst the French term the creature "lamantin." And Scoresby, the intelligent and educated mariner, says of these forms, that he has seen these animals in such positions that the human appearance was very closely imitated; whilst on one occasion the surgeon of his ship reported to him "that he had seen a man with his head just appearing above the surface of the water," so deceptive was the aspect of the sirenian.

Many of the seal tribe with their intelligent countenances—even more human-like than those of the sirenias—and expressive eyes, might similarly be mistaken for beings of human kind when regarded from a distance; whilst the positions assumed by these animals when resting on rocks, are in many cases highly suggestive of the recumbent human figure.

What the fabled "unicorn" represents in actual zoology, if indeed it represents a real form at all, constitutes rather a puzzling question; and the "griffins," "dragons," and other forms of heraldry and romance, may be noted in similar terms. Very probably the unicorn myth was derived from a horned animal belonging to one of the numerous families of mammals which possess these appendages. We certainly know of no living or extinct animal which possessed a single horn springing from the middle of the forehead, as represented in the gallant co-defender, with the lion, of the British crown. The rhinoceroses certainly possess one or two unpaired horny appendages, which, however, are borne on the nasal bones; and it has been suggested that the "one-horned" or Indian rhinoceros represents the unicorn of the ancients—the progress of the myth through the classical ages duly shifting the

horn from its somewhat unusual position on the nose, to a decidedly more elegant situation on the forehead. But no conjecture may be offered with a view of reconciling the heavy body of the rhinoceros with the light, elegant form of the unicorn; the exact descent of which from an actual form, may, as already remarked, be reasonably doubted.

Passing from the higher vertebrates to the lower groups of the animal world, we may note amid the Molluscos animals, the alleged occurrence of gigantic cuttlefishes. Accounts of monstrous specimens of these animals are abundantly met with in the works of the classic writers and naturalists; and strangely enough in the present day, instances, verifying in some measure the classical accounts, have occurred, wherein the actual development of large Cephalopods has been placed beyond the shadow of a doubt. Aristotle and Pliny relate stories of various giants of the cuttlefish group; Pliny, in particular, noting one form, which was said to have devastated the fishings on the Spanish coasts, the body of which when captured weighed seven hundred pounds, its arms being about thirty feet in length, and the head alone weighing an additional seven hundred pounds! In the middle ages, when the mythical in zoology flourished even more abundantly than in the classic ages, naturalists seemed to glory in the perpetuation of tales and stories of monstrous cuttlefish forms. To this age belongs the celebrated "kraken" or "poutpe" of the northern European seas, a monster Cephalopod, chiefly constructed after the heart and mind of Denis de Montfort, and gravely described by Pontoppidan, a learned bishop of Bergen in Norway, as "liker an island than an animal." Linnæus himself, with all his acuteness and learning, described or mentioned the kraken under the appellation of *Sepia microcosmos* in his earlier writings, but subsequently expunged it from the records of zoology, being convinced of its non-existence. And in the present day, we find Victor Hugo, in his famous "Toilers of the Sea," enlisting the aid of a monster cuttlefish, in the service and interests of fiction—a circumstance which has served to invest the cuttlefishes of ordinary existence, as seen in our large aquaria, with a great deal of interest.

Without denying positively that the legends above alluded to contained any germ of truth or were based on any probable grounds, there can be little hesitation in asserting that they bear evidence of great exaggeration. The very periods of time and history in which they first appeared were marked, in other

than purely scientific literature, by gross profuseness of romantic detail. And hence the purely legendary character of very many of these tales may be safely assumed, even whilst we may admit the more reasonable of them to contain a nucleus of truth and feasibility.

Several verified instances have occurred, especially of late years, confirmatory of the views of those naturalists who reasonably allowed that in the cuttlefish class, as among other groups of organisms, largely-developed individuals might from time to time be found. This opinion, supported by the experience of everyday life and of biological science, might be qualified by the statement that such instances of abnormal development were of exceptional and detached kind, and were not to be regarded as including any more important features than merely occasional deviations from normal laws. We might thus reasonably believe in the development of huge members of an ordinary and common species of cuttlefish, without assuming that a distinct species or race of such giants actually existed.

On this theory may be explained the instance mentioned in the account of Captain Cook's first voyage, in which the dead body of a huge cuttlefish was met with between Cape Horn and the Polynesian Islands. Portions of the tentacles or arms of this

specimen were duly preserved by the naturalists of the expedition, and these interesting remains may still be inspected, if we

mistake not, by the curious in such matters in the Hunterian Collection in the Museum of the Royal College of Surgeons of London. This form, referred to the genus *Onychoteuthis*, is calculated to have measured six feet at least, inclusive of the arms. A specimen cast up on the Jutland coast in 1853 or 1854, and described by Steenstrup, is stated to have filled several wheelbarrows when cut up, for bait by the fishermen; and the tentacles of this form are said, at their thickest portion, to have equalled the human thigh in thickness and bulk. Other and similar instances might be related, but we may content ourselves by referring to two additional cases only.

In 1861, the French war-steamer *Alecton* came upon a gigantic living cuttle, floating on the surface of the sea, about one hundred and twenty miles north-east of Teneriffe. This animal was attacked and secured by a noose being slipped around its body, which unfortunately was arrested at the projecting tail-fin, with the result of detaching the tail from the body. This

latter portion was hauled on board, and weighed over forty pounds. The total length of this form—which, from the drawing and account given of the circumstance, appears to

Fig. 1. The Paper Nautilus or "Paper Sailor" (*Argonauta Argo*). *a*, funnel; *b*, shell, around which the two expanded arms (one of which is marked *c*) are generally folded; *d*, *d*, *d*, ordinary arms or feet; *e*, point towards which the Argonaut is supposed to be swimming.

Fig. 2. Representation of Gerarde's "Barnacle Tree," from the "Herball."

Fig. 3. Ribbon or Band Fish (*Gymnetrus* (or *Regalecus*) *Banksii*).

have belonged to the same genus (*Loligo*) to which the common squid of our own coasts (*L. vulgaris*) belongs—was estimated at about fifty feet (equal to fifteen metres), exclusive of its arms, whilst its weight was calculated to average two thousand kilogrammes, or about four thousand pounds. With regard to this case, however, it has been remarked that the two elongated arms found in all the Calamaries are not represented as being possessed by this giant of the race; and it is open for us either to believe that the hurry and confusion, as was extremely probable, may have prevented an exactly correct drawing (taken on the spot by one of the officers of the *Alecton*) having been made; or that it may have lost the two elongated tentacles; or, lastly, that this form represented a new genus or species. With the last opinion no naturalist will care to agree on the slight evidence afforded him, and with the chances of the other probabilities being correct.

A notable instance in which a cuttlefish of gigantic size was submitted to actual inspection and measurement may be regarded as, being one of more satisfactory kind than the preceding cases. In 1873, two fishermen encountered a large cuttle in Conception Bay, Newfoundland. The animal, on being struck, stretched its arms across the boat, but the fishermen severed the obtrusive members with an axe, whereupon the mutilated Cephalopod at once retreated. One of the arms was partly preserved, and in its shortened length measures nineteen feet. It lost six feet of its length before preservation, and the fishermen state that about ten feet still remained attached to the body. This would give a total length of thirty-five feet to each of these arms, whilst the body itself was estimated to measure sixty feet in length and five feet in diameter.

A photograph of parts of a second cuttlefish of large size, recently cast ashore on the Newfoundland coast, and described by the Rev. Mr. Harvey, of St. John's, Newfoundland, lies before the writer. It represents the head and ten arms of a large cuttlefish supported on a stand. Eight of these ten arms are of equal length—as in all of the *Decapodous*, or “ten-armed,” cuttlefishes—whilst two are greatly elongated, and possess suckers at their extremities only. The latter are each twenty-four feet long; the eight shorter arms measure each six feet in length, and ten inches in circumference at their bases. The suckers are “denticulated,” or exhibit a “toothed” structure;

and the eyes, prominent in all these creatures, attained a diameter of four inches.

These instances therefore prove that gigantic Cephalopods undoubtedly exist, but the exact nature of such forms, and more especially their relations with their more common-place neighbours, form subjects which only more extensive information can elucidate.

As mythical as are the older accounts of large Cephalopods, is the poetical idea concerning that interesting cuttlefish, the Paper nautilus, or Paper sailor—the *Argonauta argo* of the naturalist. Every one knows Byron's description of this little form, as

“The tender nautilus who steers his prow,
The seaborne sailor of his shell canoe,
The ocean Mab, the fairy of the sea;”

whilst Pope in his turn bids us

“Learn of the little nautilus to sail,
Spread the thin oar, and catch the rising gale.”

And Montgomery, *par excellence* the poet of the sea, in analogous terms beautifully describes the nautilus, under the idea of its constituting a living ship, of hoisting its two expanded arms to the wind, as a “twofold sail,” and of using its other six arms as oars.

Beautiful as the idea may seem of the paper sailor, thus floating on the billows, and unthankful as may be the office to dispel the poetic fiction by the sterner and less elegant truth, it must nevertheless be stated that in no case does the argonaut use its arms as sails and oars, and in no sense can it thus float gaily over the surface of the sea. The two expanded arms are used to secrete and repair the delicate shell, and ordinarily embrace that structure, which is not organically or firmly connected to the body, save for the arms. And when the paper nautilus moves, it does so after the fashion of its more mundane and less famous neighbours. It can come to the surface, it is true, as do other cuttlefish forms; but there it can only propel itself along backwards by means of the *jets d'eau* from its “funnel;” these jets consisting of the water which has been used in respiration or breathing. Or it may crawl head downwards over the bottom of the sea by means of its arms and their suckers. But other means of locomotion it has none; and the webbed or expanded arms are rarely, if ever detached from the fragile shell.

The measurements given of gigantic cuttlefishes, it may lastly be remarked in concluding our observations on these forms, are susceptible in most instances of much modification, it being an exceedingly difficult, and in

some cases impossible task, exactly or correctly to estimate the relative proportions of one part or fragment of an organism to the entire bulk. And allowance for errors and mistakes on this ground must therefore be made in all cases in which only fragmentary remains of these animals have been met with.

A subject of allied nature to gigantic cuttlefishes, and one which has always held a high place in mythical zoology, is formed by the famous "sea-serpent." The mere mention of this name is frequently sufficient to excite all our credulous and risible faculties; and so hopeless and seemingly inexplicable a subject has this topic become, that it is by almost common consent allocated to the domain of popular superstition, and thus placed wholly without the category of sober natural history studies.

A little reflection, however, may soon convince one, that the "sea-serpent" tales are not invariably to be treated in this offhand manner, but are certainly worthy of more serious consideration. We do not mean to insist that all of these stories contain even a germ of probability; but we maintain that in many cases we are shut up to the choice, either of assuming that the eyes and intellects of many trustworthy spectators must from time to time have been utterly deceived, by some appearances mimicking marine serpentine forms; or that the accounts are utterly unworthy of belief. There are very many calmly and circumstantially related and duly verified accounts of serpentine, or at any rate of anomalous marine forms having been closely inspected by the crews and passengers of vessels. Either, therefore, we must argue that in every instance the senses of intelligent men and women have played them false; or we must simply assume they are describing what they have never seen. The accounts in many instances so minutely describe the appearance of such forms, inspected from a near standpoint, that the possibility of their being mistaken for inanimate objects, as they might be if viewed from a distance, is rendered entirely improbable. We may thus then affirm safely that there are many verified pieces of evidence on record of strange marine forms having been met with, which evidences judged according to ordinary and common-sense rules, go to prove, firstly, that certain hitherto undescribed marine organisms do certainly exist in the sea-depths.

A second suggestion naturally follows in the question, as to what support natural-history science can give to the above proposi-

tion. To this it may be replied that zoologists can but admit the correctness of the observation. Certain organisms, and especially those of marine kind (e.g. certain whales), are known to be of exceedingly rare occurrence. Our knowledge of marine reptilia is confessedly very small; and, best of all, there is no counter objection or feasible argument which the naturalist can offer by way of denying the above proposition. He would be forced to admit thus the existence of purely marine genera of snakes—e.g. the *Hydrophida* of the Indian Ocean—which possess compressed tails adapted for swimming, and other points of organisation admittedly suited for a purely aquatic existence. If, therefore, we admit the possibility, nay, even the reasonable probability, that gigantic members of these water-snakes may occasionally be developed, we should state a powerful case for the assumed and probable existence of a natural "sea-serpent." We confess we do not well see how such a chain of probabilities can be readily set aside, supported as they are in the possibility of their occurrence by zoological science, and in the actual details of the case, by evidence as trustworthy in many cases as that received in our courts of law.

It is not meant, of course, to be affirmed, that gigantic marine snakes form the only animals which may constitute the "sea-serpents" so frequently described. The *Plesiosaurs* and *Ichthyosaurs* of the geologist, have in some cases been disinterred and revived, and somewhat unnecessarily, we think, to do duty for the "sea serpents." Our argument merely tends to show that, *quoad* likely organisms, there is as great provision in the ranks of marine zoology for peopling the oceans with occasional sea-serpents by gigantic developments of ordinary species, as for the occasional production of monstrous cuttlefishes—the existence of which latter might, some few years ago, have been as strenuously denied as the actual presence of "sea serpents" is now by many naturalists, and not a few ordinary people.

The writer recently communicated to the daily journals a suggestion that, in those fishes familiarly named "Ribbon-fishes," likely representatives of "sea-serpents" might be found. The fishes alluded to form a well-known family (*Cepolidae*), belonging to the order (*Teleostei*) in which all our familiar food-fishes are included. They derive their popular and scientific names from the elongated, band-like shape of their bodies; and as they are known occasionally to attain a

very large size, the probabilities of such fishes being mistaken for serpentine forms—especially when viewed from a short distance, and when swimming through the water with a serpentine motion—are largely increased. One preserved and dried specimen which the writer had an opportunity of examining, measured twelve feet three inches in length, eleven and a quarter inches in depth, and two and three quarters inches in thickness. This specimen was the *Gymnetrus* (or *Regalecus*) *Banksii* of naturalists. Another specimen, captured off the Northumberland coast, measured thirteen and a half feet in length, fifteen inches in depth, and five inches in thickness. These dimensions are known to have been greatly exceeded, as the sequel will show. The extreme length of these fishes, and their dissimilarity in outward form from their finny neighbours, would render the mistake of regarding them as marine serpents very readily committed, especially by persons who were unfamiliar with zoological details. After the publication of the foregoing observations, the writer received a somewhat startling confirmation of his belief in the occasional large development of these fishes, from the head of a well-known firm of fish-merchants in Edinburgh. The facts elicited were to the effect that whilst the smack, *Sovereign*, of Hull, Baillie commander, was engaged some thirty years ago in trawling off the coast of Fife, the crew captured in the trawl a gigantic "Rib-bon" or "Tape-fish," which, when laid on the deck, extended beyond the limits of the vessel at stem and stern. The smack was above forty tons burthen, and its length may be safely estimated at sixty feet. This giant fish measured from five to nine inches in breadth; its dorsal or back-fin measuring about thirty feet in length. The fishermen, inclining to view the fish with distrust, cut it in pieces and threw it overboard; some few preserved portions, happily serving to confirm the report of its size. There seems little doubt that such a fish seen by the crew of a passing ship, and by persons unskilled in zoology, would certainly be regarded as a marine serpent, and be reported upon accordingly. Whilst it appears that the entire question resolves itself into one accounting, not for the mere appearance of marine serpentine beings, but of reconciling these verified appearances with living and existent forms. A gigantic conger-eel might in a similar manner mimic a marine snake, as those readers who have noted the appearance of large congers in aquaria will testify; although perhaps the eel would be

more readily referred to its true position in the animal world than the less familiar Ribbon-fishes and their allies.

A remarkable and curious coincidence—if, indeed, the circumstance bears no deeper meaning—between a mythological and fabulous form and an actual organism, occurs in the case of the famed tortoise of the classics, which was represented as supporting Atlas, who, in turn, held up the world. Geology makes us acquainted with the existence, in former epochs of this world's history, of extinct tortoises of immense size, the fossil remains of one specimen being found in deposits of tertiary age in the Sivalik Hills of Hindostan by Falconer and Cautley. To this gigantic form, which must have measured upwards of twenty feet in length, the appropriate name of *Colossochelys atlas* has been given. It is probable that this form may have survived the beginning of the human epoch, and may have thus suggested to the primitive inhabitants of the east some of the many legends of tortoises in connection with the formation of the globe, which abound in the religious and historical records of the Hindoos. These legends, and those of the classical nations, may thus have had an actual origin, and in point of fact from a real ancestor.

Descending, in the last place, to animals of a humbler grade of organization, we may notice the various speculations regarding the origin of a certain species of geese from barnacles, which emanated from writers of comparatively modern times. This particular goose is still known to naturalists by the name of the bernicle goose (*Bernicla* or *Anser leucopsis*); whilst one species of barnacle itself, still bears the specific name of *anatifera*, or "goose-bearing." So far as even scientific nomenclature goes, then, the names of these forms would thus tend to propagate, even in these enlightened days, an erroneous, not to say a highly ridiculous supposition.

The barnacles will be familiar to most readers as those crustacean animals which, consisting each of a fleshy stalk or "peduncle," and of a body encased in a shelly covering borne on the end of this stalk, attach themselves to floating timber and to the sides of ships in immense numbers. The ships seen in the graving-docks of any seaport town, will exhibit multitudes of these familiar forms attached to their sides. From such animals, then, crustaceans of low grade, the credulity and ignorance of two centuries ago elected to believe that actual geese were produced.

We thus find Hector Boece, in his history

of Scotland, written in the Latin tongue, bearing date 1527, and as rendered by Archdeacon Bellenden, telling us that "all treis that ar cassin in the seis be proces of tyme apperis first wormeetin, and in the small boris and hollows thair of growis small wormis. First they schaw their heid and feit, and last of all they schaw their plumis and wyngis." And we are further informed that in due time they "ar alterat in geis."

Gerarde tells us in his "Herball" (1633), that the geese are produced from "certaine trees," whereon "certain shell-fishes of a white colour, tending to russet," grow. The shells he describes as being formed from "a certain spume or froth," that in time becomes duly hardened; the shells being of a shape like those of the mussel, "but sharper-pointed." Within each shell "is contained," he continues, "a thing in form like a lace of silke finely wove as it were together," and this "in time commeth to the shape and form of a bird."

When the time for the extrusion of this strange being arrives, "the shell," Gerarde informs us, "gapeth open," and the first thing that appeareth is the foresaid lace or string; next cometh the legs of the bird hanging out, and, as it groweth greater, it openeth the shell by degrees, till at length it is all come forth and hangeth only by the bill." Then it soon comes to full maturity, and falling into the sea "gathereth feathers;" finally becoming a goose, called in Lancashire a "tree-goose," where the best, Gerarde tells us, may be bought for threepence each. Gerarde further gives a drawing of the "bernicle-tree," in which the tree is represented along with the several stages in the production of its geese-progeny, some of which, for the sake of greater effectiveness, are displayed as disporting themselves in various attitudes in the sea below. And our author further offers to satisfy any doubters, by the "testimonie of good witnesses."

Thus far Gerarde of Queen Elizabeth's days, in his curious "Herball." Sir Robert Moray, in a statement published in the "Philosophical Transactions" of the Royal Society, about 1677-78, repeats much the same history with

additions of his own. Since he relates that the pedicle of the shell draws nutriment from the tree, whilst he gravely says that he found in every shell he opened, a perfect sea-fowl; although he takes care to add, that he never saw one of the birds alive, nor ever met with anybody who had so seen them.

The credulous Sir John Mandeville, or Maundeville, says that in Cathay a gourd-like fruit grows, which when ripe is found to contain "as though it were a lytylle lomb with outen wolle." And Sir John, not to be behind the inhabitants of Cathay in wonders, relates that he told them of the "bermakes," or fruit of a tree that "becomen birddes fleeynge." Whilst some of his listeners, with doubtless a fellow feeling in respect of the marvellous, and a practical knowledge of the ease with which idealities might be invented, "trowed" that Sir John's "gret marvayle" "were an impossible thing to be." The lamb-tree of Cathay, it must be noted, is duly figured in the twenty-sixth chapter of Sir John's "Voiage," and its peculiar fruit development is as graphically delineated.

The present is therefore an instance of the purely fabulous in zoology, argued for, described, and illustrated, as if of real occurrence. The credulity of these past ages in respect to matters biological could receive no more fitting illustration than this; and the convenient doctrine promulgated by some metaphysicians that self-deception is the most subtle of all forms of deceit, may find, in the example of the "bernicle-tree," a fitting and most apt illustration.

Many other instances and examples of the growth, progress, and eradication of the mythical and fabulous, by the development of the real and true, might doubtless be cited and dwelt upon. But sufficient has been said to introduce the subject to readers whose proclivities for archæological pursuits may perchance receive impulse in a somewhat new and little-trodden, but still useful, path. For no one may deem that labour futile or unimportant, which devotes itself to the eradication of the false ideal, and to the diffusion of the healthy and vitalising true.

ANDREW WILSON.

BEES AND BEE-KEEPING.

For God the whole created mass inspires."

BEES! bees! the busy, busy bees! emblem of industry and theme of poets, endued with the wisdom of Minerva, how they live and how they work is yet a marvel and study for philosophers.

"Some have taught
That bees have por-
tions of ætherial
thought,
Endued with particles
of heavenly fires,

Wherever the bee is to be found, it is an object of interest, not merely to the naturalist and man of science, but also to the practical bee-keeper, who finds in the harvest of honey profit and reward sufficient to repay him for the generally scant attention paid to these miniature live-stock.

Although the manner of bee-keeping is very diverse, the number of species is not great, our own hive-bee (*Apis mellifica*) and its varieties being the only one cultivated in Europe. Few, if any other, insects have had so many historians as the bee, yet new facts in its natural history are continually coming to light, and there is probably no field of research so likely to reward its student with novel discoveries as the scientific investigation of a hive of bees. Among the numerous historians of the bee many of them date long before the Christian era. Aristomachus, Cicero, Pliny, Theophrastes, Plutarch, and Columella, all wrote of the bee. Virgil, the well-remembered poet of our classic school-boy days, devoted the whole of his fourth Georgic to its history, and philosophers of modern times have continued, without exhausting the well-studied subject. Marvellous were the painstaking observations of the illustrious blind Huber, aided by his wife, and the versatile genius of Lord Brougham, although loaded with the mighty cares of state, yet found time to record how the bee had solved the abstruse mathematical problem, "to find the construction of a hexagonal prism terminated by a pyramid composed of three equal and similar rhombuses (and the whole of given capacity), such

that the solid may be made of the least possible materials," which problem had exercised the great learning of the celebrated mathematicians Maraldi, Kœnig, and MacLaurin to master. But not alone have staid and solid men of science written of the bee, poets without number have sung its praises. Shakspeare, Thomson, Crabbe, Aikin, Barbauld, Evans, Smyth, Bowring, and a host of others, have gladly recognised its wisdom, its industry, and its value.

It is singular and regretful that, although bees have thus for so many centuries been a source of observation, pleasure, and profit, yet those who have reaped the annual harvest of honey have been indifferent to the fact that the bees have been kept almost universally on a most cruel and wasteful system, and the construction of the hives has been such as almost necessitated the destruction of the bees before the honey could be appropriated. It is true that the ancient Greeks saw this defect, and made an attempt to remedy it by fitting bars of wood in the crown of the hive, to which it was fondly hoped the bees would attach their combs; they did not, however, always accommodate their masters, and if they did so, the combs were surely attached to both sides of the hive, which to some extent made them still fixtures. It is only within the last twenty-five years that what are called frame-hives have been introduced, an invention which we owe simultaneously to Pastor Dzierzon in Germany and Langstroth in America. These frame-hives, without doubt, give the bee-keeper much command over his bees and their stores. They may be described as square or octagonal boxes, fitted internally with light, movable frames suspended by their ends on a rabbet, back and front; within these frames the bees build their combs, and they may be easily induced to do so by laying a straight foundation of wax, which the little architects will readily follow. Notwithstanding the self-evident advantages of such hives, their introduction into England has made but slow progress. Among others, our rustic friend Hodge is very hard to move; that which his father did he does, but he looks with an eye of suspicion and dislike on all innovations; moreover, he can make his own straw hives, and the materials cost him nothing; but he must pay for wood, and with the plane and saw he has not much acquaintance. On the continents of Europe

and America "frame-hives" are now common, and more time, money, and skill are there devoted to an avocation which thus becomes of sufficient importance to be styled "bee-farming." In middle and eastern Europe, apiaries of from one thousand to two thousand stocks are not uncommon, but in the United States is probably obtained a larger return per hive than in any other part of the world. This is accounted for in great measure by the effectual and constant use of the "honey extractor." English cottagers with straw hives and ignorant management will rarely obtain an average of twenty pounds of honey per stock. In America one hundred pounds per stock is a common result, and rare instances have been known of as much as eight hundred pounds of honey produced in one season by a single colony of bees. Such a return has never even been approached in England; but a hundred and fifty pounds have been exceeded here.

The great harvest for bees commences with the fruit-blossoms in April, and when these are gone there is usually an interregnum until the end of June; then comes hard work for a month, sipping the sweets from a hundred flowers; which time being past, there is little more honey stored, unless the bees are in the neighbourhood of extensive moors, whose heather yields abundance of fine aromatic nectar. It is, indeed, a common practice in Scotland and elsewhere, where such favoured localities are found, for bee-keepers to send their hives of bees to the moors for a month, the honey thus gathered fully compensating for all expenses of carriage, &c. Pliny tells us that in his time it was customary in Italy, as soon as spring food for the bees had failed, to put the hives into boats, which were carried up the river at night, in search of better pasture; the bees went out in the morning in quest of provisions, returning regularly with their stores to their respective hives. Such is still the practice on the Nile, where travellers constantly meet bee-barges. And, by the way, Egyptian bees have a dreadful character for ferocity; their introduction into England has been essayed, but abandoned on account of their untameable nature. Swinefurth, in his "Heart of Africa," tells us of the following adventure which happened to his party:—"As our towing-rope was being drawn along through the grass on the banks it disturbed a colony of bees; in a moment, like a great cloud, they burst upon the men who were towing, who all plunged into the

water and sought to regain the boat; the bees followed them, and in a few seconds filled every nook and cranny of the deck. I was arranging my plants in my cabin, and called out to know the cause of the noise and confusion, but only got excited gestures, with the cries of 'Bees! bees!' I tried in vain to light my pipe; in an instant thousands of bees were about me, and I was mercilessly stung all over my face and hands. Vainly I tried to protect my face with my handkerchief, and the more violent my motions the greater was the fury of the bees. The maddening pain was now on my cheek, now in my eye, now in my head; the dogs under my bed were frantic, and burst out, overturning everything in their way. Losing well-nigh all control, I flung myself in despair into the river. I dived; but all in vain, for the stings still rained down upon my head. I crept through the reedy grass to the swampy banks, and with lacerated hands tried to gain the mainland to find shelter in the woods, but was dragged back by my servants with such force that I was nearly choked in the mud. Again on board, I dragged a sheet from my chest, which afforded me some protection while I gradually crushed the bees enclosed within. By great courage on the part of my people, my large dog was brought on board and covered with cloths; a smaller one was never recovered—stung to death, no doubt, by the bees. Cowering down under my sheet, I lingered out full three hours, whilst the buzzing continued uninterruptedly, and solitary stings penetrated periodically through the linen. Every one became equally passive with myself, perfect silence reigned on board, and the bees gradually subsided. Some of the crew then went stealthily up the banks and fired the reeds. The smoke scared away the bees, and the boat was drawn to the other bank. With the aid of a looking-glass and pincers, I extracted the stings from my hands and face, but could not reach those under my hair. Those produced ulcers which for two days were very painful. I felt ready that evening for an encounter with half a score of buffaloes or a brace of lions, rather than have anything more to do with bees. Several of our party suffered from violent fever. Of sixteen boats which followed us, all were pestered by these bees; and two persons were stung to death."

The unerring precision with which bees fly straight home is taken advantage of in the backwoods by men who are called bee-hunters, and who by a simple application of

mathematics are enabled to hunt up and to rifle the treasures of the wild-bees' stores. The course pursued is this :—Having reason to suspect that such a prize is in the neighbourhood, the sportsman displays a little honey on a plate ; this is soon visited by the bees, who are then adroitly covered by a glass ; one bee is let go, it rises, describes several circles in the air, and then strikes a *bee-line* for home. The confined bees are taken along this line, then another is liberated ; the direction of its flight is noted and marked by erecting a few stakes. The bee-hunter now moves a few rods to the right or left, and again liberates a bee ; its line of flight is also marked and accurately noted. The results are compared, and at the point where the two lines meet there will the hive be found.

The name and fame of the queen-bee is known to all ; and on the Italian slopes of the Alps there are many establishments devoted to rearing queen-bees for exportation. Thence comes the Ligurian or Alpine bee, which is found to be a superior variety to our old English compatriot. It is handsomer, a harder worker, and more prolific breeder ; and as exportations to England, America, South Africa, Australia, and various countries on the continent of Europe have been carried on successfully, the Italian variety is everywhere fast superseding the aborigines. The island of Cyprus is said to possess a bee as much superior to the Italian as the latter is to the common English variety. The queen-bees are sent out each in a little box, with a few hundred workers as escort, and sufficient full honeycomb for sustenance, and on arrival at their destination they are placed at the head of stocks of common bees, whose rightful queens have been previously deposed. As the progeny of the stranger will be all pure Italians, the stock will in a short time have lost its nationality.

The length of life of bees has been the subject of very diverse opinions, but the introduction of an Italian queen, as just described, has enabled us with reasonable certainty to settle the point. A queen may live five years, but as a matter of fact seldom does attain that age ; and her fertility sensibly diminishes in her third year. The maximum life of a drone and worker may be set down at seven months, but more often their days are numbered in seven weeks. Indeed the life of a worker may be measured by the labour done. By introducing an Italian queen into a stock of English bees when the

fruit-blossoms of April have to be rifled, and stores of pollen carried to the hive, it will be found that hard work has worn out the lives of the old inhabitants in less than two months ; while if the same experiment be made in November, not until April comes will the like result be found. The rest and quietude of winter thus greatly prolong the life of the bee. It is recorded by Thorley that under the leads of Ludovicus Vives at Oxford a colony of bees existed one hundred and ten years, but the individual inhabitants of which it was formed must of course have been renewed many hundreds of times. It sometimes happens that colonies of bees are found in very unlikely places. We know how Samson found a swarm in the carcase of a lion (Judges xiv. 8).

The natural swarming of bees is a sight and sound of pleasure and delight to all who witness it. Let us watch the exciting scene. In a cottage garden stands a row of the well-known rustic hives, straw-built and domed, topped, and with their interior mysteries as unknown to their owner as the mountains in the moon. The day is in June—hot and cloudless. The gudewife goes about her daily avocations in the cottage, but listening occasionally and looking to the bees, who on just such a day are likely to swarm. Glance at the hives : sweltering in the hot midsummer sun, hangs pendent from the alighting-board of one a black mass of bees as big as a pottle-measure. Yes ; there it hangs, a solid mass of bees ; probably ten or fifteen thousand in that one cluster, where every hot day they have been hanging out for perhaps a fortnight past—idle and useless, ready to swarm, yet not swarming, the old queen being disinclined to emigrate as there are no young princesses growing up to take her place—idle, because every cell in the hive is full, and useless, because they will not gather stores without warehouse-room to store them in ! At last the happy time has come. The bees, who have been this morning preternaturally still, commence to run restlessly in and out of the hive, until with a rush and roar out pour the workers in one continuous stream, which the queen soon joins, and all in the air dash frantically to and fro, with a noise that may be heard a hundred yards off. Southey has eloquently described how—

“Of congregated myriads numberless,
The rushing of whose wings is as the sound
Of a broad river, headlong in its course,
Plunged from a mountain summit, or the roar
Of a wild ocean in the autumn storm
Shattering its billows on a shore of rocks.”

Now, with a glad countenance appears the owner, and any friendly idlers near at hand, with shovel and key, or some such rough and ready instruments, strike up rude music, clang, clang, clang, as they "ring the bees." No rural bee-keeper would believe otherwise than that this wild din pleases the bees and induces the swarm to remain at home. If all goes well, in five or ten minutes the myriad darting atoms are seen converging on one spot, probably the branch of a tree or a row of peas. Here the queen and workers again gather into a larger black mass than we have before described. Think of suffocation in a crowd! what can be the sensations of the centre bees in that dense cluster? The bees being at length all settled and quiet restored, they are soon with a sharp shake precipitated into a new hive which has been "dressed," by brushing the inside with a bunch of sweet herbs dipped in sugared beer, and a new colony is started; enough bees being left in the old hive to carry on the work of the stock and complete the education of a new queen. It may, however, have happened, nay, it is not unlikely that even in spite of "ringing," the swarm of bees did not settle at home, but, to the dismay of their owners, ring they ever so wisely, after whirling about tumultuously for several minutes, have flown far away, where, unless quick eyes and nimble feet have followed them, they are lost, for bees will sometimes in such a case fly a mile or more.

For another scene let us take a bright spring day in early May, when all nature, lately awakened to new life, is smiling and fresh. Seating ourselves quietly close to a populous hive, we muse and watch the busy scene. The colony is all activity, and the gay yellow bands of the workers tell us they are the Ligurian or Alpine bees, now common among the advanced apiarians of England. What a busy throng! in and out, in and out, backwards and forwards, hundreds and hundred of restless little bodies, faster than the eye can count, they come and go all intent on one great care, "the welfare of the state." The full-blossomed fruit-trees afford nectar and pollen in greater abundance than even these busy bees can gather. With what delight the children run to see the bees, and try to count the active pollen-gatherers, who, returning home with their loads brightly visible on their legs, have just accomplished their unconscious task in nature by assisting in the fertilisation of the various flowers. The pleasant hum of the myriads of vibrating wings almost lulls one to sleep in the balmy

air, but a louder individual hum than usual elicits a cry from the children of "There's a drone, hurrah! summer is coming, and the bees will soon swarm." All is life, bustle, and activity; but mark the change should gathering clouds presage a storm, no more bees come out, but see the tumultuous throng going in! Tumbling over one another "sauve qui peut," in they go, and when the storm does come all are snug within. What a never-ending source of delight and interest to the little ones are the bees! Bright eyes and chubby arms are perfectly fearless of the anger of their little friends, and chuckle with glee as they lay their hands at the entrance for the busy army to run over, well knowing the bees are great respecters of courage in their friends, and rarely is confidence on either side abused. The whole atmosphere is now redolent with sweet perfume of mignonette, and gay with the azure blooms of borage sown for the bees. Let us see the "bee-master," quaint old-fashioned title, a relic of the olden times, investigate the economy of his colonies; with the protection only of a light gauze veil, pendent from the brim of a straw hat, but with hands uncovered, he calmly, steadily, and fearlessly removes the crown board or cover of the hive he wishes to inspect. Most people would expect to see the inhabitants rush out in a body and attack the bold disturber; but the fact is, they do nothing of the kind, a few impetuously take wing and perhaps alight on the hands of their master; but do they sting him? No! the practised hands remain quiet, unmoved and unharmed, many more bees come tumbling like a boiling mass over the sides of the uncovered hive, apparently seeking to know why their privacy has been so unceremoniously intruded on; and having satisfied their curiosity, back they go, to rejoin their forty thousand companions within. Whereupon, with a steady unflinching movement, and great care that no hurt shall come to any of the bees, the fingers now enter the hive and grasp the two ends of a frame filled with comb and covered with bees, many of whom will run over the hands as harmless as flies and very much tamer: few bees offer to fly, but remain to be returned with the comb to the hive. The apiarian now lifts out each frame *seriatim*, notes the prosperity of the stock or the reverse by the number of young bees in their various stages of growth, as well as the abundance or otherwise of the stores. On a comb near the centre we see the queen busily engaged in her never-ending employment of egg-laying. Now watch her, in her

all-important work ; stately she travels over the combs surrounded by a body-guard of her subjects, who make way for her as she moves, and are ready to attend to the eggs she lays. Her majesty inserts her head into a cell to investigate, passes over it, and, her abdomen having taken the place of her head, she turns half round until her antennæ are below the medial line, and her work is done, to be repeated again and again two or three thousand times a day ! Such is the fecundity of a young and vigorous queen bee, the mother as well as monarch of every other bee in the hive. The nurse-bees now take charge of the egg, a little white body curved and shaped like a cucumber, which is destined three days hence to give birth to a little white grub which, coiled up at the bottom of the cell, revels in a bath of chyle, a kind of jelly which forms its sustenance for a few days, until it passes to a pupa, and eventually it becomes a winged and perfect bee. The exact time for the happening of this latter event depends on whether the perfect bee is to be a queen, a worker, or a drone ; the first is matured in sixteen days, the second in twenty-one days, and the latter (which are the males) in twenty-five days. Strange as it may appear, the bees have the power, and may be guided by their owner to exercise that power, to make worker eggs or young larvæ into queens, and this is done by enlarging the little animal's cradle, and feeding it with more stimulating food. We may add, that it is part of the art of a skilful bee-keeper not to permit idleness in his apiary, and should he discover a colony of his bees to be in the same condition as we have been contemplating in the garden of our cottage friends, he would take summary measures to remedy the evil. Lose two weeks of his bees' time, not he ! especially as he can either *compel* his bees to swarm or empty their combs of the honey. If he decide on the former remedy, he proceeds thus. A new hive being ready, the old one is removed bodily ten yards away, and its place is filled by the new one. A sheet or newspaper is spread before its entrance ; number one hive is now uncovered, and the queen sought for ; being found, she is carefully placed in number two, to the front of which the old combs are carried one by one, and with a sharp shake nearly all the bees covering them are precipitated on to the newspaper, and close up to the entrance of the hive, into which they run and rejoin their queen, thus forming at once a swarm. The combs, with sufficient bees to attend to the brood, are returned to

the old hive, and if no larvæ are in process of growing up to royal honours, the bees immediately set to work to raise one, in which they almost invariably succeed. On the other hand, if our expert had decided to set his bees to work honey-gathering, he would first clear the combs of bees, and then obtain the honey by means of the honey extractor to which we have already referred. This instrument, by the application of centrifugal force, is made to throw out the honey from the rapidly revolving combs, and that without the combs receiving any injury. The use of this machine is as yet little known in England, but it is undoubtedly destined to work a revolution here, in honey raising, as it has already done in America, which go-ahead country probably boasts the largest bee-keepers and best bee-managers in the world. It is recorded that Mr. Harbison, of San Diego, California, in 1874, sent to market sixty-seven tons of honey in best marketable form. This extensive bee-farmer has two thousand stocks of bees, the whole of which are managed by himself and eight apprentices. Very marvellous it is, indeed, to the inexperienced to see the impunity with which an accomplished bee-master handles his bees, and his indifference to their occasional stings. As to the latter, the blood becomes inoculated, and what was at first a source of great pain and irritation becomes merely a slight annoyance, and sometimes scarcely that. However expert a bee-master may be, if he often disturbs his bees, he cannot avoid being sometimes stung. The bees certainly appreciate and respect courage and care, while flinching and hesitation on the part of their owner is a temptation they cannot resist, and those who exhibit such weaknesses are often reminded of the very potent weapon ever ready to be used. Bees also have an uncomfortable habit of crawling up one's sleeve, &c., and presently feeling aggrieved at some unwonted pressure, they are apt to commit "happy despatch," for the operation of stinging is death to the bee.

A century ago one Daniel Wildman astonished the metropolis by his performances with bees. He had an exhibition at Islington, which showed he had considerable acquaintance with the habits and dispositions of these interesting insects. It is said that he could cause a swarm to settle almost instantaneously where he pleased, even on himself. The solution of this apparent marvel was simply the possession of the queen : wherever she was placed, the bees would follow, and by means of a silken thread round her waist she

could be confined where desired. It is a fact well-known to bee-masters, that bees, when full of honey, or when thoroughly alarmed, lose all disposition to sting unless actually hurt, and a knowledge of this enables the bee-master to obtain an easy control over them. Let us again repeat, that the practice of destroying bees by brimstone in order to rifle their stores, is simply cruel and unnecessary: a few smart raps on the hive will cause all the bees to fill themselves with honey, and they can then be driven out even to the last one, and their lives saved for future usefulness by joining them to another colony, which will

be greatly benefited by this addition to their numbers.

There are many superstitions connected with bees; in most country districts it is believed to be unlucky to sell them: if you wish to supply a neighbour with such live-stock, sell him the hive, not the bees; they must be a free gift. Others believe that bad luck does not follow if gold be paid for them. Should any of the family die, the bees must be told of it, and a piece of crape put round their hives or, so the superstition runs, they will die too; and a like fate will befall them if their owners engage in any quarrel about them.

J. HUNTER.

NATIONAL HEALTH.

VII.—HEALTH AND LEGISLATION.

IN ideal moments we may be allowed to contemplate the existence of conditions in which communities shall live in perfection of sanitary splendour. It is allowable to picture to ourselves days of peace, knowledge, wisdom, and plenty, when all possible advances, as they to us appear at this time, shall be realised; when premature death shall be looked upon as an accident, death induced by ignorance or neglect as homicide, and misery from want so hideous a social deformity, "that to be hated needs but to be seen."

These days are, I fear, afar off. That they are possibly near is indicated by the circumstance that some can in the extreme distance see them and describe, in however a feeble manner, what they are likely to be. When they come, as they will, they will not perchance be perfect, but will open the view to other vistas also afar off which new eyes will then strain to discover. For still will remain those who, repeating the words of a civilisation ages before ours, will say, "And I gave my heart to seek and search out by wisdom concerning all things that are done under heaven: this sore travail hath God given to the sons of men to be exercised therewith."

While, then, we anticipate the future and hopefully set up our standards of excellence, we must not walk through the present in our dream, but rather work wakefully to set forth the future within the present, so that all changes leading to what may be considered utopian results may come by such natural footsteps that to the beholders they shall steal without perception of the radical transformations they accom-

plish. We must work, in fact, remembering the aids we can call into the labour of reformation; the characters of mind that have to be drawn into the labour; the demonstrations of good that have to be made clear and repeated; the prejudices that have to be removed; and the hopes that have to be engendered. He is no sanitary reformer of the true school of reform who cannot comprehend all these points of view in the great discussion on the argument *sanitas sanitatis*.

It is in my power to say that the advances which have been made in the appreciation of sanitary matters have been, in this country, of the most certain and satisfactory kind during the life of the passing generation. Just a quarter of a century ago, as one of a very small body indeed of sanitary scholars, I was struggling to establish the first *Journal of Public Health* in this country. The effort was abortive. No publisher would touch the work, and so few subscribers would assist, or promise assistance, I shrank from the project for a time in despair, to be dismayed still more on seeing a similar attempt by an esteemed colleague and friend, the late Hector Gavin, come to grief. At last, after three years of preliminary labour, I ventured, in 1854, to bring out the first number of the *Journal of Public Health and Sanitary Review*. Backed in the enterprise by the council of the Epidemiological Society of London, who gave me their valuable Transactions for publication, and purchased a certain number of copies of the *Journal*, I commenced with some advantages, and I think the *Journal* was fairly conceived. The motto I invented for it—"National health is national wealth," a

motto which has since passed into a proverb, and been ascribed to Benjamin Franklin and other authors, but which was quite original—has been of some service. The *Journal* was kindly and ably sustained by its contributors, and as the name of nearly every then known sanitary reformer in England was enrolled on the list of contributors, it may be some time of use, historically, for the record that has yet to be written of the early progress of sanitary science in this country.

Since the period of which I have spoken the changes of public opinion that have taken place on matters of sanitary science are so great as to be startling when they are recalled. The tabooed subject is the subject of the day now. Every household circle is full of it; the legislative chambers are charged with it; the press finds it one of the most taking, as it is certainly one of the most useful, subjects of debate; the medical profession, which with a noble self-sacrifice has always been foremost in the work of sanitation, is moving in its behalf with a zeal that might reanimate Hippocrates himself; and, best proof of all, poor authors and students and, shall I say, enthusiasts on the subject like myself, find they have at last a hearing, and a success in their labour.

Never did Shakespeare write a thought more perfect in its truth than when he said, "Teach thy necessity to reason thus, 'There is no virtue like necessity.'" The truth has been most faithfully exemplified in the history of sanitary progress in England. To my mind it is clear that the necessities of the great Crimean campaign formed the means by which the progress of sanitary work was made sure amongst us. The principles had been taught long before. The great philosopher and Chancellor, Lord Bacon, had proclaimed them in terms so remarkable, they ought not to have been forgotten; and all through the second quarter of this century have sprung direct from his time. They remained little heeded until there was a struggle on the part of men of science to bring the national mind to a correct comprehension of what was needed. The Crimean disasters were, however, wanted to create the required deep impression, and to quicken the national heart to steady and effective work.

At this moment we are so fully alive to the risks our forefathers have in their ignorance accepted, and are so eager to lay in our generation a better foundation for future generations, that the prominent danger lies in proceeding too rapidly with what is con-

sidered to be, but is not always proved to be, reform of the national health. All intended reforms, to be safe in their course, must be gradual in their development, must grow, as the solidest and finest trees grow, and like the trees must, probably, fall out of leaf for a while that they may renew their life after repose from active growth. Such reforms must be founded on actual knowledge, and must be understood by the masses in the order they are set forth. This statement, which holds good in a general sense, is specially true in relation to sanitary inquiries; for so intimately is each step in the art of preserving health mixed up with social questions of various kinds, that a few false moves, a few impracticable and perhaps unscientific attempts hastily made by amateur sanitarians, for the purpose of doing something, may merely do harm ultimately to the cause they were intended to advance.

I make these observations because it is obvious to all who, by education and occupation, are specially devoted to the pursuit of sanitary knowledge, that the efforts, which at the present are being made by the parliament and by many public bodies, are undertaken without regard to system, and without any definite or comprehensive object. The elements of the sanitary question are few in number, but they lie much deeper than is generally supposed. Many recent and notable health measures are but temporary in their character, and are scarcely calculated to affect the great questions at issue, either for evil or for good.

There is a strong feeling abroad at this moment that legislative enactments are capable of doing service in the preservation of health, and the suppression of disease. I do not deny that a decision in a law court may occasionally check or remove some real or supposed cause of disease; but I doubt the correctness of the principles of coercion, and more than doubt the general competency of the men upon whom devolve the duty of adjudication and of inflicting fines and penalties on those supposed to be guilty of breaking sanitary law.

The labours of the true sanitary reformer lie, I believe, in four directions.

1. In an endeavour to understand simply the nature of diseases, their alliances, their true distinctive characters, the modifications to which the body is subjected under the influence of diseased action, and the chemical or physical measures best adapted for removal and prevention of disease. Labours of this kind require the highest order of

scientific learning. They are altogether removed from the business of the mere politician, and they imply in him who prosecutes them a mind fully charged with all the modern doctrines of chemistry, physics, and the laws of life. These labours tend to lead the mind from effects back to causes.

2. In an endeavour to seek out primarily the causes of diseases, irrespective of the symptoms and the other details involved in the consideration of the diseases themselves. Efforts in this line of research should embrace observations conducted on a large scale, and bearing on the effects of locality, climate, season, meteorology, contagion, habit, diet, and occupation, in giving rise to distinctive types of disease.

3. In striving to make the vast stores of information already acquired in regard to the two forms of inquiry above noted accessible to all classes of society, and in having them scientifically popularised and diligently taught, especially to the young.

4. In giving free scope and encouragement to those mechanical arts which tend to improve the beauty and convenience of towns and cities, to lessen muscular labour, to increase the comforts of the poor man's home, and to introduce such an elevated class of amusements for leisure moments as shall make the hearts of men happier, and their minds refined.

In these offerings to reason and knowledge lies the true reform, the *elixir vite*, which carries all the charm the quack-salver's bill claims for the quack-salver's pill.

In the prosecution of the few and simple principles thus sketched out is embodied, I believe, the beginning and the end of sanitary science. These ignored, all else is mere practical diletanteism—a playing with the details of principles, while the principles themselves are undeveloped. Right honourable and honourable gentlemen may discourse in the senate house, and sit on committees of inquiry, and publish tons' weight of blue-books, and preside over boards of health, and invest magistrates with new powers; but the mortality tables of the Registrar-General will still tell how little can be done until a new impulse is given bearing on the leading improvements which I have endeavoured to define and point out.

There are some diseases which seem to stand forth independent altogether of what are usually understood as pernicious influences, diseases which have a specific cause of which we know nothing whatever, and cannot even form an idea. There are

other diseases, the propagation of which are as easily traceable as is the generation of the living world. If legislation must do something, why should it not direct inquiry in reference to this distinction? And when it has made out a few facts regarding those diseases, the propagation of which is understood, why should it not make a trial to lessen or extinguish them? There is a disease of diseases which a mock morality makes it a very crime to name, but which leaves its base imprint more or less marked on every hundredth babe, at least, born in this kingdom, and which engrafts a host of maladies on half our Saxon race. This of all diseases is most preventable by coercive legislation, if such legislation can do anything whatever. But it cannot. It cannot stop small-pox, though it has Jenner's discovery in its right hand.

The two instances of imperfect legislation to which I have referred above are excellent examples of the difficulties that lie in the way in enforcing legislation on a people that revels in freedom, even when the legislative action is necessary for the actual protection of life as well as health. There can be no doubt in any unprejudiced mind that the Contagious Diseases Acts and the Vaccination Acts have controlled two of the most fearful of the diseases afflicting the human family. Yet the difficulties of maintaining these Acts in operation are so persistent and so great, it is doubtful whether the Vaccination Act itself may not sometime be repealed under the pressure of the stern opposition that is made to it. Yet how unreasonable the opposition is, how thoroughly it is maintained by simple want of knowledge, is proved by this one circumstance, that the members of the medical body, who are by necessity most familiar with all the dangers and all the advantages attending the process of vaccination, are so satisfied as to the infinitesimal character of its danger, and so assured of the infinite quality of its advantages, they are, of all sections of the community, most anxious to secure for themselves and their children the protection it affords. On the occasion of the prevalence of small-pox in 1870-1, a public vaccinator to whom I applied for the vaccination of my own family informed me that the doctors alone gave him sufficient employment for another pair of hands, that they were always the first to apply to him, were most importunate of all to take advantage of the prophylactic, and were, he believed, all but universally protected by it. The fact sufficiently accounts

for the immunity from small-pox which the doctors, who are most of all exposed to the poison of the disease, exhibit during an epidemic. It suggests at the same time singular contrasts, in action and in result, as between them and those who on no knowledge at all, object to the process.

The practical lesson that is to be gathered from these strange and anomalous experiences is, that legislative action which is opposed to free-will will always be the most perplexing to the legislator, and, except in instances of absolute necessity, should never be attempted. Free-will combined with ignorance is resolute, and usually wrong; free-will combined with knowledge is so right it needs no coercive law. When he meets the first, the legislator must be in perpetual contest, and must make his way purely by the strength of his position. When he meets the second, the legislator has nothing to do but lay aside his power, let the freedom and the knowledge take their own course and guide him.

Must it then be said that the Government has no responsibilities and no duties in respect to the maintenance of the national health? Must local administration, or private enterprise, or individual effort, alone or in combination, be left to their own discretions and devices? By no means. There is full scope for the action of Government, independently of its doubtfully useful coercive functions. There are before it certain grand supervising and directing functions which, up to this time neglected, should at once be brought into consideration. I cannot do better than invite public attention to some of the more important of these functions of Government. They are vital in respect to the interests of the whole community, but, vital as they are, they are certain to receive no application through the legislature until an enlightened public opinion enforces the fact that it demands their institution.

GOVERNMENT DISEASE RETURNS.

The first grand sanitary work demanded from the Government is the institution of a department for the registration of disease throughout the whole of the United Kingdom. It is as vain for the State to apply legislative action for the prevention of general disease, while it is ignorant of all the phenomena of disease that are present, as it would be vain for the physician to write a prescription for a particular form of disease while he is ignorant of the symptoms of the malady, and the circumstances under

which it was developed. I have been hammering at this subject now for twenty-two years, and at the risk of hammering again, I repeat that it is the first essential for the good of the nation that the registration of disease should be made as distinct a part of the business of the State as is the registration of births, deaths, and marriages. The registration of births, deaths, and marriages shows admirably the balance that is paid over by disease to death. We want now to know the balance that is paid over by health to disease, and the reasons of the debt.

The registration of disease is one of the simplest duties that could fall to the action of the State. It has only to be done, and might within any one year be in as perfect working order as the registration of births, marriages, and deaths. I say this not from any theory, but from direct experience. In the year 1855 I commenced an effort to test the practicability of this scheme, and was soon assisted by a large body of competent observers. At one time fifty observers were lending me their services, from forty-four points of observation, extending from the Scilly Islands to the Hebrides. The facts were published quarterly. The diseases affecting the human subject, the diseases affecting the lower animals, and the diseases affecting plants, were recorded with more or less of detail; and in some instances the observers added an excellent account of the meteorological conditions that had prevailed in their districts during the periods of observation. These returns were commenced in the March quarter of the year 1855, and were continued regularly for four years. They were published in the *Journal of Public Health*. The records of disease, obtained as I have described, may still be read with profit. In one of them, reported by Mr. Haffenden, of Canterbury, from the notes of eight observers, there was given, in the spring quarter of the year 1857, the first distinct account of the outbreak of diphtheria in England, from a series of cases observed at the village of Ash, by Mr. Reid, of Canterbury. If to the Government such a report of a disease new to the country were conveyed immediately on the outbreak of the malady, I need not tell how important might be the action of the Government in stamping out the plague at its first source.

The success of the experiment for the registration of diseases was the actual cause of its failure. It was impossible for any one individual to bear the labour and the expense of collecting and publishing regularly the

returns of disease from fifty observers, though their valued labours were freely given. When, therefore, the experiments had been fairly tried and shown to be practicable, I laid the results before Sir Benjamin Hall, who was for a time President of the Board of Health, and suggested to him that the weekly records of the union medical officers of the kingdom should, by a very simple modification, be utilised for registration of disease, after they had served the primary local purpose for which they were intended. Sir Benjamin Hall received the scheme with much favour, and promised to take the opinion of the Registrar-General upon it; but after a little time, he informed me that the carrying out of the design would involve an expense which the public, he believed, would hesitate to meet, so the effort was not made.

In scientific research it is so common for the most laborious series of researches to fail in their direct object, that men of science become inured to failure, and soon cease to lament over it. I confess, however, I have never ceased to lament the failure of my original proposition for obtaining a complete registration of disease in this country. I regret most deeply the time that has been unnecessarily lost. If I could have continued to have received reports four times a year from but fifty observers during the twenty-one years that have now passed, I should by this time have collected over four thousand sets of facts relating to disease, from which something useful must have been derivable. If the larger scheme I proposed had been carried out, if the weekly returns of the three thousand poor law medical officers had been utilised for the same period, instead of being allowed to go to destruction when their first use was over, some three million and a quarter of facts, relating to diseases and their causes in England and Wales, would by this time have been collected. It is impossible to estimate this deplorable loss of knowledge, yet still the loss goes on. I name the subject in order to urge forward an endeavour to prevent the further and continuous waste of knowledge. To know the diseases of this country in their entirety, to know the relation of the diseases in men to the diseases of inferior animals and of plants, to be able to fix the special localities of special diseases, to be able to trace the diseases back to occupations, modes of life, and all the external exciting causes from which they spring, were knowledge which every Statesman surely should long to acquire. Such know-

ledge is the best history, the best book of reference that could be obtained, from which to read the health, and thereby the wealth, of our people. Domesday-book were a poor contribution by the side of that book of vital possessions to which I once again venture to direct public attention.

GOVERNMENT WATER SUPPLY.

There are certain common necessities of life which, supplied from impure sources, are the causes of many diseases, but which, supplied from pure sources, are the great maintainers of health. The grandest representative of these common necessities is water. The animal body, as I have already said in a previous paper, is made up more of water than of any other compound that enters into its organic construction. For this important, all-essential constituent we have had to depend hitherto on various supplies; on the rain that falls into the cistern; on the river that flows near our houses; on the wells that are sunken into the earth; on the rivulets that flow out of rocks, or out of the earth,—natural springs. Precisely as these sources have been found for the convenience of the inhabitants, they have been resorted to without any reference whatever to the healthiness of the supply. Not until these late years, not, indeed, until Dr. Snow some twenty-five years ago began to direct the attention of the world to this all-important subject, supply of water in relation to health and disease, and to demonstrate by his wonderful researches the fact of its importance, did the wisest of men look with any anxiety on water as a source of disease. Afterwards, when Snow had made it appear most clear that cholera is dependent on certain kinds of impure water, the wider question of the whole influence of water in the production of disease came forward for discussion; old and half-forgotten truths began to be revived and put into their proper place, and new truths soon burst into light. The result has been to show that a large number of diseases, which were originally supposed to be due to some occult and unremovable cause, are due to the consumption of impure water. Typhoid fever has been traced to water charged with organic decomposing excreta, and perhaps to other organic decomposing substances. Cholera has been traced to the consumption of water holding in it the poison of cholera. Goitre has been traced to the consumption of water containing an excess of saline constituents. Ague has been clearly traced to

the drinking of marshy water as a cause. Paralysis has been found to occur from the dietetic use of a water charged with lead derived from leaden pipes. Diarrhœa and continued fever have been constantly discovered to arise from the swallowing of water derived from wells contaminated with sewage or the fluids from filthy drains and stagnant pools.

In these and some other directions the connection of acute and chronic diseases with the water supply has been satisfactorily determined, and now it is frequently asked, by the community generally, when the healthiness of a place is under consideration:—What is its water supply? Every one, in fact, who knows anything at all is alive to the necessity for a proper supply of the natural fluid aliment of man and beast; while the learned have so far advanced in their knowledge as to be able to compute the rate of healthiness of a place and the character of some of its prevailing diseases by the examination of the water with which the people of the place are regularly fed. With all this knowledge, general and special, it remains too true that the supplies of water throughout the country are so uncertain, and so often bad that they are a persistent cause of the most serious diseases. The health resorts of England, as they are called, and as they would be truly called if they were properly fed with water, are amongst the worst of the water-contaminated centres.

To meet the dangers arising from supply of impure water we have so far had to depend on the exertions of private companies, or in rare instances on the public enterprise of municipal bodies. Some advance has been made from these efforts, and sufficient has certainly been effected to prove that in water supply, as in everything else, "where there's a will there's a way;" that no barriers lie between healthy men and healthy water which modern science cannot overcome; and that the purest water is a commodity to be ensured at a fair cost of money, and the labour and skill which money purchases.

It seems to me that at this crisis the legitimate duty of the Government is to legislate on the question of water supply. The Government now knows, and the people know, what precisely is wanted in respect to the maintenance of health by water food. Both know the dangers that belong to neglect on this great subject. Both know equally well that supply of water to the whole kingdom, to every city, town, village, hamlet, separate mansion, lodge, is out of

the range of pure private enterprise, and cannot be safely entrusted to an unlimited number of independent companies, each liable to differ on matters of science, economy, and method. Government and people, therefore, should be of one mind to place the management of the supply under strict legislative enactment, so that every living centre should be made certain of receiving the first necessity of nature in the condition fitted for the necessities of all who live.

There are two processes by which the legislature may proceed to act on this question. It may declare what is a standard of a pure water, and enforce all municipal and local boards to supply such water to those whom they locally govern. Or it may take the whole business into its own hands, as it has the postal supply, and be itself responsible for waterworks everywhere. I do not discuss the merits of these respective systems. It is sufficient to indicate that on this subject it is time for the public to enforce on the legislature decisive action.

To see that the nation has a pure supply of water is not more important than to ensure that supplies of fatal drinks shall in some measure be reduced and in the end abolished. For more than a hundred and fifty years this question has been before the legislature, and still I fear the Lords of the Privy Council might write by her Majesty's command to the Custodes Rotulorum of the several counties, precisely as the Lords of the Privy Council wrote by his Majesty's command on March 31st, 1743, "That the excessive drinking of spirituous liquors has not been prevented by former Acts of Parliament, but still continues the same;" and it is there complained of as "a custom destructive of the health, morals, and industry of his Majesty's subjects, and to the peace of his kingdom." There are few now who do not admit the evil that has to be legislated for, and the necessity of immediate legislation; none, except those who are directly or indirectly profiting, or thinking that they profit, by the sale of strong drink. Every legislator who speaks deplores the evil, and would, he says, fain crush it. Every candid legislator knows that the nation is ready for the gradual abolition of the drink traffic. Yet only about one in seven dares to propose legislative action, and no Government dares to touch the question with a view to restrict the sale of the most useless article at its best, and the most fatal article at its worst, of all human beings buy and sell.

The future historian, watching the curious contest that is now in progress, and seeing its bearings with a distinctiveness we cannot realise, will have many speculations on the reason why such a contest was so long on hand, and why the greatest enemy of civilised man was allowed so long a reign. He will probably come to the conclusion that the chief reason was of a physiological character. He will say the generation did not see the evil because they were born to it, begotten in it, begotten upon it. The degeneracy of liking the enemy had to be bred out before a majority could exorcise it by the action of their free-will. The time, I think, approaches when the generation is sufficiently changed to begin the process of exorcism. It can only begin practically by legal enactment. I know it will be said that such moral extension of temperance as will give direction and power to political movement might be expected to move everything in due order, and with due effect, without the introduction of any one addition to the statute book. I would be second to none in supporting moral over coercive human law, in cultivating virtue, if I may so say, by fashion rather than by penalties and punishment. But in this drink question, the law as it stands is hopelessly involved. The law which should protect the nation from the folly and crime of drink, actually legalises, and it is not saying a word too much to add, patronises and sustains the evil. It exacts dues out of the iniquity, and doubles the injury which the enemy himself inflicts. It allows every temptation to drink to stand forth in the public thoroughfares to catch the ignorant and unwary. It trains the ignorant, by these means, into drunkenness; robs the man it trains of money for what are called State purposes; punishes him if in his trained, legally trained, madness, he commits some offence against society; and finally leaves him unprotected from his own acts when his madness is fully confirmed. Can any system be worse than this, or more urgently require reformation?

It is not necessary to ask the legislature to adopt any process for reducing the power and efficiency of rational free-will in order to ask it to do something to help those who are struggling to put down the great crime of our age, and who fail to triumph because the legislative machinery stands across the way. It is only necessary to pray the legislature to remove its own acts by which it has given license to a large class of men to traffic in alcohol to the injury of the national health,

if they will but pay a license for the privilege of inflicting the injury. The State here surely can say we will not take part in the wholesale disposal of an article that is to be retailed for the life service of none who buy it, but for the fatal service of the many who buy. In this case, in fact, the State has merely to withdraw its protection; to place the drug alcohol in the same position as other chemical bodies of the same class; to recognise that death produced by alcohol is the same as death produced by any other poisonous agent; and, to leave the use of this agent in the hands of those who are learned enough to know how to use it, if it be at any time a warranted necessity. Presuming the State has not power to act altogether in this concern, it should at least give fair play to those advanced communities which in their own spheres are anxious to legislate for themselves; which beg for no more than that they, by their free-will, may exclude an evil they abhor; and which hope, by the example they would set, to extend their movement until the supreme will of the people should emancipate the legislator from all peril and responsibility when the time comes for a prohibitory decree that shall transform the local into the imperial policy of the nation.

I have included in these three heads the most important measures which, to the mind of the sanitarian, first call for the attention of Government. There are many other reforms that lie prominently for notice, but it were only to embarrass legislation for the public to agitate for them until the greater measures are carried. The complete registration of diseases and their causes; the complete supply of pure water for all classes of the community; the suppression of the most determinate and extensive cause of many and fatal diseases;—these are legislative labours of so much moment they may well precede, and exclusively precede, all minor measures of a domestic character and interest.

For the due consideration of these great contemplated measures, and for the due working of the sanitary laws and regulations which already exist, an important reform is required within the Government itself. It is essential that there should be a recognised minister of health holding a seat in the Cabinet, and having a department under him that should be completely organized for dealing with every matter pertaining to the public health and life. At present sanitary supervision is so chaotic the nation does not really appreciate the quantity or the quality of the sanitary work

that is actually performed for it. The Registrar-General is an important State sanitary officer. The President of the Local Government Board is an important State sanitary officer. The President of the Board of Works is in some sense an important State sanitary officer. The Secretary of State for the Home Department is vested with duties which can only be interpreted as sanitary. In this confusion sanitation stands connected with legislation by so many loose ties, it is, according to the popular mind, disconnected and inoperative. It has no fixed place in the system of government, and is treated consequently as if it had no fixed or enduring importance. The consolidation of all that now exists of official sanitary work into one department, under the direction of a responsible minister fitted by education for the ministerial duties, would do more to bring the people to the

idea of sanitation as a distinctive part of political science than any step that has been taken in the whole political sanitary history of the country.

We must probably wait long for sound legislation on matters of health, for there is always more tempting metal than health before the gaze of the politician. But we must not, therefore, weary in sanitary work. Each man and woman is a politician in the circle at home, and if each will work intelligently in the million little centres which under the name of home make up the nation, the Minister of Health, who must one day appear, will be looked up to as one of the most honoured and responsible servants of the commonwealth: the physician, *par excellence*, whom Alexander of Tralles himself might envy.

BENJAMIN W. RICHARDSON.

FROM PALERMO.

O'ER snowy Alps and tossing seas,
To me, an idle wanderer, comes
A memory with the northern breeze—
A touch of hands from English homes.

I roam 'mid ruins rich in fame,
And on the days of glory muse,
When Carthage, with her heart on flame,
Wrestled with Rome for Syracuse.

While Clio bids to greater themes,
To strike a lyre with sterner strings,
And mingle with remoter dreams
The fights of old Phœnician kings.

But this fair shore, where roses dwell,
And reaches of the silver main,
Encircled by the Golden Shell,
Demand from me a softer strain.

So, loitering up Sicilian glades,
And climbing cliffs that Pindar sung,
I gather flowers, 'neath olive shades,
'To speak to thee in English tongue.

No brighter haes around were spread,
When Proserpine, with all her girls,
Forgot the hours on Enna's mead,
Nor gentler breezes fanned her curls.

In far green valleys, I forget
The whole dim world of strife and care;
The Graces wreath their dances yet,
With them I breathe a calmer air.

The hopes that have a second birth
Revive, fresh splendours are unfurled,
And, treading on a kindlier earth,
I realise a wider world.

Still, 'mid these realms of antique art,
Of classic sculpture, Arab dome,
And tropic fragrance, half my heart
Points, with my compass, o'er the foam.

Not wholly in the Syren's thrall,
I set afloat my random rhymes;
And pluck the branches that recall
The message borne from colder climes.

The lily's light, the violet's ray
Purpling, like eve, in this rich sky;
And daisies, blooming where the day
Beams with an ever azure eye.

Receive these blossoms of the year,
Grown, where eternal summer smiles,
Round the great gorge, without a peer,
In this the pearl of all the isles.

JOHN NICHOL.

WHAT THE KETTLE WAS SAYING.

"I WONDER what you are making all that noise about," said Malcolm one dark evening, as he sat on the hearth-rug before the nursery fire, hugging his knees, and waiting for tea-time.

It was not at all strange that he should want to know what the kettle meant, because it really was making a most ridiculous fuss—all about nothing, as it seemed; and just as he spoke, there came a still more vigorous puff and splutter, and a few boiling drops of water flew out, and fell on the hearth directly in front of him.

"What's all that hissing and singing about?" said Malcolm to the largest drop, "what's the use of making such a noise?"

"It's that horrid kettle," said the drop, "it's a great shame, he wants to keep us shut up in there, and we are all begging him to let us get out and go and do our work."

"But Nurse put you in there to make our tea with, and she'll soon pour you into the teapot, and then we'll drink you, you know," said Malcolm.

"Will she? Then that's quite a different thing; if we are being useful, we don't mind being shut up. I wish I could tell my friends in there that they're being useful!"

"What would that matter to them? They are only drops of water, they don't understand anything," said Malcolm contemptuously.

"We have seen and done a great many wonderful things," answered the drop, rather stiffly, "we understand a great deal more than you think."

"Why, what have you seen? You haven't been to the Circus like me, and I'm sure you've never been in a railway train!"

"Are you quite sure? Some of my friends in there have been in a train, and I've seen quite as wonderful things as what you call a Circus."

"I don't believe it: where did you come from?" asked Malcolm, rather rudely.

"I used to live in the Sea," said the drop.

"Did you? Why, then, you must be salt!" cried Malcolm, with a horrid fear coming over him that his tea, for which he was waiting so anxiously, would not be quite so nice as usual.

"No, I am not salt, and that is just one

of the wonderful things I could tell you about. Would you like to hear?"

"Oh, yes, if you please—go on—tell me a story." And he laid his head down on his knees, and drew a little nearer to the fire, to listen comfortably.

"Once upon a time," began the drop, "I lived in the sea; I was very happy, for I had nothing to do but to dance about all day, and run races with my companions, or play hide-and-seek among the seaweed that hung down from the rocks on the shore. But one day, two little things like you——"

"Boys," suggested Malcolm.

"Yes,—boys,—were playing on the shore, and we were running after them, and trying to catch their bare feet and wet them, when one of them cried out, 'This is stupid work, I'm tired of it, let's make a pond and sail our boats.' The other clapped his hands and shouted, 'All right, that will be great fun,' and ran away to fetch their boats and their wooden pails. It was not long before they had carried me and a great many of my playfellows away from the rest, and put us into a hole in the rocks, just like those I had often jumped into for fun when I was playing hide-and-seek, only it was a long way up from the sea.

"The boys sailed their boats till they were quite tired, and till the Sun had gone to bed behind the hills. Then they ran home; but we lay still in our pool, waiting for some of our companions to come up and take us back with them into the big sea; but all through the long dark night, no one came near us.

"In the morning, the Sun rose just as usual, but instead of smiling at us, and sending his servant, little Breeze, to play with us, he looked at us very solemnly, and began to talk to us.

"My dear little children,' said he, 'you have spent quite enough of your life here in play, and it is now time for you to begin to do some of the work that you were made to do. Nothing in the world was made only to amuse itself, or to be idle, and though you do not know it, even you little playful drops are able to do great work.'

"We were rather frightened when the Sun spoke to us so seriously, so differently from his old way,—for he used to do nothing but amuse us, play at looking-glasses with us,

and build long trains of golden light for us to go and dress up and dance in. But one little fellow took courage and asked him,—

“Of what use can we be? We are so small, and we don't know how to do anything but run about the shore and play.”

“You have been doing some work already, even in your play,” said the Sun smiling; “you are each of you carrying about a very precious burden,—something that neither men nor animals can live without. But now you have done all you can for those burdens, and you must leave them behind, and come up to me, and I will give you some other work to do. It is quite true that you are very small, but should you like to know how to make yourselves big?”

“Oh, yes,” we all cried eagerly.

“Always be ready to help one another; what one drop is not big enough to do, perhaps two can do: if two cannot, perhaps ten can. Help every creature or thing that wants help; a little help which comes just at the time when it is needed, is a very great help indeed. If you are always helping one another, you will always be big enough for your work.”

“As he said this, I saw that a great many drops were flying up into the air, and getting out of sight, and just as I had made up my mind to do the same, I saw the boys who had played with us the day before run up, and I heard one of them call out—

“Oh! look here; our pond is nearly dried up, and there's such a lot of white stuff left in it; I wonder what it is!”

“Why! it's *salt*,” cried the other, “let us scrape it out, and take it home to put in our porridge to-morrow morning!”

“I rose slowly up into the air, not sorry to leave my load of salt behind for the boys' breakfast, saying good-bye to the sea and the rocks, and all my old friends, wondering where I was going, and what my work would be, till I found myself among a crowd of drops of water, all being driven along, away from the sea and towards the land.

“Come on, little fellow, or you'll be too late; fly along with the others, they have just started,” said a soft voice; and I saw behind me a tall man dressed in pale grey robes, and felt that he was driving me forward very gently.

“Please, sir, who are you?” I asked in my most polite manner.

“My name is South Wind,” said the man, “and my master has sent me to drive you little rain-drops to your working ground;

and now, please, get on as fast as you can, or your cloud will leave you behind.”

“So I flew along, as he told me, and soon came up with the others, who were getting greyer as they went, till they looked just like the grey man's robes.

“Where are we going?” I asked of a drop quite close to me.

“I don't think we shall go far,” the other answered. “I heard the Sun tell South Wind to make haste, for the country was so dry, there had been no rain for three weeks. He told him also that his cloud was not nearly large enough; he would get some more drops to come up from the sea and join him. South Wind said he could not drive any more drops along without somebody to help him; but the Sun answered, ‘Oh, I think you can manage it very well, you have not far to go; and North Wind will come and help you to set them to work when you get to the right place.’”

“What will our work be, I wonder?” said I. “Have you ever done any work?”

“Oh, yes!” answered the other, “I have been at work for a long time; the last thing I did was—”

“Stop! stop! you have gone quite far enough,” shouted a rough, harsh voice. “They are all wanted down below here, and the sooner they go the better.”

“All right, North Wind,” said our gentle grey driver; “if you will send them about their business, I will go and fetch another cloud.”

“So saying, he disappeared, and North Wind rushed in among us, knocking us about and shouting, ‘Now, then! off with you, and see who can get to the earth first!’”

“What a grand race we had all the way down from the sky, North Wind chasing us and blowing us each in the way we had to go! Even hide-and-seek among the rocks was not half so much fun.

“I landed at last upon a raspberry leaf, and was not at all sorry to lie still for a moment after my splendid scamper; but the leaf exclaimed at once,—

“Oh! here is a drop of rain at last. Please help me to get rid of all this dust that is choking me.”

“I looked at her and saw that she was quite covered with dust; there was hardly any green to be seen. I tried with all my might to clear her, but the dust was so heavy I could not move any of it.

“Oh, dear!” said the leaf, “you're too small. Dear Mr. Bee,” she continued, speaking to one who had just settled near

her, 'do go and look for a few more rain drops, I am sure there must be plenty of them about. This kind little drop would like to wash me if he could, but he is not big enough. Please send a few more to help him.'

"The bee buzzed about for a few seconds, looking out for some of my companions, and at last perched himself on a twig just above me, and shook down half-a-dozen big heavy drops. Then we ran all over the leaf, and made her beautifully clean and fresh.

"Thank you, little drops,' she said, 'now I can breathe again! You had better carry all that dust down to the ground, and leave it in a crack you will find there; the sun shines in through that crack and hurts my roots, and I shall be so glad to have it filled up.'

"So we carried the dust down, and laid it very carefully on her roots at the bottom of the crack.

"I can tell you that we were almost as glad to get rid of it as she was, it was so heavy and choky. But we had now got down into a very deep hole, and we could not jump out of it again, so what were we to do? We ran backwards and forwards to see if there was any other way to get out; and after a long time, I discovered at one end a chink just large enough for a drop to squeeze through, and I pointed it out to my companions.

"I shall go out through that chink,' I said, 'and see what is beyond.'

"But they all preferred to stay where they were, so I left them, and making myself as small as possible, I slipped out of the deep crack where we had been prisoners for so long. I found myself in a narrow passage between two high walls, very like the place where I had left my friends, only it sloped downwards pretty quickly. I ran on as fast as I could till the passage came to an end on a large flat stone. I peeped over the edge of this, and saw a stream running very quickly past.

"That is all right,' I said to myself, and was just going to jump into it, when I caught sight of a fish staring up at the stone with large hungry eyes.

"I say, little drop,' he called up to me, 'do give that dead worm a shove and send it down here. I'm so hungry, for I've had nothing but flies to eat all this hot weather; I've been watching that worm for the last five minutes, and it only wants the least push to set it loose.'

"I looked about me, and soon saw the worm

on the very edge of the stone. Here was a chance for me! Some work not too hard for one drop to do alone. I ran in behind him, and leant all my weight against the place where I thought he was sticking. Yes, that was right; in one instant he slipped off the rock and fell plump into the stream, and I fell after him, but not into the same place, for before you could say Jack Robinson, my friend the fish had gobbled him up, and, shouting out to me, 'Thank you for a capital dinner,' he wagged his tail and dashed off to hide himself under a large stone.

"Now for another race!' I thought,—but no. Before I had gone ten yards I was stopped and turned into a little narrow stream which went along so sluggishly that I thought we should all stand still in a few minutes. There was a great deal of mud mixed up with us too, and altogether it was very stupid and uncomfortable. However, I made the best of it, and kept near the top of the stream, so that I could look about me and see what was going on. Sometimes I was stopped by a bulrush or a long blade of grass, and kept from getting on for a short time. Once when I was waiting like this, I saw two boys going along the bank with long slender rods in their hands and baskets on their backs.

"Do you think it will be any use trying the fly to day?' said one.

"I don't know,' said the other, 'the water is getting pretty thick, but they may still be able to see it; we can always take to the worm afterwards, if we don't get any fish with the fly.'

"Oh! if we only catch enough for breakfast, that is quite as much as I want,' said the first boy.

"There was some more work for me; I had helped one fish to get a dinner, perhaps I might save another from being made into a breakfast.

I followed the boys down the stream (which was now beginning to go a little faster), as well as I could, till they stopped at a pool where they said they would try. There, under a stone, lay a nice fat trout, watching eagerly everything that floated past. 'I must tell him about the boys,' I thought. So I went up to him and said, 'Please, sir, don't eat any flies to-day.'

"Why may I not eat what I like, you impertinent young rascal?' he answered, making a snap at a passing worm.

"Because there are boys out fishing, and they mean to catch you on a hook made to

look just like a fly; do take care, sir!' I cried.

"Mind your own business,' said the fish: don't you think I know a really good fly with half a wink of my eye?' And he gave his tail such a switch that it sent me spinning up the stream again. I was so vexed at the fish's obstinacy that I could not help speaking of it to all the drops that were near, and asking them if we could do anything to save him.

"We soon hit upon a capital plan, and set to work to carry it out. We had got into a small hollow by the side of the stream, under a bank of soft brown earth, and we ran round and round in this hollow, each of us knocking down a grain or two of earth from the bank as we passed, till we had collected as much as we could carry. Then we watched, and just as the boy was throwing his fly over the place where my ungrateful friend the fish lay, we all rushed down over him, carrying our burdens of earth; and we made it so dark over him that he could not see the fly.

"The water is too thick to-day, I told you so,' I heard one of the boys say as I ran on down the stream, and in a very few moments I could see and hear nothing more of them."

"Did they try to fish with the worm, and did the greedy trout get caught?" asked Malcolm anxiously.

"I don't know," answered the Drop, "I never met the Fish again,—but I had done my best to help him. Well, I swam on for a long time, neither seeing nor hearing anything, through a mill-dam, over a wheel, round two or three islands, till the stream had become a great river, and ran very fast indeed. I was racing along, wondering what we should come to next, when—splash—a little girl of about your size fell into the river, and began to float down with us. I thought

she had come to play with us, but I soon found out my mistake; for a number of little voices shouted out, 'Stop her! stop her! she'll be drowned: pull her out!'

"But we could not stop her, we could only carry her on down the river. Three or four little children were running along on the bank, and it was their voices that I had heard. Suddenly there was another splash: could it be another child in the river?—no. It was a large black dog, and in a minute he had seized the little girl by the frock, and was trying to drag her to the shore.

"Hold up her frock! keep her up!' cried a drop near me, and we all did our best to get under her frock and to help the brave dog who was swimming to the bank, holding her up as well as he could.

"Here she comes!' shouted the children, 'help her out! give her your hand! pull her up on the grass!' and by the help of the dog, on whose coat I was now resting, we got her safely on dry ground again. I was not to stay long with the dog, though I wished very much to see what he would do next, for he gave himself a tremendous shake, and threw me off into the air, and I very soon found myself running down the river again.

"I have very little more to tell, for I had not been there many minutes when I suddenly passed into a dark tunnel, and have neither seen nor heard anything since, till I sat down here beside you. I can't stay any longer now, I must be off to find some more work. Good bye."

"Come, Master Malcolm, wake up; are you not going to have any tea?" said Nurse.

Malcolm rubbed his eyes, and looked all over the hearthstone for his friend the drop, but it really was gone, I wonder where?—Perhaps to take a journey in a railway train.

CHRISTMAS, 1875.

GODWYN.

I.

BELIEVE

Hazelcote was a picturesque little townlet.

There was a quiet old-world air about it. Patches of green luxuriant grass grew at the sides of the streets; lilac

and laburnum trees drooped over the iron railings all round the market-place. The houses were for the most part built of ancient brick, and some were high and narrow and imposing, and some were low and humble and picturesque in the extreme. There were few shops in the days of which I write, and purchasers—after much ringing of bells or knocking at doors and counters—were only attended to as a kind of favour. It required a good deal of courage to enable

one to intrude upon the privacy of a Hazelcote tradesman.

And much courage was not mine—no true woman whose life is lonely and unfriended is really courageous, whatever face she may put upon the matter. "Alone, I tremble, or I hate," writes a recent thinker. "Give me but one friend, and I dare the world; I return its contempt with contempt, its derision with derision."

And I had no friend in Hazelcote, though I had been English teacher at the only girls' school in the place for five long years.

There were several reasons for this. First and foremost I had not, and have not, the necessary qualities for making friends. I can hunger for them, and thirst for them, and stretch out yearning hands to them in the solitudes; but when I meet in the highways of life those of whom friends might be made, I have no power to attract them.

I need not enter at any length into the other reasons—they will occur to the reader. It will strike him that my position was not favourable to the development of social qualities, and that my opportunities were, of necessity, very few.

I had little else to complain of—or, at any rate, it did not occur to me that I had—except this loneliness; and of this there was no one to whom complaint could be made. Miss Chilman, the proprietress of the school, would have smiled, her white teeth and her large black eyes glittering, her thin black curls dancing. "What is it you wish, Miss

Woodvyl?" she would have asked blandly and grammatically. "Is not your salary paid with sufficient regularity? Have you not food enough? Have you more work, or more unpleasant work, than persons in your position usually have?" And all these questions I must have answered in a manner satisfactory to Miss Chilman.

And Mademoiselle Dupont, the French teacher—I had made eager and unreserved trial of her friendship during the first few broken-hearted days of my life at Hazelcote. But Mademoiselle was not faithful. She had listened and questioned and sympathized warmly; and I had responded and confided with a warmth more than equal. But by-and-by my confidences began to come round to me again—at one time in sarcastic innuendo from Miss Chilman; at another time in friendly warning from one of the younger girls. It became clear that there could be no further friendship between Mademoiselle Dupont and me; but there was never any enmity.

And it was but very rarely that I had the solace of writing or receiving a letter. I had no home. My life had been spent at various schools, either as pupil or teacher, from my very babyhood. And, so far as I knew, I had only one relation, a cousin of my dead mother's, a clergyman who held a living in the adjoining county of Trentfordshire. I had had three letters from the Rev. John Willoughby during ten years. They were brief, uninteresting epistles, but not unkind.

I have spoken of these first five years at Miss Chilman's school as long years; but looking back over them they did not seem long; and if they were not happy, neither could they, with any fairness, be termed unhappy. I have a certain power of adapting myself to external circumstances that has stood me in good stead all through life.

But at certain times—for a few hours, or days, or weeks, as the case might be—this power was, in those days, wont to desert me. Expediency lost its hold upon me. My soul was left standing naked and alone and hungry. I could hide its nakedness, I could stifle its cries, but I did so at the expense of both physical and intellectual vitality.

Such times seldom, if ever, came when I had the power to work. Work was the great necessity of my life; and also its great temptation. I worked when I should have eaten, I worked when I should have slept, I worked when I should have prayed. During the holidays—which of necessity I spent at

Miss Chilman's—and when I had no need for working at all, I worked with double eagerness. Work I worshipped for its own sake, believing with Mrs. Browning that if you can only—

"Get leave to work
In this world,—'tis the best you get at all:
Get work, get work:
Be sure 'tis better than what you work to get."

I worked to get nothing but companionship for myself—the companionship of the master minds, as well of the present as of the past. When I could thus secure for myself an atmosphere of "sweetness and light" in which to breathe freely I was content. But this content could not be always mine. The power to seek it was apt to fail me when I needed it most.

One such time of need I remember most vividly. It was at the beginning of the last midsummer holiday I spent at Hazelcote, not knowing nor dreaming that it was the last. Miss Chilman was at a small watering-place on the Yorkshire coast; the pupils, with one exception, had gone home; this exception, a pretty gossip-loving coquette of sixteen, named Olive Serle, found a more congenial companion in Mademoiselle Dupont, who had also remained at the school, contrary to her usual custom.

It was most unpropitious weather for the beginning of July. For a fortnight or more a thick yellow fog hung over the housetops, and over the silent mournful-looking little lawns and gardens of Hazelcote. I had had to work unusually hard in the school before the holidays; often sitting up far into the night over fancy needlework that had to be finished, and piles of drawings that had to be retouched and mounted. Reaction followed naturally, and the intense continued gloom, the dampness and chillness of the atmosphere, added considerably to the natural depression. For ten days at least I could not take up a book for more than half an hour at a time without suffering in a most painful manner from cerebral exhaustion, an exhaustion, of course, sympathetic with that of the entire nervous system. I needed no doctor to explain my ailment or point out its remedy. I wanted change, bracing air, sea-breezes—these money would have purchased for me. I also wanted other things that money could not buy.

Each of these yet-unforgotten days had its own climax of unutterable and unsuspected misery. I struggled through the morning hours in my own room, tasting stealthily, greedily, of the nectar cups I might

not drain ; putting them down again with an agony I cannot describe as the monitress Pain touched me from time to time with her kind but dreaded finger. In the afternoon I went out, to creep for a solitary hour or two along the silent lanes, by the barren hedges ; half-thankful for the dank mist that shut out the flat, unpicturesque midland landscape. And in the evening I was alone again for the most part ; for Olive Serle and Mademoiselle had made friends whom they could visit. And they had done wisely, I knew ; though it was a wisdom I had no power to imitate. I tried to analyze the power—to find the secret of it. I had no love of solitude for its own sake. I was not cynical, nor pharisaical. Nay, so far was I from these things, that I could have stood, as one has said, "upon the broad highway of life as a beggar, hat in hand, for any smile of friendship. I could have received an act of sociability like alms!" If any such act were thrown to me by chance, God only knows how I treasured the memory of it. But I could give no outward sign of my gratitude ; and when I would again have had bread, men offered me a stone ; men and women at whose feet I could have laid my very soul.

And in these lonely evenings, pacing up and down the bare schoolroom in the twilight, the forms and desks piled against the walls, the maps rolled up, the piano shrouded in white, pacing to and fro there I began to realise how I was growing daily more and more incapable of that sympathetic association I so cravingly hungered for. It did not comfort me to remember that similar incapacity had been a marked characteristic of some of the finest natures the world has known ; that "Dante was very bad company, and was never invited to dinner ; that Michael Angelo had a sad sour time of it ; that Columbus discovered no isle so lonely as himself." Michael Angelo's life especially had an almost magnetic attraction for me. His intense passionate nature for ever and for ever thrown back to feed upon itself, until entire seclusion from the society of men became his only alternative, until nothing remained for him but to hold himself aloof from the men whom he loved with all his soul ; the description of a nature like this held my imagination most powerfully in thrall. I could see the reason of the grave serious face that he ever turned toward Raphael—a man whom he understood to the core, and by whom he was understood, in a partial way, in return. I could feel the motive of that sad reticence, the sense of

incapacity, of unfitness for that lighter and more cheerful intercourse which constitutes greater part of the brightness and colour, the warmth and value of social life. So much I had of insight, but where was the comfort of it? I was not of these. These men must have had the inner consciousness of their own immeasurable superiority, of their own higher and wider and nobler range of vision—yet more of the grand aims and purposes of their existence to support them—support that such as I might not even dream of comprehending. Where, then, could be any satisfaction in dwelling upon the experience of such as these? Yet I did so dwell ; and if there was little comfort in so doing, there was at least relief from intolerable pain.

II.

A brighter morning dawned at last, for the world round Hazelcote and for me. The white mist rolled away ; a flood of cheering brilliant sunshine broke over the plains ; there was a sense of gladness and release everywhere. I went out, taking my sketch-book and camp-stool, which was somewhat unusual. There were not many subjects, even for such a pencil as mine, in the neighbourhood of Hazelcote.

I walked on for some distance, perhaps a couple of miles ; my step and my heart growing lighter, my consciousness of life and enjoyment of life growing stronger. It was felicity only to be alive on such a day as that. Until that day I had never realised what it was to hear a lark sing. I stood for near a quarter of an hour watching and listening to one that was hovering over a meadow. Mounting up and up and up, pouring forth showers of silver sound ; quivering, warbling, ringing out one ecstatic strain after another till the very world seemed steeped in the wondrous melody.

Then I went on through the fields, with the lark's song in my ear and in my heart, and the daisies under my feet. There was a cottage a little further on, where the two roads met, a not unpicturesque dwelling ; and I sat down by the roadside and began sketching it. But I was not in a sketching mood. I was for once idle and dreamy, and I sat wondering if people, who were innately idle, found as much luxury in the sensation as I did. Then the doctor passed on horseback with a careless "Good morning," giving a new turn to my thoughts. By-and-by I heard the wheels of an approaching carriage.

It was a tiny white basket-carriage—I knew it well ; and the old white sleepy-

looking pony, and the big black retriever walking at the side. It was Miss Barry's carriage, and she was driving herself as usual, if, indeed, holding the reins of a pony that was creeping at such a snail's pace could be called "driving."

There was a kind of half-smile on her face as she passed me, a pleased, innocent, wondering expression. Had my admiration been too evident? I asked myself with a conscious blush as she went slowly down the lane. Then I began sketching again vigorously, not looking up for some minutes. When I did look up the carriage was out of sight; but I saw that Miss Barry's white shawl was lying in the road some twenty yards beyond the cottage.

I had not much difficulty in overtaking her. She was apparently in a mood as dreamy and listless as my own had been. Her head was thrown back a little, her hands were playing listlessly with the reins. She looked up with a smile sweeter than any smile I have ever seen in my whole life. "Thank you very much indeed!" she said in clear, frank, liquid tones. She had stopped the pony with the gentlest touch in the world. She stopped me too; I know not how. There was a fascination in those soft, beautiful, dreamy, grey eyes that haunts me and thrills me even through the years and the miles that lie between us now.

"I think you were sketching, were you not?" she said, as I gave her the shawl. Then she paused for a moment, and added in the same sweet and almost deferential tones, "Might I see your sketch? I am so fond of water-colour drawings."

I felt my face grow painfully hot as I handed her the tablet on which I had been at work; but she gave an instantaneous exclamation of surprise and admiration. She criticized it warmly, if that could be called criticism that was all praise. But I knew enough of art to know that her praise was not tempered with much judgment. Nevertheless, the praise was sweet.

There were two or three other sketches in the pocket of the tablet. "Am I rude?" she asked, with another deprecating glance and smile, arresting her hand in the act of drawing them out. "But won't you come for a drive with me?" she continued pleadingly, and evidently speaking the thought as it came. "Please do, and then you can tell me all about the sketches. And it will be so nice to have some one to talk to. I was dying of *ennui* just now."

"Do you know who I am?" I asked with

a *brusquerie* that sounded even to my own ears in strange contrast to Miss Barry's sweet gentle utterance.

"Yes; that is, I think I do," she said with a little hesitation, as if afraid of offending. "I don't know your name; but do you not live at Miss Chilman's? I live at Fardene. Mr. Barry is my brother, and my name is Godwyn Barry."

"And mine is Joanna Woodvyl. I am a teacher at Miss Chilman's school."

"Then do come with me, Miss Woodvyl, please; that is, if you can. You have not to teach to-day?"

I accepted the invitation, reader; smiling a little, perhaps in my own heart trembling a little, at this momentary smile of fate. I gave myself up to it unreservedly, but not designedly. I had no alternative, and I desired none. To sit there by the side of Godwyn Barry, listening to her kind friendly chatter; answering often with only a smile that seemed enough for her, occasionally with genial ready words that were a surprise to myself; to sit there, driving through green lanes that had suddenly become beautiful, under sunny skies that seemed to have the smile of heaven, was far too much for happiness. It was not real: I was acting a new version of an old story. The enchanted carriage and the fairy godmother would disappear within the stately gates of Fardene. Cinderella would go back to Miss Chilman's school.

From the very earliest days of my life at Hazelcote I had had an intense admiration for Miss Barry. At first her mere appearance had attracted me; her tall, slight, but exquisitely-shaped figure, her regal manner and bearing, her sweet gentle face, and shadowy golden hair. Writing of her, that word "shadowy" seems to me applicable to every distinguishing characteristic she had, external and internal. Nothing was pronounced. Her dress, her style, her face, her hair; all was graceful, picturesque, elegant, and undefined.

But now I was arrested by something more than external witchery, though doubtless that still had due weight with me. I could not analyze the charm of her face. It was not the charm of history: no story nor poem was written there; all was fair and clear, and yet not vacant. She surprised me with the quickness and breadth of her sympathy and comprehension; I had no need to explain my words, hardly need to find words for my thoughts. And I was astonished to find that many of my own dissatisfactions with life were also hers; and that many of her

yearnings and cravings after fuller and freer and higher life were also mine. And I think she was a little surprised too. She half confessed it. "And you are so young?" she said, inquiringly.

"I am twenty-two," I replied, with borrowed animation; "but I should think I look much older. Mademoiselle Dupont said I looked twenty-four when I came to Hazelcote, five years ago."

"You have not been teaching five years?"

"More than that. I began teaching at sixteen."

She did not ask any other questions, but a wonderful look of sadness and sympathy crossed her face. She was silent for a moment, then she said,—

"I am older than you, I am twenty-nine; but you have made me feel, as I often do feel when anything stirs me, as if my life were all to begin yet. It is such a blank page looking back; and what is worse—ten times worse—it is more blank still looking forward."

I was a little puzzled, naturally enough. Surely in her position, surrounded by friends, books, and other sources of mental and spiritual aliment, and courted by whatever of society there was in the neighbourhood of Hazelcote, surely this blankness of which she complained was a curious thing. She read my thought, and answered it.

"You do not understand me," she said; "no one could without knowing me thoroughly, and witnessing my daily life. I do not find the companionship in books that you do. I miss an author's best, his subtler meanings, his delicate *nuances* of thought and suggestion, unless I have some one with whom I can talk them over. And, poor as my own intellect is, I have no one—believe me, no one—who can even give me back value for value. I don't make a sorrow of it. I sometimes doubt whether I am capable of real sorrow, whether I am not too shallow for it."

So she went on, bewildering me with her unreserved confessions; her strange knowledge and want of knowledge of herself; her evident incapability of reaching her own standards. We were going homeward now. She drove past the gates of Farndene, on through the sleepy little town, and stopped at Miss Chilman's door. She shook hands with me, detained my hand for a moment in hers, and looked up with the thrilling smile in her beautiful eyes, saying—

"May I come and see your drawings, Miss Woodvyl? Will you let me come to-morrow?"

I went straight to my own room. Before I went out I had been reading the second volume of a book to which I have already alluded—Grimm's "Michael Angelo"—it was lying open at the fourteenth chapter, which tells how the grand sad master, at whose dead feet I had laid so much of my living heart, had found the one real friend of his lifetime. No word of friendship had passed between Godwyn Barry and me; but I had a strong and unspeakable consciousness that I too had found my equal-minded friend, my Vittoria Colonna!

* * * *

I could linger lovingly, tenderly, reverently over the next few weeks of my life's history. The remainder of that midsummer holiday was the happiest time—I use the words with the utmost consciousness and deliberation—the happiest time of my whole life from the day of my birth to this day on which I write. I hardly know now whether I ever felt anything of what is called friendship toward Godwyn Barry, whether my feeling toward her was not from the beginning an intense, absorbing, passionate love; a love that surprised almost as much as it delighted me. But I doubt if delight is a word I should use. My emotion was too deep and tremulous to be described by any words expressive merely of pleasure.

I do not know whether Godwyn herself ever fully realised the depth of my affection; and if she did it may be that in her own heart she would have preferred some lighter degree of emotion, some feeling that could have found expression in a brighter and more demonstrative manner. But we were very happy; strangely, consciously, and intensely happy. After the first week of our intimacy we met at least once every day. Sometimes she came to me at Miss Chilman's, and sat with me in my own poor little room at the top of the house for hours together; sitting at one time on a footstool, at another on the floor, almost always at my feet; leaning her head against me, her clasped hands on my lap, her sweet haunting face, all shadowed with the fair rippling hair, turned up to mine with expressions that I see as vividly now as ever I saw them then; expressions of love, of faith, of admiration—admiration that no other human being can ever offer me. I used to think that it was the result of the proverbial love-blindness, that she saw me with other eyes than her real ones; but I think now that may not have been altogether the case. I was young then, life was quickened in me, the blood in my veins ran freely and

rapidly, giving colour and roundness to my face, brightness to my lips and eyes. And the life of my soul was also quickened, the latent warmth in me was brought out by contact with a congenial mind. I no more longed for the ring of Gyges. I faced the world with a face that smiled, being freed from the crushing weight of neglect and utter loneliness; and to my great surprise the world smiled back warmly and unhesitatingly.

At other times we met at Farndene. It was a stately house, though of comparatively modern date; but there had been time for the red bricks of which it was built to grow brown and sombre; the place was altogether sombre-looking. The terraced garden was trim and precise, the flowers were few, the clumps of dark gloomy-looking shrubs abundant. There were several groups of melancholy cedars near the house; larches, poplars, stone-pines, and yew-trees gave a sad and uncheerful air to the grounds. One could have imagined that the place had been built and planted by a hypochondriac.

I do not know that there was anything hypochondriacal about Mr. Barry, Godwyn's brother, and her senior by twenty years; yet he was a man not out of keeping with his habitation. To me he was always courteous; stiffly, irritatingly courteous, but I perceived that his manner was, in every respect, the same to his wife and sister. I saw very little of Mr. and Mrs. Barry. They were both civil, both frigid, and each was a mere echo of the other. If I remained to luncheon, which I did occasionally to please Godwyn, we always took the first opportunity of making our escape. Godwyn hated the depressing atmosphere of formality, black oak furniture, and dark, heavy, crimson damask quite as much as I did. And we found no refuge in the drawing-room; our mood was not in harmony with its prim, glittering, costly elegance. We were happier far in the lanes and fields, dreaming away the long summer afternoons under a hedgerow; condensing a poet for a text, or inhaling the more stimulating ether of some favourite philosopher as we drove by turns along the unfrequented roads, or through the unicturesque hamlets of the neighbourhood of Hazelcote. I have said "by turns," but when Godwyn had taught me to drive the turn was usually mine. She liked better to lie back listening with half-closed eyes and a dreamy smile—a smile that was peculiarly and fascinatingly her own. It is often with me now; for though since then—

"I have known how sickness bends,
I have known how sorrow breaks,
How quick hopes have sudden ends,
How the heart thinks till it aches,
Of the smile of buried friends—"

though this and other experience has been mine, I do not forget the love-lit face of Godwyn Barry. I think it will not be possible that the only face that has ever been turned toward mine radiant with the radiance of deep affection can ever become wan and dim to me. It is not only of the smile of "buried" friends that one's heart thinks till it aches.

III.

About the middle of August my life of labour and routine began again; and I think I do not exaggerate when I say that the distaste and annoyance that Godwyn expressed by way of sympathy exceeded anything that I could honestly have expressed on my own account. My only regret was that I could now see so much less of her. She was pained by the thought of the continued monotonous work, the long weary hours of confinement, the uncongenial companionship that I must of necessity endure, and that I had endured so long with so little complaint.

"My poor little one," she said, holding my hand in hers, caressing it with her soft gentle touch. It was the evening before the school reopened, and we were standing on the terrace at Farndene; Godwyn leaning on the stone balustrade. She seemed to me more shadowy, more picturesque, more fascinating than ever as she stood there in the twilight. Her dress was of some soft pearly-white material, made in a quaint and unfashionable style; she wore broad frills of cloudy hanging lace round her throat and wrists; her hair was carelessly coiled round her beautiful head. There was no ornament, no colour about her. All was ethereal, graceful, and tender.

And her voice was tenderer than all. "My poor little one," she said. "And you are so brave. I should hate it myself. I should be so very, very miserable to-night, if I had your to-morrow before me."

"And I am not miserable at all," I replied; "and, what is more, I do not feel as if I could ever be miserable again. At present I feel as if only one great trouble could ever befall me in this world."

"And what would that be?" she asked smiling, and speaking even more softly than before. She knew my answer, but I put it into words.

"It would be to find myself friendless again."

"Don't imagine such things as that, dear," she said. "I hardly think it is wise."

"I don't profess to be wise," I answered gaily; but somehow I did not feel so gay at heart as before. Nay, I am not sure whether a little chill had not fallen upon me. Is the fault of being unable to enjoy present happiness without the assurance that that happiness is "to be continued," a fault peculiar to youth? I am half-inclined to believe so. I think I could rest a little now if I came to any place where a gleam of sunshine crossed my path. But I did not rest fully then. I wanted something that I could have taken as a sign; but that something eluded my grasp, and I was more conscious of the want of it than before. Yet the consciousness did not amount to pain; and soon it passed away, leaving no tangible trace of its momentary existence.

And I went back to work, as Godwyn had said, "bravely." There were about forty girls in the school, and no other teachers except Mademoiselle Dupont and myself. Miss Chilman's duty was confined to superintendence, and to the conduct of a weekly examination; Mademoiselle taught French and music; and upon me devolved the teaching of what Miss Chilman's prospectus termed "the usual branches of an English education, with drawing in pencil, pen-and-ink, crayons, and water-colours." The drawing classes I enjoyed. I had two or three pupils who were progressing rapidly, and a considerable number who worked with interest and intelligence.

Some three or four days after the reopening of the school I was sent for by Miss Chilman. I was to leave my class in charge of Olive Serle, and go down to the sitting-room for a few moments. Miss Chilman was not alone—a tall, gentlemanly young man was standing by the table, exhibiting a portfolio of sketches and drawings. Miss Chilman introduced him—his name was Rivers; and she explained that he was an artist, and that he had called for the purpose of offering his services as teacher of drawing, not knowing that drawing was already taught in the school.

"Will you look at these sketches, Miss Woodvyl?" she said. "You know I do not pretend to be a judge of art; but it seems to me that these are very pretty."

Pretty! I glanced up. Mr. Rivers's pale face was quite as pale and grave as before; but his soft brown eyes had a twinkle in them that I could not fail to understand. He waited silently for my criticism, but with

a curiosity and amusement that was quite evident.

And I too was silent as I turned over slowly, and with a feeling beyond delight, the varied contents of his portfolio. My strongest feeling was one of surprise. How did it come to pass that a man—as I felt instinctively a gentleman, and possessed of such artistic power as this—should be willing for any sum of money to give lessons at a second-rate boarding-school? I was puzzled; and I believe that he perceived this and enjoyed it.

I cannot describe his drawings—the bold poetic grandeur of some of his northern landscapes; the breezy freshness of some of his sea-views, with their yeasty tremulous waves, their weird effects of lurid and watery moonlight. He was nowhere happier in his style than by the sea. Yet his river views were beyond any praise of mine. Some had been painted in the silvery dewiness of early morn; others, in the clear glad sunshine of noonday; and others, again, in the solemn haunting twilight. There was evidence of the poet's spirit in them all; and evidence, too, of the master-artist. I had never before seen such felicities of manner and execution.

Miss Chilman awoke me, as it were. "You are a long time in making up your mind?" she said, not without a touch of asperity.

"Pardon me," I replied. "It is not that. My mind has been made up from the beginning. It would be presumption on my part to criticize such drawings as these."

"You think them clever?"

I hesitated a moment, and then said, "Yes." I could say nothing more. It was like saying a cathedral was "clever," or a symphony of Beethoven's.

After a few more characteristic questions, Miss Chilman dismissed both Mr. Rivers and myself. I went back to my work stirred all through by this transient glimpse into the world of real art, and not altogether forgetful of the artist. I felt something that was more than curiosity as I wondered what Miss Chilman would decide to do; and I felt a sensation that was almost pleasure when she sent for me in the evening to help her in coming to a decision. I need hardly say, that I pointed out with eagerness the immense benefit that two or three of the more advanced pupils would receive from the lessons of such an artist as Mr. Rivers; and I stated my intention of taking lessons myself if his terms were not beyond my means. It was then Monday evening, and

Miss Chilman finally arranged that Mr. Rivers should give his first lesson on the following Thursday.

It might have seemed a long time to Thursday if I had been entirely dependent upon Mr. Rivers's lesson for relief from monotony; but I was not so dependent. Mr. Barry's tall footman came more than once to Miss Chilman's door with notes for

me—little notes that I treasure yet. They used to come almost daily, and were probably as childish and extravagant as the most childish girl under my care could have penned. Yet their silliness was as dear to me as any wisdom. And there was no affectation about it. Godwyn's was a warm and loving and unreserved nature; and her letters were simply the outcome of that

Page 3.

nature. She could not have written otherwise.

One of these notes was an invitation, or rather an affectionate command, for Wednesday afternoon—one of my two weekly half-holidays. I dressed myself with extra care, as I always did before going up to Farndene. Godwyn was critical about my dress. She hated the demure greys and browns I had

always worn till now; and praised me warmly when I wore any bit of bright decided colour.

I thought I had never seen Farndene look so pretty as it did that August afternoon. The sun was still high; gilding the sombre trees, lighting up the scarlet and white and pink geraniums. There were flowers in stands on the upper terrace, and in the stone vases on the steps; the windows glittered in

the sun. Godwyn's window was wide open; but she was not as usual watching and waiting for me there. Suddenly I became aware of voices somewhere near; then, rounding a turn in the avenue, I saw Mr. Rivers behind an easel. Godwyn was standing at a little distance watching him as he worked.

"Oh, there you are at last!" she exclaimed gaily, gathering her pale rustling silk dress together and sweeping over the turf. Then she kissed me warmly, on either cheek, and drew my hand within her arm. "You have already met Mr. Rivers," she said, as he rose with a courteous bow. "He is making a drawing of Fardene for my brother. Would you have believed that any place could be so transfigured?"

He was much absorbed in his work; but I could not help perceiving that he was as much gratified by Godwyn's uncritical and unstinted praise, as I myself had been on a similar occasion. His face was very pleasant to look upon now that I saw it more clearly. He was pale, but not with an unhealthy pallor; his hair was dark and picturesque; and the light that was in his clear brown eyes seemed to me unmistakably derived from "the light that never was on sea or land."

Somehow one could not help feeling that it was good to be near him; and probably Godwyn felt this as much as I did, though her lighter manner, her more frank mode of address made me doubt a little whether she felt so much the power and individuality of his genius. It would have needed weeks, if not months, of acquaintance to enable me to talk to him with the same unreserve as Godwyn used, though she had known him but a few hours. In this respect I think his nature was more like my own; and therefore it amused him, then pleased and gratified him, to find that he was being drawn out of himself unawares.

The conversation turned naturally upon art. "I have had art-dreams from my very childhood," Godwyn said. She had thrown herself into a garden-chair that stood near, her hat was in her hand, her fair soft hair was stirred by the summer breeze; the ideal beauty of her face was enhanced by a most unusual depth of expression. "I do not remember the time," she went on, "when I was not conscious of a longing to express my inner self in some outward and tangible form. But it is a longing I have never been able to satisfy. I have tried poetry, I can write one line, the second eludes my grasp altogether; and as to art, I have never yet drawn a straight line without a ruler."

Mr. Rivers paused a little in his work, and looked up at Godwyn with a wondering smile.

"Probably you have more reason for gratitude than you are aware of," he said gravely and half-bashfully. "I do not think art of any kind is woman's province, except, of course, as an amusement, or accomplishment; and if it is worth anything, it is rarely content with such limits as these. Women are too eager in hope, too sensitive in disappointment, too keenly alive to the mortification of failure, discouragement, and opposition, to be fitted to fight the battles of professional life alone. Probably some must fight: I pity them. Think of Mrs. Browning—one of the two or three triumphant women of this century. What was the cry of her soul in the hour of one of her victories?"

"O God, Thou knowest, and only Thou,
How dreary 'tis for women to sit still
By solitary fires on winter nights,
And hear the nations praising them far off."

"I think I should have been content with the praise of the nations," Godwyn said, a little too lightly, as I thought.

"Pardon me, I have not known you long," Mr. Rivers replied, "but I think quite otherwise. And granting that, the praise of even one nation is not an easy thing to secure. The list of men who have failed, who have gone down to their graves disappointed, unknown, or unappreciated, is an appalling list when placed by the score or so of names that are passing on through the centuries. When your art-dreams haunt you again, take down the 'Life of Haydon.' I doubt whether there is a sadder or more unforgettable book in the English language than that. His endless trials and difficulties—many of them the result of his own vanity and improvidence, I grant you—were yet facts; and facts that seem wonderful when one thinks of his indomitable hopes, his energy, his perseverance. Taking his life as a whole, from the day he left the bookseller's shop at Plymouth to the day he died by his own hand, it is certainly one of the saddest records of that sad-fated thing, genius, that we possess."

"But why should one look on the sad side only? Isn't there a bright one?"

"Yes: bright with a brightness that dazzles quite as often as it illuminates."

A little longer they sat talking, and a little longer I sat listening. I had my own opinions about some of the subjects they touched upon, but I could not give them even when appealed to. As usual, I liked better to

listen and to think. Afterward, when we were sauntering alone in the cedar-walk, Godwyn reproved me for my reticence.

"You are such a provoking little woman," she said. "I have never yet wanted to show you off to advantage but you have disappointed me."

"Did you want to show me off to advantage to Mr. Rivers?"

"I shall not answer any question asked in that mocking way. If you don't admire Mr. Grantoun Rivers, let me tell you that I do."

"Grantoun! Is he Scotch?"

"His mother was a Scotchwoman; but she is dead; and he is not on good terms with the rest of his family."

"Oh, indeed! He seems to have been communicative. Did he tell you what they had quarrelled about?"

"I don't think there has been any actual quarrel. They consider him extravagant, and he considers them mean—he didn't say it in those words; but that is what it amounts to. He is determined, however, to show them that he can work for himself."

"How interesting!"

A reproving look was Godwyn's only answer. I believe she was a little puzzled as well as disappointed; and I also think that I was something of a puzzle to myself. The small details that she had given me of the more prosaic side of Mr. Rivers's life jarred upon me; they were altogether out of keeping with the attitude I had taken up toward him. By degrees, as I saw more of him, that attitude became modified to a considerable extent. It was not that I ever had less of reverence for his genius; but an increasing consciousness of something wanting to complete his manhood. It was no visible glaring want. I could never define it enough to be able to put it into words.

The next few weeks passed on smoothly. Mr. Rivers's drawing-lessons were the great events of our little world. To my intense astonishment, Godwyn put herself under his tuition. She had no talent whatever for drawing. A box of water-colours in her hands was simply a medium for covering paper with unsightly splashes and blotches. Yet she worked so hard and so continuously that neither Mr. Rivers nor myself had the heart to discourage her. I believe she had caught something of his enthusiasm—enough to enable her to persuade herself that the power was in her. And I believe, too, that she enjoyed our long walks in search of subjects, our dreamy and speculative con-

versations, and our hours of quiet sketching in the fields and lanes and by the river side.

About the middle of September Mr. Rivers began to allude to his departure. He never did so without producing effect. A not unpleasant effect upon myself. I confess that I was growing a little jealous of his influence over Godwyn. It might be a perfectly harmless kind of influence—the difference of position and of age (he was hardly four-and-twenty), of course, precluded fears of anything else; still I did not like it. Godwyn might be perfectly safe—she had never given me the slightest reason to think otherwise; but to Grantoun Rivers the intimacy might not be so free from danger. How should it be, I thought, when day by day, almost hour by hour, I felt myself more and more drawn to her, more and more tenderly and truly hers? Her loving ways, her sympathy, her large-souled insensibility to the social inequalities between us—these and other things strengthened my affection most powerfully; how powerfully, I had yet to learn.

September drew to an end; and much to my satisfaction Mr. Rivers came up to Farnedene one Saturday evening to say "Good-bye." We were out of doors, Godwyn and I; and I think he must have guessed this, as he came straight down to the shrubbery. He was a little more silent than usual, which seemed to me natural; but Godwyn became even brighter and freer than before. She was looking very lovely. Her long sweeping dress was of some gauzy material, of a pale faded-looking blue; she had on a thin white shawl. Her cheeks were flushed a little with pink colour; and I had never seen her soft grey eyes so dreamy and tender, and yet now and then so bright, as they were that Saturday evening.

"We are sorry you are going: we have so enjoyed our lessons, Nannie and I," she said graciously, looking from one to the other. She had called me Nannie almost from the first, having a strong aversion to such a stiff old-fashioned name as Joanna.

"And do you think I have not enjoyed them too?" he asked with expressive eyes and softened tone; but Godwyn gave no answer save a quiet smile; and I admired her for her prudence, and also for the tact she used in passing on to other subjects. I had felt a kind of thrill of fear that one or other of them might be moved to the expression of more sentiment than a third person would have found enjoyable. But my fear was altogether groundless. Godwyn

chatted gaily and frankly on various topics for about half an hour. Then as twilight began to fall she turned to go indoors.

"You have seen my brother, I think?" she said to Mr. Rivers as we went up the garden.

"Yes; I saw him this morning. He was kind enough to express a wish that it would not be long before I found my way to Hazelcote again."

"A wish that Nannie and I must certainly be permitted to join in," Godwyn replied, stopping and giving him her hand, and looking up to his face calmly and sweetly. I could not help noticing that he detained her hand longer than was necessary. Then I gave him mine. A moment after, he was gone, and I breathed more freely than I had done for some days past. I could by no means re-echo Mr. Barry's conventional wish. It was a wish that was not fulfilled. I never again saw Grantoun Rivers at Hazelcote.

IV.

Monday morning brought me the usual little three-cornered note. I received it in the schoolroom, but I did not open it at the time. I reserved it for the dinner hour, that I might open it in my own room, and there enjoy it alone.

It was the first note of Godwyn's that I did not enjoy. Somehow the mere look of the page gave me a kind of chill, though there was the usual number of loving words and phrases—more than I should care to transcribe or the reader to peruse. The following is a presentable version of it:—

"DARLING NANNIE,—How I should like to 'bore a little augur-hole' in the wall of your room, and watch you while you read this! I should like to see how you will take a surprise; shall I presume to say an unpleasant one? That is nonsense. It will be more than unpleasant, I know only too well. But don't make a trouble of it, Nannie dear. I am not going so very far away, only to my aunt's at Trentford. I had a letter from her this morning, and I am going at noon. Quite sudden, isn't it? But I hope I shall not have to be away more than a few days—it doesn't depend upon myself, or I should come back to-morrow, I know I should. And you ought to be proud and satisfied, little one; for I used to like to stay away from Farndene for months together; and there is nothing here to attract me but your loving self. I will write to you as soon as ever I can from Trentford, a long,

long letter that will be—oh, so pleasant to write! Good bye, my darling.

"Ever your most affectionate

"GODWYN."

What could there be in a note like that to give one feelings of discomfort and uneasiness so strong that they might at any moment have passed into pain? Was it nothing more than the sense of separation? I blamed myself all that day and the next; accused myself of morbidness, thanklessness, and want of common sense; but I could not persuade myself into ease or tranquillity of mind. I tried the old resource—hard and continued work, but I had not the old appetite for it. Godwyn's face came between me and my books. I confess that I was compelled at last to give myself up to restlessness, and in that state of mind I waited for her promised letter.

My restlessness was somewhat subdued when I saw the postman pass Miss Chilman's door on Wednesday morning; and when the same thing occurred on Thursday I felt as if a blankness were creeping into my life worse, far worse, than any I had ever known before. I would have gone up to Farndene to make inquiry; but I could not go out during the day without asking for leave to do so, which would have been granted as an immense favour, and I did not like the idea of going in the evening. Besides, I knew how groundless such an errand would seem to Mr. and Mrs. Barry. Godwyn had gone away on Monday, writing a note to me before she went; and I had heard nothing more on Thursday. . . . Even when Friday had come and gone, and Saturday morning also, I found great difficulty in compelling myself to go up to Farndene.

I was received with the utmost courtesy. Mrs. Barry, who was considerably older than her husband, and must have seen some sixty winters, was alone when I went in, her small withered, yellow face looking more yellow than ever; and in curious contrast to her glossy dark brown curls of false hair. Mr. Barry entered the room soon after I did, and in her usual drawing high-pitched tones Mrs. Barry explained to him the nature of my visit. "Miss Woodvyl has not heard from your sister, Theophilus, dear, and she thinks it rather strange. I have been telling her that we have only had one letter ourselves."

"No; we have only had one letter, Miss Woodvyl. It was rather a curious whim of my sister's, going to Trentford just now. Indeed, to say the truth, I cannot under-

stand it. I was thinking that perhaps you might know even more than we did of her motives."

I told Mr. and Mrs. Barry how little I knew, and that I had also been perplexed and surprised; and he seemed somewhat gratified. "It was not an unprecedented thing in Godwyn's life," he said. "In her earlier days she had been a good deal given to acting on sudden impulses; he had hoped that those days were over. But doubtless she would be back soon," he added; "she had not taken her maid, nor much luggage. And pray don't be uneasy, Miss Woodvyl," he concluded, as I rose to go. "My aunt, Mrs. Ingram, with whom Godwyn has gone to stay, is a very aged and infirm lady, and totally blind. It is not impossible that Godwyn may be so much with her as to have little time for writing letters. And if we should have any message from her for you, be sure we shall lose no time in sending it."

This was warm in the extreme, coming from Mr. Barry; and I thanked him as warmly as I could, and then went homeward. I was in better external spirits, but still hungry and faint and chill within. I should probably have spent the remainder of the afternoon in writing to Godwyn if I had had her address; to write, to pour out my pain, my indefinable but haunting fear, would have been an unspeakable relief to the suspense I was enduring; but Godwyn had not given me that address, it had probably not occurred to Mr. Barry to do so, and I had lacked courage to ask him for it. Therefore I had no alternative but to go on enduring.

Sunday passed, and Monday passed, and Tuesday passed, in silence, in sickness, in unutterable pain. On Tuesday evening I was ill. I had not slept, I had not eaten, I had thought incessantly. I went to my own room early, but not to prepare for bed. Before I sat down to my books I caught sight of myself in the glass; my eyes were hollow, my face pale and emaciated; I looked as I might have done after weeks of severe illness. I was half shocked, and when I sat down seriously to consider the cause of all this suffering, I wondered if I was becoming the subject of monomania.

I had been sitting thus some time when I heard a slight tap at the door; it was followed by the entrance of Mademoiselle Dupont's little round form, pale sallow face, and jet black hair and eyes. She was looking positively pretty. She had been spending the evening with friends, her dress was an old black net newly trimmed with cherry-

coloured ribbons, trimmed as only a Frenchwoman could have done it; but she had been so long in England that she was beginning to betray all an Englishwoman's self-conscious vanity about her toilette. Nevertheless, I could not help admiring her, and she saw that I did, and was gracious accordingly.

"Now why do you sit up here alone?" she said (she spoke very fair English). "You are growing thinner and paler day by day. But perhaps there are other reasons—perhaps you are taking too much to heart this—this unpleasantness; but I would not. It does not seem so terrible to me—not at all. Why should it?"

"What is it you are speaking of, Mademoiselle?" I asked, languidly, yet wonderingly.

"What is it I speak of? Surely! It is you should tell me the particulars. I know only what they say out in the town. What my friend Mrs. Williams tells me, and her daughters."

"Mrs. Williams! What can she say of me?"

"Of you! no; but of your friend, Miss Barry; or, as one should say now, Mrs. Rivers." And Mademoiselle looked at me with her small black penetrating eyes as if she would have read my very soul.

I had taken in the meaning of her words, but I did not reply. There was a sound as of a surging sea in my ears; there was an oppression in the atmosphere that prevented me from breathing; yet I did not lose consciousness. Mademoiselle went on chattering.

"It is strange to marry so—for a lady. The people talk so. Why should they not have waited for a little while, and have been married with the proper ceremonies?—why not? Monsieur Rivers is a gentleman; so the people say, all of them. Why should Miss Barry have made so much annoyance up at the house, at Fardene? Monsieur Barry, and Madame too, are downcast about it, so much that they do not eat. It is the suddenness, I say. They could not object so much to that nice Monsieur Rivers."

"I should like to be alone, please, Mademoiselle," I begged at last; "but before you go I should like to know what foundation you have for all this?"

"Foundation! The foundation that is everywhere; but you know it all, surely! It is not new to you?"

"It is quite new. Please leave me, Mademoiselle."

* * * *

I sat there a brief time; perhaps an hour and a half, or two hours. Then I undressed, slowly and mechanically, and went to bed, and slept.

When I awoke in the morning I was not more ill than I had been the previous day; nay, I had even a feeling of recovery from illness, from some blow that had stunned and wounded me, and left me utterly broken in spirit.

Mademoiselle Dupont was kind to me in her own way; she told the pupils that I had a headache, and that they must be quieter than usual, and try to give less trouble. I bit my lip while she spoke, to keep the tears back. It was the first and the last time that I had any inclination to weep.

The day passed on and night came, and another day and night; but not for a moment could I rise above the feeling of being stunned and stricken—stricken the more grievously because it was no enemy, but mine own familiar friend who had dealt the blow.

Did I blame her? Not for a second. I would not own, even to myself, that she had acted wrongly, or rashly, or unwisely. Had she appeared at any moment of the day or night, I should—figuratively at least—have fallen at her feet for very joy. When I tried to realise that she could never more appear; that to me she was dead, dead through all the days and months and years that would make up my future, dead to all the joys and sorrows, the changes and chances that could ever befall me—when I tried to realise this, then my grief for a time became a little wild, too wild to be written of here.

Neither did I blame her for her want of trust in me. She had doubtless had a good, perhaps a kind reason for it. It was the broken affection, not the broken faith that crushed the life out of my soul.

I made no effort to learn any details. I might have gone up to Fardene, but I had no power to go there or elsewhere. What could I expect to learn that would not deepen rather than alleviate the sorrow that had fallen upon me?

And so the heavily-weighted days passed on. Monday came again, but one fortnight from the day that Godwyn had left home. It was a fresh pang to remember it; but now that returning vitality quickened my power to feel, every hour brought its own new bitterness. I learnt to look for it, to turn chill at the sight of one of the servants from Fardene passing through the streets, to tremble if a knock came to Miss Chilman's door.

There was a knock at the door of my own

room on that Monday morning—one of the pupils handed me a letter and a small box. I know not how long I sat with them unopened before me. I opened the box first, the contents would doubtless be less capable of awakening emotion.

I opened it deliberately. It was a jeweller's box. First I came to a slender gold chain, then to a plain moderate-sized gold locket. Unclasping the latter, a tiny miniature of Godwyn looked out sweetly upon me, on the opposite side there was one little round curl of her fair cloudy hair.

I had hardly strength left wherewith to open the letter. When I did open it, I saw that it was long, that it was loving, and that it was signed, "Godwyn Rivers." Can any one believe that the mere sight of this name was like a new blow?

I need not give the whole of her letter. She explained first her long silence. She had been too happy, and yet too much perturbed in her happiness to be able to write as she wished. She was not yet free from a certain tremulousness. Her brother's cruel behaviour would have cast quite a gloom over any happiness less intense than hers. "You know I told you, dear," she wrote, "that I had no money that was legally my own; that I was born after my father's death, and that he had died suddenly without making any preparation for the future of his unborn child. I must confess that my brother has always been liberal to me in money matters, and would doubtless have been liberal still if I had married to please him; but having once seen Grantoun, I could never have married anybody else. I thought Theophilus would have had sense enough and pride enough to make the best of the matter when he knew that it was irrevocable—that was one of my strongest motives for consenting to a secret marriage; but instead, he seems inclined to make the worst of it. He has answered my letter, enclosing a cheque for two hundred pounds; but all future letters from Grantoun or from me are to be burnt unopened, and the servants at Fardene have been instructed to refuse us admission! Pleasant, isn't it? But even that cannot touch the deep and real happiness of my life."

In the pages that followed she dwelt more vividly upon this happiness, and upon the virtues and perfections of him who was the cause of it. I read them without prejudice, having a desire to understand, as far as was possible, the kind of life that was hers now. They were at present in lodgings at Trentford, she said, her aunt having taken the

same view of their marriage as her brother had done ; but they intended going abroad for the winter. Grantoun had intended this even before he had thought of taking a wife with him. But she would give me more particulars of their future plans afterward. Meantime I was to write to her a long, loving, forgiving letter. She craved earnestly for forgiveness. She had never meant to keep the dearest secret of her whole life from me, it had been both pain and difficulty to her to do so ; but Grantoun had thought, and she had, after a time, agreed with him, that it was the kindest thing they could do to one situated as I was. Knowledge of their plans might have involved me in difficulties from which they would have had no power to extricate me. She had told her brother that my surprise would be as great as his own.

In conclusion, she assured me warmly of her intense and even increased love for myself, of her sympathy for me in my loneliness, and also in what she knew must be a sorrow to me. And then she tried to cheer me with hope. She had dreams of her own for the future, dreams that she would not even hint to me yet, beyond saying that in them she saw one roof sheltering us both. "I feel something that tells me certainly, dear Nannie, however much appearances may be against it, that you and I have not drifted apart for ever ; that the time will come when we shall sit by the same fireside, your hand in mine and mine in yours, clasped in a friendship but so very little less sweet than love itself."

So I read, and then I mused awhile. I could not but be cheered, lifted a little out of that Slough of Despond where I had lain so sadly before. To have had a letter at all was something ; to find that I was not only unforgotten, but still held dear, was surely more.

It is probable that there are people who, after reading such a letter, would have been able to assure themselves, in the words of Browning :—

"This woman's heart and soul and brain
Are mine, as much as this gold chain
She bids me wear."

But I was not of these. Shall I confess it, that in despite of all I was conscious that I had still a heartache, still hunger, and pain, and wounds not yet healed? Had I been mistaken in any way? Did I miss something? Or was it that I only wanted time to realise the true position in which this event—forceful as it was for good or for evil—had left me standing?

Before I went down to the schoolroom I clasped the locket round my neck. It is there now as I write. I wear it by night and by day, always hidden and out of sight ; even as I hide away out of sight that one real love of my lifetime.

v.

I need not dwell minutely upon the blank space in my life that followed Godwyn's marriage. That other blankness that had been mine before I had known her, seemed now to have been a state of painless torpor. I had then no memories to sting me ; my yearnings had been vague and transient. Now my capacity for suffering seemed to have been heightened and quickened to the uttermost degree. There was not a road in the neighbourhood of Hazelcote along which I had not walked or driven with her ; not a hamlet nor a hedgerow that had not been transfigured by association. I would have wept a little as I walked alone now, the chill autumn winds sweeping over the fields, through the shivering trees, but I had no tears ; only a hungry silent aching.

I found but little satisfaction in letters and trinkets and love that came by post. It was no longer a whole love. There was an increasing want of vigour and originality in the expression of it. The old phrases were used, but the old and true and strong emotion that had moved the writer to invent them was conspicuous only by its absence. I made no complaint. Doubtless I had been to blame. I had hoped too strongly. I had built my house too high for the width of its foundation ; the natural and inevitable result was the fall thereof.

It was a dull day early in November when I read the last letter that Godwyn wrote to me before she left England. It was different from any other that I had received since her marriage, more full and natural, richer in feeling and in thought. It thrilled me as I read. It was written to me, with no third person between. My old faith in her seemed to revive. If it had not been too late, I should have answered it by hastening to Dover ; by craving her forgiveness with my own lips for the doubts I had had, for the accusations that had risen in my mind unbidden.

After that day I was more contented ; but it was the kind of content that steals upon the bereaved when their dead has lain long in the graveyard—a content broken by hours of anguish, of bitter, hopeless longing

"For the touch of a vanished hand,
And the sound of a voice that is still."

And even though I had this content to sustain me inwardly, I could not prevent my outer life from growing daily more and more irksome. It was not entirely the loss of Godwyn's sympathy and encouragement; not entirely that everything in and about Hazelcote reminded me painfully of her. I had been long enough at Miss Chilman's school; its monotonous routine was becoming a source of irritation. I tried to do my daily duty faithfully, but to bring either pleasure or promptitude to the task was no longer mine. At last, suddenly as it seemed, even to myself, I announced to Miss Chilman the fact that I had decided to begin life afresh under fresh conditions. I would seek a situation as governess in some family; seeking that, I might find a home—who could tell? I began to long for the moment of escape, for opportunity for adventure. The life in my veins already seemed double life, compared with what it had been.

Miss Chilman would have detained me if either less work or higher salary would have availed; but I told her that I did not care for these things, that I wanted the stimulus of change. She was kind in not insisting upon the three months' notice that she might have claimed. I might go when the school broke up for the Christmas holidays, she said, if by that time I had found any place to go to; if not, I might remain as long as it suited me so to do. She also expressed her willingness to aid me, either by references, or by any other means within her power.

I thanked her, and went to my own room at once to prepare an advertisement for the *Trentford Mercury*. Why I should have chosen this unlikely paper I cannot tell, nor why my thoughts should from the first have turned toward Trentford as a desirable place to live in. I had never been there; I had read no glowing description of it; I knew nothing of it, save the fact that Godwyn Rivers had dwelt in it for a time.

I had several letters in answer to my advertisement, one that surprised me considerably. It was from my cousin, the Rev. John Willoughby. Perhaps I had better give it in its entirety, as it is not very long; premising only that it was written in the smallest, most cramped, most illegible handwriting I have ever seen:—

"St. Dunstan's Vicarage,
Trentford, November.

"MY DEAR JOANNA,—Surely this advertisement, 'J. W., care of Miss Chilman,' is

yours? I had almost forgotten you. We have had so much to think of. First the change from Dilby to Trentford, two years ago; then my wife's illness. She is quite an invalid, I am sorry to say; and the children, six of them, are running wild. People have suggested a governess, but I didn't like the notion of a stranger in the house. I think you were quiet as a little girl, if I remember right. If you are still quiet, and will come, we shall be glad to have you.

"Truly yours,

"JOHN WILLOUGHBY."

I thought for a little while intently. There was one letter more tempting. The writer wanted a governess for a little girl; a liberal salary was offered, and a comfortable home in one of the most picturesque parts of the county. But Mr. Willoughby had been kind to my mother; and to one so much alone in the world as myself, even the slender tie of cousinship seemed an attracting influence. Besides, there were the six little children, the invalid mother, and the evidently somewhat inept father! Conscience pointed with very decided finger toward St. Dunstan's Vicarage.

Yet I must confess that on the evening before I left Hazelcote my heart sank a little. About twilight I went out, and for the first time since Godwyn's marriage I turned my steps toward Farndene. It was late in December now. A chill wind moaned and shivered through the black masses of trees; the house loomed dark and sombre against the sky; behind, a dank mist was creeping up from the river. There was no light anywhere, no warmth, no promise. For more than an hour I wandered there, passing and repassing the closed gates, a lower Eve shut out from a lower Paradise. I could not but go back over the past; it seemed to me as full of mystery as of pain. Where was the meaning of such a life as mine? Hitherto I had not found a clue to any meaning. What the future might hold I could not tell. I tried to peer into it, to picture it bright and expansive; it must certainly be more expansive. Before twenty-four hours were over, my horizon would have widened a little. So I encouraged myself, walking away from Farndene, through the darkness, and the gloom, and the driving arrowy rain.

* * * * *

It was between three and four in the afternoon when I reached Trentford. I had been perfectly calm during the journey; neither depressed by fears for the future, nor in any way elated by the thought of escape from the

past. I got out at the large busy station, claimed my luggage, waited awhile for any clerical-looking man answering to my dim recollection of the Rev. John Willoughby, and scanning each strange face with a growing sense of forlornness. At last, when the crowd had subsided a little, I got into a cab and drove toward St. Dunstan's Vicarage.

The daylight was fading, but I could see as we drove along that Trentford was a large, cheerful, yet ancient-looking town. There seemed to be a church in every street. In the busier parts of the town there were well-lighted shops, numerous antiquated inns, with wide archways; and here and there was a large, new, incongruous-looking building of red brick—an exchange, a theatre, or a concert-room. I enjoyed this appearance of life and movement much, and should have been very glad to evade the immediate future by driving round and round the quaint old city till bedtime.

Presently we turned into a quieter and still more ancient-looking part of the town. The last street (Priory Lane, as I afterward learnt) was hardly lighted at all. It was exceedingly narrow, the houses were high, and their broken outlines showed picturesquely against the strip of blue starlit ether overhead. Then the wheels of the cab ceased to rattle over flints. We seemed for a few moments to have left Trentford behind, there were dim trees and hedges and garden-walls on either hand. Suddenly I knew that I had reached my journey's end. I glanced round a little nervously. I stood at one end of a terrace of moderate-sized houses; there was a little commonplace-looking strip of garden, commonplace gas-lamps, commonplace iron railings. We had left behind us altogether the Trentford of history and old association.

"Is this St. Dunstan's Vicarage?" I asked of the cabman.

"Yes," he replied, "No. 10, Hart's Terrace. The old vicarage was down in the town, close to the church. It's made into shops now."

He rang the bell, and after some delay an affrighted-looking maid-servant appeared.

"Is Mr. Willoughby at home?" I asked, seeing that she showed no signs of expectation.

"I'll see," she said, shutting the door not very gently, and leaving me standing with my luggage on the steps outside. The cabman had departed. That was not a very hopeful moment of my life.

Presently, however, I heard hasty steps; the door was hurriedly thrown wide open,

and Mr. Willoughby himself was there to welcome me.

"I am so sorry, so exceedingly sorry," he began in a kind voice, grasping my hand as he spoke. "I had quite forgotten, altogether forgotten that you were to come to-day. Pray come in. How thoughtless of me! I am very much distressed."

A moment more, and I was in the small, shabby, dimly-lighted dining-room; and five of the six children were clustering noisily about my feet.

"Now do be good, my dears," Mr. Willoughby begged in a carefully subdued voice. "Don't begin to ask questions already, Linda. Julian, my boy, be quiet; and Derwent too. Remember, poor mamma can hear every sound. She is not so well to-day, Miss Woodvyl—or, shall I say Joanna? And you must have some tea—where is Ann? Maurice, ring the bell. My darling Evelyn, you will tear your cousin's dress if you cling to her in that way."

My dress! They might have torn all my dresses if the occupation would have afforded them the slightest pleasure. I was brimming over with new sensations. Amid all this strange confusion—in spite of this atmosphere of disorder, shabbiness, and irregularity, I discerned an element of homelikeness. Mr. Willoughby urged me warmly to make myself at home; but there was no need for any such urging, I was at home from the beginning. The children, one and all, went up-stairs with me to take off my bonnet; one and all returned with me to the dining-room, where the slatternly maid was preparing tea.

"We have no nurse now," exclaimed Linda, the only one of the family who had the slightest concern about appearances. "There is no one but Ann and Sarah—Sarah is our cook; but we shall have a new nurse next week. And when papa grows rich, we are going to keep a carriage. He may be a bishop, you know, some day—Julian says so; and then perhaps we should have two carriages."

So Linda chattered, with a chorus of chattering voices behind her; Evelyn nestled on my lap; and Baby Clare threw her weary little form into the space under the side-board, and slept there with her head upon her arm. I seemed to know them all intimately by the time I had finished tea, to have assigned to each of these varying, and, for the most part, strongly individual little characters, its own place in my estimation. In one thing only were they at all alike, in not being burdened with the very slightest trace

of shyness. Their ages ranged from eighteen months to ten years. As I write I see them as they were then, not as they are now. Julian, the eldest, with his light-brown curly hair; pale, intellectual, almost wasted face. Derwent, round-eyed, dark-haired, bold, heroic, yet with sudden fits of gentleness in him. These two, as Derwent hastened to inform me, were at the grammar-school during the day. My pupils to be were Linda, a golden-haired, dove-eyed maiden of six, full of amusing little vanities; Evelyn, a sweet round little creature of four summers,

with long yellow hair falling in natural ringlets to her waist, cheeks with the fresh tints of pink rose-leaves upon them; and most provoking, impetuous, irresistible ways. I was drawn to her from the first, and I love her unto this last; yet no one of my cousin's attractive, affectionate, and troublesome children has ever given me so much trouble as Evelyn. Then came the two that were nominally still in the nursery—Maurice, a bluff, lisping, defiant little mannikin of three, who would raise his tiny fist to strike one moment, and hold up his lips to be

Page 5.

kissed the next; and Baby Clare, whose features resembled those of Julian strongly. Her poor little white face, her quick yet pleading eyes, her touching half-sad ways, always gave me the impression that she missed something in this strange world of ours.

My next proceeding was to take upon myself the duties of the departed nurse. Baby Clare was taken from under the sideboard, and laid warmly in her little cot, by the side of my bed. Poor careworn-looking Mr. Willoughby was gliding about everywhere, rubbing his hands, or smoothing

down his scant grey hair with a bewildered look, and expressing a profusion of regrets that my induction should be of such an untoward nature. I think my presence had unsettled him a little. I never again saw so much of him at once as I did on that evening.

After disposing of Baby Clare, I returned in search of Master Maurice, whom I found standing in the middle of a small round rickety table in the nursery, holding on to the gaspipe—the gas flaring to the full extent allowed by the burner—with one hand, and

indulging in somewhat extravagant declamatory action with the other. His voice—naturally gruff for the voice of a mere baby—was raised to its loudest pitch. He took no notice of my entrance, but continued to harangue his brothers and sisters in the language of Macaulay. The following quatrain drew down enthusiastic applause:—

"And how can man die bether
Than fating fearful oddth,
For the atheth of hith fatheth
And the templeth of hith godth?"

I will not recount the difficulty I had in persuading the young Roman that his night-dress would more nearly resemble the *toga virilis* than did the short petticoats he was then wearing. Sufficient to say that the change was accomplished; and that, after about two hours and a half of struggle and effort, and eloquent persuasion, I found myself once more alone for a few moments.

I cannot say I thought. I seemed to be undergoing some process of transformation that arrested my thinking powers. Nothing was as I had pictured it beforehand; and I did not yet know whether to be disappointed or agreeably surprised. If I was disappointed at all, it was simply because I perceived how little opportunity I should have of using, or even of keeping up, what I possessed in the way of attainment. If I was to be of any use at St. Dunstan's Vicarage, it must evidently be in the capacity of what the Germans term "house-mother." But on the other hand, I seemed already to be shaking off the stiffness, the reserve, the indefinable characteristics of a life of rules and systems. My horizon had indeed widened. I could breathe freely enough now. And let the atmosphere in other respects be what it might, it was at least sweetened by kindly feelings and affections. Each of my cousin's six children had given me a dozen last kisses before falling asleep.

I had not been alone long when Mr. Willoughby once more came stealing noiselessly from some remote and mysterious corner of the passage. Poor little, grey, absent-minded man! When I remembered the ceaseless uproar the children had made, I failed to understand why he should creep about so stealthily on tiptoe, and speak only in subdued whispers. His whispers were still of a regretful and anxious nature. "Was I *very* tired? Did I want anything? Would I like to see his wife, or would I prefer waiting till the morning?"

Naturally, I was a little anxious to see her, perhaps a little curious; but I suggested

that, as she was an invalid, perhaps he had better allow her to choose the time herself. He thanked me, and again retired and reappeared on tiptoe. Amy would be glad to see me at once, he said. She was better than she had been all day; she was always better in the evenings.

Creeping up the narrow, almost dark staircase, already acquainted with greater part of the dingy, shabbily-furnished house, I was not prepared for the blaze of light and colour that burst upon me as Mr. Willoughby opened the door of a tolerably large and elegantly-furnished drawing-room. Apart from its furniture, it was the one good room of the house. It boasted three windows, wide and high, and heavily curtained with pale rose-coloured damask. The walls were white-and-gold, and half-covered with water-colour drawings. There was a profusion of exquisite ornaments, a glitter of gilt and colour, of glass and china everywhere. The chairs and sofas were as dainty as any at Farndene, and on one of these sofas, which was drawn up to a blazing fire, lay Mrs. Willoughby.

She was a woman of striking appearance, and altogether unlike my preconceived notions of a confirmed invalid. Her figure was large and well-moulded; her face had a roundness that would have been babylike but for its size; and her large, shapely, dimpled hands, more surely than anything else, betrayed that the cause of her ill-health could not be very grievous. She welcomed me with a smile that seemed both sweet and cordial, her soft blue eyes smiled too, and a tinge of pink colour rose to her somewhat sallow face, making her look quite radiant. She was tastefully dressed. She had on a gown of lavender cashmere, a Shetland shawl, and a tiny cap of rich white lace, trimmed with pink ribbons. It was unfortunate that this toilette recalled to me the stringless and buttonless garments of the children I had just undressed.

"I think it so kind of you to come to us," she said, holding out one of her warm soft hands. "Neither Mr. Willoughby nor myself liked the idea of having a total stranger in the house."

She spoke languidly, and I had almost said brokenly, she had such strange childish little tricks of affectation in her mode of utterance. Yet, in spite of her size and her age, I cannot say that the effect was unpleasant. It did not jar upon me in any way; and it was not long before I learnt that it was considered one of her numerous fascinations.

"You will find the children terribly ignorant, poor little darlings," she went on, lisping a little, looking up with winning smiles from time to time. "I used to teach them myself, and I had a nurse who taught them a little; but I don't think they ever learnt much. However, you will see. I shall not interfere about their lessons, or about anything else, after once telling you what I wish."

Then Mr. Willoughby broke in, timidly and wearily,—

"And what we wish more than all, my dear cousin, is that the children may be kept quiet. My poor Amy suffers so much from nervousness, that quiet is essential. Her sufferings have been increased terribly of late by the noise the children make."

"Yes, indeed," resumed Mrs. Willoughby with another smile. "If it had not been for Uncle Felix—that is a dear old friend of ours, a Mr. Mapleson, whom the children have always called uncle, though he is no relation whatever—if it had not been for him and one of the curates, who has also been very kind in taking the children out for long country walks, I do not know what I should have done. My friend Mrs. Chesshyre says she does not know how I endure such martyrdom."

Then Mrs. Willoughby sighed a little in her smiles, and Mr. Willoughby feared that she was talking too much, and bathed her forehead gently with eau de Cologne. There was a small table by her side, half-covered with scents and medicines and other mysteries in bottles. On another table were three sets of novels from Mudie's, a thermometer, a tiny basket of grapes, and a fan.

After using the fan for a little while, Mrs. Willoughby was able to resume her part in the conversation. Before doing so, she took a sheet or two of pink paper, covered with a delicate angular handwriting, from a portfolio at her side.

"This, my dear Miss Woodvyl," she began, "is a kind of plan or time-table, that one of my friends, Mrs. Templeman, has assisted me to draw up as a sort of guide for you. She is an exceedingly clever person, and manages her large household better than any one I know. If you will just glance over it, I think you will find it excellent. Of course it is only for the winter months; we shall prepare another for you before the spring."

I took the paper, and read it. The reader may do the same if he chooses:—

"6.0 A.M. Miss Woodvyl and the chil-

dren to rise. Miss W. to see that the nurse washes and dresses the children in a proper manner.

"7.0 A.M. Miss W. to hear the children say their prayers, and engage them in calisthenic exercises until 8.0.

"8.0. Breakfast. Afterwards Miss W. to give a few minutes to the cook and household matters.

"9.0. Lessons till 12.0, allowing fifteen minutes' interval for the children to have a light luncheon.

"12.0. Out-door exercise till 2.0 P.M.

"2.0. Dinner.

"3.0. Lessons till 5.0.

"5.0. Tea. Afterwards Miss W. to assist Julian and Derwent till 7.30 in preparing their lessons for school.

"7.30. Miss W. to hear the children say their prayers, and superintend nursery matters. Also to see if the children's clothes need repairing, and that the nurse repairs them neatly."

I looked up. Mrs. Willoughby was still smiling, gently and kindly. Her husband, with nervous hands and anxious look, was smoothing his thin grey hair. His face had a most pleading expression, and I answered the plea involuntarily.

"I think there is nothing here that I cannot do," I said. "Anyhow, I will do the best I can."

"Thank you, thank you," he exclaimed with hurried relief; and in her own elegant way his wife also thanked me.

"And I hope you will not object to see the cook for me in the mornings," she continued. "Of course I do not get up very early, and when I do get up I am not fit for anything for some hours. Usually, when the weather permits, some of my friends take me for a drive in the afternoon; and after that I sleep a little if I have no company, which Dr. Vining says is the best thing I can do. Dr. Vining is my new doctor. I was compelled to dismiss the old one, Dr. Philimore, though I believe he was really much cleverer; but his want of sympathy, and I may almost say his rudeness, came to be really intolerable at last. Dr. Vining is *quite* a gentleman."

So Mrs. Willoughby went on talking, her husband admiring and sympathizing, I listening and fortifying myself with what philosophy I was master of. When I rose, she handed me a large bunch of keys.

"There," she said, in her prettiest and most fascinating manner, "that means that you are to take my place entirely. I have

full confidence in you already; and I am never deceived in any one."

Nor was I deceived in the estimate I had made of my cousin's wife.

VI.

Having introduced to the reader the various inmates of St. Dunstan's Vicarage, I need hardly say that the map of life, so nicely pricked out with pins, was of no more use than a chart of the Chinese coast would have been. By slow degrees, after earnest efforts, and long labours, I succeeded in introducing a little order where only chaos had been; but even yet we are very far from having attained to the comfort and regularity of a well-conducted household.

One thing I learnt and tried to remedy early. Mr. Willoughby had been living considerably outside of his limited income—exceedingly limited it was, although his high-sounding designation as "Vicar of Trentford St. Dunstan's cum-Walton-Cleve St. Anne's, and Chaplain to the Earl of Ayresbrook" led many unthinking people to an opposite conclusion. I do not think it was by any fault of his own that he had not been able to live within his means, except in so far as the over-indulgence of his wife could be termed a fault. There is no feminine taste so expensive to indulge as a taste for invalidism; and neither Mrs. Willoughby nor her husband ever appeared to realise that there was any very material difference between five pounds and five-and-twenty. If they had money at all, that was quite enough; and when money was scarce, they fell back upon credit. In cases where that failed, or when servants and workpeople clamoured for wages, there was always Uncle Felix with purse-strings ready open.

We saw a good deal of Mr. Mapleson, although Bentlands was some three miles from Trentford. It soon became almost as much a pleasure to me as to the children to hear his dogcart stopping at the door; then to see the big, untidy, grey man, with pockets full of sweets and fruit, toys, or picture-books, come stooping into the room as if afraid of knocking his head against the doorway. He had large, rugged, unhandsome features; grey hair, long, but not over-abundant; it used to turn up a little in a kind of curl, where it touched the collar of his waterproof overcoat. Yet, unhandsome as he was, he would probably have made a very artistic portrait, probably also a pleasing one, if the artist had been able to see the large, kind, grey eyes, the kindly smiling lips, as I saw them.

He always came on Saturdays, and on any other days when the elder boys had a holiday, and were likely to be troublesome. If the weather was fine, he would take them out; sometimes we all went together. And on rainy or stormy days we took possession of the nursery, and held our revels there.

And on Sundays, too, he came, sometimes to tea, but invariably to supper. The Sunday evening supper was an institution at St. Dunstan's Vicarage. The curates always came—good and earnest-minded Mr. Powers, who was so very young, and tried to make himself look so very old. He, too, was much attached to the children, and bore with wonderful good humour the tricks and impertinencies that always distressed me as much as if I had been responsible for them. I ought to have mentioned the Rev. and Hon. Noel Stuart first, he was the senior curate and an older man; but his amusing little pomposities—evidences of claims not always acknowledged—his formal ways, his terror of the children, seem to have faded from my mind a little, leaving only the remembrance of a thin, stiff, upright figure, with a prematurely bald head and a gold eyeglass.

And while I was learning to forget the old life, and to make the best of this that was so strange and new, winter passed on into spring, and spring into summer. I say learning to forget, but the task is difficult of accomplishment. I have made no complaint. I have written only of the outer life, but the reader must not therefore suppose that I lived no inner life at all; that I had forgotten Godwyn Rivers, or that my heart had ceased to cry out for her with a cry that was at times exceeding bitter.

In very truth I was still as lonely as I had ever been in my life, though happily I had less time in which to suffer from loneliness. I still had desires that ceaseless household worries failed to satisfy; still a sense of need and deprivation that I could not kill with labour and care. Godwyn's letters ceased altogether to afford me comfort or consolation. Nay, at the time of which I write she had come to require consolation from me.

I know not how nor when the first sad note of change was struck. I became gradually conscious of want of harmony. Godwyn complained, half fondly at first, of her husband's disposition. He was dreamy and unpractical, and, though not exactly indolent, he could only work by fits and starts. After this I was not surprised when hints came of straitened circumstances, then of poverty

and discord, lastly of actual privation and suffering.

And how I suffered too, I may not tell. Once or twice I sent her a sum so small that I was utterly ashamed to send it; but on each occasion I left myself all but penniless. Then, at Godwyn's suggestion, I wrote to Farndene; and that proceeding not being attended with success, I called upon her aunt with the same, or perhaps even a more unsatisfactory result. Mrs. Ingram informed me, in courteous but decided terms, that, immediately after her niece's imprudent marriage, she had made a new will, leaving the whole of her possessions to the Trentford Infirmary.

Subsequently I sold my watch and forwarded the proceeds to a small town in the south of France, where Godwyn and her husband were then staying. She thanked me in words that made the very bread I ate turn bitter in my mouth because I might not share it with her.

After that painful thanksgiving a silence followed. Two or three of my letters were unanswered, so I concluded that they had again changed their address, and wrote no more.

And thus I went on ignoring these hidden wants and sorrows as best I might, and reserving my strength for the trials and difficulties of every day. Fortunately these latter were of a very bracing kind; and, as I have already pointed out, they were not unrelieved nor unsweetened.

* * * *

At the beginning of my second spring at St. Dunstan's Vicarage a new trial came upon us.

Things had gone on not unsmoothly during the winter. I had had no letter from Godwyn. I had found no friend to replace her, but there were many to smile upon me in a friendly way. Mrs. Willoughby smiled upon me with an approval I was conscious for the most part of trying to merit; and more than one of her numerous visitors grew cordial and kind. And there was Mr. Powers, too, who came often of an evening to take my place in helping Julian and Derwent with their lessons; and Mr. Mapleson, who got into a habit of coming every day, bringing grapes for Mrs. Willoughby, flowers for me, and presents of all kinds for the children. I think he only looked upon me as a kind of older child, though he never annoyed me by insipid conversation. He was always sympathetic and understanding, always thoughtful and kind—kind even to tenderness in some of his ways.

And when the new trial came, when our round, rosy little Evelyn was taken ill, there was no one to whom I could turn so readily for help or advice as Uncle Felix. Poor Mr. Willoughby seemed to lose all power of thinking or acting from the very first, and, of course, no one could have expected either thought or action from his wife. She had full confidence in me, confidence still fuller in Dr. Vining; so she smiled sweetly, and drove out with her friends, and ate daintily and slept soundly, and all because of this unlimited confidence.

And meantime Evelyn was growing worse hour by hour. For several days Dr. Vining had insisted that the child was suffering from nothing more than a feverish cold. Then he ceased to insist at all, and took refuge in vagueness and elegance, and frequent changes of medicine.

Still the child grew worse, and I grew troubled and anxious; and when Uncle Felix came one evening, I confessed my trouble and anxiety to him. He stood by the bedside, bending tenderly over the little one, watching her as she threw her head feverishly from side to side, her long yellow curls lying like a mass of entangled gold threads upon the pillow, her face flushed to burning, her lips blackened and parched. "I do not like the look of this," he said, turning away.

Once or twice he walked up and down the long, sparsely-furnished room. It was the night nursery, and I had had the beds of the other children removed. There was only the little white cot in which Evelyn lay, and an iron chair on which I occasionally threw myself while I watched during the night.

"Tell me honestly, Miss Woodvyl," Mr. Mapleson said presently, stopping and looking at me with a graver look than I had ever seen on his face before—"tell me honestly, have you any faith in Dr. Vining?"

"None whatever."

"You would be glad to have another opinion?"

"More glad than I can tell you."

Then he turned away and left the room. I heard him go to the drawing-room, and after that to the little damp closet beyond the kitchen, which had been dignified with the name of study, and where Mr. Willoughby spent the greater part of his time.

After a few moments my cousin came up-stairs again; he had been running up and down at intervals all day. There was a look of new fright and anxiety on his face now. "Do you *really* think her worse?" he asked

hurriedly and tremulously, rubbing one hand over the other as he spoke. "Amy thinks you have a little—a little tendency to look on the dark side of things But the child looks ill—she looks ill I am glad Mapleson has gone for Dr. Philimore."

It was perhaps twenty minutes or so before Uncle Felix came back. Dr. Philimore was with him—a man so small and slight that at the first glance he looked a mere boy by the side of Mr. Mapleson. When he turned, however, I saw that he must be somewhere about thirty-eight years of age. He was the quickest, keenest, most nervous-looking little man I had ever seen. He had dark hair, a somewhat high colour, and deep-set, intense grey eyes, that seemed to look through people rather than at them. He vouchsafed me one searching glance, which I felt myself returning steadily; then he turned to the child.

After asking me two or three questions in a cultivated voice, but in an exceedingly abrupt manner, he turned to Mr. Willoughby.

"This is a case of gastric fever," he said briefly.

Then he turned to me, and again I felt that I was an object of study.

"You are nursing this child?" he asked.

"Yes."

"Are you aware that her disease is an infectious one?"

"No; I thought simple gastric fever was free from infection."

"This is not a simple case," he said; "it is of a typhoid nature. I should recommend your having a professional nurse."

This I objected to; and in a feeble way my cousin supported me. Mr. Mapleson said nothing. Dr. Philimore having done his duty, made no attempt to exceed it.

Before leaving the room he gave me the necessary directions. They were minute, yet concise, and would have been intelligible to the meanest capacity. The child was not to be left for a second; beef-tea and brandy were to be administered alternately with the greatest regularity. It was probable that certain changes might occur during the night; for these he prepared me by describing the symptoms and pointing out the treatment to be adopted when they appeared.

Then he went away, and Mr. Mapleson with him; and soon after my cousin went down-stairs in great distress of mind. Toward midnight he came up once more; but there was no change, and after a few broken words of gratitude he left me alone for the night.

I need not describe that night, nor the nights and days that followed. Mrs. Willoughby, who had always had a great dread of infection, grew alarmed, and went to stay with her friend, Mrs. Chesshyre, taking Linda with her. The two elder boys remained at school as boarders; Uncle Felix took Maurice home with him, and nurse and Baby Clare were sent to lodgings somewhere in the suburbs. I had nothing to do with these arrangements. I think they were made by Uncle Felix in order that the house might be kept quiet, probably also that my cares and anxieties might be lessened. He still came daily himself, bringing fresh oranges, or a bottle of rare old wine for Evelyn, and a few flowers or a new magazine for me. Occasionally Mr. Powers came too, wishing, in hoarse whispers, that he could do something; looking helplessly about the room to see if he could discover anything that was wanting. It is strange how grateful one sometimes feels to people for mere wishes and desires.

VII.

And meantime, slowly but steadily, our little Evelyn's illness increased; consciousness of passing circumstances grew less and less. She lay in a state of dreamy, fitful muttering, recognising her papa or me for a moment at a time, then calling us by strange names, talking to us of strange things. Soon a wilder kind of delirium supervened. My hopes of her recovery, never very strong, grew weaker and weaker. I strove to read Dr. Philimore's face as I might have striven to read the face of a judge about to pronounce my own sentence; but it seemed to me that as the child grew worse, his expression grew more and more inscrutable. I saw with satisfaction that his interest in the case was intense. He usually came three times every day, and in the evening when the more decided delirium set in, I was not surprised to hear him coming up-stairs for the fourth time.

He entered the room noiselessly as usual, and honoured me with the usual scrutinizing glance. Absorbed as I was in the child's illness, there were times when I could not help puzzling myself about Dr. Philimore. He had that strong, magnetic individuality so often possessed by men of short stature, or insignificant appearance, and which defies the most indifferent and unimpressible people to ignore the possessor of it. He had never encouraged me by one word of approval, never cheered me with one word of sympathy. He knew that I had been

sitting up now for some fourteen consecutive nights; that I had only lain down, and that not always to sleep, for three or four hours in the middle of each day. At first I had had numerous offers of assistance; some of them from Mrs. Willoughby's friends; others from ladies who were members of the St. Dunstan's congregation, but of whom we had hardly any knowledge at all; but Dr. Philimore's announcement that the fever was an infectious one had caused most of these offers to be withdrawn. And there was no servant in the house upon whom I could depend during the night. They were willing, they were helpful to the extent of their power; but worn by toil, they were altogether unable to withstand the influence of sleep. Hired assistance I still continued to refuse.

All this Dr. Philimore had learnt from Mr. Willoughby, and there were other things that he had probably learnt for himself. I obeyed his orders to the utmost, regarding not only the letter, but the spirit of them. He asked no question to which he did not receive at least a clear and direct answer; and more than once in moments of critical importance, I had had to use my own judgment. Yet even then I failed to learn whether in his estimation I had used it wisely and well. He questioned, received answers, but made no comment. Had I been less anxious, this would probably have been somewhat depressing; as it was, the only effect was a momentary piquing of my curiosity.

I watched him closely as usual as he stood by the little cot. The lamp was burning dimly, there was a low fire in the grate, the room was cool and still and shadowy. The only sound was the ticking of the tiny clock on the mantelshelf; the only sight attractive to me was the thin, resolute, inscrutable face of Dr. Philimore. I could discern no change as he felt the throbbing pulse, and the burning forehead. He stood there self-possessed, absorbed, and apparently altogether unconscious of me and my questioning look. A question in words was a thing I could only dream of in his absence.

Presently, however, he raised his head, and looked up at me with a glance less hard and professional.

"Have you a pair of large scissors in the room?" he asked quietly.

Without speaking I laid a pair beside him. He took them up, examined them, and handed them back to me.

"Those will do," he said. "I wish you to remove the child's hair, the whole of it.

Disturb her as little as possible, if you please."

Had any one else told me to do this, I should have declined at once, knowing that I had not strength for a task so trying. I had done all else; others might have done this. Now, however, I dared not even hesitate. Dr. Philimore's keen grey eyes were fixed upon me in no sympathetic manner. I took the scissors, I turned with a choking sensation to the pillow where the little flushed face lay surrounded with its halo of golden curls. I lifted one, a long shining tress that coiled itself round my wrist as I raised it, then with tremulous, strengthless hands I severed it, the sharp sibilant biting sound of the steel thrilling through my very soul.

Again I essayed, a second curl was in my fingers; but the power to force myself to a second effort like the first was not mine. I did not faint, I shed no tear; but I sank down by the side of the bed nerveless and exhausted.

There was no smile, sarcastic or other, on Dr. Philimore's self-controlled face. He stood on the opposite side of the little cot watching me with keen, intent, professional eyes. Had I needed aid he would probably have been driven by the sheer force of his medical instinct to afford it; but he saw that I had no such need.

He waited a moment or two; and then he took the scissors in his own hand. "Will you hold the lamp?" he asked curtly.

I did so, and watched his proceedings with almost as much admiration as sorrow. Till that moment I had never believed that he had a single fibre of tenderness in him; I was astonished beyond measure as I watched his movements now. His skill was as marvellous as his gentleness. No words could describe his quick, unhesitating, yet compassionate manner of handling the little form, the certain deftness of his touch, the studied noiselessness with which he performed the painful task. It was painful, I believe, even to him. I did not soon forget the half-sorrowful manner in which he glanced from the large, glittering, yellow pile at the foot of the bed to the little round, forlorn, unsightly-looking head upon the pillow.

I know not how it was, but after that night I seemed to know far more of Dr. Philimore than I had done previously. I had more faith in him and less fear of him. I think he unbent a little to me, but of this I am not sure. Anyhow, I learnt to watch and to listen for his coming; to be a little

glad when he came, a little sorry when he went away.

And still the terrible days went on, the signs of prostration seemed to increase hourly, the delirium grew less wild, and gave place to fits of stupor. The little form sank down in the bed, lower and lower, till at times one could hardly see where it lay. Dr. Philimore grew graver, and came oftener,

and I knew that he thought the crisis very near; but I dared not question him. Perhaps I hardly cared to do so now; for I had no hopes to be raised or depressed. I think that sad certainty that possessed me was one secret of my strength. It kept me calm, prevented me from wearing out my energies in suspense. Perhaps also other sources of strength were mine. I had need of all in

Page 10.

those hours. I often think it strange that I who have so great a dread of responsibility, should have had so much thrust upon me. Self-dependence has never had any charm for me, so that it has added little to my happiness to feel that others were depending upon me, laying burdens upon my shoulders grievous to be borne, and they themselves not touching them with one of their fingers.

But in that hour of which I write I thought nothing of any burden. I craved for no earthly guidance. I tried to pray, I tried to work, I tried to wait, and to be still.

The crisis came at last. It was on a Sunday morning. The first sun-rays had stolen into the room about four o'clock; and I had then seen that change was at hand, and had doubled the amount of stimulant

and given it more frequently. The fever flush had passed away some days before. There was now only a ghastly pallor, total unconsciousness, and, as it seemed to me, all but utter lifelessness.

About half-past six I sent for Dr. Philimore. He came promptly, and stood silent for a few moments while Mr. Willoughby in a broken voice read a commendatory prayer. I knelt, of course, while the prayer was being read, and then I rose to administer the stimulant which I had been giving at intervals of ten minutes. Now, however, Dr. Philimore by a sign stayed my hand; and glancing at his face, I saw a change there. There was no change that I could detect on the face of the child.

Still my cousin knelt, praying silently, pausing once to whisper,—

“Tell me when all is over.”

So we remained, Mr. Willoughby kneeling, Dr. Philimore and myself standing by the bed. The doctor's thin keen face was still impassive and inscrutable; but from time to time when he touched the child's pulse I saw a momentary expression that seemed strangely critical and curious, for such a moment as that. Surely his fear was not as mine.

And by slow degrees, I know not when nor how, my own fear seemed to become modified. The little one had not stirred nor raised an eyelid, but the drawn painful look that had been so terrible to see on her face had given place to a look that was almost tranquil. It might be the tranquillity of death. Mr. Willoughby, who had been watching her for a moment or two, once more knelt to pray the prayers for a departing soul.

He read as before, in a broken whisper; but he read on to the end. As he concluded, at that moment when he had uttered the last word, his little daughter half-turned in her bed; slowly her eyes opened; slowly her parched lips moved. Then in a voice that was verily and indeed like a voice from the dead, she chanted clearly and sweetly, on one thrilling monotonous note, the *Gloria Patri*.

Each word was audible.

“Glory be to the Father, and to the Son, and to the Holy Ghost.

“As it was in the beginning, is now, and ever shall be; world without end, Amen.”

I can never forget that moment.

We waited awe-struck and breathless—waited for the last sigh. But the child, turning herself a little on her side, and

gently closing her eyes again, fell into a quiet sleep.

It was impossible for her father and for me not to feel that we stood in the midst of unseen presences. After a time, he went from the room sobbing. I too should have been glad to escape from Dr. Philimore's gaze for a few moments.

Of course the doctor explained it all afterward. There are people in the world who grow quite irritable at the notion of anything happening that cannot be explained; an irritation like all other, the certain sign of pitiable weakness somewhere. According to his view of the case, the child had passed from stupor to sleep, the sound of her father's voice in prayer had suggested a dream—a dream of the church she had attended, of the service to which she had responded; and the culminating point had been the *Gloria Patri* which she had uttered aloud. Nothing could have been more sensible than such a view as this.

* * * *

I dare say I shall almost startle my readers when I tell them that on the second day after this crisis, on the Monday afternoon about five o'clock, our wan little Evelyn might have been seen sitting propped up with pillows and holding a chicken bone in her fingers. Nevertheless it was true; and the little white thing smiled, and grey, awkward, ungainly old Uncle Felix cried; and Dr. Philimore, who came in at that moment, for once looked somewhat pleased and gratified.

Then he turned to me, and his gaze softened even a little more. Presently, without speaking, he laid his fingers upon my pulse.

“When have you had any food?” he inquired abruptly.

This was the first proof I had that Dr. Philimore did not consider me an automaton.

“This morning,” I replied.

“And what did you have? Tea and muffins, I suppose?” he asked contemptuously.

I looked at him without answering for a moment, strongly impelled to reply in a manner approaching his own. But, humanly speaking, he had saved our little one's life, and I controlled the impulse.

“The tea without the muffins,” I replied quietly.

His lip curled a little, and another contemptuous exclamation escaped him.

“Can you remember at all when you had any solid food?” he asked with a slow sarcastic smile.

I hesitated a moment, a burning sensation rushing over my face; then with all the defiance I could muster, I told him the plain, naked, ridiculous-sounding truth,—

"I have had no solid food since Friday; and I had only rice-pudding then. But please don't think that I am not capable of taking care of myself."

"Oh, no, certainly not. I should never dream of thinking such a thing. Indeed, judging from the evidence now in court, I should say you were eminently capable of self-preservation."

I turned away. I would not let him see that I was stung and wounded. I was ill, worn-out, ready to cling to anything or any one who would have given me a word of sympathy, a sense of rest and relief, of something to lean upon and trust in. Yet I bore his sarcasm better than I bore what followed it.

Uncle Felix had left the room while we were talking; and I thought, as I bent over the child to hide my own pain a little, that Dr. Philimore was preparing to go too. Instead, he came round to where I stood with a glass of Mr. Mapleson's rare old port wine and a biscuit in his hand.

"You have done a great many things that have pleased me," he said, in a low altered voice, "will you do one more, or rather two? Will you take this at once, and then go and lie down?"

This was a little too much. The ready tears sprang in spite of me. But I took the wine and thanked him; then we shook hands warmly, and for the first time, and he went away. I know not what of consciousness had passed into me, or into him.

VIII.

And then there came a day of change; and after a little confusion, protestation, and silent wonderment, we were settled at Maybank Farm, Evelyn and I. We were given a month, a whole bright June month, wherein we were to live out of doors, drink abundantly of Mrs. Warde's milk, and grow fat and strong. And friends came every day to see that we obeyed. Maybank was about half-way between Walton-cleve, Mr. Willoughby's suburban parish, and Bentlands, where Uncle Felix lived. And Walton-cleve was under the care of Mr. Powers, for the most part, so that the shy, awkward young curate came, as a matter of course, to see how his vicar's little daughter was getting on, and, as a matter of course too, Mr. Mapleson came, and occasionally Mr. Willoughby. Less

frequently still came Mrs. Willoughby; not equal to the fatigue of descending from Mrs. Templeman's brougham, but very smiling and gracious.

Dr. Philimore's visits were continued of necessity. Evelyn would need careful watching for months to come, he said. And although I was glad that one well able to watch her should be at the same time willing, yet I could not but wonder that he should still come so often, and stay for so long a time. I was not comfortable in his presence now, nor quite happy in his absence; indeed, to confess the truth, happiness seemed further away than ever, and I knew not why, and was half-angry with myself for the feeling. What would I have? I had desired rest and change; I had panted for sunshine, and green pastures, and still waters, and having all these, I was not satisfied. Nay, they did but seem to create a want, or to give me time and opportunity for realising one before created.

Was it the old want, the want of the friend to whom my thoughts still turned, from whom, through all the silences and distances, I still craved sympathy? I had heard nothing more from her. Was it a kind of punishment for my dissatisfaction with her letters? I would have treasured the merest scrap now. And my yearning for knowledge of her grew with the growing days; grew till I half wished myself back at St. Dunstan's Vicarage, compelled to narrow my vision to the ordering of the morrow's dinner, and the making of the children's summer frocks. It was ungrateful, I knew; the more ungrateful in that I was not friendless, nor desolate, nor uncared for, as I had been before in my life. But it was true for me, as for many another, that—

"The love of all
Is but a small thing to the love of one.
You bid a hungry child be satisfied
With a heritage of many cornfields: Nay,
He says, he's hungry,—he would rather have
That little barley-cake you keep from him."

And again I began to feel as I had felt before leaving Hazelcote, that my life was a terribly narrow and bounded life, hardly worth calling life at all; and one day, in a fit of fretfulness, born of hunger-pain, I spoke out the feeling.

It was in the prim little parlour at Maybank. I was sitting by the open window, and Uncle Felix was sitting on the garden-seat outside. He smiled a little at what I had said, and his soft grey eyes smiled too, and his large unhandsome features seemed

"Loved and lost,—oh love, I did love you well;
More than you knew, for I had no power to tell;
More than myself did know till we said farewell.

"Can true love die? I ask of myself in pain:
Can true love sleep for awhile, and awake again?
No answer comes save the falling of midnight rain.

"Oh, loved and lost! Are you lost for ever to me?
Can I reach you no more? Can you never hear my plea?
Does the storm prevent you—the miles of land and sea?

"I hear no storm: I behold no sea nor land.
You are here beside me, smiling where you stand;
Your voice has a thrill, and you take me by the hand.

"And my hand is clasped in yours, and my face is wet.
In my dream I live over the day when first we met.
I loved you then, and after—I love you yet."

Was it fancy that made me think I heard a rustling among the foliage behind me? I turned quickly, but all was still and silent. The floating boughs of the ash-trees were hanging and swaying against the blue sky, the sun was rising higher, the song of the birds was all but hushed. Evelyn lay sleeping beside me, her head upon my lap; and with idle pencil I sketched the branches of an overhanging creeper that grew near.

An hour passed, perhaps more, and again I heard a sound among the leaves; this time followed by sauntering yet firm footsteps. I am not ashamed to confess that my heart palpitated a little even before Dr. Philimore came in sight.

There was something sterner than usual in his courtesy, or sterner than had been usual of late. He raised his hat, and then sat down on the trunk of a tree at some little distance, not shaking hands with me as he had always done for some time past. I missed the trifling civility.

And there was a little change too in his voice and on his face. He was paler and the muscles about his mouth had a rigid look. When he made the usual inquiries about Evelyn his tones seemed hard and forced. Was he ill, or troubled, or only out of temper?

When I had answered all his questions I tried to make conversation, but quite unsuccessfully. He seemed absorbed, and replied abruptly, even petulantly at times. It was becoming painful, when, much to my satisfaction, Evelyn awoke and began to chatter. Dr. Philimore never could resist Evelyn. She gave him a strict account of the day before, of the game at hide-and-seek among the corn-stacks, of the feeding of the ducks near the pond in the farmyard, and lastly of the sound of the night wind among the chimneys. "And do let Dr. Philimore see that beautiful lady," she concluded, turning to me; "and sing to him about her as you did sing to me. Oh, do let him see her!"

Dr. Philimore glanced up at me with

a stranger look on his face than any I had seen there before. His colour came back, he looked at me with his keen, penetrating, grey eyes, and then he put out his hand and drew Evelyn gently and tenderly to his side; and putting his arm round her he said in a strangely embarrassed manner,—

"Has Miss Woodvyl been singing about a lady?"

"Yes, the pretty lady in her locket. And she sang to me last night, and told me about her. . . . And she loves her very much, better than everybody."

"Really! And now do you think that if I were to promise to bring you a very beautiful doll, as beautiful as Miss Woodvyl's lady, you would gather me some flowers, some forget-me-nots?"

"Oh, yes! Such a lot. I will gather a basketful."

And then he rose from the root of the tree where he had been sitting and came nearer to where I was now standing, preparing to follow Evelyn.

"Don't trouble about her; she can take care of herself for a few moments," he said. Then he paused, and added with some agitation, "I came here on purpose to see you to-day. . . . I came an hour ago."

"An hour ago?"

"Yes, the longest and most miserable hour of my whole life."

I dare say I looked the inquiries I could not ask. Dr. Philimore continued,—

"What made you sing that song, especially what made you sing it in the manner you did, every word distinct and clear and maddening?" This he said with something that was almost asperity in his tone. Then his voice changed, and his whole manner became more subdued, as he added,—

"You owe me some reparation. Will you not show me the portrait Evelyn spoke of? I should like to know something of the person who could win from you such love as that."

I hesitated a moment. There seemed a kind of sacrilege in the mere idea of exhibiting the face I loved to satisfy the curiosity of one who was outwardly so very little more than a stranger. But I could not hesitate long. The mere fact of Dr. Philimore's presence seemed to envelop me in a kind of non-natural atmosphere in which I could neither act nor think nor breathe freely. I unclasped the chain at last, and placed the locket in his hand, watching his face as intently as he had watched mine.

The time seemed long. Then he said simply and earnestly,—

"It is beautiful!"

He closed the locket and returned it, handling it with a kind of tenderness; then he seemed absorbed for a moment or two.

Presently he spoke again, his restlessness was a little subdued, he was more himself.

"Tell me," he said, "it was not *only* because of her beauty that you loved her?"

"You speak as if my love was a thing of the past," I replied. "I love her as much or more than I have ever done. I cannot help myself; I believe it will be my fate never to forget her, never to be able to shake off my love for her."

"But I am trying to find out *why* you love her; what awoke your love in the beginning?"

"And that I cannot tell," I replied. "How should I? Love has no cause."

"Pardon me: you are betraying your inexperience. Love has very often a cause; and that cause is, more often than people dream of, gratitude. Had you not something or other to be grateful for to your friend?"

Something! I had everything; and so I told Dr. Philimore without reserve. It was the first time I had had any opportunity of speaking of Godwyn's beautiful and wondrous kindness in those early days at Hazelcote; and I spoke now from out of years of pent-up thought and love and pain. Dr. Philimore listened eagerly and sympathetically, and when I had done speaking he hesitated awhile and then spoke himself.

"I am glad you have told me all this," he said in a low, fervid tone; "more glad than I can tell you. I shall understand you better, and perhaps after a time I may hope that you will understand me."

Then once more he paused, and once more seemed overcome by the strange agitation that beset him. I myself was in no calm mood; but already, before that word that he had to say was spoken, the word that I knew was coming, before it was uttered I had upon me a strong and half-maternal yearning to soothe and quiet him. It might be only nervousness that troubled him, but it was something that I did not want, something that a little distressed me.

When he spoke again his manner was even more perturbed. He had been silent for a time, and he seemed to expect me to understand instinctively all that had been passing in his thoughts. Taking my hand in his, he said tremulously,—

"I cannot choose my words, nor make fine speeches. I came here to-day to tell

you simply that I love you; hoping that you knew it, that you had seen it for yourself, that you were prepared a little to love me in return. There can never be full satisfaction to a heart like yours in spending its affections on a silent and absent friend, a friend who may never again be present. If you will but give me the opportunity, you shall see that hers is not the only kindness the world has to offer you. Life shall be no more the lonely and hard thing that it has been for you of late. Say only that you will give me this opportunity, and I will be content. . . . No, not content; I shall want more, I shall want all the love you can give me before I can know contentment."

Then he paused, and for a moment I trembled with fear lest some strange and sudden impulse should impel me to self-betrayal, to betrayal of such feeling as I did not intend Dr. Philimore even to suspect. Until this hour I had not dared to acknowledge its existence even to myself; but are there subtler and more implicit modes of revelation than any that belong to words? Or did Dr. Philimore assume what he wished? I hardly know. . . . Only one thing was quite clear to me that day. When Evelyn came back with her basket of forget-me-nots I had promised to become Louis Philimore's wife.

* * * *

Another whole fortnight had to pass before our return to Trentford and lessons and household cares; a fortnight of wondering happiness, and sudden pride, and strange humilities. I was not worthy; no, nor could be. And yet to have been once—were it but for an hour—so lifted up to the throne of a man's heart was matter for proud surprise. I could never again take so little pleasure in thinking of myself as I had done before.

And this great happiness was all between us two; no one else was even to know of it for a time. Louis was not rich; he had only his practice, and that was variable, he said; acknowledging too that he himself had been variable, and had not humoured his wealthier patients as a popular doctor is required to do. Mrs. Willoughby was only one of many whom he had offended by plain speaking, but he would hold himself in a little in these cases; he would set himself to work for my sake. And meantime it would be better that his motives should be unsuspected. We should have plenty of opportunities of meeting. He would continue to attend Evelyn, Mr. Mapleson had requested him to do so.

And he should forbid lessons and prescribe long walks in unfrequented places whenever he chose so to do.

There was no little marvelling during the first week or two of our return. We were so much improved, said one; and so bright and animated, said another. Uncle Felix said nothing, and his silence made a strange little disappointment that I could not understand. Did he suspect? Did I want him to suspect? I cannot tell. There was a little complication somewhere, a complication that did not become less puzzling as the days went on. The dear old man—why do I call him old? Do fifty years make an old man? or thin grey hair? or perpetual garments of waterproof? Yet he seemed old to the children and to me, and I was going to say that he seemed to us all to grow dearer than ever during that long sweet summer. He came a little less frequently, but that was to be accounted for. A married sister of his, named Mrs. Dewhurst, had come with her husband to live at Walton Priory, and naturally enough he went often there. But when he came to the Vicarage I felt more and more that there was change in him. He was quieter and tenderer, tender almost to sadness at times; a sadness all the sadder for having to struggle through the outer habit of cheerfulness. And the struggle was never more evident than when he met Dr. Philimore at the Vicarage. I never could tell why their meeting should be half a pain to me, nor how much Mr. Mapleson's evident kindness of feeling towards Louis had to do with that pain.

IX.

Once upon a time—when or where I cannot tell—I read these words in a book:—

“Women who brood much over the past, are apt to invest their love with qualities it never had. They forget their distastes, their qualms, their doubts, and remember only that they loved.”

I suspect strongly that this contains much truth. Of those first six months I remember nothing but the love they held, and yet it is probable that they held at least the germs of other feelings, afterwards to be developed.

I was happy, beyond all doubt happy; more especially happy, perhaps, before the autumn set in. Louis was a little *exigant*, perhaps a little imperious in his love; but imperiousness became him; *exigence* was a proof of the depth and reality of his affection.

Perhaps his variableness began to trouble me a little; but he accused himself of it, and

assured me repeatedly that it was only variableness of manner. “He had professional anxieties,” he said, “and his life was not so smooth as it appeared to be.”

And yet I became conscious of a sense of incompleteness growing in me; and when the dark November days came, they found me disquieted, and a little oppressed. The oppression might have grown to more than a little if I had not been so much occupied; but as it was, I had no time to dwell upon it, to feed it with doubts and fancies. I believe, too, that this perpetual demand made upon my attention by outward things was one strong reason why my affection was ever so fresh and new. It was only at rare times that I could allow myself the indulgence of thinking of Louis, reverencing his superiorities, surrounding him in imagination with whatever seemed to me good and beautiful. And as the winter drew on, these times became still rarer; I was more occupied with the children indoors. And of course I saw much less of Dr. Philimore. Evelyn was now as strong as she had ever been, and his visits to St. Dunstan's Vicarage were all but discontinued.

On one of these November evenings, I wrapped myself in a cloak, and stole out to the garden at the back of the house. The children were all in bed. I had had a long wearing day, and the effect was feverishness and restlessness rather than lassitude. I felt a sensation that was almost one of delight as I stood in the clear night air, with the deep blue star-lit ether overhead, the solemn weird silence all round, the dark leafless trees waving and swaying a little sadly. The scene could hardly have seemed so intense in its characteristics to one whose imagination had been less prepared for excitement. It would have been common-place enough in the daylight. There was a high wall skirting the lane, the long sprays of ivy on the top of it seemed to wave between me and a world of mystery now. I stood watching it for a while, listening to the far-off roar of the town, the faint rolling of distant wheels. Then the clock of St. Dunstan's chimed three lines of its ancient psalm tune—it was a quarter to nine. I would walk about for a whole quarter-of-an-hour, I told myself, with a feeling of childish pleasure as I went down the gravel path. But at the bottom of the garden, where the deepest shadow was, I stood again for awhile, watching the Rembrandt-like effects of a single ray of yellow light that came from the window of a small laundry that had been built out from the back

of the kitchen. The long straggling boughs of a laburnum tree made an arching network above the light, and below, a blossoming laurustinus caught the sheen. The darkness all round seemed vaster and deeper than ever. It was a darkness that spoke, and its voice was like the voice of many memories—memories of dead hopes and dying desires, and of friends who seemed further away from me than even death would have put them. There was a strange ache in the whispering tones all about, in the quivering trees, in the soft, low wind, in the distant murmur of the city. Some eerie spell seemed to be falling upon me. I could not stir nor move. My lower perceptions seemed to be dulled and overcome for the moment.

Suddenly, and silently, and coldly, as I stood there in that darkest shadow, a hand was laid quietly upon my arm. I became aware of a short figure breathing heavily by my side. A thrill of horror shot through me. For one moment that seemed ten, I did not dare to turn, to speak, or to think. The wall was twelve feet high, there was only one small door in the side of it, and this was locked. These were the first facts that flashed through my brain. The figure began to creep slowly to the front of me. With a sickening sensation I tried to peer into its face, to assure myself of its materiality. Then I tried to speak, but speech was as impossible as movement.

At last I felt that an attempt was being made to draw me toward the ray of yellow light that streamed from the window; the icy hand was removed from my arm to the skirt of my dress. I did not dream of resistance, and as I stepped tremblingly over the grass, my tongue was loosened.

"What is your name? And what are you doing here?" I asked, with an attempt at sternness, but hardly recognising my own voice.

There was no answer. The figure shook its head and drew me onward.

We stood in the light presently—I and an impish-looking girl, who might have been twelve, or might have been twenty. She was small and dark, and literally half naked, and her two round, black, glittering eyes flashed back the light as two glass beads might have done. I was reassured, yet I started involuntarily when she once more put out her cold hand, and fastening it into the top of my dress, drew my head down till it was almost on a level with hers. Then she held out her left hand, and assuring herself that my eyes were fixed upon it, she slowly

unclasped it, disclosing a small exquisitely-made gold cross . . . I had seen it before, on the neck of Godwyn Barry.

I felt a strange shiver creep over me. I could not think nor frame any other questions. I would have taken the cross, but the child closed her hand over it, and drew it back in a determined manner, and with her right hand pointed over the wall in the direction of Walton-cleve, and then again pointed to the cross. It had not struck me till now that she was probably dumb.

"Are you not able to speak?" I asked at last.

She shook her head negatively.

"Will you come into the house?"

Again the same negative gesture, and again the out-stretched hand pointing into the distance. Then, once more she grasped my dress, and attempted to draw me towards the door in the garden wall. I began to comprehend.

"Did the lady to whom this belongs give it to you herself?"

The girl smiled and nodded, still drawing me onward.

"Is she there?" I asked, pointing in the same direction, as she had done.

And again the affirmative nod and smile.

For one moment I disengaged myself from the girl's grasp, to snatch the key of the garden door which hung in the laundry. Then I followed her out into the night, thinking of nothing, dreading nothing; picturing to myself only a sudden tender meeting with Godwyn Rivers.

I believe the night was a cold one, but I did not feel the cold, though I had on no outer garment save a thin cloak, with the hood drawn over my head in place of hat or bonnet. My boots were thin, too, and I knew afterwards that the roads were wet; but I was conscious of none of these things, as I followed my silent guide on through the lanes that wound between Trenford and Walton-cleve.

Some little consciousness began to come back to me when I found that we had passed through the village without stopping. As we passed the church, once more I made attempt to gain information; but I obtained little beyond more emphatic assurance that what I had already gained was true.

Still we went onward, rapidly onward. I was fevered, absorbed, excited; forgetful or disregarding of all consequences. In the background of my thought there was somewhere a knowledge of the lateness of the hour, of the consternation there would be

when I was missed—if anybody did miss me—at the Vicarage; of what the world would call the strange imprudence of the thing I was doing; but none of these ideas came with force enough to cause a moment's qualm or hesitation. My elfish guide still grasped my dress as if she feared I should make some attempt to escape, but she had no need to fear. Remembering the talisman she held, I should probably have clung to her if she had not clung to me.

As we passed Maybank Farm, I perceived that a young moon was rising over the hills behind us, silvering the tops of the corn-stacks and the white dove-cote, and throwing a long line of light behind the trees in the copse. For the first time I remembered Louis, and the remembrance came with a little thrill of fear—a thrill that might have proved to me that my confidence in my own power over him was not so strong as it should have been. I felt inclined to hesitate.

"Tell me," I said, "how much further have we to go?"

The girl shook her head. Then once more she pointed into the distance.

"But how many miles? Hold up some of your fingers."

She obeyed with reluctance, holding out two fingers of her left hand, and still grasping the skirt of my dress with her right.

Two miles yet. We should be over five miles from Trentford when we reached the end of our journey.

Another thrill—one that had in it no fear nor pain, but a little sadness—came over me as we passed Bentlands. It was a long, low, old-fashioned stone house, standing a little way back from the road. There was a somewhat stately-looking portico with grey pillars, that gleamed a little in the moonlight, and diamond-paned windows, with heavy stone mullions. It stood rather high, on a kind of terrace; and the edges of the low terrace-wall were softened with creeping ivy; and ivy grew among the windows and up to the roof; and there was a background of dark trees and wide orchards. I have never seen a more picturesque house than Bentlands; and I think it can never look more beautiful and peaceful than it did on that November night.

Still we went onward, but by-and-by we left the high road, and turned into some heavy ploughed fields, over which no track was discernible to me. I was more than ever at the mercy of the silent girl, but she was evidently to be trusted for her knowledge of the road.

After crossing the last of the fields, we came to a low sedgy plain, and began to traverse a path by a narrow, dark, sluggish river. It might be that I was growing weary, but I began to feel a sickening sensation as the spongy plash that followed each footstep fell upon my ear. The very air seemed tainted. The moonlight seemed to grow pale and weird; and the pollard willows over the black, silent current hung gloomy and still, as if they were but the ghosts of trees.

Once more, and for the last time, I turned interrogatively to the girl. This time she smiled, and pointed to the left. Looking in that direction, I saw a feeble light flickering. At first it seemed to be burning low down amongst the damp vegetation that fringed the river. As we passed on through the sedges, I perceived that there was some kind of dwelling there.

A strange, wretched, haunted-looking dwelling, rising out of the sluggish water, rising ruined, spectral, shadowy, into the dank air. The broken, naked beams of a mill-wand crossed the sky in one direction; two or three gaunt poplars loomed in another. The roof was all but gone; the bare rafters, black and shattered, stood out in the moonlight like the skeleton bones of a house that had been dead for centuries.

We crept round among the sedges to what appeared to be the front of the dwelling. The window where the light burned was like a double slit in the wall; the entrance was at the top of a broken, rickety wooden ladder, that led to a kind of gallery.

The girl entered first, still dragging me onward. It was some moments before I saw what kind of place I was in. The light was dim, there was a low wood fire burning on a stone hearth; one woman crouched over the fire, another lay on a wretched bed by the side of it.

I had only need to glance once at the soft rippling yellow hair and the beautiful head upon the pillow—a head beautiful, and queenly, and picturesque even there. The woman by the fire raised the faggots, so as to make a blaze. Godwyn awoke, and turned her face up to mine, and put out her hands. We did not speak for some moments.

Godwyn was the first to break the silence. I had often wondered how she bore herself in the reverses that had come upon her, not dreaming of such reverse as this. I had wondered if her manner had lost aught of its charms of brightness and sweetness; if her face could grow sad and worn, her voice unmusical and querulous. My wondering

was at an end now. Not one of these changes had passed upon Godwyn Rivers.

"Well, old Nannie, and how has the world been behaving to you?" That was her first word after the long silence. She uttered it gaily, holding my hand in hers, looking into my face with loving, tender eyes. But I noticed that her lip quivered as she spoke, and I began to perceive that the

exquisite flush upon her cheek was perhaps deeper than it should be. Placing my finger on her pulse, my fears were quickened.

"You must tell me about yourself first," I said. "To begin with, have you been ill, or are you going to be?"

"Neither, I hope. I'm only tired, dead tired, Nannie darling; as you would have been if you'd done what I have done. Look there!"

Page 33.

She turned as she spoke, and drew back the tattered grey coverlet. Asleep there by her side was a child as lovely as herself, a little plump, dark-haired, rosy-cheeked girl, nearly a year old, but as large as many a child of two.

"How should you like to walk fifty miles on foot, and carry a creature like that in your arms?" Godwyn asked, with eyes that

seemed to flash pride and love and triumph. She covered the little one with passionate kisses before she drew the rags over it again. I sat silent and bewildered.

"Fifty long miles, and in November," Godwyn went on, still in her own silvery tones, but speaking more rapidly and fluently than I liked, remembering her confession of exhaustion. "My money failed me at Fair-

bury Junction. So what could I do but set out to tramp with my baby and my bundle; an actual bundle, Nannie, tied in a handkerchief. I've been five days coming. I was coming to you, dear. But I suppose there is a limit, even to *my* physical powers. These good people found me in the road this evening; and I had no means of writing. I could only let poor Hetty have my cross (the sole relic of the old days that I have never been able to persuade myself to part with), and describe you as well as I could, and tell her where you lived. Her mother said she would be sure to bring you if you were to be found in Trentford. I am going to set up a school there. What will my aunt say to that, think you?"

"Mrs. Ingram is dead."

"Is she really?"

"Yes. They are adding a new wing to the Infirmary with her money."

"Then I shall go to Hazelcote, and start in opposition to Miss Chilman. I shall take a house as near to Farnedene as I possibly can. You must go too, Nannie; we will be partners. But I shan't like Hazelcote so well. It will remind me too much of Grantoun. My poor Grantoun! It was a year last Monday since they laid him under the poplar-trees at Bagnères-de-Luchon. Such a long year it has been; and oh, so hard, darling. I didn't write, partly because the hardness made me feel too bitter to write, and partly because I thought it was no use saddening you with what you couldn't remedy. I've been teaching, dear, in a *pensionnat*. How I hated it! And there were some English people at Bagnères, and they were very kind, and very charitable, and I hated that too. I was growing to hate everything and everybody but my little Marcelline. I couldn't bear it any longer. But it is all over; I won't think of it. Surely life can never, never be so wretched again."

I could not answer. I seemed to be growing more and more stunned and saddened. It was not only the brief description of her outer life; there was something behind that, something that I could not explain nor define, even to myself. Yet, as of old, Godwyn seemed to comprehend the thought that I could hardly grasp. She went on again, speaking in the same clear rapid manner,—

"How strange it all is! Do you think everybody's life is as strange to look back upon? I was thinking of 'Rasselas' before I went to sleep, thinking that perhaps, after all, Dr. Johnson's depressing views of life

were not far from true ones. Disappointment does seem universal; and I believe that the happiest people are those who can best endure. That is where I fail, Nannie, where I have always failed. I have no power of endurance. If my trouble is one that I can elude, or make light of, I slip over it in that way. If not, I sink under it, and fret, and give way to weak impatience. Sometimes I think Grantoun might not have died if I had been the helpmate I might have been. But I never thought, till it was too late, that he really took to heart the things I said. Is it not an awful fear to have? And I have other fears. Conscience is a terrible enemy, Nannie, if one can't make a friend of it."

"But hadn't you better be quiet awhile, and not talk so much to-night?" I suggested. I was about to suggest other things, when Godwyn interrupted me.

"I must talk, dear; I have not talked for months. And I want you to talk to me, to help me, and strengthen me, and comfort me as you used to do. Tell me I'm not so wicked as I think I am, Nannie darling—it oppresses me; and show me how to start afresh, and to start from higher ground. The other day, when I was waiting at a station, I took up *Fraser's Magazine*, and opened upon this fragment of poetry:—

'Great morning strikes the earth once more,
And kindles up the wave,
As many and many a time before,—
And am I still a slave?
Come, let me date my years anew;
This day is virgin white;
By heav'n I will not reindue
The rags of overnight!
I was a king by birth, and who
Is rebel to my right?
None but myself, myself alone:
Conquer myself. I take my thrine.'

"Isn't it grand? But I've always been beginning afresh, and ending where I began. Nannie, can't you *make* me something better? Can't you start now? I'm in a plastic mood to-night."

She was in a mood that was something more than plastic; yet it was no fit opportunity for a sermon, even had I been capable of preaching one. Partly to quiet her, and partly perhaps for higher reasons, I strove to show her where she might find the light she was most certainly and earnestly at that moment craving for. To do more than this was not mine, I told her; perceiving not dimly for myself that grand truth that all power to touch or sway for an instant another soul must be power won by our own soul out of the days and hours that are past. So surely as a man lives a 'careless, insufficient life, knowing himself capable of fuller

life, yearning all the while after higher life, so surely will come a day, here on the earth, when he shall find himself wanting. A day of darkness, and no inward light to make plain the meaning. A day of sorrow, and no strength to keep his soul erect. A day of counsel, when his friend shall find him naked, empty, with downcast eyes, a shrinking face, and on his tongue a flow of vain, unwise, and unconsidered words—words that shall afterward sting him like so many deadly sins. Circumstance may develop in us new strength for our own needs, but the needs of another draw upon us suddenly, and what an hour it is if they find us insolvent! No repentance, no agony of prayers or tears, will buy the force that comes only by the slow accumulation of the years wherein a human being has lived up to his best.

I had been sitting there above an hour, and I had not once looked round, but hearing a slight noise behind me, I did so now. One touching little scene attracted my attention from the general wretchedness. Below the rude window there was a little stone sill, not much more than a foot long, nor much more than a foot from the ground. Hetty was kneeling before it, her hands clasped together, her eyes closed, and her head bowed most reverently. It was a pathetic sight, and heightened much by the gloom and the squalor, and the half-defined fear of which I had been so little conscious. I had no more fear. Hetty's mother was making another bed of straw and rags in a corner of the room.

"Are you goin' to stay, missus?" she said, pausing for a moment.

I had not thought of what I was going to do. I hesitated a little in my bewilderment, and Godwyn interposed,—

"Of course you are going to stay. What else can you do? You cannot go back to Trentford to-night. Lie down here by me, and we will go together as soon as it is daylight. I shall be rested by that time, and my headache will be gone. It's bad now, very bad, Nannie. Do you think they would put out the light? it pains my eyes."

Godwyn's colour was gone now. She was pale, and she began to shiver a little, and I saw that other symptoms of fever were in process of development. For a moment I half determined to go back to Trentford at any risk, and send Dr. Philimore at once; but the night, the distance, and Godwyn's assurance that she was not unaccustomed to such attacks, prevailed against my inclination.

Before going to bed, the woman once more tried to persuade Godwyn to take food, informing me that she had not tasted anything since she entered the house. But entreaty was quite in vain. A few minutes later both the woman and her daughter were fast asleep. Before they retired I had tried, with the mother's help, to discover how Hetty had contrived to enter the Vicarage garden. I learnt, with some surprise, that she had managed to climb the high wall without assistance.

I still sat by the bed, watching Godwyn. After a time the shivering fit passed away, and once more she became feverish and excited. I could not prevent her from talking, from going over the past sorrowfully, and with self-reproach; from dwelling in detail upon the future, and with brighter hopes than seemed to me warrantable. Her first step would be to seek out a gentleman of the name of Dewhurst, she said. He had been a friend of her father's, and would doubtless be willing to afford her the little friendly aid she needed. She had heard in Paris that he had, after long absence, come to live in the neighbourhood of Trentford again. Did I know him? He would probably be an old man, though she had heard that he had married a young wife.

I told her the little I knew of Mr. Dewhurst, that he had some years ago married the only sister of Mr. Mapleson, of Bentlands, and that they were now living at Walton Priory. They had no children, and I believed they were good and charitable.

"Charitable! Don't use that hideous word, Nannie; I hate it. I don't want charity. I want to keep a school, and to earn my own bread, and bread-and-butter for Marcelline. And you must help me, dear. You have had experience, and you have common-sense. But we will talk it all over afterwards. We shall be so happy, I know we shall. My malignant star has been dominant a long time now, Nannie; but it is setting at last, I can see it—there—out over the trees."

Long afterward I remembered the night when Godwyn Rivers watched the setting of her evil star.

* * * * *

It was well-nigh daylight when I entered Trentford again. Hetty had accompanied me almost as far as Bentlands; and after she had left me I had walked as rapidly as I possibly could, hoping to get through the town to Brunswick Terrace, where Dr. Philimore lived, before people were astir. I

was wearing Godwyn's hat ; but I was conscious of presenting, on the whole, a very forlorn appearance.

Suddenly, turning a corner that led into a suburban street, I found myself face to face with a medical man of the name of Henslowe. I was aware that he was a man upon whose social reputation some shadow rested, but I did not think of that ; indeed, I thought of nothing save the fact that I had left Godwyn worse than she had been during the night, and that here was a doctor who could reach her more speedily than the one I had intended to send. After two or three minutes' explanation and direction, Dr. Henslowe, who was riding, started for Baines's Mill at once ; and I went onward to St. Dunstan's Vicarage.

X.

There are certainly hours in life when the soul seems to pass as it were out from the body, drawn out for the most part by the strength of engrossing outward circumstances, drawn out more rarely by influences higher and beyond the influence of event. The return is usually much the same in either instance. There is surprise and dissatisfaction, and an after-fit of sadness.

The first sight of Mr. Willoughby's face was the cause of my return into myself. To my astonishment he looked angry, and he spoke more angrily still. I had, of course, meant to explain everything to him ; instead, I explained nothing, but stood silent and a little rebellious. Then he turned away, muttering something about "knowing the meaning of it," and I dragged myself wearily up-stairs to change my dress before beginning the long day's work that was before me.

I made a rough attempt as I dressed to assign to each hour its own task. Much of my ordinary work would have to be left out of necessity. I would do what I could during the morning ; in the afternoon the nurse should take the children out for a walk, and I would humble myself so far as to ask Mr. Willoughby for a holiday.

I had not the smallest doubt that the holiday would be granted ; indeed, I had been so long and so completely looked upon as one of the heads of the household, that there seemed something ridiculous in the mere notion of my asking permission to do anything I felt inclined to do. Yet I would ask, I told myself, feeling not a little repentant, and very uncomfortable. It was the first shadow of unpleasantness that had ever been between us, and I hoped earnestly that it would be the last.

The morning seemed strangely long, the children slower and duller than usual, and the November sun as bright and tempting as any sun of spring. I grew more and more absorbed, restless, and impatient. I seemed to have so much to do, and the things I had to do were so important, that it was like a refinement of cruelty on the part of fate to keep me sitting there teaching French verbs and English history to two unwilling children. I gave it up at last, and went to put on my walking garments, that I might be ready to start as soon as Mr. Willoughby came in. I would not wait for dinner.

My afternoon's work was all arranged. I would take a cab, go first to Brunswick Terrace and explain to Louis how it had come to pass that I had sent Dr. Henslowe to Baines's Mill, ask him if he considered that Godwyn would be safe in Dr. Henslowe's hands, and I would ask him also if he could recommend a trained nurse who would go with me at once. Having found the nurse, I would go to Walton Priory, enlist the sympathies of Mr. and Mrs. Dewhurst. From Walton Priory I would go to Maybank Farm, and, if possible, engage Mrs. Warde's rooms ; and from thence I would go straight on to the old mill, returning at once to the farm with Godwyn if she were in a fit condition to be removed.

But alas for my Alnaschar-visions ! I had almost finished dressing, my hat was in my hand, when I heard Mr. Willoughby's step on the stairs ; he was coming up with most unusual rapidity and decision. He knocked impatiently ; and when I opened the door, I saw at once that he was in a most irate and agitated mood.

"Is it true?" he inquired breathlessly, "is this rumour true, that you were seen talking to Dr. Henslowe at the top of Green's Road this morning? Answer me at once, is it true, I ask?"

Perhaps it might be want of sleep, perhaps it might be the anxiety I had endured, that had left me strengthless ; I cannot tell. I only know that I felt myself turn cold, that I began to tremble, that I was altogether unable to give Mr. Willoughby the explanation to which he was entitled. Certainly he did not give me much time for it. Before I could at all collect myself he had left the room, locking the door, and taking the key with him.

Then I did what most women would have done ; I sat down and cried for nearly an hour—cried bitterly, and passionately, and

without restraint. At the end of that time Eliza, the housemaid, came up with my dinner. I do not know what she knew, or what she suspected; but I noticed that she looked a little sorrowful and sympathetic, and that she left the door ajar while she was in the room, and moved about in a manner that would have made escape very easy. I was sorely tempted.

After I had eaten my dinner, Eliza made a fire; and asked if she could bring me any books or work. I told her that I thought I had all I wanted, but I should be obliged if she would take a note for me as soon as she could. She turned red and looked distressed. Mr. Willoughby had forbidden her to take any notes or messages.

I know not how I should have passed the remainder of that miserable day if I had not been so utterly worn and weary that to keep awake with nothing but sorrow to feed upon, was altogether an impossibility. I thought till I was thought-sick of Godwyn, ill, lonely, and in actual distress, and as it were at my very door; of the imprudence I had so inadvertently been guilty of in putting her under the care of Dr. Henslowe; of the rumour Mr. Willoughby had heard, and which would doubtless reach the ear of Dr. Philimore also. I seemed to be entangled in a very network of trouble, and all means of freeing myself denied to me by what seemed an almost unaccountable proceeding on the part of one of the most gentle, timid, and unsuspecting men I had ever known. I had never before seen any evidence of the latent capriciousness of my cousin's temper; but since that day he has more than once betrayed the same tendency, though in a less marked manner, and never again in any matter concerning myself.

About four o'clock, when the grey gloom of evening began to spread over the sky, I threw myself on the bed, and slept as only the weary and trouble-laden can sleep. When I awoke again the fire was out, the lamp was burning, a tray containing an abundant and somewhat dainty tea stood on a table by the side of my bed; and I saw that it must have stood there for some time. The house was strangely still and quiet. Presently the clock in the hall struck twelve. I had slept nearly eight hours.

I did not soon sleep again. I was capable of thinking now as well as of feeling; and after sorrowing not a little over the day that was gone, I set myself seriously to consider what I had better do when the coming day broke. It was clear that I could do

nothing until Mr. Willoughby and I had had some explanation; remembering his mood, I was afraid I could not trust myself to offer such explanation to him in person. Finally, I decided that I would send as soon as possible for Mr. Mapleson, and place myself and my worries entirely in his hands. After this I grew quiet and tranquil, and slept soundly till the morning.

I had decided to ask Eliza's opinion about the best way of sending for Mr. Mapleson; but after breakfast, just when I was about to detain her, to my great satisfaction, I heard his voice in the hall. There was a shout of "Uncle Felix," a clatter of little feet, then after a while all was still again; and I knew that in all probability my cousin was asking the advice of Uncle Felix, as to what he should do in so strange a dilemma. After waiting a brief time, I sent Eliza to inform Mr. Willoughby that I wished to see Mr. Mapleson. She came back smiling. I should find Mr. Mapleson alone in the dining-room, she said.

He, too, was smiling when I entered the room. He shook hands more warmly than usual, placed a chair for me by the fire, and then sat down himself, saying with some amusement,—

"So you have actually been getting into a scrape? It's quite refreshing to think of. Pray let me hear all about it?"

It was something more than refreshing to me, to tell my story to a listener like Mr. Mapleson. I had talked to him before of Godwyn; and he knew of my strange love for her, and understood it. His face grew grave as I told him of my night's work, and of Godwyn's motherhood and widowhood, of her illness and distress; but he made little comment until I had done speaking. He was less at a loss than I had been to account for Mr. Willoughby's capricious irritation, and made ample excuse for him. The poor little man was penitent and distressed already, he said, and would doubtless be yet more distressed when he knew all.

"And now I will tell you what I should like you to do," Mr. Mapleson concluded. The amusement had gone from his face now, and the old look of kindness and gentleness, with its undertone of sadness, had come back. "I should like you for this one day to put your friend entirely into my hands, remaining perfectly quiet and calm yourself, doing nothing whatever till the evening, when you shall hear from me again. Will you do this? Can you trust me?"

I replied briefly and without hesitation,—

"I can trust you entirely, and I will do what you ask gladly."

Then he rose to go. At the door he paused for a moment.

"I suppose, if Mrs. Rivers should still be ill, ill enough to require medical advice, that you would prefer her having some other doctor?"

"Yes, certainly," I replied, adding more diffidently, "I had intended to send Dr. Philimore."

As soon as Mr. Mapleson had gone, the children came clustering round me, anxious to know if I was better, and full of a sympathy that was very precious to me. Presently, just as we were about to prepare for lessons, Mr. Willoughby came in, looking so frightened that I could hardly help smiling.

"Run away, my dears, run away and play in the nursery for a moment or two. I will call you directly."

Then he turned to me, holding out a penitent hand, speaking in a yet more penitent voice,—

"It seems idle to say that I am sorry, my dear Joanna. I am more than sorry. But I had been so terribly distressed at first, I cannot tell you. Then we discovered that you had taken the key, and had gone as it were deliberately; and—and my distress turned to anger. And—and another thing. Perhaps I ought hardly to have used the word 'rumour' about Dr. Henslowe. A poor woman in Green's Road mentioned the matter incidentally; but it irritated me to hear your name mentioned in connection with his in any sense. However, you will forgive me, I know you will forgive me. . . I am sorry, too, about your friend; more than sorry, shocked, distressed. The Ingrams and the Barrys are connected with my patron, Lord Ayresbrooke. . . We must do something, I and Mapleson, we shall be only too glad; so will Dewhurst, I'm sure."

It was strange that as he went away I remembered the moment when Godwyn had watched the setting of the star over the trees beyond Baines's Mill.

There was nothing left for me to do now but to wait. Mr. Mapleson had begged me to wait quietly, but anything like quietness of mind was hardly to be expected. Whatever may be the course of events, the human mind cannot pass at once from a state of anxiety and tumult, to a state of perfect tranquillity. The mechanism of the brain requires time for its adjustment; thought has to arrange itself on the side of reason before emotion can be brought fairly under control.

I began to look for Mr. Mapleson almost as soon as twilight set in; and naturally, from that time the hours seemed very long, and suspense very unbearable. Remembering the state in which I had left Godwyn, and the time that had elapsed, it required almost supernatural powers of self-command to keep me from rushing to the nearest cab-stand and hastening to Baines's Mill.

By-and-by, however, came a note, scrawled by Mr. Mapleson in pencil on a leaf torn from his pocket-book. It consisted of only these words:—

"Mrs. Rivers is much better. She has been removed to more comfortable quarters. I shall probably be at the Vicarage in an hour or two."

I waited less impatiently after that, waited till tea was over, the boys' lessons at an end, the younger children all in bed; and then I took some sewing, and went to sit in the dining-room, that I might be alone when Mr. Mapleson came.

The kindly smiling face seemed literally beautiful in its kindness. The rugged features, the ungainly figure, the fifty years, the thin grey hair, all seemed as but so many elements of a nobler humanity. I fancied he looked just a little conscious, just a little pleased and self-satisfied; but it was entirely the consciousness and satisfaction of a simple, open-hearted child.

"Well?" I said, holding out two eager hands.

He only smiled in reply, and sat down beside me as if he meant to take leisurely whatever of gratification or enjoyment was to be had.

And I could not but humour him. I smiled too, and waited in questioning silence.

"So you want to know what I've been doing all day?" he said presently, bending forward, and rubbing his hands.

"Yes; please tell me?" I replied with an eagerness outside of my intention.

"But I told you all that was of real importance in that elegant little note."

"Yes. Thank you for sending it. But where is Godwyn? and what does Lou—Dr. Philimore say? And is she really better?"

In spite of Mr. Mapleson's fifty years, his face flushed a little. And mine flushed too. I could not have betrayed myself more completely; but I knew that my secret would be safe.

"Dr. Philimore says that Mrs. Rivers has without doubt had a slight attack of fever," Mr. Mapleson replied, speaking with some-

what less of that quiet cheerfulness that had marked his tone before. "But she has thrown it off at the very onset, as good constitutions are apt to do. He has no further fear for her. She appears to me quite well; but Philimore says she will need rest and quiet."

"And she is at Maybank?"

"No; we did not take her to Maybank. Dewhurst would not hear of it. She is at the Priory; and Marcelline is an established favourite. Clara will probably be inclined to dispute the possession of her with Mrs. Rivers by to-morrow at this time."

I hardly know why it was, but I suddenly felt that I was growing strangely fevered and disquieted. I would have given all I had to give, if I might myself have introduced to each other the two people who were more to me than all the world beside. I knew that the liking in such cases was very seldom mutual, and I had so longed that this case might be an exception to the general rule. Had I been present, I could doubtless have done a little to bring about what I wished; at any rate I should have seen whether aid of mine was needed. The things I longed most to know I could not ask of Mr. Mapleson. I could only conjecture, and guess at the meanings between his words. He told me that he had explained my absence, and that Godwyn had been grieved on my account, and unable to see anything amusing in the fact of my being kept prisoner. She had feared that from the beginning her friendship had been productive of more pain than pleasure to me. "But you will hear what she has to say about that and other things in the morning," Mr. Mapleson concluded. "My sister is coming into the town to do some shopping; and if you can be ready about half-past twelve, she will call for you on her way back."

XI.

Mrs. Dewhurst was a pleasant little woman, round and smiling and comfortable. She was in the habit of acknowledging herself guilty of two faults—idleness and indecision; and it is probable that she did not wrong herself much by the acknowledgment.

It was nearly one when her carriage stopped at the Vicarage gate. "You see I am so terribly undecided," she began, as I took my place beside her, "that shopping is quite a burden to me. I never can make up my mind, the things seem all beautiful alike, and I buy a great many more than I want, and

then they accumulate, and I wonder where they have all come from. I have been buying some baby's things this morning, and I am terribly afraid they won't fit. Marcelline is not a baby, is she? She's quite a little girl. But it won't matter much, perhaps. I dare say Gilbert can alter them. Or perhaps the nurse will know more about them. I have just engaged a nurse for the little one, quite a clever person, I understand; so I dare say she will know more about baby's things than Gilbert.

So Mrs. Dewhurst went on soliloquizing, I listening and admiring. People who can talk and enjoy talking while driving rapidly in an open carriage are always objects of admiration to me. Mrs. Dewhurst never once flagged till we came to the gate of the Priory; then, remembering that she had forgotten some embroidery, she became lost for a moment or two in dismay, and I had time and opportunity, to admire in silence the scene that was gradually unfolded.

It was a lovely day, although it was the second week in November. There was quite a spring-like balminess in the air; the brightness of the sun was somewhat subdued; there was a soft ethereal haze over all the distance; there were wide lawns near at hand, and rich bright glowing autumn flowers everywhere. The trees behind and all round the ancient grey stone house were all but leafless, and the far-off woods were brown and wintry, yet brilliant flowers—roses, dahlias, salvias, geraniums—these and others lingered lovingly, making wondrous contrasts with the brown and sere backgrounds.

I believe I tried a little to fix my attention on these things as we went slowly up the avenue. My heart palpitated at the thought of meeting Godwyn as it never palpitated for any one else. She was in the drawing-room, lying on a sofa near the open window. Mr. Dewhurst was there, and Dr. Philimore, and outside on the lawn there was a servant walking up and down in the sun with Marcelline; yet I saw only Godwyn. She was warm and loving as usual—as loving as she was lovely, and that was saying much. In the first days I had occasionally thought that some of her exquisite grace and beauty might be owing to the grace and beauty of her attire; but I could not think so now. She still wore her own dress, a shabby black merino trimmed with much-frayed crape—probably the only dress she was possessed of; and over it she had on an oriental-looking shawl. There was no ornament about her. Her pure, fresh, almost childlike complexion borrowed

nothing of its purity and freshness from contrast; her fair, rippling yellow hair was wound round her head in her own simple and careless fashion; and her eyes, now that I saw them in the light of day, seemed to have won out of sorrow and suffering a strangely touching and pathetic depth of expression. There was hardly a trace of her recent illness and fatigue; she smiled sweetly, fascinatingly; she talked brightly and gaily; yet through and behind all I saw the wistful pleading expression in her soft grey-blue eyes.

As I have said before, Mr. Dewhurst was

a man considerably older than his wife, I should think he must have been over sixty; yet his age had not apparently rendered him insensible to the attractions of a woman like Godwyn Rivers. He seemed to listen to and weigh her lightest word; and to listen with a deference that she could hardly fail to perceive. Concerning the impressions Dr. Philimore was receiving I could decide nothing. He had shaken hands with me when I entered the room, whether warmly or coldly I had not noticed; but when I began to recover myself a little, I began also to feel the spell

Page 32.

of his individuality upon me; to wonder if Godwyn did not feel it too. He was not in a conversational mood, but I felt rather than saw that there was a certain tension about him, that his mood was somewhat more highly wrought than the occasion warranted. I longed to be alone with him for a moment; and was glad when Mrs. Dewhurst asked him to stay to luncheon. A little to my surprise, he accepted the invitation at once. I knew that it was an unusual thing for him to do.

After luncheon Godwyn's sofa again seemed

to everybody the natural centre of attraction. For awhile I amused myself with Marcelline at some distance from the window; perhaps hoping a little that Louis would suspect why I did so; but my hope was not realised. I saw, however, with satisfaction that he was getting on better with Godwyn; and that her attention was not now so entirely devoted to the corner where Mr. Dewhurst's white head and pink face shone so conspicuously.

It was not until Dr. Philimore rose to go that he crossed the room to where I was playing with the child. His face was flushed,

and he looked self-conscious and embarrassed; perhaps he remembered that it was now over a month since we had met before, and that our last meeting had not been particularly satisfactory to either of us. I had no wish to remind him of these things; Godwyn's presence had put all dissatisfaction out of my mind. I was happy and hopeful, and I only wished to show that I was.

"Tell me," I said in a low voice as he bent over the child, "tell me what you think of my friend, Louis?"

"What do you wish me to think?" he asked, softly yet eagerly.

"I wish you to think the best of her, of course," I replied. And then in the momentary excitement produced by his presence and his manner, I added, "I want you to like her as well as you like me."

He laughed a low amused laugh, but I saw that the keen light in his eye became an intense light, and that the flush on his face deepened.

"Take care!" he whispered, as he turned away. "What would you say if I took you at your word?"

Then he was gone. His last sentence lingered on my ear; but it gave me no uneasiness. Nay, I felt something that was almost pleasure in remembering it. It was the kind of jest that people only indulge in over extreme improbabilities.

It was long since I had had a day so happy as that; and it was only the first of many happy days. Mr. Dewhurst went to Farnedene, and brought back a message that was at least as kind and relenting as Godwyn had any right to expect. Her brother had been deeply distressed to hear of her loss and her other trials; he was undergoing a heavy trial himself, and could sympathize with her; his wife being dangerously ill and not expected to recover. The main purport of his message was, however, a free and unconditional offer of a home for herself and her little daughter. According to Mr. Dewhurst's account, Mr. Barry was even anxious that they should go to Farnedene at once; but I hardly think Mr. Dewhurst strove to give Godwyn any very forcible impression of this anxiety. She wrote to her brother and received replies; but she still remained contentedly and happily at Walton Priory; giving out a kind of atmosphere of graceful and affectionate happiness that was felt by everybody. To be there seemed to me to live in another world. There were no jars to be smoothed down, no miserable little economies to hide, no weary hours of labour, of worry, or of soli-

tude. Godwyn had never seemed to me so much in her natural element as she did at the Priory. There was none of the stiffness and formality there that had always reigned at Farnedene. The house itself was brighter; the furniture less heavy and more tasteful; everything seemed more in keeping with her own dainty and ethereal elegance. She looked and moved more queen-like than ever in her new robes of rich mourning silk; and Princess Marcelline was twice a princess in her elaborate white embroideries.

Dr. Philimore still continued his visits to the Priory; but he seemed to be looked upon more as a friend than as a merely professional visitor. I had watched his progress a little curiously. He had never appeared to make the slightest efforts to please, not even the unconscious efforts made by ordinarily sociable men. Nay, sometimes I had listened in wonder to his little asperities, and *brusqueries*, and touches of satire. Yet so strong was the influence of that magnetic individuality of which I have spoken that people seemed attracted by its power to a degree that they themselves could not account for. Mr. Mapleson, who, of course, was frequently at his sister's house, seemed irresistibly drawn out of himself by the presence of Dr. Philimore. There was still the undertone of sadness about him at other times, still the almost painful gentleness of manner and bearing; but when Louis came his whole attention was unconsciously given up to him for the time being. I know not whether he was admiring him, studying him, or merely watching him.

For myself I had now no opportunity whatever of seeing Louis except at the Priory; and of course it was next to impossible that we should see each other alone there. One day I had walked over from the Vicarage, which was somewhat unusual; Dr. Philimore was coming down the avenue as I entered it. I could not yet keep under my emotion, though we had known each other so long; but I could not tell whether he perceived it. He took my hand in his, and drew me into the shrubbery-walk. He was a little stirred, I saw, as we went silently along.

We stood awhile under some brown over-arching trees. There was a stone vase on a tall pedestal; Louis leaned against it, still holding my hand, looking into my face with eyes I could not read, though they were intent and full of meaning. It was I who broke the silence,—

"How is Godwyn to-day?" I asked.

"She is quite well, little one; as well as

ever she was. I wish I could see you looking as well."

"As beautiful?"

"No; that is, I was not thinking of beauty just then. I don't think I care much for beauty for its own sake. I must have something behind."

So we went on talking for a while, in a language that no one cares to have translated. I had not been happier in Louis's presence, nor found him more completely my own for months past. The grey sky seemed all golden, the wintry trees stirred with a soft sweet delight. I could hardly be sad even when he moved to go away.

We had been talking of Godwyn again at the last. "Does she know yet of our engagement?" Louis asked a little carelessly.

"No," I replied, feeling my heart leap suddenly. The secrecy had been such a pain, disclosure would be such intense relief and pleasure. "No; she does not know. You said I was not to tell any one. But you will let me tell her now, will you not?"

He looked a little troubled, and he turned away his face for a moment or two; then he looked at me, and his look seemed both a little perplexed and a little sad.

"Would you very much mind waiting a while longer?" he said gently. "There are reasons; I will explain them all by-and-by."

I promised; and he went away; leaving me to go up to the house quiet, and content, and as happy in the future as in the present.

XII.

I know not how long Godwyn might have remained at Walton, if Mr. Barry had not written more urgently than he had done hitherto. He wrote by request of Mrs. Barry, he said, who was gradually sinking, and had expressed a wish to see Godwyn and her baby while she was yet able to recognise them.

It was a sorrowful leave-taking for me; and, strangely enough, seemed to come suddenly. I went down to the station, perhaps hoping a little that Louis would be there too; but there was only Godwyn and the Dewhursts. Even Godwyn was a little sad, I saw; and I did not wonder. Farndene might be preferable to teaching in a *pensionnat*, or living in cheap French lodgings; but I knew well how much she would miss the ease, the society, the affectionate worship that she had become accustomed to at Walton. But to be gloomy in her sadness was happily not hers. She smiled upon Mr. Dewhurst, said gracious and unforgetable

things to his little round, placid-looking wife, who stood talking to Marcelline with tears in her blue eyes; then she turned to me with words of hope and comfort. I had no tears, nor any words, nothing but one sob that burst from me when her last kiss had been given.

And after that day the wheels of life once more began to move heavily. I had made, no, not that; I was about to say I had made another friend; but rather should I say another friendly-minded person out of her kindness and goodwill continued to shower her friendliness upon me. Mrs. Dewhurst came often to the Vicarage, and often I went to Walton, sometimes taking Linda and Evelyn, and sometimes Baby Clare. Yet I always missed something there, and now and then came away with a heartache; but this was not often. Mr. Mapleson was there frequently; and I was growing more and more to feel that his presence had in it some influence more powerful to soothe and tranquillize than any influence I felt in the presence of people I held far more dear. My cravings and dissatisfactions seemed small, and egoistic, and in a strange sense unreal when I talked with him.

Of course I no longer met Louis there, or indeed anywhere except by accident. Once or twice he wrote to me, but his letters were exceedingly brief, exceedingly unsatisfying. They might each have been written during a fit of absent-mindedness, so little of himself was there in them. He was very much engaged, he said; his practice had increased so rapidly that he had been compelled to take a partner; but he was afraid it would be some time before he would be able to realise the advantage of the measure. These and similar practical explanations, given in the most practical form, were all I had wherewith to compensate myself for continued absence, hateful secrecy, and dawning fear.

Godwyn wrote often, happily and cheerfully. If I might only have written of my troubles to her, or have talked of them to Mr. Mapleson, they might have been lightened not a little. But I was bound in honour to endure them in silence. Mrs. Barry still lingered, Godwyn said in one of her letters. Her malady was partial paralysis; and she, Godwyn, did not believe that either of the medical men who were attending her thoroughly understood the case. She had endeavoured with all her power to persuade her brother to send to Trentford for Dr. Philimore; but he had such an aversion to strangers that she had not been able yet to succeed.

Consequently I was not surprised when I learnt a few days later from Mr. Mapleson, that Dr. Philimore had been summoned to Farndene by telegram. Mrs. Barry had had another attack; and her husband in his distress had followed his sister's advice gladly. Subsequently Godwyn wrote me all particulars herself. She had every reason to be thankful that her own confidence in Dr. Philimore had been so strong. Her brother was quite impressed with his skill, and only regretted every hour of the day that he had not desired his attendance sooner.

Godwyn's letters were not very precise. She wrote of Mrs. Barry's improvement, of her brother's increasing appreciation of Dr. Philimore's talent, and of Marcelline's growing friendship for the doctor; but I could not gather the date of his return to Trentford. That he had returned I knew, though I had not yet seen him.

And as I waited till I should see him again, I grew a little sick with waiting. I had obeyed him; I had had faith in him; I had thought that I loved him. Now, in pain, in sorrow, in neglect, in fear, I began to learn that I was learning to love.

Occasionally when I was out walking with the children I met him in the road. If he was driving he merely lifted his hat, and bowed with a pleasant smile. If he was on horseback he would stop, and talk to Evelyn awhile; and shake hands in a warm friendly way with me. His whole manner was friendly; but it struck a more painful chill through me than anything I had ever had to endure from his asperity and imperiousness. In his most unamiable moods I could by an effort, by condescension, have won him back to himself at once; but I felt instinctively, that by no effort could I touch or reach Dr. Philimore now. Every bright ready word, every smile, and every movement said, "Thus far, but no further."

I will spare the reader as far as I can all description of the gnawing, sickening, creeping sorrow that threatened ruin of every faculty I possessed. I did not bear it with much dignity of mind. I think I could have borne a sudden and irrevocable blow better. There seemed cruelty in the very slowness with which my fate overtook me. There was time for suspense, for intervals of wild passionate despair; of clinging pitiful groundless hope. . . . Yes: I could better have borne a sad and sudden certainty.

And still Godwyn wrote, and I learnt from her letters that Mrs. Barry still lived; that Dr. Philimore still went frequently backward

and forward between Trentford and Farndene. She did not mention him so often, nor at such length as she had done at first; but I still gathered that he was keeping up the favourable impression that he had produced at the beginning.

By-and-by came the letter bordered with black that I had looked for so long. Mrs. Barry was dead. Godwyn was more troubled than she had expected to be, and her brother was almost crushed by the stroke.

And then for a brief time, perhaps a month or six weeks, nothing else happened that I need write of here. Of course Louis went no more to Farndene; and if I had had any dawning suspicion that his visits there had been more numerous than was actually necessary, the suspicion was naturally set at rest. I still continued to meet him occasionally and by accident in the lanes and villages, and our meetings were still of a most varied and perplexing nature. Now and then his manner would be so much the manner of the old days—his voice so low and tender, his glance so full of meaning, his words so charged with a half-expressed penitence, that I could have knelt in the hedgerow to offer up a psalm of thanksgiving when he had gone out of sight. Surely his coldness had been mere caprice; or he had been burdened with anxiety; or he had theories, and held that satisfied love is apt to satiate—that he would best keep affection alive in me by keeping alive doubts and fears and suspicions and pains!

But times like these, at all times rare, grew rarer; and I began to meet him seldom more than ever before. It was his partner, Dr. Roberts, whom I saw driving or riding out to attend the distant cases.

And then I learnt from Godwyn that Marcelline was not well; and that having no confidence in either of the Hazeltote doctors, her brother had once more sent for Dr. Philimore.

Her little one was not really ill, she said; she had simply lost tone and appetite, and needed a little medical supervision. And Dr. Philimore was so exceedingly kind, Godwyn wrote. He thought nothing of going over to Farndene (which was sixty miles from Trentford) twice or thrice a week; and this even after Marcelline had begun to improve. She was intensely grateful to him, she acknowledged; not only for the skill he had used, but for the general and even affectionate interest he took in her fatherless baby—an affection that was but a due return for the affection that Marcelline had always had for him.

This and much more in the same strain Godwyn wrote. I hated myself when I began to discover that my fears were taking newer and more tangible form. How I strove and strove that the low and hateful and painful passion of jealousy might never take possession of me, I cannot tell here. It never had possession; I loved Godwyn too well, I loved Louis too well. If the world held for him a higher happiness than he could find in loving or in being beloved by me, by all means let him secure that happiness for himself. I would aid him in securing it.

My plan was extremely simple. I would write a letter to Dr. Philimore, icy, formal, and heartless as I could make it, telling him that I wished to be free. I had not a shadow of a doubt that no more welcome thing could happen to him than to receive such a letter as this.

I did not delay. I held no parley with myself till the deed was done. Then when the letter was written, folded, enclosed, addressed, and sealed, I laid it before me, and thought.

I thought first of my former prospects—of the life I had pictured to myself as Louis Philimore's wife. It was to have been a happy life—intensely, quietly, continuously happy; and it was to have been a busy life—full of congenial work amongst the very poor, the very sick, and the very sad, whom I knew I should find amongst my husband's patients. I saw this life in every detail. The morning's separation, the day's labour, the evening's sweet and quiet rest. It was all known to me, all dear to me—dearer than I knew. . . . And there lay the letter.

And then I thought of the actual future that must be mine now. I need not write of it—of the grey, dreary monotony, of the enforced isolation and self-dependence, of the want of aim and purpose that seemed inevitable. Life lay before me sunless and arid and barren. I could find no secondary object worth living for; had any presented itself, I should have rejected it. I had used the knife sternly—there was a certain sense of satisfaction in the utter sternness. I would have no alleviation of the wounds I had made.

And I posted my letter without once being tempted for a moment to stay my hand. It was written just as I had at first intended to write it. There was no reproach, nor any reason given. I wished to be free. I did not even say that I believed his wishes and mine would be consonant on this point. I had written as briefly as possible, and con-

cluded by saying that I would prefer that my letter should end all intercourse between us.

It was a sunny spring day; the children, Linda, Evelyn, and Maurice, were with me; and after passing the post-office, we went onward toward Walton. I read aloud a book of fairy stories as we went slowly through the green winding lanes; and now and then we stopped to gather flowers in the hedge-rows, or to peep through between the hawthorn-bushes at the lambs in the meadows beyond. We were a gay little party, and somewhat riotous; running after nothing, shrieking at nothing, laughing at nothing, as only children and people who are hiding mental torture can laugh. Suddenly we came upon Uncle Felix, who could only express how much he was shocked by standing quite still in the middle of the road, and holding up both hands.

He went on with us to Walton, and as we went we grew somewhat more decorous in our behaviour. His mood was graver than usual, but the word "graver" seems almost to do injustice to one whose quiet, cheerful smile was hardly ever absent, and whose words breathed a higher and more deeply rooted cheerfulness than the words of any human being I have ever known. Yet I have no better word to express the undertone that was visible in him after the first few moments of our meeting.

There was a certain unusual resoluteness, too, in his manner, not visible perhaps except on close inspection. Yet he contrived apparently to arrange some little matters exactly as he wished, and without any show of contrivance. The children were left to the willing care of Mrs. Dewhurst, who was never happier than with little ones about her feet; and I was taken down to the greenhouse to see some new geraniums raised by Mr. Dewhurst.

"What do you think of this?" he said, stopping in front of a pot with a large pink bloom in it. "This is the '*Adam Bede*.' Dewhurst is an intense admirer of George Eliot. I should say at least a dozen of his new blooms are named after her and her characters. This is my favourite—a lovely one, isn't it?" he continued, taking down a plant with a richer and more splendid crimson flower than any in the place. "This is the '*Maggie Tulliver*.' I hope you admire it!"

I did admire it to his heart's content; and from speaking of the geranium we went on to speak of Maggie herself.

"I think I like the '*Mill on the Floss*' better than any other of George Eliot's

works," Mr. Mapleson said, putting the flower-pots back, and drawing out a couple of basket-chairs, whereon we seated ourselves. "I dare say, considered merely as a novel, it is not her most perfect book; but I think it is by far the most touching and pathetic. It seems written more from the heart and less from the brain than her other works. Perhaps it may not contain so much of her peculiar philosophy, nor quite so many of those elaborately wrought scientific similes in which she has indulged of late; but it abounds far more fully with those exquisitely natural touches of which she is such a perfect mistress. And then, too, there is more of something beyond and higher than nature. Do you remember that graphically described scene wherein Maggie finds 'the little, old, clumsy' copy of 'Thomas à Kempis'?"

"Yes; I remember it well. I have read it lately."

"Have you?" Mr. Mapleson asked, with a little surprise, and looking as if he would like to ask something further; but he went back to the book.

"Recently," he continued, "I saw in a magazine a very thoughtfully written article on George Eliot's novels generally. It seemed written for the purpose of asking the pregnant question as to whether her grand and noble and heroic teaching was grand with the grandeur that only the highest Christian motive can inspire? I wondered as I read whether the writer remembered well that scene to which I have referred. Then I was obliged to acknowledge, a little sadly, that it was almost an isolated one, and that even in that the author could hardly be said to have herself subscribed fully and without qualification to the teaching that might have been inferred from the description itself."

"Probably not," I replied; "but I should say George Eliot was a person who could not and would not write beyond what she felt. I think when she wrote that scene she felt dubious and sad; but surely there is truth in her sadness?"

"Partial truth, perhaps," Mr. Mapleson answered thoughtfully and gently. "I was beginning to perceive his intention now—to feel conscious that the keen eye of friendship had, in spite of all my effort, detected my real mood. It was probable, too, that he knew at least as much as I knew of the reasons I had had for the deed I had done that day, though he could know nothing of the deed itself."

"Partial truth," he said. "Do you remember a sentence at the conclusion of the

scene, qualifying all the rest, and as it were letting down the tone of it? 'She' (that is, Maggie) 'had not perceived—how could she until she had lived longer?—the inmost truth of the old monk's outpourings, that renunciation remains sorrow, though a sorrow borne willingly.' Do you think that is the 'inmost truth' of 'The Imitation of Christ'?"

"That is a question I can hardly answer," I replied; "but I think few people who have really endured the sorrow of renunciation would quarrel with the passage."

"Perhaps not. I don't want you to quarrel with it; I want you to see beyond it; to see—and you can if you will try—that the renunciation of a human being who is really trying to be Christ-like is a renunciation that lifts the soul above sorrow—raises it altogether out of the region of earth-born longings and memories and desires. George Eliot has given us some of the most striking and forcible passages that the 'Imitation' contains; but they are almost without exception the voice of the 'brother who, ages ago, felt and suffered and renounced.' Of the voice of him who loved, who desired nothing so much as to be perfectly free, that he might love more perfectly—of him who was quieted, uplifted, whose soul was consoled with sweetest, fullest consolations—we hear nothing."

How small seemed the thing I had done! How low down in the scale of human emotion seemed all my regrets and strivings and resolutions! I could imagine, and for the first time, that there might even be somewhere in the future a day whereon I could thank God for my heart's martyrdom as for a mercy.

But that day was far off; and when I went back to the old scenes and influences, it seemed to recede still further. I felt less blinded, less stupified, less shut in by the narrow boundary of my own sorrows and negations; yet I was far from the mountain heights to which my gaze had for awhile been turned. There was still for me the desert and the waters of Marah.

XIII.

The reader knows with what complicated feelings I had written to Louis Philimore; how little I had really desired that my letter should reduce our strange and fitful intimacy to mere acquaintanceship; and he will not, therefore, be surprised when I tell him that I opened Dr. Philimore's reply with eager, tremulous hopefulness. Surely he would not have written if he had meant to take me at my word.

His note—for it was nothing more—was written on a single page of note-paper. I read it several times; and I knew as little what to think or feel in the end as I had done at the beginning.

It ran thus :—

“No—don’t throw me overboard like this. I cannot bear the thought of it. I have been to blame, I know; but believe me, I still care for you far more than you think. I have not time now to write all I have to say—I must see you soon. Meantime, do trust me a little. I shall take no notice of this cruel letter. Whatever made you write so strangely—so unlike your old self? I cannot understand in the least.”

For the first moment I felt only a thrill of wild joy. I had been unstrung and depressed; and was consequently an easy prey to excitement. But reaction followed quickly. As I read the letter again and again, its characteristics came out more strongly. “I *still* care for you more than you think.” What a wide descending scale there was between the passionate declarations of the earlier days, and such a sentence as this! And as to his plea that I would trust him, how long and how faithfully I had trusted him! And why should he suspect now, but for the whisperings of his own conscience, that it was want of trust that had led me to write as I had done? I had said nothing of any want of faith in my letter.

A few days afterward I received a second note, merely asking if I could meet him near Maybank; but unfortunately when the hour came, a pouring rain prevented me from keeping the engagement. I ought not to have cared so much as I did; a single meeting more or less should hardly make much difference between people who hold themselves bound by such ties as those which still existed between Louis Philimore and myself. Yet I cannot help thinking sometimes that that wet day was a fateful one.

Then I met him once or twice accidentally, and at times when I could not hope for any word of understanding. And I could gather nothing of an assuring nature from his manner. He could at any time assume that air of inscrutability which was one of his peculiar characteristics. I was strangely tortured. It required all the effort I was mistress of to keep up a tolerably brave face toward the world. Whether I did wisely or not I cannot tell; but I strove by all the means in my power to keep alive in my heart the hope that would so fain have died. I was for ever arguing with some more reasonable self that

would be heard. “Your letter to Louis Philimore was simply premature,” it said. “Do you not know the man, his unstable disposition, his intense restlessness, leading him to crave for ever to be carrying out new plans, visiting new places, seeking the society of new people? Do you know nothing of his selfishness, his vanity, his ambition? He loved you! Yes, perhaps he has a lingering tenderness for you still; if so, be sure he will endeavour to keep his hold upon you so long as it exists. That is the secret of his puzzling letter, his subsequent conduct—you wrote prematurely, eliciting a last flash, real so far as it went, but still of a final nature.”

So spake this stern and truthful self within me; but I refused to listen; more and more I refused as the days went on. He might not care for me now with that passionate and exigent caring that had been his in the beginning; but still he cared; he had said so; and whatever other faults he had, no one could lay to his charge the sin of untruthfulness.

And, then, into these slow sad days came a little change. The Dewhursts were going abroad; and though it was late in the season, they decided to give a ball before they went. I begged hard to be allowed to decline the invitation; but Mrs. Dewhurst would not hear of it. So resolute she was, so particular about my toilette, which she insisted upon superintending, that I suspected even beforehand, that she had some especial motive in view. Would Dr. Philimore be there? Had Mr. Mapleson whispered to his sister any of his suspicions? I dared not betray myself by a question.

* * * *

I had entered the wide brilliantly-lighted hall at Walton Priory a little wearily, a little unhopefully. I had had a letter from Godwyn in the morning. Dr. Philimore was at Hazelcote; and he was not to return to Trentford till the following day.

But I suppose I was still young enough to be incapable of refusing to respond in some measure to the exciting influences of a ball-room. I was a little bewildered at first, the hall was perhaps over-lighted; perhaps also over-crowded. All was glitter, and gaiety, and smiles, and radiancies. There were flowers on the wide staircases that led up to the gallery, flowers in stands in the recesses, flowers giving out soft fragrant perfumes everywhere; and pleasant beautiful faces moved smilingly between, and gay dresses were sweeping and gliding about, and jewels gleamed, and the music rose and fell to the

soft, sighing, singing measure of a waltz. It was like a scene in some unreal world, where surely lessons and pinafores and children's dinners had never been heard of. . . . Do people who are little used to such scenes ever get intoxicated upon them?

I was surprised—not a little—to see Mr. Mapleson dancing, and dancing well. He looked well too; curiously enough, he always looked well in evening dress; but this evening he looked even better than usual, and younger, and more animated.

"And how is it you are not dancing?" he said, coming up to me after the first waltz. "I saw young Chesshyre asking you. What made you refuse?"

There was some curious change about him. Where was it—in his voice, in his attitude, in his manner? I could not tell. It seemed to embarrass me a little. I replied with the fluency that often comes through an access of shyness.

"I hardly know why I am not dancing," I replied. "I don't think I meant to dance; probably I never shall again. It seems a long time since dancing added to my happiness—nay, *made* it. Once upon a time, when I was a school-girl, I believe I lived for the dancing-class."

"And that is so long ago?" he said with a smile that faded slowly into something that was almost sad.

"It seems long to me," I replied, without any smile at all; "though just now I could fancy that the wheels of life had moved backward at least a dozen years." Then I paused awhile, and added with a vehemence that surprised even myself, "Oh, I should like to be young again, just for to-night."

"Should you?" he said, with grave earnest eyes, and in gentle tones.

We were standing at one end of the hall, half-screened by the musicians, who were playing a noisy quadrille. There was a small marble console table where we stood, filled with exotics, and above an alabaster lamp hung from the floor of the gallery, and a long mirror reflected the light, and the sweet pale-tinted flowers.

"Would you really like to be younger?" he said bending down a little, speaking in lower, tenderer tones. "Then what do you think my wishes must be? I am afraid I must seem very old in your estimation?"

He asked the question with a smile, but I saw with what a strange eagerness he waited for an answer. Had I not felt intuitively that there was something behind his words, I might have spoken out simply what I had

been thinking—that I had never seen him look so young—but I could not do that now; still I replied honestly,—

"No, you do not seem old at all; and if you did, a few years more or less does not make much difference in men, any more than does a little more or less of beauty. It is only women whose lives seem to end as the first grey hair, the first wrinkle betrays itself."

"And how long do you expect it will be before *your* first grey hair appears?"

"It appeared long ago."

"And the wrinkle?"

"I saw it to-day."

"Then life is at an end for you now, is it?"

There was a gentle, affectionate satire in his tone, as well as in his words; and his kindly grey eyes seemed to grow more kindly and tender than ever as he moved a little, so that he might take my hand in his unperceived.

"I hope one kind of life is at an end for you," he said, with no playfulness, no satire in his manner now. "But is it too much to hope that you would be willing to begin a new life, to share such life as I have to offer? If you could," he added with intense fervour, "every effort I have energy for should go to make that life a happy one."

I had withdrawn my hand while he was speaking. I stood before him chill and rigid with pain and self-reproach, and a new and overpowering consciousness.

I only lifted my eyes once, I only spoke once,—

"I am engaged," I said; "I have been engaged to Dr. Philimore a long time."

I dared not look upon the effect of my words. At the first glance I had seen the face before me grow white and stony. Then I saw no more, but I heard Mr. Mapleson speaking hoarsely and with effort,—

"Is it possible?" he said. "Is it possible that you are—that you *still* consider yourself engaged?"

I felt the emphasis of that one word. I knew what it meant. Mr. Mapleson knew more than I knew. Yet I could give no explanation, nor ask for any then. In my confusion, I could only bow in reply to his question. A long pause followed.

Then Mr. Mapleson shook hands with me, warmly, and with that pressure that means friendship and nothing more; and we went back into the crowd. He looked at me sorrowfully and pityingly, as he turned away; and I saw that he was not sorrowing only for himself.

XIV.

Was there, then, to be nothing for me but strife—strife with myself, with events that were stronger than myself?

The crisis that I had passed through that evening at Walton Priory was very enlightening; yet the light was one that cast strong, bewildering shadows on a pathway that had before not been too clear. For the first few days I thought till I was thought-sick; then the power of thinking at all seemed mercifully to desert me. I could only drift with the tide. I did all the outer mechanical duties passively, and with what faithfulness I could. I ignored the complexities, the negations, the strange and continued disappointments that beset me. I tried simply to wait, to shut out the future, to beware of any gleam of hopefulness.

Godwyn still wrote to me regularly, tenderly, and happily. It was now some time since she had mentioned Dr. Philimore's name; and though I was aware that he was still frequently absent from Trentford, I had no reasons for thinking that he was continuing his visits to Hazelcote. Godwyn had begged me many times to visit her myself. Letters were such a poor means of carrying on a friendship like ours, she said; and added that though I might be able to live my life well enough without her, there was never a day that she had not need of me. She seemed to be still struggling upward—still striving to attain to some more elevated life that lay before her, as a grand but vague possibility.

For me all vagueness was fast departing. Glamours, illusions, indefinite cravings after existences with nobler meanings—all seemed moving away like so many phantoms. Life was putting on a sterner aspect, but a far more real one. I saw nothing before me but work, isolation, endurance; a fight, longer or shorter, in which all I had to do was to take care not to be beaten. I knew that in this fight I must have a high aim, and the highest-tempered weapons. I made effort to secure these, and the mere effort was bracing. I take no credit to myself for this. I would have died if I could; but finding that not practicable, it would have been only worldly wisdom to live bravely. Humanity at the best has only a contemptuous pity for failure and despondency. It gives no real consideration to the weak, the helpless, the vanquished in the battle of life.

I know not that these considerations weighed with me at the time. I sought

readier, and nearer, and more comforting help than any to be found in mere human philosophy. And I know now that help must have come when I did not seek it; that I must have been guided even when I failed to ask to be led; strengthened when I did not know how much I was needing strength.

And so the summer went on. Mr. Mapleson continued to come just as before. His manner was not altered, his kindly thoughtfulness not diminished, and he never made any allusion to that evening at the Priory. He was teaching Linda to ride now; and he used to come over every fine afternoon, bringing a pretty bay pony with him. I used to watch them from the window, Linda all glee and vanity, Uncle Felix all gentleness and tenderness, helping her to mount, arranging her habit, talking and smiling in his own quietly cheerful way. Then, when they were gone out of sight, I used to turn away a little sadly, finding the room somewhat darker, and duty less pleasantly absorbing.

On one of these days I stood watching them a little longer than usual, perhaps a little more sorrowfully. I was thinking of Godwyn, to whom I had written twice without receiving an answer. Her silence, which was unusual, did not give me any pain except the pain of anxiety. I feared she was ill. Should I write again? Should I accept her oft-repeated invitation? Or should I go without writing, allow myself and her the indulgence of one of those pleasant surprises which are so seldom really pleasant? But I could count upon Godwyn's pleasure as implicitly as upon my own. . . . I had smiled at the idea at first; but I believe it was resolving itself into something more than an idea when the postman came in sight. He had two letters for me; a foreign one from Mrs. Dewhurst, a long one from Godwyn, which I read first. If I laid it down and wept when I had read it, I wept inwardly, so that I might not seem to know of it myself. Tears would have been dishonouring.

I need not transcribe her letter. It was kind, it was elevated, it was happy—written out of a happiness so great, she said, that she knew now for the first time how weak words were. And this happiness was so new too. It had only been openly hers since the day before. She had hidden a great joy from me once, and had felt while hiding it as if she were deceiving me; but her will had not been wholly her own. It was different now. Louis was proud that all the world should know of their engagement, and she had no

reason for being other than proud and glad herself. Her brother had spoken somewhat tauntingly about her desire to make what he termed a second *mésalliance*; but a marriage with Dr. Philimore would be no *mésalliance* in her eyes. I knew, she said, that she had never been accustomed to measure people by their wealth or their social standing; that it had been a matter of pride

to her that she could see moral and intellectual worth in men and women in whom the world around her could see no good thing at all. And she hoped that her brother was at least beginning to see Dr. Philimore with her eyes. He had always liked him as a man; always appreciated his talents, his force of character, and his independent spirit; and, doubtless, he would come to like him as

Page 51.

a brother before long. It seemed impossible to her that any one should resist his singular and powerful fascination.

So she wrote, and so I read; and as I have said, if I wept I wept tears that left no traces.

As soon as I could think, my first thought was of Louis Philimore's audacity in counting upon my silence. For one moment I confess

I was tempted, for Godwyn's sake, to prove to him that he had reckoned without his host. Then I thought of her great happiness. Was it possible for me to be the one to cast the first shadow over it? I could do nothing more than that, I knew. And had I sufficient reason for doing it? I might warn her of his variableness; but what woman under such circumstances ever believed that a man's

feelings could vary toward herself? And was it not more than probable that such attractions as those of Godwyn Rivers might be a loadstar powerful enough to keep even the affection of such a man as Louis Philimore true and constant? Must I needs suppose that because I, a woman, poor and plain and unattractive, out of whose life all hope and courage had been crushed by labour, and loneliness, and care; because I had failed to keep the love I had won, must I make sure that she would fail too? Such reasoning had absurdity on the face of it.

No, not by one word, nor even by a look, would I mar a happiness that might not be my own. Probably there might come a day when I could even enjoy it in a vicarious way. My emotions were strangely complicated. My pain was more than I could have believed possible; yet I could foresee that it was a kind of pain that would resolve itself into relief. I did not encourage it, though I faced it boldly, which always seems to me the best way with a bad pain of any kind. If one looks at a grief with the highest kind of light upon it; weighs it in the weightiest balances; it has a trick of going up, even though it had pressed very heavily, lying undisturbed upon one's heart.

And after a day or two I wrote a congratulatory letter to Godwyn, and I wrote sincerely, and softly, and tenderly. As I posted the letter, I said to myself, slowly and solemnly as I might have said a prayer,—

"Behold! I have sinned not in this!
Where I loved, I have loved much and well.
I have verily loved not amiss."

XV.

And again after that day a great calmness fell upon me; my soul seemed to sink into silence for a while. I could not but feel that I had been a little hardly treated; wounded and bruised in a conflict into which I had not entered of my own free will; but the wounds grew less and less painful as the days went on. Fortunately no one save Mr. Mapleson had known of my sorrow, so there was no one to irritate me with the pity that is in all such cases half-contempt.

Mr. Mapleson still came to the Vicarage; was still the general friend and guide and counsellor of the whole household, including myself. Of course he knew of the engagement of Godwyn and Dr. Philimore, it was soon known everywhere; but he never even alluded to it in my presence. I was grateful to him for this, and for many other

negative things that I knew were costing him effort.

Godwyn's letters to me were now more frequent than they had ever been. Often she wrote daily; she seemed to be under the necessity of bestowing the overflow of her felicities upon some one, and it was a little hapless that she had no one save myself. I replied as frequently and responsively as I could; but I think this was hardly necessary. I knew that she wrote for her own delight, not knowing nor dreaming how often her letters were anything but a delight to me; yet I always received them gladly. Her love was, and is, something different from all other love I have known. Sometimes I ask myself, is it because she was the first to awaken love in me? But I think an affirmative answer would fall short of the truth. She *was* the first human being I loved, and I think she will be the last; certainly I shall never again set up an idol to worship as I have worshipped and do yet worship her even as I now write.

* * * *

The Dewhursts have come back again; smiling, comfortable, cosy, and warm-hearted as ever. Mrs. Dewhurst carried me off by force to spend the day with her last week, and as it was a day that will probably have some influence upon the conclusion of these few chapters out of a life's history, I must write of it a little.

It was a December day, cold and bleak, with biting winds, and wild inky clouds driving across the grey ether. There was no temptation to go out of doors. We sat by blazing fires. The Dewhursts talked of their travels—talked prosily and disconnectedly as people in real life do talk; yet Mr. Mapleson and I listened as we could not have listened to the best-written book that ever was printed. The scenes and people they spoke of were interesting to Mr. Mapleson because of familiarity with them; and to me for lack of it. I dare say I listened more eagerly and responded more enthusiastically than I was wont to do. Switzerland and Italy were among the unpermitted visions that now and then flashed across my brain in spite of me; and Dr. and Mrs. Philimore were still in France; Godwyn's last letter had been dated from Paris. Curiously, no one spoke of them as we sat by the fire.

By-and-by a singular gleam of brilliant yellow light shot across one end of the room from the west window. The sun, which had been obscured all day, was setting with all

the glory and radiance of an evening in early autumn. Clouds edged with crimson and flame-colour were glittering and shimmering like wavelets in the summer noontide; the wind had gone down, a soft purple curtain was creeping peacefully up from the north-west. The world below seemed like a grand but only half-understood poem, breathing of a beauty, a stillness, a peace, beyond all ordinary comprehension.

We stood by the window for some time in silence, Mr. Mapleson, Mrs. Dewhurst, and myself. Mr. Dewhurst had disappeared some time before. I was hardly conscious of anything, as I stood there, save the quiet, subdued feeling that was born of the hour and of the scene.

And then I heard a voice, saying solemnly—

"At eventide it shall be light."

It was Mr. Mapleson who spoke. I turned, and found to my surprise that we were alone. His face was, as it often is, almost transfigured by the earnestness and purity of the light within.

Again he repeated the text, adding—

"I have all my life, ever since I was a mere boy, taken that promise to myself as a personal promise; wresting it from its literal meaning, of course, as one always does in such cases."

"But I should say that your life has been light all through," I said, with a little surprise.

"Should you?" he replied, smiling. Then he added, "I may tell you some time of the dark places, but not now. I may remind you of one though, one evening, not so long ago, here at the Priory."

And I replied now, as honestly as I had replied to some of his questions then, hardly perhaps fully conscious of all the meaning my words would bear—

"That evening was for me, too, a dark one."

He stirred a little, as if the words vibrated through him. "Was it?" he said, under his breath; and his eyes drooped and softened. Then he raised them again, and looked at me tenderly and kindly, placing his hand on my shoulder with a touch that seemed more fatherly than anything else.

"It has disturbed me as well as pained me to remember that evening," he said, after a pause. "What I said to you then was not spoken under the influence of any sudden impulse. I had loved you from the first hour I saw you—loved with the love of a man who thought that the power to love had

gone from him for ever. I did not dream of return—not till quite lately. I loved you with that affection of which the author of 'Friends in Council' has written, the affection that says to itself, 'If I love thee, what is that to thee?' and for awhile I was happy in so doing. Then, when you were not happy, how could I be? How could I help longing to comfort you, if I could do nothing more? And since then my longing has seemed all selfish. You are so much younger. Life may hold much that is good for you yet, better than anything I can offer."

I could only smile, and look at him; but I know now that I smiled with lips that quivered with emotion, and looked with eyes that spoke the truth.

And I did not speak much more that evening, neither did Mr. Mapleson. Mrs. Dewhurst poured out delighted congratulations; her husband made speeches that made me wonder if he had just been reading something of Madame D'Arblay's. I sat silent, bewildered, hardly daring to let myself know that I was happy. There in the drawing-room at Walton Priory, with soft lights, and bright flowers, and kind friends round me, and Mr. Mapleson beside me—as I sat there, I prayed that I might never again be too happy. At any time—

"Souls are dangerous things to carry straight
Through all the spilt saltpetre of the world."

But surely the danger is increased if the soul be alight with happiness.

Mr. Mapleson accompanied me back to the Vicarage. It was a glorious evening; the moonlight flooded the landscape with a soft ethereal beauty; the stars twinkled in the dark-blue ether with a new and strange brilliancy; the commonest things seemed changed, heightened, rounded into harmony and repose. We were driving quickly, and we had little to say to each other; but somehow I betrayed the half-fearful way in which I was taking my joy; the curious dread I had that some unacknowledged power of Destiny was watching my happiness with jealous eyes. Mr. Mapleson did not smile at the idea, as I had expected him to do.

"It is wrong," he said gently, "but it is natural, and I can quite understand it. It will leave you soon, especially if you don't encourage it; if you try to put it away by taking the higher and nobler view of happiness. You have accepted a good deal of trouble; surely you do not believe that joy is less God's gift than sorrow? I have often fancied that permanent happiness is kept out

of some lives almost till the last for a special reason, for the sake of giving a finishing touch to a higher kind of education; but it is not well to receive it suspiciously when it does come. Perhaps I have as much reason to talk thus for my own sake as for

yours; perhaps I, too, am a little tremulous, and with more grounds, at the thought of so rich an aftermath of life being mine. We must both remember that when God gives freely, it is not for man to hesitate, not daring to receive."

LIGHT IN DARKNESS.

WHEN they led Christ forth to be crucified,
That morn in early spring,
Crowds gathered from city and rough hill-side,
To see his suffering.

But many were scattered in wild affright,
As noontide's hour drew near;
For there fell, when the sun should be most bright,
A darkness black and drear.

O'er hill and valley it hurried along,
Hiding both earth and sky;
Then it silenced the birds' sweet morning song,
And made them nestward fly.

Shrank the fairest of all spring flowers from such
Weird darkness like to night,
And faded before its withering touch
As stricken with a blight.

It was darkest where three crosses stood,
High on the mountain-side,
Where the dying Christ hung on the rood,
For sinners crucified.

And there at noon, while the scared earth shook,
And thick clouds hid the sun,
So that none on the Victor's death might look,
Was man's redemption won!

HILDA'S HOPE.

I.

CERTAIN perfumes; the blown scent of early spring flowers, the breath of evening hay-fields, the fragrance of a rose on some dewy, still, summer morning, smite us sometimes more deeply than sharpest stings of physical pain. And that early autumn morning, it seemed to me, there was grief, parting, despair in the crisp scent of the dead leaves the wind was whirling round my feet. And yet how bright was the world, or our little corner of it! The mists had drifted away now, and Duchess Anne's tower rose strong and sun-girdled above the purple and brown masses of woodland, the grey old walls and the many-coloured house-roofs that clustered round its base, while, far below, gleaming darkly through its bordering line of firs and chestnuts, the Rance flowed down, cool and tranquil, from the wooded slopes of Léhon. Yet I do not think the beauty of the morning made much impression on the little group standing just at the curve of the road where the picture so suddenly unfolds. We were gathered together, according to long-established custom, among the "*Buttes diques*," for our morning gossip, with a fringe of dogs round us and an occasional eruption of children in our midst, discussing the general news of the

morning before we went down into the town. I was quiet enough, busy listening to the talk about me, for the news they had to relate had not as yet reached my ears, and it behoved me for my future safety to pay special heed. So far we English had thought ourselves safe in our northern colony, for although the war news was serious, Metz and Sedan seemed still a long way from Dinan, and St. Malo and Brest could be reached in a few hours from the first signal of alarm. This morning we had heard the mobiles were to be collected together and sent away no one knew whither, and some of us who had friends among the kindly French were thinking sadly of the parting that was at hand, while others had been frightened by reports that were busily circulated of the ill-feeling of the French towards us, and the manner in which, as Protestants, we were regarded by the superstitious Breton peasants. One of us had just seen the consul's wife, and she had greatly increased our anxiety by her unfavourable opinion of the state of affairs. I was determined to remain, for my home was here, and I had gathered round me friends and means of livelihood, and could not easily relinquish all for a mere report. Still, I watched with anxiety as well as curiosity the faces about me, for I did not

care to remain if all the other English quitted Dinan. Many years before my mother and I had come here to escape from a great sorrow, and together we had established a boarding-house for the English visitors to the town. When I laid her in the little cemetery I turned back to my home, determined not to abandon it so long as health and energy remained, and I found interest and occupation enough to keep me from the bitter irksomeness of memory. Already I had several Parisians staying with me, and there was a prospect of their fully occupying my house through the winter. Only one Englishwoman, a Miss Hilda Yorke, had remained through the general panic, and now, as I stood chatting and half fearfully listening to the gossip around, she came leisurely up the road to meet me. A girl with a half-melancholy grace of movement and an unusually grave and reserved expression on her pale, clearly cut features. There was a touch, too, of listless scorn curling her red lips, and her wide grey eyes looked half defiantly, half shyly, from beneath their drooped lids; a beautiful, but not an attractive face, stern, and a little repellant, but softening, brightening, growing wonderfully tender in rare moments of confidence.

"What do you think of the state of affairs, Miss Yorke?" said one of us, turning towards her as she stood a little apart from the group.

"I do not see anything so very disastrous," she replied. "We shall all be glad to get rid of the mobiles, I think; they make the town unpleasant enough at present."

"Oh, do you think so? I call it rather fun," said a brisk, little yellow-haired woman, who, followed by a large English bull-dog, was making her way towards the *Place*. "We shall all find it dull when they are gone; and though I don't think I'm more of a coward than my neighbours, and I don't mean to go till I'm obliged, I expect we shall have to make a run for it when they have left us. The longer they stay here the better, say I, and I'm sure I don't grudge the poor fellows their pipe and their extra chopine."

Hilda looked a little disgusted. "You might go down into the town now and make them happy by distributing a few more cigars. I see some of the English girls are making themselves popular that way."

"I have got some in my pocket," she answered with a good-natured smile. "Will you come down with me and help me to give them away? Perhaps it would be as

well for us, in case of an émeute, to secure a little easy popularity, as well as the girls of La Presnaige."

"Thank you, no," Hilda answered; "I am not envious of such a distinction. I am going down to Léhon," she continued, turning to me, "to try and get you the fern you spoke about; I fancy I shall find it growing among the stones of the old castle."

But Mrs. Roberts was not to be so easily daunted. She liked to be friends, as she called it, with every one worth knowing in Dinan, and the persistent coldness with which Hilda met her advances only made her more anxious to overcome it.

"Never mind the mobiles," she said now, taking no notice of Hilda's last remark to me. "But in good faith, Miss Yorke, I was on my way down to ask you to spend the day with me, and then if you will be good enough to take compassion on my loneliness, we can go for a fern-hunt together. I think it is scarcely prudent for you to risk a solitary walk."

"Thanks, it is not possible to-day," answered Hilda, coldly, "I like a solitary walk sometimes, and I don't feel valiant enough to protect any one besides myself. Good-bye now," and she walked away without leaving time for any further conversation.

Now, we are great sticklers for etiquette at Dinan, and this was not the first time Miss Yorke had outraged the proprieties, and not very complimentary were the comments that were now passed on her eccentric behaviour. I could not help a sudden feeling of pity as I watched the lonely figure moving down the tree-shadowed road, and her friendlessness and isolation smote me painfully. Generally, we are cordial, genial people enough, and love our neighbours as well as most folks, and Hilda, had she so willed it, might have surrounded herself also with pleasant summer friends.

"The mobiles are becoming too much for us," said Colonel Vaughan, who that moment joined our group. "I'm glad enough to hear they leave Dinan to-morrow! The riot and confusion was something dreadful in the town last night, and my governess and the children had to make good their escape from a low ruffian this morning."

"I am sorry to hear it," I said, "for my friend, Miss Yorke, has gone for one of her solitary rambles, and I cannot think it safe."

"Certainly not; if she is alone, by all means send or go after her," he replied; "for these beggarly fellows are all over the place, and she is not safe a moment."

"Miss Yorke is not a girl to be followed, Colonel," said Mrs. Roberts; "in my opinion a good fright would do her no harm, and might teach her better manners."

"She is not quite so intractable as you think," I said with a smile. "I dare say she will not object to the society of my old servant Jeannette, and I think I will go back now and send her at once."

As I am rather afraid of Jeannette in general, I was trying to frame a sufficiently ingratiating request on my way, but my artful inventions were all dispelled by her appearance, as I met her just opening the little wicket that led to my house. She was evidently setting forth for her daily marketing, and to disturb her in this expedition was to deprive her of her chief honour and glory, and subject myself for the next twenty-four hours to a succession of the small tyrannies long-established custom had made inevitable. Even at this moment her expression was rather ominous, and passing her as quickly as I could, I determined to follow Hilda myself. Through the green lanes, past the fair Caraduc woods, and into the lower fossé, I should soon overtake her; for although she was a rapid walker, she would choose the longer road by the river, and I should meet her by the time she entered the village of Léhon. Here there would certainly be numbers of the mobiles drunken and disorderly, even at this hour of the day, but she would not be likely to meet them on the solitary road she had chosen.

"I wish I could make friends with that girl," I said to myself as I walked along, "she will probably remain the winter with me, and, as appearances are at present, it is likely enough we shall be the only English-women left. I wonder how it is that we stand so far apart, and that though she is charming, gracious, and attentive to me when my rooms are full of people, when we are alone she puts me under a spell, and I am almost afraid to speak to her, measure and arrange every sentence I utter, and stand aghast before suggestions that will arise of more pleasant and confidential companionship. I do not think she means to be satirical, but she is as keen and cutting as the rawest east wind, and haughty to a point that would make me laugh were I not so completely chilled." I had often wondered what induced her to remain in Dinan, mixing constantly in society she seemed so thoroughly to despise. Our summer had not been a very gay one. The war had nipped our budding season, and it was a

depressing contrast to the one we had passed last year. But Hilda had certainly made the best of it, and I do not think had missed one out of the few parties that had taken place. She had owed her introductions and subsequent welcome to her relationship to one of our most influential English families, rich people who had come to Dinan for the sake of its scenery and bright, clear air, and not because they were too poor to live decently anywhere else. She was an orphan, they told us, and had lived for some years with an aunt, but tiring of her English life, had written to ask them to find a home for her in Dinan. And yet, though Hilda went everywhere, and was everywhere well received, she had made no friends, had shown no preference, so far as I could see, for any living being, man, woman, or child, that she had met amongst us. Perhaps lately, without apparent reason, she had been quieter, gentler with me, yielding herself to a listless kindness for which I vainly sought the cause. Yet what was wrong with me that morning, that my thoughts should turn to her, and grow again and again into wistful longings? I had friends who were near and very good to me; I did not need to form new ties. I was stupid and depressed, growing sentimental, and I pulled myself up with a sharp rebuke. It was the morning; the air was full of disembodied passions, the pain of death in the gorgeously coloured woods. I turned away from my favourite view, and fixed my eyes resolutely on the weedy stone wall until I had passed Mont Parnasse. As I descended the steep, slippery steps that lead into the village of Léhon, an old woman, who had been sitting in one of the low arched doorways, accosted me,—

"Mademoiselle, mademoiselle, will you stay a moment and speak to my son, Jules here, who wishes to make his farewells to you;" and, as she beckoned to a mobile standing disconsolately against the angle of the cottage, I recognised in his round black head and ribston-pippin features, my old friend Jules the milkman.

"Is it not sad," she went on volubly, while Jules stood silent and abashed before me—"is it not sad that I should thus be left without support in my old age? And who knows if he will ever come back, since it is devils he has to fight against, and not men? Tiens!"—she interrupted herself suddenly, administering a loud box on the ears to a round-eyed youth who had crept up to her side from the dark interior, "art thou here

still, and the clover not yet given to the cows, and the brown one still in the meadow? Ah, mademoiselle also perceives that, once my Jules has left me, I shall be worse than alone."

"I am so sorry for you," I said, looking at the sorrowful, mercenary old face, puckered up under its white cap; "but Jules is happy, at least, since he is going to serve his country."

Jules shrugged his shoulders, as though that were a doubtful matter, while his mother continued,—

"Had she not heard that mademoiselle had been en Prusse? Would I not stay one little moment to tell her if it was true that the men there were black, quite black, comme la nuit? and did they not carry little cats of guns that spat fire as soon as you looked at them? Ah, mon Dieu! but it was too dreadful! And did mademoiselle know that his captain was English too, and that amongst all his men there was only Jules who could bear the sight of him?"

"Is this really so?" I asked. "But how is it that you have not been up to see me, and tell me all about it before, my poor Jules? You were to come and have a long chat with me before leaving."

"Mais oui, mademoiselle," he answered; "and I was coming this very night, for we go to-morrow morning at four o'clock."

"And who is your captain? You have not yet told me. I have been ashamed to find you had no volunteers from the English here, and shall be so glad to hear of one."

"Ah, mademoiselle," he exclaimed, "he is a stranger. At least, monsieur had been here all the summer, but he did not live in Dinan. The mobiles were very vexed about it, though he could not see what they disliked in him. He was a trifle triste, perhaps, but that was only right when every one was so sad. His name?—his name was Maynarre. Surely mademoiselle must have heard it in Dinan?"

Old Nanon, who had placidly resumed her knitting and her seat on the doorstep, here gave me a confidential little nod.

"Her Jules was always so bête. Did not mademoiselle already know a great deal more about Monsieur Maynarre than he did? Mademoiselle must have met him at the casino, at balls, at fêtes, for he was so rich that he had several millions a year, and went everywhere. At this moment he was in Léhon; she had but just seen him on the bridge. Mademoiselle could see him for herself if she went down the road."

But there was no Englishman in sight, only miserable little groups of Bretons dotting the dark old street; peasants with white hair and pathetic weather-worn faces, who had missed one day's precious gains of toil, that they might spend it with the well-beloved Jean or François, starting to-morrow on that fatal journey. Women knitting still at their doorways, but many of them sorely weeping. Everywhere an unusual stir; only overhead the pigeons wheeled round and cooed peacefully on the housetops, and the hens pecked undisturbed in the gutters. Neither was there any sign of Hilda, so I resolved to climb the Castle hill, whence I could see some distance up the road she must come, and be sheltered myself from the noisy bustle below. I had often been here before, but never alone; now I was glad of a few moments' solitary enjoyment of the lovely prospect. I climbed up into a cosy nook in one corner of the old keep, securely sheltered by the jutting angle of the wall and the great masses of ivy, while below, on the little plateau, the rabbits rustled through the corn, and the birds stopped leisurely to pick up the fallen grains, unconscious of my presence. I had fallen into a reverie over the wide panorama outstretched before me, thinking of pleasant walks beside the river, so softly rippled now by the winds that were blowing round me; of meetings and partings in the meadows on its brink, where the great white narcissi blow, and where the tall pines make a mysterious darkness on its waters, growing gradually so absorbed by memory's bitter fascination, that I started half-vexed when Hilda's voice recalled me to the more commonplace interests of to-day. I had not noticed her climbing the hill; now she was walking on the plateau beneath, speaking, not to me certainly, for I was quite hidden in my nest, but to some one else, whose voice I did not recognise as he replied to her question. His tone made my position a difficult one; for after hearing these few sentences, it would have been very uncomfortable to discover myself, and to retire was impossible, unless I wished to create a sensation by jumping down some three hundred feet. "They will pass directly," I thought; "then I can go round and meet them on the other side." But to my consternation they seated themselves a moment after on the bank below me, and I had to remain an unwilling listener, till they should move and release me. I could see the clear outline of Hilda's face, as she leaned it on her hand, and the sunlight played in and out the folds of her dress.

A few moments later a slight alteration in his position enabled me to recognise her companion.

It was a Mr. Maynard, and suddenly I remembered Jules's pronunciation of his captain's name. 'Maynard,' 'Maynarre,'—there was sufficient likeness to make the two identical. I had met him but seldom, for he had been staying at the De Caux, an old

French family living in the country, and rarely coming into the town except for some spécial Church festival. Yet Hilda must have met him frequently, for he was saying to her now,—

"Chance has helped me for once. I did not expect to see you again, and I had no hope of even saying good-bye."

"Chance rarely befriends those who do

not seek it," she answered defiantly. "Did you mean our meeting at Madame Dutré's to be the last, Captain Maynard?"

"I had no right to seek another, Miss Yorke," he answered gravely.

"Then by all means don't take advantage of it now," she said quickly. "Good-bye, I wish you all success and a happy return;" and she rose from her seat and gave him her hand in farewell.

Passively he let it stay in his own, yet making no effort to detain her. I heard no sign of protest, and could only guess, from her lingering still, that she was waiting for some further word from him.

"I wish you would say good-bye to me," she said almost pettishly, after a few moments' silence; "there is no reason why we should part in this strange way. Won't you shake hands? No? Well, then, I must go."

"Are you going?" he said stupidly, and, I thought, as if half asleep. "Well, good-bye, Miss Yorke," and I saw a hand stretched to meet her own. But Hilda's had fallen to her side again; her face was half-turned away, her foot pushing impatiently at the trailing ivy that held it.

"I wish you would not say good-bye like this," she said, turning a flushed face towards him. "I cannot think why you speak so abruptly; you have forgotten our pleasant friendship, I think—forgotten—" and she stopped half shyly, as if expecting him to end her sentence.

Still he did not answer, stayed quite still beside her, while I watched the wind lift up his brown locks and toss them hither and thither at its wild will, and a great bee settle perilously close to his ear and buzz away undisturbed; while a lark rose unnoticed from its nest in the stubble under the apple-tree, carolling shrilly and in mad delight at its own brave song, higher and higher above their silence, till far, far overhead, the wandering voice grew weary, and ceased as suddenly as it began. I was wondering if I could slip away also unobserved, when Mr. Maynard's voice, harsh and grating as an ill-used lock, stopped me.

"Miss Yorke," he said, "do you mind my speaking to you? Perhaps you will not like to hear what I have got to say—perhaps it would be better to leave you without another word of explanation."

This time it was Hilda that gave no answer, only catching a glimpse of her face as she turned it towards him, I saw it transfigured into a soft womanliness, the grey eyes full of sorrowful pleading, the red lips uncurled and quivering. Captain Maynard, lifting his eyes, saw the strange new light flickering and flushing the sweet face, and in one mad moment lost all his self-control, all the armour of defence he had put between them.

"Hilda," he said hoarsely, "Hilda, my darling, is it true that you care to hear me? that you will let me tell you how I love you? that before I go—"

"Why must you go?" she asked, releasing herself and lifting a brave face to his. "Even now you can get a substitute, and I—I do not want you to go away, Captain Maynard."

But surely he took strange heed of the sweet re-assurance of her saucy words and flickering blushes, for I could see his face where he stood grow grey and pinched and wan, and it was with a long shivering sigh that he said,—

"I must go—that is what I was going to say to you before. God knows, I did not mean to speak to you like this."

Hilda's face caught the reflection of his own; her voice was measured and cold, as she answered him,—

"I am waiting for your explanation. I have been premature in thinking I could influence your resolution, and there must of course be some strong reason why you should enlist yourself in a cause you entirely condemn."

"Wait," he said, drawing her to him again, and imprisoning the little restless hands in his own, "and listen to me. I am going because I dare not stay near you any longer—because honour and right, and all that is strongest in a man's soul, call me away from you—because even now I have been a traitor to myself and you."

"Is this something new," she asks, lifting her eyes steadily to his face, "or has it been so from the beginning? Did you know that it was wrong and traitorous to care for me that day at La Fontaine—that afternoon we spent among Madame Dutré's roses—all the times we have met since the spring?"

"Yes," he said slowly, his eyes failing beneath her steadfast gaze; "but I have been too weak, too great a coward to leave you before."

"And the reason?" she demands in a voice that has grown strangely quiet and gentle; "what is the reason that takes your love away from me, and makes it a shame and a dishonour?"

There was a pause, when he broke it his voice was broken and irresolute.

"If I were to ask you to believe in me," he said, "if I were to tell you that to give you my reason would be to make our parting doubly bitter—and if I were only to say that it is because in my very soul I believe it is right to give up all and go, would you help me? would you understand that it is better for both of us that I should be silent?"

"Nay," she answers him, "I have a right to know;" and in the sharp distinctness of her speech he feels the rising shadow of distrust and contempt. "Do you not see that if you leave me in the dark I must think worse than the reality, and that my thoughts, perhaps, may do you greater dishonour than your own confession?"

"Better even then to leave it unsaid," he answered sadly. "Nothing you can imagine would be so bad as the truth."

"Shall I tell you what I might imagine?"

That you think perhaps I should be a hindrance in the life that you have planned, or even," she adds, suddenly sheltering her conviction behind the more kindly speculation, "you have found that your love for me is a mere fancy, that has put aside some older and stronger tie?"

"Scarcely," he said at last, in a tone so low that I could barely hear the words that followed, words spoken in a voice vibrating with passion, shriller and broken by some unconquerable grief—"scarcely, Hilda, since you are the first and only woman I have ever loved. I have lived thirty years, and until that day in last spring, love was an abstraction, a dream—that could be put aside as dreams are, with the work and stir of life. Oh, my love! my love!" he went on, loosing her hand, and taking fuller possession of her face with his eyes, "do you know what it all means? if I might leave everything, duty, and right, and long years of self-repression, and give myself up to happiness, and dare to keep you, to teach you what love means, and how worthless life is without it, to hold you against all the world—oh, Hilda! Hilda! will you tell me to do this, and even now I am ready to turn back as you bid me."

"Stay," she said softly, "will you listen to me quietly for a moment? I should like to speak to you now as I can never speak to you again. If you go away, you take from me, too, all hope, all happiness, all pleasure in life for all my life. *Your* life will be full of change and excitement; in time you may forget, or even you may be killed, and then all will come to an end, but I must live out every weary hour of every weary day, knowing that perhaps a foolish prejudice, something easily averted or put by, has kept us apart. Dear!" she said, with her hand on his shoulder, and a great solemn light in her grey eyes—"dear! if I love you, I must trust you too, and if you tell me now that we must part, it is enough, and I will not ask you any more for your reason. I think only death should come between us, but rather than my life should bring you shame or dishonour, I am ready to say good-bye." She was leaning over him, her hand still on his shoulder, her eyes looking steadfastly into his face. Surely he would gather her then and there to his heart. What reason, however strong, could weigh against so sweet a prize? But, instead, there was another long pause, in the hot noon, till by-and-by Hilda took her hand away, and seating herself again by his side waited for his answer. A

long, long silence it seemed to me, playing there a spy's unworthy part, and feeling the sun beating hotly on my unsheltered head; but at last Captain Maynard sprang to his feet, and with a voice that, if still husky with passion, was strong and resolute with new courage, woke Hilda from her dream beside him.

"Kiss me once, my darling," he said, "and for the last time. It must be all over now, Hilda, for you and me, and God help us both!" Passively she yielded herself; but he gave himself no one moment to notice the deadly whiteness that crept over her face as he turned, and passing quickly down the steep descent, left her alone on the hill.

Long after I waited there, as I needs must, till poor Hilda, gathering together the bewildered threads of her consciousness, wearily rose, and as wearily descended the grassy slopes. Then I followed her on her listless homeward way, somewhat weary also, and angry with myself that my cowardice had made me the unwilling holder of her secret.

Next day I did not see her till about twelve o'clock, when she came and asked me if I would walk with her.

"Where are you going?" I questioned, "for I am busy to-day, and cannot go far."

"Only into the town with you," she replied, "while you do your shopping. I am tired of stopping in-doors, and I want your company for my walk."

So we went my daily usual round, and in truth, for the poor child's sake, I would have consented to no other way. When grief comes suddenly upon us and smites us down with her bitter hand, nature, even in her softest mood, takes part with her, doubling and sharpening each stroke of memory, each regretful question. The busy gossip of the streets, the outlook of each indifferent passer-by, was better far than the mute sympathy of hills and trees, and, to be quite frank, I had some faint hope beside that we should meet Captain Maynard, and that something might have moved him to renounce his tragic decision of yesterday, that some small, new light of hope might dash out the restlessness of the wistful face beside me. The whole thing was incomprehensible, and I felt certain some sequel must arrive to the mystery before very long. Madame Barth had some choice bits of gossip to tell us over her meringues and pommes; old Madame Goupil chatted interminably, not a dozen of buttons or a yard of ribbon would she let us

have till we had paid our full tithe of news, and we were both tired enough as we went on our homeward way. I drew Hilda in after me to rest as we came to the open doors of the grey old church of St. Malo. How cool it was after the glare of the streets! How dim and quiet and full of a peaceful repose! Some one was playing softly on the organ, practising, I think, for there were some low minor chords repeated again and again, until they grew into a sort of lullaby. Old peasant women, their baskets beside them, flecked the church with little dots of white. The chapel close by where we knelt was blue with incense from the just-concluded service. Here, surely, was rest and quiet, a little waiting on the weary onward way, where the heart could make its bitter cry and the strained eyes overflow with only the great Comforter to see or hear. I left Hilda, kneeling on the little wooden chair, her face turned to the outstretched Christ beside her; it was good for her that she should be alone, and I was obliged to quit the church for a moment to give my persistent dog Snubs, who had followed us in, into the care of a good-natured shopkeeper. As I came back quietly over the stone floor, I heard a man's steps behind me, and looking round came face to face with Captain Maynard. Poor fellow! I can never forget the bitter misery of the eyes that met mine. Hilda's was the trouble of an unconscious child, compared with the hopeless despair and humiliation of his face—so hopeless, so wretched, so almost debased. Did he look, that I asked myself if indeed the loss of any woman's love could so crush and ruin a man with strength to outlive, with courage to overcome a disappointed passion. Hilda, as she rose from her chair and came forward to meet me, saw him too, and though I noticed first the white shudder and then the hot flush of her face as she passed him, she gave no sign then, either by word or look, that she was aware of his presence. But when we came to the church door out of the cool sanctity, and saw before us the dusty pavements, the sun glittering on the shop-windows, and the children shouting noisily in their play, Hilda, with a sudden impulse, turned back again into the church, stood irresolute a moment under the great arched portal, and then walking quickly up to where Captain Maynard leant against one of the further pillars, she put her hand upon his arm. I heard no word that passed between them, only saw him lift up an unchanged face to hers, saw her take from the grey

folds of her cloak some violets she had worn since the morning, lay them softly on the chair beside him, and return to me with a face out of which all the brief light had faded.

II.

After this the days seemed to pass very slowly with us, slowly because they were so filled with excitement and rumours, that we lived a double life, and every day that passed over seemed lengthened into two. I got into the way of sending Jeannette half an hour earlier to do her marketing, that she might bring in reports of the fresh telegrams that were posted up in the town, and sometimes even we did not wait for her return, but went out ourselves to gather the morning's news. People had grown accustomed by this time to the sensation of danger, and a large number of the English residents still remained with us. I fancied, too, that the common trouble had drawn us more together, and that little crossnesses were forgotten, and we all seemed to grow warm-hearted and genial, and full of kindness through that dreary winter. I tried to get Hilda to go out with me, but she resolutely refused, and spent most of her time in her own room. I used to go up to her door with the telegram in my hand, and call out to her to let me in and hear it, but she always assumed a languid indifference, and never once, that I can remember, put a question to me about the news. It grieved me to notice how she drooped, and grew so pale and quiet, and old-looking. All her saucy ways had vanished, and she went about doing everything with an unruffled monotony that aggravated me at last into action. A dear old French woman had come to me from Paris, and had made herself such a comfort and help, that I was quite at liberty, and able to go or stay at home as I pleased. Her only boy was with the army of the Loire, and he had made her promise to leave her home and come away to the spot he fancied safest in all France. God only knows how she wept and trembled and prayed before the little crucifix that was his parting gift to her: I often saw the little oil lamp in her room meet the dawn with its tiny flicker, but through the day she was the sunshine and comfort of my house, the most confident, hopeful, contented soul amongst us.

"That child is ill," she said to me one day, "she eats absolutely nothing; she is unhappy, my friend, and devoured with sadness. It would be so good if only she could

have a little breath of the sea ; it would give her strength and nerve to resist this ennui. It is often so with these young people, and more especially with your English girls ; if they were Catholics, well, it would be different, but as it is you ought to do your best and give her change and diversion. She has no mother ? Nor sister ? Ma chère, you must be a little mother to her, and that will be good for both of you. I shall have care of your house, and you must take her to Dinard for a week or two, and we shall all make an excursion and pay a visit to your little ménage.

I left her to coax Hilda, and I believe she made up a wonderful tale about my "fatigued health," giving her the preliminary pleasure of a good action to stimulate her anticipation of our trip. So one dark November day Hilda and I, with Snubs on the box, started in a lumbering old *char-à-banc* for the sea, with the misty rain and the dead leaves drifting in uncomfortably on our faces, and with a dismal feeling that we had left bright fires and home comforts and kind faces behind us, in our search for health and cheerfulness.

We settled down in a tiny house perched, like a sea-bird's nest, on the steep overhanging rock. Hilda had wished to go to the hotel, but I wanted to have her all to myself, and I knew what a French hotel is like when the season is over : the guests departed, the landlord absorbed in his newspaper, and madame in her knitting ; the bustling servants dismissed, the kitchen-maid turned into cook, and the solitary waiter given up entirely to his own melancholy reflections. Monsieur le Propriétaire of our little domicile, after having asked three times the price he meant to take, and made a great sacrifice of letting his house to "ces dames" for a fortnight, went away delighted at having added a few more francs to his estimated yearly profits, and behaved to us all the time with the most charming politeness, supplying newspapers and sending us salads from his garden during our stay.

It was dreary enough then among the dying woods and deserted streets of Dinan ; but here there were no signs of the departing year, save the strong winds that whirled round the great rocks, and curled up the crisp waves into long lines of foam, blowing their spray in our faces, and sending us home limp and blown about, and deliciously weary, to our cozy evening fire.

At first Hilda seemed pleased and roused into something like interest, once even I saw

her stay and speak to two rosy children that had been left there, like babes in the wood, with their *bonne*, while their parents went back to look after their goods and chattels in Paris ; but when the little things, after slowly considering her for a moment, turned and ran away down the steep street as fast as their little legs would carry them, she gave an impatient sigh, and never renewed the attempt. In a few days the old listlessness returned ; she would walk wearily beside me, or stand absorbed looking seaward, while I poked about for anemones and pebbles in the tiny pools, and gave up even the pretence of interest in any of my plans and expeditions. At night sometimes, when the little house was rocking in the wind, she would run out into the tiny garden and, leaning on the boundary fence, stand quivering and gasping for breath in the deep rushes of the wind, swaying to and fro to catch its motion, and, with eyes closed and hair white with spray, seem to take her single delight in the noise of wind and water. Towards the end of the week, some dear old Scotch friends of mine who lived there found us out, and asked us to come down and spend the evening with them ; and Hilda, to my surprise, eagerly responded to the invitation. I shall always remember that evening. It is so strange that the ghosts of these quiet uneventful hours, unstirred by any trouble or excitement, stay with us long after they themselves have departed, keeping their breath and colour fresh and untarnished, while moments of storm and grief, the passion-stirred hours of life, that set our pulses dancing to their mad music, and fill us with emotions that we blindly call eternal, grow dim, melt away, until in looking back we almost think it is another's story we are remembering, and not our own. The quaint room, with its arched windows and shining floor, where the fur rugs lay thick and soft and crimson-bordered ; the subdued light of the lamp put away in the corner, bringing out mellow gleams from the antique cabinets and grotesque old china jars and vases, the scent of dried rose-leaves and lavender, all seem glowing and brightening round me now, making a setting for the grave sad beauty of the girl's wistful face beside me.

Mrs. McLeod and I drew our chairs together, and began to talk over old times, while Hilda went to the piano with the daughters, and the old doctor leaned back in his chair with closed eyes to listen to their music. Perhaps because the wind surged and wailed so outside, perhaps because people often

grow pathetic in the quiet evening light, the girls sang all their saddest songs, and to my great content did not favour us with their usual jerky modern "Maggies," and "Jessies," and "Jennies," and "Joes." Presently the doctor asked Hilda to sing to him, and she at once assented. I had often tried to persuade her to sing, but could never succeed, and had concluded that she had no voice, and was much too high and mighty to make a voice as young ladies do nowadays when they have no sweet notes to look for in their own throats. I was surprised, astonished, doubtful at first, and then delighted when she had done. She had a rich contralto voice, but there were some odd chords in it like a subdued bass, and in the beginning this seemed peculiar, and took one too much by surprise to be quite pleasant. I had never heard music or words before, a wild minor air with a passionate refrain, full of fire and harmony:—

"Wind in thy garden to-night, my love,
Wind in thy garden, and rain:
A sound of storm in the shaken grass,
And moans as of spirits in pain.

"If there's wind in thy garden outside,
And troublous darkness, dear,
What carest thou, an elected bride,
And the bridal hour so near?

"Yea, all things come to an end, my sweet,
Life and the light of day,
So turn thyself to thy rest and dream,
Nor heed what the mad winds say."

Now how plainly I can see the upraised face, the light falling in soft gleams on her white dress and weaving gold threads in her brown hair, the thin little hands pressed on the notes as if they would repress all the melody they awoke. I see it all as plainly now as when I watched her then through all our whispered talk.

"Yes, two ounces a day is all they allow now of meat," Mrs. McLeod was saying to me. "I had a letter to-day from my friend Captain Maynard. He writes in bad spirits; he says the men are demoralised by inaction; there is no hope of a sortie."

"Oh, do you know him?" I said interested, looking over at Hilda absorbed and unconscious in her song; "he was at Dinan all the summer, but I did not know he was a friend of yours."

"I have known him all his life," she answered, "his mother was my friend at school."

"How strange he should have gone with the mobiles!" I said, thinking that now I had got the clue to poor Hilda's sad mystery; "he seemed well off: had he nothing better to do at home?"

"Not at all," she said abruptly; "young men like action," and then quickly turning the conversation began to tell me about her own boy, who was in Bengal, and of all her fears on his most uninteresting account. By-and-by, when we were being shawled and cloaked, I drew Mrs. McLeod quietly aside, for I was determined not to be baffled, and resolved that I would help my poor child before it was too late. "I am coming up to see you to-morrow afternoon," I said, "to talk to you about Captain Maynard. I am much interested in him."

"What do you mean, my dear?" she replied, "why—but no, it is not possible!"

"No," I reassured her, smiling, "not me, but some one else—may I come?"

"Come by all means," she said, "but I warn you that I have nothing to tell; I expect you have all the story on your side."

We had a long way to go, and as we creaked and rumbled over the rough roads I wondered if we were to solve the mystery at last; and grew hot and excited, as one who is on the brink of a discovery that means life or death to oneself or some one near to us. Hilda lay back in her corner with closed eyes and folded hands, but once I thought I heard her give a little gasp, as if she were stifling a sob, and once she shivered and drew her shawl closely round her. Suddenly she put her hand out in the darkness, and laid it on mine.

"Dear," she said, in a quick, broken voice, "you are very good to me; thank you for taking me to-night; the people there were so kind, and it felt like home."

Next day, after having left Hilda comfortably established by the fire, I set off on my journey of discovery. Whether my friend knew more than she chose to tell me I cannot say, but I certainly elicited little from her.

Captain Maynard had been educated at a *séminaire* in Bayonne, and at the age of seventeen he had been sent to London to read law. After some years, and just as he was called to the bar, he disappeared, no one knew whither, and remained unheard of, and at last almost forgotten, until this very summer, when he had suddenly turned up in Dinan.

"Was he married?" I asked.

"Certainly not," she replied, "but as he was a man of strong religious feeling, there had been a rumour that Rome had sent him on some secret mission."

All this was unsatisfactory, and could not help Hilda. I put by my hope with a sigh, and returned to her disheartened and weary.

That night I could not sleep ; I grew restless and unhappy. "If Hilda would only speak to me," I thought, "together, we might seek out some clue, and her secret grief, which is wearing out heart and strength, would grow lighter if another shared it." I threw on my dressing-gown and pulled back the curtains, looking for solace in the night. It was wild and uncomfortable ; the sea moaning drearily against the rocks, dark masses of cloud driven wildly across the sky, with sudden gleams of moonlight breaking over the desolation of the rocky coast. Ever and again the light was quenched in gusty showers, the rain driving against, and the wind shaking the little window-panes, till the whole room seemed to shiver in the gale. Snubs, curled up on the mat, began to whimper and growl as Hilda opened the door and came in to me. She looked as though she were walking in her sleep ; her eyes dilated, her long hair falling over her shoulders, and her face rigid and white.

"What is the matter, dear ?" I asked her ; "does the wind disturb you ?"

As I spoke her features began to work hysterically ; she put out her hands in an uncontrolled kind of way, and then came and knelt down close to my chair. "Kate," she said, "will you take me away from here ? Let us go home ; the sea and the wind make me stupid and nervous ; and to-night, do you know, I feel almost afraid to be left alone."

"Certainly," I answered her cheerfully ; "we will pack up and start in the morning. But, my dear, dear child," I whispered, putting my hand on the poor little bowed head, "I wish you would let me help you in some other way too. If only I could tell you how glad it would make me, and how I wish you would let me love and take care of you !"

"What do you mean, dear Kate ?" she answered, flushing up. "You are as good and as kind as you can be to me ; but I am all right, and do not need any help. I shall be quite happy again with you when we get back to Dinan ; it is only the sea that worries me so. Listen now ; it is like a human voice calling out for help ; and sometimes, after a great wave has broken against the rocks, I seem to hear such a dreadful cry of pain. When I cannot sleep I lie and listen to it, until I scarcely know how to bear it, and to-night I want you to let me stay with you, if you will."

She was herself by this time, quiet and composed ; but when, long after, I fell asleep,

she was lying beside me wide-eyed and motionless, and when I awoke late in the morning I found her already dressed and making preparations for our departure.

So far I had kept Hilda's secret ; but now I began to wonder if I was right in doing so longer. As the days went on her health visibly declined ; she had fallen into that restless, irritable state that so often precedes a more serious illness. Not only did she cease to take interest in the things about her, but she abandoned herself to a listless idleness, and would remain for hours with her hands folded and her eyes half closed, seemingly regardless of all that went on.

Old Madame de Sainte-Foix used to try and rouse her sometimes, and get her to walk out with her or to read to her ; but though Hilda never refused, I was glad for her sake when the effort was over. One day, however, there came an end to my conjecturings. I had set out to pay a visit to little Mrs. Roberts, with half a mind to confide in her : peculiar she was, certainly, and Hilda had avoided her, thinking her loud and unwomanly, but I knew that under this affectation there was not a warmer heart or sounder judgment in Dinan.

"The very person we most wish to see !" she said to me, as I made my way through the group which usually gathered round her tea-table at this hour of the day. "Sit down, and when you have had your tea, see if you cannot help us out of our difficulty. You remember when young Dr. Mantell went away to join the American ambulance ; we promised him all the help we could, and made a fine subscription at the time ; but now he writes to me to know if I cannot beat him up any recruits as well. He says the English ladies belonging to the ambulance are falling sadly away ; two of them have been taken ill, one has been sent for home, and he wants to replace them immediately. They are daily expecting a sortie now, and he is afraid it will come and find him in the lurch."

"Well, I am sure I don't know whom you will get in Dinan," said a fat old lady, comfortably tucked up in the easiest chair in the room. "The girls have all gone away, and it isn't likely the married women are going to leave their husbands and families."

"Exactly," replied Mrs. Roberts ; "that's my case. I'd be off to-morrow if it weren't for Dick and his father ; but I should find one in the Basfoin and the other in the Séminaire when I return, and I don't know which is worse."

"Of course," said the old lady, whom we called Mrs. Rector among ourselves, as a compliment to her ability in bearing her husband's ecclesiastical dignity; "but it would be a very good thing if they would turn out a few of the convents here and elsewhere, and give those poor useless women something to do. Some of the priests have gone to the war, I hear."

"Very likely," I answered quickly; "but there are the Sisters of Mercy, you know; this is not what Dr. Mantell requires; he wants Englishwomen, I suppose, and surely we can manage to send him out some one from amongst us."

"You are quite right, Miss Brown," said Mrs. Roberts, assisting me to divert good Mrs. Rector from her favourite broadsides against Popery; "I expect better things of Dinan. Now let us go over the people left here, and see if there is any one likely to suit us."

"It is of ~~no~~ use coming to my house," I said, after they had discussed most of our acquaintances; "with the exception of Miss Yorke, I have only Frenchwomen there now."

"Why Miss Yorke!" exclaimed two or three at once; "she is the very one to go out; she has nothing to keep her here, and does not intend to return to England at present."

It flashed across ~~me~~ at Mrs. Roberts's first words that this would be the very thing to save and help my poor Hilda; but I did not care that the matter should be placed before her in this manner, and I rather hesitated at Mrs. Roberts's proposal to return with me and ask her immediately. But news travels faster in Dinan than anywhere else in the world, I think, and when I reached home Hilda came forward to meet me with flushed cheeks and eyes bright with excitement.

"What do you think, Kate?" she said to me, taking my muff and umbrella from my hands. "Dr. Blackstone has been here, and has asked me to join the ambulance. That kind old Miss Grant is going, and I could travel with her and Dr. Blackstone."

"Well," I said, sitting down by the fire and looking up in her face, "you will not go, of course?"

"Yes—Kate—I am going," she answered, her eyes bent down on Snubs stretched out before the fire, the flame-light dancing and flickering on her sweet face.

I knew then, by this new shyness, drawing her eyes away from mine, what thought and

purpose were in the girl's heart, and how, in her upright truthfulness, she shrank from the credit she would win by her apparent charity and self-devotion.

"You scarcely know what you are undertaking, Hilda," I said to her. "The work will be very hard, and you are not strong, and scarcely fitted for it, I think."

"Oh, but you are mistaken," she replied. "I don't expect I shall work very hard—I never do; but I know how to roll up a bandage, and the sight of blood does not make me sick, as it does some girls; and then I am so tired of Dinan, tired of doing nothing, and the eternal gossip; I am tired of the people and of the place, and any change will be better than this."

After this we were all very busy making preparations for the departure, getting together great bales of lint and bandages, almost the only things they would take, curtailing their personal luggage to the barest necessities. When I kissed Hilda for the last time, I had to turn back into my doorway, and leave Jeannette to tuck the rug round her and bid her a last *bon voyage*, for my eyes were full of tears, and I knew, alas, by the lump in my throat and the dreary heart-sickness that came over me as I watched them drive away, how very dear the child had grown.

III.

Life turned round for Hilda now; all her uselessness and inactivity made way for busy, eager work. New interests, absorbing necessities, claimed her from herself, and very completely and efficiently she answered to their call. In the ambulance they found her the most unwearied and reliable of nurses. After a time much supervision was given to her, and Dr. Mantell congratulated himself that when the press came he was very sure of her, however great the emergency might prove. He has told me of her courage and endurance, and related to me graphically enough the story of those two terrible months.

For after that disastrous day when Paris finally gave up hope, and the living left seemed less numerous than the dead, I did not hear from her, and had to bear, without means of breaking it, a month's long silence. On the eve of that terrible day it was well known in the Prussian lines that the enemy was about to make a sortie, and the several ambulances were stationed where the fighting was likely to prove most severe. I afterwards heard that the one with Dr. Mantell

Hilda, and two other nurses was sent over to the château of Buzenval. After a time it became evident that they were wholly insufficient for their work; the French, repulsed in their attack on the château, were pursued into the surrounding woods, where a hand-to-hand fight ensued, and the wounded were scattered over an immense area, hidden from succour, and dying in the most protracted agony.

Hilda had been busily at work since noon in the château, helping as she best could the wounded men as they were

brought into the house. About five o'clock Dr. Mantell came up to her and said,—

"You must be almost tired out, Miss Yorke; are you capable of still further exertion to-day?"

"Undoubtedly," she answered; "what is it I am to do?"

"Come with me," he replied, "if you have the courage: we must go into the woods, and see what we can do, for it is certain not half of the wounded men can be brought under cover to-night."

Already it was very dark, and a bitter

Page 66.

north-east wind swept through the bare trees, and sobbed and moaned so in the branches, that they often stopped irresolute, thinking they had heard some cry of distress. The waggon followed them as far as it could penetrate, but at a short distance from the château Dr. Mantell ordered it to stop, while he struck down a narrow by-path leading apparently through the densest part of the wood. "Will you follow me?" he said, turning to the others. "This is a cross cut to Les Quatre Chemins, and I fear we shall find sad work close at hand. Then, I

think, we must divide, and find our way back separately to the waggon for extra assistance."

They had chosen a right direction; torn branches constantly intercepted their path, and the briars and underwood were trodden down. Presently the doctor, who was walking ahead, lantern in hand, said, "My foot has touched something; wait until I see."

It was a rifle lying across the path, and only a few yards beyond the lantern flashed on the upturned face of its owner, white in death, and showing clearly enough that no

help was needed here. A few steps further on, and there was an undoubted groan. "Miss Yorke!" he called, as he bent over what seemed a dark heap under the trees, "will you come here with your bandages? This poor fellow has a sword cut only; if you will follow my directions in this case, I think he will be able to follow you after a short time back to the waggon, and I will meet you at this point again when you return."

"But here are two others," said Hilda, kneeling down and looking through the brushwood close beside him.

"Quite dead," he replied, examining them. "We can do nothing there to-night; the living must come first."

Hilda was too busily employed in following directions to feel frightened at her lonely position. The man she was tending seemed half unconscious, but soon revived with a draught from her flask.

"Mon capitaine!" were the first words he uttered, as, raising himself up, he looked round bewildered and alarmed.

"You have been wounded, my poor fellow," said Hilda, as, after dressing his wound, she helped him to rise staggeringly to his feet. "You are in the woods, and your captain has most likely escaped."

"Mais non," he answered, "for I saw him fall beside me, and as I stopped to raise him, I felt this thrust that turned me sick. Stay, mademoiselle," he said, arresting her, "I must look for him; he must still be close by."

"Not now," returned Hilda soothingly, remembering the dead men near, "you will faint again if you do not get quickly rested. Come now," taking his arm and leading him on in the direction of the main track, "if he is here we shall find him, for we are searching the woods for the wounded, and two other nurses and the doctor are on ahead."

"Are you a sister?" he asked, looking wonderingly at her; and as Hilda lifted her eyes to meet his glance, it seemed to her that she had seen his face before. "Ah! I forget," he said, putting his hand to his head, "for a moment I thought I knew you, mademoiselle, at home in Dinan."

"Why, it is Jules!" cried Hilda, startled into sudden recognition, "and my name is Yorke; you remember me at Mademoiselle Browne's?"

Poor Jules's delight did him little service in his weak state, and Hilda scarcely heard the outburst of his joy. His captain fallen! that must be Mr. Maynard. Could he be one of the dead men she had left lying among the trampled leaves?

"Come on," she said impatiently, "for God's sake walk as quickly as you can. Do you not know there are others worse than you waiting for us?"

The road they had come so quickly seemed interminable. Jules went on talking in his faint, confused way, as he stumbled after her, piecing together his recollections, asking a string of questions that Hilda did not care to hear or to answer. Mr. Maynard's name occurred often enough, but all anxieties were swallowed up in the one great eager wish to get back again, to see if indeed her doom was awaiting her in one of those white, upturned faces. At last all the tangled obstruction of underwood and briar was safely passed, the main track was in sight, and the welcome shape of the waggon loomed darkly through the white mist that had crept up.

"Stay here," she said imperatively, as she helped him up; "rest quietly until I return; make no exertion, and all will be well with you. Meanwhile we shall find your captain."

Jules watched her disappear through the bushes.

"C'est une bien bonne demoiselle," he said confidentially to the driver. "I knew her before, but I did not think it then; she had the air so proud. No doubt if Monsieur le Capitaine is to be found, it is she who will help him."

As she walked swiftly back again, there rose up before Hilda, with a cruel distinctness, the last look Mr. Maynard had worn for her, the white despair and humiliation of his face. The remembrance of it seemed to wipe away the possible sorrow of the dead face she might find to be his. But one look at the uniforms of the men she had left lying in the grass showed her she had not yet found the object of her search, and though Jules had been so certain that he had fallen in this spot, there was nothing else to be seen for some considerable distance. Carefully she searched on either side of the path, now holding her lantern to some treeless root, now starting back in fear at a patch of white lichen looking curiously like a face leaning against the dark tree-trunk in the misty uncertain light. She was in the right path for "les quatre chemins." Dr. Mantell might have found and succoured Mr. Maynard before she had come up. She was startled to see a Prussian guard stationed by the little hut that she knew had been held only that afternoon by the French. Sad evidence was around that here the fighting had been severe, but only the *débris* was left;

wounded and dead had been already removed. Through the window a warm light streamed brightly, and Hilda could see two or three officers within, smoking over a large wood fire.

"I am a nurse," she said to the sentry, pointing to the badge on her arm, "and searching for the wounded. Can you tell me if any men have fallen here?"

For all answer he pointed to the door of the hut, and she went up and knocked. A stout, be-spectacled Landwehr opened it to her, but instead of responding to his inquiring look, she threw a rapid glance over the interior, and saw a wounded or dead man lying on the floor in the further corner.

"You have wounded here," she said at length, "and no doctor. Can I be of use, or send any one to you?"

"Perhaps," he answered her in French, "but we have done all we can. It is a French officer; none of our men fell here. We have dressed the wound, and the poor fellow can lie here till he dies. If you will come in for a moment, madame," he went on, holding the wavering light in the direction of the wounded man, "you can see; but it is a pity to spend your time here when it is so much needed elsewhere, for already he is past any earthly help."

As she moved nearer to him, one swift glance told her, alas! that this helpless heap, this agonized sufferer, was the man with whom she had parted last under a cloud of anger, suspicion, doubt, and now, as it seemed to her, out of reach of tender clasping or warm kisses, beyond that hope of reconciliation which had never left her through all those autumn days, that had drawn her through all the chances of the war, to find him when it was too late!

Only one moment did she stay watching him, for a slight movement drew her to his side, searching with her skilled eyes for the wound that was draining his life away. A ball had passed through his shoulder, and the bleeding had been stayed, but some grave mischief had been done unsuspected by his rough nurses, and Hilda, as she cut away the cloth of his uniform, felt the blood ooze through her fingers and drip down to the folds of her dress.

"Ah!" she cried, trying to support the unconscious form against her shoulder, "if Dr. Mantell were only here!"

The Landwehr, who had been standing by, wondered at the agony in the girl's face as she tried to force him to swallow some brandy from her flask.

"Let me help you," he said gently, and kneeling down by her, he shifted the heavy burden to himself, while Hilda, with this numb pain at her heart, with quivering lips and shaking hands, searched out the hidden wound.

"The ball is still here," she said to the officer beside her. "In another hour he will be dead if the doctor does not come. Will you fetch him?" she implored, with passionate eagerness. "Our English surgeon; he must be close at hand, or at the waggon that is standing only at the other end of the track."

"Dear lady," he answered her kindly, "I will try and find him indeed, if you wish it; but I know enough to see that this poor fellow can in no way be helped by him. It will only give him needless suffering. It is the will of God," he said solemnly; "do not let us disturb him any more."

"Oh, no!" she cried, "it may not be fatal; I have seen worse cases. It is only speedy extraction that can save him."

"It is your friend, your brother, perhaps," he said, catching sight of the pitiful terror of her face. "Let us send, then, for the doctor; if he cannot help him, it will be some comfort to you that he should be here. Einthal," he beckoned, "will you try and find him?"

The man shrugged his shoulders, and answered roughly in German.

"He does not like to go out after his hard day's work," said the first one to her; "but keep up your courage, madame, I will go. Give him some brandy from time to time; in a few minutes I shall return, and all shall be done that is possible."

Hilda thanked him brokenly, then instructed him in the peculiar call they used amongst them when assistance was necessary, and turned round again to watch the unconscious man by her side.

How long she stayed, what time she passed kneeling there in the prolonged suspense of that terrible watch, Hilda never knew; her heart seemed to stand still in her eager listening for the feeble pulsation; her eyes fettered to his face, while she waited for some change in the deadly pallor; her hands staying, as best they might, that ceaseless drip, drip, from the wound draining his life away.

Who amongst us that has kept watch by the sick, even in the safe shelter of our own homes, waiting for the result of the scrutiny that is to tell us if it be life or death, does not know the agony of these protracted moments—does not understand the baseless fears, the rootless suggestions that will not be

dismissed? Hilda told herself, after all, it was the merest chance that any help should come, or that Dr. Mantell should be found in the shadowy woods, and it was only the click of the latch, and his quiet voice by her side, that woke her to courage and remembrance that for him this was only one amongst the great crowd of wounded and dying, who took in their hurried turn such brief assistance as he could render.

There was no time for explanation or discussion. Hilda made no sign when Dr. Mantell spoke hopelessly of the case. Mechanically she rendered him the help necessary; only when all was finished, and he was about to leave the hut, she said—

"This man must not be left. If the bleeding should recommence he would be dead before we returned. I will stay with him until the morning, when perhaps he may be moved."

"In the morning he will want nothing from any of us, I fear; your time is so valuable, it seems almost like wasting other lives for you to stay here," he said doubtfully.

"Can you send the man to me we found on the grass?" questioned Hilda, driven at last into explanation. "This officer is Captain Maynard, from Dinan, and that man was his servant, Jules Goupil; I knew them both."

Dr. Mantell looked up curiously a moment in the girl's white face, then he said,—

"If you don't mind being left alone, you had better stay. I will come back to you for a few moments before the morning."

Hilda took up her quiet post in the dark corner, unfaltering in her intent watch, while the officers smoked and chatted over the dying wood fire, and by-and-by, rolled in their cloaks, threw themselves on the mud floor of the hut for their short night's rest. There was nothing sudden or strange to her in the solitary vigil she was keeping; it seemed to her as if after the suppressed excitement of these last weeks, her mind had reached out to a great calm, a calm which neither hope nor fear came near as yet to disturb. Now that all that was possible was done for him, she scarcely questioned herself as to the issue, for these few present hours at least, there was the peace of his presence, hers by a right strong as death itself.

For a moment, it is true, when he first stirred from his death-like exhaustion, there came a passionate hope that he would speak and recognise her; but no mention of her name broke through his delirious mutterings,

and she forgot everything, save the care his condition demanded. Dr. Mantell, haggard with the night's ceaseless work, looked in on her in the early morning.

"This is what I expected," he said, as he noticed the delirious symptoms that had set in.

"You cannot possibly be left here alone; he may get more violent, and you will need help."

"These officers are very kind," she answered, "and even if they leave, I shall do very well if you will send Jules Goupil to me."

"As you like," he answered, a little aggrieved; "but we miss you terribly, there are not half enough of us to do the work; if we had you at the château, you could attend to so many at once."

"This fever will pass before long," she answered, "Jules can watch beside him if he sleeps, and I will be with you before long."

The remembrance of Jules's anxiety to find his captain had recurred to Hilda many times during the night, bringing with it a certain sense of comfort. It was evident that Captain Maynard had overcome his first unpopularity sufficiently to attach one of his men to him, and she acknowledged to herself that, in spite of all her strength, he would need help beyond her power to give him. There would be many hours too of sleep during which her presence would only be an act of self-indulgence, and Hilda, having once undertaken her post, would let no personal interest, however strong, interfere with her due fulfilment of its duties.

"You have nothing to do but watch," she said to Jules when he came, quieting at once his joyful demonstrations at the discovery of his captain; "he sleeps now, and before he wakes I shall return; you must not forget that on perfect quiet his life almost depends."

It was well for Hilda that she could exchange the hush and stillness of the wayside hut for the terrible work that awaited her at the château, that she could escape from the breathless expectancy of the slumber that meant life or death, to pain and suffering that appealed to her most untiring energy, her greatest powers of endurance; and Dr. Mantell, whatever he might have thought of her absorbed interest in that other sufferer, found no falling off in the eager help she yielded him.

Perhaps it is only when they have quite slipped past us, that we realise the tragic moments of our lives, the dumb intensity of our joys and sorrow, and now to Hilda, the

days that were hers at last—to mar or make her life—passed over as swiftly as if no passion of suspense, no thrill of renewed hope, came to lengthen out their hours.

Jules, who shared with her this probation of waiting, could not have guessed that their patient was more to her than any one of the wounded men she tended day and night at the château. Captain Maynard himself, with the curious acceptancy of an invalid, showed no surprise at her presence, when first he returned to consciousness, nor gave any sign of recognition that could be taken heed of by the world outside themselves. Hilda watching him gather together the feeble threads of his life, and come back as it were by a daily renewed miracle, from that dark shore whence she had drawn him, felt him drift further and further away from her as he strengthened with the lengthening days, and in her rebellious bitterness she told herself that utter parting would have been easier to bear than this, that knowing his love still to be her own, she could have let him go rather than bear this cold acceptance of their present position, this pitiful submission to conditions he alone had imposed upon her, and against which the fate that had again given him to her seemed vainly to cry out.

IV.

And now it is May-time, and we are all quiet and settled again at Dinan. We have counted our dead, our wounded bask in the sunshine, in the low old doorways of the Rue St. Malo, watching their mothers go backwards and forwards with their knitting, looking up to say a saucy word to Nanon or Lisette, as they pass with their baskets on their heads to the washing-pool or the market.

Jules, too, comes over from Léhon to see us, and brings us news of Captain Maynard, who, still an invalid, lodges with Jules in the curé's little white house by the river.

There seems to come a sudden light of perception into his dull, good-natured face, as he watches the brightness in Hilda's soft eyes, and the glow on her cheeks, and he looks across at me wistfully, as if to ask the meaning of their deadly beauty. But I will not understand him, I have shut my eyes wilfully to the change that has come to her since first she grew wan in the early autumn days. One change, indeed, I am only too ready to acknowledge—the new gentleness, the soft womanliness she has learnt from her terrible winter's experience, and which has made her grow dearer to me than even

before, when, because of the child's great grief, I had taken her half-reluctantly to my heart. Sometimes noticing the eager, far-away look on her thin face, I cannot help acknowledging to myself that the long strain has been too much for her, that she does not gather strength as I could wish, that every day she walks a shorter distance, does some one thing less than she did the day before. But it is Captain Maynard himself who opens my eyes at last, who forces me to confront him with the truth I would not before admit to myself.

He has come over before leaving for England, to bid us good-bye, the first and the last visit he has paid to Hilda since he left her at Buzenval, and now they meet and part in a way that, old maid as I am, fires me with indignation, and inspires me with a sudden resolve to make him as uncomfortable as I can in return for the caprice or weakness that is blotting away all the brightness of her life.

"I am afraid Miss Yorke is the greatest invalid of the two now," he says, stopping to speak to me at the garden-gate. "I should like to hear when I am away that she is getting better. I can never forget, you know, that I owe my life to her—that——"

"She will *never* get better," I interrupt him suddenly; "every day she grows weaker, and nothing seems to do her any good. Can you not see," I say, all my repressed anxiety and reproach stirring in my voice—"can you not see how she is changed, how thin she looks—how unnaturally bright her eyes are?"

"What are you saying?" says Hilda herself, joining us under the blossoming lilacs; "you are talking of me, Kate, I can see it in your face."

I am guiltily silent—only I watch with breathless protest Captain Maynard's eyes, as he lifts them to the sweet face, looking so piteous with its brave smile of unconcern. I forget to answer as I see the swift awakening that fills them, the sudden resolve, that may find utterance, perhaps, if I leave him now to tell his story, with the soft May twilight, and the fragrant solitude of the shadowy old garden, to give him courage at last.

But I find Hilda alone when, an hour later, I bid her to come in from the damps and the dews; yet with such a soft contentment, such a new sweetness rounding the thin lines of her face, that I, too, take courage, and, prisoning both her hands in mine, confess to her all I learned in the old castle at Léhon, and how the knowledge that came to me

that sad September day has made the interests of her life my own.

I do not ask for the sequel, though she tells me, in no way angered by my confession, what, indeed, I have already guessed from her face, that all the trouble is over now, and that this one hour of the summer twilight has unravelled the weary riddle of months.

"You know we do not all think alike," she says, making it seem to me rather an excuse for him, to her own loyal soul than to me, "and he fancied that an old trouble, an

imaginary stain on his honour, made him unfit to ask me to be his wife. Years ago he had to pay the penalty of a brother's disgrace; he was mistaken for him, and imprisoned, and since his release, he has shunned almost every one, has felt the dishonour to be his own. Before we met he intended to be a priest, and he forgot," she says softly, looking away from me into the gathering darkness—"he forgot that I loved him too, and that, in the separation he made between us, the pain and the sacrifice were not for himself alone."

VISION OF TWO WORLDS.

TWO sisters stood upon the dusty way
Where paths divided. Sweet, midst woods and
flowers,
And mellow-throated summer songsters, lay
The dear old home of all their sunny hours.

Stately was one, with hair of rippling gold,
And liquid glow within her deep-blue eyes,
Which spake of worlds that never can grow old,
And mocked the lustre of the brightest skies.

The other, meekly-robed, had saintly face,
Suffused with sadness and half-hidden glow;
Revealing that divine yet human grace
Which masters gave Madonnas long ago!

"Sweet sister," said the one with laughing eyes—
And melody filled all the noon-tide hours—
"Keep thou thy vigils and thy holy sighs,
And I shall wreath my head with summer
flowers.

"And soon a bridal wreath shall deck my brow:
Thou didst cast such away in bygone years;
And what is all this bright world to thee now
But cloistered penance? Sister, why such
tears?"

Then spake the meek-eyed maiden as she wept,
Each falling tear itself a holy prayer;
While o'er the land a sacred stillness crept,
And silence filled the once-melodious air.

"The bridal wreath was offered me by one
Whose feet with Love's pure sandals were not
shod:
With him my journey never was begun,
When we could ne'er have gone as one to
God.

"Now fires of earthly love thy soul consume;
Even as the fires so shall the ashes be!
And when thy passion's flame is quenched, what
gloom
Awaits thine erring spirit! Woe is me!"

"Hush, sister! Do not chill my young life now,
While all the world is flashing green and gold!
I'll come and kiss thy sadden'd yet sweet brow
When Laughter dies and Mirth is faint and old!"

And then she passed away, while all the land
In luscious beauty 'neath the sunlight slept;
When lo! beside the meek-eyed maid's right
hand
An angel stood. The maid and angel wept!

Then fell the pleading maiden at the feet
Of her bright sister, who in love stooped down
And raised her, whispering, "It is not meet
That we should lift our hands against God's
frown!"

"Not now, my tender sister, no, not now!
God's loving heart clasps all the human spheres!
I have a heaven-sent garland for *thy* brow,
And it must be bedewed with Sorrow's tears!"

The angel put the crown on that young head:
It was a wreath of thorns, but still the face
Beneath it glowed with heavenly light, which
shed
Around the pilgrim's path a guiding grace.

"I take the garland, angel sister, now!
Help me to bear the griefs it shall entwine!
The Christ had such a wreath around *His* brow:
For His sweet sake let this encircle mine!"

A light like that of some calm, setting sun
Suffused her face. Her feet with love were
shod.
The angel saw the noble life begun,
Then mounted to the golden land of God.

And down into the sadden'd paths of sin
And death the solitary pilgrim went;
While all the land lay like a soul, wherein
The light of love and faith had long been
spent.

Into the gloom she went with shining face,
The dews of Pity falling from her eyes;
A messenger of heaven's healing grace
To dying ones—like some divine surprise.

The fevered brow she soothed, and mixed her tears
With some lone one's, who, dying, blessed her
name;
Nor stayed her love till the recording years
Had said "'Tis well!" and then an angel came

And led her to the Master, who, with smile
Of love, placed on her brow a crown of gold,
Blessing His faithful one, and all the while
Around the throne heaven's swelling anthems
rolled.

But oft, amidst the sweetest songs of heaven,
And glory of the rainbow-circled throne,
The meek-eyed maiden thought of those unshriven,
And heard, borne-up, a sister's bitter moan!

And oft she wandered to heaven's golden walls,
Bearing her grief back from the angels' song;
Like some lone, yearning spirit that recalls
A lost love, weeping still in passion strong.

The angels came and knelt down at her feet,
And when they saw such love their eyes grew
dim
With falling tears. And silent was each street;
For hushed were all the white-robed cherubim!

And long they knelt beside the walls of light,
With mingled pity and great wonder dumb,
That 'mongst them, from the realms of sin and
night,
A purified yet sadden'd soul should come!

And long she prayed while thus she knelt within
Heaven's battlements of jasper and of gold,
That kept from angels' ears the mournful din
That round *her* yearning spirit ever rolled!

Pale Sorrow's dim transfiguration veil
Hid all the brightness of her fair young face.
Her longing spirit turned whence one long wail
Came up from souls with whom hope had no
place.

Then heaven awoke in one o'erwhelming song,
While opened wide one of the gates of light;
When down the guiding gleam she sped along,
Nor stayed till she had reached the realms of
night,

And came to her wan sister, toiling on
Heavenward with bleeding feet, and then her
face
Beamed with a warmer light than when it shone
'Midst glowing seraphs in God's holy place.

And then the wandering one fell at the feet
Of her sweet sister from the shining spheres,
And wept as does a lonely soul, when sweet
Comes o'er it all the light of other years.

And now they clasped each other long in love—
One radiance midst the gloom—while all around
The wailing ceased a while, and from above
There came the sweetest ecstasies of sound.

The stricken one revived in that embrace,
With Christ's dear grace her erring feet were
shod;
And then they passed, heaven shining on each face,
Together o'er the golden hills of God!

And far behind them, like receding night,
They left the shadow of the land of sin;
Till last they reached the gates of quenchless light,
When Christ Himself with blessing took
them in.

And then the meek-eyed one, low bowing down,
Whispered in tremulous joy, clasping His feet—
"Dear Lord! I thank Thee for this other crown!"
And never was an angel's face so sweet!

CHRISTMAS, 1876.

BY THE STONE EZEL.

CHAPTER I.

TOM BAI-
LEY'S
house
on Wick
Common
was one
of the
pleas-
antest
nooks
in the
world
when
Tom
was not
in it.

It
stood

on the sunny side of the Common, and on the hot summer days there was no more refreshing sight than its ivy-covered face and snowily draped windows. Cool within and bright without, it was the very opposite of its tenant, who might be compared to a volcano under snow, or gunpowder pickled in vinegar, so icy and sour

could he be before one of his terrible explosions of temper.

Tom was a spare, round-shouldered little man, with short thick whiskers standing straight out round his face. And these whiskers, and Tom's shaggy eyebrows also, were white in patches, giving one a strong impression that they had been struck so by lightning flashes of temper rather than by the hand of time. The line of Tom's mouth was thin and hard, and though he had a well-shaped nose enough, its nostrils were ever ready for formidable expansion, as if, like the war-horse in Job, they were sniffing "the battle afar off." There was no want of height or breadth in Tom's forehead, yet even this was spoilt by the sharp line made across it by the habit he had of dashing his hat on instead of putting it on his head soberly like other men. And when once on it had a look of surly determination to come off for nobody.

Not only was Tom's hat different from other men's, the expression of his face was reflected generally in his attire. His coat was buttoned in at the waist, apparently in defiance of anticipated attacks on his heart and pocket, and the buttons and button-holes of his spotless shirt front seldom seemed to agree. The stretched wrists of

gloves that he carried in his right hand had a look of never intending to be coaxed on again, or turned to any other use than that to which they were generally put, which was smiting the palm of the left hand. His feet in his square-toed boots spurned the ground they trod, and kicked the air they walked through.

Tom's face was redeemed from utter ugliness by a pair of eyes as blue as human eyes can be. Any girl might have envied him the possession of them. No matter how he frowned, or glared, or sneered, his eyes remained clear and calm. When Tom was in one of his most inexorable tempers, his wife fixed her eyes on his, and clung to hope, as a tempest-tossed sailor might while still seeing bits of celestial blue between the storm-clouds. But even these eyes, so strange amid the premature age and the trouble of Tom's face, had a look of sharp suspicion of everybody and everything they looked upon. Once a well-meaning neighbour said to him,

"My dear Bailey, excuse me, but really I don't see the world has treated you so very badly that you should always have that look of being so fiercely on guard against everybody. Why should you, now?"

And Tom gave him his answer without hesitation or want of energy—

"And so I *am* always on guard; and so I'd need be—to keep the wolf from the door: a poor miserable clerk, with a wife and ten children. I'd like to see how *you* would walk in my shoes. Ha! I'd like to see if *you* wouldn't be always 'on guard,' indeed."

But no description can do justice to the intense savageness with which Tom would repeat that "on guard," or any such words that offended him. No terrier that ever snapped and snarled or growled could give such an idea of bitterness or smothered rage.

And then it was such nonsense about "the wolf" and "the door." Though it must be owned that *had* any wolf caught sight of that door when it was *unguarded*—the fat rosy children, tearing up and down the sun-faded floor-cloth of the broad passage, and in the garden beyond, with the river at the end of it—there is little doubt that the said wolf

would never again think Little Red Riding Hood, or her grandmother, worth pulling the bobbin for.

Perhaps nothing showed more signs of Tom's fitfulness of temper than this same garden of 3, River Terrace.

One year it was to be a pleasure-garden, and the house would be strewn with little green-covered books on the arrangement and management of parterres and ornamental grasses, and the cultivation of roses.

The children would be turned out to play on the public Green or by the river-side, pigeon-houses banished, dogs and cats rabbit-trapped or poisoned.

Even Tom's wife scarcely dared walk in the garden for fear her dress should brush down a blade of Tom's precious *Milium multiflorum*, or lest, in her ignorance, she should gather a flower of his cherished *Heliotropeum Chinensis*, fondly imagining she was only picking a sprig of "cherry pie," to which, even after her terrible mistake was proved to her, she still meekly protested it bore a remarkable resemblance.

Another year a fit of fury at the amount of the greengrocer's bill would make Tom declare his intention of never having another farthing's worth from the "rascally impostor." Then parterres were to become cabbage-beds, and lawns potato plots.

The books on horticulture were thrown into the waste-paper basket, and for a long time literature was represented at 3, River Terrace by such works as "Treatises on the Cauliflower," "A Book on Beans," "Practical Guide to Potato Growers," "A Manual on Marrows," and publications of an equally interesting character.

Tom would come home with his pockets crammed with neat little brown-paper parcels, that set everybody thinking of presents, though it was long years since Tom had made any. But the packets, peeped into when Tom had gone up-stairs to wash the London smoke from his cross little face, proved to contain only shrivelled beans or feathery carrot seed, or some such dry-looking things, supposed to contain germs of vegetable life.

Tom's kitchen gardening was not alto-

gether a success even after the second season. But for each of his failures he found a reason apart from himself or any fault of his.

His cauliflowers had much growth of green leaves, but hearts of flowers no bigger than Tom's waistcoat buttons. Tom threw the "Treatise" in the fire, and declared, as he thrust at it with the poker, its writer deserved a like fate. His vegetable marrows damped off before they arrived at maturity, and Tom swore the author of the "Manual" should one day smart for it.

Tom's cabbages, instead of spreading, aspired, and ran to seed. This he attributed to the unusual heat of the weather, which, with everything else, was in league against him. His peas were eaten up by the sparrows, and Tom wrote letters to the newspapers demanding in his strongest language if this "atrocious tribe of robbers, worse than all the plagues of Egypt put together, were to be allowed unchecked to carry on their work of ruin in happy English gardens."

His potatoes Tom never could be got to regard as failures. Each day as the cover was lifted from a dish of waxy marble-sized balls, he declared the fault was in the cooking, and several honest servants were dismissed for not doing justice to Tom's "Early Gloucesters" and "Dalmahoyes," and for cherishing a secret spite against his "Flukes." There were dozens of bushels of the waxy bullets, and Tom's order being that not another vegetable should be bought till these were eaten, his family, when they heard of the potato disease, were of opinion that in no part of the country did it exist so obstinately as in Tom's brain.

At last there came one day a very heavy doctor's bill for attendance on the family through various complicated stages of dyspepsia, as well as for injuries received by the children, through being struck by cricket balls, or kicked by horses on the Green, or falling into the river.

It was a happy day at 3, River Terrace, when he did at length declare gardening, both horticultural and culinary, a mistaken use of his powers, and that high

cultivation was only a short road to barbarism.

So the garden was to be left to nature and the children. It was soon a happy wilderness again, only Tom's face looked more dreary and puzzled as he sat smoking his pipe and gazing round at the luxuriant ruins which were all that remained of his plans and toil.

Mrs. Bailey, however, could not bear to see all his labour turned to nothing, so she quietly cherished some of the things he had spent most time and care upon. She would not let any of his remaining papers of seed be wasted, but sowed them carefully, but not knowing what they were, caused some odd mixtures of vegetables and flowers that brought forth flashes of Tom's sarcasm, and made the poor woman very humble on the subject of her gardening even when others praised it.

But her patient efforts succeeded better than might have been expected. In good time the young people made themselves a croquet ground in a corner of Tom's elaborately cultivated lawn, but when his attention was drawn to it, and they tried to please him by showing how successful his new grass-seed had proved after all, Tom only laughed contemptuously, and said it was only fit for the purpose to which it is now turned, namely, for donkeys to play on; and as at the moment he spoke several sons and daughters of neighbours were present, his remark was felt to be as ungracious as the kick he gave the winning ball, sending it flying down the garden and into the river.

The younger children had their own slips of garden, and the boys their pigeon-houses and rabbit-hutches again, and some of them had made a rustic summer-house, at the end by the river. It was in this summer-house Tom was fated to make one of the most unwelcome and astonishing discoveries that he had ever made in his life.

On the whole there were few pleasanter nooks at Wick Common than Tom Bailey's garden, though if told so he would shrug his round little shoulders and talk grandly of what might have been but for this or that reason, or anything but any fault of his.

"As it is," Tom would say, looking witheringly around, "it's a bear garden:" and there were some people who when Tom himself was in it perfectly agreed with him.

His next fit took the form of chicken keeping. The Browns' children across the Common were so much stronger than his, he told his wife, that he could see no other reason for it than the fact that they had as many new-laid eggs as they could eat.

So Tom turned the little as-yet-unused stable into a fowl-house, and instead of coming home by his usual train, spent an hour every afternoon for a week or more in peeping into the windows of bird-fanciers at Ratcliffe Highway, and countless by-streets.

Neighbours hearing of his new scheme were ready to offer excellent advice, but Tom was suspicious of advice, and determined to act on his own judgment.

His utter ignorance, however, on the subject of fowls compelled him to seek knowledge somehow before purchasing. So he listened, though with half-disdainful ear, to what Brown and other neighbours had to say on the matter, and also took in the chief papers containing information on the subject. Journals of light reading were discontinued as Tom pronounced the *Field*, *Country Gentleman*, and *Poultry Fancier's Guide* far more improving literature for the family, and declared that all fiction was "pernicious trash."

It was long before Tom could decide upon what breed to choose. Buff cochins, white cochins, partridge cochins, light Bramahs, grey Dorkings, white Dorkings, cuckoo fowls, duckwing game, game bantams, silver-spangled Hamburgs, gold-spangled Hamburgs, pencilled breeds, black Spanish, Minorcas, and crossed breeds innumerable, strutted, clucked, and crowed in his dreams many a night before he could decide in favour of any.

At last Tom arrived one afternoon with a large wicker cage from which projected six heads, the appearance of which elicited from the porters and bystanders at the station comments not at all reassuring to Tom as to the wisdom of his choice after so much consideration and research.

Indeed, he was so disconcerted by the remarks he had heard, agreeing with certain vague suspicions of his own that had occurred to him after his purchase, that to prevent further humiliating evidence of a mistake he sold the whole lot, cage and all, to the man at the toll gate for less than a quarter of the price he paid.

Thus ended Tom's attempt at poultry keeping. He could never after hear a cock crow without irritation, and declared eggs to be the most indigestible things in the world.

When Tom left for business in the morning, every one in the house had an air of serious responsibility, if not solemnity or depression. This look was retained by Mrs. Bailey for about half an hour, when it generally passed away with a few tears. But the rest of Tom's household only waited to hear that slam of the door to break out like birds at cock-crow.

The little children shut up in the attic-nursery heard it, and shouted,

"Daddy's dorn! Daddy's dorn!" and came galloping, crawling, and tumbling downstairs, hurting Mrs. Bailey's tender heart by repetitions of the same joyful and triumphant cry.

The boys ran out in answer to certain mysterious whistling of acquaintances on the Common—summonses they had not dared to notice till Tom's back was turned.

The girls had letters in bodice or pocket they had not dared to read except by stolen glances when the *Times* hid Tom's face at breakfast. No sooner was he gone than these epistles came out, and were rushed off with to be read in the garden, or shown to bosom friends over the garden wall.

The servants invariably left off their work and gave a sigh of relief, and even the two cats rushed up from the kitchen and took possession of the parlour rug, sitting defiantly on Tom's very slippers.

At all this Mrs. Bailey looked with gentle reproach, though probably no one in the house enjoyed as much relief as herself. She certainly allowed a good deal of running in and out among the young people. Critical neighbours said the house was always in a muddle, and always noisy, if they called in

Bailey's business hours. Yet every one seemed to choose those hours for calling, in spite of muddle or noise.

There is no doubt Mrs. Bailey did leave everybody to do very much as they liked while Tom was away; even the last new baby was not opposed, being taken up or put down, fed or danced, just as it expressed its inclination. Very likely Tom's wife considered that every one had more than enough scolding and setting to rights when Tom came home, and perhaps she was not mistaken.

No sooner was the door opened, in answer to his thundering knock and his ring, which left the bell in a semi-hysterical state for a quarter of an hour,—no sooner was the door opened, than Tom was in upon them all like a terrier on a family of unruly pups.

If his slippers were not on the door-mat, he wanted to know if he was to stand there all night waiting for them. If they *were* there he fell over them, and "confounded" them and everybody, and sat shoeless all the evening.

If his wife was nursing the baby, he demanded to know if he paid a nurse's wages, and rented a house with a nursery, for nothing but to be pestered with screaming imps in the parlour. If she was without the baby, and devoting herself to his comforts, he desired to be informed whether she intended that child to be sacrificed, like all the rest, by being left to the tender mercies of servants.

If his boys were at their lessons, he asked them if that was the time to be buzzing at his ears, just as he wanted a little rest in his own house. If they were amusing themselves with a game at chess, he turned upon them, demanding fiercely whether *that* was what he paid their schoolmaster for?

If his girls were at their music, he requested that he might be telegraphed to another time when the place was going to be turned into an opera-house, so that he could stay at his office, and spend his evening in quietness at least. If the piano was shut, he declared his intention of letting it go to pay the butcher's bill, since, though they might not be aware of it, he was not quite in circumstances suffi-

ciently affluent to keep a sixty-guinea instrument rotting in his house for nothing.

As such was Tom's normal condition, it may be dimly, but very dimly, guessed what his wife had to face when she found it necessary to broach the subject of the annual seaside trip, or new winter dresses for the girls, or the baker having been pressing about his little account. But sometimes these necessities proved, afterwards, blessings to the family, for they brought about a crisis in Tom's temper, and acted like thunder-storms in clearing the domestic air.

Mrs. Bailey generally began the gentle attack when Tom, having sat up later than her over his pipe, came to retire to rest. It was not, perhaps, the happiest moment to choose, but it was the last, and she chose it for the simple reason that she could never get courage before.

At the opening of the attack, Tom would begin to pace the room slowly without answering a word, his eyes gleaming with rage and sarcasm. Mrs. Bailey would go on gently pressing her reasons for her petition; and often till morning have her children listening heard her soft voice pleading and reasoning, while Tom raved, and almost flew up and down the room like a demented little monkey. Indeed, to see him at such times was enough to make a Darwinian of any man.

These scenes nearly all had one ending: poor Mrs. Bailey, who never did battle with Tom for herself, would, in behalf of her children, continue her patient onslaught till her last bit of strength failed her, and she either fainted or was seized with that painful hysteria at which the learned sneer; but Tom, not being learned, was simple enough to believe it was a sort of dangerous delirium brought on by over-exertion of bodily and mental strength; and, to do the little tyrant justice, he would be from that moment in a state of abject contrition. He was not above flying up the stairs, with his braces streaming behind him, to call for assistance, heedless of exposing his villainy to the servants if necessary; but most often he was himself his victim's only and most tender nurse. At these moments he would yield anything or everything she wanted; and heaven knows

she deserved it after such prolonged, and, up to the present turning point, such apparently useless torture.

But at these times came also her only gleams of happiness, for Tom was for some twenty-four hours or so "a perfect angel,"—at least so she said.

But the old Adam, or, what was worse, the old Tom Bailey soon returned, and all was as bad as ever. Yet it is wonderful how much is endured from a thoroughly unjust tyrant by people who cannot tolerate the least annoyance, or blame, or inconvenience from a reasonable and worthy person.

All in Tom's household bowed to his sway,—only one even questioned it, and she only questioned it with her eyes. This person was Tom's second daughter; his eldest had made a run-away match rather than involve her mother in the awful task of breaking the news of her engagement to her father.

But Tom's second daughter, Ella, blamed her sister for behaving so treacherously, as she called it, though no one else blamed her, and declared her intention, if *her* turn should ever come to be placed in a similar position, never to marry till she had obtained her father's consent. And this child, who was the only one to defend Tom's right to his family's confidence, was the very one who questioned, though only silently and gently, his right to tyrannize.

Tom very plainly saw, and very clearly understood those quiet, questioning looks of Ella's, and very much resented them too. But there was one thing that made him not so very angry about them as he might have been. It was this thought: Everybody but Ella was afraid of him and obeyed him because of their fear. Ella was evidently not at all afraid of him,—some "inner consciousness" told him this,—and yet she was the readiest of all to give him obedience, attention, comfort, help, whenever he would let her.

Sometimes when Tom wondered why this was so, he allowed a hope, strange as a gleam of sunshine over a storm-tossed, half-wrecked, groaning ship, to have a brief existence in his restless, self-tortured heart. Was it possible, he asked himself, that the girl could

guess anything of what had been in him before her own birth? Could it be that there remained in him any germ by which she could see he had not always been what she now knew him? It was the dread of destroying for ever this vague, faint hope, that alone kept Tom from breaking out at Ella very hotly when he met those bravely reproachful eyes of hers. They were pitying eyes, too; and Tom could sometimes fancy they saw into that secret, ever-living, ever-thwarting sorrow of his; for Tom had such a sorrow.

Some people suspected a strong reason *must* exist for any one turning into such an inflammable little tyrant, and many hinted at a disappointment in love.

These were not far wrong, but they mistook altogether the nature of the disappointment Tom had encountered. *His* crossed love had been of that kind "passing the love of woman."

CHAPTER II.

THIS humble and inglorious David had once had his high-born Jonathan, and had so loved him and relied on him that when he felt he had lost him it was a hard matter indeed to face the world without him.

It had only been for the last few years that Tom had owned to himself that he had quite lost his friend, and it was since then that his querulousness and inflammability had become so ungovernable.

He was an irritable man before because he was a disappointed man and utterly cut off from the society of his Jonathan by circumstances as uncontrollable as those that so often divided the sons of Saul and Jesse. But though so widely separated from him, Tom had had an inexhaustible solace in the belief that his friend was as true to him in thought as he was to his friend, and ready to prove his regard whenever Tom should require such a proof of him.

Why Tom never would ask for such a proof was almost as much a mystery to himself as it was to all who knew him. Perhaps it was pride, a sense that he had all to ask and nothing to give, that kept him from putting this friendship to the test through

those many weary years of fighting off the wolf from that inviting door. Or might it have been a dread he would not own to himself as to what his life would be suppose he did prove his friend's regard, and prove it other than he had so long steadfastly believed in?

And even while he still believed in it his temper was soured because he saw others did not believe, and grew tired of hearing him incessantly praise a man who appeared to take not the slightest notice of him.

His neighbours regarded it as his hobby at last, and knew how to use it when they wanted to get Tom into a good temper.

Once let a neighbour, walking home with him from the station, touch on that apparently unprofitable, one-sided friendship, and Tom was an entirely different creature: his cold, blue eye would soften and kindle, —his thin, contemptuous lip swell into quite a comely curve; and his weary, lagging little foot tread old Wick Common like that of Rob Roy MacGregor on his native heather.

And this wondrous change was (till the last three years) to be wrought in Tom by the mention of an old bachelor living in a lonely house on the Lincolnshire Fens: a rich old bachelor, shut up with his organ, his dogs, and a tyrannical housekeeper, who frightened everybody from the house. His was the magic name,—the "open sesame" of all Tom's brightest and best memories, and brightest and best hopes.

They had first met at school. It was a private academy, but sufficiently large to have the dangers, adventures, sorrows, and joys of a public school. At this time George Bentinck, though two years older than Tom, had been backward as a scholar, and through delicacy of health still more backward in playground prowess. He stood in much need of such a little champion as appeared suddenly in the person of Tom, as shrewd, hard-headed, muscular, sure-fisted, pugnacious a little Briton as ever bullied in or out of school.

When Bentinck first saw Tom he mentally called him a detestable little monkey. He seemed to have come armed from top to toe with school necessities. His sturdy form

seemed made for any amount of fighting; his clothes to match; his boots designed for effective kicking. From his Sunday hat to his very pocket-knife there was so much of the human bull-dog in his appearance and belongings that Bentinck conceived the deepest repugnance for him. He was certainly a hard-headed, persevering little student, but that the boys declared was less from love of study than a determination to have his father's money's worth in full from the master.

Tom was quick to see Bentinck's looks of disgust and returned them, substituting impudence for what he failed to assume of contempt.

The school being chiefly composed of the sons of proud old county families, Tom Bailey, the son of a tradesman, was looked down upon as a low innovation.

Bentinck, on the contrary, failed to win the approval of the fastidious youths of Runnymede House, on account of his birth and breeding being higher than their own, as well as his possession of talents of a very rare order, which it was impossible to ignore, though as yet they had not shown themselves in successful study.

At first little doubt was felt but that Tom would soon fight and bully his way among the fighters and bullies of the school, but to the amazement of every one he suddenly took Bentinck's part against them all.

It was on a hot July afternoon when Bentinck sat under a tree by the river reading Spencer's "Fairy Queen."

The elder boys had been bathing and were then lolling on the bank amusing themselves by pelting some of the small boys who were still in the water. The eldest in the school, a tyrant named Sadler, told Bentinck to put his book down and join in the "sport."

On Bentinck declining and going on reading, his tormentor began filling one of the small boys' boots at the river and throwing the water at him.

Bentinck looked round, seized the boot, threw it to its distressed little owner and went on reading.

Tom, who was lying on his chest on the

grass, watched the scene with lazy wonder. He could not understand how so tall a fellow as Bentinck could suffer himself to be so persecuted without retaliation. He was mentally placing him among the poorest spirited girls he had ever known when Bentinck's tormentor snatched at his book.

Bentinck was too quick for him. Seizing

it back he gave the bully a blow on the side of his head with it and then quietly went on reading.

Sadler retired to his old place to consider revenge.

Tom's sleepy eyes now regarded Bentinck with rather more interest.

The hand hanging down from the willow

Page 5.

branch over which Bentinck's arm was thrown was certainly whiter and more fragile than many a girl's, but assuredly Tom owed to himself it had dealt a blow Tom would not have been ashamed of.

By degrees his eye travelled up, and for the first time in his life Tom became slowly

aware of a finer and subtler strength and power than such as he had always hitherto admired.

He was so deeply interested in watching the anger in Bentinck's face giving way to returning enthusiasm for the lines he read that Tom felt personally irritated when

Sadler again approached Bentinck from behind, snatched the book, and rushed off with it to throw it in the river.

He had to pass by Tom and did so, hardly noticing him as he lay apparently half asleep.

Tom caught one of his ankles and brought him down so suddenly that even Bentinck could not help joining in the shout of laughter with which the lookers on greeted Tom's exploit.

Before Sadler could recover breath Tom had possessed himself of the book and beaten him about with it so energetically that it became a favourite question among the boys as to which had most of the "Fairy Queen"—Bentinck inside his head or Sadler outside his.

Tom punished his big adversary without mercy till Bentinck from his tree called to him, at first laughingly and afterwards seriously, to desist.

Then it was that—as this young David left his fallen Goliath, and presented not his head but the book he had punished it with, to his newly-found Jonathan, with a certain blunt honest grace that Tom could command when he liked—the wonderful friendship took root in these two utterly opposite natures. From that moment it would seem their souls were knit.

Bentinck discovered Tom only put his rough side out because he found it necessary to do so, in concealment of very impressionable material within. They certainly were of good service to each other. Bentinck's friendship for Tom made Tom's inferiority of birth forgotten, and Tom was able to do much in helping Bentinck in a mechanical, dogged sort of way through his lessons. He also did him good by coaxing him to practise cricket in solitary places till he could play sufficiently well to escape sneers. He would never attempt taking part in any important game, but joined now and then to show that he *could* drive a ball to the tent or bowl down a wicket.

Tom also soon taught him to row, and this recreation gave them many of those delightful hours that Tom relived in after years when he sat up with his pipe while all Wick Common lay steeped in slumber.

Besides smiting the Philistines of the school when they molested his Jonathan, he was fortunate enough to reinstate him in his father's favour, which had been considerably lost through Bentinck's backwardness as a student.

It happened that just when Tom, by dint of hard persistent plodding, had prepared himself thoroughly for the half-yearly examination after which he was to leave school, a change was made that destroyed all chance of his distinguishing himself.

He had worked in the full belief that "Lucian's Dialogues" would be the chief book the examiners would use, and he was completely amazed and thrown off his guard when the examination came, and he found that his well-studied text-book was scarcely used at all.

His great labour seemed to him quite lost. He nearly raved himself into a fever to Bentinck, charging the masters with having guessed his strong point and making the change on that account.

But it seemed that his own misfortune was to be used by David as the foundation of Jonathan's first success.

Before long it was known in the school that the master had told the examiners to reserve "Lucian's Dialogues" for the next term, at which, in honour of the school jubilee, a gold medal was to be given to the best student of that work. The examination was to be conducted by an examiner from Oxford.

At first this prospect, from which he was to be debarred by his removal from school, sent poor Tom half wild. However, he knew his father had no choice in the matter, as he and the master had already had some painful correspondence concerning the settlement of Tom's long-standing school account. Poor Tom, then, had to leave.

His temper was not soothed by the knowledge that Bentinck was too unwell to remain the next quarter. Tom was so unjust and unreasonable as to declare that everything was planned by the master to get the medal for the son of a nobleman, one of his show pupils, a youth whose head Tom described at home as consisting of a Roman nose in

front, and a curl-covered bump at the back, and nothing else.

So Tom went home with the exasperating vision of young "Hawknose," as he called him, left to take easy possession of the prize to which Tom felt he had so good a right.

At home he moped so miserably and disturbed his family so much by nightmares and dreams in which he was constantly making onslaughts on some imaginary nose, that it was regarded as a most happy event when he received an invitation from George Bentinck's father to spend some weeks at Conholt Park.

But even there the nose would leave Tom but little peace. He was reminded of it by the old family portraits, by the beaks of the parrots of George's maiden aunts. His nights were still restless, and once the housekeeper, whose room he slept near, heard him moaning so that she kindly got up and came to him, but Tom, in his half sleepy, half delirious state, uttered threats of such treatment of her prominent feature as caused her to retire in alarm and high offence.

Altogether he was so moody, mopish, and ill-behaved that every one at the park wondered what George could see in him to make him care for his society.

George, too, was disappointed in Tom, though he knew and sympathized with the cause of his trouble, but he certainly thought he was carrying his vexation too far. If he could not leave it at school, George thought he might have left it at home, and not be bringing it down there where they might have had such a jolly holiday.

George had thought his friend would have been in raptures with his father's library, but Tom would hardly look at a book.

Perhaps his want of appreciation of his music hurt George most, for at school it had been in this case Jonathan who played the sweet minstrel, while David with Saul's troublous spirit was the entranced listener. There, where they had had so few opportunities to indulge in this delight, Tom's ears were ever greedy for more. Here, where a fine old organ and unlimited time waited them, he seemed to take a gloomy pleasure in disproving the hackneyed proverb

about the effect of music's charms on minds in a similar condition to his own.

One morning Tom electrified the breakfast party at Conholt Park by suddenly throwing down his knife and fork, starting to his feet and exclaiming,

"By jingo! I've got it!"

It should be remembered this took place before Tom was made a gentleman of by his University course, and at a period when he was just what Mr. Beattie assures us "young Edwin" was *not*, a "vulgar boy."

George looked at his father in alarm for the consequences of Tom's misdemeanour, and well he understood the depth of displeasure in the eyes fixed on the plebeian little guest.

Tom, however, was not to be daunted by any "stony British stare." He actually lifted his little red hand and snapped his fingers at his host, exclaiming excitedly,

"I must speak to you the instant after breakfast if you please, sir. I have a splendid idea."

The only idea that Mr. George Aubrey Bentinck had during the rest of breakfast time was that his son's friend should quit Conholt Park before dinner.

Jonathan never felt more misgivings during a private interview between Saul and David than George felt while his father and Tom was shut in the library.

After waiting some minutes he did not see why he should not enter and learn what Tom was about.

On going into the library George saw Tom standing before his father, waiting evidently in much excitement a reply to what he had been saying.

Mr. Bentinck was leaning back in his chair, pressing the tips of the fingers of his right hand to those of his left, and looking up over Tom's head to the portrait of his great-grandfather with an expression of haughty patience. One would think he felt humiliated, that even the mere shade of that august personage should see himself dictated to by a schoolboy in a round jacket, too short-waisted for him, a boy with visible ancles and wrists, and wearing hob-nailed boots.

George looked nervously at his father.

There had long been a coolness in his manner which he knew sprang from unconcealable anxiety and disappointment as to George's school progress, and now he dreaded some deeper displeasure from Tom's impetuosity.

"Here *is* my son," said Mr. Bentinck coldly. "You had better acquaint him with what you have proposed to me."

Tom spun round on his hob-nails and addressed his astonished schoolfellow with vehemence, brevity, and decision.

"Now, look here, George, you're such a deuce of a fellow for taking things easy that I spoke to your father first about what I want you to go in for, because I know you'd do anything in the world to please him. Now here's a glorious plan, George. I've, as you know, got Lucian at my finger's ends."

And Tom shook them as if they tingled with knowledge, then pointed them at George's eyes like a mesmerist, and said,—

"Now, I've thought what to do with it. I can put it into you, George, as easily as emptying one bucket into another. You must help me get it into you this quarter, go back to school the next, keep dark about what you've done here, take your lessons in the usual way, then when the examination comes go in and lick everybody like anything. Now George, this can be done, and ought to be done, and shall be done, if only——"

And here Tom with that grace he could but did so seldom adopt, bowed before Mr. Bentinck in a manner that gentleman could not have been ashamed of even if his pictured ancestors on the walls had looked down with living eyes.

"If only," added Tom, "your father will say it is to be."

"Well, George," I think you might do worse than try," said Mr. Bentinck.

Tom's prophecy was fulfilled. He did manage to put his knowledge into George, whose fine memory retained it well. George did "keep dark," and seemed to only study with the other competitors. He amazed every one, and made his half-respected and half-mistrusted character no longer doubtful

in the school. The boys gave him credit for having chosen to be reserved, for having been always ready to "come out" before if he had desired.

The master was greatly surprised, for "Hawknose" was considered safe. But the medal was borne off by George, whose father sent for Tom to welcome him to Conholt Park.

And that Christmas young David was an honoured guest in the house of his Jonathan's father.

CHAPTER III.

MR. GEORGE AUBREY BENTINCK owed it to his pride to do something good for Tom's future. Accordingly he called that young gentleman into the library one morning and fathomed his mind on the subject. This was after he had been to school again with George two years, and was once more enjoying a visit at Conholt.

It was not a difficult matter to get at Tom's view about himself. He told Mr. Bentinck in very few and decisive words that the only thing he cared to do was to go through a university course, and as his father, after holding out a faint hope of such a thing, had now declared it to be impossible, Tom informed his kind old host that it mattered little or nothing to himself what his people pleased to do with him. He supposed he should try and do his duty wherever he was sent, but his own impression was he should ultimately "go to the dogs."

Perhaps Tom's recklessness of mood at that time was owing to his being a daily witness to the preparations for George's departure for Oxford.

Mr. Bentinck was shocked. He invariably was after an interview with Tom. This time, however, he was so shocked that he determined to do something that should utterly free him from his obligation to Tom.

He had a long conversation with his son, after which he wrote to Tom's father, and the end of all was that the two went to Oxford together.

Tom's father was only too glad to send his boy, of whom he was secretly proud,

though he always called him "that prodigal," and prophesied gloomily as to where and how Tom would soon bring his grey hairs. He had set aside a little property, he told Bentinck, for the purpose, but a friend had laughed at the idea of the sum carrying Tom through his college expenses. Mr. Bentinck, however, told him he might very safely rely on that sum carrying Tom through all necessary expenses, for as Tom would be George's chum he would of course be spared a thousand little excesses that go to swell college bills. In fact Bentinck arranged with Tom's father to take upon himself a good deal more than Tom ever knew till he found out at college by the experiences of others how many expenses he was free from.

Even then he never knew the full extent of the generosity of George, for it was as delicate as it was large.

Yet through weary years afterwards, long after these two were parted and estranged, there dawned in Tom's mind sudden revelations of his friend's goodness to him, and Tom would walk about the room with a light in his eye that made his wife wonder if he really had more feeling than he seemed to have, and really did at that moment experience some natural parental emotion at the fact of the baby having cut two new teeth in one night.

It was not that Bentinck enabled Tom to share in as many amusements as the richest student (who was in earnest over his studies) could desire, that made Tom look back as he did to his college days. Neither had these friends gone through any very remarkable adventures to bind them together.

The secret of Tom's devotion was, that he had found in Bentinck that which once found is never forgotten,—what scarcely one man in ten thousand does ever find. He had found a friend, in whose society he saw himself in the best as well as the truest light, in whose sight his worth had its highest value, his life its fullest importance. All that was true gold in him had in this man's handling so healthful a ring as to render Tom determined to make the best of life without trying to pass false metal of any kind at all.

The dream then was that Tom was to be ordained and ultimately presented to a living, of which Mr. Bentinck was patron, and which was in these days held by an elderly man in uncertain health.

One fine morning, however, poor Tom, with his usual changeable luck, found he had driven himself out of Oxford, out of George's friendship, out of Mr. Bentinck's good graces, and out of all his bright hopes, in a tandem.

What he did was felt by all who knew him, and most of all by himself, to be thoroughly inexcusable. He had plenty of driving with George and his set; and in fact it was his having been seen taking the reins for George and his companions that suggested to certain speculative individuals the trick they so successfully played on Tom.

Tom's disaster began one morning when he strolled out with a few fresh-men belonging to a set George had expressly warned him against. These being on their way to the livery stables, asked Tom to come with them for a drive.

Tom assented. He was introduced to the proprietor, an unnecessary formality, as he informed them, since he was already on intimate terms with him. Tom was then pressed to take the reins of a tandem pair. He protested, however, that he had never driven tandem. The party entreated and insisted; he was known to be such a swell hand with the reins, &c., they told him, and could do it so much better than any of themselves. So Tom was overruled, and all his companions praised his driving. When they came to a narrow bridge, Tom's head became giddy; he would have given up the reins, but they were already on it. He shut his eyes, and left the tandem to take its chance.

It was only when he heard by his companions' cheers that chance had favoured him, and brought them safe across, that he drew free breath again; but he afterwards used to declare, more bitterly than truly, it must be hoped, that he wished he had toppled the whole affair into the water.

His new friends now assured him he was a perfect Jehu, and Tom hardly wanted the

assurance to think so himself. He was, however, highly flattered, and went with the same party again and often till the drive became an institution. He had to acknowledge the kindness of the gentlemen by a breakfast now and then. George, though sorry to see him amongst the set, said nothing, and had no idea what a dupe Tom was being made till the vacation came round.

Then Tom went home, and his father entered fully into the subject of his expenses, and was bound to confess (apart from his usual amount of grumbling) that Tom had kept to his word of honour, which had been pledged to his father and Mr. Bentinck, to keep his debts within the sum agreed upon.

The next morning Tom's father received from the livery stable keeper a bill in Tom's name of ninety pounds.

Pale with rage, he placed it before Tom, who stared, started, and stared again, and repudiated it in strong language. He poured out passionately to his father the whole story of the tandem.

Old Bailey seeing how his son had from the first been made responsible for the affair by his formal introduction to the proprietor of the stables, and always being seen with the reins in his hands whenever the tandem was had, became only more furious. He told his son he had always half expected him to turn out a knave, but never a simpleton, and that he felt it almost worse to be disgraced by the latter than the former. But the truth was poor old Bailey did not believe in the simpleton, and was roused to the fiercest indignation by what he thought Tom's paltry excuse.

How slight now seemed to Tom his fever about "Hawk-nose" and the medal in comparison with his present confusion, shame, and wretchedness! Scarcely supportable to him were those hours in which he knew his father had gone off to see Mr. Bentinck, and to tell him he must remove Tom from the university, as he could no longer place dependence on his word, or allow Mr. Bentinck to depend on it.

It was no use now raving and showing signs of brain fever. Tom's misery had to

be borne in humble, bitter silence. He thought he could feel no keener pang than when a letter came from Conholt to inform him that the discovery of any communication whatever, between himself and George Bentinck, would result in Mr. Bentinck disinheriting and disowning his son for ever. The writer ended his letter by expressing a hope that Tom had at least enough honour left to prevent this from happening.

There had never been love lost between Tom and the elder Bentinck, and Tom ground his teeth with rage at the knowledge that George's father felt a certain relief in finding this excuse for dividing their paths.

But what overcame Tom more than all was a little note he received from George, a few lines written evidently before he had received Mr. Bentinck's commands concerning his further intimacy with Tom.

"Dear Tom," it ran, "the tandem business is settled. I had enough to manage it without mentioning it to *my father*. If there's trouble at home or anywhere about it, remember whatever happens I am, as ever, yours,

"GEORGE BENTINCK."

It was a cruel-kind little note, under the circumstances, to poor Tom. It kept the friendship alive and aching through many and many a year, when but for that note it might have died out. It was, too, so entirely unexpected. Surely George, of all people, had most cause for indignation and contempt. He was jealous, and Tom had risked his friendship, his father's trust, and his own honour for the pleasure of being with men George would not have spoken to. He was proud, and Tom had given him cause to be ashamed of his choice of his nearest friend. He had trusted Tom as himself, and Tom had deceived him. Yet for all this, his was the hand that had paid Tom's debt, and written him the first and only word of comfort.

By this time, of course, thought Tom, George knew that he must not answer it—that all was over between them.

Within a month of his exit from Oxford, Tom was placed as clerk in an office in the City, beginning with a salary of fifteen shillings per week.

George went back to college, and continued to win many honours. It was long, though, before the hump-backed ostler at the livery stables ceased pointing him out as "the gent as was done by Tandem Tom to the toon o' ninety pund."

For months, Tom could scarcely realise it was all over. The break had been so sudden, and was apparently so complete.

No words of hope or warning had there fallen for this poor David—no meeting and leave-taking by "the stone Ezel" was *he* permitted.

The parting was even without a grasp of the hand, or even a look to say the time *might* come when they should meet again.

CHAPTER IV.

IN his marriage, Tom had been as ambitious as in most of his speculations during those earlier years, and in this, as in other things, his luck had been varied, though, on the whole, he had much to be thankful for.

He had won a rich as well as a pretty woman; but his plans were somewhat deranged when he discovered that her fortune went from her in the event of her marriage with any but a certain gentleman, who apparently cared as little for her as she for him.

But even with this serious disappointment, the young couple, full of hope and confidence, married and kept the wolf from the door very bravely.

Tom's happiness in those days was darkened only by the news that George Bentinck was looked on as a ruined man. Not only had he, like Tom, lost the fortune of the lady he loved, but the lady herself also.

Tom thought he knew what George's love must be, and felt no surprise at hearing that his friend was utterly cast down, that his former delicacy of health had returned, and that he was falling passively, under his father's rule, into the docile, helpless meekness of a child.

"Old Bentinck," said Tom's informant, "and the housekeeper, have everything their own way. Poor George takes no interest in anything but the organ and his dogs. In

fact, he's a thousand times more melancholy and listless than before you came to school and roused him."

The person who gave Tom occasionally some news of George was Dr. Sadler, a rising young physician, who was now and then summoned to feel the slow pulses at Conholt Park, and who evidently bore neither of his friends any malice about "the Fairy Queen." He was then engaged to a relation of Tom's, and he saw him often. But when he married and went to London, and became a great man, Tom heard scarcely any more news of Conholt, though sometimes, but very rarely, the Bentincks came up to town to consult Dr. Sadler.

Tom's wife had cause to know how terribly her sex had fallen in his estimation, by the unknown lady's rejection, or jilting, or whatever it was by which George had so suffered. He spoke henceforth of "women" as he spoke of wickedness, with bitter emphasis.

Tom hoped, when he saw the announcement of the elder Bentinck's death, George might feel freer to begin some more healthy and useful plan of life. But instead of this, his loss only seemed to prostrate him greatly, and to make him withdraw himself from the world more than ever.

And thus it was the real tide of life had left these two after sweeping them so widely asunder. After wrecking Jonathan on the rocks of love, it had knocked and tossed poor David about till he was transformed into this testy little City clerk with £250 per year, ten children, and that imaginary wolf, to which he was so fond of referring, at the door.

Even his friend's fate, sad as it was, had some sublimity in Tom's eyes when compared with the weary, commonplace drudgery of his own. There was tragedy and poetry in Bentinck's, and Tom would have thought it presumption to pity him; yet many surmises were yearningly made by him over his pipe at night, as to how that lonely bachelor-life was being passed. He did not wish for a moment that Bentinck should descend from a sorrow so lofty to commonplace comfort; but he earnestly longed to hear of

his rising to a happiness even more exalted than his grief.

About once in five years, some little classical work bearing the beloved name as author appeared. Tom would worry the publisher days before it was to be had, and when he procured it at last, sit up at night reading it, and go to business in the morning with a white face and blinking eyes. After he had finished the book, he would sit down and cover about half-a-dozen sheets of note-paper with heartfelt praise, that showed how every sentence of the work had been read, and every [skilful touch appreciated. Then he would lock the letter in his desk. As these "few and far between" productions of Bentinck's were reviewed by the chief papers with very unusual laudation, their advent was hailed most proudly and joyfully by Tom; David, hearing of the royal archer's victories, could scarcely have exulted in his heart more truly.

For many a week would Tom carry the treasured volume about with him and read it over and over in the train. A proud man he was if he happened to get into conversation about it, when he would, as a matter of course, allude to the reviews, which he was sure to have "accidentally" in his pocket.

No sign of resentment at Bentinck's neglect of him was Tom ever known to show. He had full faith in his readiness to help him should he ever let him know how he might do so.

As this faith was not kept to himself, but boasted of very freely, yet was never put to the proof in any family emergency, the mere mention of Bentinck's name and Bentinck's goodness and "influence," and princely generosity, awakened smiles of weary incredulity on the faces of Tom's little family circle. Tom knew this, and felt it keenly, but still did fierce and often foolish battle for the honoured name, the questioned friendship.

But the blow had come at last that had turned Tom's nature and made so sour a tyrant of him.

One day, about twenty years after Tom's marriage, David and Jonathan chanced to meet, and when they took leave of each

other there was a silent but very firm opinion on both sides that no more meetings were desirable.

CHAPTER V.

TOM was waiting on the platform for the Windsor train by which he returned home every afternoon. He had his little basket of fish in one hand and Bentinck's last work, a commentary on *Ars Poetica*, in the other.

As he was walking up and down with the book open and very close to his eyes—for Tom was near-sighted—it is not to be wondered at that another person coming hastily along and looking another way should run against him, knock his fish-basket out of his hand and his book into his eyes.

But it was wonderful indeed to Tom when, after having regained his fish and informed his supposed assailant he would "hear of this again," he should see before him, offering profuse and earnest apologies, the author of the book whose fascinating pages had so absorbed him.

Some odd impulse caused Tom to slip the book hurriedly into his pocket before Bentinck saw it. Perhaps his pride demanded that Bentinck should not see how his thoughts were with him till Tom knew more of his feeling.

As to Bentinck, he had an impression of a dusty little City man fussily picking up fish and putting himself to rights. He could not, however, fail to recognise in this person his friend of early days.

But how different he seemed from the blunt, upright, fearless-eyed Tom of Runnymede House!

Poor Tom's impression of his old chum was as favourable as Bentinck's was dubious. He was in delightfully cool looking fresh attire, having just returned from seeing some ladies to the grand horticultural show. How tall and commanding he was to what even Tom had thought him! How well his years became him! Time, in Tom Bailey's opinion, had only been the finishing sculptor to that fine face. Though the eyes as yet certainly looked but coldly on Tom, they were so clear, so full of mental health, he could but feel his

own mind refreshed in their light just as it used to be so long ago.

Tom could not choose whether he should or should not avow his recognition of Bentinck. He had done so in his first gaze. Bentinck had no choice either, so looked at.

He held out his hand with more politeness than fervour, and said with far more surprise than pleasure—

"Bailey! so it is. I should really scarcely have recognised you."

Tom was far too much excited by the mere fact that they had met—that they were once again shaking hands—to believe in any of the fears that Bentinck's coolness might have brought before him.

Of course it would be only too easy to give way to doubts and reserve, and so bring on another, perhaps an endless separation.

Tom felt he could not afford this. The temptation to trust was too great.

He hung on Bentinck's not very yielding arm, and looked up at him so much as in old times that Bentinck could have half believed he was about to propose going to the livery stables, or one of their old haunts.

"George," said Bailey, "here's my train, do come home with me. Don't let me lose sight of you already, come home with me and see them all—my wife and the children. There, take your place in here. I'll go and get your ticket. Don't refuse me, Bentinck."

The porters stared at Tom in astonishment. Was this bounding, hopping little gentleman the sour, quarrelsome passenger so well known?

As he came up to the telegraph office a thought Tom then believed to be a happy one (but which proved quite otherwise) occurred to him.

He would send a message to his wife to let her know who was coming, so that she might prepare a little for the reception of so honoured a guest.

He certainly would never have done so could he have guessed the panic it would cause at home.

Even before opening the message Mrs. Bailey had to be revived with smelling salts and vinegar.

She was incessantly prophesying that Tom would go off in a fit of apoplexy, and the first sight of the telegram almost convinced her her great fear had come to pass.

When the true statement of things was made known to her, she tried to rise to the occasion, but vague and bewildering ideas as to what Tom would expect deprived her brain of its usual coolness and her hand of its usual skill and quickness.

The girls too were in despair about satisfying Tom. They had just unpicked their best dresses for the purpose of turning them, and had no others they considered fit for the occasion. When they suggested clean prints to their mother, she shook her head, and said she feared papa would not think them at all proper. She thought their pink silk evening dresses more suitable on such a day, and told them their father had spoken of the ladies at Conholt Park always wearing low-necked dresses at dinner.

The girls declared they could not bear the idea of appearing in daylight in the faded silks which had done them good service for three years, and were no longer of as fresh a tint as could be desired, even by gaslight. They served very well for the theatre, for which young Aubrey Bailey sometimes brought the girls orders, or with white over them, for the annual ball at Miss Pinkney's academy across the Common.

Mrs. Bailey, however, turned so depressed and dubious an eye on the pretty, clean cottons of which her daughters were in favour, that after a consultation on the stairs with their arms laden with the subjects of discussion, they dutifully agreed, as it was a choice of evils, to "make mamma's mind easy," and decide on wearing the old pink silks.

Mrs. Bailey felt their good nature so much that she could not have heart to tell them, when they came down dressed, that she feared she had given unwise counsel. But she was obliged to own to herself they looked uncomfortable and unnatural, and not half so pretty as usual. Neither did the girls themselves like to own they fully felt all this.

The poor children in the nursery underwent such combing and brushing and dress-

ing, and restriction, as caused them to congratulate themselves heartily on the fact that "papa" did not often bring a friend home.

As for the cook, she had such injunctions laid on her about dinner, that she declared she would not stay to risk being so put about and "took off her head, again, not if it was the pope o' Rome a comin' on a helephant. Telegrams indeed! Much master must know of cooking a dinner, if he thinks as one was ever improved by a telegram, as

is just the thing to be sure to make the fire contrary, the meat burn, and everythink go wrong."

The fact that Bentinck had seen Tom Bailey rush into the telegraph office made him look without surprise and with a subdued smile on the prim order and unmistakable air of expectation of his friend's household.

Mrs. Bailey was in the drawing-room—flushed and nervous—when they arrived.

Page 12.

Doubtless she would have received her guest with her usual gentle ease and cordiality if Tom had not frightened her by frowning savagely at her new cap.

Even this discouragement did not prevent her feeling for Tom's much-talked-of friend, giving her confidence enough to throw off her nervousness, and speak very agreeably of the great pleasure it was to her to meet at last one so many years known all *but* personally.

In this little speech she showed so much simple grace and amiability that Tom could but feel proud of her.

Bentinck looked at her with cold acknowledgment. There was, Tom was certain, approval in his eyes, if not admiration, but of a cold and distant kind.

He looked round at the simply-furnished pretty room with evident liking, till his eyes fell on the telegram that had been dropped accidentally at the end of the piano, and then

he bit his lip as if to prevent a sarcastic smile. Tom saw the change come in his face, but did not see what had caused it.

Tom had two sons bearing Bentinck's names. One, a boy of seven years, was called by his first name, George, and Tom's eldest boy was called Aubrey.

This young man, a medical student, arrived at home without having had the benefit of the telegram, yet he, perhaps, was just the person who might have been the better for a little preparation for meeting so respected a visitor.

He came into the hall while the drawing-room door was open, and in his inquiries about the progress of dinner, and his remarks on the dresses of his sisters (who were then just coming down-stairs), made such free use of the name of the power of evil, that when Tom introduced the young gentleman to his friend as the bearer of his old family name, Bentinck did not appear at all enraptured.

Then the girls came in, and Tom thought they at all events must set things right, for in his opinion they were indeed no ordinary girls.

Jenny, the eldest, was the acknowledged beauty of Wick Common. She was nineteen, and had a wonderfully brilliant complexion—such a glow of scarlet lips, and damask cheeks, and forehead, and chin, and throat white as pear-blossom. Her hair was dark brown, and she had eyes like her mother's—brown and tender—but not half so sweet or peace-loving, for Jenny's were restless and over-brilliant, and ever athirst for the admiration they had fed on from childhood. She had a dainty, perfect little nose, the least bit Roman, and the imperious manner that some people say always accompanies it. She was quick-tempered, but not peevish or self-doubting. On the contrary, one could see what excellent terms she was on with herself, by the carriage of her pretty little head, and by her light free step. In appearance she was certainly perfect—on a small scale.

She made it a virtue to be frank about her beauty, and never to be so uncandid as to question the fact of its existence. She laid claim to no quality but beauty and

generosity. As long as these were unquestioned, she had good words, pleasant smiles, and kindly acts for every one, and especially to girls less favoured by nature than herself. In conversation Jenny was at a disadvantage, because the confidence she had in her charms of person and manner, made her think it quite unnecessary to consider what she was going to say—as of course she knew “plain people must to make themselves endurable at all.” That which she intended for wit seemed often only unkind or rude to her listeners. She thought she might say whatever occurred to her, and if it was silly her brightness could give it some meaning—if acid, her smile would sweeten it—if hurtful, her glance could cure the wound as soon as it was made. In her own family all this was perfectly true, and she had not the least idea others saw her in a very different light.

Tom called her “Sweetbriar” in his amiable moods, and as yet it was not an unfit name, for her bloom and sweetness were enough to hide a multitude of thorns. As yet, too, they were but young thorns, and though sharp almost harmless; but her mother often wondered anxiously how it would be with herself and others when they grew strong and hurtful, and the bloom and odour of youth should leave them unshielded.

Tom generally considered her irresistible, though he scolded her more than any one, frightened away her admirers, intercepted her letters, grumbled at her love of dress, and behaved, Jenny said, “like every tyrant of a father in the old plays and novels, who happened to have a daughter not blessed with ugliness.”

This evening, however, Tom was obliged to own to himself Jenny did not appear just like the daughter he would most care to introduce to his old friend. She seemed too gaily dressed for the sober hue of the well-worn carpet and furniture of their quaint little drawing-room. Her bloom was unusually high, her fairy-like arrogance amounted to coarseness, her frankness of manner to vulgarity, her air of self-satisfaction to childish vanity.

Ella was but little over fifteen, and was growing so rapidly that she was already

taller than Jenny, whose dainty symmetry of figure put Ella to much disadvantage beside her, making her look an awkward, overgrown girl. She was rather listless in her manner and movements, while Jenny was all vivacity. Yet it was Ella who was the right hand of her mother, and a really hard young worker, besides being the general settler of difficulties, and the practical peace-maker of the family. Her brother Aubrey, who was something of an exquisite, used to tease her about her way of stalking or bolting when she walked, like a long-legged boy, and told her she had a way of looking when she rose from her chair, as if she was utterly at a loss to know which way to go, north, east, south, or west.

If Tom was painfully aware of her defects, this evening he was not, even on Bentinck's account, inclined to be severe in his thoughts of them. He knew that her look of hesitation as to which direction to move in, had partly come from the fact of her never being sure where she might be called to settle some difficulty or stop some gathering storm. If there was a battle in the nursery, piteous cries for "Ella" brought her leaping up the stairs two at a step. If loud voices rose from the kitchen, it was Miss Ella cook would summon and request to "inform her mamma that either she would leave this instant, or Sarah Hann must."

If Tom himself was what his servants called "carryin' on," no one thought of doing anything till Ella was consulted, and she had a quiet, business-like way of slipping herself in between combatants, as if she had been born for the purpose.

Far was it from Tom to be ashamed of the little awkwardnesses and nervousness that her life of constant anxiety had stamped on Ella. Unkind would he have thought it to comment as Ella's brother often did on the rather generous size of the mouth which was the general receptacle for door-pinched fingers, besides having to kiss away hurts and tears from all little tumblers up or down stairs.

Of course Mr. Bentinck knew nothing of all this, and saw only a light-haired lanky girl with a large mouth and very earnest blue

eyes that seemed full of thought of every one but herself.

When the two girls entered Tom looked sharply at Mrs. Bailey, who, though she tried to assure him by a placid smile that she thought they looked remarkably well, knew he was making her responsible for Jenny having grown too stout and Ella too tall for the pink silk dresses.

Each, however, being earnestly desirous of pleasing a guest so honoured, could but find favour in Tom's eyes, which watched, as David's might have watched when first his Jonathan saw Absalom. And in spite of all defects in the way of dress, surely Tom thought Bentinck must perceive at a glance these were the best as well as the most charming girls in the world.

But Mr. Bentinck was far more reserved with them than he had been with their mother. He remarked that Ella had her father's eyes, but that he should not have guessed Jenny to be in any way related to him. Tom took it that he considered her far too beautiful, and was flattered on his daughter's account, if not on his own. Jenny understood the remark in the same way, and was offended on her father's account.

After dinner, which passed off stiffly, the younger children were introduced to Bentinck. Mrs. Bailey had often declared that each of them would make a painter's fortune, and regretted the wealth that was lost to art through none volunteering to undertake the task. They really were all very pretty children with the exception of George, who was overfed and conceited.

When this young gentleman was introduced to Bentinck as his other namesake, he shocked his father and mother by saying nurse had told him perhaps the gentleman would leave him a lot of money, and further intimated a strong desire that he would leave it now, as he wished to go out and buy some apples.

To the surprise of all, this forward and mercenary urchin won by this speech the only kind words Bentinck had yet uttered since he came into the house.

"You are a right honest little manikin, and we begin our acquaintance with sincerity at least," said he, taking the child on his knee

and slipping, in spite of Tom's remonstrances, some gold pieces into his knicker-bocker pocket.

While master George Bailey showed his wealth, not by taking it out, but only allowing eager eyes to approach the opening of his pocket, and so see what they could of the wealth within, Jenny began a song.

Her singing was like herself, sweet, bright, and trifling. But Ella was a marvellous accompanist. The poor child's time for musical practice was so hard to spare from her other duties that she had been very much in earnest in those hours allowed her.

She played much that evening at her father's wish, for he saw that Mr. Bentinck noticed with surprise her extraordinary skill. But it drew from him nothing but very commonplace and cold compliments.

Bentinck looked on the efforts of all the family to please him in much the same way that he had regarded Tom's advance at the railway station, with the half-startled air of a shy recluse who appeared hardly able to believe in the sudden demonstration of esteem for which he apparently saw no sufficient reasons.

His extreme gentleness of manner, of which Tom had said so much, only made his reserve appear the more chilly. He was indeed most amiably distant, gallingly polite.

Tom Bailey, knowing his natural shyness, and imagining it had not been lessened by the secluded life he had led, thought that perhaps a cigar by the dining-room fire, for the evening had turned dull and chilly, might enliven him.

Bentinck agreed to the proposal, he was far too polite to think of opposing it, and soon he and Aubrey and Tom were sitting gazing at the freshly kindled, struggling blaze, trying hard to bring about the conviviality which the occasion seemed to require.

Bentinck, however, made a mere pretence of smoking, and when taxed with doing so by Tom, owned he had almost given up the habit. His favourite beverage, that only Tom could mix for him to his taste in days gone by, remained on the mantelpiece hardly touched.

Tom began to speak of old times; but

nothing that he touched on could inspire that imperturbable white face with either pleasure or friendliness.

The first school incident to which Tom referred was, it seemed, utterly forgotten by Bentinck. The contest about Spenser's "Fairy Queen" was remembered apparently only because one concerned in it had become a great physician, and not at all from its having marked the beginning of Tom Bailey's and George Bentinck's friendship.

Other things that were as epochs in school and college life were but ever so faintly acknowledged. As Tom gave him no choice about looking back into the past, he did look back, but apparently with the deepest reluctance, saying, in answer to Tom's allusions to all kinds of pleasant memories, "Yes, yes," "Oh, yes," "Oh, I remember," as one led against his will into a churchyard acknowledges familiar names on the tombstones and longs to leave them.

It was the same with nearly all the adventures of Auld lang syne that Tom had so often assured his son Bentinck would never forget to the day of his death.

To have those proud assertions thus coldly disproved in his boy's presence was hard indeed. But when the more important events of their lives were touched on by Tom, even then to see the long thin hand passed across and across the eyes as to assist their retrospective vision—this was harder still.

Young Aubrey, deeply pitying his father in this hour of cruel disappointment and heart-humiliation, made matters worse by trying to mend them in his own way.

"By Jove, sir!" he exclaimed, edging in his knees closer to the fire, and holding out his glass to his father with an air of extreme good fellowship, "that *was* plucky for you and the governor to go in for, cutting out the show-boy and getting the Lucian medal after all."

"Sir?" said Mr. Bentinck, looking at him as at one who had addressed him in an unknown tongue.

Tom threw the end of his cigar into the fire, and rose proposing they should return to the drawing-room.

Mrs. Bailey and her daughters knew by his face something of how the fireside smoke had resulted, and began to dread the consequences of Bentinck's leaving without things taking a more genial turn.

They therefore exerted themselves to their utmost power to try and melt this human iceberg for Tom's sake.

While the girls were endeavouring to amuse him with their playing or singing, Mrs. Bailey related to him numerous anecdotes, illustrative of Tom's veneration and friendship for him.

She even did a violence to her own pride, by trying to move him by the recital of some of her husband's trials, as to ways and means, his business hopes and disappointments.

She thought it must be her own fancy, but it really seemed to her that Mr. Bentinck's cold grey eyes grew colder, and even very nearly sarcastic, as she mentioned with an almost merry patience and resignation the pecuniary troubles she and Tom had struggled through since their marriage. It was a passing, and, she thought, an absurd idea; but none the less did it cause her to relapse into silence on the subject of Tom's misfortunes.

Once in the course of the evening, Ella had to rush across the room in order to prevent her little brother George from upsetting the inkstand on the table, 'tust where Mr. Bentinck's arm in his light coat-sleeve rested.

Ella was of course obliged to explain to their visitor the cause of her sudden seizure of the culprit. Always generous in the cause of the little ones, she could not resist following up her explanation by a panegyric on the young gentleman's character, apart from his one little failing, which was always getting into mischief.

Mr. Bentinck had smiled at first; but her ardent praise of his little namesake had soon made him regard even her innocent face with a long, half-shocked scrutiny that puzzled and chilled her.

Jenny not only tried her best, but unfortunately went beyond her best in her efforts to please.

The later the hour, and the colder the guest, and the more troubled Tom's brow,

the more zealously did all strive to render the visit less disappointing and gloomy.

Poor Jenny positively flirted with Bentinck, that is, as her brother said, so far as flirting was possible, being all on one side.

Tom saw Bentinck's cool, half-ironical glances at his daughter, and grew quietly furious with her.

But Jenny went on exerting all her powers of fascination, thinking, doubtless, it would be odd, indeed, if one who had her admirers, on all sides of the Common, could not captivate papa's elderly friend.

At last it was with a strange mixture of relief and dread, they saw their guest rise, and heard him say that as he was staying in town with a friend he must not delay returning, especially, he added, with a cold smile at Tom, as his absence had been so sudden and unexpected.

Tom accompanied Mr. Bentinck to the station. On their way no allusion whatever was made to Tom's family, or, indeed, any personal matters.

They merely talked of the Common being somewhat overcrowded with trees, of the annual overflow of the river, of the want of water-carts, the necessity for a conveyance to and from the station.

No matter of deeper or nearer interest had been spoken of by either, by the time that Mr. Bentinck was seated in a carriage containing no other passenger, while Tom stood with his hand on the door.

The last minute had come, but even in that last minute, while the porters went lazily slamming the doors, for they do everything leisurely and lazily at Wick Common Station, even then, there *was* just time for a word or two as to meeting again, or communicating by letter, or something that might change the whole aspect of the day, the visit and the parting.

Bentinck cleared his throat, and Tom thought something was coming to make the evening gloom less unendurable.

"We are sadly needing a little rain," he said.

"We are indeed," answered Tom, feeling he hardly cared whether it ever rained at all, or rained for ever.

The train was beginning to move, but Tom still clung to it, listening with all his might.

Bentinck leaned forward.

"But I don't suppose we shall get it till this wind changes," he said.

"I suppose not," replied Tom.

"Good night," shouted Bentinck, waving his hand as the train moved so as to compel Tom to drop.

"Good night," cried Tom.

He went his weary way across the Common with so listless and fagged an air one might have taken him for a traveller, who, after journeying in hopes of reaching a certain refreshing spring, had found it dry, and had to continue his way thirsty and hopeless. Or he was like a merchant, who, having long kept secretly some stone he thought of marvellous price, had had it tested, and proved of no worth to him.

As he looked round at the houses whose inmates he knew so well, even his neighbours' foibles stood out in his mind and added to the ugliness of life.

Must he set out to business morning after morning accompanied to the station by this or that familiar face, hear the same cut and dry oft-told tales—bear with the hobbies of all without that secret consolation he used to possess—of being able to see one man appear noble and stronger the more he saw the faults and weaknesses of others?

CHAPTER VI.

MRS. BAILEY dreaded Tom's return. All the faces at home were grave on his account during that half-hour he was away. No one cared for his or her disappointment in Bentinck. All annoyance was for Tom's sake.

Had anything happened to bring Mr. Bentinck back with Tom, he might have formed a very different opinion from what he took away with him of the group gathered in unfeigned sympathy round Mrs. Bailey, who was in the rocking-chair, endeavouring by showers of kisses and assurances unintelligible to any but their two selves to make up to baby for their long separation.

The girls having hastened to change those odious pink dresses for the print dressing-gown,

looked like the prettiest figures from one of Watteau's prettiest pictures.

Jenny, in her lilac-hued wrap, had thrown herself on the floor by her mother, on whose knees her head rested by her baby sister. Jenny's face was natural enough now, all flushed and bright with tender indignation for her father's sake.

Ella sat in Tom's big arm-chair opposite, and was engaged in brushing out her three-years'-old sister's hair.

Ella's own fair tresses were let down, and their pretty shade and her pale blue-striped gown became her well, as did also the simple childish pity that filled her big sleepy eyes.

Young Aubrey stood leaning his arm on the mantelpiece, looking subdued and cautious, but finding no epithet strong enough to express his anger against Bentinck. The ghost in *Hamlet* was his favourite comparison for him.

But all started and broke up the little conclave at that long angry knock.

Ella must rush up-stairs with her little sister in her arms, while Jenny hid all signs of the room having been turned into an impromptu nursery. Aubrey tossed down the extra glass of wine he had just poured out to soothe his irritated feelings. Mrs. Bailey summoned the nurse, and gave up her reluctant charge that she might herself run to the door.

The instant she saw Tom's face she knew he had taken Bentinck's coldness even more seriously than she had feared he would take it.

There was a bitter disbelief in all the world expressed in the slight touch by which he pushed from him that tender heart that met him at the door.

It had been a very slight touch, one that might have been accidental, only Mrs. Bailey knew it was not accidental, and she stood with her hand pressed to the spot where his first repelling touch had been as if it hurt her very cruelly.

Tom hung up his hat in the hall and went into the dining-room, where Jenny met him with his slippers.

Tom took no notice of her, but sat down

in his arm-chair and reached his pipe from the mantelpiece.

Jenny, warned by a glance from her mother, put the slippers gently down at his feet, and offering the meekest of little mouths for his kiss, said softly,—

"Good-night, papa."

Tom drew his head back and looked at her almost fiercely.

"Jane," he said, "I wish you could learn to dress yourself more as a lady, and to behave yourself more like a modest woman."

"Papa!"

Jenny turned pale, and then red, and the tears rushed to her eyes.

The Sweet-briar was all deep glow and rain-drops, and Mrs. Bailey knew the thorns would appear next. She therefore put her arms round her trembling little daughter, and led her gently and firmly to the door, while Tom was engaged in filling his pipe, and no doubt preparing some still more bitter speech.

Ella was spared rebuke because she gave her father no time for it, but kissed his troubled brow in her usual earnest hearty way that would admit of no repulse.

Aubrey made a bold attempt at comforting his father, taking his idea from a few words dropped by Mrs. Bailey in her efforts at consolation.

"It must be fearfully sad, Tom," she began, after a long silence, which only Tom's sullen "puff puff" broke, "to see how Mr. Bentinck's troubles have altered him. One never can guess the effects of those early disappointments."

The remark was more cunning than it may appear, as it might perhaps touch Tom by the reminder of how Mrs. Bailey herself had had to disappoint some one for Tom's sake, as well as hint that Bentinck's change was in his head rather than in his friendship.

This suggested to Aubrey the idea of persuading his father that failing powers of mind, and not unfaithfulness of heart, had caused the change that surprised them.

"What a break down, sir, since you knew him!" said Aubrey. He chose to call Tom "sir," rather than make use of so old-fashioned a designation as "father."

"What?" said Tom.

"No memory left at all, sir," explained Aubrey, adopting a professional air—"clear case of cerebral affection—tissues of the brain failing rapidly."

This was too much. Could David sit and hear quietly of Jonathan's bow turning aside so early in life's battle?

Tom was silent a moment while he scanned his son with an angry light in his eye that Mrs. Bailey did not like the look of.

But she need not have feared. Tom's anger this time was not ignoble or dangerous.

He felt in his pocket, and drew out Bentinck's "Ars Poetica."

Putting it on the table, and placing his hand upon it, he said, turning with a savage aspect towards his son, but speaking not only in anger, but also with grief and with tender pride,—

"My boy, your poor brain will have to improve more than a little before you can ever hope to see the power and precision of memory, the wealth of knowledge, the glorious purity and vigour of the mind, that has just produced such a work as this. May the world see it as I do! May God bless him and make him great and happy yet!"

"Dear Tom," said his wife, taking the now bowed down head in her hands, "how good you are! But forgive Aubrey, he meant no harm."

"No, sir, beg pardon, I'm sure," mumbled Aubrey, inwardly consigning to eternal perdition all Bentinck's race.

"But as for us," said Tom, erecting a tiger-like head with sudden firmness, "let his name never be mentioned again in this house. I've done with him. No, no, Ada, don't speak to me; my love—that will do, Aubrey, leave me alone, good night."

Unfortunately this resolve did not in its carrying out prove of much consolation to Tom Bailey for the loss he had sustained.

On the contrary, the little clerk's mind was much darkened and confused by that day's experience; so much so, that he began to persuade himself there was no such thing as natural affection in the world, and

that his wife and children only loved him because they depended upon him. His own affection for them, though it rather gained than lost strength, became a thorny sort of thing that hurt them and himself, however it was touched. The poor fellow had lost the last bit of belief in himself as anything better than a mere office drudge, a family

wolf-scarer; and after this he descended very low indeed in his own estimation. At every hurtful exhibition of his terrible temper he felt he had gone a step lower. At last he seemed to himself so contemptible, that he thought it quite necessary to become a bitter little tyrant to keep up at all the family's respect for him.

Page 13.

Not long after Bentinck's visit, Tom Bailey's eldest daughter had left her home.

When Ella went up to her room on the night Tom had rebuked Jenny so severely, she found her standing by the open window, pale, cold, and too sorely stung to bear sympathy or to take comfort.

Ella, who always went to her rest tired with nursing and running about, had slept her first sleep before she became aware her sister was sitting up and sobbing bitterly. "Jenny, darling," she said, rising and rubbing her sleepy eyes, "what is the matter? And what letters are those?"

Jenny did not answer, but turned away and thrust some papers under her pillow as she lay down.

Ella was still listening, thinking the while how unkind she was to be feeling so sleepy and stupid when her sister was in such trouble, when Jenny said some words she did not understand then, but Ella often, long afterwards, wept at her own stupidity in not guessing in time their meaning.

"Dress like a lady!" said Jenny in a bitter undertone. "Very well, I know how that may be. Act as a woman! I *will*, and he shall soon see that I *can* too."

Ella only discovered the real meaning of these words two months later, when her sister went off with and was married to a man they all knew and deeply disliked.

Frivolous, idle, and imperious as she was, Tom missed his "Sweetbriar" from the home bouquet a long, long time, and found the thorn she had left behind with him very rankling.

But in three or four years Ella, like a soft, slowly-opening rose, began to fill up the gap, and in her increasing sweetness the wild fragrance of the lost one grew fainter.

Ella was now nineteen, and, in Tom's idea at least, a picture of grace and bloom.

She was fair and had eyes as blue as Tom's; in fact she was astonishingly like him in many things. They reminded one of the same note of music produced first on a cracked brass trumpet and then by a silver bell. Tom was short and looked shorter, while Ella, though scarcely of middle height, had a slim elegance that made one wish her neither taller nor shorter. Family troubles had not told on her appearance in any way but one, which was that every movement and expression had a look of earnestness about it. One could see life was a matter of business to her.

Ella had said that when her turn came to be engaged, she would never marry till her father's consent was won, however long she waited. Ella's turn *had* come: she *was* in effect engaged.

In this case the lovers would not allow the poor mother to go through one of those awful night ordeals, for the purpose of "breaking it" to Tom.

There was a tacit understanding that they were to wait at least a year and keep the matter secret from Tom till Ella's suitor should be in a position to marry.

It should perhaps be mentioned as some little excuse for the cruelty with which Tom afterwards treated his favourite daughter, that he could not be supposed to know what he did, or how much time and how many opportunities there had been for the strengthening of those ties he was so determined to break.

Tom had long had his own ideas as to Ella's increasing loveliness, but he half-doubted his own judgment on the subject of feminine beauty since Bentinck's humiliating visit.

It was not, then, until Tom saw through other eyes as well as his own that he became thoroughly aware of what his daughter really was.

This "seeing" happened one July afternoon when he came home an hour earlier than he was expected.

It took place in a spot that had already been the scene of innumerable disappointments to Tom, that is—his garden.

CHAPTER VII.

BUSINESS that day had been dry and irksome, the heat in London almost unendurable, and, as Tom fancied, had affected everybody's temper with the single exception, perhaps, of his own.

Coming out of the little station, the Common looked delightfully cool. The chestnut trees were at their thickest, the limes in bloom and filling the air with fragrance. There was altogether a peacefulness about the place that made Tom Bailey quicken his weary feet somewhat, and press on more eagerly than usual towards that great bower of a house the old blinds of which, even in this stillness, found air from the river at the back, or something to flap themselves in, and seemed to Tom to be beckoning him on cheerily.

He had not yet ceased to indulge in pleasant thoughts if he had in words, and it certainly came into his mind with pleasure that so unexpected early a return would be a most welcome surprise.

He pictured, he could not help picturing, in his own mind the state of afternoon weariness in which he should find them all at home.

His wife, poor woman, he thought, would probably be wearied out by the extra duties devolving on her through the nursemaid having to assist the cook in her Saturday high-pressure of work.

As he imagined the good mother lying pale and worn on the old sofa in the back parlour, Tom was moved to the extraordinary extravagance of purchasing one of the six-penny bouquets, so many of which were thrust into his face as he walked across the Common, and his heart was quite in a flutter as he thought of the pleasure that would come into her soft brown eyes at the unusual attention.

Then Ella, poor girl, Tom thought, would of course be minding the children, keeping them quiet while her mother slept, and most probably had the usual Saturday pyramid of socks and stockings to mend on the nursery table before her.

"Poor, poor child!" said Tom to himself, and he selected from his wife's bouquet the best rose he could find there with the intention of presenting it to Ella with a pretty quotation that had just come into his head.

His generous impulses gained on him as the distance between himself and home lessened, and when he arrived on his own side of the Common he was laden with two pottles of strawberries for the children.

Just as he came in front of the house Tom, in his unwonted fit of considerateness, remembered his knock would perhaps put Mrs. Bailey in a fright, making her think of some formal visitor.

No, Tom thought, he would not knock. He had a wish to come upon them with his little gifts quite suddenly and surprisingly.

He had a key to the garden door round by the river, where he could let himself quietly in through the rustic summer-house, and glide up the garden, which was sure to be deserted this busy Saturday afternoon, and enter the house before any one could know he had even left his office.

So he went down the little lane leading to the river and the back of River Terrace,

and had soon let himself in at the summer-house which formed the back entrance to his garden.

He was just about to emerge from the arbour into the garden when he heard sounds that made him pause and peep in surprise through the curtain of tangled woodbine and clematis that shaded the entrance, instead of pushing it aside as he had intended.

At that first peep Tom Bailey almost believed he must have let himself into the wrong garden.

But he soon recognised too many signs of his own failures to be in any doubt. Even straight before him was the weeping tree that never would weep, though he had paid an absurd price for its being warranted to do so, but there it was as it had been from the first, sticking up in the stiffest manner in all directions.

Yes, Tom was obliged to own to himself it was certainly his garden and no other, and that the scene he saw before him was certainly taking place there on his own familiar lawn.

There was nothing going on there to shock an ordinary man, but it was undoubtedly trying to a person of Tom's peculiar temperament, after being moved to bring home flowers for his weary wife and daughter, and fruit for his little children, to find his generous attentions already anticipated by another man.

Tom took not long to grow furious over his own waste of pity, thought, and money as he looked at his wife seated in a rocking-chair, her face all smiles and admiration as it emerged now and then from behind a huge bouquet of roses—such roses as made Tom grip his own poor sixpennyworth vindictively.

The children, in the freshest of frocks, their smartest sashes, and their hair glimmering like floss silk in the sunshine, were sitting on the grass devouring strawberries, which were being distributed very freely by a young gentleman of clerical appearance reclining in their midst.

In spite of Mrs. Bailey's half-serious, half-laughing protestations that they had all eaten too many, he still kept dealing out lazily fresh supplies on every side.

Who in the world, wondered Tom, could this interloper be? What business could he possibly have to be lounging on Tom's lawn, and making himself so very much at home?

Had this occurred in Jenny's time, Tom would not have wondered, for somehow he was in those days constantly finding some utter stranger to himself on the best of terms with his family.

But it was different now, and so who *could* this be? Mrs. Bailey actually called him by his Christian name too! "Edmund," she called him, and Tom thought he never disliked a name so much as that same Edmund.

"No, no, Edmund," she protested, "not one more for Maudie, if you please. And, Bertie, put those down, sir; you shall not have one more. Now, Edmund, don't make him disobey me."

And who, thought Tom, with a fierce fit of suspicion, was this Edmund looking at so adoringly?

Casting his perplexed and prophetic eyes in the direction of the young man's glances, Tom saw, as he had expected, his daughter Ella.

She wore a white morning dress, and had a red rose all aglow in her bodice. There was nothing particular in the rose itself, but the way in which Ella guarded and shielded it from the touch of the children when they brought her strawberries, the jealous care she took of it, the shy but tender look she threw back at the lord of the strawberry feast when the same rose had been in peril and came out of it safely—all this made Tom know but too well whose gift it was.

And as for poor Tom's pretty poetical comparison, how much subtler and sweeter a compliment must have accompanied *that* gift to have brought such lovely consciousness to Ella's face! How strong a beam of flattery's sun must have fallen on Tom's own household rose to have caused such sudden rich unfolding of beauties he had never seen in it before!

He had hitherto thought Ella's blue eyes only simple and earnest, and it was not a pleasing change to see them now so full of what Tom thought unnecessary brightness and shyness.

Yet all her shyness did not prevent a certain air of sweet girlish queenliness. Her young head seemed to know well how to wear its new crown of love with modest pride.

Only now and then her heart panted suddenly with childish fear, which Tom might have known, had he cared to be merciful, was partly on his account—that is, of so great a thing being kept secret from him.

Tom Bailey, however, could or would see nothing in all this lively scene but cruel deception and perfidy, and approaching mutiny.

He could not trust himself, in such a state of mind, to appear in their midst. No; he would go round to the front, and come upon them openly.

So putting down his two poor stained pottles of strawberries and his bouquet, Tom turned and gently opened the door towards the river.

But he as soon shut it again, for he had seen sauntering towards him a talkative neighbour whom he knew would not pass him without playing the ancient mariner, and Tom did not feel at all in a humour for the part of the wedding guest just then.

So he determined to smother his indignation as he best could, and stay where he was till he could escape unobserved.

But the more embarrassing he felt his position, the more wrathful he grew with those who placed him and kept him in it.

He could not, try as he might, keep his eyes from the garden, the strawberry feast, the handsome and reverend master of the ceremonies, Mrs. Bailey's radiant face, or Ella in her white dress, looking down, half in awe and half tenderly, at the rose on her breast, as if it was a red wound made by love's first bold arrow.

Both looked at it so significantly from time to time, that Tom knew well enough it was what he mentally termed a token of mischief, most likely the first real love-gift, or some absurdity that might prove binding to his child.

While Tom Bailey was thus in the ridiculous position of being a prisoner in his own summer-house, the children began to

clamour round the guest on the lawn for the immediate fulfilment of some promise he had made them as to the telling of a story that afternoon.

"Tell us the 'Edoodoo,'" Tom's youngest had implored, and immediately the others all began at once,—

"Oh yes, yes, the 'Egugu.' You promised you would tell us to-day. *Do* begin. Oh do begin now."

"You must tell them," declared Mrs. Bailey. "They've done nothing but talk about the 'Egugu,' that used to eat the babies, since you were here last Saturday."

"Oh, indeed," thought Tom; "then this is a weekly entertainment, is it?"

"There's no escape for you," said Mrs. Bailey.

"So it seems," thought Tom, with a savage look at her happy face.

"You must tell them, and then there's a chance of their minds being at rest."

Some little chatterbox said,—

"Ella promised to *make* him tell it," which remark gave opportunity or excuse for another exchange of tender glances, that made Tom impatiently open the door and peep out to ascertain whether the loquacious neighbour had passed by. But no; there he stood, just before the garden-gate, contemplating a little overloaded sailing-boat, concerning which he would certainly want to hold half an hour's conversation, if he espied Tom.

So Tom shut the door again, and, to his intense disgust, had to see his children range themselves familiarly round the story-teller, while Ella and Mrs. Bailey drew their chairs nearer.

In his school-days, Tom had been accounted an excellent story-teller, and he considered he still possessed that power to no ordinary extent, though he could not be supposed to have time in which to use it.

This being the case, it was not pleasant to be reminded by this stranger on his lawn how much delight Tom himself might so easily have given his children.

To see how they almost quarrelled in their eagerness to get a place nearest the story-teller, and the wondrous illumining of

each little face as the negro legend of Sierra Leone was brought before them; to see how they hung entranced on the accents of a tongue not half so eloquent as Tom considered somebody else's could be if it liked—all this seeing did not at all improve his temper or lessen his impatience at being held in so undignified and unpleasant a position.

So he had to listen to what he called a parcel of bosh, as to how, after the abolition of slavery in Sierra Leone, when all the negroes were brought under influence, and numerous churches and schools were established, there still remained one horrible superstition, that of the Egugu. This Egugu, it was explained, to the children's intense horror, was a hideous creature with scarlet and yellow painted face, horns, and a tail, who appeared suddenly on a certain day every year, and bore away a little child which would never be seen again, and traces of its murder were sometimes found.

The negroes dreaded yet longed for the day to come, for they believed that the sacrifice of one child gave them a day's licence for excesses of every kind, so every one who wanted to be wicked thought he or she could be so that day to any extent without danger of being punished. Even the parents who had been bereaved would sometimes be the wildest in the furious jubilee.

"Now, one year," said Tom's unwelcome guest in a rich deep voice, and so turning his face that his eyes might command a certain white figure, "there was at Sierra Leone a brave missionary, who said that he would watch for the Egugu, and fight him, and give him such a beating that he would never again run off with any more babies."

When the chorus of approving and excited "Ohs" that greeted this resolve of the missionary had subsided, the story went on.

"And so when the day came when the Egugu was expected, the missionary took a stout stick, and marched up and down the chief street of Freetown.

"But you must know the people were rather frightened at his boldness, for, as I told you, they thought it necessary to lose one child a year, and the wicked ones amongst them did not at all desire to lose

their day of doing just as they liked, behaving like the people of a madhouse set free, there was no telling what horrible thing they would not do. Beside this, they did not at all believe the missionary really would dare to touch the Egugu when he should behold him, for there was one amongst them, a great giant of a fellow called Bobololo, who did nothing for his living but lounge about by the town pump and beg, and this giant was always talking of how he would conquer the Egugu if ever he could get hold of him. But for all his boasting, as sure as ever Egugu day came Bobololo took care to keep out of the way, and out of call of the people. And so everybody said the missionary would no sooner behold the frightful figure of the Egugu than he would take to flight like Bobololo, or find shelter in one of the houses.

"The day came, and there, as I told you, was the missionary parading the chief street of the town. All the little children were kept safely indoors, but all crowded to the windows in hopes—though in a terrible fright—to get a glimpse of the Egugu.

"The monster was later than usual, and the most wicked of the people began to fear he would not come, and that they would not be able to enjoy themselves in their usual wicked way.

"Now, I must tell you, that amongst the youngest children of Freetown was a great little favourite named Sambo. He was a jet-black little fellow of two years old with the merriest eyes you ever saw, and the most pearly teeth in the world; and the great dread of everybody was that some day little Sambo would be seized and carried off by the Egugu. And no wonder they feared for him, for he was such a restless little stray-away, he could hardly ever be got to stay indoors.

"On this particular day, after he was tired of peeping out of the window at the missionary, and tired of being kept from play with his little neighbours, what does little Sambo but slip slyly down-stairs and somehow make his escape into the street on his way to a certain little Peter, an acquaintance he was not used to be so long separated from.

"'Why—where be Sambo?' asked his father, suddenly missing him.

"'Oh, he's safe enough playing on the stairs,' answered Sambo's mamma, who happened to be polishing her black face at a looking-glass hanging opposite the window.

"Suddenly she gave a loud scream, for she saw in the glass Sambo's little black figure, in his pink cotton shirt, toddling over the road, and not only did she see Sambo, but some great hideous thing rushing towards him."

Here one of Tom's little ones became so excited that her brothers had to quiet her by saying,—

"Don't be silly, Tottie. Of course the missionary will save him."

"No, I guess lazy Bobololo will," said an older and more knowing one."

"Well," continued the story-teller, "Sambo's father and mother rushed out and found the street ringing with the awful yells of the Egugu. And there, too surely, was he, with such horns and such a tail, and one cheek painted yellow and the other red, and between his horn over his forehead there hung down a lot of hair like a horse's mane. The creature had already snatched up little Sambo, who was so frightened you could only see the whites of his eyes, and his little red mouth was then white too.

"But the missionary sprang out and gave the terrible thing a tremendous blow right between his horns, and snatching Sambo away gave him to his father.

"Then, though every one thought the missionary must surely be killed by such a monster, he seized him by one of his horns and gave him blow after blow till he forced him down on his knees. Having done this, he pulled off horns, tail, and hair, and showed the astonished crowd that the terrible Egugu was no other than lazy Bobololo.

"You should have seen the figure he cut. You should have heard Sambo and all the little blackies laughing at him as he was dragged up and down the town, and you should have heard how he yelled when he had the paint washed from his face at the very pump where he was so fond of sitting to beg.

"So the Egugu was never seen again from that day to this, because lazy Bobololo was only too glad to run away as fast as his lazy legs would carry him right out of the country. If he had not, the government would have had him far more severely punished than the missionary had punished him."

Tom's children had not yet said a word, but were still fixing dilated eyes on the storyteller's face, trying to fully realise the identification of Bobololo with the Egugu. The happy termination had scarcely yet, in their little minds, taken away the horrors of little Sambo's cruel capture, when Tom, having peeped out at the back and seen his talkative neighbour still in the way, could control himself no longer, but made his appearance before his family in the very height of his indignation.

So precipitate an entrance accompanied by the loud crushing of evergreens, [and the falling of some rockery work which Tom had knocked down, caused at that critical moment quite a panic amongst the children, who rushed to Ella and their mother with shrieks of—

"The Egugu! Bobololo! The Egugu!"

Tom was so exasperated at this folly, that he by no means felt inclined to join in the joyous peals of laughter when they recognised it was "only papa."

Perhaps the three grown-up folks would almost rather have seen the horns of the Egugu than have met Tom's angry and sorely troubled eyes.

Mrs. Bailey was as usual the first on which his wrath descended.

"Ada!" he said, looking at her with inexpressible irritation.

Mrs. Bailey rose, trying hard to cover her confusion under an air of confidence and gentle dignity.

"Tom, dear," she began, approaching him and taking a rigid arm in her two soft hands, "let me introduce to you a friend who has shown us much kindness. Mr. Pope."

Tom felt it was one of those rare occasions when his wife, under an air of perfect submissiveness and gentleness, almost defied him putting her to humiliation by his violence of manner or language.

He therefore acknowledged, though in the most distant manner, Mr. Pope's bow.

"You are surely much earlier to-day, Tom, dear," said Mrs. Bailey.

"About an hour," Tom felt compelled to answer.

"The heat must be great in town to-day, sir," ventured Mr. Pope.

Something in Mrs. Bailey's manner obliged Tom to answer almost civilly.

"It is, indeed."

"You look dreadfully heated, dear."

Tom gave her a savage look. Heated indeed! as if she did not know well enough what had heated him.

"Come and sit down here in the shade," she said. "Do, Tom."

"No, indeed," replied Tom. "You know I can't stand the garden on an afternoon like this. I'm going indoors."

And Tom looked at her in a way that showed her very plainly she had better not try him too much.

Therefore it was with very faint remonstrance that she said, in answer to Mr. Pope's intimation that he must be leaving,—

"Must you go already?"

One of the boys reminded him that as he had said he was to make a sick call at the boatman's below, his nearest way would be through the summer-house.

With unnecessary alacrity Tom conducted him thither, and when he saw him glance at the thrown-down strawberry pottles and bouquet, felt much inclined to still further assist him into the middle of the river.

CHAPTER VIII.

WHEN Tom came back Ella had vanished. He made no remark, but went straight into the house, passing Mrs. Bailey when she came down the lawn to meet him. Going into the dining-room, he sat there with his newspaper till dinner, speaking to no one.

Ella had fled to her own room, where she sat with her face hidden in her hands, feeling very guilty in her father's sight.

For she knew by one glance of his he had guessed how the great event of her life had come, and had been kept secret from him. He had seen, she felt sure, how her

heart had found another home, while he had been left to believe it devoted only to that wherein she was so loved and needed and trusted.

A few minutes before dinner her mother came up and kissed her, saying hurriedly,—

"Don't be afraid, dear child, he doesn't think anything yet about you and Edmund. I think he's only angry with me, because of his objection to clergymen, you know."

"Oh, but mamma," sobbed Ella, "ought we to keep it from him any longer?"

"Well, my love," said Mrs. Bailey, "you see that, though between ourselves we know how you care for each other, so little has been said, we cannot be said to be keeping much from him. And then if Edmund's position could be what he wishes before things went further in any way, it would simplify everything so greatly. As it is, I'm afraid that he——"

And Mrs. Bailey sighed instead of finishing her sentence.

"At all events, dear," she said, "bathe your eyes now, and come down as if nothing was the matter."

Dinner passed in ominous silence. There would seem little doubt that Tom was meditating how his formidable discovery was to be dealt with, and he evidently felt it too serious to be treated in his usual hasty and passionate way.

In the evening Mrs. Bailey and Ella took some of the children across the Common, where they had to do some shopping.

It was the evening for the choir boys' practice, and Mr. Pope happened to be on his way to the church just as Mrs. Bailey and Ella were coming out of the little general shop.

As they were in full view of home windows, Ella hoped and trusted he would not come over to them.

But he did come the instant he saw them, and walked at Mrs. Bailey's side.

"Charming evening," he remarked, looking round calmly at the fine sunset, as if there was nothing passing of more importance, visible or invisible, to her, Ella, or himself.

"Very," answered Mrs. Bailey, with rather

an unconcerned look at the sky; "perfect, isn't it?"

Mr. Pope walked on with them to where their paths must separate—that was at the opening in the railings opposite the church.

Then he turned and said, as if making quite a trivial remark,—

"I shall do myself the pleasure of calling on Monday to see Mr. Bailey."

He had a habit of speaking so slowly, and as it might be called so insignificantly, that many people said he drawled. But it was scarcely just to describe his slow, hesitating speech in that way.

Mrs. Bailey was frequently impatient with him for this peculiarity, because it made one feel half-doubtful as to his meaning what he said in so inconsequential and languid a manner.

Yet she had had many an experience, that whatever intention he might make known, he invariably carried out.

He had said when he first came as curate to Wick Common,—

"No choir—must get one."

"I should like to see you do it," laughed the rector, and he had his liking, for Edmund Pope kept his word. It was the same with the organizing of Sunday-schools, the obtaining proper poor relief, and everything that he so idly said he would do he most industriously did. He was a lazy professor, a zealous performer, but people were a long time understanding this, and thought his reluctance to talk showed indolence and lack of interest in the parish.

He seemed to have an innate contempt for spoken resolutions and assertions.

When any one, touched by his kindness or by something in his sermons, came to him with a declaration of intending to reform, that person would generally leave disappointed and offended by Mr. Pope's careless reception.

But if he found his words had been the cause of one good deed, however slight, Mr. Pope was at once full of interest and ready with kindly help to bring about further improvement.

In the church and by the sick bed he was never known to speak with languor or care-

lessness, for there he found his work and voice and manner were vigorous and fresh.

Sometimes he was remonstrated with for the mildness with which he heard and saw things that should have aroused his indignation. He was asked how he could visit and be intimate with persons whose conduct he could not approve. His answer was, that even if he had but small hope of bringing some change for the better by being on friendly terms with them, he had

no hope at all of doing so if he showed such disgust as some people thought he ought to show.

He had, at his arrival, been warned that it was of no use visiting the Baileys. They were a large family, he was told, who were very poor, never free from debt, and that Mr. Bailey disliked the church, and had quarrelled with the rector and former curate. Mr. Pope casually remarked, there were so many heads of families with more

Page 34.

expenses and anxieties than they knew how to bear, and they dreaded fresh responsibilities in being connected with the church. Yet he had known them not only passive, but pleased at seeing their families drawn to the church and useful work. Mr. Pope therefore hinted he should call at the Baileys, and see if good might not be done there.

The rector smiled, for he had had some sharp rebuffs from Tom. In a very short time, however, he knew his curate had proved

Mrs. Bailey to be one of the readiest, kindest-hearted helpers in cases where a mother's advice and experience were needed. Ella and a younger sister were his best Sunday-school teachers, and two of Tom Bailey's boys were singers in the choir. He knew that Tom was an observer of all this, though Tom pretended to be utterly oblivious.

The comfort Mrs. Bailey derived from Mr. Pope's advice and real assistance with her

"GODWYN."

boys she could not speak of without emotion. And seeing he consulted her on such things as he would have consulted his own mother, was a matter of honest pride to her, and quite restored and lifted up her too often crushed down heart.

When she discovered how Ella's unselfish and useful life had drawn more than friendship from him, she was far too elated by the dream of being at ever so distant a day connected with one for whom she had at once such reverence and motherly liking, to risk its destruction by bringing a hint of the matter before Tom.

Then, too, they seemed to be so happy and contented with meeting so seldom and never corresponding, that she thought such a state of things might go on a considerable time, and so made herself happy in it too, and felt no compunction at keeping it from Tom.

It was enough for Ella that such romance had glided into her commonplace, poverty-beset life. It was enough for Edmund Pope to be slowly realising that he was winning to himself a girl whose face and form were as perfect an outward rendering of the qualities she possessed as the form and colour of a rose are of its fragrance.

But this state of things had lasted some time now, and unfortunately this quiet contentment in the knowledge of each other's love had drifted on to that stage when longing for assurance of its joyful certainty had begun. Jealousies of others, thinking each free, troubled both in spite of much secret faith.

Tom had been right enough in guessing that the red rose in Ella's dress had some peculiar significance in their love's history.

The incident would seem absurdly trivial to any but themselves, to whom it was as the first even silent promise that had passed between them.

As Mrs. Bailey stood between them on the Common and heard Mr. Pope's declaration about calling, she felt rather out of patience with them both, for she could not get rid of a suspicion that they were not very sorry to have the still waters of their love moved somehow, even if it was by a storm.

She believed that Ella understood even better than herself, from some undertone in Mr. Pope's voice, that in spite of the distress his communication to Tom might cause, there was not only a sense of honour urging him to make it, but also a great longing to release his love from its present prison of silence.

Mrs. Bailey saw nothing but trouble to come of such an interview, but felt it useless as well as dangerous to oppose it.

She only said as she followed Ella through the opening into the Common,—

"Is that wise just now?"

"I think," answered Mr. Pope, "it's necessary."

"You'll remember he is not home till five on Monday."

"Yes. I will call in after dinner."

"Good bye."

"Good bye."

Ella was supposed to say good bye too, though nobody heard her.

And the curate took leave of them in his usual slow, careless manner that so well concealed all feeling, and was certainly very convenient to a clergyman whose parishioners' houses were nearly all in sight of each other.

No one at Wick Common guessed, though many saw that parting, the fluttering of the two hearts Mr. Pope had left to take their way across the Common while he went on to the church.

Yet cool and distant as it all seemed, there had been time and opportunity for him and Ella to express to each other by one glance the wonder and satisfaction with which they discovered they were of the same mind with regard to no longer deceiving Ella's father. It was of this discovery they each thought more of all Sunday than the dreaded interview with Tom, of so much more importance to lovers is the undercurrent of their story than its outward visible course. Poor Mrs. Bailey forgot all about this, and could not sleep for thinking how full of anxiety both must be.

Tom had never yet alluded to the scene in the garden. He expected, dreaded, some explanation coming. He also hoped for the sake of Ella's sincerity it would come after

confer a great favour on Tom by discontinuing his share of it.

Here Mr. Pope's stick appeared to grow so exceedingly heavy as to drag him down almost double, and to require the whole strength of his hands to hold it.

He said that he felt the time had come when he should no longer hesitate to tell Tom the truth—namely, that his visits had already made him too well acquainted with, and deeply interested in, one member of the family for the course Tom mentioned to be possible.

Tom, upon hearing this, declared with great emphasis that in *that* case he must the more positively repeat his request.

"But, sir," said Mr. Pope, bending still lower over the stick, "though being a stranger to you leaves me without right or power to act against so severe a decree, I feel, though I have perhaps been to blame by letting this be, I feel I should beg you to be more considerate, if not to me, to one whom I, however blameably—whose happiness, however blameably on my part may also be—is concerned."

"Oh," said Tom, "is *that* your fear? *That* shall not remain a matter of suspense."

And in a moment of passionate pride, and in some reliance on his powers of tyranny, Tom rang the bell and summoned his daughter Ella, intending to demand of her whether her happiness depended on a continuance of the visits of Mr. Pope.

It was a bold move, and might, a week or two sooner, have been successful, for if there was one person who tried to show Tom that even all his tyranny had not yet lost him the right of obedience from his children, that person was Ella. But now she knew what she had not been sure of then, that there was a new claim on her trust and courage and love. She might a little sooner have felt that in promising what her father now required of her she would only be giving up a dream which was perhaps a wrong one, and which, at most, she was not confident enough about to rebel against her father, and involve her mother and all her home in pain and trouble.

But it might have been long before the

two came to such an understanding of each other as Tom brought about for them that evening.

He did what parents have done for innumerable lovers, by harshness and injustice, drove them to each other, loosened their tongues, and linked their hearts.

When Edmund Pope saw Ella put to such cruel embarrassment for his sake, any irresolution he might have had vanished, and honour and duty took the side of inclination. He was suddenly, he felt, placed by Tom under the most subtle and delicate obligations to Ella. He could not see the girl he had known to be so gentle and shy, standing there shocked and unnerved by this cruel question as to her love for him, and not at least take away her shame, so far as he could, by no longer being silent as to his own love.

When he came to meet her, and held her hand till he had led her to the most comfortable chair in the room, Ella saw in his look and felt in the clasp of his hand a gentle firmness of purpose that seemed to take away half the cruelty of her father's question.

To Tom's intense irritation, the presence of Ella for some time occupied Mr. Pope's whole attention.

After so carefully taking her to her seat, he had by no means hurried away from her, and when he returned to his chair again, on seeing her little foot tremble, rose directly and brought a footstool, waiting on his knee while she placed her feet upon it.

Then he found the room was too warm for her, and begged Tom's permission to raise the window a little more, all with a most perfectly natural and unembarrassed tenderness that made Tom quietly furious; yet left him utterly at a loss how to show his resentment.

Trying to hide the shaking of his hands by clasping them tightly as he leaned forward over the table by which he sat, he turned and looked at his poor child very terribly.

"Ella, I say again, I wish to know whether your happiness depends on the visits of this gentleman?"

Ella was not so strong but what tears

came into her eyes, and her pretty lips trembled at such a look and speech.

These tears being the first Mr. Pope had ever seen in her eyes, brought his first feeling of anger against Tom.

He started, rose, sat down again, and then, turning to Tom, said in somewhat cold, even stern remonstrance,—

"I beg your pardon, but I really think that is not a fair question to be put to your daughter in my presence."

"Sir," ejaculated Tom, "am I to be dictated to in my own house?"

"Pardon me," said Mr. Pope, but more as one demanding to be heard than begging pardon. "I have been so desirous of sparing your daughter any distress that the fear of your opposition to my—my hopes has perhaps kept me silent too long, and though I now—"

And Mr. Pope gently, almost deferentially, changed his position so as to confront Ella, whom he really now addressed, though his speech was put in the form of one to Tom. "And though I now venture under these very unfavouring circumstances to say that my whole life's welfare, and, as I fear, my whole life's usefulness, too, is in her keeping, and at her mercy, yet I can have no right to expect to hope—"

Here Mr. Pope rose and approached Ella, apparently forgetting Tom's presence in love's suspense, though his words were still apparently to him.

"To hope," he said, "that she can answer such a question as you have put to her—in my favour? I would to God that it were possible that I might be so fortunate, that she might have courage to answer it so."

No father could have been much more tried and enraged than Tom at that moment. He had not only discovered that his impetuous conduct had anticipated what he wished to oppose, but had really brought it about—had not only given voice to a hitherto silent lover, but had in fact made the offer for him. At least, Mr. Pope was certainly turning before his very face his own cruel, humiliating question into as plain a declaration of love as ever was made.

And then, too, it was almost more than he

could bear to sit there and see how thoroughly both the culprits were for the time ignoring him.

There was Mr. Pope standing before Ella, looking down on her drooped eyelids as if they were the only doors of hope the world contained for him.

And though it inspired Tom with such disgust, there was nothing so very unnatural in the fact that when those tender lids did rise and leave visible deep worlds of love and happiness, he who had waited and watched should go nearer to them.

Certainly Tom himself in his impetuous love-making would not have contented himself with taking a hand to his lips as Mr. Pope did. Neither would he have been diffident enough to doubt still the truth of his happiness, and have to ask as he asked,—

"Ella—can it be—is it really possible?"

Tom wondered on his part could it be really possible this was a child of his—oblivious of his presence while answering with sweet, frank, ungrudging eyes her lover's question. What tender surprise she showed at his uncertainty as to her love, what full yet timorous assurance of it was in her sweet scarcely audible,—

"Oh Edmund!"

But instantly followed the cry of recollection and distress,—

"Oh papa!"

Tom was cruel enough to answer the appeal with a look of fury.

"I have asked you a question, Ella," he said, "I demand an answer."

"My dear sir," said Mr. Pope very gently, and with moisture in his grey eyes, "be assured you shall not suffer by my great good fortune. We will wait—we will not even meet, if you wish we should not till you have had time to consider what I know must just now be a painful surprise. Yet I know that when you do consider it calmly, your care for Ella's happiness will cause you to look leniently on my unworthiness in all but my profession and my appreciation of *her*—the only two things I have to recommend me to you."

"Mr. Pope," answered Tom, "you know already my opinion of your profession, and

as you yourself tell me you have nothing else to recommend you, you will doubtless not be surprised when I tell you I wish your acquaintance with my family to cease at once, and your compliance with my wish will save my insisting on an answer from my daughter to the question you think so painful to her."

Tom forgot that while giving great pain and perplexity by this demand, he also gave these two a new joy in the prospect of being called upon to bear persecution for each other's sake. He forgot how much even this was to them, and supposed he had rendered them much more miserable than they really were, even under such merciless treatment.

Mr. Pope told Tom he could not be surprised at his displeasure at the first discovery of danger of losing such a daughter as Ella, and took his departure with a show of having every confidence in overcoming his prejudice in due time.

This, of course, only made Tom the more determined to show his firmness.

So poor Ella went up to her room trembling under the double character assigned to her, first, by Edmund Pope's farewell glance, which assured her she was an angel, and, secondly, by Tom's terrible look of dismissal that accused her of being the most base and perfidious of daughters.

Mrs. Bailey did not do as most mothers would probably have done. She did not rush up-stairs and weep with her daughter. She knew that signs of tears in her would only aggravate Tom the more, and do Ella little good, if any. She therefore took her up a cup of tea, and assured her things would come right in the end.

But though Tom had wrung many tears from Ella, and had put Edmund Pope to great perplexity and anxiety, he could not deprive either of what they took with them from that interview, or render those next few hours other than the happiest they had ever known. He could not hold from Ella in her little room, or Edmund Pope in the stuffy little parlour over the baker's shop, the power and delight of remembering look, or tone, or touch more precious than anything life then had afforded them.

Mrs. Bailey knew well enough what

was in store for her that night to make her arrangements accordingly. She therefore saw about breakfast for the next morning, brushed Tom's business hat, gave the cook directions for dinner, in fact prepared all household matters as if about to take a day's journey.

It was well she did so, for though retiring in her usual health, she was unable to rise the next morning.

All night the terrible rise and fall of Tom's voice was heard like the wind in a March storm.

While Ella was sleeping peacefully, and dreaming of being led through interminable pleasant paths by the hand that had never held hers so long as when it led her from the door at her father's cruel summons, her poor mother was being accused of wickedly aiding and abetting in the most diabolical plot ever laid for a father by his own child. Slight were the wrongs of Lear compared with Tom's, by his own account, that night. Miracles of faith and obedience were Goneril and Regan compared with Ella.

For hours nothing but Tom's voice was heard. At last there mingled with it suppressed weeping and inaudible entreaties, then wilder crying, then still wilder laughter and weeping mixed. Then came the sudden opening of the door, and Tom's demand for all possible restoratives at once, and his rage at all not being producible that instant.

After Tom had gone to business next day, and his poor wife lay in her darkened room patiently enduring the cruellest of headaches, she quite excused all his anger on the strength of one little communication he had made to her between his reproaches.

This was that one of the partners in Tom's bank had confided to Tom, that on a visit he paid him a few days since Ella had made a deep impression on him, and Tom asked his wife what she thought must be a father's feelings to discover that a penniless parson had stepped in and spoilt the chance of such a marriage. There was no telling what might have come of it. Certainly Tom would have become one of the firm, and this thought kept the tender brown eyes of Mrs. Bailey wet with remorseful tears all day.

CHAPTER IX.

AFTER this Tom was like a demon in human form: every child and servant in the house was against him, and for the lovers. The girls, Ella's sisters, would accept flowers and presents from the curate, let Tom storm as he liked. The boys would go fishing with him. Even Mrs. Bailey, meek and obedient wife as she was, one evening was discovered by Tom in the very act of making the young curate change his wet boots for Tom's own warm slippers.

The poor woman had not much rest from Tom's sarcasms that night, nor several others. The carpet where Tom was in the habit of racing up and down on his stormy nights was worn almost threadbare, for nights and days were all stormy now.

"Hang it all, Ella," Ella's brother Aubrey said, "I should do as Jenny did if I were you, and put an end to all this raving. You and the mother will be skeletons soon, you're being worried so. If I were you, I should certainly bolt, and have done with it."

But Ella shook her head, and declared it should never come to that with her.

But the girl's bodily strength began to give way, though her mind remained healthy and strong in loyalty to both father and lover.

Mr. Pope kept up a brave show of confidence in all coming well eventually, and though he utterly disregarded Tom's commands to cease visiting, he did it with such a gentle deference, and laid such honest siege to all Tom's household, even Tom himself respected him, though he hated him for his disobedience.

But one day Tom met him coming from his house as he came home from town, and quarrelled with him so severely that he made it impossible for Mr. Pope to enter his doors again under such circumstances.

After this life began to be very bitter to the lovers.

Mr. Pope began to consider that as Tom Bailey was proving himself unnatural and cruel as a father, Ella no longer owed him such obedience as he thought due to him. Her brother, who was now a constant visitor at the lodgings over the baker's, was strong

in his advice to Mr. Pope to persuade Ella to "make a bolt of it."

"It's not a bit of use," he said, sitting with his feet on the curate's window-sill; "if you wait till doomsday, he'll never give in. Jenny knew what she was about. You'll see all our girls will have to do as Jenny did if they get married. And if you could only get Ella to be privately married, you'd soon have the governor all right."

Mr. Pope had no thought of taking young Aubrey's advice, whatever wish he might have had about it, but he did try to get from Ella some hope that her father's obstinacy, if it lasted, was not to keep them apart for ever. But even this he could not get, and began to lose faith and to get gloomily despondent, ill, and wretched.

Poor Ella no sooner became aware of this than her distress was increased beyond her strength. Still she was firm.

"I can give no hope," she wrote, "and must not deceive you. You ought not to wait, or feel yourself engaged to me. I do not think papa ever will change; and I told you that when I saw him suffer quietly for years, what no one but myself knew at my sister's marriage, I said in my prayers that I would rather die than cause him one day of such suffering; and so, dear Edmund, I will. I must not ask you to be hopeful, because, perhaps, I ought not to wish to keep you to our engagement. It would seem very cruel, only he is half mad sometimes about our circumstances. They are no secret from you; but you do not know how serious they are becoming. Sometimes I think papa is better and nobler than any of us know, and that his hardness to us is kindness to you, and fear of bringing disgrace to you as a clergyman, by letting you be connected with us while so much trouble is hanging over us."

Tom saw the slight form growing more fragile every day. At last, one morning, he missed it from the breakfast table. He remembered how he had missed Jenny's at the breakfast table, and had never seen it since; and his heart failed him.

"Where's Ella?" he asked, sharply.

"Don't be frightened, Tom, dear," said

his wife. "Ella isn't very well this morning, —I think it's the hot weather: she feels too weak to get up."

This being the case for several mornings, Tom *was* frightened.

"She ought to go to the sea," he said. "I'd do anything to be able to afford it, but I'm at my wits' end as to manage to keep shelter over our head till Christmas, and then the end must come; I can fight it off no longer. And all might have been so differ-

ent but for that rascal springing this mine at my feet. Sprague adores her; and now, of course, as I cannot respond to any of his overtures, hates me, and will ruin me by preventing the firm making me the advance by Christmas."

Tom, in past years, had too often, like the shepherd boy in the fable, cried "Wolf, wolf!" without cause, but there was little doubt now that the wolf want was indeed prowling very near.

Page 43.

His own health began to give way. Ill luck seemed to hem him in on every side.

One morning he looked up from his paper and cried,—

"Good heavens, Ada, Bentinck's ruined!"

"Tom! What *can* you mean?"

"Why—here's the Eastern Bank stopped payment."

"But he may have sold out. May he not?"

"Yes, of course, he may."

"Then depend upon it he has."

"Yes, yes, I suppose. it's most likely," said Tom. And his own troubles kept his thoughts from dwelling much on the subject.

There was little doubt but that he would have worried himself much over the news and the suspense as to Bentinck's share in the great failure, had not anxiety about Ella engrossed him so much.

She was again down-stairs and moving about over her old duties, but a change had

come to her that startled Tom. Her shoulders began to grow quite sharp looking, her cheeks had sunken so much. She seemed growing back again to her early girlhood. Her smile was still cheerful and meek. Her eyes grew fuller of love and watching after others' comforts every day. She was taking all possible comfort and delight from the love allowed to her still, but would she live upon it? When accidentally, by one of the children or a visitor, Mr. Pope's name was mentioned, Tom saw she no longer blushed and looked confused, as she used to do, but turned paler, and if that name was lightly coupled with any woman's (as it often was), Ella's eyes lost their loving meekness, and grew almost tragic in their dull, fixed, downward gaze.

At last, without saying a word of his intentions to any one, he determined to consult Dr. Sadler, and to describe him Ella's symptoms, so far as Tom had noticed them, and ask his permission to bring her to see him.

In the room where Tom had to wait his turn for going to the doctor's consulting room, he had noticed, as he entered, a form that at first he thought he knew. But a second glance made him feel sure it had been a mistake of his to think so. It was much too thin and white-haired to be the person he had fancied it, he felt sure now.

Tom was standing looking out of the window into the dull respectable street, trying to make up a list in his own mind of "Ella's symptoms," when he felt a hand laid on his shoulder.

Tom almost shuddered, for the very touch seemed familiar to him, but, like "the touch of a vanished hand."

Almost with awe, Tom turned and looked up and beheld a pale, noble friendly face looking down at him.

As a quarrelsome child grows suddenly silent and subdued at finding its mother's gentle eyes upon it, as a brawling servant is abashed at the unexpected appearance of his master, Tom Bailey's poor turbulent soul grew suddenly still under that touch and that look.

At last came the welcome sound of the voice he had thought dead to him.

"Tom, old boy! is it really *you*?"

Tom could only put the same rather idle question, changing the name to "George."

There was only one patient in the room besides themselves, and when he was summoned to the doctor's inner sanctum, Bentinck again put his hand on Tom's shoulder. (Ah, what an old, old habit it was! It made Tom feel a boy again to find it there.)

"You don't look well, George. Have you just come up from Conholt?"

"From Conholt, old boy," answered Bentinck, "haven't you seen the old place advertised in the *Times*? Oh, more than a week now."

Tom almost groaned.

"Oh, that infernal Eastern swindle."

Bentinck looked at him very keenly.

"Tom," he said, "*you* won't scorn an old friend because great changes have come to him. I believe, Tom, no friend's adversity would alter *you*."

"Don't ask me that, Bentinck. But, good heavens, is it possible?"

But how clumsily blind he had been, he said to himself, not to have seen it all at the first glance. It was now only too apparent to Tom in his friend's face and form that some great change had come to him.

"Yes, Tom," said Bentinck, in answer to the deep sympathy in the little clerk's eyes. "Yes, I have, indeed, known great changes; but, even now, things might be worse. I have enough to live on: what more does a single man want? I suppose I never should have been quite a free man if I hadn't been compelled to part with my termagant of a housekeeper—and then that house."

"What! Is she gone too?" cried Tom.

"Well, that's no great loss to me," answered Bentinck, smiling. "And as to the house it was beginning to be a dismal dungeon. I assure you lodgings and liberty give me quite a new idea of life."

Then poor Tom, who had always been used to be perfectly frank with Bentinck, could not forbear bursting out with that, to him, question of questions, mystery of mysteries,—

"George, why on earth did you seem ^{to}?"

take such a dislike to us all when you came down home with me three years ago?"

"Is it such a rare thing, Tom," said Bentinck, "for a rich old bachelor to be suspicious of kindness from friends who are—well, who are not rich themselves; or if that is not sufficient reason for you, is it such a rare thing for an old bachelor to be sulkily jealous at finding an old college chum in such a nest as that down at Wick Common, with such a wife and——"

"Did you really like Ada?" asked Tom as eagerly as if he had not married her.

"I thought I never saw a more unaffected sweet wife and mother," answered Bentinck.

"Really," said Tom, with water pressing warmly but inconveniently to the back of his eyeballs: "you don't say so!"

"And with children," continued Bentinck, "that might well make a prince proud. Was it such a wonder, Tom, I should think of my wasted life, and feel that there could be nothing to account for your great interest in me but—but,—well, Tom, forgive,—but because I was rich? There: now it's out! But I've rued that day many a time."

Tom was pained. He had hoped Bentinck had known him better. He had put it very gently; but still there was no mistaking what he meant. He thought it was for his money they had tried to make much of him and show him respect at Wick Common.

"Don't be hurt, Tom," said Bentinck: "you teach me better now," and he held out his hand.

"I didn't think you'd ever want teaching on such a matter, George," said Tom, as he grasped it very heartily.

Bentinck had come to see the doctor about the continued weakness and prostration he had been suffering since the change in his affairs.

"Poor fellow," thought Tom: "how terribly his losses have broken him down!"

So many patients now began to drop in, Tom decided that, as the doctor would evidently have a busy morning, he had better come about Ella the next day; and Bentinck agreed to put off his own consultation till then. So once more the friends went down together to Wick Common.

On the way, Tom told the story of Ella's love affair; and Bentinck quite agreed with him that he should oppose such a marriage, since it was evident the young couple would not have enough to live upon, even in the humblest way. And both, Tom explained, were unusually delicate, and in need of more than common comforts. Of course Tom spoke in such strong terms against the curate, that Bentinck thought it desirable to break off the engagement for other reasons than the mere absence of ways and means.

"For I'm sure," said he, "though I don't recollect which was Ella, I remember your daughters well enough, Tom, to know there's not one who ought to be sacrificed to a 'fool' or a 'fop,' or—though I hope for *her* judgment's sake you've used an over-strong expression there—or an 'unprincipled rascal,' Tom."

"Well," said Tom, looking a little shamefacedly out of the carriage window, "I've my opinion any man's a fool who wants to marry, and bothers a girl and her relations about it, when he knows he can't afford to do so."

"Oh, I see," answered Bentinck, smiling: "he's only a fool in that light, is he? Well now, Tom, as to the 'fop.' Is he really that?"

"Well," said Tom, bolder this time, "he's one of your Apollos that I hate the sight of: one of your perfect-visaged, Grecian-headed, blue-eyed exquisites, that I can't imagine a woman taking to. Ada, my wife, says she can't either."

Certainly poor Tom was a very striking proof of Mrs. Bailey having been true to her instinct against the Apollo style.

"And now, Tom," said Bentinck, "you've explained entirely to my satisfaction the 'fool' and the 'fop;' now—now be merciful, Tom—how about the 'unprincipled rascal?'"

"Oh," answered Tom, "I believe he's a good fellow enough in his own walk. They say he's a perfect fag to the poor: quite a poor man's parson, in fact, though so sought after in society, and so accomplished. But I do call any man an unprincipled rascal who comes to my house to steal the plate, sir; and am I not to call him, for trying to

steal my daughter, what I would call him for stealing merely a spoon or a fork?"

Tom was getting heated, and pulled himself up in a fright.

He was aware he would have to hold very strong control over himself. He shrunk from the idea of Bentinck seeing what he had become. He had a strange power of subduing those wild bursts of fury in his presence.

As to his many troubles, Tom was determined not to weary his friend with them. He did not fear them showing themselves on this visit, for if there was at all a cheerful side to put out, he knew his wife well enough to be sure she would show it and no other.

Tom sent no telegram this time; and, coming home so much earlier, found the family in their usual afternoon abandonment to ease and, as he called it, muddle.

The front door stood open, the floor-cloth was faded to an artistic delicacy of tint by the four summer suns that had shone on it since Bentinck's previous visit.

The garden door at the end of the passage was also open, and gave a view of reddening pear-trees, yellowing apple-trees, and a flying swing, on which a long-haired young lady of ten years' old was swinging, shouting at the top of her silvery voice to be sent—

"Higher! *higher!* HIGHER!"

As Tom and Mr. Bentinck were putting down their hats on the hall table, they heard, through the open dining-room door, the voice of Mrs. Bailey apparently issuing commands to her hairdresser and shoemaker.

Yes, certainly, Tom could not be mistaken. He heard her say,—

"Don't push the pins *quite* so far in my head, if you please, Monsieur Frizzelle."

And then,—

"No, that slipper is too large for me, shoemaker; let me try a size smaller, if you please."

At first, Tom was puzzled; but as he and Bentinck stood in the doorway it soon became apparent to them that Mrs. Bailey was only acting the part of a fine lady reclining in her easy chair, while little Tommy, aged three, stood on a chair behind her playing

the fashionable hairdresser. A big comb-pocket was pinned in front of his chubby person, though the big comb itself was stuck, in a knowingly professional way, in his own curls, while he stood on tiptoe, straining with all his might to lift a coil of his mother's grey-touched brown hair to where he wished to fasten it on the top of her head.

Little Cissy, aged five, was on one knee at her mother's feet, trying on boots and shoes, of which she had slung on her arm a large assortment, consisting of all the old ones in the house, tied in pairs as if new.

This was a favourite game, called "The grand lady;" but though Mrs. Bailey held up her head proudly, and stuck out her foot with great hauteur, she might have played her part better if she had not been so zealously engaged in darning a very old garment of Tom's.

As soon as Mrs. Bailey saw who was entering, she rose up with such precipitation as sent the little cobbler tumbling over on her back, and jeopardised the equilibrium of the barber, who only saved himself by clinging to the back of the chair his lady had just left.

After her first confusion, hasty greeting, and departure to assume her proper cap and slippers, Mrs. Bailey felt inclined to treat Bentinck as distantly as he had treated her on his former visit; but when Tom found an opportunity to tell her their old friend was as poor as themselves, and how noble a patience he showed over his losses, the good woman could not do enough to serve and entertain him.

When Aubrey came home, Tom's ire was roused by his bringing with him two fellow-students. The altercation between father and son would have become serious, but that Bentinck interrupted it by reminding Tom how he had, one evening at Oxford, brought three or four young men to Bentinck's room, and how vexed he was with him for it, but how their quarrel had ended in one of the jolliest of nights, all discovering in each other such marvellously congenial souls.

"Of which," explained Bentinck, "we

should have remained in ignorance but for my bringing out a box of cigars like these."

Of course Tom himself and Aubrey's little party had to make trial of the wonderful cigars, and, strange to say, with almost as agreeable a result.

Now indeed full amends were made for Bentinck's former reticence. Achievements of Tom's which he would have thought too trivial to recount to his son were recorded by Bentinck in the most flattering terms; and Tom was soon regarded by his son's friends as such a hero, he could scarcely keep his sallow cheek from blushing.

When Tom went up to bed, after he and Bentinck had sat over their pipes together, as in old times, Mrs. Bailey said,—

"Oh, Tom, what a change adversity has made in your friend! You may well be proud of him *now*. How charming he is! His sadness is so veiled by that wonderfully gentle humour of his. How he remembers every little incident of your *queer* college life. It is nice to have him, Tom. Do make him stay with us till he finds a home, and is ready to settle."

So it was arranged.

The girls were all full of his praises. He was such a dear, elegant, clever old creature. Such a broken-down courtliness about him! Young men ought to take example from him! His old-fashioned love-songs, which he seemed so amazed at himself for remembering as his long white fingers strayed dreamily over the keys, how charming they were; and how touched he seemed at their pleasing the young people so greatly. How soon he discovered one girl who never sang had a voice that ought to make her fortune; that another had a true taste for drawing; and that the supposed dunce of the family had "a great deal in him,"—what of, perhaps Bentinck thought it wisest not to say, till he was better acquainted with the young gentleman.

In fact, what he made Tom feel in days gone by, he made all the family feel now—a desire to be true to all best and highest instincts.

Ella spoke so enthusiastically about their guest to her father that Tom begged Bentinck

to use his influence with her in trying to break off this "idiotic engagement."

Bentinck promised to do his best, for he quite agreed with Tom, he said, that Ella was not a girl who ought to be sacrificed to a life of poverty and trouble.

He declined, however, to take the matter in hand until he had seen more of Ella and her lover, with whom he managed to meet and become acquainted without any introduction from Tom's family.

Tom's great anxiety was to keep his pecuniary troubles concealed from Bentinck, for fear he should think it behoved him to relieve the family of the trifling expense of his board.

It was indeed trifling, for "the dear thoughtful soul," as Mrs. Bailey called him, seldom came home without some little delicacy for her or Ella.

Then the presents he received in the way of turkeys and fowls, and hampers of dairy dainties from his old neighbours down at Lincolnshire, kept Tom's larder more liberally supplied than it had ever been before.

When Mrs. Bailey gently but firmly rebuked her guest for buying so many toys for the children, and gloves and knick-knacks for the girls, and boxes of cigars for Tom and young Aubrey, Mr. Bentinck laughed and boldly asserted his right to spend in pleasure what it would have cost him to pay for his dinners all this time.

Every morning before Tom went off to business, he turned back with a look to his wife that implored her to be careful, and prevent disclosures of their pecuniary troubles.

The poor woman did her best to carry out his wishes, but sometimes unforeseen accidents would happen.

One day, for instance, Mr. Bentinck was crossing the hall just as the baker was informing her he could leave no more bread till his account was settled.

Mrs. Bailey hoped her visitor had not heard, and comforted Tom with the assurance he had not, but she had her own suspicions when the next day two great hampers, at which Mr. Bentinck looked with great surprise, arrived, and on being opened were

found to contain home-made loaves from his former housekeeper.

In spite of the letter from that lady, telling him she was sure he would have all sorts of things the matter with him if he ate London bread, and that whether he liked it or not she should go on making and sending till he was settled and being provided for like a Christian, in spite of this letter Mrs. Bailey could not get rid of the suspicion that her baker's declaration on the door-mat had something to do with the arrival of the hampers.

But when Tom came home Bentinck grumbled so naturally about "that old Jezebel," bothering him with "loaves as stale and crusty as herself," that Tom did not see any cause and effect between what he called the baker's "rascality" and the old housekeeper's jealous care of her former master's digestion. So to Tom it appeared as a happy accident only, a pleasant illustration of what he was so often remarking to Mrs. Bailey, that Bentinck was like a genial influence in the house, making all troubles easy to bear.

"Yes," said Mrs. Bailey, "but really, Tom dear, you ought to reason with him about spending so much, it makes me so nervous, and yet I don't like to say much, as it seems unkind to remind him how necessary it is for him to be careful now."

"I am always at him about it," answered Tom, "but of course, as he says, when one is single one is almost rich. However little is in the pocket, it goes so far."

"What a pity that everybody who thinks so isn't single!" remarked Mrs. Bailey.

Tom smiled. He was wonderfully patient under the fact that he could not help seeing, namely, that Mrs. Bailey was beginning to take advantage of his increasing amiability, to indulge in certain wicked speeches at Tom's expense, accompanied by a sudden colouring of her motherly "cheek" and brightening of her eye. Tom, on the whole, rather liked the change, she had shown wondrous patience, there was no doubt of that, through all his troubled life. But patience even, ever so gentle, placid, and undemonstrative, is wearisome sometimes,

however excellent it may be. Tom had certainly been so unreasonable as to grow tired of it in his wife. These little natural outbursts showing quick feeling and fearlessness of him, were as pleasant to him as the sparkle of mountain rills, or flash of sea-foam.

The subject of Bentinck's little extravagances was, however, a matter of anxiety to Tom and his wife all the time he stayed.

Tom was perhaps the least troubled of the two, for Bentinck said that from the necessary changes he was making in his arrangements he had several more odds and ends of sums from which he had more change than he well knew what to do with.

All dreaded the time coming for his departure. It was more like entertaining a rich friend than a poor one in every way, so pleasant had he made his presence.

By his assistance during that visit, Aubrey was enabled to pass his examination a year sooner than he would have done. Two great unruly boys who were becoming beyor'd Mrs. Bailey's control, and the plague of her life, were arranged for at a public school they could not have got into at all but for Bentinck's influence.

Tom's greatest anxiety, Ella's engagement, was the one difficulty he appeared not at all inclined to interfere with, though he was constantly saying to Tom it would never do for her to marry a very poor man.

When Tom begged him not to delay using his influence with her, Bentinck said he was waiting an opportunity, and would certainly make one if it did not come without before he left.

Mr. Bentinck had not performed his task in any thorough manner up to the last day of his visit.

But that day Tom left home with the comforting assurance that he would reason with Ella, and make known to her that he as an old friend of her father's, and as one who had had some opportunity of seeing the curate of Wick Common, was entirely of Tom's opinion.

As Tom was not to return before Bentinck's departure, they took leave of each other at the gate.

"You will do your best," he entreated.

looking most miserable, for he had a sad day's business before him, being bound on several visits to arrange for the renewal of certain bills already too often renewed.

"I will do my best," answered Bentinck, and I think I shall succeed in making her see the matter as you see it."

"What!" exclaimed Tom, "have you had any talk with her then about it?"

"Enough," answered Bentinck, slapping Tom's sharp little shoulder cheerily, "to lead me to hope Ella will never be married to the curate."

"You don't say so," cried Tom; "God bless you, George."

"Come, be off, or you'll lose your train," said Bentinck, putting him out of the gate.

CHAPTER X.

AFTER his spirit having been buoyed up all day by Bentinck's hopeful words, Tom Bailey was sorely disappointed on his return home to hear from his wife that Bentinck's interview with Ella had been a failure. All he had obtained from it was her declaration that though she would never marry without her father's consent, her love for Edmund Pope was unalterable, and would remain so.

Tom was indeed cast down. He did not rave at his wife; somehow since Bentinck's visit he had not been able to find relief in that way.

Bentinck's gentle serenity of manner had the effect of wonderfully quieting Tom's spirit, till lately so restless and bitter.

Truly the year seemed closing in very gloomily for them, and the departure of Bentinck had left a blank that was very dismal to Tom.

It grieved Mrs. Bailey sorely to see his face, though gentle and more patient, so pinched and troubled. His sharp, though subdued sighs woke her at daybreak, and the word "ruin—ruin," came from him in his sleep, banishing hers, and keeping her pillow wet with tears.

But still the remembrance of Bentinck's goodness and the way in which he bore his reverses seemed always before Tom when strength and courage were low, and acted as

a spur to urge him on to meet his troubles bravely.

"At the worst," he said to his wife, "there will be a crash after Christmas, and perhaps it will be easier to rise after a complete breakdown than fag on as I've done so many years."

Strange too, as Tom rose to something like courage and forbearance, his wife sank in health and spirits.

Those unceasing sighs of Tom's at waking, and that cry of his sleep—that moaning of "ruin—ruin!"—became too much for her. They were almost killing the gentle soul, too full of love and kindness to endure the pain of one so dear.

Sometimes Tom broke out in complaint against Ella very bitterly. But at other times he was kinder and gentler to her than he had ever been.

His thickening troubles seemed to make him wish to draw them all nearer to him and to each other—quite a new thing with Tom in his times of adversity, when he had been generally used to mentally kick against every one belonging to him, or in any way connected with him.

Bentinck had promised to write soon. Three weeks had passed, and he had not yet written.

Tom supposed him to be vexed and disappointed in his interview with Ella. The poor girl thought this too, and fretted over the thought grievously. He had promised to run down and spend Christmas Day with them, and she was trembling in the fear her obstinacy might cause him to break this promise.

A day or two before Christmas, as Tom was going off to town, he turned back, half-closed the door his wife had opened to let him out, and kissing her and looking at her with some little embarrassment, slipped a letter in her hand.

"Ada," he said, "you can post this if you like—if you think as I do that we must all be the most we can to each other this Christmas. Your uncle Joseph always sends a turkey or two, so we shall not have an empty larder if we have a roof over our heads at all."

"What is this letter, Tom?" asked Mrs. Bailey.

But Tom hurried off, and she had to find out the meaning of his speech by reading the address on the letter.

The envelope bore the name that Tom had commanded should not be mentioned again in his house. The letter was to his wilful, erring, and till then utterly cast off "Sweetbriar," his daughter Jenny, whom he knew to be as poor as, and more unhappy than, themselves, telling her if she liked to come with her husband and two little ones, and spend Christmas Day with them, all would gladly welcome her.

That same day, as Tom was returning, he was greatly pained to see Mr. Pope crossing the Common, evidently on his way to River Terrace.

He was only just before Tom in the foggy twilight, and was walking with much greater energy than usual, and humming in a low but by no means despondent voice,—

"Flow on, thou shining river,
But e'er thou meet'st the sea,
Seek Ella's bower and give her
The wreath I fling on thee."

The stick, the very same stick that appeared to be of such ponderous weight in the curate's nervous hand on that day when he proposed for Ella and was refused, now spun round in the air lightly as a feather.

Tom looked at it savagely. He was to make unpleasant discoveries apparently every time he came home a little earlier. He had done so now by about half an hour, and was he to discover that he was being grossly deceived, and that the curate's visits were being continued in his absence?

Surely enough he made direct for Tom's door and knocked.

Tom was only at the Common rails on the opposite side of the road, and when the door was opened heard Mr. Pope inquire for Mr. Bailey.

"He's not come home yet, sir," said the servant.

To Tom's surprise and also somewhat to his satisfaction, Mr. Pope said he would call again later, when Mr. Bailey would probably have returned.

As he came out of the gate Tom met him.

He greeted him very stiffly, and would not see the hand Mr. Pope offered him.

"May I speak to you a few minutes on some business I must send an answer about by telegraph this evening?" said Mr. Pope, with some excitement.

After showing some ungracious hesitation, Tom asked him to walk in.

No one was in the drawing-room, and Tom shut the door after they had entered it, in a manner that expressed his desire that this was to be regarded as a business call exclusively.

"Will you kindly read that, sir?" said the curate as Tom turned up the gas. "I received it the day before yesterday, and went down to see the place yesterday, and must send an answer to-night."

To Tom's surprise he gave him a letter in Bentinck's handwriting.

"Clarence Hotel, Fenton, Lincolnshire,
December 17th, 18—."

"MY DEAR SIR,—Lord T—, the patron of the living of Tangley Combe, has asked me to name a suitable clergyman for presentation to the benefice. I believe you know something of the place, and think you might be induced to accept it. If so, I need scarcely say with what confidence I could mention you to my friend Lord T—, and how fortunate I should consider the parish in having the services of one whose good work I have had opportunity of being acquainted with during my late visit to my old friend Mr. Bailey. The living is worth £500, with good house and grounds. In case you decide to accept the preferment, please call on Lord T—'s solicitor, who has instructions to prepare the necessary papers. If you wish to see the place first, the clergyman in charge will show you everything. I hope for every reason you will accept the preferment."

"Yours faithfully,
"G. A. BENTINCK."

Mr. Pope did not understand the darkening of Tom's look as he finished the letter. He did not know this Tangley Combe was the very living he was working for when he

ruined himself with the tandem at Oxford. The living had passed from Bentinck, Tom understood, with the Conholt property into Lord T——'s hands.

Tom knew he was unreasonable and selfish, but he could not help feeling it bitterly that Bentinck should have brought open the old sore thus. He could not well find time to write to *him*, the young people were occupying his thoughts and time all these weeks. Tom was nobody.

"Well, sir," he said, "and what has this letter to do with me?"

"It has this much to do with you, sir," answered Mr. Pope, "that if you consent to my marriage with Ella, I telegraph at once to accept it, and if you refuse, why I refuse, that is all."

"I suppose you call that wisdom," said Tom, because he hardly knew what to say.

"Wisdom or folly," answered Mr. Pope, "I shall not go away and lose sight of her

Page 55.

while things are so uncertain, and while her people are in trouble."

"Well, certainly," said Tom, half to himself, "God knows what may become of us next year, or where we may be."

"I may send a telegram accepting it?" said Mr. Pope. He spoke at all events in a way Tom could not find fault with, showing too much sympathy to want sentiment, or give Tom unnecessary pain, or to vaunt his own happiness.

"Yes," answered Tom. "You can accept it if you are aware of what you do, that you are connecting yourself with a ruined man."

Many would have seized that poor trembling hand of Tom's and spoken of gratitude and assistance to avert the ruin which he mentioned. But Mr. Pope understood Tom too well.

"I know perfectly well what I am doing, sir," he said, "and I will not try you by asking to see Ella now. I know what it must

cost you to say what you have said, and it is more than enough for me, more than I could ever repay you for. Good night, sir, there is only just time before the telegraph office is closed."

"Good evening," replied Tom with great stiffness.

As the servant was still outside gossiping with the policeman, nobody in the house but Tom yet knew of Mr. Pope's visit.

Tom was thankful for this, as he did not feel at all equal to any scenes of a sentimental nature immediately.

He lowered the gas, and sat and sulked deeply over the curate's good luck, and the prospect of losing Ella.

So even Bentinck's friendship, he thought, must go where all the brightest and best things of life go—to the young, the already rich and happy in youth and hope.

For the life of him he could not go to Ella and break to her her good fortune. He felt wicked for not being able to do so, but he could not.

The fear might be selfish, but it was natural, that Bentinck's newly-recovered friendship was passing away from him to these young people. Of course he thought, it was no wonder it should be so, though it might be hard; it was natural Bentinck should find them infinitely more interesting than Tom and his poor Ada with all their burdens and troubles, it was natural his heart should yearn toward them.

As that friendship had alone made those days of debt and hopelessness endurable to Tom, the feeling of its second decay gave him a desponding feeling deeper than he had yet known in all his life, and a sigh that was almost a groan broke from him.

He retired to rest without a word to Ella or any one.

CHAPTER XI.

THE next morning certain letters came from some of Tom's chief creditors that little fitted him for his day's work.

When he went off his wife saw that all his

new patience was worn out. She asked him what time he would probably return, as she knew he had some of his own depressing business to transact after office hours.

The old terrible spirit, more than ever savage for its brief curbing, broke out. What cruel name he called his gentle questioner shall not be told. Home! How did she suppose he knew or cared to know when he should be home? What was home to him but a millstone of debt round his neck, a nest of vipers that he had only nourished and toiled for to be stung by each in turn as it grew old enough? Home indeed! Better for him if there was a smash on the line, or something that should prevent his ever seeing home again. And off went the rebellious little feet, pounding the mud and kicking the fog.

Mrs. Bailey, who had been utterly unprepared for such an outburst, was thrown into a fit of trembling and weeping by it that lasted several hours. Ella was out on a day's visit, so she had no one to speak to of her trouble. She was restless and anxious all day.

In former times, when circumstances were only in their average state of unsatisfactoriness, she had not been used to feel much alarm at Tom's wildest and most wicked words. But she could not help shuddering now at the thought of what confusion and misery might come in this time of real trouble if his evil spirit gained ascendancy over him. Life lately had been just supportable to him even with all his new-found patience and fortitude. What would it become bereft of these? It must become wild and desperate as a madman's, without the merciful unconsciousness of insanity.

The day closed as it had begun, with a dense fog.

When Tom had got into his carriage at the London station, two gentlemen came to the door, but the foremost, as he was entering, stared at the little figure in the corner, and turned back hastily.

"What's the matter?" inquired his com-

panion as they entered the next compartment.

"Well, I shouldn't care to travel with that individual at all," he answered. "We shall hear of an escape from an asylum to-morrow, or I much mistake his look."

He had much mistaken that lonely passenger's look. The fire in the eyes glancing so wildly from under the shaggy bear-like brows was not the fire of madness, but only the fury of a tyrant who had found in fortune a more implacable bully than himself—yet stood at bay. This was what the eyes expressed, frightening people when they met their fixed unnatural gleam under the carriage lamp in the fog. On every side Tom Bailey had been met that day by dogged and continuous opposition to all his efforts to obtain money where he sought it, or to tide off threatened danger for a little while. In every direction fortune seemed to say to him, "See how completely I can humble you as you have humbled others!"

At last, as evening came, and the fog deepened, and the shop lights blazed through it, showing as Tom passed hundreds of happy faces, wondering what should be bought to make other faces happy too; as he was knocked about by parcels of presents, and splashed by the dancing feet of children, Tom's eye caught sight of something that impelled him to go straight into the shop and buy it. He had not a moment's hesitation about its purchase. At the instant he had seen it he was saying to himself, "Are these accumulating miseries supposed to humble me and make a better man of me?" And not with any positively criminal thought or intent, but rather with an uncontrollable passion to show his foolish and impotent defiance of fortune's hardness, he had gone in straight and bought what he had in his pocket when the passenger in Tom's train had turned away, as if the presence of Tom's wicked purchase, and of another little purchase which he had put into it, had been apparent in his face.

Mrs. Bailey had suffered all day a restless dread of something worse coming than even the heavy troubles that visibly threatened.

In the afternoon the cook, a faithful though scolding adherent to Tom's troublous household, who had not seen the colour of his money for many a long day, came up to the parlour and shut the door behind her in a mysterious manner.

"Well, cook," said Mrs. Bailey, "what is the matter?"

"Why, jest you keep quiet, mum; don't you be put out by nothink, mum; that's all," was the not very enlightening answer.

"Why, what is that? who is going down-stairs?" demanded Mrs. Bailey, rising in alarm as she heard heavy feet lumbering down cautiously towards the kitchen.

"Now jest you keep quiet, mum, till master comes home. I'll take care o' these gentry; I've had 'em to see to afore now, at a lord's house too. You jest keep quiet up here. That rascally lan'lord! But don't be put out, mum. Master 'ill know how to arrange somethink or other to get rid of 'em, I know."

Mrs. Bailey sank back in her chair with her hands to her brows. The mention of the landlord made her understand all too well. She looked round her, pale and helpless. Oh, sad little home! If Tom, she thought, had felt it as a millstone round his neck when he went off in the morning, what would he find it on his return this night?

"Come, now, mum, don't you take on," urged cook. "I've seen many a time things as bad, and all come right without a stick being moved. Don't flutter yourself. I've sent Sarah Hann for some porter, and they shall have the Dutch cheese, and never lay a finger on the jient, if I knows it. Miss Hella don't know nothink about it, and if you keep the children up-stairs, nothing need be known by no one till master comes home, and then he's sure to be able to 'range somethink."

Tom's landlord had been to him a very job for patience, but insults upon injuries proved more than he could bear. He said that Tom wanted a lesson, and should have one. He kept his word, and his lesson very nearly proved fatal, not only to Tom, but to one of the persons sent to administer it.

When the expected knock came, Mrs. Bailey's feet were powerless to move. She rose, intending to be the first to meet Tom and break to him the hard truth, but had to cling to her chair and listen helplessly as other feet tramped up the kitchen stairs and across the hall to meet him. She had to listen to the gruff though civil explanation, to bear as well as she could the torture of the next silent moment or two; but when Tom's voice at last broke that silence by fiercely denouncing the intruders as "impudent rascals," and telling them that if they did not instantly leave the house he would kick them out, or help them in a speedier way than that—a threat which was followed by the click of a pistol, in whose hands the poor woman could not tell—she fell back half fainting against her chair. She was just conscious of hearing one of the voices that had been talking in the kitchen so long, exclaiming outside the house,—

"He've attempted my life; you're witness ter that, 'Arry; he shall pay fur it."

Then she heard the street door furiously slammed to by Tom, who afterwards went straight up-stairs, and entering the half-empty room known as his study, shut the door of that also, and turned the key in the lock with a sharpness and decision that made his wife shudder.

As this locking himself in was quite an unusual thing with Tom, even in his worst moods, the real anxiety of that anxious day only now seemed to begin for his poor wife.

She dragged herself up-stairs as soon as she had strength, and leaning, scarcely able to stand, against the door begged him to open it.

She waited while Tom, keeping cruelly silent, made no attempt to grant her request.

He was in one of three rooms opening on the same long wooden balcony; and when his wife had remained more than a quarter of an hour at the door, vainly entreating him, she could not keep from trying the only other chance she had of getting to him.

She went into her bedroom, stepped out

of the window, and, holding by the balcony-rail, guided herself to where the ray of light came from Tom's window.

The children had been at play there after dusk, and the gas had been lighted for them.

The blind was down, but not fitting closely Mrs. Bailey could see in across the room.

Right before her, his head bowed down on his arms on the table, was the miserable cause of her misery.

His prostration at first made her eyes rain tears of surprised pity, for she had fully expected to see him still furious and defiant under his trouble. But when she noticed for a few minutes that he appeared perfectly motionless, a great terror seized her. She prayed mutely with closed eyes, then opened them and looked in again, in faith that she would see him move.

But he remained quite still; and this poor woman, so overwhelmed in troubles, forgot that she had one care in the world except the awful stillness of the downcast hoary head.

She sank down on her knees, and prayed and watched. No movement yet!

She rose and turned and prayed with clasped hands thrown upwards against the wall of fog. Again she looked in, and looked long, and took hold of the window-frame and shook it, calling his name gently. No answer, no movement.

As she got up again, and leant, scarcely able to stand, against the balcony-rail, she heard the gate open and a footstep pacing quickly and lightly down the garden.

She thought it was her son's step and knock that she heard, and, using all her strength, managed to return the way she had come, and to get down to open the street door before any one else had time to reach it.

On opening it she saw Bentinck standing there, looking fatigued and heated. She clung to his arm and drew him in, looking up at him with such misery as he had seldom seen—never in any face familiar to him.

"My dear soul, what is it?" he said in true distress.

She pointed up the stairs and approached them, and Bentinck ascended them with her, supporting her and trying to read in her white face what had happened.

At Tom's door she broke down, and her pent-up fears burst from her; but they came in so faint a voice that Bentinck had to bend down to hear it.

"The pistol!" she said. "He has it there. He has been so still. Oh! I do dread it was too much for him to bear."

Bentinck, pressing her cold and trembling hand reassuringly, knocked at the door with the business-like manner of a newcomer knowing nothing of what had happened.

"Tom," he called in a loud and cheerful voice, "I have come on urgent business, and must beg you to see me instantly."

No answer, no sound of any kind was heard from within.

After waiting some minutes, Bentinck went round to the balcony. The rusty old fastening of Tom's window gave way at his strong push, and in an instant Mrs. Bailey was on her knees by the bowed-down figure at the table.

To Bentinck's intense relief, he saw once more that savage and suffering little face lifted.

"What is it you want with me, George Bentinck?" Tom said, looking up beyond the hand Bentinck had laid on one of his arms, which were still obstinately folded on the table. Mrs. Bailey, who, kneeling at his side, had slipped her hand under them, knew what they were trying to conceal.

"Tom," answered Bentinck, shocked by his face and voice, "don't lose heart and head just as you are out of your trouble."

"No, Bentinck," cried Tom fiercely. "Let what is coming come. I want no patching up; let the worst come. My whole life has been a patching-up and nothing else. I don't want you to come and patch it up again. I am ruined. I am in misery and disgrace."

"No, no," said Bentinck, "only hear me, my dear fellow, do hear me."

"I tell you I want nothing from you that you can do now," cried Tom with increasing

passion. "No doubt you would do your best, such as it is now, to set me as I was before, but it cannot be done; I say I am ruined and disgraced: all must now be known, whatever little good you can do me. Once more, forgive me; but this is not the time to come to me, Bentinck. It is a time I want to be alone. I want no Job's comforters—no hypocrites!"

"Oh, Tom!" cried Mrs. Bailey, but very faintly and gently, for her hand had not made Tom yield that, to her, terrible thing he was hiding.

"What name else," demanded Tom, "is there for a man who pledges himself to try and save my child from a hated marriage, and then while I am absorbed and overwhelmed with difficulties, leaves me to discover that he has done all he could behind my back to help her to disobey me?"

"If you will not let me speak, Tom——"

"No," interrupted Tom, "I want to hear no more a voice that has misled and deceived me through life. Why did you interfere with me at school? Why did you delude me into the ridiculous farce of going to Oxford, and then leave me for twenty years with nothing but the boast of your friendship, a boast that made me laughed at by all the world—by my own wife and children when you came, by my folly, at last to my house, and showed them how vain had been my boast."

"Did I not explain that, Tom, to my own humiliation?" said Bentinck gently.

"You could not undo the mischief done by those years of utter silence, and that visit that gave the lie, in my own house, to all I had said," answered Tom. "Your so-called friendship has been the bane of my life. If it had not been for thinking of *your* high-flown ideas of morality in business and all through life, I should have been as other men. You have really made me what I am. Now leave me, Bentinck. I have told the truth because I would have *you* know what others will never understand, that it is not entirely my own worthlessness and indolence that have brought me to this."

Mrs. Bailey thought of none of the troubles that others knew Tom to be overwhelmed with. All she understood by his words, "brought me to this," was the thing her hand as well as his held concealed by his folded arms.

As it seemed to her while he spoke that his grasp tightened over it, she lifted her eyes towards Bentinck with a glance of yet keener pain than she had shown yet.

"Tom, even if I do at once obey you and leave you thus in all your trouble——"

"I command—if I *can* command any longer in this house—that you do so," answered Tom. "Your new friend and protégé, Edmund Pope, will no doubt be better able than I am to entertain you."

"If I do as you say, Tom," said Bentinck, pretending to take his hat, "still I demand to be allowed to speak a word or two on what you call the silence of twenty years. I can tell you the reason I did most carefully and firmly refrain from meeting or knowing you. It is simply this. You married the woman to whom I had been betrothed from childhood; who had never seen me, but whom I had seen, watched—and studied—as she little knew—and loved—well, Tom, as my lonely, aimless life has shown. I saw you had access to her guardian's house, and soon I saw you loved her. Tom, I never knew whether or not it was then too late for me to have any claim. I was assured it was not so, but strong as my love was, my friendship was stronger. I would not try my chance, if chance I had, till I saw if you were likely to win her. You did win her, and I never knew till my last visit to you that she lost her little fortune by the marriage—and that ignorance made me unsuspecting of all your difficulties. Believe me, I have always thought you fairly prosperous till lately."

Tom's fierce little head had sunk, and paused and listened, and sunk lower, and again paused and listened, and then sunk still lower till his face was down again upon his arms.

The troubled stream of his poor life, as he

looked back on it, was turning to gold as Bentinck thus removed these clouds of mystery from the inherently bright sun of his friendship, leaving it dazzlingly clear and warm.

Tom's stubborn hand was stubborn yet to the gentle fingers trying to unclasp it, but it was so only that the thing it held might not be seen in this new light.

"And now," said Bentinck, who in his turn was taking all the right of speaking—"now as to your daughter Ella, I found her armed with all her father's own dogged obstinacy in the matter of her engagement, and inspired with all her mother's faithfulness and tenderness of heart. How could I fight against this? If I did not try very hard, and was not very eloquent, why she need not tell. Forgive me if I say I admired her for her firmness, and could hardly help telling her so; she remains unchangeably firm, and I must say I think she is quite right. Indeed, I have told her so. I have learnt enough from you to know that your only *real* objection to her marriage is the fear of her not being provided, under present circumstances, with such comforts as you very naturally wish her to have. Dear Tom, let an old friend have the delight of removing this little difficulty out of the path God has made so full of promise for your sweet child and the most estimable young fellow I ever met. When I say that doing so is in my power, do not accuse me of having deceived you. The deception as to my circumstances was entirely in your own mind *at first*."

"What!" cried Tom, "do you mean to say you did not talk of your losses—your adversity—yes, that was your word."

"I say," continued Bentinck, "*at first* the deception was entirely in your own mind, Tom. When I saw it I was suddenly tempted to encourage it, to see how you would use me under such a change as you thought had come. I had sold out of the Eastern bank in good time before the smash. I had only alluded to my serious illness, and the death of the only relative who cared for me, and who has left me rather richer than poorer. After my illness, my doctor insisted on my termagant of a housekeeper being

Driven forth, and that Doubting Castle in the Fens should be utterly abandoned by me. Need I say, Tom, what my freak has shown me as to your kindness and unselfish goodness of heart, and what new faith it has given me in human nature this memorable autumn?"

"You have made fools of us," exclaimed Tom, rising a little. "You have let us patronise—insult you almost."

"So far from that, Tom, I assure you I feel my gift to Ella of £500 a year is trifling indeed, compared with *your* gift and your wife's to me of fresh belief in the world's warm heart. I do this little for *her* because I feel it best that the young people should be on an equality as to means. I have been seeing to the furnishing of the rectory at Tangley Combe, but as Pope has been down there, I shall leave him to tell Ella all about it. She must not be too hard on an old bachelor's blunders. I don't intend settling myself anywhere for the present—this vagabond life suits me wonderfully. I want to persuade Mrs. Bailey to spare you next summer to carry out our thirty-years-ago-planned trip to Switzerland. She would not refuse me, if she could believe how stout and bronzed a mountaineer I will bring you back."

It might, to listeners less concerned, have seemed an out-of-place remark. But Bentinck knew the memories it would move in Tom—knew how it would make the light he had thrown on the past be met by the light from the future years.

Again the head was bowed quite down, and still the hidden token of despair was grasped more firmly. It must never be seen now by Bentinck. Tom felt nothing should make him move till he could effectually conceal it. Mrs. Bailey would keep hold of it, too, or he might have got it down his sleeve.

"I ought, Tom," said Bentinck, in a voice that had suddenly taken a business tone, "to have begged your pardon for having been engaged over a little business concerning you, and for having concluded as far as I could without your knowledge. I found there was about to be a vacancy in the part-

nership of the firm where you have served so long and efficiently, and without loss to myself, I have, in making my new banking arrangements, obtained a promise that you are to be offered the partnership in the first instance. You will make me very happy in accepting, and I trust you may long enjoy the substantial advantages it will bring you."

"It won't be," cried Tom, "when you know what happened here to-night—the fool I made myself, and the row there will be by morning."

"*That* affair will never be heard of," said Bentinck; "fortunately, I met those queer guests of yours, Tom, and thinking you had hardly been up to your usual mark of hospitality, I gave them a supper in your name over at the King's Head, where they are now drinking your health."

The knowledge that, after all, he had not disgraced, and made himself ridiculous before his neighbours, was as the last feather that breaks the camel's back to Tom's reserve and self-control.

Unlocking his rigid little arms, he put one round his kneeling wife and drew her head to his breast, while with his right hand he pushed the pistol towards Bentinck, saying,—

"Why should I hide from you one sign of the black gloom from which you've drawn me? Oh, what my friend, and my wife, and my God have been to me! Oh, God, make me less mean in my own sight."

Ella returned home the next day, and Tom, afraid of the shock of so much good news, got Bentinck himself to break it to her.

Her great unselfishness saved her from being overcome by her own good fortune.

When Tom went to her afterwards, either she had not realised her own changed prospects, or they were hidden in the brightness of Tom's. Not that she seemed to think so much of his improved position; her pale face and large eyes were filled with joy and wonder for his sake, for the beauty of his life's friendship, the apparent one-sidedness

of which so many years had made her excuse all his injustice.

It was sympathy of this kind Tom needed more than anything just then. But he had thought Ella, in her own bewildering happiness, would be the last person who could give it to him, and when he went to her to help her to realise that happiness and break its glad heart-shock, to find suddenly her thin arms thrown round him and her eyes bright and wet, full of the triumph of his faithful and so long unrewarded friendship, was almost too much for Tom. His knees trembled so that he had to slip down and rest his grey head a few moments on his child's knees.

Mrs. Bailey, who had been the only one to keep courage and cheerfulness so long, now broke down under such unexpected sunshine in the house, and instead of nursing and caring for everybody, she had become the object of the tenderest care and solicitude of all. She was very weak and could hardly hope to rise for some days, but the change was by no means saddening to her. To see Tom trying to learn to walk on tip-toe, and to hear for the first time that his voice had tender undertones, to see how her children who, except by her own example, had never been taught the self-sacrifice required by illness, the most devoted of nurses—all this was new experience to her, and proved for a little while almost more pleasant than health.

Tom's Christmas was hardly one of the right old-fashioned sort such as Bentinck had meant to make it.

Good fortune had enthroned herself so suddenly in Tom's humble household, that it is scarcely surprising they all regarded the new bright monarch with some wonder and trembling.

On Christmas Day was the arrival of poor Jenny and "that rascal," as Tom had always designated her husband, who proved, on acquaintance, one of the most inoffensive and well-meaning of men.

Then there was the little plot laid for Mr. Pope, who was to be sent for to spend the evening as if nothing but his own good fortune had happened; so a stiff little note

was sent by Tom, saying he should be happy to see him after the evening service, if he had no better engagement.

Before his arrival, Bentinck had managed by divers cunning references to the past, which he knew to be irresistible to Tom, and by the distribution of his famous punch, to awake some little seasonable excitement.

Ella, to encourage it, sat down and started "Auld Lang syne," though her thoughts were all in the very opposite direction.

Jenny's pretty and now plaintive voice joined in, and then Bentinck's, and though Tom was somewhat backward, yet when he did warm into the spirit of the song, his enthusiasm was something wonderful.

When Mr. Pope arrived, instead of the melancholy circle he had expected, he found himself in a concert of voices of all ages, from five to fifty.

When he first entered, Tom was keeping everybody waiting over his enthusiastic shake in—

"Auld la-a-ang—" in which he went far too high ever to reach the "syne." And feeling for his glass of punch to assist him, discovered, amid a roar of laughter, that Mrs. Bailey had sufficiently recovered to rise from the sofa and slyly take it away, considering he had already given enough practical illustration of the friendly sentiment of the song as to the "cup o' kindness."

But still Bentinck could not with his utmost exertions bring about the amount of jollity he would have wished.

Perhaps the breaking of clouds "big with mercy" brings to the eyes thankful tears rather than smiles; and pilgrims but just led footsore from a stony road prefer rest to dancing. Lips, from which a bitter cup has lately passed, it may be, are more likely to tremble over their mute "thank God! thank God!" than to engage in song or misletoe merriment; while hands that are to meet hands as they never met before, spanning, as it seems, reconciled souls as well as fingers, prefer a silent pressure to boisterous shaking, or linking and unlinking in the dance.

Many appeals are made at this season to Dives on behalf of starving Lazarus.

But there are those whose craving is deeper than hunger; whose sores are hidden from the eyes of dogs and men; whose wants cry for more than broken morsels

Not altogether in vain shall the little story of these friends have been told if it remind one prosperous Jonathan that the David of his youth perchance still waits for him at "The Stone."

Frost and snow will soon be there: and the eyes watching for the deliverer may soon be too dim to see the longed-for light of his countenance; the voice too faint to answer the tardy call.

But there is time still: and surely many a heart is destined to prove that Friendship is yet as chivalrous and deep as when the Israelitish prince gave up his royal heirship at its shrine.
